of Egypt's troops. The Christians of the city suffered reprisals for their attitude with regard to the Mongols, and the Church of St. Mary was destroyed at this time. From then on Cairo, where since 656/1258 a shadow Caliphate had been maintained, supplanted Dimashk which became a political dependency of Egypt.

It was still to be the most important city of the Syrian province, the *mamlaka* or *niyāba* of Dimashk. (For its administrative organization, see Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, 135-201). The first great Mamlūk sultan, al-Malik al-Ẓāhir Baybars [*q.v.*], interested himself especially in Dimashk which he visited frequently during his reign (658-76/1260-77). He reconditioned the citadel which served as a residence for the sultan when he visited the city; in it also were to be found the mint, the arsenal, a storehouse of military equipment, food reserves, a mill and some shops. This veritable "city" served also as a political prison (see J. Sauvaget, *La Citadelle de Damas*, in *Syria*, xi (1930), 50-90 and 216-41).

On the Maydān al-Akhḍar to the west of the town Baybars built a palace with black and ochre courses of masonry, the famous Kasr al-Ablak, of which the Sultan Muḥammad b. Kalāwūn was later to build a replica in Cairo. In the 10th/16th century the Ottoman Sultan Sulaymān erected the *takkiyya* on the site of this building. Baybars died in this *kaṣr* in 676/1277 and on the orders of his son, al-Malik al-Saʿīd, was buried in the al-Ẓāhiriyya *madrasa* where the National Library is now situated. During his long reign of seventeen years Dimashk had only four governors but after the death of Baybars it was to undergo a long period of political anarchy punctuated by frequent rebellions.

Dimashk was the second city of the empire and the post of governor was given to eminent Mamlūks, usually coming from the *niyāba* of Ḥalab. The possibility of rivalry between the governor of Dimashk and the Sultan was diminished by the presence of the governor of the citadel. There were, in fact, two governors, the *nāʾib* of the city who received his diploma of investiture from the Sultan and who resided to the south of the citadel at the Dār al-Saʿāda where he gave his audiences, and the *nāʾib* of the citadel who had a special status and represented the person of the Sultan. The constant rivalry between these two dignitaries and the amīrs of their circles was sufficient pledge of the maintenance of the Sultan's authority. A change of Sultan in Cairo usually provoked a rebellion on the part of the governor of Dimashk. Thus when al-Saʿīd, Baybars' son, was dismissed from the throne and succeeded by the Sultan al-Malik al-Manṣūr Kalāwūn [*q.v.*], the governor, Sunkur al-Ashkar, refused to recognize his authority. Supported by the amīrs and strengthened by a *fatwā* given him by the *kāḍi 'l-kuḍāt*, the celebrated historian, Ibn Khallikān, Sunkur seized the citadel whose governor, Ladjīn, he imprisoned, and proclaimed himself Sultan in Djumādā II 677/October-November 1278. He had the *khuṭba* said in his name until Ṣafar 679/June 1280, when the troops of Kalāwūn were victorious over him, following the defection of certain Damascene contingents. Sunkur fled to al-Raḥba on the Euphrates. Ladjīn, now freed, was proclaimed governor of the city. A new Sultan often decided to change the governor; thus ʿIzz al-Dīn Aybak was relieved of his office in 695/1296 on the succession of al-Malik al-ʿĀdil Kitbughā, who nominated Shudjāʿ al-Dīn Adjirlu. After the deposing of Kitbughā, who was imprisoned in the citadel of Dimashk, Ladjīn, who became Sultan, nominated Sayf al-Dīn Kipčak governor in 696/1297. The latter put himself at the disposition of prince Ghāzān [*q.v.*] and accompanied him at the time of his incursion into Syria. In 699/1300 the Mongol army entered Dimashk; it seized the Great Mosque but did not succeed in taking the citadel where the Mamlūks had entrenched themselves. The whole sector of the town between these two strongpoints underwent serious damage and the Dār al-Ḥadīth of Nūr al-Dīn suffered. When the Mongols evacuated the city, Kipčak betook himself to Egypt and rejoined the new Sultan al-Malik al-Nāṣīr Muḥammad b. Kalāwūn. In 702/1303 a new Mongol threat hung over the city, but the advance was repulsed. From the beginning of 712/1312, in the course of the third reign of Muḥammad b. Kalāwūn, Dimashk had, in the person of Tankiz, a governor of true quality whose authority was recognized by the Syrian amīrs. Viceroy of Syria in fact as well as name, he inspired respect in the Sultan whose nominal representative he was for almost a quarter of a century. The prosperity which this period brought allowed intellectual life to flourish. This was the epoch of the Muslim reformer Ibn Taymiyya, and of the historian al-Ṣafadī. In 717/1317 Tankiz built the mosque where his tomb was to be placed *extra muros*. Some years later he had work done on the Great Mosque; finally in 739/1339, he founded a *Dār al-Ḥadīth*. On the succession of the new Sultan, al-Malik Abū Bakr, he fell suddenly into disgrace, was arrested in Dhu 'l-Ḥidjdja 740/June 1340 and imprisoned at Alexandria where he died of poison.

From 730/1340 until 784/1382, the time when Ibn Baṭṭūṭa was visiting the Muslim East, twelve Baḥrī sultans succeeded each other in Cairo, while a dozen governors occupied the position of *nāʾib* of the city. Some of them had charge of its destiny on more than one occasion. It was a continual struggle stirred up by the ambitions of one or another and aggravated by the audacity of the *zuʿar*, whose militias, intended for self-defence, neglected their proper duties and, often with impunity, terrorized the population.

The succession of Barkūk [*q.v.*] in 734/1382 brought a new line of Circassian Sultans to power who are also called Burdjīs.

In 791/1389 Dimashk fell for some weeks into the power of Yīlbugha al-Nāṣirī, a governor of Ḥalab who had revolted against the Sultan. Master of Syria, he penetrated the walls of Dimashk, overthrew an army sent by Barkūk and made his way towards Egypt. He was defeated in his turn but in Shaʿbān 792/July-August 1390 we find him once again governor of Dimashk.

Although warned of the progress of Tīmūr, Barkūk did not have time to reinforce the defences of his territory for he died in 801/1399. In Dimashk, Sayf al-Dīn Tanibak who had governed the city since 795/1393, revolted against Faradj, the new Sultan, and marched on Egypt. He was beaten near Ghazza, made prisoner and executed at Dimashk. Syria, torn apart by the rivalries of the amīrs, fell an easy prey to Tīmūr. The Mongol leader advanced as far as Dimashk and it was in his camp near the town that he received the memorable visit of Ibn Khaldūn. The Sultan Faradj, coming to the aid of the Amīr Sudun, Barkūk's nephew, was forced to turn back, following a series of defections. After its surrender the city was given over to pillage but the citadel held out for a month. Many were the victims

of fires which caused serious damage. The Great Mosque itself was not spared nor the Dār al-Saʿāda. In 803/1401, Tīmūr left Dimas̲h̲ḳ, taking with him to Samarḳand what remained of qualified artisans and workmen. This mass deportation was one of the greatest catastrophes in the history of the town. After the Mongols' departure, the Amīr Tag̲h̲rībirdī al-Ẓāhirī became the governor of a devastated city, despoiled and depopulated. The exhausted country had to face a thousand difficulties. Two long reigns gave Dimas̲h̲ḳ the opportunity of rising from its ruins: that of Sultan Barsbāy (825-41/1422-38) and, more important, that of Ḳāʾitbāy [*q.v.*] whose rule from 872/1468 until 901/1495 brought a long period of tranquillity. Moreover between 16 S̲h̲aʿbān and 10 Ramaḍān 882/23 November and 16 December 1477 this Sultan paid a visit to Dimas̲h̲ḳ where the post of governor was held by the Amīr Ḳid̲j̲mas, whose rapacity remains legendary. The civil strife had swallowed up large sums of money and the amīrs did not hesitate about increasing the number of taxes and charges. The Sultans themselves would often use violent means of procuring a sum of money with which the taxes could not provide them, nor did they scruple about reducing their governors to destitution by confiscating their fortunes. Under the last Mamlūks corruption even won over the *ḳāḍīs* who, in return for a reward, were willing to justify certain measures against the law. After Ḳāʾitbāy, there began once again a régime of violence and extortions which ended only with the reign of Ḳānṣūh al-G̲h̲awrī (905-22/1500-16). This last Mamlūk Sultan had to defend himself against the Ottomans who had invaded Syria. He died in battle in Ramaḍān 922/mid-October 1516, and the troops of Selīm I made their entry into Dimas̲h̲ḳ.

Paradoxically enough, a large number of buildings were constructed in the city during this tragic period. The Mamlūks, who lived uncertain of what the next day would bring, tried at least to secure themselves a sepulchre, so that mausoleums and funerary mosques multiplied although they built few *madrasas*.

There were no innovations in the art of this period, for any lack of precedent frightened these parvenus. At the beginning of Mamlūk times they built according to Ayyūbid formulas. The al-Ẓāhiriyya *madrasa*, now the National Library, where Baybars' tomb is situated, was originally the house of al-Aḳīḳī, where Ayyūb, father of Ṣalāḥ al-Dīn, had lived, and the modifications made in 676/1277 were limited to the addition of a cupola and an alveoled gate.

The only new type of building was the double mausoleum, of which that of the old Sultan Kitbug̲h̲ā, built in 695/1296, was the first example in Dimas̲h̲ḳ.

In 747/1346 Yīlbug̲h̲a, then governor of the city, erected a building on the site of a former mosque whose plan was inspired by that of the Great Mosque. It was in this sanctuary, situated near the modern Mard̲j̲a Square, that the new governor put on his robe of honour before making a solemn entry into the city.

The artistic decadence which became more pronounced in the course of the 8th/14th century came into the open at the beginning of the 9th/15th century after the ravages of Tīmūr. At this time everything was sacrificed to outward appearances and the monument was no more than a support for showy ornamentation. This taste for the picturesque manifested itself in the minarets with polygonal shafts, loaded with balconies and corbelling whose silhouettes were to change the whole skyline of the city. The first example was the minaret of the D̲j̲āmiʿ His̲h̲ām, built in 830/1427. Polychromatic façades grew in popularity and even inlays were added. The al-Ṣabūniyya mosque, finished in 868/1464, and the funerary *madrasa* of Sibay called the D̲j̲āmiʿ al-K̲h̲arrāṭīn, built in the very early years of the 9th/16th century, are two striking examples of the decadence of architecture under the last Mamlūks.

It is interesting to notice that most of these Mamlūk monuments were built *extra muros*. There was no longer room within the city walls and the city "burst out" because, paradoxically, "there was an immense development of economic activity during this sad period". "All the trades whose development down the course of the centuries had been assisted by the presence of a princely court, had now to satisfy the demand for comfort and the ostentatious tastes" of military upstarts who thought only of getting what enjoyment they could out of life and of impressing the popular imagination with their display. Dimas̲h̲ḳ, while remaining the great market for the grain of the Ḥawrān, became also a great industrial town, specializing in luxury articles and army equipment. This activity was reflected by a new extension of the *sūḳ*s which was accompanied by "a sharp differentiation between the various trading areas according to their type of customer". A new district, Taḥt Ḳalʿa, developed to the north-west of the town below the citadel. In the Sūḳ al-K̲h̲ayl, whose open space remained the centre of military life, groups of craftsmen installed themselves whose clients were essentially the army and who left the shops inside the city walls to other groups of artisans. Wholesale trade in fruit and vegetables also went outside the town; a new Dār al-Biṭṭīk̲h̲ was set up at al-ʿUḳayba where the amīrs and the members of their *d̲j̲und* lived.

Towards the middle of the 9th/15th century there appeared the first symptoms of an economic crisis. The state, whose coffers were empty, lived on its wits, but commerce still remained active as is demonstrated by the accounts of such travellers as Ludovico de Varthema (*Itinerario*, v-vii) who visited Dimas̲h̲ḳ in 907/1502. The city profited from the very strong trading activity between western Europe and the Muslim East, but the hostility of the people of Dimas̲h̲ḳ and the despotic nature of its governors prevented European merchants from founding any lasting establishments likely to acquire importance. Merchants arrived bringing a above all cloth from Flanders, stocked themselves up with silk brocades, inlaid copper-work and enamelled glassware, and then departed. The effects of the discovery of the Cape of Good Hope did not immediately make themselves felt; it was excessive taxation rather which was beginning to slow down trade on the eve of the coming of the Ottomans.

The Ottoman Period (922-1246/1516-1831). — On 25 Rad̲j̲ab 922/24 August 1516 the Ottoman troops, thanks to their well-trained infantry and the superior firing power of their artillery, put the Mamlūk cavalry to flight at Mard̲j̲ Dābiḳ near Ḥalab. This success gave the Sultan Selīm I a conquest of Syria all the more swift since the majority of the *nāʾib*s rallied to the Ottoman cause. There was practically no resistance at Dimas̲h̲ḳ where the Mamlūk garrison retreated and the Sultan made his entrance into the town on 1 Ramaḍān 922/28 September 1516. The Mamlūk detachments protecting Egypt were beaten three months later near G̲h̲azza. The commander of the Syrian contingents,

Djanbirdī al-Ghazālī, joined forces with Selīm and was allowed to return to the post of governor of Dimashk to which he had been nominated by Kānṣūh al-Ghawrī, the last Mamlūk Sultan.

The arrival of the Ottomans seemed no more to the Damascene population than a local incident and not as a remarkable event which was to open a new era. To them it was merely a change of masters; the Mamlūks of Cairo were succeeded by another group of privileged foreigners, the Janissaries who had come from Turkey. Fairly quickly, however, there was a reaction on the part of the amīrs and Djanbirdī surrounded himself with all the anti-Ottoman elements. On the death of Selīm I in 927/1521 the governor of Dimashk refused to recognize the authority of Sulaymān, proclaimed himself independent and seized the citadel. The rebel quickly became master of Tripoli, Ḥimṣ and Ḥamā, and marched against Ḥalab which he besieged without success, then returning to Dimashk. Sulaymān sent troops which crossed Syria and in a battle at Kābūn, to the north of Dimashk, on 17 Ṣafar 927/27 January 1521, the rebellious governor was killed. The violence and pillaging of the Turkish soldiery then sowed panic in Dimashk and its surroundings. A third of the city was destroyed by the Janissaries.

Under the rule of Sulaymān, the political régime changed and the administration showed some signs of organization. In 932/1525-6 the Ottomans made their first survey of the lands, populations, and revenues of Dimashk (see DAFTAR-I KHĀKĀNĪ and B. Lewis, *The Ottoman Archives as a source for the history of the Arab lands*, in *JRAS*, 1951, 153-4, where the registers for Dimashk are listed). Dimashk was no more than a modest *pashalik* in the immense empire over which the shadow of the Ottoman Sultanate extended. Most certainly the city no longer had the outstanding position in the game of political intrigue which it had enjoyed in the century of the Circassians. Pashas, accompanied by a Ḥanafī *kāḍī* and a director of finance but with no authority over the garrison, succeeded each other at a headlong rate; between 923/1517 and 1103/1679 Dimashk was to have 133 governors. A list of them and an account of these years is to be found in H. Laoust, *Les gouverneurs de Damas sous les Mamelouks et les premiers Ottomans*, Damascus 1952.

Early in the 12th/late in the 17th century there was a change of feeling in the empire; the Sultans lost their authority and remained in the Seraglio, and the Ottoman frontiers receded, but they still remained wide enough to shelter Dimashk from enemy attempts. Furthermore the population had internal troubles at that time. The offices of State were farmed out during this period; the holders and especially the governors, wanting to recover the cost of their position as quickly as possible, put pressure on the people; corruption became the rule and lack of discipline habitual. Nevertheless Dimashk was not without a certain prosperity thanks to the two factors of trade and the pilgrimage to Mecca.

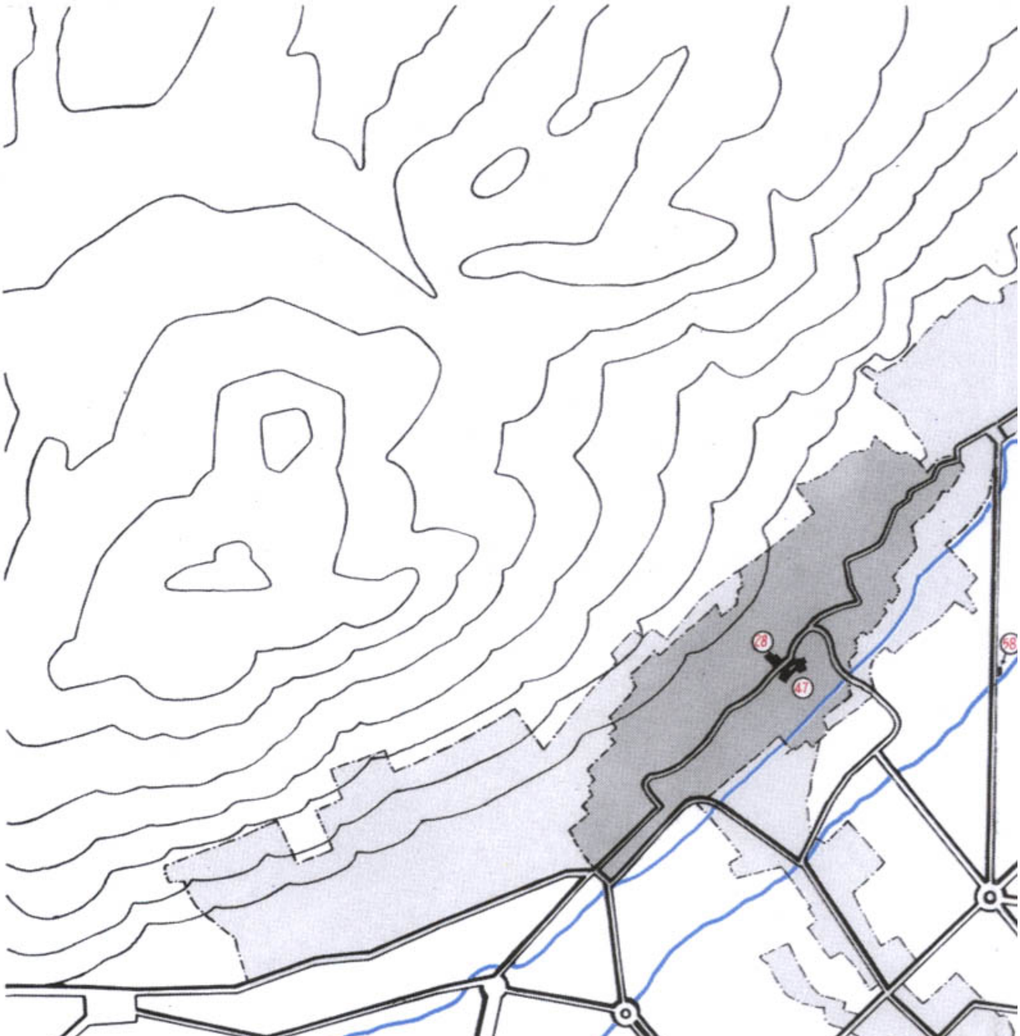
As early as 942/1535, France concluded with the Porte a Treaty of Capitulations which opened Turkish ports to its traders and enabled them to do business throughout the eastern Mediterranean. European merchants, three-fifths of whom at the end of the 18th century were French, imported manufactured goods and exported raw materials and spices. Despite the very high custom duties, the bad behaviour of officials and even, to some extent, the insecurity, external trade remained very lucrative and political events never succeeded in stopping the broad movements of commerce. At Dimashk, as in other parts of Syria, the native Christians served as intermediaries between the Europeans and both the Turkish administration and the population which spoke an Arabic that in the course of four centuries had taken in many Turkish loan-words. The intensity of the commercial traffic justified the construction of numerous *khān*s which served as hotels, as well as exchanges and warehouses, for the foreign traders. In the oldest *khān*s, such as the Khān al-Ḥarīr, built in 980/1572 by Darwīsh Pasha and still in existence to-day, we find the usual Syrian arrangements: a court-yard, generally square, surrounded by an arcaded gallery on to which open the shops and stables, while the floor above is reserved for lodgings. Certainly the Venetian *funduk* which came into being in Damascus after 1533 would have had the same arrangements. Early in the 18th century this plan was modified; the central space became smaller and was covered with cupolas, the merchandise thus being protected in bad weather. This was a new type of building and specifically Damascene. Still to be seen to-day is the Khān Sulaymān Pasha, built in 1144/1732, whose central court is covered by two great cupolas, and most important of all, the Khān Asʿad Pasha, constructed in 1165/1752, which is still alive and active. This masterpiece of architecture is a vast whole, square in plan, covered by eight small cupolas dominated by a larger one in the middle which is supported by four marble columns.

Trade with Europe was carried on via the ports of the *wilāyet* of Dimashk, the most important of which was Ṣaydā.

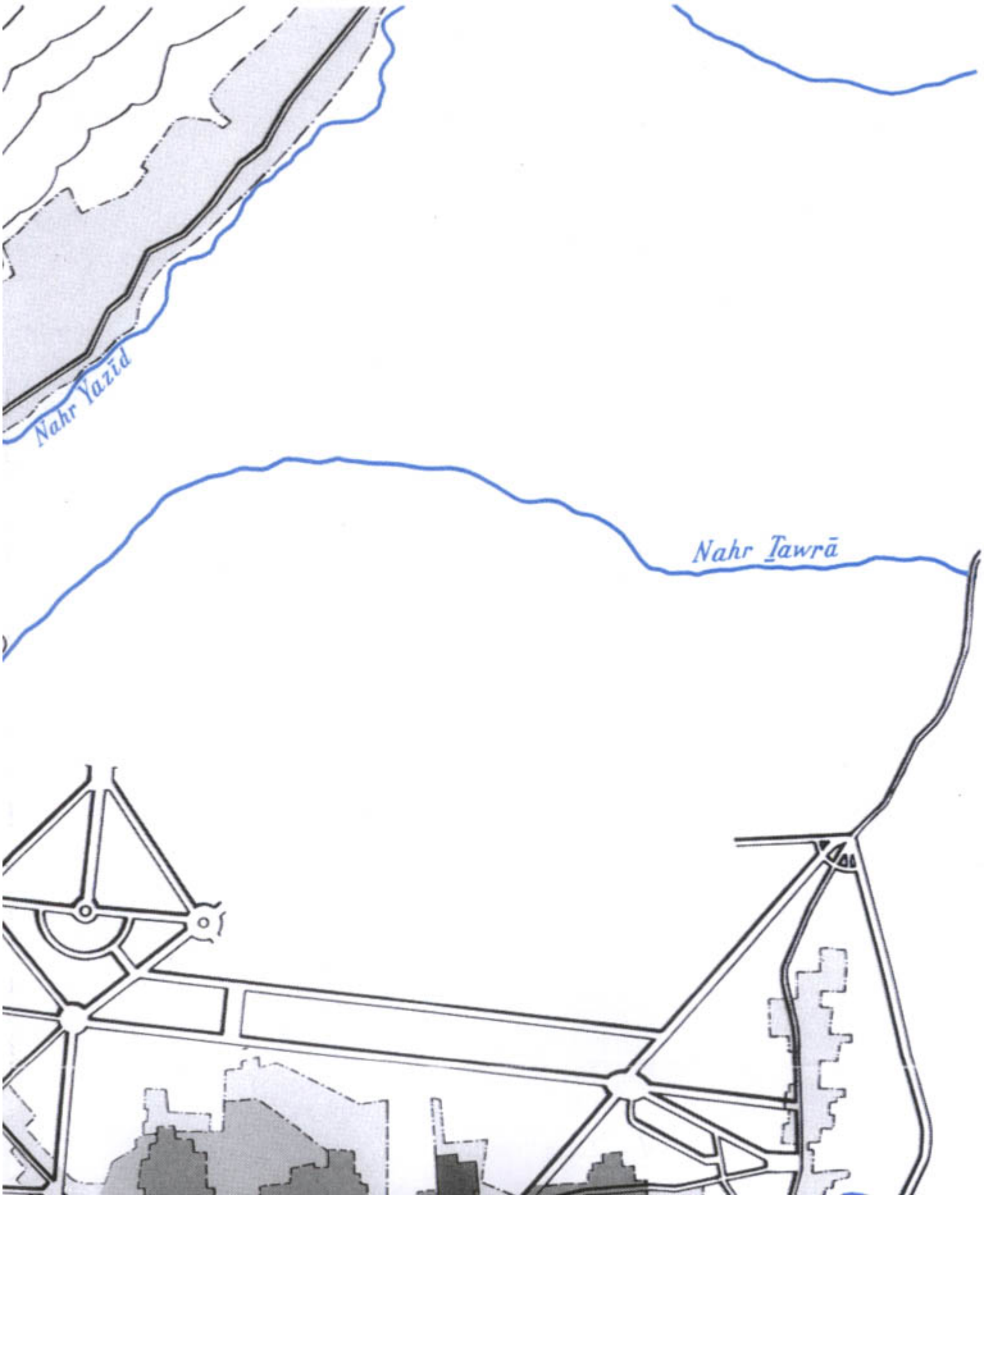
The Ottoman Sultan, having become protector of the Holy Cities, showed a special interest in the pilgrimage to Mecca. This became one of Dimashk's main sources of income. Being the last stop of the *darb al-ḥadjdj* in settled country, the city was the annual meeting-place of tens of thousands of pilgrims from the north of the empire. This periodical influx brought about intense commercial activity. The pilgrims seized the opportunity of their stay in order to prepare for crossing the desert. They saw to acquiring mounts and camping materials and bought provisions to last three months. At the given moment, the Pasha of Dimashk, who bore the coveted title of *amīr al-ḥadjdj*, took the head of the official caravan accompanying the *maḥmal* and made his way to the Holy Cities under the protection of the army. On the way back, Dimashk was the first important urban centre and the pilgrims sold there what they had bought in Arabia, whether coffee or black slaves from Africa.

Once past the Bāb Allāh which marked the extreme southern limits of the town, the caravans passed for three kilometres through the district of the Maydān, where cereal warehouses and Mamlūk mausoleums alternated without a break between them. This traffic to the south helped to develop a new district near the ramparts outside Bāb Djābiya; this was to be the quarter of the caravaneers. These found equipment and supplies in the *ṣūk*s where, side by side with the saddlers and blacksmiths, the curio dealers installed themselves as well. This district owed its name of al-Sināniyya to the large mosque which the Grand Vizier, Sinān Pasha, *wālī* of Dimashk, had built between 994/1586 and 999/1591; its minaret covered with green glazed tiles could be seen from a very long way off. Some years earlier, in 981/1574, the governor, Derwīsh

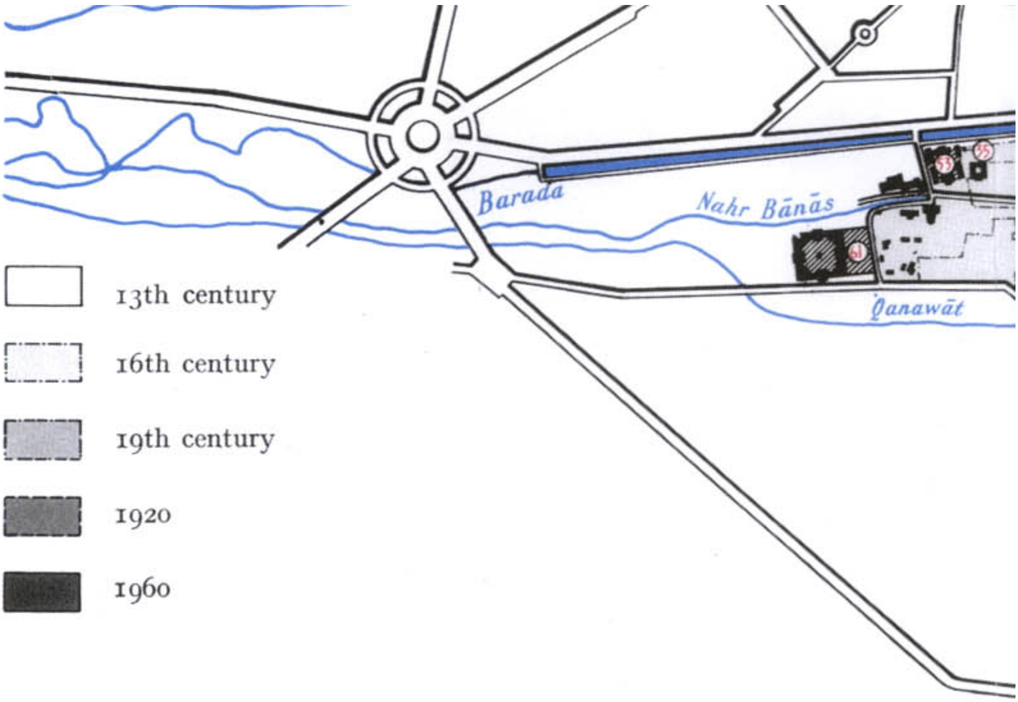
Pas̲h̲a, had had a large mosque, whose remarkable faïence tiles are worth admiring, built in the north of this quarter. This mode of decoration arrived with the Ottomans when the art of Constantinople was suddenly implanted in Dimas̲h̲ḳ. A new architectural type also appeared in the urban landscape, that of the Turkish mosque, schematically made up of a square hall crowned by a hemispherical cupola on pendentives, with a covered portico in front and one or more minarets with circular shafts crowned by candle-snuffer tops at the corners. The first example of this type in Dimas̲h̲ḳ was the large mosque built on the site of the Ḳaṣr al-Ablaḳ by Sulaymān Ḳānūnī in 962/1555 according to the plans of the architect, Sinān. This mosque, indeed, formed part of a great ensemble which is still called to-day the Takkiyya Sulaymāniyya. The covered portico of the hall of prayer opens from the south side of a vast court-yard; on the east and west side there are rows of cells with a columned portico in front of them; on the north stands a group of buildings which used to shelter the kitchens and canteen but which since 1957 has housed the collections of the Army Museum. Active centres of religious life were to spring up both around the ʿUmariyya *madrasa* at al-Ṣāliḥiyya, and around the mausoleum of Muḥyi 'l-Dīn al-ʿArabī, where in 959/1552 the Sultan Selīm I had an *ʿimāret* constructed to make free distributions of food to the poor visiting the tomb of the illustrious *ṣūfī*, or again at the Takkiyya Mawlawiyya built in 993/1585 for the Dancing Dervishes to the west of the mosque of Tankiz. The fact that all these great religious monuments of the Ottoman period were built *extra muros* shows that the Great Mosque of the Umayyads was no longer a unique centre of assembly for the Muslim community and definitely confirms the spread of the city beyond the old town.



With the progress of artillery the ancient fortifications of Dimas̲h̲ḳ became outdated, but on the other hand the peace which reigned over the empire diminished the value of the surrounding walls which at this time began to be invaded by dwelling-houses, while the moats which had become a general night-soil dump were filled with refuse.



Within the ramparts the streets were paved, cleaned and lit at the expense of those living along them, as under the last Mamlūks. If the piety of the population showed itself in the construction of public fountains (*sabīl*), the *madrasas* and *zāwiyas*, in contrast, were deserted by many in favour of the coffee-houses which multiplied and added to the number of meeting-places for the people. The only monument worth notice *intra muros* apart from the *k̲h̲āns* is the palace which the governor Asʿad Pas̲h̲a al-ʿAẓm had built to the south-east of the Great Mosque in 1162/1749. The whole body of buildings is grouped according to the traditional arrangements of a Syrian dwelling of the 18th century with a *salāmlik* and a *ḥarāmlik* decorated with woodwork in the Turkish style. This palace is at present occupied by the National Museum of Ethnography and Popular Art.



The Modern Period (1831-1920).—Between 1832 and 1840, Egyptian domination was to bring to Dimas̲h̲ḳ, which had for centuries remained outside the main current of political events, a relative prosperity. In 1832 Ibrāhīm Pas̲h̲a, the son of Muḥammad ʿAlī, after crossing Palestine came to seize Dimas̲h̲ḳ, where revolts against the Ottomans had preceded his arrival. The population aided the Egyptian troops who put the Ottomans to flight near Ḥimṣ, then at the end of July inflicted a new defeat on them near Ḥalab and forced them back across the Taurus.

The Egyptian regime lasted a decade and allowed the return of Europeans who up to that time had not been able to enter the town in western clothes and had been forced to submit to all kinds of irritating formalities. In spring 1833 the Sultan ceded the viceroyalty of Syria to Muḥammad ʿAlī and Ibrāhīm Pas̲h̲a governed it in his father's name. From that time on, foreign representatives came and settled in Dimas̲h̲ḳ. Very liberal and tolerant on the religious side, Ibrāhīm Pas̲h̲a founded a college in Damascus where some six hundred uniformed pupils received both general and military instruction. Many administrative buildings were put up even to the sacrifice of some ancient monuments such as the Tankiziyya, which was turned into a military school and remained so until after 1932. A new residence, the Sérail, was built for the governor. This, which was erected outside the walls to the west of the city facing Bāb al-Ḥadīd, was soon to bring about the creation of a new district, al-Ḳanawāt, along the Roman aqueduct. The buildings of Dar al-Saʿāda and the Iṣṭabl, where in 932/1526 there had existed a small zoological garden dating from the Mamlūks, were transformed into a military headquarters which only ceased to exist in 1917, while in this same sector of the city the best patronized shops were grouped together in the Sūḳ al-Arwām. In J. L. Porter's *Five Years in Damascus*, 2 vols., London 1855, an interesting picture of the city in the middle of the 19th century is to be found. In 1840, after having re-established order and peace, Ibrāhīm Pas̲h̲a made a first attempt at reform (see BALADIYYA and MAD̲J̲LIS) and proposed an independent and centralized government. Europe, and above all Palmerston, was opposed to the ambitions of Muḥammad ʿAlī; they profited therefore by the discontent provoked by the introduction of conscription to rouse the population against Ibrāhīm Pas̲h̲a who was forced to evacuate Dimas̲h̲ḳ. His attempt at reform was not followed up and the Damascenes fell back under Ottoman domination. A violent outburst of fanaticism was to break the apparent calm of life there. Bloodthirsty quarrels having arisen between the Druzes and the Maronites of the south of Lebanon, public opinion was stirred up in Damascus and on 12 July 1860 the Muslims invaded the Christian quarters and committed terrible massacres, in the course of which the Amīr ʿAbd al-Ḳādir, exiled from Algeria, was able by his intervention to save some hundreds of human lives. This explosion was severely punished by the Sultan and, at the end of August 1860, provoked the landing of troops sent by Napoleon III.

From the beginning of this period European influence made itself felt in the cultural and economic spheres. Foreign schools of various religious denominations were able to develop, thanks to subventions from their governments. The Lazarist Fathers had had a very active college since 1775, and a Protestant Mission had been functioning since 1853. New establishments were opened after 1860 such as the British Syrian Mission and the College of Jesuits (1872). Education of girls was carried on by the Sisters of Charity. Midhat Pas̲h̲a made an attempt to develop state education but it was no more than an attempt and was not followed up. Cairo was the true intellectual centre at this time, and it was Cairo's newspapers, *al-Muḳtaṭaf* and *al-Muḳaṭṭam*, which were read in Dimas̲h̲ḳ. *Al-S̲h̲ām*, the first Arabic language newspaper edited and printed in

LIST OF MONUMENTS SHOWN ON THE PLAN OF DIMASHK

1.	Roman arch	3rd century
2.	Agora	B.C.
3.	Castrum	3rd century
4.	Chapel of Ananias	1st century
5.	Citadel	13th century
6.	Bāb al-Barīd	3rd century
7.	Bāb al-Djābiya	3rd-12th century
8.	Bāb Djayrūn	3rd century
9.	Bāb Djīnīḳ	3rd century
10.	Bāb al-Farādīs	13th-15th century
11.	Bāb al-Faradj	12th-15th century
12.	Bāb Kaysān	14th century
13.	Bāb al-Ṣaghīr	12th century
14.	Bāb al-Salām	13th century
15.	Bāb Sharḳī	3rd-12th century
16.	Bāb Tūmā	3rd-13th century
17.	Dār al-Biṭṭīkh	8th century
18.	Dār al-Ḥadīth of Nūr al-Dīn	12th century
19.	Dār al-Khayl	7th century
20.	Djāmiʿ Darwīshiyya	16th century
21.	Djāmiʿ Hishām	15th century
22.	Djāmiʿ Sibāʾiyya	16th century
23.	Djāmiʿ Sināniyya	16th century
24.	Djāmiʿ of Tankiz	14th century
25.	Djāmiʿ of Yilbughā	13th century
26.	Church of St. Mary	
27.	Great Umayyad mosque	8th century
28.	ʿImāret of Selīm	16th century
29.	al-Khaḍrāʾ	7th century
30.	Khān Asʿad Pasha	18th century
31.	Khān al-Ḥarīr	16th century
32.	Khān Sulaymān Pasha	18th century
33.	Khānaḳāh al-Ṭāwūsiyya	12th century

Damascus, was not to appear until 1897. Little by little, however, the Syrian capital was to become one of the centres of Arab nationalism. As in the other towns of Syria, secret revolutionary cells showed themselves very active in the last quarter of the 19th century and periodically exhorted the population to rebel. It was even said that Midḥat Pas͟ha, author of the liberal constitution of 1876, protected the movement after he had become governor of Dimas͟hḳ in 1878. The great reformer had a population of about 150,000 to administer and accomplished lasting good in the city, chiefly in matters concerned with public hygiene and improvement of the traffic system, which since carriages had come on the scene had grown very inadequate in the old town. The governor replaced a number of alleyways in the *sūḳ*s with broader streets. The western part of the Street called Straight was widened and given a vaulted roof of corrugated iron; this is the present day Sūḳ Midḥat Pas͟ha. To the south of the citadel the moat was filled in and its place occupied by new *sūḳ*s, while the whole road joining Bāb al-Ḥadīd with the Great Mosque was made wide enough for two-way carriage traffic and was given the name Sūḳ Ḥamīdiyya. New buildings were put up at this time on vacant lots to the west of the town around the Mard͟ja, the "Meadow". These were a new "sérai", seat of the civil administration, a headquarters for the military staff, the town-hall, the law-courts, a post-office and a barracks. The Ḥamīdiyya barracks, which was newly fitted out and arranged after 1945, was to be the kernel of the present-day university. The Christian quarter of Bāb Tūma saw the rise of fine houses where European consuls, missionaries, merchants and so on, settled themselves, while the old town began to empty; there were no longer any gaps between the suburbs of Suwayḳāt and al-Ḳanawāt to the west, or those of Sarūd͟ja and al-ʿUḳayba to the north-west. A new colony of Kurds and of Muslims who had emigrated from Crete settled at al-Ṣāliḥiyya, which gave the quarter the name of al-Muhād͟jirīn. The situation of this suburb on the slopes of the D͟jabal Ḳāsiyūn attracted the Turkish aristocracy who built beautiful houses surrounded by gardens there. At this time also relations with the outer world became easier and to the two *locandas* existing before 1860 were added new hotels for the foreigners who, after 1863, were able to travel from Bayrūt to Dimas͟hḳ by stage-coach over a road newly constructed by French contractors. Further progress was made in 1894 when a French company opened a railway between Bayrūt, Dimas͟hḳ and the Ḥawrān. Later on a branch from Rayyāḳ to the north went to Ḥimṣ and Ḥalab. Then ʿIzzat Pas͟ha al-ʿAbīd, a Syrian second secretary to the Sultan, conceived the idea of a Damascus-Medina line to make the pilgrimage easier. From this time on, the Sultan was to be on friendly terms with Kaiser Wilhelm II, who had visited Dimas͟hḳ in the winter of 1898, and so the construction of this line was placed in German hands. The narrow gauge Ḥid͟jāz railway was inaugurated in 1908; it allowed pilgrims to reach the Holy City in five days instead of the forty which it had taken by caravan. In this same year, an army officers' movement forced the Sultan to restore the Ottoman constitution which had been suspended for 31 years and it was not long after this that ʿAbd al-Ḥamīd II was overthrown. This news was greeted in Dimas͟hḳ with large-scale popular manifestations and many firework displays, but their happiness was to be of short duration. The spirit of liberalism which had led Kurd ʿAlī to bring to the city his review, *al-Muḳtabas*, which he had founded in Cairo three years earlier as a daily paper, was deceptive. Indeed after 1909 the Ottoman authorities banned it and the only resource for the Arab nationalists was to band themselves together again in secret societies.

The declaration of war in 1914 was to have grave consequences for Dimas͟hḳ. At the end of that year, D͟jemāl Pas͟ha was appointed Governor-General of Syria, Lebanon and Palestine, and Commander-in-Chief of the 4th Ottoman army with headquarters in Dimas͟hḳ. This town rapidly became the great General Headquarters of the combined German and Turkish forces and their operational base against the Suez zone. D͟jemāl Pas͟ha soon showed himself a mediocre general but a very energetic administrator. He had hoped to win the people of Dimas͟hḳ over to the Turkish cause but was soon forced to give up this idea. It was in Dimas͟hḳ, in the circle of the family al-Bakrī, that the Amīr Fayṣāl, son of Ḥusayn, the S͟harīf of Mecca, was won over to the idea of Arab revolt in April 1915; he met with members of the secret societies *al-Fatāt* and *al-ʿAhd*, at that time. At the end of May, Fayṣal returned from Constantinople and shared in the elaboration of a plan of action against the Turks with the co-operation of the British. They arrived ultimately at the famous "Protocol of Damascus" asking Britain to recognize Arab independence and the abolition of capitulations. In January 1916, Fayṣal was in Damascus again and was still there on 6 May when D͟jemāl Pas͟ha had twenty-one partisans of the Arab cause hanged. This event, the "Day of the Martyrs", is still commemorated every year. On 10 June, the revolt broke out in the Ḥid͟jāz, where the S͟harīf Ḥusayn proclaimed himself "King of the Arabs". It was not until 30 September 1918 that Turkish troops evacuated Dimas͟hḳ. On 1 October Allied forces, including units of the Amīr Fayṣal, entered the city. In May 1919 elections took place to appoint a National Syrian Congress and in June this congress decided to reject the conclusions at which the Peace Conference of Paris had arrived concerning the mandates. On 10 December a national Syrian government was formed in Dimas͟hḳ. On 7 March 1920 the National Congress proclaimed Syria independent and elected Fayṣal as king. The Treaty of San-Remo in April 1920 gave the mandate over Syria to France, in the name of the League of Nations. But this decision roused serious discontent in Dimas͟hḳ and other large Syrian towns. On 10 July the National Congress proclaimed a state of siege and introduced conscription, but on 14 July General Gouraud, High Commissioner of the French Republic, gave an ultimatum to Fayṣal who accepted its terms. Popular agitation grew in Dimas͟hḳ and on 20 July the Arab army had to disperse a large meeting of the people. French troops were sent to Syria to put the agreement which had been concluded into force. On 24 July fighting broke out at Mayṣalūn and on 25 July the French entered Dimas͟hḳ. King Fayṣal was forced to leave the country and power passed into the hands of the High Commissioner. The mandate had begun.

The Contemporary Period.—The period of the mandate was marked by expressions of hostility to the mandatory power, which sometimes took the form of strikes, sometimes of more violent outbreaks.

The most serious revolt which broke out in 1925 in the D͟jabal Durūz, under the leadership of the

Amīr Sulṭān al-Aṭrash, succeeded in taking Dimashk. At the end of August the rebels, newly arrived in the suburbs of the city, were repulsed. The population did not openly support them until they came back a second time, when on 15 October 1925 serious rioting occurred in the city which caused General Sarrail to bombard it on 18 October. In April 1926 a new bombardment put an end to a rising in the Ghūṭa and the city, but tranquillity was not restored until the following autumn.

From 1926 onwards the town began to develop in the western sense of the word very quickly. Undeveloped quarters between al-Ṣāliḥiyya and the old city were rapidly built up and from then on, the suburbs of al-Djisr, al-ʿArnūs and al-Shuhadāʾ provided homes for a growing number of Europeans and Syrians without any segregation of ethnic groups. The Christians of Bāb Tūma left the city walls in greater and greater numbers to set up the new district of Kaṣṣāʿ. To avoid chaotic development, the French town-planner, Danger, in 1929 created a harmonious and balanced plan for the future town, and its working out was put into the hands of the architect, Michel Écochard, in collaboration with the Syrian services. New roads, often tree-lined, were made and the ancient Nayrāb became the residential quarter of Abū Rummāna which continued to extend towards the west. New suburbs were developed to the north of the old city between the Boulevard de Baghdād and the Djabal Kāsiyūn, and to the north-east towards the road to Ḥalab. In view of the growth of the population and in the interests of public health the drinking water was brought from the beginning of 1932 by special pipelines from the powerful spring of ʿAyn Fīdja in the valley of the Baradā.

Dimashk suffered very much less in the Second World War than in the first. In June 1941 British and Free French troops entered Syria. On 16 September 1941 General Catroux proclaimed its independence, but there was no constitutional life in Dimashk until August 1943. It was then that Shukrī al-Kuwwatlī was elected President of the Republic. On 12 April 1945 the admission of Syria to the United Nations Organization put an end to the mandate, but a new tension was to be felt in Franco-Syrian relations. They reached a culminating point on 29 May 1945, when the town was bombarded by the French army. The British intervened in force to restore order and some months later foreign troops finally evacuated Syria.

From 1949 until 1954 Dimashk was shaken by a series of military *coups d'état*. In 1955 Mr. Shukrī al-Kuwwatlī became President of the Republic again and from 1956 on discussions were broached with a view to a Syro-Egyptian union. On the proclamation of the United Arab Republic in 1958 Dimashk became the capital of the northern region; but after the *coup d'état* of the 28th September 1961 it again became the capital of the Syrian Arab Republic.

Ruled by a municipal council, the city in 1955 had a population of 408,800 of whom 90% were Sunnī Arabs. Important groups of Kurds, Druzes and Armenians were also to be found there.

Numerous cultural institutions make Dimashk an intellectual centre of the first rank. The Arab Academy (*al-Madjmaʿ al-ʿIlmi al-ʿArabī*), founded in June 1919, on the initiative of Muḥammad Kurd ʿAlī, is situated in the al-ʿĀdiliyya *madrasa*, while opposite this, the al-Ẓāhiriyya *madrasa* houses the National Library which possesses more than 8,000 manuscripts. The Syrian University, which originated from a school of medicine (1903) and a school of law (1912), was founded on 15 June 1923. In 1960 it had about 10,000 students divided into six faculties. The National Museum of Syria, founded in 1921, has been installed since 1938 in premises specially devised for the preservation of its rich collections (Palmyra, Doura Europos, Ras Shamra, and Mari rooms). The *Direction générale des antiquités de Syrie*, created in 1921, is housed in the same buildings. Many bookshops, a dozen or so cinemas, radio and television transmitting stations, help make Dimashk give a very modern impression. It is an important centre of communications with its railway connections with ʿAmmān and beyond that, ʿAkaba, terminus of the Dimashk-Ḥimṣ line and its prolongation (D.H.P.), its motor-roads, Bayrūt-Baghdād and al-Mawṣil as well as Jerusalem-ʿAmmān-Bayrūt, and its Class B international aerodrome situated at Mizza. It is also the greatest grain market of the Ḥawrān and a centre of supplies for the nomads and peasants of the Ghūṭa. These not only find many foreign products in its *sūk*s but also goods specially manufactured to fit the needs of the country-dweller. There exists also a class of artisans which specializes in luxury goods such as wood inlays, mother of pearl mosaics, silk brocades and engraved or inlaid copper work. Wood turners and glass blowers are also very active.

The protectionist measures of 1926 brought a remarkable upward trend to industry and thus it was that a first cloth factory (1929), a cement works at Dummar (1930) and a cannery (1932) were founded one after the other. Modern spinning mills were installed in 1937, and by 1939 there were already 80 factories representing 1500 trades. A large glass-works was put up to the south of the city at Kadam in 1945, while to the east many tanneries and dye-works ply their centuries-old activities. Since 1954 an important international exhibition and fair has been held at the end of each summer on the banks of the Baradā. This has helped to establish Dimashk as a great commercial and industrial centre of the Arab Near East.

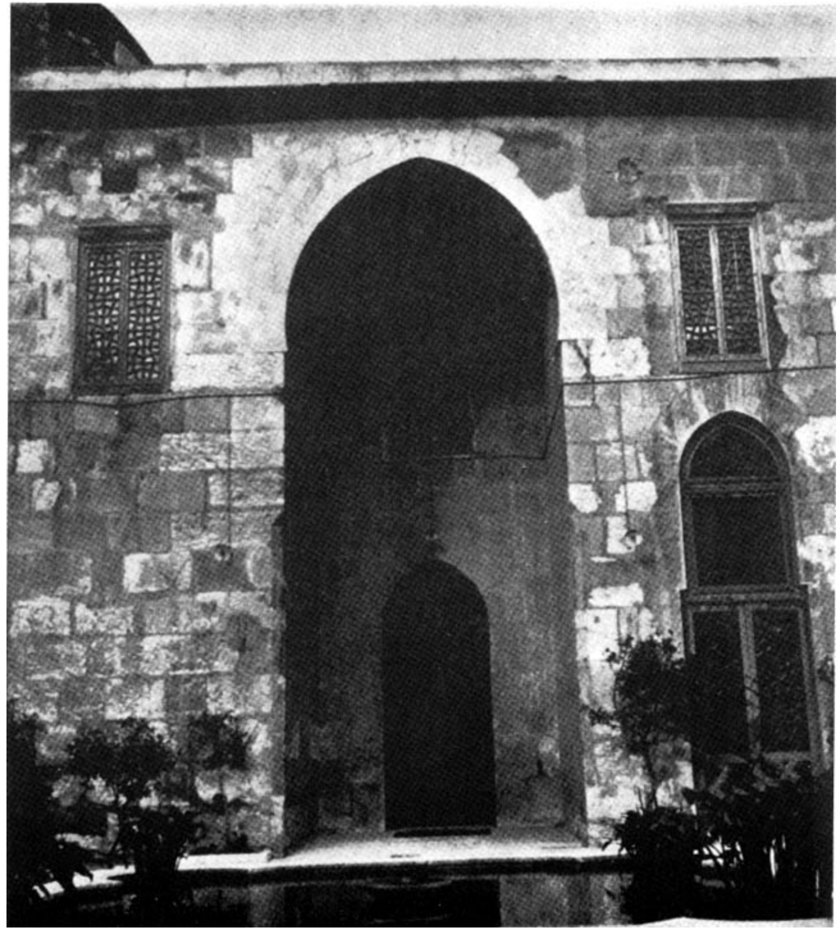
al-DIMASHĶĪ, Shams al-Dīn Abū ʿAbd Allāh Muḥammad b. Abī Ṭālib al-Anṣārī al-Ṣūfī, known as Ibn Shaykh Ḥittīn, author of a cosmography and other works. He was *shaykh* and *imām* at al-Rabwa, described by Ibn Baṭṭūṭa as a pleasant locality near Damascus, now the suburb of al-Ṣāliḥiyya, and d. at Ṣafad in 727/1327. Al-Dimashķī's best known work, *Nukhbat al-dahr fī ʿadjāʾib al-barr wa 'l-baḥr* is a compilation dealing with geography in the widest sense, and somewhat closely resembling the *ʿAdjāʾib al-makhlūķāt* of al-Ķazwīnī. Though the author's standpoint is conspicuously uncritical, his book contains a good deal of information not to be found elsewhere. Less well known but also of considerable interest is another work of al-Dimashķī, *al-Maķāmāt al-falsafiyya wa 'l-tardjamāt al-ṣūfiyya* (see E. G. Browne, *Handlist of the Muhammadan MSS preserved in the library of the University of Cambridge*, 217-218, no. 1102), fifty *maķāmas* forming an encyclopaedia of physical, mathematical and theological information, placed in the mouth of one Abu 'l-Ķāsim al-Tawwāb (*i.e.*, the Penitent), on the authority of Abū ʿAbd Allāh al-Awwāb (*i.e.*, the Repentant). Al-Dimishķī has also left a defence of Islam, *Djawāb risālat ahl djazīrat Ķubrus*, in which traces of Ṣūfī mysticism appear (see E. Fritsch, *Islam u. Christentum im Mittelalter*, Breslau, 1930, 33-36). Another work of his has been printed: *al-Risāla* (variant: *al-Siyāsa*) *fī ʿilm al-firāsa* (Cairo 1300 A.H.); but *Maḥāsin al-tidjāra* (Cairo 1318 A.H.) attributed to Shams al-Dīn by Brockelmann (correctly *K. al-ishāra ilā maḥāsin al-tidjāra*, tr. H. Ritter, in *Isl.*, vii, 1917, 1-91) was written by Abu'l-Faḍl Djaʿfar b. ʿAlī al-Dimashķī.

Bibliography: A. F. Mehren, *Cosmographie de Chems-ed-Din Abou Abdallah Mohammed ed-Dimichqui*, Arabic text, St. Petersburg 1866, transl. *Manuel de la Cosmographie du Moyen Age*, Copenhagen 1874; Brockelmann, II, 130, S II, 161, *GAL*², ii, 161. (D. M. Dunlop)



DIMETOĶA, also called Dimotiķa, a town in the former Ottoman Rumeli. Dimetoķa lies in western Thrace, in a side valley of the Maritsa, and at times played a significant role in Ottoman history. The territory has belonged to Greece since the treaty of Neuilly (27 November 1919), again bears its pre-Ottoman name of Didymóteikhon, and lies within the administrative district (Nomos) of Ebros. It has a population of about 10,000, and is the seat of a bishop of the Greek church as well as of an eparch (provincial governor). It is situated near the junction of the Saloniki—Alexandroupolis—Dimetoķa line with the Orient line.

Dimetoķa, which was called Didymóteikhon (Διδυμότειχον) by the Byzantines, fell first into Ottoman hands in Muḥarram 763/November 1361, according to the Florentine chronicler Matteo Villani (cf. F. Babinger, *Beiträge zur Frühgeschichte der Türkenherrschaft in Rumelien* (*14.-15. Jhdt.*) = *Südosteuropäische Arbeiten*, xxxiv, Munich 1944, 46). Dimetoķa had been defended by a castle encircled by a double wall, built for protection on a conical hill, and provided with strong fortifications under the ruler Matthew Cantacuzenus; it was probably the commander Ḥādjdjī Ilbegi who brought it into Ottoman possession. Murād I, before the conquest of Adrianople early in 762/1361 (cf. F. Babinger, in *MOG*, ii (1926), 311 ff.), set up his court there. The Burgundian traveller and diplomat Bertrandon de la Broquiere (see his *Voyage d'outre-mer*, ed. Ch. Schefer, Paris 1892, 172 ff., 180) has vividly depicted its appearance in 1443; from this it may be seen that Dimetoķa, as the first residence of the new Ottoman lords—their final removal to Adrianople/Edirne cannot have followed until about 766/1365—was built and beautified with especial care, although the layout of the fortifications of that time goes back for the most part to Byzantine times. The rich and broad hunting grounds of the surrounding country made Dimetoķa a favourite resort of early Ottoman rulers, such as the prince and claimant to the Sultanate Mūsā Čelebi, and Bāyazīd II, who was born there in Dhu 'l-Ķaʿda 852/January 1449 to the 15 year-old future Sultan Meḥemmed II. The planning of the royal palace and its additions owed its origin to this circumstance. The first design was brought to completion under Murād I (Cf. Ḥādjdjī Khalīfa, *Rumeli und Bosna*, trans. J. von Hammer, Vienna 1812, 65). Bāyazīd II, weary of wordly cares, proposed to spend the rest of his life there, to avoid persecution by his son Selīm I, but died en route—probably poisoned—on 10 Rabīʿ I 918/26 May 1512, not far from Hafsa (on the place of death cf. Hammer-Purgstall, *GOR*, ii, 365 ff., 625). The Swedish king Charles XII (1697-1718) fared rather better when, before reaching Stralsund, he stayed in Dimetoķa from February 1713 to October 1714, and managed to evade pursuit by an adventurous ride.

1080/1670 is given by the Ottoman globe-trotter Ewliyā Čelebi [*q.v.*] in the eighth volume of his *Siyāḥatnāme* (73 ff.; cf. the abridgement in H. J. Kissling, *Beiträge zur Kenntnis Thrakiens im 17. Jahrhundert* = *Abh.K.M.*, xxxii/3 (1956), 81 ff.). At that time the sole Muslim in the fortress of the city was its commandant (*dizdār*), for the inner castle (*derūn ḥiṣār*) consisted of a hundred tumbledown houses occupied by "unbelievers". Dimetoḳa was the seat of a judge and the administrative centre of a district (*nāḥiye*). The upper fortress measured, according to Ewliyā Čelebi, 2500 paces in circumference, and the outer double walls of stone were defended by "a hundred" towers. There was no moat, no space for one being available. The citadel (*ič ḳalʿe*) of the upper fort is arranged on two vertical levels; one part is commonly called the "Maiden's tower" (*Ḳïz ḳalʿesi*). From Ewliyā Čelebi's detailed description of the defensive arrangements of Dimetoḳa it is specially noticeable that the royal palace, which was at that time no longer much used, lay in the upper fortress, and could be reached through doors accessible only to the sultan. The lower city (*varoš*) was divided in Ewliyā Čelebi's time into twelve wards (*maḥalle*) and consisted of 600 multi-storeyed tiled houses. In Dimetoḳa at that time there were twelve places of worship, the most important of these being that with which sultan Bāyazīd I graced his usual abode. The remainder are smaller mosques (*mesdjid*), many of which our traveller mentions by name; they owe their origin for the most part to the well-to-do Ottoman dignitaries established there. Sultān Bāyazīd I had a Ḳurʾān school erected in Dimetoḳa, which next to that of Urudj Pasha is the most important of the four in existence. Of the baths, the so-called "Whisper Bath" (*fïsïltï ḥammāmï*), with its "Ear of Dionysus", is also mentioned by Ḥādjdjī Khalīfa (*op. cit.*, 66). According to the *Sālnāme* of Edirne, 1309/1891-2, 208, it was still standing and widely famous. There was no *bazzistān*, although the market (bāzār) was dominated by some 200 potters' stalls, whose wares, especially the red Dimetoḳa glasses, beakers, dishes and jugs enjoyed a great reputation. The chief produce of Dimetoḳa and its environs is grapes and quinces.

There were numerous graves of holy men, who found their last resting place in or near Dimetoḳa; Ewliyā Čelebi gives a list of them by name, from which it appears that they belonged entirely to the Bektashī order; from the evidence of Ottoman toponymy the hinterland of Dimetoḳa towards the west must have been to a very great extent a centre of the dervishes, particularly those of the Bektashīs (cf. H. J. Kissling, *op. cit.*, 83, n. 310). In more modern times Dimetoḳa, out of the way from the bustle of the world, had practically no part to play under the Ottomans, and gradually declined.

Bibliography: in addition to references in the text, cf. *Sālnāme-i Edirne*, 18th ed. 1309, 203-9; 28th ed. 1319, 996 ff.; Sāmī Bey Frashëri, *Ḳāmūs al-aʿlām*, iii, Constantinople 1308/1891, 2216 ff.; Ami Boué, *Recueil d'itinéraires dans la Turquie d'Europe*, i, Vienna 1854, 102 ff. European travellers have hardly touched Dimetoḳa and its surroundings and have left no descriptions.

(F. BABINGER)

DIMYĀṬ (Damietta), a town of Lower Egypt situated on the eastern arm of the Nile, near its mouth. Dimyāṭ, which was an important town before the Muslim conquest, was captured by a force under al-Miḳdād b. al-Aswad, sent by ʿAmr b. al-ʿĀṣ. As a Muslim town, it suffered repeated naval raids, at first from the Byzantines and subsequently from the Crusaders. After an attack in Dhu 'l-Ḥidjdja 238/June 853, al-Mutawakkil ordered the construction of a fortress at Dimyāṭ as part of a general plan to fortify the Mediterranean coast. Dimyāṭ, as the key to Egypt, played a particularly important part in the conflicts between Franks and Muslims at the end of the Fāṭimid dynasty and in Ayyūbid times. When Ṣalāḥ al-Dīn al-Ayyūbī was vizier of Egypt, the Franks under Amalric I of Jerusalem besieged Dimyāṭ, but were compelled to withdraw in Rabīʿ I 565/December 1169. Dimyāṭ was twice more the centre of important military operations. The great Crusading expedition of 615-8/1218-21 (see Hans L. Gottschalk, *Al-Malik al-Kāmil von Egypten und seine Zeit*, Wiesbaden 1958, 58-70, 76-88, 104-15) succeeded in capturing the town but was ultimately forced to capitulate by al-Kāmil. In Ṣafar 647/June 1249 Dimyāṭ was taken by Louis IX, shortly before the death of al-Ṣāliḥ, but was restored to Muslim rule on Louis's subsequent capitulation. The Baḥriyya Mamlūks, who then formed the ruling élite of Egypt, decided to end its military importance. The walls and town, except for the mosque, were demolished in 648/1250-1; while in 659/1260-1 the river-mouth itself was blocked to sea-going ships by order of Baybars I. The devastation of Dimyāṭ was no doubt the cause of the extinction of its famous textile industry, although a new urban centre, which took the old name, soon arose on a site south of the former town. In the Mamlūk and Ottoman periods, Dimyāṭ was used as a place of banishment. In Rabīʿ I 1218/July 1803 the Ottoman viceroy of Egypt, Meḥmed Khüsrev Pasha, who had been expelled from Cairo by a revolt of Albanian troops, was compelled to surrender at Dimyāṭ, where he had fortified himself, to a force commanded by Meḥmed ʿAlī and the Mamlūk grandee, ʿUthmān Bey al-Bardīsī.

Bibliography: The principal data are given in Maḳrīzī, *al-Mawāʿiẓ*, ed. Wiet, iv/2, 37-80; and ʿAlī Mubārak, *al-Khiṭaṭ al-djadīda*, xi, 36-57 (largely a reproduction of Maḳrīzī). For a full bibliography, see Maspero-Wiet, *Matériaux*, 92-3.

AL-DIMYĀṬĪ, ʿABD AL-MUʾMIN B. KHALAF SHARAF AL-DĪN AL-TŪNĪ AL-DIMYĀṬĪ AL-SHĀFIʿĪ, traditionist born in 613/1217 on the island of Tūnā between Tinnīs and Damietta; at the end of his career he was professor at the Manṣūriyya and at the Ẓāhiriyya in Cairo, where he died in 705/1306. Apart from the works listed by Brockelmann, to be supplemented by the recent study of A. Dietrich, *ʿAbdalmuʾmin b. Xalaf ad-Dimyāṭī'nin bir muhâcirûn listesi*, in *Şarkiyat Mecmuasi*, iii (1959), 125-55) he has left a dictionary of authorities, often cited and used by subsequent historians and biographers, called *Muʿdjam Shuyūkh*; it only survives at the present time in a single incomplete manuscript (Tunis, *Aḥmadiyya*, 911-2,—about 1185 entries out of the 1250 contained in the complete work) which was written at the author's dictation. In this document are contained the *Ḥadīth*, and also other texts collected by al-Dimyāṭī in the course of his numerous voyages in Egypt, the two holy cities, in Syria, Djazīra and in ʿIrāḳ between 636/1238 and 656/1258; these, together with the numerous reading-certificates which accompany them, will be the subject of a monograph by G. Vajda. Apart from his own works, al-Dimyāṭī is one of the most

important figures of the last third of the 7th/13th century in the field of the handing down of traditions.

Bibliography: Brockelmann, II², 88; S. II, 79 (to the sources quoted may be added *al-Durar al-Kāmina*, ii, 417, no. 2525 and Ibn Rafiʿ, *Muntakhab al-Mukhtār*, in the edition of ʿAzzāwī, 120-2, no. 104; for Dimyāṭī as a transmitter of traditions, see also Ahlwardt, *Verzeichniss ... Berlin*, no. 9648 (ix, 193 f.); G. Vajda, *Les certificats de lecture* ... 12; Ahmed Ateş, in *RIMA*, iv, 1, 1958, 14.

(G. Vajda)

AL-DIMYĀṬĪ, al-Bannā'. Aḥmad b. Muḥammad b. Aḥmad b. Muḥammad b. ʿAbd al-Ghanī al-Dimyāṭī, known as al-Bannā', though he had some local reputation in Lower Egypt as a pillar of the Nakshbandiyya order of dervishes, owes his fame to his work *Itḥāf fuḍalā' al-bashar* on the Ḳur'ānic variants of the Fourteen Readers. He was born at Dimyāṭ where he had the usual education of a Muslim youth under local teachers, till he was able to journey to Cairo, where he studied *ḳirā'āt*, *ḥadīth* and Shāfiʿī *fiḳh* under al-Muzāḥī and al-Shabrāmulsī, and was able to hear such contemporary masters as al-Adjhūrī, al-Shawbarī, al-Ḳalyūbī and al-Maymūnī. At the conclusion of his studies he went on pilgrimage to Mecca where he studied *ḥadīth* under al-Kūrānī. On his return to Dimyāṭ he published his *Itḥaf*, on which he had apparently been at work while in the Ḥidjāz, and in which he collected the variant readings of Ibn Muḥayṣin of Mecca, al-Yazīdī of Baṣra, al-Ḥasan of Baṣra, and al-Aʿmash of Kūfa, as well as the more commonly studied Ten Readers, prefacing the whole with an excellent study on the science of *ḳirā'āt*. He also made a one volume digest of the famous *al-Sīra al-Ḥalabiyya*, and compiled a treatise, *al-Dhakhā'ir al-muhimmāt*, on the signs which precede the coming of the Last Day. After a second pilgrimage to the Holy Cities he journeyed to the Yemen, where he was initiated by Shaykh Aḥmad b. ʿAdjīl into the Nakshbandiyya fraternity. On his return to Egypt he established himself as a marabout in the sea-side village of ʿEzbet al-Burdj. During a third pilgrimage he died at Medina in Muḥarram 1117/April-May 1705, and was buried in the Baḳīʿ. Besides the *Itḥāf*, which has been printed at Constantinople in 1285/1868-9, and at Cairo in 1317/1899-1900, he wrote smaller works on Ḳur'ānic readings, of which MSS survive, and the gloss he made to al-Maḥallī's commentary on the *Waraḳāt* of Imām al-Ḥaramayn has been printed at Cairo in 1303/1885-6 and again in 1332/1913-14.

Bibliography: al-Djabarti, *ʿAdjā'ib al-Āthār*, i, 89, 90, copied into ʿAlī Pasha Mubārak's *Khiṭaṭ Djadīda*, xi, 56; Sarkis, *Bibliographie*, col. 885; Brockelmann, II, 327; S. II, 454).

(A. Jeffery)

AL-DIMYĀṬĪ, Nūr al-Dīn or Aṣīl al-Dīn; his dates are uncertain but almost certainly not before the end of the 7th/13th century; author of a *ḳaṣīda* in *lām* on the names of God (see al-asmā' al-ḥusnā and dhikr); each verse of this *ḳaṣīda* is reputed to possess mysterious virtues, given in detail by the commentaries of which the text has several times been the object (the best-known is that by the Moroccan mystic, Aḥmad al-Burnusī Zarrūḳ, d. 899/1493). The *ḳaṣīda Dimyāṭiyya* holds a considerable place in the worship of the semi-literate, in particular in North Africa. A translation of it was made into Ottoman Turkish in 1257/1841 by Ibrāhīm b. Meḥmed Ṣāliḥ al-Ḳādirī al-Kastamūnī al-Istānbūlī, and printed in the following year at Istanbul, together with several *taḳrīẓ* and the Arabic text, under the title of *Farā'id al-La'ālī fī bayān asmā' 'l-mutaʿālī*. A fragment of another work of the same kind attributed to al-Dimyāṭī is preserved, with a commentary, in the ms. Paris, B.N. Arabe 1050, fol. 138-139, while an imitation, not without vulgarisms in its language, was written by a certain Maḥmūd Hizza al-Dimyāṭī (printed as an appendix to *Badīʿ al-maḳāl* by an anonymous Andalusian, with the title of *al-Istighfār al-asmā fī naẓm asmā' Allāh al-ḥusnā*, Būlāḳ 1319/1901).

Bibliography: J. Goldziher, in *Orientalische Studien .... Nöldeke*, i, 317-20; E. Doutté, *Magie et Religion en Afrique du Nord*, 199-211; G. Levi Della Vida, *Elenco* 55-66; Brockelmann, S II, 361, note.

(G. Vajda)

DĪN, I. Definition and general notion. It is usual to emphasize three distinct senses of *dīn*: (1) judgment, retribution; (2) custom, usage; (3) religion. The first refers to the Hebraeo-Aramaic root, the second to the Arabic root *dāna, dayn* (debt, money owing), the third to the Pehlevi *dēn* (revelation, religion). This third etymology has been exploited by Nöldeke and Vollers. We would agree with Gaudefroy-Demombynes (*Mahomet*, 504) in not finding it convincing. In any case, the notion of "religion" in question is by no means identical in Mazdaism and Islam. On the contrary, the two first etymologies, Hebrew and Arabic, seem to interact, and the meanings are nothing like so diverse as has sometimes been stated. Thus the semantic dialectic of Arabic causes *dayn* "debt which falls due on a given date" to pass to *dīn* "custom" (cf. *EI*¹, s.v., art. by Macdonald). "Custom, usage", in its turn, leads to the idea of "direction" (given by God), *hudā*; and to judge (the sense of the Hebrew root) is to guide each one in a suitable direction, hence to give retribution. In Gaudefroy-Demombynes' view the "Day of Judgment" (*yawm al-dīn*)" is the day when God gives a direction to each human being". Elsewhere the Arabic philologists freely derive *dīn* from *dāna li-*... "submit to". *Dīn* henceforth is the corpus of obligatory prescriptions given by God, to which one must submit.

Thus *dīn* signifies obligation, direction, submission, retribution. Whether referring to the Hebrew-Aramaic sense or the ancient Arabic root, there will remain the ideas of debt to be discharged (hence obligation) and of direction imposed or to be followed with a submissive heart. From the standpoint of him who imposes obligation or direction, *dīn* rejoins the "judgment" of the Hebrew root; but from the standpoint of him who has to discharge the obligation and receive the direction, *dīn* must be translated "religion"—the most general and frequent sense.

There is no doubt about this translation. But the concept indicated by *dīn* does not exactly coincide with the ordinary concept of "religion", precisely because of the semantic connexions of the words. *Religio* evokes primarily that which binds man to God; and *dīn* the obligations which God imposes on His "reasoning creatures" (*aṣḥāb al-ʿuḳūl*, as Djurdjānī says). Now the first of these obligations is to submit to God and surrender one's self to Him. Since the etymological sense of *islām* is "surrender of self (to God)", the famous Ḳur'ānic verse then shows its full meaning: "This day I have perfected your religion (*dīn*) for you and completed my favour unto you, and have chosen for you as religion *al-Islām*" (V 3; cf. II 126, III 19).

These few remarks cast some light on and perhaps

oversimplify the difficulties encountered in translating the *dīn* of Ḳur'ānic verses into Western languages. (1) The sense of judgment (and retribution) is quite frequent in the *sūra*s of the Meccan period: four times taken absolutely and 12 times in the expression *yawm al-dīn*. (2) The sense of religion is suitable in the other cases. It is true that R. Blachère several times, and appropriately, translates it by "act of worship" (*culte*) (e.g. II, 189; XLII, 11 and 20, etc.). Notice XLII, 11: "Discharge the debt of worship" (*acquittez-vous du Culte*), which evokes the primitive Arabic sense of debt, owing. But if we recall that *dīn* is defined by the obligations and prescriptions laid down by God, it must be admitted that the *culte* is the essential part of *dīn*. (Moreover Muslim authors often associate *ʿibāda*, the act of worship proper, and *dīn*). Finally sundry Ḳur'ānic expression must be indicated which are found again in subsequent elaborations: *al-dīn al-ḳayyim* "the immutable religion": "The Judgment (*ḥukm*) rests with Allāh only Who hath commanded you that ye worship none save Him. This is the immutable religion" (XII, 40); *dīn al-ḥaḳḳ*, "the religion of Truth": "He it is Who hath sent this Messenger with the guidance (*hudā*) and the religion of Truth" (XLVIII, 28); *al-dīn ḥunafā'*, "religion practised as a *ḥanīf* [*q.v.*]" (XCVIII, 5); *al-dīn al-khāliṣ*, "the pure religion" (XXXIX, 3). The three texts cited above (V, 3; IX, 36; and XLVIII, 28) emphasize the relationships of meaning between *dīn* on the one hand and, on the other, *islām* (surrender of self to God), *ḥukm* (judgment), and *hudā* (right direction). Other references could be given.

II. Content of the notion of *dīn*

There are numerous Ḳur'ānic verses which associate the worship of God, or the prayer due to God, and the religion (or *culte*), *e.g.*, XXXIX 14, etc. A well-known *ḥadīth* (Bukhārī, ii, 37) unites under "the teaching of religion" (a) the contents of the faith (*īmān*), (b) the practice of *islām*, (c) *iḥsān* or interiorization of the faith ("to adore God as though one saw him"). It later became common to define *dīn* by these three elements.

We now come to a few elaborations of doctrine. The Ḥanafī-Māturīdī text *Fiḳh Akbar II* defines religion as an appellation including faith, *islām*, and all the commandments of the Law. The *Kitāb al-tamhīd* of the Ashʿarī Bāḳillānī devotes a short chapter to the meaning of *dīn*. He distinguishes several possible meanings: (1) judgment in the sense of retribution (in the expression *yawm al-dīn*); (2) judgment in the sense of decision (*ḥukm*); (3) doctrine (*madhhab*) and religious community (*milla*), implying faith, obedience, and the practice of a given belief; in this last sense there may be more than one religion (cf. below); (4) *dīn al-ḥaḳḳ*, which is *islām* (and Islam): allowing one's self to be led by God and abandoning one's self to Him. In his *Taʿrīfāt*, Djurdjānī defines *dīn* as a divine institution (*waḍʿ*) which creatures endowed with reason receive from the Apostle. Similar definitions are repeated in the treatises of the Ashʿarī school. Thus in Bādjūrī's elementary manual *dīn* is "the corpus of prescriptions (*aḥkām*) which God has promulgated through the voice of His Apostle".

Thus the Māturīdīs willingly make faith an element in religion; the Ashʿarīs stress the prescriptions to be observed. As for the Ḥanbalī school, their accent falls on the "authentic tradition" taken in the widest sense. The Ḳur'ān and the Sunna—therein lies religion (*ʿAḳīda I* of Ibn Ḥanbal); Ibn Taymiyya repeats that it is "the whole of religion". Hence the assertion that *dīn* is *taḳlīd* (*Ṭabaḳāt al-ḥanābila*, i, 31), endowing *taḳlīd* with a positive value of faithfulness to the Prophet (contrarily to other schools who see it primarily as pure acceptance, passive and non-reasoning). L. Massignon writes that, for Ibn Ḥanbal (*Passion d'al-Ḥallādj*, 669), *dīn* may be understood as "devoting our religious observances to God", as distinct from *islām* (external practices) and *sharīʿa* (observance of legal precepts): the whole constitutes faith (*īmān*). Thus understood *dīn* is nourished by the Tradition and supererogatory acts of piety. Besides the Ḥanbalīs associate *dīn* with the act of worship (*ʿibāda*) which is "action", and with right guidance (*hudā*). Now the first act of worship is prayer (*ṣalāt*). Ibn Taymiyya quotes several Traditions where prayer is stated to be "the basis of religion"; "those (then) who cause it to be observed and themselves observe it preserve their religion" (cf. *Siyāsa*, tr. Laoust, 19). He is pleased to reproduce the dictum of the "Ancients", which makes *īmān* the complement of *dīn*: "Religion and faith consist of word, action, and the fact of following the Sunna" (*Maʿāridj*, tr. Laoust, 76). Commenting on the author's thought, M. Laoust stresses that "religion" is "above all a law" (ibid., 79 n.). Finally, the contemporary writer Rashīd Riḍā, whose links with Ibn Taymiyya are well known, presents religion as "the act of worship, the care to avoid bad and blameworthy deeds, to respect right and justice in social relationships, and to purify the soul and prepare it for the future life; in a word [it consists of] all the laws whose aim is to bring man near to God" (*Khilāfa*, 192; tr. Laoust, 156). This concept, though losing nothing of its specifically Muslim character, reminds one of the more usual meaning of *religio*.

III. *Dīn wa-milla: dīn al-ḥaḳḳ*

In order to set forth clearly the elements of the problem *dīn* is often distinguished from terms with related meanings or made more specific by a determinative which limits its connotation.

Ibn Ḥanbal employed *milla* in the sense of *dīn* (cf. Massignon, *loc. cit.*, n. 4), and, as we have seen, Bāḳillānī noted that *dīn* could be synonymous with *milla* or, in a more restricted sense, with *madhhab*. Djurdjānī (*Taʿrīfāt*, 111) distinguishes a shade of meaning: *dīn* and *milla* agree in respect of their essence, but are distinct in respect of their signification. Both go back to the idea of Law, divine positive legal prescriptions (*sharīʿa*). Here we come across the usual Ashʿarī position again. *Dīn*, says Djurdjānī, is the Law as something obeyed; *milla* (a word of Aramaic origin: word, revelation) is the Law gathering men in a community; *madhhab* is the Law to which one strives to return. *Dīn* relates to God, *milla* to the Apostle (*rasūl*), *madhhab* to the founder of a school, the *mudjtahid* who strives to know and interpret the Law. It is to be noted that in the Ḳur'ān *milla* is used now to designate the "religion of Abraham", which is already essentially Islam, now to designate the communities of "possessors of the Scripture".

But Islam alone is *dīn al-ḥaḳḳ*, the "religion of Truth". Each time that this expression appears in the Ḳur'ān it is to affirm that the "religion of Truth" has the primacy over the "whole of religion", that is over all the domain of religion, and so over any other religion (*e.g.*, XLVIII, 27; IX, 33; and parallel text LXI, 9). Opposite to *dīn al-ḥaḳḳ* is *al-dīn al-mubaddal* "corrupted religion", "like that of the polytheists or the Zoroastrians" says Ibn Taymiyya (*Maʿāridj*, tr. Laoust, 87). Tradition, especially that of the Ḥanbalīs (*e.g.*, Barbahārī, cf. Laoust, *La*

profession de foi d'Ibn Baṭṭa, 4, n. 1), distinguishes *ḥaḳḳ*, what comes from God, *i.e.*, the Ḳur'ān; *sunna*, what was established by the Prophet; *djamā'a*, the common practices and beliefs of the Companions. Thus we have on the one hand *dīn al-ḥaḳḳ*, revealed religion, and on the other *al-dīn al-'atīḳ* "the ancient religion" understood as Islam as practised by the Companions (from whom Barbahārī exludes 'Alī). This latter expression is connected with the Ḥanbalite conception of *taḳlīd*.

Dīn al-ḥaḳḳ is to be compared with and distinguished from the other Ḳur'ānic expression *al-dīn al-ḳayyim* "the immutable religion": it is Islam referred to the faith of Abraham (VI, 162, here synonymous with *dīn ḥunafā'*) or considered as bound to laws testifying to the order of the universe (IX, 36) and recapitulated in the worship of God alone (XII, 40). Note finally that one of the characteristics of the *dīn al-ḥaḳḳ* is to be a "religion of the golden mean", "far from extremes". Several Muslim apologists, arguing from *Ḳur'ān* II, 137 where the determinative is applied to the Community (*umma*) and on the other hand from the phrase "no constraint in religion" (II, 256, cf. XXII, 78), like to present Islam as a religion of the "golden mean". This is a theme which readily re-occurs when a writer wishes to urge a balanced solution on the opponents of his school (*madhhab*); thus Ibn 'Asākir, in his defence of Ash'arism, or Ibn Taymiyya, in his solution of this or that legal problem (*e.g.*, *Siyāsa*, tr. Laoust, 31). In the opposite direction a severe warning is addressed to the "People of the Book" (Jews or Christians) who "are extravagant" or "exaggerate" in their religion (*Ḳur'ān* II, 171; V, 77; cf. VII, 31); those who do not practise *dīn al-ḥaḳḳ* must be combated.

IV. *Dīn wa-dunyā, dīn wa-dawla*

Dīn, distinct from *milla* and *madhhab*, is opposed to *dunyā*. The nearest translation would be the *relations* of the spiritual and the temporal. *Dīn*: the domain of divine prescriptions concerning acts of worship and everything involved in spiritual life; *dunyā*: "domain of material life", as M. Laoust translates (*dunyā* appears besides as the opposite correlative to *ākhira*: "this world" and "hereafter".

Dīn and *dunyā* are undoubted opposites. The Ṣūfīs stress the ascetic's disdain in the face of *adhā 'l-dunyā*. But the most traditional tendency is to subordinate *dunyā* to *dīn*, to make "this base world" in some way included in the "domain of religion". The Ḥanbalī school is insistent on this. It is "an act of religion (*diyāna*)" says Ibn Baṭṭa, "to give good advice to the imāms and all the other members of the Community, whether in the domain of religion (*dīn*) or that of material life (*dunyā*)" (tr. Laoust, 129-30). Ibn Taymiyya quotes Ḥasan al-Baṣrī with approval: "Religion is good advice, religion is good advice, religion is good advice". Religion and state are closely bound to each other: "exercise of a public office is one of the most important duties of religion; we would add that public office is essential to the very existence of religion". Again: "Thus it is a duty to consider the exercise of power as one of the forms of religion, as one of the acts by which man draws near to God" (*Siyāsa*, tr. Laoust, 172-4). "Social order and peace" are indispensable to the exercise of religion. Commenting on Ibn Taymiyya's political doctrine, M. Laoust writes: "Religion (*dīn*) is intimately bound up with the temporal (*dunyā*)", (*Doctrines sociales et politiques d'Ibn Taymiyya*, 280).

The contemporary Salafiyya school puts the elements of the problem somewhat differently. By a modernized apologetic, Muḥammad 'Abduh intends above all to show the conformity of reason (*'aḳl*) and *dīn*. Rashīd Riḍā, having set forth what in social life is an integral part of the religious domain (cf. quotation above), enumerates everything which depends on it in a wide sense: respect for life, honour, other people's property, an attitude based on sound counsel, shunning of sin, iniquity, violence, deceit, abuse of confidence, unjust wastage of other people's property; in other words the domain of morality. Thus it is a question, both here and there, of an equivalence between "the rights of God and of men", according to the classic distinction of Muslim jurists. But Rashīd Riḍā adds that there is a third order of facts, which no longer depends on the domain of *dīn*: everything to do with "administrative, juridical, political, and financial organization" (*Khilāfa* 92/154). Two concepts may be brought up here: (1) the principle of distinction established by Ibn Taymiyya between the prescriptions of the Ḳur'ān, as distinct from the beliefs (*'aḳīdāt*) and laws concerning the acts of worship (*'ibādāt*), which are untouchable, ethics (*akhlāḳ*) (in certain cases) and social relationships (*mu'āmalāt*) (more generally) are capable of adaptation to time and place; (2) the prescriptions of the Ḳur'ān taken as a whole (domain of *dīn*) do not by any means legislate in detail for the actual organization of social life; this organization must be, and it is sufficient that it be, subservient to those prescriptions. Thus we see the sketch, according to a traditional line of reflection, of a possible principle of distinction between the "spiritual" and the "temporal" derived not so much from the *object* of the prescriptions as from their *source* ("revealed" or not).

The Muslim Brethren vie with one another in repeating that Islam is at one and the same time *dīn* and *dawla* (government, domain of politics). The principle of distinction is by no means abolished. *Dīn* and *dawla* are not identical. But Islam, which is the link between the two, includes both. According to this view there is a distinction between *dīn*, domain of religion, and Islam, which is religion, true enough, but temporal Community also. The Muslim "laicists" or "progressives", on the contrary, tend to identify *dīn* with Islam, and to see in the latter a "religion" in the Western sense of the word.

V. *Uṣūl al-dīn*

Apart from this latter case, where modern Western influence is obvious, *dīn* and Islam are distinct. Sometimes Islam, as the practice of the Ḳur'ānic faith, is one of the elements of *dīn* (*ḥadīth* quoted above, Bukhārī, ii, 37); and sometimes *dīn* is one of the elements of Islam understood as an organized politico-religious Community (e.g. Islam is *dīn* and *dawla*). In current language *dīn* is employed absolutely in the sense of *dīn al-ḥaḳḳ* and then becomes the religious expression and spiritual radiation of Islam itself. Such is the connotation of the frequent proper names where *dīn* is a determinative (*e.g.*, Muḥyī —, Fakhr —, Nūr —, Ṣalāḥ —, Taḳī al-Dīn, etc.).

But if we translate *dīn* by "religion" or "spiritual domain" we must not forget that the Muslim concept denotes above all the Laws which God has promulgated to guide man to his final end, the submission to these laws (thus to God), and the practice of them (acts of worship). The expression *uṣūl al-dīn* "sources (or bases) of religion" is to be taken in this sense.

The advanced course in the great mosques is

often shared by three faculties (cf. an old official syllabus of al-Azhar, *REI* 1931, 241-75: *kulliyyat al-lugha al-ʿarabiyya* ["faculty of Arabic language"], *k. al-sharīʿa* [centred on *fiḳh*], and *k. uṣūl al-dīn* ["theology" and apologetics]). As a matter of fact the writers on *ʿilm al-kalām* often used the term *uṣūl al-dīn* (or *al-diyāna*) to denote an introduction to or a résumé of dogmatics, and so we have the titles of well-known works: *Al-ibāna ʿan uṣūl al-diyāna* (Ashʿarī); *Maʿālim uṣūl al-dīn* (Fakhr al-Dīn Rāzī), etc. The *Uṣūl al-dīn* of ʿAbd al-Ḳāhir al-Baghdādī deals with the methods (*asbāb*) towards knowledge and their degree of certitude. The expression *ʿulūm al-dīn* made famous by Ghazzālī's great work there signifies the body of knowledge on the spiritual plane. The "religious sciences" as properly understood, in the technical sense of organized disciplines, are rather to be called *al-ʿulūm al-sharʿiyya* (as often) or (more rarely, and also by Ghazzālī) *dīniyya*.

(L. GARDET)

DĪN-I ILĀHĪ (Divine Faith), the heresy promulgated by the Indian Mughal emperor Akbar [*q.v.*] in 989/1581. The heresy is related to earlier *Alfī* heretical movements in Indian Islam of the 10th/16th century, implying the need for the re-orientation of faith at the end of the first millennium of the advent of the Prophet. Among its formative inspirations was Akbar's reaction to the decadence and corruption of contemporary *ʿulamāʾ*, his eclecticism and religious tolerance, and the intellectual scepticism of his chief associate Abu 'l-Faḍl ʿAllāmī. Ethically, the *Dīn-i Ilāhī* prohibited sensuality, lust, misappropriation, deceit, slander, oppression, intimidation and pride. To these was added the Djayn dislike of animal slaughter and the Catholic value of celibacy. Nine of the ten virtues enjoined were presumably derived directly from the Ḳurʾān: liberality, "forbearance from bad actions and repulsion of anger with mildness", abstinence, avoidance of "violent material pursuits", piety, devotion, prudence, gentleness, kindness; while the tenth was the ṣūfistic "purification of soul by yearning for God". Ritually, it was a kind of solar monotheism with an exaggerated preoccupation with light, sun and fire, showing primarily Zoroastrian, and secondarily Hindū and *ṣūfī* influences.

The brunt of the orthodox Muslim criticism of Akbar's age was focussed on its indirect suggestion of extolling the emperor to a status of prophethood, even of divinity in such manifestations as the mutual greetings of his disciples *Allāhu Akbar* and *Djalla djalāluhu* hinting flatteringly at Akbar's name; though these were also familiar formulae of *ṣūfī dhikr*. Actually Akbar discouraged enrolment to his sect on the plea: "Why should I claim to guide men before I myself am guided?" The number of its adherents did not exceed nineteen. Akbar seems to have regarded it as a spiritual club confined to those of the élite of his court whose devotion to himself, by his own encouragement, had assumed the form of an esoteric and heterodox personality cult. The *Dīn-i Ilāhī* did not claim to possess a revealed text, and did not develop a priest-craft. The apologetics of Akbar in diplomatic correspondence with ʿAbd-Allāh Khān Ūzbek [*q.v.*], stressed that the basis of his religious faith was essentially rationalistic, affirmed Akbar's attestation of faith as a Muslim, and denied any claim on his part to prophethood or divinity. On the other hand Abu 'l-Faḍl quotes Akbar as confessing, at least figuratively, to cessation from Islam.

Though electically influenced by other religions, the *Dīn-i Ilāhī* derives its essential tenets from various streams of orthodox and heterodox ṣūfism. Its preoccupation with light was an exaggeration of the Suhrawardiyya emphasis on *nūr*; Akbar's personality cult was inspired by Ibn al-ʿArabī [*q.v.*] and al-Djīlī's doctrines of the 'Perfect man'; the use of the Emperor's name in salutation was giving a heterodox significance to familiar *ṣūfī* formulae of *dhikr*; the ritual of the initiation of a disciple was based on the Čishtiyya example.

Some features of the ritual of sun and fire, specially at one stage Akbar's recitation of one thousand Sanskrit names for the sun, suggest Hindū influence; but it is remarkable that very little was borrowed from either orthodox Hinduism or the Bhakti movement. The sect had only one Hindū member, Rājā Bīrbal, while Akbar's trusted administrators like Bhagwān Dās and Mān Singh were opposed to it.

The trend of recent scholarship is to treat the *Dīn-i Ilāhī* as a heresy within Islam, rather than a form of apostasy. In Akbar's own age Muslim orthodoxy treated it with some apprehension, and although it died out with him, it set in motion a strong orthodox reaction represented in Naḳshbandiyya ṣūfism by Shaykh Aḥmad Sirhindī and in theological studies based on *ḥadīth* by Shaykh ʿAbd al-Ḥaḳḳ Dihlawī.

DĪNĀDJPUR: a district in East Pakistan; population (1951) 1,354,432.

In 1947 the district was partitioned, and its southern part was given to India. The name has been wrongly derived from Dinwadj or Danudj, identified with king Danudja Mardana Deva, whose coins are dated in Sáka 1339-40 = A.D. 1417-18. This king has nothing to do with Rādjā Ganesá, whose original estate was at Bhatoriya in this district and who played an important role in the early 9th/15th century Muslim history of Bengal. *Dīnādj* is a non-Aryan term, which with the Sanskrit ending *pur* makes the full name of the town and district. Such non-Aryan terms are common in the place names of Bengal. The district is famous for the fortified remains of the old city of Devkoṭ, the ancient Koṭivarsha, about 18 miles south-south-west of Dīnādjpur, now marking the boundary between India and Pakistan, just on the Indian side of the railway station Hilly. It was at this place that Muḥammad Bakhtiyār Khaldjī, the first Muslim conqueror of Bengal, returned from his ill-fated Tibetan expedition and died in 602/1206. There is also to be found the famous *dargāh* of Shaykh al-Mashāyikh Mawlānā ʿAṭāʾ Waḥīd al-Dīn, who died in the middle of the 8th/14th century. Another important saint, Shāh Ismāʿīl Ghāzī, who died a martyr's death in the third quarter of the 9th/15th century in fighting against the non-Muslim rulers of this area, has a memorial *dargāh* at Ghoṛāghāṭ, 18 miles east of Hilly. The third important place is Mahisantosh, spelt in Persian works as Mahisūn, which was a centre of Muslim education during the early Muslim rule.

(A. H. Dani)

DĪNĀR (pl. *danānir*), the name of the gold unit of currency in early Islam. The word derives from Greek δηνάριον (Latin, *denarius*), originally signifying a silver coin but in post-Constantinian times commonly synonymous with *solidus*, *denarius aureus* or νόμισμα χρυσοῦν. The Arabs were familiar with the word and with the Roman and Byzantine gold coin before Islam (*Ḳurʾān*, ed. Flügel, iii, 68; and cf. J. Stepková in *Numismatický Sborník*, iii, 1956, 65).

The earliest type of Arab dīnār, undated but attributable to approximately the year 72/691-2, and struck almost certainly at Damascus, imitates the *solidus* of Heraclius and his two sons but with specifically Christian symbolism deleted and an Arabic religious legend added. A new type, more distinctly Arab, that of the "standing sword-girt Caliph", appears at the Umayyad capital with an issue dated 74/693-4 and is repeated in 76 and 77; but in the latter year ʿAbd al-Malik's coinage reform drastically affects the style of the dīnār which henceforth, with very rare exceptions, is purely epigraphic. In North Africa and Spain the early dīnār (*ḳūḳī*) has an independent history: before approximately the year 85/704 the unit and its fractions imitates the Carthaginian *solidus* of Heraclius but bears Muslim legends in abbreviated Latin translation; thereafter until the year 95/713-4 the portraits are deleted and dates are sometimes given in indiction years; Hidjra dates appear in 95, bilingual legends in 97/715-6, and just after the turn of the century both Ifrīḳiya (Ḳayrawān) and al-Andalus (Cordoba) issue dīnārs of purely Arab type, differing only in minor detail from the reformed dīnār of the East. The minting of gold in al-Andalus ceases in 106/724-5 (except for an anomalous unpublished issue of 127/744-5) and is not resumed until 317/929 under ʿAbd al-Raḥmān III.

The weight standard of the early transitional dīnār appears to have been the same as that of the Byzantine *solidus*, *i.e.*, approximately 4.55 grams. With ʿAbd al-Malik's reform, however, the weight was reduced to 4.25 grams. The accuracy of this latter figure is attested not only by the weights of well-preserved dīnārs but by the evidence of Egyptian glass dīnār and dīnār fraction weights dating from the end of the first to the end of the second century A.H. The reduced standard of the post-reform dīnār resulted from a decision to redefine the mithḳāl (*i.e.*, dīnār) in convenient terms of 20 Syro-Arabian ḳīrāṭs of 0.2125 grams in place of such cumbersome terms as $21^3/_7$ ḳīrāṭs, or "22 ḳīrāṭs less a fraction", etc., which had been employed by the Arabs in pre-Islamic times to express the weight of the mithḳāl. The latter was doubtless based on the Attic drachm theoretically weighing 4.37 grams but actually, as circulated in Arabia, falling somewhat below that weight. While in general the weight standard of the dīnār was maintained in most parts of the Islamic world down to the 4th century of the Hidjra, thereafter extreme irregularity occurs both in weight and purity. In any case the dīnār usually passed by weight rather than tale, except where payments were made in sealed purses (*ṣurra*) of coins of guaranteed weight and fineness.

The half dīnār (*niṣf*, *semissis*) and the third dīnār (*thulth*, *tremissis*) were struck in North Africa and Spain in the transitional period and in the early years of the 2nd/8th century, while glass weights for these fractions (2.12 and 1.41 grams) continued to be issued until the third quarter of that century. The quarter dīnār (*rubʿ*) was introduced by the Aghlabids in North Africa early in the 3rd century and subsequently was issued in large quantities by the Fāṭimids both in North Africa, and in Sicily where in due course it became the well-known *tari d'oro*; as well as in Spain under ʿAbd al-Raḥmān III and his successors and some of the *Mulūk al-Ṭawāʾif*.

With respect to fineness the standard of the early dīnār was exceptionally high. The post-reform Umayyad dīnār ranges between 96% and 98% fine

and this same standard prevails by and large during the ʿAbbāsid period. Exceptions are the years of civil war between al-Amīn and al-Maʾmūn, the period between the end of Ṭūlūnid and the beginning of Ikhshīdid rule in Egypt and the Buwayhid period in Baghdād. Less debased but still below the early standard is the gold of the Caliph al-Nāṣir and his successors who resumed the striking of dīnārs and multiples in their own names in Baghdād during the last years of the Caliphate. In Egypt under the Fāṭimids the standard exceeds 98% and even approximates 100% under al-Āmir; under Saladin it falls below 90% but rises again to 98-100% under his successors, particularly under al-Kāmil. "There existed neither in the West nor in the East dīnārs of a standard excelling the standard *al-Āmirī al-Kāmilī*" (Ibn Baʿra, writing between 615 and 635 A.H.). Reliable statistics for the fineness of the dīnār in the period of its decline in the East are lacking (Ghaznawids, Saldjūḳs, Khwarizmshāhs, etc.), but it is evident from the appearance of preserved specimens and from limited technical data available that in eastern Khurāsān in the 5th and 6th centuries A.H. the alloy is low-grade electrum containing a large percentage of silver. Electrum fractions also appear among the *Mulūk al-Ṭawāʾif* in Spain. Silver and copper "dīnārs" of eastern Īrān and Transoxiana are known in Mongol and post-Mongol times (see v. Schrötter, *op. cit.* in bibliography).

For the division of the dīnār into various theoretical fractions, see *Dānaḳ*, *Ḳīrāṭ*, *Ḥabba*, s.v. SIKKA.

In outward appearance the dīnār of the Caliphates and of most independent dynasties differs very little. The prototype carries the *shahāda* and part of Ḳurʾān CXII in the field or area, and the "prophetic mission" (Ḳurʾān IX, 33) and a formula stating the date of striking in words in the circular margins. The ʿAbbāsids alter the legends and arrangement slightly. Down to the year 170/786-7 the dīnār is anonymous; thereafter the name of the official charged with the administration of the coinage begins to appear; some of the issues of al-Amīn and al-Maʾmūn bear their names, and from the time of al-Muʿtaṣim the Caliph's name appears regularly. Until the year 198/813-4 there is no indication of the mint, but beginning with that year at Miṣr (Fusṭāṭ) and subsequently at Madīnat al-Salām (Baghdād), Ṣanʿā, Dimishḳ, al-Muḥammadiyya (Rayy), Marw, Surra-man-raʾa (Samarra) and many other cities, the name of the mint regularly appears in the date formula. Gradually other legends are added, such as the name of the heir-apparent, supplementary religious legends and eventually the names of independent dynasts and princes. The Fāṭimids, while not entirely abandoning the style of the prototype, introduce Shīʿite legends and a type in which the inscriptions are arranged in concentric circles.

The word dīnār disappears from the coinage in the 6th century A.H. in the West, in the 7th/13th century in the East and in India, and in the 8th/14th century in Egypt. As a money of account the word was widely used both during and after its circulation as an actual coin.

The influence of the dīnār on the economy of western Europe, its rôle in mediaeval international commerce along with the Byzantine *solidus* or *nomisma* have been discussed at length, notably by Pirenne, Monneret de Villard, Block, Lombard, Lopez, Bolin, Grierson (synthesis and bibliography conveniently assembled by F.-J. Himly in *Rev. Suisse d'Histoire*, v, 1955, 31); and it was inevitable that it should on occasion be imitated as other popular media of exchange have at various times been imitated (*e.g.*, the florin, the ducat, etc.). Most important was the Crusader bezant (*besantius saracenatus*, *sarrazinas*, etc., etc., the Arabic *dīnār ṣūrī*), chiefly imitating Fāṭimid coins of al-Mustanṣir and al-Āmir. In the western Mediterranean the dīnār gave rise to the *mancus*, a European term used not only to describe the Arab dīnār and as an accounting term, but also, with qualifying proper names, to designate various Christian imitations of the 5th/11th century in Spain (cf. P. Grierson in *Rev. belge de phil. et d'histoire*, xxxii, 1954, 1059, and J. Duplessy in *Rev. Numismatique*, 1956, 101). The original *marabotino* (*maravedi*, etc.) of Alphonso VIII of Castile was an imitation of the Murābiṭ dīnār with Christian legends in Arabic character.

Sauvaire (see bibliography) lists numerous adjectives and nouns which occur in written sources qualifying or describing various types of dīnārs. To these may be added: *Atābakī* (Zangid), *ṭūrī* (for *ṭarī* ?, *JAOS* 1954, 163), *djayshī* (Dozy, *Suppl.*), *Ḥākimī* (Fāṭimid), *Ḥasanī* (Fāṭimid), *al-kharīṭa* (for special occasions, Herzfeld, *Geschichte ... Samarra*, 195), *ʿadad* ("counted", ἀρίθμια νομίσματα, papyri), *sawā* ("correct weight", papyri), *ṭarā* ("fresh", "uncirculated", papyri), *ḳawāmī* (Buwayhid, *Ars Islamica* 1951, 23), *mithḳālī* ("full weight", papyri), *mudawwara* (Fāṭimid, with concentric legends ?), *musaṭṭara* (Fāṭimid, with legends in parallel lines ?), *mashkhaṣ* or *mushkhaṣ* ("with effigies", *i. e.*, European, *BSOAS*, 1953, 72, *JESHO* 1958, 48), *mashriḳī* ("eastern", papyri), *muẓaffarī* (Shah-i Arman, *JAOS* 1954, 163), *maʿsūl* ("correctly counted out", papyri), *malikī* (Zurayʿid, *Num. Zeitschrift* 47, 1914, 172), *munaḥḥat* ("clipped", papyri), *nizārī* (Fāṭimid), *yūsufī* (Muwaḥḥid, Ibn Khallikān).

The word dīnār as a denomination applied to coins of various metals including nickel, copper, etc., bearing no relationship to the classical Arab unit, has survived in modern times: *e.g.*, Ḳādjārs (Nāṣir al-Dīn Shāh and successors, and the Pahlavī dynasty), ʿIrāḳ (1 dīnār, paper money = 1000 fils), Yugoslavia (1 dinar = 100 para).

(See also DIRHAM, MITHḲĀL, ḲĪRĀṬ, SANADJĀT and SIKKA).

Tiesenhausen's compendium of Umayyad and ʿAbbāsid coins, *Moneti vostočnago Khalifata.* The bibliographical details are available in L. A. Mayer's *Bibliography of Moslem Numismatics*², London 1954. (G. C. MILES)

DĪNĀR (MALIK), name of one of the Oghuz chieftains who set themselves up at Khurāsān after the dislocation of the kingdom of the Saldjūḳid Sandjar; unable to maintain his position there before the pressure of the Khʷārizmian state, he found a way to profit from the dissensions among the Saldjūḳids of Kirmān to lay hands on that principality (582/1186) and to hold it, in spite of hostilities on the borders of Sistān, Fārs, and the Persian Gulf, until his death in 591/1195. After his death, however, Kirmān in its turn became absorbed within the Khʷārizmian empire, on account of insufficient Oghuz immigration.

Bibliography: Almost the only source for the history of Kirmān in this period lies in the *Badāʾiʿ al-azmān fī waḳāʾiʿ Kirmān* of the contemporary Afḍal al-Dīn Kirmānī, the text of which, reconstituted from later compilers (especially Ḥasan Yazdī), was published by M. Bayānī in 1331/1952, but was already almost equally well accessible in Muḥammad b. Ibrāhīm's *History of the Saldjūḳids of Kirmān* ed. by Th. Houtsma as vol. i of his *Recueil de textes relatifs à l'histoire des Seldjoucides*, and analysed by him in an article in *ZDMG*, 1885; also to be consulted is the special apologetic work of Afḍal al-Dīn on Malik Dīnār, *ʿIḳd al-ʿUlā*, ed. Tehran 1311/1932, and the *Risāla* recently discovered and published by A. Iḳbāl, 1331/1952, which continues the history of Kirmān until 612/1215 (excellent editorial preface on Afḍal al-Dīn). Isolated references in Ibn al-Athīr, xi, 116, 248-9, and xii, 198; and Djuwaynī, *Taʾrīkh-i Djahāngushā*, ed. Muḥ. Ḳazwīnī, ii, 20-2 (Khurāsānian period). (CL. CAHEN)

DĪNAWAR (sometimes incorrectly written Daynawar) in the middle ages was one of the most important towns in Djibāl (Media); it is now in ruins. The exact location is 34° 35′ Lat. N. and 47° 26′ E. Long. (Greenwich). The ruins are situated on the north-eastern edge of a fertile plain 1600 metres above sea level which is watered by the Čam-i Dīnawar. This stream, after traversing the precipitous Tang-i Dīnawar, joins the Gamas-Āb near the rock of Bisitūn; the Gamas-Āb is a tributary of the Ḳara Sū which, in its lower reaches, is known as the Karkha. When Ibn Khurradādhbih (ed. de Goeje, 176) stated that the Nahr al-Sus (Karkha) rose in the neighbourhood of Dīnawar, he was obviously regarding the Čam-i Dīnawar as its real source.

The foundation of Dīnawar dates from the Seleucid era, if not earlier. As at Kangāwar (42 km. east by south), there was a Greek settlement there; recent excavations have brought to light a stone basin decorated with busts of Silenus and satyrs, thus making it probable that the cult of Dionysus had been introduced there by the Greeks (see R. Ghirshman, *Iran*, 236).

Dīnawar surrendered to the Muslim Arabs immediately after the battle of Nihāwand in the year 21/642. In Muʿāwiya's reign it was renamed Māh al-Kūfa. In the administrative division of the Caliph's empire, Māh al-Kūfa appears not only as the name of the town of Dīnawar, but also as that of two districts of Djibāl, Dīnawar comprising the upper lands and Ḳarmīsīn (Kirmānshāh) the lower. In the west Māh al-Kūfa was bounded by the district of Ḥulwān, in the south by Māsabadhān, in the east by Hamadhān and in the north by Ādharbāydjān (see Ḳudāma in *BGA* (ed. de Goeje), vi, 243 ff.). There has been some controversy as to the meaning of the word Māh in such names as Māh al-Kūfa and Māh al-Baṣra (Nihāwand). Some Arab authors have maintained that Māh was a Persian noun equivalent in meaning to the Arabic *ḳaṣaba* 'town' or 'capital', while Balʿamī, in his Persian translation of Ṭabarī, stated that it was a Pahlawī word meaning 'province' or 'kingdom' (see Zotenberg's French version, iii, 480); it is to be noted that this explanation is not given in the Arabic text. A more probable explanation is that Māh is equivalent in meaning to the ancient Māda or Media. It is noteworthy that all geographical names which are compounded with Māh and can be fairly definitely located (cf. for example Māh al-Baṣra) belong to Media. In the case of Māh al-Kūfa, it has been said that the place was so called because the taxes raised from it and its district were applied for the benefit of the citizens of Kūfa. On the word Māh, see in particular Nöldeke in *ZDMG*, xxxi, 559 ff. and his *Gesch. der Perser und Araber zur Zeit der Sasaniden* (1879), 103, and J. Marquart, *Ērānšahr*, Berlin 1901, 18-19.

In the Umayyad and ʿAbbāsid periods Dīnawar was very prosperous. In the 4th/10th century it was, according to Ibn Ḥawḳal, only one-third less in size than Hamadhān. Muḳaddasī praised its well-built bazaars and its rich orchards. The confusion that broke out in the last years of al-Muḳtadir's reign (d. 320/932) temporarily ruined the town. When the rebellious general Mardāwīdj of Gīlān seized the whole province of Djibāl after defeating the troops sent against him by the Caliph, Dīnawar also fell into his hands (319/931), and several thousands (the figures vary from 7,000 to 25,000) of the inhabitants perished soon afterwards. Ḥasanwayh (Ḥasanūya), a Kurdish prince living in this region, founded a small independent kingdom of which the capital was Dīnawar; he was able to retain possession of it for nearly 50 years (until his death in 369/979). Ḥamd Allah Mustawfī (*Nuzha*, 106) described Dīnawar as a small town, with a temperate climate and abundant water, producing crops of corn and also fruit. Half a century after Mustawfī's time, Dīnawar was completely destroyed by Tīmūr and has never been rebuilt.

Theodore Strauss, who visited the ruins of Dīnawar in 1905, stated that: "The site of Dīnawar is indicated only by mounds of earth which have been ransacked several times in the search for coins; numerous finds are still being made especially by peasants tilling the fields" (See his *Eine Reise im Westlichen Persien*, in Petermann's *Geog. Mitteil.*, 1911, 65). Strauss also stated that traces can still be seen in the adjacent Tang-i Dīnawar of an ancient road hewn out of the rock which probably connected Dīnawar with Baghdād.

(L. LOCKHART)

AL-**DĪNAWARĪ**, ABŪ ḤANĪFA AḤMAD B. DĀWŪD, Arab scholar of the 3rd/9th century. The name of his grandfather, Wanand, indicates that he was of Iranian origin. In spite of the great value attached to his work by later authors very little has been handed down about his life except a short notice by Ibn al-Nadīm (*Fihrist*, 78), copied by Yāḳūt with additional notices about the year of his death, which according to various sources fell in 281 or 282/894-5 or before 290/902-3; an appreciation of his work quoted from the *K. Taḳrīẓ al-Djāḥiẓ* by Abū Ḥayyān al-Tawḥīdī and an anecdote about his meeting in Dīnawar with the philologist al-Mubarrad (*Irshād al-arib*, 1, 123-7; an extract in ʿAbd al-Ḳādir al-Baghdādī, *Khizānat al-adab*, 1, 25-26). That he lived in Dīnawar is corroborated by what is said by the astronomer ʿAbd al-Raḥmān al-Ṣūfī, who in the year 335/946-7 saw the house in Dīnawar that served him as an observatory (*Ṣuwar al-kawākib*, Ḥaydarābād 1373/1954, 8). His philological studies he prosecuted in ʿIrāḳ, where he is said to have learned both from Baṣran and Kūfan teachers, especially from the two grammarians al-Sikkīt and his son Ibn al-Sikkīt (see also Suyūṭī, *Bughyat al-wuʿāt*, Cairo 1326, 132).

Dīnawarī belonged to the epoch of Arabic literature which was dominated by the spirit of al-Djāḥiẓ [*q.v.*] to whom he may be compared (as did Abū Ḥayyān al-Tawḥīdī) in consideration of his interests in the "philosophical" studies of the Hellenistic learning (*ḥikmat al-falsafa*) and the Arabic humanities alike. Unlike Djāḥiẓ, however, he had a clear disposition for a systematical approach, which was from the very beginning applied by the masters of the philological schools of ʿIrāḳ to materials treated by them. It may be that this disposition was connected also with his mathematical genius attested by works of his in the field of the exact sciences, which were cultivated by scholars of Iranian origin like himself. From the beginning, Arabic philology, the study of pre-Islamic literature and culture, had been associated with Ḳurʾānic studies; a commentary on the Ḳurʾān is mentioned by the bibliographers among his works. These studies may have corresponded also to his temperament, because he is characterized as pious and ascetic (*wariʿ zāhid*).

Of his mathematical works, one on Indian arithmetic (*K. al-baḥth fī ḥisāb al-Hind*) and another on algebra (*K. al-djabr wa 'l-muḳābala*), nothing has been preserved. A work on astronomical geography (*K. al-Ḳibla wa 'l-zawāl*) was plagiarized by Ibn Ḳutayba, according to Masʿūdī (*Murūdj*. vii, 335). For his *K. al-anwāʾ*, which was estimated by al-Ṣūfī as most complete in its kind (*op. cit.*, 7), he tried to check, by observations of his own, the statements made by the Bedouins and collected by the philologists concerning the *anwāʾ* [*q.v.*].

To later authors Dīnawarī is especially known as the author of the *K. al-nabāt*, the main purpose of which is lexicographical, to collect all available tradition, oral and literary, about names and terminations in the field of plants and plant life as documented by verses of poetry or by authorities on Bedouin dialects. In this field he had predecessors among the philologists (see AL-NABĀT). The work of Dīnawarī incorporated their material and added to it collections and observations of his own. To later generations it was the standard work in the field and was to a great extent quoted by lexicologists from Ibn Sīda [*q.v.*] on. Of the two sections into which it was divided the first contained a series of monographs some of which go far beyond the field of "botany" proper, treating with themes that have a more or less indirect connexion with the world of plants; see B. Silberberg, *Das Pflanzenbuch des Dīnawarī* in *ZA* xxiv, 1910: 225-65, xxv, 1911: 39-88. Two volumes of the original work have come down to us, the 5th containing the last part of the monograph section and the letters *alif* to *zāy* of the alphabetical section (ed. by B. Lewin, *Uppsala Universitets Årsskrift* 1953: 10), and the 3d (M. S. Salisbury 77, Yale Univ. Libr.; an edition of this together with the monograph part of the 5th vol. is under preparation to appear in *Bibliotheca islamica*).

The only work of Dīnawarī's that has come down to us in its full extent is his historical work *al-Akhbār al-ṭiwāl* (ed. by V. Guirgass, Leiden 1888; Preface, variantes et index par I. J. Kračkovskij, Leiden 1912). That this work, in spite of its literary and scholarly qualities, never met with great approval and popularity in the Arab speaking world may be due to accidental circumstances rather than to a deliberate disregard. Its title was known to bibliographers from Ibn al-Nadīm on, but the author is never called a historian. History is seen from an Iranian point of view; thus the Prophet is mentioned so to speak in a marginal note of the history of Anūsharwān; Islam and the Arabs appear on the scene when invading Persia; the Umayyads are treated with only as far as the religious and political movements involving the eastern part of Islam are concerned, etc. This tendency towards promoting Iranian views may be due, not to anti-Arab feelings, but to the sources on which he drew. His chief aim was certainly to write a book of literary and entertaining qualities. For this reason he omitted the *isnād*s of the *akhbār*, took the liberty of choosing, among different traditions about one and the same event, the one that suited him and insisted on points of dramatic value; *e.g.*, the days of Ḳādisiyya, Ṣiffīn and Nahrawān, the death of Ḥusayn, the *fitna* of Ibn al-Ashʿath etc., narratives which belong to the finest products of Arab historiography.

Bibliography: in the article. (B. LEWIN)

AL-**DĪNAWARĪ**, ABŪ SAʿĪD (SAʿD) NAṢR B. YAʿḲŪB, is a writer chiefly remembered as author of *al-Ḳādirī fi 'l-Taʿbīr* (composed in 397/1006 and dedicated to al-Ḳādir Bi'llāh 381-422/991-1020), which is the oldest authentic Arabic treatise on oneirocriticism and an excellent synthesis of everything that was known on the subject at the time. Its sources were Arabic: Ibn Sīrīn [*q.v.*] to whom innumerable interpretations are attributed; Greek: Artemidorus of Ephesus, whose *Oneirocritica* translated into Arabic by Ḥunayn b. Isḥāḳ (died 260/873; cf. *Fihrist*, 255, MS A 4726 in the Istanbul University Library; edition being prepared) is reproduced almost in its entirety in this learned compilation. As for Christian and Byzantine sources, al-Dīnawarī would have used the Arabic original of the Greek treatise known as Ἀχμετ υἱὸς Σηρείμ, written by a Christian and translated into Latin by Leo Tuscus in 1160 [see IBN SĪRĪN[. The same work would have served him for Hindū and Persian sources. The author makes frequent reference to

interpretations imputed to the Jews and has numerous quotations from the Bible.

Bibliography: *al-Ḳādirī fi 'l-taʿbīr* is still unpublished; 29 MSS. are known. It was translated into Persian (AS 1718) and following Ḥādjdjī Khalīfa (ii, 312, no. 3068), translated into Turkish verse by Shihāb al-Dīn Aḥmad b. ʿArabshāh (died 854/1450). On this work and Arabic oneirocritical literature, cf. T. Fahd, *Les Rêves en Islam*, in *Sources Orientales*, ii, Paris 1960, 125-58.

(T. Fahd)

DINDĀN, the *laḳab* of Abū Djaʿfar Aḥmad b. Ḥusayn, a Shīʿī traditionist of the 3rd/9th century. His father was a reliable authority who related traditions of the Imāms ʿAlī al-Riḍā, Muḥammad al-Djawād, and ʿAlī al-Hādī; originally from Kūfa, he lived for a while in Ahwāz, where Dindān was born. Dindān also related traditions on the authority of his father's masters, but was regarded as a *ghālī*, extremist, and his reliability as a relator was impugned. He wrote several books, among them *Kitāb al-iḥtidjādj*, *K. al-anbiyā'*, *K. al-mathālib*, and *K. al-mukhtaṣar fi 'l-daʿwāt*; none of them appears to have survived. He died and was buried in Ḳumm.

These data are found in twelver Shīʿī biographical and bibliographical sources (*e.g.*, *Tusys List of Shy'ah Books*, edd. Sprenger and ʿAbd al-Ḥaqq, Calcutta 1853, 26; Ibn Shahrāshūb, *Maʿālim al-ʿulamā'*, ed. Eghbāl, Tehrān 1934, 10; Astarābādī, *Minhādj al-maḳāl*, Tehran 1307, 34). The reference to Dindān's extremist views is amplified in a group of Sunnī sources, dealing with the genesis of Ismāʿīlism. (*Fihrist* 188; Baghdādī, *Farḳ*, 266, tr. A. S. Halkin, *Moslem schisms and sects*, Tel-Aviv 1935, 108; Maḳrīzī, tr. Quatremère, in *JA*, 1836, 132, etc.). In these Dindān appears as one of the founders of the sect, in association with ʿAbd Allāh b. Maymūn [*q.v.*]. He is said to have played an active part in both the formulation and propagation of Ismāʿīlī doctrines, and in addition to have provided large sums to finance the *daʿwa*. According to the *Fihrist*, he was secretary to Aḥmad b. ʿAbd al-ʿAzīz b. Abī Dulaf (d. 280/893). His name and pedigree are variously distorted in these sources, but remain recognizable. His grandfather's name is given, with various corruptions, as Čahār Lakhtān, 'four parts'—obviously a nickname. Abu 'l-Maʿālī (*Bayān al-adyān*, ed. Eghbāl, 36, tr. Massé in *RHR*, 1926, 57) makes Čahār Lakhtān an associate of Dindān and ʿAbd Allah b. Maymūn in founding the Bāṭinī sect, and attributes to him the role of financier.

The much better informed Shīʿī sources make it clear that Dindān lived in the 3rd century. While therefore he may have been a secretary of Ibn Abī Dulaf, he cannot have been associated with ʿAbd Allah b. Maymūn, who lived and died during the 2nd/8th century. He may well, however, have played some part in the early history of Ismāʿīlism, though it is noteworthy that neither his name nor any of his works appear to have been preserved by the Ismāʿīlīs.

DIPLOMACY [see ELČI, MUʿĀHADA, SAFĪR].

DIPLOMATIC

i. Classical Arabic

1) Diplomatic has reached the status of a special science in the West, and the results of such research are accessible in good manuals (like Harry Bresslau's *Handbuch der Urkundenlehre für Deutschland und Italien*, 2nd. ed. 1931). Much less work has been done on Arabic documents: the material is very scattered, and not yet sufficiently collated to permit detailed research. Yet Arabic documents have aroused interest for some considerable time: a number have been published, and the editing of Arabic papyri of the first centuries of Islam in particular has added materially to our knowledge. It is thus not mere chance that so much of the groundwork for the establishment of a science of Arabic diplomatic should have been done by a papyrologist (Grohmann), and it is to be hoped that the publishing of further papyri will advance work in that direction. It is indeed of very special advantage to possess original documents of so early a date, particularly as there are not so many Arabic documents of the later centuries. Some collections have become known only recently, and it is to be hoped that here, too, more material will be discovered. Numbers of important Arabic documents have already come to light in the *Genīza* collections and among the manuscripts in the St. Catherine's Monastery on Mount Sinai. Documents of the Mamlūk period are preserved in archives in Italy and Spain.

Arabic manuals for secretaries also form part of the material on which a science of Arabic diplomatic can be based, and these are preserved in great number. In part, they consist of theoretical explanations and advice to scribes, in part of practical examples in the text; these, however, are usually no more than model forms without either names or dates. It is obviously difficult to decide to what extent these texts are authentic, that is to say to what extent they are based on original documents. Such manuals gradually grew and became more complete, until in the time of the Mamlūks they reach encyclopaedic extent in Ḳalḳashandī's *Ṣubḥ al-aʿshā fi ṣināʿat al-inshā'*. This great work is an essential source book for the study of documents, and therefore its author may be regarded as the most important precursor of scientific Arabic diplomatic. Here too, of course, it is hard to tell to what extent Ḳalḳashandī had himself seen the originals of the numerous texts he gives. It is known that he did have access to the archives, and that many more texts survived then than do today. We are not so certain about the older texts: Ḳalḳashandī probably based his work largely on literary sources (some of which he names), but we can hardly expect a critical treatment of these.

The following is an attempt at a survey, based on Bresslau's classification, in order to get nearer to a complete picture.

2) Composition of Documents. The same division which is observed in occidental documents is also to be found in Arabic ones; namely the introductory protocol, the text, and the closing protocol.

A. The introductory protocol is known as *ṭirāz* and *iftitāḥ*. *Ṭirāz* is the name of the protocol in the Arabic papyri: to begin with the formulae were bilingual, Greek-Arabic, and later Arabic-Greek; later on, purely Arabic. There is considerable variety in the wording, and extensive material has been published by Grohmann. The purpose seems to

have been to endow the document with a certain authenticity, but as far as the validity of Arabic documents goes, it is without import. From the 4th/10th century it was omitted altogether, and the term *ṭirāz* is now used only in the sense of the inscription of names on clothes. Ḳalḳas̲h̲andī knows it only in this sense, and uses the term *iftitāḥ* for the introduction of documents, for example *iftitāḥ al-kutub* and *iftitāḥ al-mukātaba*. He calls the individual parts of this *iftitāḥ fawātiḥ*; they are *basmala*, *ḥamdala*, *tas̲h̲ahhud*, *ṣalwala* (*taṣliya*), *salām*, and *baʿdiyya* (*ammā baʿdu*). Each of these terms has its own history; thus the *ṣalwala*, for example, is said to have been added only in the year 797.

The *ʿunwān*, a direction or address, is also part of the introduction. It was formerly known as *min fulān ilā fulān* or *li-fulān min fulān*, and developed from there. Ḳalḳas̲h̲andī collected 15 different forms. The designation of the sender in the *ʿunwān* was *tard̲j̲ama*, which developed from the simple *ak̲h̲ūhu* or *waladuhu* to *al-mamlūk al-Nāṣirī* etc. There is also evidence of the use of *tafdiya* for sender, developing from the ancient *d̲j̲aʿalanī ʾllāhu fidāʾaka* through numerous intermediate forms, as early as ʿAbbāsid times. The formulae of benediction for the addressee, which were called *duʿā* and were taken very seriously, were even more varied. Developing from inconspicuous beginnings in Umayyad times, there was a whole system of gradation under the ʿAbbāsids. Scribes appear to have compiled lists of these *adʿiya* fairly early on, which became more detailed when distinctions in rank became more and more minute in the times of the Fāṭimids and Mamlūks, when every *laḳab* had its own precise *duʿāʾ*.

The different personal names (*asmāʾ*, *kunā*, *alḳāb*, *nuʿūt*) also underwent considerable development, and details concerning them are naturally of great importance in the interpretation of documents. Ḳalḳas̲h̲andī devoted his third *maḳāla* to them, and the material which he collected is very extensive. Here too, the development is towards ever increasing complexity. Under the Umayyads, *ism* and *kunya* were sufficient, but *laḳab* and *naʿt* became current under the ʿAbbāsids. There was a veritable inflation of terms in Mamlūk times, which is borne out by Ḳalḳas̲h̲andī's lists of 152 *alḳāb* and 372 *nuʿūt*. These can be checked with Caetani's *Onomasticon*.

B. The term used for the actual text is *matn*, in letters also *mā bayn al-salāmayn*, because they usually began and ended with *salām*. The text can be cast in either a subjective or an objective form: objective, as for instance *hād̲h̲ā mā* ... There are definite terms for different parts of the text: *e.g.*, in letters of appointment the *isnād* mean the decisive words *an yuʿhada ilayhi*, etc. The *waṣiyya* is the part in which the duties of the nominee are specified in detail. Such details are important for the consideration of the ethics of civil servants and throw light on lesser known offices.

C. The concluding protocol consists of the *k̲h̲awātim* : *istit̲h̲nāʾ* = *in s̲h̲āʾ allāhu taʿālā*, often run together in writing, though some authorities state that this should have a line to itself. *Taʾrīk̲h̲* = dating, sometimes omitted and a separate subject of enquiry, see 14 below. *ʿAlāma* = signature of the person drawing up the document; this was known popularly, with great lack of respect as 'crow's foot' (*rid̲j̲l g̲h̲urāb*), often in particularly large writing (*al-ṭūmār al-kāmil*); in the *ik̲h̲wāniyyāt* this was in the margin. Ḳalḳas̲h̲andī, for example, has *ḥasab al-marsūm al-s̲h̲arīf* and *bi ʾl-is̲h̲āra al-ʿāliya al-wazīriyya* as *mustanadāt* of the closing phrases. The *ḥamdala*, *ṣalwala*, *ḥasbala* and others are religious closing phrases, and amongst these one might perhaps list the *ḥr*, which Ḳalḳas̲h̲andī did not understand, and explains as a second *ḥasbala* or mere padding (more correctly, perhaps, a mere differentiatory sign under the letter *ḥ*).

3. Types of Documents. Grohmann has made an attempt to submit Arabic documents to the same kind of classification as European ones: with and without legal content, public and private documents, cancellarial and non-cancellarial documents, mandates, diplomas, evidential and business documents etc. The Arabs, Ḳalḳas̲h̲andī in particular, likewise classified their documents clearly.

A. The following are general terms: *kitāb*, *wat̲h̲īḳa*, *ṣakk*, *sanad*, *ḥud̲j̲d̲j̲a*, *sid̲j̲ill*, *ẓahīr*. *Kitāb* is frequently explained by such additions as *k. al-ins̲h̲āʾ*, *k. al-nikāḥ*, *k. al-ṭalāḳ*, *k. al-iʿtimād* and others. A more limited meaning was attached to the other ones, but the Fāṭimids had a preference for *sid̲j̲ill*, and in the Mag̲h̲rib, for *ẓahīr*.

B. At the beginning, documents of state were apparently also just known as *kutub*, although quite early on a distinction was made between *kutub ʿāmma* or *muṭlaḳāt*, and *kutub k̲h̲āṣṣa*, and these were further sub-divided into *k. al-aymān*, *k. al-awḳāf*, *k. al-mulūk*, *k. al-sid̲j̲ill*, and others, according to their contents. Their inclusion under the heading of 'state documents' gives this a very wide meaning. Consequently, the exchange of letters concerning matters of state was called *mukātabāt* by the ʿAbbāsids, and the chancellery the *dīwān al-mukātabāt*. This was also usual in Egypt, under the Fāṭimids, Ayyūbids, and Mamlūks. There were also *rasāʾil* and *dīwān al-rasāʾil*. *Murāsalāt* and *tarassul* were also known, though these appear to have been less common. *Ins̲h̲āʾ* and *muns̲h̲aʾāt* were used, and *dīwān al-ins̲h̲āʾ* was already known in ʿAbbāsid times, then, especially under the Fāṭimids and Mamlūks, it became the general term for chancellery (cf. 6 below).

C. Letters of Appointment. *Wilāyāt* = offices are dealt with in detail under that heading by Ḳalḳas̲h̲andī in his 5th *maḳāla*. Generally, however, compound terms appear to have been more common, such as *wilāyat al-ʿahd*, *w. al-dīwān*, *w. al-ḥisba*, *w. al-Ḳāhira* and others. Thus there is, for instance, a term like *nusk̲h̲at sid̲j̲ill bi-wilāyat al-Ḳāhira*. *Tawliya* was the right to appoint, but this, in Mamlūk times, rested with the governors of Syria only, not with those of Egypt. The following terms for the different grades of appointment were, at least in Mamlūk times, more common than these general terms: *bayʿa*, *ʿahd*, *taḳlīd*, *tafwīḍ*, *marsūm*, *tawḳīʿ*, *mans̲h̲ūr*. Each of these has its own history.

(*a*) *bayʿa* [*q.v.*] = the homage paid to a Caliph. Under the Fāṭimids, this reached particular importance, and reports of it were written in the capital and sent to the provinces, where the governor accepted the oath of allegiance from the subjects.

(*b*) *ʿahd* = contract in general, but here the contract between a caliph and his successor, or a sultan, in particular; and later also the contract between a sultan and his successor, or the sultan and rulers of smaller lands. Ḳalḳas̲h̲andī classifies all these as appointments. He believes that the first two are traceable back to the Prophet, but he describes the latter as developments which took place only under the Ayyūbids after the death of Nūr al-Dīn.

(*c*) In the actual letters of appointment of officials, there was also one supreme grade, called *ʿahd*,

which concerned only the highest officials. It has not been usual since the time of the Fāṭimids.

(*d*) *taḳlīd* was a much used term for high officials such as *wazīr*s and *ḳāḍī*s, although under the Mamlūks it was restricted to very special high officials such as the confidential secretary = *kātib al-sirr*.

(*e*) *tafwīḍ*, applied to supreme *ḳāḍī*s, appears to have been used in Mamlūk times only. It may have been introduced by Shihāb al-Dīn b. Faḍl Allāh (?).

(*f*) *marsūm*, used for military personnel, also seems to appear in Mamlūk times only. By this, Shihāb al-Dīn b. Faḍl Allāh means minor documents which are not connected with appointments (of these, the more important with *basmala*, and the less important, such as passes, without), but Ḳalḳashandī distinguishes between major and minor *marāsīm* : *mukabbara* for the appointment of the commander of a fortress, and military persons of medium rank, *muṣaghghara* for the lower ranks. The latter are said to be rare (presumably because they were normally given a *manshūr*).

(*g*) *tawḳīʿ*: to begin with this seems to have been the ruler's signature, which was appended in the chancellery (whilst *ʿalāma* was a kind of motto written in the ruler's own hand, like a signature, at the bottom of documents). The *tawḳīʿ ʿalā 'l-ḳiṣaṣ* may well have developed from this. Later on, *tawḳīʿ* was also used for letters of appointment: to begin with, quite generally (thus Ibn Faḍl Allāh, perhaps even Ayyūbid); but later only for the lesser officials, and in Ḳalḳashandī for the fourth and lowest group of the *mutaʿammimīn* = turban wearers.

(*h*) *manshūr*. In the first centuries, this was a pass for peasants in Egypt, apparently designed to curb increasing movement away from the land. In ʿAbbāsid times, it was the name given to grants of fiefs; under the Fāṭimids it denoted certain letters of appointment; rather general appointments under the Ayyūbids; but under the Mamlūks, it became restricted to feudal grants, in different grades according to size and writing. The wording was short and precise, there were no instructions (*waṣāyā*), neither was there the sultan's signature, but a kind of tughra can occasionally be found at the head.

D. Contracts. The general terms *ʿahd*, *ʿaḳd*, and *mīthāḳ* appear as early as the Ḳur'ān, and seem to have been usual at all times. *ʿAhd* [*q.v.*] seems to have been used particularly for political agreements; *ʿaḳd* [*q.v.*] for civil contracts, often more clearly defined by an additional genitive, such as *ʿaḳd al-nikāḥ*, *ʿaḳd al-dhimma*, *ʿaḳd al-ṣulḥ*. *Mīthāḳ* seems to have been less common. Ḳalḳashandī does not mention it, but Ibn Faḍl Allāh's *Taʿrīf* mentions *mawāthīḳ* and *muwāthaḳa*. Ḳalḳashandī uses the terms *hudna* and *muhādana* for an armistice, giving examples from ʿAbbāsid and Mamlūk times. He pays particular attention to the form which the oath takes, and states that such contracts have not been current in more recent times. He knew the terms *muwādaʿa*, *musālama*, *muḳāḍāt*, and *muwāṣafa* as having the same meaning, but these were probably all less usual. Neither did the terms *faskh* and *mufāsakha*, for revocation by one or both parties, appear frequently. See further SHURŪṬ.

E. Documents of a predominantly business nature. These include not only grants of fiefs (see C (*h*) above) and annual tax settlements, but also the *musāmaḥāt* and the *tarkhāniyyāt*. The former concerned tax-relief, probably only in Mamlūk times, and were divided into large (*ʿiẓām*), issued in the name of the sultan, and small (*ṣighār*) in the name of the governor. Dues thus cancelled were called *mukūs*, *djihāt mustaḳbaḥa*, *munkarāt*, and *bawāḳī* (ref. balance of tax due). Some were valid for merchants and all their goods, others only for certain sums. The *ṭarkhāniyyāt* were concessions granting aged officials exemption from taxes, and possibly also a fixed salary (*maʿlūm*). In the case of the military, they were called *marsūm*, and in others *tawḳīʿ*.

F. Documents of a predominantly legal nature. Such were *amān* [*q.v.*], safe-conducts either for whole tribes or for individuals, in particular for foreigners in Islamic territory, though later also for Muslims "whose attack is feared, and especially those who have renounced their allegiance", so that, if possible, they might yet be recalled to obedience. The drawing up of such documents gradually came to form the bulk of the work of a *dīwān*. Ḳalḳashandī endeavours to trace both varieties back to the time of the Prophet and gives examples from Umayyad, ʿAbbāsid, Fāṭimid, and Mamlūk times. Some documents refer to an application of the *musta'min* (*e.g.*, *innaka dhakarta raghbataka*), others do not.

Yarlīgh = Ferman, extensively used by the Turks, and introduced as far as Mamlūk Egypt by consular traffic, but only in its limited meaning of a pass for foreign ambassadors.

Iṭlāḳāt was the name given to documents reaffirming decisions of former rulers; sometimes, however, they were simply called *tawḳīʿ*. The Fāṭimid proclamation of the year 415/1024 (ed. Grohmann, *RSO*, 32, 641) can be added to the three texts cited by Ḳalḳashandī.

Dafn, the burying of sins, is said to have been known in pre-Islamic Arabia, but appears to have fallen into disuse (perhaps replaced by the *amān* ?) [see DHUNŪB, DAFN AL-].

Taḳālīd ḥukmiyya were occasionally written for the *ḳāḍī*s; they were appointments either in the form of diplomas or mere *mukātabāt*.

Isdjālāt al-ʿadāla were certificates of good character of witnesses. They are known both in the papyri, and later right into Mamlūk times. The *ʿalāma*, date, and *ḥasbala* at the end were written by the *ḳāḍī* himself, and witnessed by the scribes.

al-tawḳīʿ ʿalā 'l-ḳiṣaṣ, *i.e.*, the decision of petitions in open court, is said to have been the custom even in Sāsānid times. In Islam under the Umayyads, and under Hārūn al-Rashīd, the right of *tawḳīʿ* is said to have been transferred to Yaḥyā al-Barmakī. Egyptian governors exercised this right, too, but it seems to have been forgotten after the Ṭūlūnids, and not revived until the Fāṭimids fostered and developed it. The decision was made immediately, and was noted briefly on the back by the 'owner of the fine pen', then, after instruction (*taʿyīn*) by the head of the *dīwān*, it was fully executed by the 'owner of the broad pen'. The right of decision remained with the head of the *dīwān al-inshā'*, even under the Mamlūks. The Sultan himself also presided in court, and Ḳalḳashandī reports six different ways of submitting a petition. This *tawḳīʿ* was so popular that the people applied the term *tawḳīʿ* to the profession of the scribe, and called the scribes themselves *muwaḳḳiʿūn*.

ʿAḳd al-nikāḥ. Marriage contracts; legal documents in which the economic details were of special importance (*ḥawā'idj al-ʿurs*, *nuskhat ṣadāḳ*), though the attestation of equality, the undertaking to pay the remainder of the marriage portion, and the rejection of all claims in case of divorce, etc., were likewise important.

Fatwā. Whereas certain qualities were demanded of the muftī, there does not appear to have been any set form for the *fatwā*. A customary form did, however, emerge, as can be seen from the many collections, and a certain brevity appears to have been typical.

Waḳfiyya, deed of *waḳf,* also traced back to the Prophet. Lawyers have laid down regulations for the content and form of endowments, and the deciding words *waḳaftu, ḥabastu, sabbaltu,* as well as the exhortation that it must be neither sold, nor given away, nor bequeathed, appears in every such deed. Such texts are extant in the original, in literature, and carved in stone. The numerous endowments affected the economic situation adversely, and the state found a solution for this in large scale confiscations, as also—in more modern times—in supervision by Ministries of *Awḳāf.*

Waṣiyya, last will and testament, legacy. The content is laid down by law in detail, the form appears to be free, but two witnesses are prescribed.

Waṣāyā dīniyya were large and ornate documents for reading from pulpits, in order to inculcate the rules of Islam. They were of particular importance at the time of the Sunnī restoration after the fall of the Fāṭimids, but appear also in the Maghrib.

Yamīn. Oaths played an important part in the ceremonies of homage (*bayʿāt*), and the *aymān al-bayʿa,* introduced by al-Ḥadjdjādj, were famed for being particularly strong. The Fāṭimids systematically extended these oaths, particularly in view of the fact that their subjects were of a different faith. Later, too, the oaths had their significance when they sealed contracts, or were made on attaining office or entering certain professions.

ʿUmra. These were documents for pilgrims to Mecca, who there made the *ʿumra*; these appear to have been rather rare.

Idjāzāt were frequently issued on behalf of scholars and writers, *e.g.*, for *futyā, tadrīs, riwāya,* often in the form of large sized *farkhat al-shāmī.*

Mulaṭṭifāt were sent by the Fāṭimids to the governor of a province when he took up his office, and also when honours were bestowed (*khilaʿ, tashārīf*). *Mulāṭafa* was also the term applied to letters accompanying appointments or presents.

Tadhkira were the orders laid down for the higher officials, ambassadors, and commanders of fortresses. These were chiefly concerned with income and expenditure.

Taḳrīẓ recommending books or poems occur occasionally.

4. Transmission and multiplication of documents. Naturally, the Arabs recognized a difference between draft, original, and copy (*musawwada, aṣl, nuskha*). A capable copyist (*nāsikh*) might advance to being a *munshiʾ* (Ṣūlī 118). Ibn al-Ṣayrafī 142 mentions copying as an important occupation, and also mentions a fair-copyist (*mubayyiḍ*). Copies are marked with *nusikha* or *nusikhat,* and, like originals, could be attested by *ṣaḥḥ*. The copies were kept, and it may well be that some collected works of the *inshāʾ* literature were compiled from collections of drafts or books of copies.

There are innumerable examples of the transmission of documents, in historical works. M. Hamidullah has collected no fewer than 269 texts attributed to the period before 652 (*Documents sur la diplomatie musulmane à l'époque du Prophète et des khalifes orthodoxes.* Suivi de: *Corpus des traités et lettres diplomatiques de l'Islam,* Paris 1935. Also in Arabic: *al-Wathāʾiḳ al-siyāsiyya fi 'l-ʿahd al-nabawī wa 'l-khilāfa al-rāshida*). This has of course no bearing on the unsettled question of their authenticity.

5. Archives. The preservation of originals and copies in archives was already customary in the Ancient Orient and in Greek Egypt. It may therefore be assumed that the Arabs likewise knew of the practice at an early date, and indeed we find a short précis on the back of some papyri, intended to facilitate storing and reference. But there is no evidence of the existence of a central archive, as there was in Greek times. Barthold in 1920 treated the question of the preservation of documents in the states of the Islamic orient (*Arkhivnïe Kursï,* i, Petrograd 1920; cf. *Islamica,* iv, 145). Perhaps one might be permitted to regard the documents drawn up between Hārūn al-Rashīd and his sons Amīn and Maʾmūn in 186/802, and sent to Mecca to be hung up in the *Kaʿba,* as being kept in a kind of archive in that holy place.

There was a proper archive in Fāṭimid times, and Ibn al-Ṣayrafī (*Ḳānūn,* 142) calls the archivist *khāzin* [*q.v.*], and stresses his importance. He praises the Baghdād archive *al-khizāna al-ʿuẓmā* as a model. It was the archivist's task to file the originals of incoming documents, and the copies of the outgoing ones according to months, in folders with headings (*iḍbāra yaktub ʿalayhā biṭāḳa*). A certain decline in this practice seems to have set in in Mamlūk times, and there were periods when the *dawādār* of the confidential secretary sufficed as an archivist.

6. Chancelleries. A. Whether the Prophet himself had a chancellery in which his famous writings to the rulers of the world were written is not certain, although we do have a whole list of scribes of the Prophet, among them the first caliphs. According to one report, ʿUmar is said to have set up the first chancellery and called it *dīwān* [*q.v.*], a word which might go back to the Persian *dīwān,* or even the Assyrian *dep,* and in fact, a certain parallel with Persian administration can be discerned. Yet it would appear to have been a *dīwān* for matters of finance and the army, rather than an actual chancellery of state.

B. In Umayyad times, the official language—which had hitherto been Persian in the east and Greek in the west—became Arabic. This *taḥwīl al-dīwān ilā 'l-ʿarabī* was carried through by al-Ḥadjdjādj in the east, and by ʿAbd al-Malik in the west. It was indeed a disaster when all the *dīwāns* were burnt in the battle near Dayr al-Djamādjim [*q.v.*] in 82/701. Otherwise we know little about Umayyad chancelleries. A special office for the sealing of documents (*dīwān al-khātam*) is said to have been introduced because of an attempted forgery under Muʿāwiya. Some innovations are said to have been made by Walīd b. ʿAbd al-Malik, when papyrus appears to have become better and the writing more beautiful; though here, as on other occasions, ʿUmar b. ʿAbd al-ʿAzīz is said to have reverted to the customs of his forebears. The custom of the caliph's hearing and deciding complaints in open session (*al-tawḳīʿ ʿalā 'l-ḳiṣaṣ*) is said to have come into being under the Umayyads. The scribes then had to record the caliph's decisions in writing. The most famous of the Umayyad scribes was ʿAbd al-Ḥamīd b. Yaḥyā [*q.v.*], who was active from the time of Sulaymān to the end of the dynasty. He appears to have enriched the scribal art in respect of both form and content, and he was probably influenced by the Persians. Not all the writings attributed to him have, however, been authenticated.

C. ʿAbbāsid Chancellery. The ʿAbbāsids do

not appear to have taken over much of the Umayyad administration. They developed a completely new scheme, in which Persian influence—still only latent in Umayyad times—came to the fore. The *kātib* became *wazīr*, and the state chancellery became known as *dīwān al-rasā'il* or *dīwān al-inshā'*. We have only scanty reports (and those particularly from Ibn ʿAbdūs al-Djahshiyārī and Maḳrīzī) of its organization and the way it functioned. Some innovations are attributed to the Barmakids. Thus, for example, Khālid b. Barmak is said to have introduced parchment books (*dafātir min al-djulūd*) instead of scrolls (*ṣuḥuf mudradja*), Yaḥyā b. Khālid is said to have enlarged the *basmala* by the *taṣliya*, and Hārūn al-Rashīd is said to have bestowed the right of the *tawḳīʿ ʿala 'l-ḳiṣaṣ* on him. The *tawḳīʿāt* of Djaʿfar b. Yaḥyā were copied, collected, and studied as models of erudition. Al-Mahdī is said to have decreed that scribes should be free every Thursday, and it became a working day again only under al-Muʿtaṣim. The following were famous scribes and *wazīrs* of the ʿAbbāsids: Ibn Muḳla (died 328/940), Ibn al-ʿAmīd (died 360/970), and Abū Isḥāḳ al-Ṣābi' (died 384/994), and many innovations are traced back to them. One used to quote: *Futiḥat al-rasā'il bi-ʿAbd al-Ḥamīd wa-khutimat bi-Ibn al-ʿAmīd.* We hear little of the working of the state chancellery in later ʿAbbāsid times, but it will still have served as an example to the chancelleries in Egypt and other countries.

D. Chancelleries in Egypt. Papyri are the main source for the earliest days, and Grohmann has attempted to describe the administration of the provinces from these in *From the world of Arabic papyri*, 114 ff. Of course, Egypt had no state chancellery at that time, although it did have one for the provinces which dealt with the exchange of letters with the capital. A seal of the conqueror of Egypt, ʿAmr b. al-ʿAṣ (died ca. 43/663), has survived by chance, and there are a number of letters by Ḳurra b. Sharīk (died 96/714), which exhibit the uniform style of a chancellery.

It was not until around 258/872, when Aḥmad b. Ṭūlūn became independent, that a chancellery on the Baghdād pattern was introduced in the general development of his administration. Its first head was Ibn ʿAbd Kān, and some of his documents became famous. Other scribes were Ibn al-Dāya (died 340/951), and four brothers of the Banu 'l-Muhādjir family, descendants of ʿAbd al-Ḥamīd b. Yaḥyā.

The first report of an exchange of letters between Egypt and a non-Islamic country dates from the time of the Ikhshīdids: at the time when Muhammad b. Ṭughdj (323-35/935-46) wished to write to the Byzantine co-emperor Romanus I (920-944), he asked several scribes to submit their drafts, and chose that of Nadjīramī.

Thanks to Ibn al-Ṣayrafī we know a great deal more about the Fāṭimid chancellery. His *Ḳanūn dīwān al-rasā'il* is practically a treatise on the chancellery. It is dedicated to the wazir al-Afḍal (487-515/1094-1121). After a foreword, the work consists of what amounts to a chancellery programme; even if it was in fact put into practice, this still leaves the following questions unanswered: what was the *dīwān* like before? On what pattern did he model his suggestions? Did he evolve them himself, or in imitation of Baghdād or even Byzantium? According to Dölger, there are certain similarities with Byzantium; but how did Ibn al-Ṣayrafī come to hear of them? Could it be through Monte Cassino (cf. Roemer, *Staatsschreiben der Timuridenzeit*, 7)? From Ibn al-Ṣayrafī we learn many details of the duties of civil servants in the state chancellery, which he calls *dīwān al-rasā'il*, also *dīwān al-mukātabāt*, and (in his later work *al-Ishāra ilā man nāla rutbat al-wizāra*) *dīwān al-inshā'*. He distinguishes 12 different kinds of officials: 1) the head (*ra'īs*, *mutawallī*, *ṣāḥib*), 2) a secretary for correspondence with rulers (*mukātabat al-mulūk*), 3) one for the decision of complaints (*al-tawḳīʿāt fī riḳāʿ al-maẓālim*) with two under him (*ṣāḥib al-ḳalam al-daḳīḳ*, and *ṣāḥib al-ḳalam al-djalīl*), 4) one for nominations and official proclamations (*inshā'āt*), 5) one for correspondence with the important men in the country, especially the governors of the provinces, 6) one for letters of investiture (*manāshīr*), 7) one fair-copyist (*mubayyiḍ*), 8) one copyist (*nāsikh*), 9) one keeper of bound model texts (*tadhākir*), 10) an archivist (*khāzin*), 11) a keeper (*ḥādjib*), 12) a translator (*mutardjim*), who was only consulted when the need arose. Thus the departments of the *dīwān* were: documents of state, appointments, decisions of complaints and occasional documents such as proclamations of important events (*al-kutub fī 'l-ḥawādith al-kibār wa'l-muhimmāt*), passes (*amānāt*), texts of oaths (*kutub al-aymān wa'l-ḳasāmāt*), and others.

There is no special text giving us information concerning the chancellery of state in the time of the Ayyūbids, but there are a few details in the *Rasā'il* of al-Ḳāḍī al-Fāḍil, and in Ibn Mammātī, al-Nābulusī, and Ibn Shīth. Al-Ḳāḍī al-Fāḍil describes his admission to the *dīwān al-inshā'* by a stringent examination. Cliques and intrigues in the *dīwān* are also mentioned. Ibn Shīth describes conditions in the province of Syria, and pays special attention to the form of the documents. There is a detailed description of the *Tardjama* of the sender; *duʿā'*, *nuʿūt*, and *ʿunwān* are treated in detail, and so is collaboration with other *dīwāns*.

Our most extensive sources date from Mamlūk times, namely from Shihāb al-Dīn b. Faḍl Allāh (d. 749/1349), in his *al-Taʿrīf bi 'l-muṣṭalaḥ al-sharīf* (with three commentaries: *Tathḳīf*, *ʿUrf*, and *Laṭā'if*); and, above all, there is Ḳalḳashandī's (died 821/1418) great encyclopaedia *Ṣubḥ al-aʿshā* (with *mukhtaṣar Ḍaw' al-ṣubḥ*). Of late Mamlūk times, we have the Paris MSS *Dīwān al-inshā'*, and Khalīl al-Ẓāhirī (died 872/1468), *Zubdat kashf al-mamālik*. Ḳalḳashandī may be regarded as the main source, particularly as he did a great amount of historical research, and gives a survey of earlier developments. His work can thus be regarded as a precursor of an Arabic diplomatic. Amongst the heads of the *Dīwān al-inshā'*, the families of Banū ʿAbd al-Ẓāhir and Banū Faḍl Allāh became famous and continued to improve their position. The title *kātib al-sirr* emerged under Ḳala'un, and under Nāṣir Muḥammad b. Ḳala'un, the head acquired the right of the *tawḳīʿ ʿalā 'l-ḳiṣaṣ*, and precedence over the *wazīr*. The number of employees rose with the increasing importance of the office. The higher employees bore the title of *kātib al-dast*, the others *kātib al-dardj*. Although their numbers increased, their status in the public eye diminished. The head also succeeded in bringing official mail and the whole of the news service gradually under his control.

The spheres of work were the same as under the Fāṭimids, but they were enlarged and differentiated. Foreign correspondence in particular had grown very much, through contact with almost the whole of the world which was then known. Foreign languages and

interpreters were of importance. The exchange of letters with governors became increasingly complicated as the number of grades, titles and addresses increased. Offices (*wilāyāt*) also became more numerous, demanding further written work, and one now distinguishes 5 different grades of officials (cf. C 3 above). The *tawḳīʿāt ʿalā ʾl-ḳiṣaṣ* continued, as did a whole group of occasional documents such as contracts, passes, oaths, amnesties etc.

E. Compared with Egypt our knowledge of chancelleries in the other Arab countries, such as the Maghrib and al-Andalus, is scanty. In these, the term *ẓahīr* was commonly applied to all documents. Ibn al-Khaṭīb (died 776/1374) became famous with his *Rayḥānat al-kuttāb*, which is frequently quoted by Ḳalḳashandī. Cf. below, ii.

7. Probative force of documents. Islamic law accepts only proof brought by witnesses, and rejects written testimony in principle. Nevertheless, in the actual practice of law, documents have achieved great importance. Incidentally, contracts seem to have appeared in writing in Arabia even in pre-Islamic times. The seal (*khātam*), which is of very long standing in the Orient, was an important means of authentication in Arabic documents. This seal was not replaced, as it was in the West, by the use of a signature, for the document was not valid unless a seal appeared on it, even if it was signed. The Prophet is said to have had a silver seal with the inscription: *Muḥammad Rasūl Allāh*. The earliest known seal is that of ʿAmr b. al-ʿĀṣ, which has the picture of a bull.

8. Development of Documents. Petitions and preliminaries also occur amongst Arabic documents. Petitions (*ḳiṣaṣ*) naturally preceded decisions (*tawḳīʿ*), and were the instigation of their formulation. The actual text of the *tawḳīʿ* was generally short and to the point, so that mention of the petition was hardly possible. The *fatwā*, too, was preceded by an investigation, and the state of affairs was described more or less explicitly in a set formula which omitted names. Contracts were often preceded by lengthy negotiations, but there is no mention of these preliminaries in the actual text of the contract.

9. Procedure and authentication, stages of authentication. Of the nine stages of authentication which are known in western documents, only a few can so far be traced in Arabic ones. Ibn al-Ṣayrafī (108 f.) mentions revision and correction as *muḳābala* and *iṣlāḥ*. During the consultation with the ruler, the head of the *dīwān* merely indicated the main points of the reply, whilst the reply itself was drawn up by the relevant secretary. Then he compared the reply with the excerpt, corrected omissions and errors if need be (there is also mention of a special corrector = *mutaṣaffiḥ*), and only then did he submit the completed reply to the ruler to be signed. The latter then added his signature (*ʿalāma*), but the address (*ʿunwān*) had to be written by the head of the *dīwān* himself, in order to give visible proof that he was aware of the contents and accepted responsibility for it. In order to be put into effect, the document required the *taʿyīn* for the charge of carrying out the decision, which was summarized on the reverse of the *ḳiṣṣa*; this charge had to be assigned in writing by the head of the *dīwān*. According to the rank of the secretary who was ordered to carry this out, it had different phrasing and placing, *e.g.*, *yuktab bi-dhālika* or *li-yuktab bi-dhālika* (cf. Ḳalḳashandī, vi, 210). Great attention was obviously paid to the elegance of the fair copy, and the Fāṭimids had a special fair-copyist (*mubayyiḍ*) who was responsible for all types of documents (cf. Ibn al-Ṣayrafī, 133 f.). Nothing is said concerning the reading of this fair copy to the ruler, or about its handing over.

10. Intercessors and witnesses. The religious intercession (*shafāʿa*) of the Prophet is well known in Islam. There are also intercessions of a secular nature, such as on the occasion of the handing in of a petition to the ruler, or on standing surety for a debtor. Ḳalḳashandī, ix, 124 gives early and late textual examples, and, in xiii, 328, an *amān* in which the intercessor is referred to as follows: *inna M.b. al-Musayyib saʾala fī amrikum wa-dhakara raghbatakum fi ʾl-khidma*.

11. Model documents for use by scribes. In the West, set forms were always used, from the days of ancient Rome to the end of the Middle Ages. As early as the first century, there are some Arabic papyri which prove that letters and documents were written in a certain set form, and one may therefore assume the presence of models, although none is extant. Later Arabic formularies, the so-called *inshāʾ* works, are an independent genre of literature. Of these, three types can be distinguished: 1) collections of models similar to the formularies of the West, 2) treatises on stylistics and rules concerning the drawing up of the documents, similar to the Western *artes* or *summae dictaminis*, 3) a mixture of both, that is to say, formularies with theoretical commentary, or theoretical treatises with examples from practice, similar to the ones found in the West from the 12th century onwards. The most important of the many (over 50) Arabic *inshāʾ* works are probably the following: al-Ṣūlī (d. 335/946), *Adab al-kuttāb* (type 2); Abū Isḥāḳ al-Ṣābiʾ (d. 384/994), *Rasāʾil* (type 1); Ibn al-Ṣayrafī (d. 542/1147), *Ḳānūn dīwān al-rasāʾil* (type 2); al-Ḳāḍī al-Fāḍil (d. 596/1200), *Rasāʾil* (type 1); Shihāb al-Dīn b. Faḍl Allāh (d. 749/1349), *al-Taʿrīf biʾl-muṣṭalaḥ al-sharīf* (type 3); al-Ḳalḳashandī (d. 821/1418), *Ṣubḥ al-aʿshā fi ṣināʿat al-inshāʾ* (type 3). As examples of preliminaries, one might perhaps mention those known as *iṭlāḳāt*, which confirmed decisions of earlier rulers. These naturally refer to the older decisions, but there is no evidence of a complete list as an *insertum*.

12. Copies. There are many examples of official facsimiles or copies in the West, but I know of no Arabic ones. But there were grounds for them, too, such as the loss of an original, or the accession of a new ruler. There are Arabic examples of illegal imitations or forgeries. As early as Ṣūlī (143), there is mention of forgery from *miʾat alf* to *miʾatay alf*, which is given as the reason for introducing the *dīwān al-khātam* of the Umayyads. Ḳalḳashandī (xiii, 104) writes on Tamīm al-Dārī's first investiture with land, and Shihāb al-Dīn b. Faḍl Allāh (*Masālik*, i, 173) claims to have seen the original. This can hardly have been anything other than a forgery. Hamidullah seems to accept the documents attributed to the Prophet as genuine, but some internal evidence would argue against the authenticity of some of them. Concerning forged papyri cf. Grohmann, *Chrestomathie* 35.

13. The language of the documents. Whilst much thorough work has been done on the development of Latin in the Middle Ages, only the main outline of the development of modern literary Arabic from Classical and Middle Arabic is known (cf. ʿARABIYYA). This development is of great importance for the interpretation or documents. A special branch is the emergence of rhymed prose

(*sadj*ʿ), on which there are the treatises by Zakī Mubārak (*La prose arabe au 4*ᵉ *siècle de l'hégire*, thesis, Paris 1931; also in Arabic, *al-Nathr al-fannī fi 'l-karn al-rābiʿ*, 2 vols., 1352/1934). The zenith of *sadj*ʿ was, in documents as elsewhere, the time of the Mamlūks. The infiltration of the vulgar tongue into the language of the documents poses a further question. It can already be traced in the papyri and later it repeatedly led to errors on the part of the scribes. This is dealt with in detail by Ṣūlī (129) and Ḳalḳashandī (i, 148 ff.).

14. Dating. Just as in the West, dating (*ta'rīkh*) brought a wealth of problems. Even the normal *hidjra* dating offered many possibilities, such as dating according to nights and days, feast-days, parts of the month etc.; but Ḳalḳashandī (vi, 234 ff.) treats no less than 19 older eras and one younger era, that of Yezdegird. Most of them were of little importance. Only the Christian and the Coptic occurred frequently. A special problem was the adjustment between the lunar and the solar year (*sana hilāliyya* and *kharādjiyya*) for the purposes of taxes. As far back as ʿAbbāsid times, special documents, *fī taḥwīl al-sana*, were written when the need arose. [see TA'RĪKH].

15. Writing materials. Extensive work has been done on writing materials by papyrologists, the most recent being by Grohmann, (*Chrestomathie* 63 ff.). Apart from the usual materials (papyrus up to the 11th century, parchment, paper), there were the rarer materials, such as cloth (especially for marriage contracts), wood, stone, wax, bones and potsherds. Size (*ḳaṭ*ʿ, in Ṣūlī *miḳdār*) also differed greatly, and so did the kinds and the prices. Ḳalḳashandī gives several recipes for the ink (*ḥibr*, *midād*). [See DJILD, KĀGHAD, ḲIRṬĀS, RIḲḲ, WARAḲ].

16. Script in documents. Although much groundwork has been done by Moritz, Tisserand, Cheikho, and others there is as yet no full scholarly history of Arabic script (cf. KHAṬṬ). Grohmann investigated the script of the papyri (*Chrestomathie* 88-103). As far as later documents are concerned, observation of the peculiarities of different types of script, the use of diacritic marks and differential signs, must suffice in order to decide the age of undated pieces approximately. Certain formulae, numbers, notes on records etc. often appear in a shortened cursive hand which one might almost call shorthand. Grohmann (*Chrestomathie* 83) discusses the writing materials, and Ḳalḳashandī (ii, 430) lists no less than 17 terms, the precise meaning of which can hardly be determined in the absence of drawings. Codes and hidden allusions may always have played a part, as in Ṣūlī (186) (*tardjama*), and Ḳalḳashandī (ix, 229, *taʿmiya*, later *ḥall al-rumūz*). They even occur in a papyrus (Grohmann, *Chrestomathie* 103[2]).

17. Sealing. Ṣūlī (139) and Ḳalḳashandī (iii, 273) were already interested in seals (*khātam*), and in Europe too the shape and use of Arabic seals has roused a certain amount of interest since Hammer. According to Grohmann (*Chrestomathie* 129 f.), one should distinguish between the use of a seal to replace the signature as a means of authentication, the attaching of a seal by way of recognition and ratification, and sealing on the part of witnesses. [See KHĀTAM].

Bibliography: Information concerning the extensive literature on Arabic papyri now probably best found in A. Grohmann, *Einführung und Chrestomathie zur arabischen Papyruskunde*, 1955, iv-viii. Cf. also *Die Papyri und die Urkundenlehre*, 107-30. Works in Arabic: al-Ṣūlī, *Adab al-kuttāb*, ed. M. Bahdjat al-Atharī, Cairo 1341 A.H.; Ibn al-Ṣayrafī, *Ḳānūn dīwān al-rasā'il*, ed. ʿAlī Bahdjat, Cairo 1905; Shihāb al-Dīn b. Faḍl Allah, *al-Taʿrīf bi 'l-muṣṭalaḥ al-sharīf*, Cairo 1312 A.H.; al-Ḳalḳashandī, *Ṣubḥ al-aʿshā fī ṣināʿat al-inshā'*, i-xiv, Cairo 1331-8/ 1913-9. Index in W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, 87-177. Older publications of documents by S. de Sacy, Amari, Cusa, de Sousa, Remiro, Ribera, and others, are collected by G. Gabrieli, *Manuale* 255-288. Concerning more recent publications, cf. H. R. Roemer, *Über Urkunden zur Geschichte Ägyptens und Persiens in islamischer Zeit*, in *ZDMG* 107, 1957, 519-38 (this also mentions an Egyptian project of editing Fāṭimīd and Mamlūk documents); A. Grohmann and Pahor Labib, *Ein Fatimidenerlass vom Jahre 415/1024*, in *RSO* 32, 1957, 641-54 (which mentions a projected series of *Monumenta diplomatica arabica*); J. Wansbrough, *A Mamluk letter of 877/1473*, in *BSOAS*, xxiv/2 (1961), 200-13; S. D. Goitein, *The Cairo Geniza as a source for the history of Muslim civilization* in *Stud. Isl.*, iii, 1955, 75-92; G. E. El-Shayyal, *Madjmūʿat al-wathā'iḳ al-Fāṭimiyya*, i, Cairo 1958; Ḥasan al-Bāshā, *Al-Alḳāb al-Islāmiyya*, Cairo 1937. See further DAFTAR, SIDJILL, etc. (W. BJÖRKMAN)

ii. — MAGHRIB

In the Maghrib the external characteristics of documents (format, colour of paper, kinds of script, etc.) as well as the choice of protocols and formulae appear always to have been simpler than in the East.

To be mentioned, however, is the introduction by the Moroccan Almohad dynasty (*al-Muwaḥḥidūn*) of a sign manual of authentication called ʿ*alāma*. This consisted of the precatory formula *wa 'l-ḥamdu li-llāhi waḥdah*! elegantly inscribed in large, thick letters, with a ligature of the *hā'* and the *dāl* in the final word, and followed by a "terminal sigla" (see below). This mark of authentication was written afterwards at the top of the document, in a broad space left free for this purpose by the scribe, below the *basmala* and the *taṣliya*, of which it was a complement.

Of a "unitarian" nature, this formula was possibly used by the mahdī Ibn Tūmart himself in some of his epistles. His successor ʿAbd al-Mu'min certainly used it in his famous *Risālat al-Fuṣūl* (see E. Lévi-Provençal, *Documents inédits d'histoire almohade*, Arabic text, 13). But it is Yaʿḳūb al-Manṣūr (580-95/ 1184-99) whom the *Ḳirṭās* (ed. Fās 1305, 154) considers to have been the first to use this formula as an ʿ*alāma* and to write it with his own hand. Indeed, it was not until under this ruler that the formula appeared, as a dynastic device, on the Almohad *dīnars* (see Lavoix, *Cat. mon. mus.*, Espagne et Afrique, 303-308) replacing the earlier formula *al-ḥamdu li-llāhi rabbi 'l-ʿālamīn*.

The Almohad Ḥafṣid rulers of Ifrīḳiya expanded the formula by adding *wa 'l-shukru li'llāh*. Later, the Naṣrids of Granada chose *wa-lā ghāliba illa 'llāh* "and there is no conqueror but God", very likely in memory of the name of their eponymous ancestor Naṣr ("divine aid which grants victory"). Moreover their first ruler chose the *laḳab*: al-Ghālib bi'llāh.

These two dynastic devices, Ḥafṣid and Naṣrid, appeared as well on their coins and some monuments.

Left at first to the ruler himself, the responsibility for inscribing the ʿ*alāma* was later entrusted to a very

high confidential official, a kind of head chancellor or keeper of the seal called *ṣāḥib al-ʿalāma*. It was most often a scholar of great distinction; thus it was that Ibn al-Abbār [*q.v.*] and Ibn Khaldūn [*q.v.*] filled this office at Tunis. According to the importance of the document to be authenticated, it could have an *ʿalāma kubrā* or an *ʿalāma ṣughrā*, whose inscription was entrusted to two chancellors of different rank.

In Morocco the use of the Almohad *ḥamdala* as *ʿalāma* continued to the end of the Saʿdian dynasty. But it became much more stylized and ended by becoming a kind of tracery of arabesques, difficult to decipher, and possibly in imitation of the Turkish *ṭughrā* [*q.v.*]. This very artistic *ʿalāma* of the Saʿdians, for them a sort of coat of arms, is found on their guns, some of their coins, and in the ornament of their palaces. In the last years of the Saʿdian dynasty as well as the manual *ʿalāma*, use was made of a stamp in ink engraved on an oval seal.

The succeeding Moroccan dynasty, that of the ʿAlawids, abandoned entirely the Almohad *ʿalāma*, both manual and stamped. The sole mark of authentication became the ink stamp of a round seal (*ṭābiʿ*), large or small according to the importance of the document, placed below the blank space between the *ḥamdala* and the *taṣliya*.

Yet another particularity of Maghrib diplomatic must be noted. To mark the end of the text in a document, a terminal sigla was splaced immediately after the date, consisting of an initial *hāʾ* with a tail curving towards the right, which it is tempting to read, not without reason, as an abbreviation of the verb *intahā* ("it is concluded"). In any case it cannot be an abbreviation of the postscript (*tawḳīʿ*) *ṣaḥḥ hādhā* or *ṣaḥīḥ dhālik* ("this is authentic") which appears at the end of diplomas conferring privileges and favours, often written by the ruler in his own hand.

We might add that some Moroccan documents, of the Waṭṭāsids and Saʿdians, are dated in "Greek numerals" which also appear on some of their coins, and that the Saʿdian sultan Aḥmad al-Manṣūr made use of a cryptographic writing.

The principal types of Maghribī documents are the following:

ẓahīr (for *kitāb ẓahīr*), pl. *ẓahāʾir*, in the Moroccan dialect *ḍahīr*, pl. *ḍwāher*. This is a diploma of investiture or of immunity from taxes, tolls, and forced labour, especially in favour of *sharīf*s or *murābiṭ*s.

tanfīdha, a diploma conferring a life pension or personal usufruct of a property belonging to the royal domain. These first two kinds of letters-patent are also called *ṣakk*.

risāla or *barāʾa* (in dialect *brā*), a letter addressed to a community, in order to announce an important event (the appointment of a new governor, victory over the enemy or rebels, etc.), or in order to exhort or to admonish. These official communications were generally read from the *minbar* in the mosque on Friday. Several Moroccan ʿAlawid sultans, among them Sayyidī Muḥammad b. ʿAbd Allāh and Mawlāy Sulaymān b. Muḥammad, acquired a solid reputation as letter-writers in this *genre*.

bayʿa, the "contract of allegiance" concluded between notables and the new ruler.

Bulak 1274, 120, 129: trans. de Slane, *Prolégomènes*, i, xxxi, ii, 26, 63; Rabino, *Contribution à l'histoire des Saadiens*, in *Archives berbères*, iv (1920), 1; H. de Castries, *Les signes de validation des chérifs saadiens*, in *Hespéris*, i, (1921), 231; E. Tisserant and G. Wiet, *Une lettre de l'almohade Murtaḍā au pape Innocent IV*, in *Hespéris*, vi (1926), 27; E. Lévi-Provençal, *Un recueil de lettres officielles almohades*, in *Hespéris*, xxviii (1941), 1. The text and the notes of the last three articles provide a basic bibliography, which can be supplemented by S. de Sacy, *Mémoires d'histoire et de littérature orientales*, Paris 1832, 119 and 149; G. S. Colin, *Contribution à l'étude des relations diplomatiques entre les Musulmans d'Occident et l'Égypte*, in *Mélanges Maspero*, iii, 197, Cairo 1935; idem, *Note sur le système cryptographique du sultan Aḥmad al-Manṣūr*, in *Hespéris*, vii (1927), 221; L. Di Giacomo, *Une poétesse grenadine du temps des Almohades*, in *Hespéris*, xxxiv (1947), 64-65; R. Brunschvig, *La Berbérie orientale sous les Ḥafṣides*, ii, 61; Cusa, *I Diplomi greci ed arabi di Sicilia*, Palermo 1868; ʿAbd Allāh Gannūn, *Rasāʾil Saʿdiyya—Cartas de historia de los Saadies*, Tetuan 1373/1954; M. Nehlil, *Lettres chérifiennes*, (collection of 128 official documents of the Moroccan ʿAlawid dynasty, in facsimile), Paris 1915. The collection of *Sources Inédites de l'histoire du Maroc* contains in transcription, as well as plates, numerous Moroccan diplomatic documents.

(G. S. Colin)

iii. — Persia

The origins of Persian diplomatic are to be found in the period of the foundation of Turkish states in Persian territory. While in the chancelleries of the Ṭāhirids and Sāmānids, who in so many respects were influenced by Iranian culture, Arabic was employed and efforts to introduce Persian (in the form of a "court language", [see DARĪ]) failed, Maḥmūd of Ghazna (389-421/999-1030) declared Persian the official language and thus provided for its introduction into the chancellery. A similar development took place under the Saldjūḳs (see B. Spuler, *Iran*, 245-6). It is impossible to say to what extent Arabic documents served as models for Persian, though the strong Arabic influence can very likely be traced back to this early period. The relations between the ruler of Ghazna and the Caliphal court necessitated the translation of Persian documents into Arabic as well as of Arabic into Persian. There were in addition a number of Turkish elements, considerably increased during the Ilkhānid period by elements of Mongol-Turkish origin, which for centuries were to influence in particular the external form of documents and other written communications.

Categories of documents. These correspond broadly with the types described above for Arabic documents. An important distinction is between documents which attest and documents which command. The first consist of legal deeds or certificates which were recorded and confirmed by witnesses with seal and signature (*muhr wa niwishta*), for example, *ḳabāla* (deed of purchase, confirmed by a judge), *tamassuk* (bill or receipt), *ʿaḳd-nāma* or *nikāḥ-nāma* (marriage contract), *wakālat-nāmča* power of attorney), *bayʿ sharṭ-nāmča* (deed of sale), *waṣiyyat-nāma* (testament), *waḳf-nāma* (act for the establishment of a pious foundation). These documents (*sidjillāt-i sharʿiyya*) belong primarily to the sphere of competence of the authorities for religious law. In contrast to these, documents containing orders were the exclusive prerogative of the organs of state, executed by the ruler or his

deputies and recorded in the chancellery. In principle an "official document" (*farmān*) can be found for every expression of the ruler's will. In practice they may be divided according to contents into the following groups: deeds of appointment, of investiture (*iḳṭāʿ*, in the Mongol and post-Mongol period: *soyūrghāl*; *musallamī*, tax-exemption; *tiyūl*, office-holder's fief; *waẓīfa*, grants to religious from foundations or state funds; the awarding of a robe of honour, *khilʿa*, etc.), treaties, passports, judicial decisions of the ruler, and orders of a general nature to governors and officials. In the Saldjūḳ period the terminology appears to have been still largely undeveloped. In addition to *farmān*, the most general term, *manshūr* (*manāshīr*) refers to documents of the greatest diversity, while others are *taḳlīd*, *tafwīḍ*, *taslīm*, *mithāl* (*amthila*), and *manshūr-i taḳlīd* or *tafwīḍ* (see Rieu, *Cat. Pers. Mss in the Brit. Mus.*, London 1879, i, 389; Ethé, *Cat. Pers. Mss in the Ind. Off. Library*, i, 1131; Muntadjab al-Dīn Badīʿ Atābeg al-Djuwaynī, *ʿAtabat al-kataba*, *passim*). The expression *nishān* appears in the Tīmūrid period (see Roemer, *Staatsschreiben der Timuridenzeit*, Wiesbaden 1952, *passim*) and is used until the 17th century (see Chardin, *Voyages du Chevalier Chardin en Perse*, ed. Langlès, Paris 1811, ii, 97). Synonymous with *nishān* is *maktūb*, occasionally used in the Tīmūrid period (Niẓām al-Dīn Shāmī, *Ẓafar-nāma*, ed. F. Tauer, ii, 264, index). Decrees were further called *ḥukm* (Ḥāfiẓ-i Abrū/Tauer, *Cinque opuscules*, 83, index), *tawḳīʿ* (originally only the signature of the ruler and later his seal as well, see below) or *mithāl* (Shāmī/Tauer, ii, 299). The Mongol designation *yarlīgh*, alone or in the combination *ḥukm-i yarlīgh*, remained in use until the end of the 15th century (Shāmī/Tauer, ii, 274). A distinction according to diverse introductory formulae (see below), though not according to contents, appears in the 9th-10th/15th-16th centuries: *parwānča* and *ḥukm* with solemn formulae are contrasted with simpler documents designated by *raḳam* (see H. Busse, *Untersuchungen zum islamischen Kanzleiwesen an Hand turkmenischer und safawidischer Urkunden* (Abhandlungen des Deutschen Archäologischen Instituts Kairo, Islamische Reihe), i, Cairo 1959, 67); the acts of subordinate authorities are now evidently called *mithāl* (*mithāl-i dīwān al-ṣadāra*: Papazyan no. 17, 970/1562). In the Ḳādjār period the designations depend upon the issuing authority: only the decrees of the Shah are called *farmān*; acts of governors of royal origin are called *raḳam* (*arḳām*); those of other governors *ḥukm* (see Greenfield, *Die Verfassung des persischen Staates*, Berlin 1904, 115). In less official language, however, almost all of the expressions listed above occur (see S. Beck, *Persische Konversationsgrammatik*, Heidelberg 1914, ii, 211 ff.).

Distinct from deeds and orders in the strict sense are the letters concerned with domestic and foreign affairs (*maktūb*, *kitābat* or *risāla*). Like the former they are provided with an official attestation and have a fixed external and internal form, but lack a legal content, as for example in the letters confirming friendly relations (*ikhwāniyyāt*). There is a form for every occasion, such as congratulation (*adʿiyyāt*), condolence (*taʿziyat-nāma*), etc. Into the 9th/15th century foreign correspondence, based on a Mongol pattern, preserved in part the form of a decree, from which, however, it tended to depart under the Ṣafawids in the 11th/17th century. Owing to their legal contents "border-books" (*sinūr-nāma*, examples in Evoğlu Ḥaydar, *Inshāʾ*, see Rieu, i, 390) approach the form of decrees. The same may be said of letters-patent for envoys. Letters from the royal hand (*dast-khaṭṭ-i humāyūn* or *mubārak*), the highest in rank, assume a middle position between documents and other writings, their contents ranging from the personal execution of an act by the ruler to confidential communications.

The internal structure of documents and writings has in the course of nine hundred years of Persian chancellery history scarcely changed—that is, until modern times. The documents begin with an invocation to God (*invocatio*) frequently combined with a devotional ejaculation (*al-ḥukm li'llāh*, *al-mulk li'llāh*). These formulae, together with the formula of promulgation, the *arenga* and the *narratio*, constitute the protocol, which is followed by the most important part of the document, the *dispositio*. In the *arenga* the execution of the document in general terms, mostly of a religious character, is established, partly by the abundant use of Ḳurʾānic citations, verse, and rhetorical analogy. Here, in contrast to other parts of the document which are bound by more rigid formulae, the writer is free to display his literary talent. Evidence of this art is to be found, however, in pronounced form more frequently in *inshāʾ* works than in original documents. The *narratio* on the other hand contains the essential transaction, for the most part a report of the proposition (*ʿarḍa-dāsht*) of the petitioner, while in documents of confirmation the proposed act, or, depending upon the affair in question, several acts are included completely or in their most important parts (*insertio*). In the *narratio* appear for the first time the name and title of the addressee, who is always referred to in the third person, and afterwards only by *madhkūr*, *mazbūr*, *mushār ilayhi* and *mūmā ilayhi*. The full titles can, in artistic combinations with *panāh*, *dastgāh*, *niẓām*, etc., be extended for several lines. The formulae of promulgation (such as *farzandān wa wuzarā ... bi-dānand ki*) are placed before the *arenga* or *narratio*, but can be omitted. The *arenga* closes frequently with the phrase *ammā baʿd*.

The nucleus of the document is the *dispositio*, or decision of the ruler: in appointments and investitures the office and date of the nomination or object of the investiture are given in more detail (*circumscriptio*), while in other acts the decision or command is set forth. The *dispositio* is expressed in either active (that is, the ruler refers to himself in the first person plural: *muḳarrar farmūdīm wa arzānī dāshtīm*), or passive form, (*muḳarrar farmūda shud ki*). Vestiges of an original first person singular were preserved in isolated phrases into the 17th-18th centuries: *shāh bābam*, *djadd-i buzurgwāram* (accompanied by blessings). The transition from the *narratio* to the *dispositio* is accomplished by means of set formulae: frequently *bināʾan ʿalayhi*, *binā bar īn*, *li-hādhā*, or *mī-bāyad ki*. To the *dispositio* in cases of appointments and investitures, prescriptions (*adhortatio*) for the addressee or officials and persons concerned might be added, usually introduced by *sabīl wa ṭarīḳ*. In contrast to the formulae of promulgation, where the highest dignitaries are named first, they appear here at the end. The accountants (*mustawfiyān*) are often directed to register the document (*dar dafātir ʿamal namāyand*). Finally a prohibition might follow, forbidding the annual request for a renewal, with the directive "may this apply in all similar cases". Except for the *invocatio* all of these parts which precede and succeed the *dispositio* may be omitted, in which case the document consists only of the *dispositio*. Most frequently, however, the order

is *narratio—dispositio*—conclusion (date etc.). In this case the entire text is included between *čūn* (beginning of the *narratio*) and *binā bar īn* (*dispositio*). In the *narratio* or in the *dispositio* by means of *siyāḳat* script directions for registration of the document might be given; should these instead be written on the reverse side (*ẓahr, ḍimn*), this is indicated by a remark in the text.

The documents close with a phrase in which reference is made to the seal (*corroboratio*), and with the Islamic date: *kutiba fī* (as early as Rashīd al-Dīn, ed. Jahn, *GMS*, n.s. xiv, 222) or *taḥrīran fī*. The day of the month, in Arabic numerals as well as in Persian ordinals, disappears almost completely in the 10th/16th century. The Persian day of the week is occasionally given (Papazyan, no. 18, 977/1570). The first day of the month is called *ghurra*, the last *salkh*. The names of the months appear with their customary attributes: *Muḥarram al-ḥarām*, *Ramaḍān al-mubārak*, etc. The year was at first written in Arabic, replaced by Arabic numerals from the 10th/16th century on. Until the 10th/16th century the *Hidjra* year was usually accompanied by the corresponding year of the animal cycle, which was used even later (with the *Hidjra* year) with reference to dates in the *dispositio*. Up to the end of the 9th/15th century the place of issue was named after the date: *ba-maḳām*, *ba-madīna* or *ba-dār al-salṭana*. With some exceptions this later disappears. In Turcoman documents, beneath the date and place name, is an *apprecatio*: *rabbī ikhtim bi'l-khayr wa'l-iḳbāl* (see Busse, *Untersuchungen*, no. 2). In the 10th/16th century this phrase was moved to the right-hand margin and shortened to *khutima bi'l-khayr* or *khutima*, later disappearing altogether. Similarly, until the end of the 9th/15th and beginning of the 10th/16th centuries, to the right below the text and perpendicular to it, was a reference to the secretary and other officials who might have participated in the preparation of the text: *parwānča-yi ashraf-i aʿlā*, *ba-risāla* (name), *ba-wuḳūf* (name). From the beginning of the 11th/17th century this remark can be found in altered form on the reverse side of the document (see below).

The external form of the documents has been more subject to change than the internal form. The periods of modification are roughly the following: Pre-Mongol—Mongol—Tīmūrid and Turcoman—Ṣafawid to the beginning of the 14th/20th century. The *tughra*—[*q.v.*] was employed by the Saldjūḳs and the rulers of Khwārizm (in *ʿAtabat al-kataba* a *wazīr-i tughra* is mentioned, no. 16; for Khwārizm see al-Nasawī, *Sīrat al-sulṭān Djalāl al-Dīn Mängübärdī*, ed. Ḥāfiẓ Aḥmad Ḥamdī, Cairo 1953, 324). While here they consisted evidently only of the name and titles of the ruler, in the Mongol period was added, in addition to *bahādur* (after 1319, see Spuler, *Mongolen*², 197 and 271), after the name the phrase *üge manu* ("an order from us"). In Tīmūr's documents the phrase reads in Turkish translation: *Tīmūr gürkān sözümüz* (see Fekete, *Arbeiten der grusinischen Orientalistik auf dem Gebiet der türkischen und persischen Paläographie und die Frage der Formel sözümüz*, in *AO Hung.* vii (1957), i, 14). In this form the *tughra* was preserved on particular documents throughout the Turcoman period into the 11th/17th century, and was employed by the khāns of Bukhārā as well as by the Golden Horde in southern Russia (see Fekete, *op. cit.*, 14). In Aḳ Ḳoyunlu documents the *tughra* is combined with the *tamgha* which appears on their coinage (see Hinz, *Irans Aufstieg zum Nationalstaat im fünfzehnten Jahrhundert*, Berlin and Leipzig 1936, 106 and the illustration opposite 104). An innovation for the world of Islam was the Uyghur practice introduced by the Mongols of indenting the first lines of the text, as well as emphasizing (owing indirectly to Far Eastern influence) the name of the ruler and the word *yarlīgh* by beginning a new line (see Busse, *Die Entwicklung der Staatsurkunde in Zentralasien und Persien von den Mongolen bis zu den Safawiden*, in *Akten des XXIV. Internationalen Orientalisten-kongresses München*, Wiesbaden (1959), 372-4). With insignificant changes this usage can be observed as late as the 11th/17th century in documents with a *tughra*, from which it was also extended to other documents. During the rule of the Ṣafawid Ismāʿīl I (1501-24) the *tughra* disappeared from certain documents, though the first two lines of the text continued to be indented. The seal, earlier at the bottom of the document, came generally to be placed at the top (where it is still, in the form of a crest). There was a new development under the second Ṣafawid Ṭahmāsp I (1524-76), in that the *tughra*, written by the head of the chancellery (*munshī al-mamālik*), appeared now in red or gold ink in two forms as an introductory phrase (while the indenting of the first two lines was dropped): *farmān-i humāyūn shud* and *farmān-i humāyūn sharaf-i nafādh yāft*. At the beginning of the 11th/17th century was added the phrase (written in black ink by the *wāḳiʿa-niwīs*, equivalent to the *madjlis-niwīs* or *wazīr-i čap*): *ḥukm-i djahān-muṭāʿ shud*. In documents of the *dīwān begi* the same formula appears in red ink (see *Tadhkirat al-Mulūk*, ed. and tr. V. Minorsky, London 1943, fol. 21b, 24b, 40a). A further differentiation had already begun to develop (the first example in Papazyan no. 3, 866/1462), in that the *tughra* in documents emanating from members of the royal family had instead of *sözümüz* the term *sözüm* ("my order"), to be found up to the end of the 10th/16th century (see Puturidze no. 17, 1591). There appeared further in the 10th/16th century in the documents of governors the formula *amr-i ʿālī shud* (also in combination with the *tughra* containing *sözüm*: Puturidze no. 76, 1051/1642), and in the 11th/17th century *muḳarrar ast ki*. Under Ismāʿīl II (1576-77) the phrase *amr-i dīwān-i ashraf-i aʿlā* was used in certain decrees (Papazyan no. 19, 984/1577). Documents of the authorities in the central government bore in the 11th/17th and beginning of the 12th/18th centuries the imperial seal but contained no introductory phrase (see Busse, *Untersuchungen*, 65). The same is true even today for letters of the Shāh, which begin directly with the name and title of the addressee. Diverse introductory phrases characteristic of different kinds of documents remained in use in the Post-Ṣafawid period. The formula *farmān-i humāyūn shud* continued to appear in the acts of the Afshārs, though combined with *biʿawn Allāh taʿālā* (later *aʿūdhu bi'llāh taʿālā*), while the strokes of the letters were curved into an artistic shape similar to a row of treble clefs. In Ḳādjār documents is the phrase *ḥukm-i djahān-muṭāʿ shud* (with *al-mulk li'llāh taʿālā*), while in the acts of Muẓaffar al-Dīn Shāh (1896-1907) *farmān-i humāyūn shud* reappears (see Beck, *op. cit.*, ii, 342-3 and facsimile). The *tughra* in gold ink was preserved. The phrase *ḥukm-i djahān-muṭāʿ shud* (without additions) appears even in the late Afshar and in some Zand documents, retaining the same simple form of the Ṣafawid period. The acts of Nādir Shāh prior to his coronation (8 March 1736; the nominal ruler was the Ṣafawid ʿAbbās III, 1732-6) contained the phrase *farmān-i*

ʿālī shud (with *bi-ʿawn* . . .) already in the peculiar form described above. After 1736 *farmān-i ʿālī shud* was replaced by *farmān-i humāyūn shud*. *Farmān-i ʿālī shud* (without additions and in simpler form) is also to be found in the documents of Karīm Khan Zand (1750-96), who was content to hold the actual power under the nominal rule of the Ṣafawid Ismāʿīl III. His predecessor the Bakhtiyārī leader ʿAlī Mardān Khān, also unofficially Shah, employed the introductory phrase *ḥukm-i wālā shud* (without additions). Here tendencies towards a practice which was definitively established in the Ḳādjār period become apparent: documents emanating from governors belonging to the royal family bear the formula *ḥukm-i wālā shud*, while other governors must content themselves with *ḥukm-i ʿālī shud* (customary as early as the Ṣafawid period; see *Sayyid al-inshāʾ*, Tehran 1327/1919; Beck, *op. cit.*, i, 451 and 455). Modern edicts (with an obvious European influence) contain the following protocol: crest (a lion and sun). *farmān-i muṭāʿ-i mubārak—aʿlā-ḥaḍrat-i humāyūn-i shāhinshāhī—ba-taʾīdāt-i khudāwand-i mutaʿāl—mā* ("we")—*Pahlawī shāhinshāhī Īrān.* Seal. Here parts of the old formulae are combined into one.

Scripts and writing materials. Owing to the lack of original documents nothing is known of the kinds of script used in the Saldjūḳid chancellery. The *tughra* was written with a "broad pen" (*ḳalam-i ghalīẓ*; see Spuler, *Iran*, 362). It may be presumed that the variety of scripts developed in the late ʿAbbāsid period (see *Fihrist*, ed. Flügel, 4 ff.) continued to be cultivated in the chancellery in the 5th/11th century. The earliest Persian fragment, a deed of sale (see Margoliouth, in *JRAS* 1903, 761 ff.), indicates tendencies towards *taʿlīḳ*, which later came into general use. The Mongol documents of the Ilkhans were of course written in Uyghur script, still used in the Turkish documents of the Tīmūrids in the 9th/15th century though with an interlinear transcription in Arabic script (see Kurat, *Topkapı Sarayı . . . yarlık ve bitikler*, Istanbul 1940, 195 ff.: an act of Abū Saʿīd 873/1468). In the post-Mongol chancelleries *taʿlīḳ* had become firmly established, though some parts (*invocatio*, *tughra*) were occasionally written in *thulth*. In the 10th/16th century *nastaʿlīḳ* came into use, though *shikasta* script was also employed. The development towards *shikasta*, which did not attain its pure form until the 11th/17th century, had been evident in the *taʿlīḳ* of the 8th/14th century.

From the beginning the writing material used was probably paper, a domestic product in the Near East from the end of the 3rd/9th century. As early as the end of the 9th/15th century, as in other Islamic states, a part of the paper was obtained from Europe; Chardin (*Voyages*, iv, 271 f.) bears witness to this at any rate for the second half of the 11th/17th century in Persia. Better grades of paper came from Balkh, Bukhārā and Samarḳand. The format varied in breadth from 15 to 30 cm; some documents were several metres long (for example, Busse, no. 3: 263 cm), consisting of separate sheets pasted together.

Mongol decrees were already richly decorated in coloured (red and gold) inks, especially in those parts which were emphasized by means of *elevatio*. The same is true into the 11th/17th century for documents with a *tughra*, in which, especially, gold ink was used for the *invocatio*, prayers, the *tamgha* (in Aḳ Ḳoyunlu decrees), Ḳurʾānic citations, and words on the right-hand margin. Gold and red inks were used abundantly in documents with introductory formulae, with the exception of those with *ḥukm-i djahān-muṭāʿ shud*, which with this phrase were executed completely in black. The use of coloured inks was dropped also in the documents emanating from provincial authorities. In writing, a large margin was left at the top and on the right, in which only words to be stressed were written. The lines rise, especially in the early period, slightly to the left; occasionally, in order to prevent later insertions, the last word of the line was extended to reach the left-hand edge of the paper. Until the end of the 9th/15th century the beginning of the *dispositio* was indicated by particularly large letters (see Busse, no. 3). In letters to foreign rulers the name of the addressee is placed above the text; the place in the text in which it was to be inserted (after the execution of the title) was indicated by a small space.

Seals. Originally, decrees and writings (except for those with a seal?) were attested by the ruler's flourish (*tawḳīʿ* or *imḍā*), in the place of which the seal (alone?) must have early appeared. In any event into the 10th/16th century the expression *tawḳīʿ* in the *corroboratio* refers to the seal; not until the 11th/17th century was *tawḳīʿ* replaced by the (long overdue) designation *muhr*. Shāh Ismaʿīl included in his edicts the phrase *huwa Allāh al-ʿādil* (Papazyan no. 19, 984/1577), though it was an exception; in principle the seal was enough. Not until the Ḳādjār period did the seal require a countersign (*tughra*) by the Shah (see Greenfield, *op. cit.*, 197; Beck, *op. cit.*, facsimile: *saḥḥa* below the first line). The ruler's seal was originally at the bottom of the document. The Mongol square seal was also used on paste-joints, in order to preclude the possibility of later insertions, though in the 9th/15th century the seal appeared only at the bottom (see Kurat, *op. cit.*, 19). At the beginning of the Ṣafawid period, in acts of the ruler and those of the central government, the seal was put in the place of the *tughra* at the top of the document. In the decrees of governors with the *tughra*: *ḥukm-i ʿālī shud*, the seal remained at the end, while those governors who were princes placed their seals to the right of the *tughra* (similar to the *penče* of the Ottoman viziers). Correspondence (*maktūbāt*) was sealed on the reverse side (see *A chronicle of the Carmelites in Persia and the Papal mission of the XVIIth and XVIIIth centuries*, 2 vols., London 1939, plate opposite 95 in vol. i). In the Mongol chancellery seals for the various affairs of state were stamped in different colours, such as blue, red (or gold), green, and black (see Spuler, *Mongolen*, 293). For the square seal still to some extent used by the Tīmūrids, gold ink was employed; later all seals were stamped in black. In addition to square seals (Ghāzān Khān had introduced different kinds of seals for the different branches of government; see Rashīd al-Dīn, ed. Jahn, 292) the Tīmūrids also had round seals, often stamped at the top of the document (see J. Deny, *Un soyurgal du Timouride Shah Rukh en écriture ouigure*, in *JA* 245 (1957), 253-66). The use of different seals for different kinds of documents, of which there were tendencies under Ismāʿīl I, reached full development in the later Ṣafawid period: "great" seals (*muhr-i sharaf-i nafādh* and *muhr-i humāyūn*) were used in documents with the introductory formulae *farmān-i humāyūn sharaf-i nafādh yāft* and *farmān-i humāyūn shud*, while "small" seals (*muhr-i angushtar-i āftāb-āthār*), or signet rings, were used for documents with *ḥukm-i djahān muṭāʿ shud*. The inscription in the large seals partly contained the names of the twelve *imāms*, that in the

small seals contained only the ruler's name, frequently combined with the title *banda-yi shāh-i wilāyat* (servant of the king of holiness, that is, ʿAlī). Chardin gives evidence also of a square seal (Plate XXXI, and v, 461). The large seals were round (occasionally with an upper extension in the shape of a roof), and the small seals rectangular or in the form of a shield (plates in Rabino di Borgomale, *Coins, medals and seals of the Shahs of Iran, 1500-1941*, place of publication not given, 1945, plate 3). The seals of the ruler were later for the most part rectangular with an upper extension in the form of a roof. The lion and sun (*shīr wa khūrshīd*) appears in the seal as early as 1159/1746 (Chubua, no. 47). Large (rectangular with extension) and small (oval) seals are still to be found in the Ḳādjār period (plates in Rabino, *op. cit.*, 4). The governors' seals were in the Ṣafawid period mostly rectangular or oval (some isolated examples are round) with inscriptions containing the name of the office-holder and a religious device. These were not much changed. Imperial authorities employed during the Ṣafawid period a special round "dīwān-seal" (*muhr-i musawwada-yi dīwān-i aʿlā*). Originally in the custody of the keeper of the seal (*muhr-i dār*), the seals passed in the early Ṣafawid period into the safe-keeping of harem officials (see Roemer, *Der Niedergang Irans nach dem Tode Ismaʿils des Grausamen* (1577-81), Würzburg 1939, 44), in whose protection they remained in the later Ṣafawid period. The actual sealing was executed by officials with the title *dawāt-dār* (see DAWĀDĀR), while the keepers of the seal placed only a small stamp on the reverse side (see *Tadhkirat al-Mulūk*, ed. Minorsky, fol. 41a ff.).

Before delivery to the addressees the documents were sent through different departments of the financial administration (*daftar khāna-yi humāyūn aʿlā*), where high officials supplied flourishes and seals, and other officials confirmed the entry of the documents in various registers (*daftar, dafātir*) by means of seals and annotations (*muhr wa khaṭṭ*) (other than for example in the Ottoman administration, where these remarks were placed on the draft, that is, as mere bookkeeping comments; see Fekete, *Die Siyaqat-Schrift in der türkischen Finanzverwaltung*, i, Budapest 1955, 67, 68 note 2). While flourishes and comments were placed, in Fāṭimid decrees for example, between the last lines (see Grohmann in *RSO*, xxxii (1957), 641-54), in Persia they appear early on the reverse side from and written in a direction perpendicular to that of the text. This procedure was already to be found in Ilkhān documents (see Cleaves in *HJAS*, xiv (1951), 493-526). In this respect Ghāzān Khān also introduced obligatory prescriptions (see Rashīd al-Dīn, ed. Jahn, 291-6). A series of seals and comments are also to be found on Tīmūrid (see Deny, *op. cit.*), Turcoman and early Ṣafawid documents (see Busse, *Untersuchungen*, 77 ff.). A definitive system was introduced at the beginning of the 11th/17th century and remained substantially in effect until the end of the Ḳādjār period. The flourishes consist of a religious device (for example, *tawakkaltu ʿalaʾllāh*), while the registration comments contain a reference to the nature of the business, for example, *thabt-i daftar-i tawdjīh-i dīwān-i aʿlā shud* ("it has been entered in the outgoing register of the high dīwān"), or simply *saḥḥa* ("correct"). In the later Ṣafawid period flourishes and seals were applied to all documents by the grand vizier (*iʿtimād al-dawla*), by the *ṣadr* and officials who belonged to the *arkān-i dawlat*, such as the *ḳurči bashī* and *ḳullar aḳasī*, on documents which fell within their jurisdiction, while registration comments and seals were applied by the *mustawfī al-mamālik* (or—*khāṣṣa*), *lashgar-niwīs*, *ṣāḥib-tawdjīh*, *nāẓir-i daftar-khāna-yi aʿlā*, *darūgha-yi daftar-khāna-yi aʿlā*, and others. The documents were brought first to the *mustawfī*, then circulated in the various departments, returning finally to the *mustawfī*. The registration comments of the imperial officials (*sarkār-i mamālik*) differed from those of the officials for the royal domain (*sarkār-i khāṣṣa-yi sharīfa*) in composition: for example *ba-naẓar rasīd* (imperial), *thabt-i daftar-i naẓārat shud* (royal domain). In contrast to those documents which were registered in the *daftar-khāna* (*arḳām-i daftarī*), are those which were not registered (*arḳām-i bayāḍī*) because they did not concern the financial administration or because they were to be kept secret (see *Tadhkirat al-Mulūk*, fol. 42b; and Busse, *Untersuchungen*, 79).

The documentary commission was given orally by the ruler or a high official directly, or in writing by way of the "relator", to the chancellery. The actual process was then, even in the Mongol period, entered on the document (see Hinz, *Die Resālä-yi Falakiyyä des ʿAbdollāh ibn Mohammad ibn Kiyā al-Māzandarānī*, Wiesbaden 1952, fol. 44a ff.). In Turcoman documents into the 10th/16th century the annotation was placed on the lower right-hand front (see above), but from the beginning of the 11th/17th century it is to be found on the reverse side: in an oral commission from the ruler *biʾl-mushāfa al-ʿalīya al-ʿāliya*, otherwise *huwa ḥasab al-amr al-aʿlā*. In the latter case beneath this formula the relator was named: *az ḳarār-i niwishta* ... when the relator was the grand vizier; otherwise *ba-risāla*. The phrase *ḥasab al-amr al-aʿlā* was omitted when the grand vizier or another official had given the commission (see Busse, *Untersuchungen*, 69 ff.). In post-Ṣafawid documents such annotations appear to have been omitted. After all of the formalities had been seen to the documents were rolled together with the writing inside and pressed flat. Letters to foreign rulers were often sent in richly ornamented covers of brocade, protected against unauthorized view by a special seal.

In the early period documents and correspondence were prepared in the imperial chancellery (*dār al-inshāʾ, dīwān al-rasāʾil*) under the authority of the *munshī al-mamālik*. From the 11th/17th century on, documents with the introductory formula (*tughra*) *ḥukm-i djahān-muṭāʿ shud* (in black ink) were executed in the chancellery of the *wāḳiʿa-niwīs*, who was also responsible for letters addressed to foreign princes. There was also a subdivision in the jurisdiction for the empire and for the royal domain: documents relating to imperial affairs (with the introductory formulae *farmān-i humāyūn sharaf-i nafādh yāft* and *farmān-i humāyūn shud*) were prepared by the *munshī al-mamālik*, those for the royal domain by the *wāḳiʿa-niwīs*. In addition to these two authorities separate departments of the *daftar-khāna* were also authorized to execute documents, in the Ṣafawid period for example, the *lashgar-niwīs* and the secretariats of the *ḳullar aḳasī, tubči bāshī, tufangči bashī*, and others. These documents contained no introductory formulae (*tughra*). The provincial authorities had their own chancelleries. Solemn documents were independent pieces of writing; on less important occasions, though the other formalities were preserved (seal, *tughra*), the resolution was placed in the upper margin of the petition (*ʿarḍa-dāsht*). Supplementary

remarks and additions by subordinate officials were until the 9th/15th century written between the lines, later in the right hand margin (with the phrase *muḳarrar ast kī* and seal). In solemn edicts the ruler could make additions in his own hand (*ḥās̲h̲iya ba-k̲h̲aṭṭ-i mubārak*).

In addition to the Persian section there were, as was mentioned before, in the chancellery departments for foreign languages as early as the G̲h̲aznawids. Especially comprehensive in this respect, corresponding to the many nationalities involved, was the Ilk̲h̲ānid chancellery (see Hinz, *Die persische Geheimkanzlei im Mittelalter*, in Westöstliche Abhandlungen, Wiesbaden 1954, 345). The Tīmūrids corresponded with the Ottomans partly in Arabic and partly in Eastern Turkish (Rieu, i, 389; Kurat, *op. cit.*, 195 ff.), the Ṣafawids in Ottoman Turkish (see Fekete, *Iran Şahlarının iki türkçe mektubu*, in *TM*, v (1935), 269-74). During the Ḳād̲j̲ār period French became the principal foreign language of the chancellery, a position which it has preserved.

Original deeds and deeds of confirmation may be distinguished according to the occasion of their issue. Confirmations were necessary upon the death of the incumbents of hereditary offices and fiefs, and general upon a change of government. The prohibition at the conclusion of many documents "a renewal (*tad̲j̲dīd*) shall not be requested annually" was very likely of a precautionary nature. In practice an annual renewal does not seem to have been customary. For practical reasons possessors of documents might have issued verified copies of these which carried the same degree of authority as the originals. Edicts which concerned larger groups of people or the population of an entire community were frequently posted in the form of inscriptions in public buildings and places (see Barthold/Hinz, *Die persische Inschrift an der Mauer der Manūcehr-Moschee zu Ani*, in *ZDMG*, ci (1951), 241-69; and Hinz, *Steuerinschriften aus dem mittelalterlichen Vorderen Orient*, in *Belleten*, xii (1949), 745-69).

The oldest original documents preserved belong to the Ilk̲h̲ān period (largely Mongol letters to European princes). Some Persian documents of the 8th/14th and 9th/15th centuries are to be found in Persia (and bordering territories), and in European archives and museums. Only Ṣafawid and later documents have been found in greater quantity. Especially rich in this respect are Georgian (M. Chubua, *Persidskie firmanī i ukazī Muzeya Gruzii*, i, Tbilisi 1949; and V. S. Puturidze, *Gruzino-persidskie istoričeskie dokumentī*, Tbilisi 1955) and Armenian sources (A. D. Papazyan, *Persidskie dokumentī matenadarana*, 2 vols., Erivan 1956-60). A small collection of Ṣafawid documents (of which two are Turcoman) is located in the British Museum (Rieu, *Suppl.* 252-60, the greater part having been published by Busse, *Untersuchungen*). Isolated documents and letters are to be found in the Vatican (*A Chronicle of the Carmelites in Persia*, Appendix B) and in Italian archives (see F. Gabrieli, *Relazioni tra lo scià 'Abbas e i Granduchi di Toscana Ferdinando I e Cosimo II*, in *Rend. Lin.* 1949), in Poland (H. S. Szapszal, *Wyobrazenia swietych muzulmanskich*, Wilna 1934, 26-48), in Sweden (see K. V. Zettersteen, *Türkische, tatarische und persische Urkunden im Schwedischen Reichsarchiv*, Uppsala 1945), in Austria (Vienna), and in Germany (Dresden, see Fekete, *Iran Şahlarının . . .*). In Persia there are large and small collections in private archives in Teheran (Ḥusayn S̲h̲āhs̲h̲āhānī, Maḥmūd Farhād Muʿtamid, K̲h̲ān Malik) and Tabrīz (Muḥammad and Ḥusayn Āḳā Nak̲h̲d̲j̲uwānī), other collections in the Archaeological Museum in Teheran, in the Čihil-Sutūn pavilion in Iṣfāhān, in the Armenian church in New D̲j̲ulfā, and in the Sanctuary Library (*kitāb-k̲h̲āna-yi āstāna*) in Mas̲h̲had. In Germany there is a small collection of documents, assembled in 1938-9 by Wilhelm Eilers (Würzburg) in Persia (original documents and copies of inscriptions), in the possession of Hans R. Roemer (Mainz). In two articles the latter has brought together the material known up to 1957: *Vorschläge für die Sammlung von Urkunden zur islamischen Geschichte Persiens*, in *ZDMG*, civ (1954), 362-70; and *Über Urkunden zur Geschichte Agyptens und Persiens in islamischer Zeit*, in *ZDMG*, cvii (1957), 519-38.

Busse, *Persische Diplomatik im Überblick. Ergebnisse und Probleme*, in *Isl.*, xxxvii, 1961.

(H. Busse)

iv. — Ottoman Empire

Diplomatic in Ottoman Turkey can be traced back to the beginnings of the Empire in the 8th/14th century. The diplomatic system was fashioned after

the pattern brought by Asiatic Turks who in turn followed diplomatic models that were developed by the states of Central Asia, thus presenting a blend of Uyghur and Chinese traditions. On the other hand its organization was largely based on European practice, especially that established by the Byzantine Empire. The Tatar documents (those of the Golden Horde and of the Crimean Tatars) mainly followed Central Asian models and showed influence of Uyghur and indirectly of Chinese diplomatic usage. This fact is evidenced by Persian documents dating from the 16th to 17th century which use the title-forms of *sözümüz* (see L. Fekete, *Arbeite der grusinischen Orientalistik auf dem Gebiete der türkischen und persischen Palaeographie und die Frage der Formel "sözümüz"*, in *AOHung.*, vii, 1, 1957). The documents of Ottoman Turkey from the 15th century represent a set of more or less consistent patterns (see F. Kraelitz-Greifenhorst, in *SbAK Wien* 1921 and *TOEM*, xxviii, P. Wittek, in *WZKM*, 1957). The documents, their general names being *ewrāḳ* or *wethīḳa*, were issued by the chancellor's office of the Sublime Porte; solemn public documents proclaimed by sultans or announced by viziers were issued by the office of the so-called *beylik* or *beylik ḳalemi*, a special department of the central office of the Porte, formally known as *dīwān-i humāyūn ḳalemi*. The secretary, the scribe and the official in charge of the whole department (*beylikdji*) attached their signatures to the documents, before they were sent to the *reʾīs efendi* for his stamp (the *resīd*). More important deeds were checked by the *nishāndjī* and had to bear his *tughra*. In the office of *takwīl* documents such as letters of appointments, proclamations and letters-patent were renewed or ratified. The documents called *tedhkere* were issued by the office of the *büyük tedhkeredji* and those of the fisc were made out by the clerks of the *defterdār*. Officials of lower rank in the capital as well as in the provinces had their own secretariats and were endowed with the authority to issue their own documents (see J. Hammer, *Staatsverfassung und Staatsverwaltung des osman. Reichs*, Wien, 1815; I. H. Uzunçarşılı, *Osmanlı devleti teşkilâtı*, 1945, and also BEYLIK above).

The documents were of two main trends. On the one hand there were proclamations, messages, and pronouncements, as for instance public edicts of the sultan, called *nāme, mektūb, kitāb, yazl, biti, tewḳīʿ*. The most solemn was the royal proclamation called *khaṭṭ-i-humāyūn*. These terms have never been very precise in meaning. Quite frequently the same document bore one or another name. The same is the case with various documents falling into the second category, of orders, edicts and ordinances such as *fermān, emr, ḥükm, buyuruldu* ([*q.v.*] see also I. H. Uzunçarşılı, *Buyuruldu*, in *Belleten*, 5/19, 1941), and deeds of appointment (*berāt*). The most solemn public documents bore names consisting of several words, *e.g.*, *ʿahd nāme, mülk nāme* (or *temlīk nāme*), *ṣulḥ nāme*. Of another category were the deeds called *nishān* (denoting also patent letters, diplomas, or charters), *menshūr* (a deed of nomination to an office or rank), *mithāl, ʿarḍ ḥāl* (Tk. *arzuhal*) etc. Documents would at times bear elaborate names, *e.g.*, *nishān-i sherīf ʿālīshān, fermān-i beshāret-i ʿunwān* etc. These names concerned exclusively documents promulgated by the ruler or by his highest officials and clerks of the public offices. There were, too, numerous acts issued by officials of lower ranks, such as *tedhkere, telḫīṣ, taḥrīr, defter, sidjill* etc., while the documents (diplomatic notes) presented to the Turkish government by members of the foreign diplomatic corps were called *taḳrīr*. Another group of documents issued by religious authorities (especially by the *sheykh al-islām*), the so-called *fetwā*, concerned rulings in disputes and controversies.

The body of a Turkish document shows a great similarity to a European document. It is quite probable that its form and shape were imitated from the Byzantine model. The Turkish document can be divided into two parts; the first (the opening and concluding formulae) bears the character of protocol while the middle part contains the essential text. There are particular formulae which are also found in any Turkish document: *erkān*: (1) *daʿwet*, being an invocation composed of the formula containing the name of governor (the Bey's name). This would range from the simplest *huwa* to the longest titles (numerous examples are quoted by Fr. Kraelitz, *Osmanische Urkunden in türkischer Sprache*, in *SbAK Wien* 1921). A little space that follows the initial formula somewhat to the right hand side (in the documents issued by the Sultan only) is succeeded by (2) *tughra*, the device or the sign of the sultan, named also *nishān-i humāyūn, tewḳiʿ*, or *ʿalāmet*, and of different design for each sultan. This device contains the name of the sultan and all his titles and other distinctions with the formula *muẓaffer dāʿimā*. All this is encased in an ornamental design, always with the same motifs and shape. The *tughra* was drawn and painted with particular care by a clerk specially assigned to this work, the *tughra-kesh*. It was made in colours. The origin of *tughra* is not certain (see I. H. Uzunçarşılı, in *Belleten* v, 1941; P. Wittek, in *Byzantion* xviii, 1948 and xx, 1956; F. Kraelitz-Greifenhorst, in *MOG* i; F. Babinger, *Sarre-Festschrift* 1925; P. Miyatev, *Tugrite na osmanskite sultani ot XV-XX wek*, in *Godischnik na plovdivska narodna biblioteka i muzei 1937-1939*, Sofia 1940; E. Kühnel, *Die osmanische Tughra*, Wiesbaden 1955; and TUGHRA). The documents issued by higher officials bore instead of the *tughra* another sign, the *pence*. It was usually placed not at the beginning but on the left hand or right hand margin or at the foot of the scroll. Sometimes it was called *imḍā* or erroneously *tughra* (see F. Kraelitz-Greifenhorst, *Studien zur osmanischen Urkundenlehre*, i; *Die Handfeste (Pence) der osmanischen Wesire*, in *MOG*, ii). (3) The *ʿunwān*, that is, the title of the person in whose name the document was made, was, especially in sultanic documents, of considerable length and worded in solemn form beginning with the traditional *benki* ... (see Orgun Zarif, *Tuğralarda el muzaffer daʿima duası ve Şah unvanı, Türk Tarih, arkeol. ve etnogr. dergisi*, Istanbul 1949). (4) The *inscriptio* or the title of the person to whom the document was addressed (*elḳāb*), especially in documents of great importance, was also very long, and was introduced with the formula *sen ki* or *ḥālā*. Beside the name and titles of the addressee it contained (as regards Christian rulers) certain long-established formulae, *e.g.*, "the paragon of the highest princes of Jesus", "the pattern of the most illustrious dignitaries of the people of Messiah", etc. The addressee's name was followed by (5) *duʿāʾ*, *e.g.*, by a brief clause expressing the good wishes of the sender, an equivalent to a certain extent of a salutation in European documents. If the person addressed was a Muslim the clause contained also a blessing, an invocation to Allāh for protection over his person, etc. If the letter was addressed to a Christian, this formula would contain

an allusively worded hope for his future conversion to Islam, *e.g.*, *khutimat ʿawāḳibuhu bi'l-khayr*, see J. Østrup, *Orientalske Høflighedsformler*, Copenhagen 1927, 85-8 (German tr., *Orientalische Höflichkeit*, Leipzig 1929). The *duʿāʾ* concludes the introductory part of the protocol. The transition to the contents proper of the document is achieved through a special expression, *e.g.*, "when this writing comes to your hand, let be known that", then follows (6) *naḳl-i iblāgh* or *taṣrīḥ*, that is the main body of the letter or document which tells of the reasons for writing it, of favours bestowed or letters which have preceded it, sometimes introduced by means of the *areng*, *i.e.*, excuses and apologies that would occasionally contain a quotation from the Ḳurʾān, or a proverb, etc. In documents dispatched to foreign rulers no distinction is made between the narrative part and the succeeding one, which is (7) a *dispositio* with the opening words *ḥükm* or *emr*. This bears the main decision or resolution, either being strengthened by the use of the word *teʾkīd* and the formula, such as for instance *shöyle bilesiz* together with *laʿnet*, a threat of punishment in case of disobedience to orders (in relation to superior authorities). Then follows (8) an attesting formula, corresponding to the European *corroboratio* as *biti taḥḳīḳ bilüb, iʿtimad kïlasïz*. The dating or (9) *taʾrīkh* is marked by means of an Arabic formula, *e.g.*, *taḥrīr^{an} fī*. Then comes the decade of the month, the name of the month, and the year. The numerals are written in letters without any diacritic signs. To the names of the months there are usually added such descriptive definitions as *ramaḍān-i sherīf*. Instead of the name of the day there we find the monthly decades indicated. The first one is called *awāʾil*, the second, *awāsiṭ*, the third *awākhir*. The first day of the month is called *ghurre*, the last one, *salkh*, the middle of the month, *muntaṣaf*. To indicate particular months abbreviations are used. This rule is followed in documents written in the *siyāḳat* script. From the abbreviated forms the names of the quarters of the year are made (the first is *müshir*, the second *redjedj*, the third *reshen* and the fourth *ledhedh*) see J. H. Mordtmann, in *Isl.* ix; F. Kraelitz-Greifenhorst, in *Isl.*, viii; J. Mayr, *Islamische Zeitrechnungen*, in *MSOS*, xxx, 1927; H. Šabanović, *Izrazi evaʾ il, ewasit i evahir u datamima turskih spomenika*, in *Prilozi za Orijentalnu filologiju*, i, 1950. (10) The place of promulgation or announcement comes after the date and here the usual formula is *be-meḳām-i* .... Then the name of the town is given (sometimes accompanied with an appropriate epithet), which frequently is descriptively defined. If the writing was made out on a journey or in camp, the phrase *be yurt* is used. Last comes (11) the seal *mühür*, *khātem*, serving to attest the document. It is impressed in China ink on the moistened paper. The seal is of various sizes and shapes, round, oval, square, polygonal etc. It contains the name of the writer, religious formulae and ornamental elements (see İ. H. Uzunçarşılı, in *Belleten*, iv, 1940; also MUHR). On the front page of the writing or on its back there are attached various attesting formulae for ensuring its validity, *e.g.*, *ṣḥ* (= *ṣaḥiḥ*) inserted by the officials of the chancellery to attest to the authenticity and correctness of the document. There frequently occur abbreviated forms of certain terms, *e.g.*, *m* in the meaning of *merḳūm* (= mentioned), *la* instead of *Allāh*, etc.

As a matter of course documents of the Turkish chancery were written in the vernacular (in Turkish), but there are also other documents in Greek, Old Slavonic (Cyrillic characters), Hungarian, with the genuine *tughra* or *pence* attached to them. Sometimes a translation in Italian, Polish etc. accompanied the Turkish text, or its transcription in Latin, Greek or Armenian characters. The documents of the Ḳazan Khāns and those of the Golden Horde that were dispatched to the sultans in the 15th century were written in the Uyghur language and bore the specific characteristics of Central Asian diplomatic documents.

Turkish diplomatic practice led to the development of a specific technique for writing more formal and solemn documents. The left hand side of each line was rounded upward and resembled a sabre with a curved point. For the sake of more intricate ornamentation the last letter in each line was inscribed in oval shape (usually *nūn*, *rāʾ* or *tāʾ*). The script used was the *dīwānī*, also known as *tewḳiʿ* in its various forms (see under KHAṬṬ). Not infrequently the invocation would be written in *thuluth* while the rest of the text would be written in the *dīwānī* characters. Documents signed by inferior officials were written in *neskhī* and *dīwānī* (see Mahmut Yazır, *Eski yazıları okuma anahtarı*, Istanbul, 1942). Fiscal documents were written in the *siyāḳat* characters which are very difficult to read (see L. Fekete, *Die Siyāqat-Schrift in der türkischen Finanzverwaltung*, i-ii, Budapest 1955; N. Popov, *Paleografski osobenosti na čislitelnite imena v pismoto siyakat*, Sofia, 1955).

Official papers are usually written with a rather broad margin (*kenār*) on the right hand side. It is covered with notes and remarks (*der kenār*), suggesting the main points to be worked into the body of the answer.

The usual ink used for writing was black China ink; in some words the black letters were covered with gold dust (*altïn rīg* or *rīh*).

Waxpaper, frequently imported from Italy, with watermarks was used (see F. Babinger, in *OM*, xi, 1931). The sheets were of elongated rectangular shape about 50 cm. long and 20 cm. wide; the letters of sultans, solemn acts of alliance were at times several metres long.

Generally the document was folded in pleats breadthwise so that when it was unfolded the introductory part with the forms of courtesy etc. would be the first to be read. Longer documents were rolled up like scrolls. Each document was kept in a satin bag, *kise*, tied up and having a slip of paper sticking out that contained the address or *ḳulaḳ*.

Copies (*ṣūret*) were made and sewn together into files (*munshaʾāt*). They would contain the bare text only, with no remarks, notes, *tughra*, or stamp. The legal formula which was usually placed on the right side close to the first lines of the text stated (usually in Arabic) the conformity of the copy with the original and was called *imḍā* or *tewḳiʿ -i ḳāḍī* (see F. Kraelitz-Greifenhorst, *Legalisierungsformeln in Abschriften osmanischer kaiserlicher Erlässe und Handschreiben*, in *MOG*, ii, 1926). In order to indicate that this was a copy only and not an original, such phrases were used as *yazïlïdjak*, *gönderiledjek*, *irsāl olunan*. Also registers of documents were kept with entries which contained transcripts or summaries, the so-called *defter* or *sidjill*.

The development of the style and phraseology of the Turkish diplomatic document continued till about the 17th century, when the forms crystallized and acquired their uniform character. In the 19th century the lettering looked exactly like print. The

style and wording of Turkish documents had their effect upon the somewhat different tradition and usage of the Crimean Tatars, as they also left their mark upon Persian diplomatic practice. A certain number of letters sent out by the Chancellor's office of the Persian *pādishāh* in the 17th and 18th centuries were written in Turkish (see L. Fekete, in *Türkiyat Mecmuası*, v, 1936).

The copies of the documents and incoming correspondence were kept in special offices from which Turkish archives later developed (see BAŞVEKALET ARŞIVI and F. Bajraktarević, *Glavni Carigradski arhivi i ispisi iz niega* in *Prilozi za orijentalnu filologiju i istoriju jugosl. naroda*, vi-vii, Sarajevo 1958).

Numerous Turkish documents are extant in the countries once forming part of the Turkish Empire—in Egypt (see J. Deny, *Sommaire des Archives turques du Caire*, Cairo 1930), Tunisia (see R. Mantran, in *Les Cahiers de Tunisie*, 1957, 341 ff.); Bulgaria (see V. Todorov-Hiṇdalov in *Godischnik na Narodna Biblioteka*, Sofia 1923; P. Mutafčiev in *Mitteilungen des deutsch. wissenschaft. Instituts in Sofia*, Sofia 1943; P. Miyatev in *Levéltári Közlemények*, 1936; B. Nedkov in *Istoričeski Pregled*, x/2, 1954), Yugoslavia (see F. Giese in *Festschrift Jacob*; G. Elezović, *Turski izvori za istoriju Jugoslavena*, Belgrade 1932; H. Šabanović, *Turski diplomatički izvori*, in *Prilozi za orijentolnu filologiju*, i, Sarajevo 1950; R. Muderizović, *Turski dokumenti v dubrovackom arhivu*, in *Glasnik Zem. Muz.*, Sarajevo, 1938, v. L.); Rumania (see M. Guboglu, *Documentele turçeşti din arhivele Statului*, Bucharest 1957). Less numerous are Turkish documents in Greece (see E. Rossi, in *OM*, xxi, 1941). A great many of them, either through diplomatic channels or as booty or through trade relations, became part of foreign collections. Especially rich are the collections in those countries that maintained close diplomatic and other relations with Turkey: in Austria (see F. Zsinka, in *KCA*, i); Germany (on the Berlin and Dresden collections—see L. Fekete in *Levéltári Közlemények*, 1928-1929); Hungary; Poland (see E. Zawaliński, in *RO* xiv, 1938 and Z. Abrahamowicz, *Przegląd Orient.*, 1954, 2); Italy (see A. Bombaci, in *RSO*, xviii, 1939 and xxiv, 1949; L. Fekete in *Levéltári Közlémenyek*, 1926); the Soviet Union. Numerous documents are found in Sweden (see K. V. Zetterstéen, *Türkische, tatarische und persische Urkunden im schwedischen Reichsarchiv*, Uppsala 1945), Denmark (see H. Duda, *Mitteil. d. Instit. f. Oesterreich. Geschichtsforschung*, lviii, 1950), Great Britain (see P. Wittek, *The Turkish documents in Hakluyt's 'Voyages'*, in *Bull. of Inst. of Hist. Research*, xix, 1942; and A. N. Kurat, *Ingiliz devlet arşivinde ... Türkiye tarihine ait bazı malzemeye ait*, in *AÜDTCFD*, 1949), Czechoslovakia and in other countries (see the bibliography by J. Reychman and A. Zajączkowski, *Zarys dyplomatyki osmańsko-tureckiej*, Warsaw 1955, English edition in the press). Many collections are still to be classified, some are being catalogued at present.

The fullest and most comprehensive bibliography of published Turkish documents is given by A. Zajączkowski and J. Reychman (English edition).

The first textbook of Turkish diplomatic was published by L. Fekete, *Bevezetés a hodoltság török diplomatikájába*, Budapest 1926, with an introduction followed by a series of photographed documents. The introduction contained valuable information on the progress of research in this particular field of the history of diplomatic.

In 1955 in Warsaw there was published a textbook by A. Zajączkowski and Jan Reychman: *An outline history of Ottoman Turkish Diplomatic* (*Zarys dyplomatyki osmańsko-tureckiej*). An English version of this book, under the title: *A manual of Ottoman Turkish Diplomatics*, revised and considerably enlarged, is in the press. In 1958 a Rumanian scholar M. Guboglu published a new book: *Paleografia, şi diplomatica turco-osmană*, Bucharest 1959, which beside the facsimiles contains 203 Turkish documents from Rumanian archives. In this book the author gives new and useful information on the subject of Turkish diplomatic and documents.

(J. REYCHMAN and A. ZAJĄCZKOWSKI)

DĪR, a princely state, which acceded to Pakistan in 1947, with an area of 2,040 sq. miles and a population of 148, 648 in 1951, lies to the south of Čitrāl in 35° 50′ and 34° 22′ N. and 71° 2′ and 72° 30′ E., taking its name from the village of Dīr, seat of the ruler, lying on the bank of a stream of the same name and a tributary of the Pandjkōřā. Politically the Dīr territory roughly comprises the country watered by the Pandjkōřā and its affluents. The state gained prominence in the second half of the 19th century for its hostility to the cause of the *mudjāhidīn*, remnants of the defeated forces of Sayyid Aḥmad Barēlawī [*q.v.*], with their headquarters first at Asmast (Samasta) and later at Čamarkand in Yāghistān.

The present Nawwāb of Dīr, Prince Muḥammad Shāh Khusraw, is a member of the Akhund Khēl, a branch of the Pāyandah Khēl subtribe of the Yūsufzaʾīs. The founder of the ruling family, like those of the sister states of Swāt, Amb and Čitrāl, was one Mullā Ilyās *alias* Akhund Bābā, who flourished in the 11th/17th century. His grandson, Ghulām Bābā, however, is said to be the first to have discarded the rôle of a religious leader and assumed worldly power. It was his great-grandson, Ghazzan Khān b. Ḳāsim Khān b. Ẓafar Khān who, with a force 10,000 strong, joined the tribal *lashkars* during the Ambēylā Campaign of 1863 directed by the British-Indian troops against the *mudjāhidīn* of Sayyid Aḥmad Barēlawī and their allies. He, however, withdrew his contingent when he found that the scales had turned in favour of the invaders. He was succeeded by his son, Raḥmat Allāh Khān, who, aware of his weak title, gained the throne with the monetary assistance of the Mahārādjā of Kashmīr. In 1875 Raḥmat Allāh Khān, offended at the misbehaviour of the Kashmīr agent, broke off relations with the Mahārādjā and threw off his suzerainty. On his death in 1884 his son Muḥammad Sharīf Khān came to the throne and soon started a series of campaigns and skirmishes against the neighbouring state of Čitrāl [*q.v.*]. The forces of Muḥammad Sharīf Khān were, however,

completely defeated and the Mihtar Amān al-Mulk of Čitrāl acquired great influence in Dīr. Muḥammad Sharīf Khān had to take refuge in Swāt [*q.v.*] with whom his principality had been almost constantly at war. He made several unsuccessful attempts to regain from Amān al-Mulk his territory, which in 1890 was conquered by the adventurer, ʿUmrā Khān, chief of Djandōl. Five years later in 1313/1895, Muḥammad Sharīf Khān succeeded with the moral and material backing of the British forces, in recovering Dīr and even capturing Shīr Afḍal, pretender to the throne of Čitrāl.

In 1897 the title of Nawwāb was conferred on Muḥammad Sharīf Khān who had, the same year, annexed a part of the upper Swāt territory, the old enemy of his House. This title was, in all probability, conferred on him in recognition of his services to the British in dissuading the Dīr tribes from participating in the *djihād* which Mullā Saʿd Allāh Khān of Bunēr, nicknamed *Sartōr* (crazy) *Faḳīr*, had launched against the alien government. A close ally of the British Government, in receipt of an annual allowance amounting to 26,000 rupees, Muḥammad Sharīf Khān died in 1904 and was succeeded by his son Awrangzīb Khān (Bādshāh Khān). He soon fell out with his younger brother, Miyān Gul Djān, who in alliance with the disaffected sections of the population of Dīr, marched against his elder brother and captured, in Djumādā I 1323/June 1905, two of the Dīr fortresses. Peace was, however, restored through the efforts of the British Chief Commissioner of the North-West Frontier Province. It proved short-lived and fighting broke out between the two brothers again in 1911-12. This period of internecine war came to a close with the death of Miyān Gul in Djandōl in 1914.

In 1917, while World War I was still in progress, Bādshāh Khān helped ʿAbd al-Matīn Khān, a son of ʿUmrā Khān, to regain the principality of Djandōl but soon afterwards occupied it himself. This act was characterized as usurpation and betrayal of the worst kind. The Sultan of Turkey, in an appeal issued in Muḥarram 1336/October 1917 to the war-like tribes of Yāghistān, exhorted the Nawwāb of Dīr to give up creating discord among the tribesmen and restore Djandōl to its rightful ruler. In 1919 the oppressed people of Swāt, under Miyān Gul Gul Shāhzāda, threw off Bādshāh Khān's rule but the British forced Shāhzāda in 1922 to withdraw from the area conquered by him. On his death in 1925 Bādshāh Khān was succeeded by his eldest son, Muḥammad Shāh Djahān Khān, the deposed ruler. In 1930 when the entire north-west frontier of India was ablaze he placed his resources at the disposal of the British Government for quelling the Red Shirt disturbances in Pēshāwar and the surrounding area. The same year existing boundaries between Dīr and Swāt were confirmed, putting an end to centuries-old hostilities.

A great part of the Dīr territory is divided into small Khānates, held by the Nawwāb's relations. There have recently (1959) been some disturbances in the state but these were described as mostly agrarian rather than political in nature.

In 1960 Muḥammad Shāh Djahān Khān was deposed, arrested and interned by the Government of Pakistan on serious charges of misgovernment and maladministration. He was succeeded by his eldest son, Prince Muḥammad Shāh Khusraw, who was formally installed as the Nawwāb of Dīr on 9 November 1960 at Čakdara, in the Malākand' Agency.

DIR [see SOMALI].

ḌIRĀR B. AL-**KHAṬṬĀB** B. MIRDĀS AL-FIHRĪ, a poet of Mecca. Chief of the clan of Muḥārib b. Fihr in the Fidjār [*q.v.*], he fought against the Muslims at Uḥud and at the battle of the Trench, and wrote invectives against the Prophet. He was however converted after the capture of Mecca, but it is not known if he perished in the battle of Yamāma (12/633) or whether he survived and went to settle in Syria.

DIRE DAWA, important road, rail, and air communication centre and chief commercial town in Eastern Ethiopia, situated 35 miles North-West of Harar [*q.v.*] and thus within the cultural orbit of this major Muslim city in the Ethiopian Empire. The name is most probably derived from the Somali *Dir-ḍabo* 'limit of the Dir' (the *Dir* being the confederation of Somali tribes which inhabit the vast arid region between Dire Dawa and Djibuti), but it is possible that the Amharicized form is meant to reflect a popular etymology from the Amharic *dire dawa* 'hill of uncultivated land'. Dire Dawa owes its comparatively recent origin and importance to the Addis Ababa-Djibuti railway which climbs from the desolate Dankali plain to this first great centre of sedentary population at the edge of the escarpment at an altitude of just below 4000 feet. The total population (estimated between 30,000 and 50,000) includes Ethiopians proper as well as Gallas, Somalis, Italians, French, Greeks, Indians, and Arabs. The ill-starred Emperor, Lidj Iyasu, built a mosque at Dire Dawa during the First World War, while during the Second the town became the headquarters of the British Reserved Areas Administration after the reconquest of Ethiopia in 1941. The Islamic culture of the Muslim population of Dire Dawa and its *hinterland* varies considerably and includes remnants of pagan practices. The Shāfiʿī is the most generally accepted *madhhab* in this area.

ḌIRGHĀM ("Lion"), Fāṭimid *amīr* and *wazīr*; his full name Abu 'l-Ashbāl al-Ḍirghām b. ʿĀmir b. Sawwār, he received the agnomens of Fāris al-Muslimīn, Shams al-khilāfa, and, when he was

vizier of the last Fāṭimid al-ʿĀḍid, the title of al-Malik al-Manṣūr, the victorious king, according to a protocol issued by Riḍwān [*q.v.*]. He was Arab in origin and was perhaps descended from the former kings of Ḥīra, to judge from the dynastic names of al-Lakhmī and al-Mundhirī that he bore.

The first mention of him is made in 548/1153. He was among the detachment charged with relieving the garrison of ʿAskalān led by the future vizier al-ʿAbbās together with Usāma b. Munkidh [*q.v.*]. It was during the advance of this company that the murder of the vizier Ibn al-Sallār [*q.v.*] was planned, and was carried out by Naṣr, the son of al-ʿAbbās; the latter, advised of this, returned to Cairo with his company and seized the vizierate (Muḥarram 548/April 1153). Al-ʿAbbās was overthrown by Ṭalāʾiʿ b. Ruzzīk in 549/1154. The latter, whose trust Ḍirghām seems to have received (Abu 'l-Maḥāsin calls him "one of the emirs of Banū Ruzzīk"), made him commander of the corps of Barkiyya which he had just formed. He rose in the hierarchy and became *nāʾib al-bāb*, that is to say lieutenant of the *ṣāḥib al-bāb* or grand chamberlain. He distinguished himself as commander of the army sent by Ṭalāʾiʿ against the Franks, which gained a victory at Tell al-ʿAdjūl in Palestine on the 15 Ṣafar 553/19 March 1158. The following year, together with Ruzzīk, son of the vizier, he triumphed over the rebel Bahrām in Upper Egypt near Aṭfīḥ (Derenbourg, *Oumara du Yémen*, i, 1-3, ii, 127). During the vizierate of Ruzzīk, Ṭalāʾiʿ's successor, Ḍirghām, was sent with an army to stop the expedition of the king Amalric I who, in September 1162, invaded Egypt in order to claim the tribute already promised by Ṭalāʾiʿ. Ḍirghām (Dargan of Guillaume de Tyr, in *RHC. Occ.* i/2, 890-1), was defeated and fell back on Bilbays. But, taking advantage of the rising of the Nile, he breached its dikes in order to flood the adjoining plain and Amalric had to withdraw into Palestine (Derenbourg, *op. cit.*, ii, 203-4, 208-9). Immediately afterwards, he took part in the putting down of a rebellion in the province of al-Gharbiyya.

But there soon broke out the revolt of Shāwar, the powerful prefect of Kūṣ, which was to end with his victory and the death of Ruzzīk. When Shāwar's success was certain, Ḍirghām, in spite of his good relations with Ruzzīk whom he had instructed in horsemanship and knightly pursuits (al-Makrīzī, *Khiṭaṭ*, ii, 78), did not hesitate to leave him and go over to the side of Shāwar, who became vizier (Ṣafar 558/January 1163). Shāwar, in whose circle he remained, made him grand chamberlain or *ṣāḥib al-bāb* (Abu 'l-Maḥāsin, v, 338, 10), the most important office after the vizierate. But Ḍirghām, supported by his brothers and a considerable part of the army, was not long in forming a faction against the vizier and, after nine months of the vizierate of Shāwar, revolted against him, although Shāwar, according to the Continuator of the *History of the Patriarchs of Alexandria*, had made him swear forty oaths that he would not betray him (Derenbourg, ii, 246). In Ramaḍān 558/August 1163 Shāwar was driven from Cairo and took refuge in Syria where he sought the support of Nūr al-Dīn in regaining the vizierate. Ḍirghām had Ṭayy, the eldest son of Shāwar, put to death, and on 29 Ramaḍān/31 August he was invested with the vizierate with the title of al-Malik al-Manṣūr.

He had three brothers, Nāṣir al-Dīn Humām, Nāṣir al-Muslimīn Mulham and Fakhr al-Dīn Ḥusām. The first, after his brother's accession to the vizierate, took the title of Fāris al-Muslimīn which Ḍirghām had formerly borne. According to al-Makrīzī, during his vizierate Ḍirghām was dominated by his brothers Humām and Ḥusām.

Fortune did not smile on Ḍirghām for very long, and difficulties soon arose. Aware of Shāwar's preparations for revenge, he attempted to start negotiations with Nūr al-Dīn by promising him his allegiance and an advantageous alliance against the Franks. Nūr al-Dīn gave an evasive reply. And perhaps it was at the instigation of Nūr al-Dīn that Ḍirghām's messenger was seized by the Franks of Karak on his return from Damascus. Thwarted in this and disturbed by the attitude of the *amīr*s of the corps of the Barkiyya, who had given him powerful support in winning the vizierate but some of whom envied him and were negotiating with Shāwar, Ḍirghām trapped them in an ambush and massacred seventy of them, not counting their followers. Historians do not fail to point out that these executions removed men of ability and weakened Egypt dangerously.

Amalric however had not given up his scheme to conquer Egypt, and at the end of 1163 or at the beginning of 1164 his advance-guard invaded Egyptian territory. Ḍirghām, after failing to bring over Nur al-Dīn to his cause, decided to negotiate with Amalric and offered him, on condition that he withdrew his troops, a peace treaty, the delivery of hostages, and the payment of an annual tribute to be levied until a date fixed by the king. But Shāwar had finally gained the support of Nūr al-Dīn, who in Djumādā I 559/April 1164 sent into Egypt with Shāwar an army commanded by Shīrkūh which included Saladin his nephew. It crossed unhindered the territory controlled by the Franks who were prevented from taking action by a manoeuvre of Nūr al-Dīn. Mulham the brother of Ḍirghām (Ḥusām according to al-Makrīzī), who was sent against the invaders with a large but, according to Shāwar, inglorious army, was surprised near Bilbays and put to flight at the end of April 1164. This caused panic at Cairo, where Shīrkūh and Shāwar soon appeared. Several battles took place between the troops of Shāwar and those of Ḍirghām. In order to raise some resources Ḍirghām made the mistake of seizing the possessions of the orphans, and so alienated the population. He was deserted by some of his troops; the corps of Rayḥānīs who had sustained some losses promised their aid to Shāwar. Ḍirghām, after trying in vain to muster some supporters and accompanied by no more than 500 cavaliers, presented himself at the palace of the Caliph, who refused to admit him and advised him to have a care to his own life. The desertions continued until he retained only thirty cavaliers. He took to flight followed by the curses of the people while Shāwar's troops entered Cairo. Overtaken between Cairo and Fusṭāṭ, Ḍirghām was dragged from his horse and killed near the mausoleum of al-Sayyida Nafīsa in Ramaḍān 559/July-August 1164, or, according to certain traditions, at the end of Djūmādā II/24 May 1164 or in Radjab/May-June 1164. His three brothers were likewise killed soon afterwards. His corpse remained without burial for two or three days and his head was carried on a pikestaff. He was buried near Birkat al-Fīl and a cupola was raised over his tomb. His vizierate had lasted only nine months.

ʿUmāra al-Yamanī and al-Makrīzī praised Ḍirghām whom they consider among the greatest *amīr*s and bravest cavaliers. He combined with his physical

qualities (skill at polo, archery, wielding the spear, and feats of prowess at tilting in the ring) a gift for penmanship, for poetry (he composed some fine *muwashshaḥāt*) and for poetic criticism. ʿUmāra has spoken highly of his generosity, but has also noted that he was quick to turn against his friends, and it must not be forgotten that he betrayed successively Ruzzīk and Shāwar.

CANARD)

DIRHAM. 1. The name of a weight, derived from Greek δραχμή. Traditionally the *dirham kayl* or *sharʿī* weighed from 50 to 60 average-sized, unshelled *shaʿīra* or *ḥabba*, and was theoretically divided into 6 *dānaḳ*, the latter being calculated variously between 8 and 10 *shaʿīra*. So numerous and contradictory are the reports on the weight of the dirham and its relationship to other Arab metrological units in different parts of the Islamic world and at different times that they cannot be summarized here, and the reader is referred to such works as Sauvaire's *Matériaux* and Grohmann's *Einführung* (see bibliography under DĪNĀR). Efforts to define the weight of the traditional dirham in terms of modern metric grams have resulted in various figures, most of them probably erroneous. Cf. W. Hinz, *Islamische Masse u. Gewichte* (*Handbuch der Orientalistik, Ergänzungsband* 1, *Heft* 1, Leiden 1955, 2 ff.), where also 19th and 20th century legal definitions in different countries are to be found. Although most Muslim states have now officially adopted the metric system, the dirham and other traditional weights continue irregularly in use in various trades. In present-day Egypt, the dirham is defined as weighing 3.12 grams; two actual goldsmith's brass dirham weights of the year 1953 are found to weigh 3.1322 and 3.1335 grams respectively.

2. The silver unit of the Arab monetary system from the rise of Islām down to the Mongol period. The earliest Arab dirhams (*baghlī*) were imitations of the late Sasanian *drahms* of Yezdigird III, Hormuzd IV and (chiefly) Khusraw II. The Sāsānian iconography was retained, but a Kūfic religious inscription was added to the margin; on a few issues the name of the Caliph (Muʿāwiya and ʿAbd al-Malik) and on most issues the name of the provincial governor and the abbreviated mint name and date according to the Hidjra, Yezdigird or post-Yezdigird era (all in Pahlevi characters), were engraved. About the year 72/691-2 (American Numismatic Society *Museum Notes* vii, 1957, 191) and for a few years thereafter variations of the conventional type, including the use of more Kūfic legends and innovations in iconography more suitable to Islam, were experimented with, but in the year 79/698-9 ʿAbd al-Malik's monetary reform drastically altered the style of the dirham, which thenceforth, with few exceptions, was, like the dīnār, purely epigraphic. The post-reform dirham was at first anonymous, but in the course of the 2nd and 3rd centuries A.H. the names of governors, heirs-apparent, Caliphs, etc. were added. The name of the mint and the date, in words, was always present. In Umayyad times the chief dirham mints were located in former Sāsānian administrative centres, but silver was struck also in Damascus, North Africa and Spain. Wāsiṭ, founded in 84/703-4, appears to have been the most prolific of Umayyad dirham mints, and it is possible that the administration of the silver coinage was centred in this city and that the dirham dies were engraved there.

Little change in the style and general appearance of the dirham occurred under the various independent dynasties down to the end of the 4th/10th century, except that the legends on the Fāṭimid dirham were usually arranged in concentric circles. There followed a period of silver famine in the East when the output of silver coinage was relatively insignificant (cf. R. P. Blake in *Harvard Journal of Asiatic Studies*, 1937, 291, where the study of this phenomenon is broached but not investigated to the depth which it deserves); but with the rise of the Mongols in the mid-7th/13th century, dirhams and multiples thereof, differing in design from the "classical" type, were again issued in immense quantities. For the late Fāṭimid *dirham waraḳ*, the Ayyūbid *dirham Nāṣirī* and *Kāmilī*, and Mamlūk dirhams, see P. Balog in *BIE*, xxxiii, 1950-1, and v. Schrötter, s.v. *dirhem*. In the West the dirham declines in quality with the fall of the Umayyad dynasty of Spain, is restored in somewhat altered form under the Murābiṭs, and undergoes a complete change in style and weight with the Muwaḥḥids, when the square dirham (*murabbaʿ*), also imitated by the Christians in France (the *millares*), is introduced (corpus and bibliography in H. W. Hazard, *The numismatic history of late medieval North Africa*, N.Y. 1952).

With regard to the weight of the classical Arab dirham, statistics (unpublished) show that the highest frequency group of the Sāsānian drachm of Khusraw II falls between 4.11 and 4.15 grams. The Arab-Sasanian dirham was definitely lighter, approximately 3.98 grams. After the reform of 79 A.H., an entirely new standard is adopted with the result that thenceforth until the middle of the 3rd/9th century, when weights begin to be very erratic, the peak weight of the dirham consistently lies between 2.91 and 2.95 grams (A.N.S. *Museum Notes*, ix, 1960, see bibliography). The corrected figure, allowing for loss of weight, is 2.97 grams, which conforms exactly with the traditional theoretical figure based on the classical Arab formula which pronounced the weight of the dirham to be 7/10 that of the *mithḳāl* (dīnār), *i.e.*, $^7/_{10} \times 4.25 = 2.97$ (see s.v. DĪNĀR). Dirham glass weights fall slightly below this figure; and a special category of glass weights establishes the fact

that there were in Egypt dirhams of 13 *kharrūbas*, weighing still less.

The rate of exchange between dīnār and dirham fluctuated widely at different times and in different parts of the empire. The jurists speak of 10 (or 12) dirhams to the dīnār in the time of Muḥammad, but subsequently there is plentiful evidence to show that the dirham at times sank as low as 15, 20, 30 and even 50 (see the numerous textual citations by Sauvaire, Lane-Poole in *NC* 1884, Grohmann in *Einführung*, etc.). P. Grierson (*op. cit.* under DĪNĀR) has attempted to explain the economic bases of the mint and market gold-silver ratios, with particular reference to Byzantine-Arab relationships.

Both typologically and economically the dirham exerted a strong influence on Byzantium and the West. The Byzantine *miliaresion*, introduced in the second quarter of the 8th century after a generation during which virtually no silver coinage was issued in Constantinople, was clearly inspired by the dirham, and many *miliaresia* of the 8th and 9th centuries were actually struck on Arab dirham planchets. There is some reason to believe also that the style of the Carolingian *denier* or *denar* may have been influenced by the dirham. The great importance of Arab silver in commerce between the lands of the Eastern Caliphate on the one hand and Russia, eastern Europe, Scandinavia and the Baltic regions on the other, is abundantly documented by the immense numbers of dirhams and fragments of dirhams found in these areas in hoards dating from four clearly defined periods between 780 and 1100 A.D. (comprehensive summary and full bibliography in U. S. L. Welin in *Kulturhistorisk Leksikon for nordisk middelalder*, i, Copenhagen 1956, s.v. *Arabisk mynt*). Dirhams also have been found in lesser numbers in England and France (cf. J. Duplessy in *Rev. Numismatique* 1956, 101).

Beginning in the 5th/11th century, dirhams of base silver (billon) and copper were struck by various dynasties (late Buwayhid, Ḳarakhānid, Khʷārizmshāh, etc.). The large, thick copper dirhams of the Artuḳids (in the coin catalogues "Urtuḳids"), Zangids and Ayyūbids, with figured types resembling those of Hellenistic, Roman provincial, Byzantine and other coinages, and occasionally exhibiting original Islamic iconography, constitute a unique phenomenon so far unsatisfactorily explained and deserving of further study (best illustrations in the British Museum and Istanbul catalogues and in S. Lane Poole, *Coins of the Urtuḳi Turkumáns*, London 1875; cf. also J. Karabacek, in *Num. Zeitschr.*, 1869, 265).

(G. C. MILES)

AL-**DIRʿIYYA** (or al-Darʿiyya), an oasis in Wādī Ḥanīfa [*q.v.*] in Nadjd, the capital of Āl Saʿūd [*q.v.*] until its overthrow in 1233/1818. The oasis lies c. 20 km. north-west of al-Riyāḍ, the present capital. The wadi flows south-east through the upper part of the oasis and then bends to the east before passing the main settlements. Beyond these settlements the high cliff of al-Ḳurayn forces the wadi to make a sharp turn to the south-west. The road from al-Riyāḍ descends the cliff by Nazlat al-Nāṣiriyya to enter the wadi opposite Shaʿīb Ṣafār, the largest tributary on the right bank. On the left bank just below the pass lies the cultivated plot of al-Mulaybīd.

The wadi is a narrow ribbon threading the oasis from one end to the other, hemmed in by abrupt cliffs on both sides. The flash floods coursing down the wadi may be as few as two or as many as fifteen a year; as soon as they are gone the wadi is dry. In many places the date gardens occupy a raised step above the valley floor which is protected from the floods by a levee (*djurf*) of large stone blocks sometimes three metres high. On occasion the floodwater surges over the levee and reaches the base of the cliff (*djabal*) at the outer edge of the palms. The houses are built either among the palms or on the heights above.

The settlements farthest up the wadi are al-ʿIlb and al-ʿAwda, both among the palms on the right bank. Below these is Ghaṣība, now a complete ruin, on the high ground on the left bank opposite the tributary al-Bulayda. The tributary Ḳulayḳil runs along the eastern side of Ghaṣība. After the wadi bears eastwards the left bank is lined with a series of settlements, among them being the low-lying al-Budjayrī, the home of the reformer Shaykh Muḥammad b. ʿAbd al-Wahhāb and the many *ʿulamāʾ* among his progeny, Āl al-Shaykh. A mosque stands on the site where the Shaykh was accustomed to worship, and his grave is not far off, though, in keeping with his doctrine, it is not an object of visitation. On the right or southern bank facing these settlements is the promontory of al-Ṭurayf thrusting into the pocket between Wādī Ḥanīfa and Shaʿīb Ṣafār; here rise the majestic ruins of the palaces where the princes of Āl Saʿūd once lived and held court—in Philby's words, "the noblest monument in all Wahhabiland". The buildings, made of clay save for the pillars of stone, have a grace and delicacy of ornamentation unusual in Nadjd. Near the north-western corner of the fortified enclosure is the highest point in al-Ṭurayf, the citadel known as al-Darīsha (it is noteworthy that in Nadjd, the wellspring of Arabic, the common words for window, *darīsha*, and gate, *darwāza*, are both Persian in origin). Leading up to the citadel from the shelf of palms below is a ramp called Darb Fayṣal after Fayṣal b. Saʿūd, one of the captains guarding the town when Ibrāhīm Pasha besieged it in 1233/1818. The most impressive palace still standing is Maḳṣūrat ʿUmar on the brink of the northern cliff. Near it is the congregational mosque of al-Ṭurayf in which the Imām ʿAbd al-ʿAzīz was assassinated in 1218/1803. The ruins of al-Ṭurayf are gradually disintegrating because of the ravages of time and the development of a new settlement which is spreading from the foot of the promontory up to its shoulder.

According to the chroniclers of Nadjd, al-Dirʿiyya was first settled in 850/1446-7 when Māniʿ b. Rabīʿa al-Muraydi was given Ghaṣība and al-Mulaybīd by his relative Ibn Dirʿ of Ḥadjar al-Yamāma. Māniʿ was an emigrant from the east; his former home, said to have been called al-Dirʿiyya,

is reported to have been in the region of al-Ḳaṭīf, but its exact location is not known. Some genealogists state that the Marada, the kinsfolk of Mānīʿ, belong to Banū Ḥanīfa, while others advocate a descent from ʿAnaza, which appears to be the prevailing view among members of Āl Saʿūd.

After Mānīʿ various branches of his descendants took turns in ruling al-Dirʿiyya. Gh̲aṣība seems to have been the original centre and strong point; no record has been found of when it was supplanted by al-Ṭurayf, which topographically enjoys an even greater degree of impregnability. In 1133/1721 Saʿdūn b. Muḥammad Āl Gh̲urayr of Banū Kh̲ālid, the lord of al-Ḥasā, plundered houses in al-Ẓuhayra, Malwī, and al-Surayḥa, all settlements still existing along the left bank.

In 1139/1726-7 Muḥammad b. Saʿūd Āl Muḳrin, a direct descendant of Mānīʿ, became the independent ruler of al-Dirʿiyya, including Gh̲aṣība. At that time the primacy among the towns of central Nad̲j̲d was held by al-ʿUyayna, farther up the valley, under the domination of Āl Muʿammar of Tamīm. ʿAbd Allāh b. Muḥammad, the most powerful representative of this house, died the same year Muḥammad b. Saʿūd came to power in al-Dirʿiyya. Muḥammad b. Saʿūd won a good reputation as a secular lord. In 1157/1744 Sh̲aykh̲ Muḥammad b. ʿAbd al-Wahhāb chose al-Dirʿiyya as his new home when requested to leave al-ʿUyayna, his native town, by ʿUth̲mān b. Aḥmad Āl Muʿammar. The Sh̲aykh̲ and Muḥammad b. Saʿūd made a compact to work together in establishing the true version of Islam throughout the land of the Arabs.

The spiritual force of Ibn ʿAbd al-Wahhāb and the military skill of Muḥammad b. Saʿūd and his son ʿAbd al-ʿAzīz and grandson Saʿūd brought virtually the whole of the Arabian Peninsula under the authority of al-Dirʿiyya by the early 13th/19th century. Ibn Bis̲h̲r records his own eye-witness description of the capital in the time of Saʿūd. Much of the land now given over to palms was then occupied by buildings. Particularly vivid are Ibn Bis̲h̲r's vignettes of the market in the valley bottom, the sunrise religious assembly in the same spot attended by Saʿūd and his resplendent corps of *mamlūk*s, Saʿūd's hearing of petitions and dispensing of largesse to his subjects and guests, and the diligent Islamic instruction given by the sons of the Sh̲aykh̲. Saʿūd was said to own 1,400 Arab horses, of which 600 were taken on campaigns by Bedouins or his *mamlūk*s. He had 60 cannon, half of which were of large size. For Nad̲j̲d, al-Dirʿiyya had become a very cosmopolitan and expensive centre: visitors from Oman, the Yemen, Syria, and Egypt thronged its bazaar; shops rented for as high as 45 riyals a month, and houses sold for 7,000 riyals. So much building went on that there was a great scarcity of wood.

The first and only European to see al-Dirʿiyya while it flourished was J. L. Reinaud, an Arabic-speaking Dutchman (or Englishman?) sent there in 1799 by Samuel Manesty, the East India Company's Resident in al-Baṣra, to negotiate with the Imām ʿAbd al-ʿAzīz. Reinaud, who spent a week in the oasis, remarks on the simplicity of the ruler's establishment and the sullen hospitality of the inhabitants.

When Ibrāhīm Pas̲h̲a of Egypt advanced into Nad̲j̲d with the intention of breaking the power of Āl Saʿūd, ʿAbd Allāh b. Saʿūd, who had succeeded to the rule in 1229/1814, fortified himself in al-Dirʿiyya instead of using the superior mobility of his forces to harass the enemy's over-extended lines of communication. Ibrāhīm, establishing himself athwart the wadi at al-ʿIlb, began a siege which lasted about six months. The attack consisted of a ponderous advance step by step down the wadi, accompanied by a piecemeal reduction of the numerous towers and barricades of the defenders scattered about the heights on either flank. Ibrāhīm moved his headquarters from al-ʿIlb down the wadi to Ḳarī Ḳuṣayr (now known in memory of his army as Ḳurayy al-Rūm), a tributary descending from the north. Sweeping around the oasis, the invader's horse fell on the town of ʿIrḳa farther down the wadi. Progress was impeded by the explosion of Ibrāhīm's ammunition depot, but ʿAbd Allāh b. Saʿūd failed to exploit this opportunity. Once a new supply of ammunition had been built up, Ibrāhīm resumed pressure on the main front and fought his way into the palm grove of Mus̲h̲ayrifa south of the tributary al-Bulayda, thus gaining access to the promontory of al-Ṭurayf from the heights to the west. A resolute offensive launched at all points brought about the surrender of the capital in D̲h̲u 'l-Ḳaʿda 1233/September 1818. After staying in al-Dirʿiyya a short time, Ibrāhīm returned to Egypt. On his orders the place was systemically torn down in 1234/1819. According to Captain Sadleir, a British officer who saw it almost immediately afterwards, "the walls of the fortification have been completely razed by the Pacha, and the date plantations and gardens destroyed. I did not see one man during my search through these ruins. The gardens of Deriah produced apricots, figs, grapes, pomegranates; and the dates were of a very fine description; citrons were also mentioned, and many other fruit trees, but I could only discern the mutilated remains of those I have mentioned. Some few tamarisk trees are still to be seen."

An attempt was soon made to restore al-Dirʿiyya as the capital. As many members of Āl Saʿūd had been killed during the siege or carried off to Cairo, Muḥammad b. Mus̲h̲ārī of the old princely house of Muʿammar of al-ʿUyayna, a nephew on the distaff side of the great Saʿūd, established himself in al-Dirʿiyya before the end of 1234/Oct. 1819 with the aim of rebuilding the oasis and making himself the head of the reform movement in Nad̲j̲d. A few months later, in 1235/1820, Mus̲h̲ārī b. Saʿūd appeared in al-Dirʿiyya, and Ibn Muʿammar swore allegiance to him as scion of Āl Saʿūd. Having once tasted power, Ibn Muʿammar dreamed of regaining it and rebelled against Mus̲h̲ārī b. Saʿūd. Another member of Āl Saʿūd, Turkī b. ʿAbd Allāh, a cousin of the great Saʿūd, now returned to the scene after having escaped Ibrāhīm Pas̲h̲a's dragnet. Turkī sided with his relative Mus̲h̲ārī b. Saʿūd, but the Egyptian forces got hold of Mus̲h̲ārī and he died in captivity in 1236/1821. In revenge Turkī put Ibn Muʿammar to death. After taking al-Dirʿiyya, Turkī also occupied al-Riyāḍ, but the Egyptian troops quickly drove him out. In 1236/1821 Ḥusayn Bey, the new Egyptian commander, ordered all the people who had settled in al-Dirʿiyya with Ibn Muʿammar to go to T̲h̲armadāʾ, the new Egyptian headquarters. After their departure al-Dirʿiyya was destroyed for the second time, trees being cut down and the torch set to whatever was inflammable. In T̲h̲armadāʾ about 230 men from al-Dirʿiyya were paraded on orders from Ḥusayn Bey and slaughtered in cold blood. The obliteration of al-Dirʿiyya was complete. When Turkī in 1240/1824 gained strength enough to challenge the Egyptian forces, he attacked them in al-Riyāḍ, which he chose

as the new capital for his realm in preference to the twice desolated home of his forefathers.

In 1281/1865 Colonel Pelly, the British Resident in the Persian Gulf, passed through al-Dirʿiyya on the way to al-Riyāḍ; the place seemed to him "utterly deserted". The modern oasis, now encroaching on the territory of its forerunner even in the hallowed precincts of al-Ṭurayf, was described by Philby after his visit in 1336/1917.

DİRLİK, a Turkish word meaning living or livelihood. In the Ottoman Empire it was used to denote an income provided by the state, directly or indirectly, for the support of persons in its service. The term is used principally of the military fiefs (see TIMAR), but also applies to pay (see ʿULŪFA), salaries, and grants of various kinds in lieu of pay to officers of the central and provincial governments. It does not normally apply to tax-farms, the basis of which is purchase and not service.

DIŪ, an island off the southern point of Saurashtra (Sawrāshṭrā, Sōraṭh), India, with a good harbour clear of the dangerous tides of the Gulf of Cambay. Taken from the Čudasāmas in 698/1298-99 by the generals of ʿAlāʾ al-Dīn Khaldjī, probably lost a few years later, it was recovered by Muḥammad b. Tughluḳ in 750/1349.

In 804/1402 Muẓaffar Khān, governor for the last Tughluḳs and first sultan of Gudjarāt, built mosques, appointed ḳāḍīs and installed a garrison in Diū. By 834/1431 Diū was a flourishing port furnishing ships for the Gudjarātī fleet. From 916/1510 it became the seat of the governors of Soraṭh, of whom the most famous was Malik Ayāz. He made Diū a great emporium, built the fort and harbour defences and threw a bridge to the mainland suburb of Goglā. Though in 914/1509 his fleet and that of the Mamlūk admiral Amīr Ḥusayn were crushed in Diū harbour by the Portuguese viceroy Francisco d'Almeida, he was able to persuade Sultan Muẓaffar II to withdraw his offer of Diū made to Albuquerque in 919/1513 and to repulse Portuguese fleets in 926/1520 and 927/1521.

Malik Ayāz died in 928/1522 and was succeeded at Diū by his son Isḥāḳ. Isḥāḳ rebelled in 933/1526-27 and offered Diū to the Portuguese; their fleet was forestalled and defeated by the new governor Ḳawām al-Mulk, but next spring so crushed the Diū fleet under his son that Ḳawām al-Mulk was replaced by Malik Tūghān, second son of Malik Ayāz.

In 937/1531 Tūghān, aided by the timely arrival of two Ottoman generals, Amīr Muṣṭafā and Khwādja Ṣafar, defeated a full-scale attack by the viceroy Nuno da Cunha.

In 942/1535 Sulṭān Bahādur Shāh, a refugee from Humāyūn, and the Mughal emperor both offered Diū to the Portuguese. Nuno da Cunha chose the less formidable Bahādur Shāh with whom he signed a treaty of military aid in return for Diū on 27 Rabīʿ II 942/25 October 1535.

In 943/1536 Bahādur Shāh, having expelled the Mughals, returned to Diū. He invited Nuno da Cunha to come north, and having failed to tempt him ashore, visited his galleon. On his way back to the shore he was killed in a scuffle with the Portuguese, 3 Ramaḍān 943/13 February 1537.

The Portuguese thereupon seized the palace, treasury and arsenals in Diū, and in 943/1537 proclaimed Muḥammad Zamān Mīrzā sultan, in return for his confirmation of their position in Diū. He was defeated outside Diū, however, and in 945/1538 Khwādja Ṣafar laid siege to the island. The siege was intensified after the arrival of Khādim Sulaymān Pasha [*q.v.*], governor of Egypt, with a powerful fleet, but after three months, distrust between Ottomans and Gudjarātīs and reports of Nuno da Cunha's approach led to the break-up of the siege and the conclusion of peace, 6 Shawwāl 945/25 February 1539.

On 20 Rabīʿ II 953/20 April 1546 Khwādja Ṣafar opened a second siege of Diū which lasted seven months and cost the lives of the Khwādja and his son before the viceroy João de Castro routed the Muslim forces and lifted the siege on 19 Dhu 'l-Ḳaʿda 953/11 November 1546.

For many years the Portuguese from Diū fort controlled all seaborne traffic from Gudjarāt through a system of *cartazes* or passes. Though in 1079/1668 and 1086/1676 Diū was overrun and sacked by Arabs the Portuguese were able to use Mughal decline to extend their control over the whole island and its mainland suburb. They retained them until December 1961.

DIVAN [see DĪWĀN].

DIVINATION [see KIHĀNA, also DJAFR, FAʾL, IKHTILĀDJ, RAML, TAʿBĪR].

DIVORCE [see ṬALĀḲ].

DĪW (originally *dew*, Avestan *daeva*, Sanskrit *dēva*), in Persian the name of the spirits of evil and of darkness, creatures of Ahriman, the personification of sins; their number is legion; among them are to be distinguished a group of seven principal demons, including Ahriman, opposed to the seven Amshaspand (Av. *aməša spənta*, the "Immortal Holy Ones"). "The collective name of the *daiva* designates ... exclusively the inimical gods in the first place, then generally other supernatural beings who, being by nature evil, are opposed to the good and true faith .... These *daiva*, these *dēv* have become increasingly assimilated to the ogres and other demoniac beings whose origins are to be found in ancestral beliefs" (A. Christensen). In the Iranian epic Kayūmarth, the first of the civilizing kings of Īrān, and then his son and his grandson, fought the Black Dīw and his hordes; Tahmurath, his great-grandson, deprived them of power, and they taught him writing (Firdawsī, *Shāh-nāma*, Fr. tr. J. Mohl, i, 19-32); Djamshīd, son of Tahmurath (ibid., 35), controlled the *dīws* (as Solomon did the *djinns* in the Muslim legend [see SULAYMĀN B. DĀWŪD]); these, on his orders, constructed palaces and other buildings, then took him to heaven on a day later called *nawrūz*; under the following dynasty, that of the

Kayanids in the course of the war against the king of Māzandarān—a country frequented by the *dīws* (ibid., 421 ff.)—the hero Rustam, champion of the king Kay-Kawūs, killed the *dīw* Arzang whose hordes he dispersed, and then the White Dīw whose blood, which he carried to the king of Īrān, cured him of incipient blindness (cf. the fish-gall which restored sight to Tobit). In the *Gars͟hāsp-nāma* (see ASADĪ) that hero, the great-grandfather of Rustam, several times opposed *dīws* of monstrous form (*Livre de Gerchasp*, tr. Massé, ii, 46, 48, 129-31, 190).

It is impossible to mention here all the *dīws* who appear in Persian literary or popular sources : most frequently the term *dīw* is juxtaposed to the Arabic epithets *ʿifrit*, *s͟hayṭān*, *tāg͟hūt*; for example, the Dīws with Cows' Feet (*dīw-i gāw-pāy*: Saʿd al-Dīn Warāwīnī, *Marzubān-nāma*, ed. Muḥammad Ḳazwīnī, 79 ff.; M. Nizāmuʾd-dīn, *Introduction to the Jawāmiʿ ul-ḥikāyāt of Muḥammad Awfī*, 163). In modern popular tales *d̲j̲inn* is generally substitued for *dīw*; but *dīw* remains, *e.g.*, in H. Massé, *Contes en persan populaire*, nos. 27 and 29; or it may be associated with both *d̲j̲inn* and *parī* (*e.g.*, Ria Hackin and A. A. Kohzad, *Légendes et coutumes afghanes*, 17 and note). According to the S͟hīʿas, men, *dīws*, and *d̲j̲inns* will receive reward or punishment at the day of resurrection (*Tabṣirat al-ʿawāmm*, ed. Iqbal, 210). Ḥamd Allāh Mustawfī Ḳazwīnī mentions a Dīw River (*Dīw rūd*, district of D̲j̲iruft, Kirmān), so called because of its rapid current (*Nuzhat al-ḳulūb*, tr. Le Strange, 217, 139).

Bibliography: For the various senses of *dīw* and its use in metaphor and composition: Vullers, *Lexicon persico-latinum*, and Desmaisons, *Dictionnaire persan-français*; *dīw* occurs frequently in Firdawsī (see F. Wolff, *Glossar zu Firdosis Schahname*, s.v. *dīw*, *dēv*; and *S͟hāh-nāma*, ed. and Fr. tr. J. Mohl, 1878, vii, index, s.v.); Spiegel, *Eranische Altherthumskunde*, II, 126-36; A. V. W. Jackson, in *Gr.I.Ph.*, ii, 139, 165, 175, 196, 646 ff., 662; A. Christensen, *Essai sur la démonologie iranienne*, 60 (*dīws*, *parīs* and dragons in the neo-Persian epic), 67 (*dīws* in Arabic and Persian texts), 71 (*dīw* and *d̲j̲inn*), 92 (conclusions). On the *dīws* in Persian secondary epics: Firdawsī, *op. cit.*, i, introd., 68 note 1, 70 note 1, 72, 77, 87). Popular beliefs: H. Massé, *Croyances et coutumes persanes*, ii, chap. XIII and index III: *dīv*. On the Armenian *dews*: Christensen, *op. cit.*, 87; F. Macler, *Les dew arméniens* (text and facsimile mss.). There are few miniatures representing the *dīws*, apart from those illustrating the epics; some confuse *dīws* and *parīs*; see E. Blochet, *Enluminures . . . de la Bibliothèque Nationale*, plates 20, 64b, 75, 78a, 106b, 117a; Sakisian, *La miniature persane*, plate 78; Ph. W. Schulz, *Die persische-islamische Malerei*, plates 14 and 63, 31, 172 (*dīws* and *parī*); *Iran*: *Miniatures de la Bibliothèque Impériale de Téhéran* (New York Graphic Soc.—Unesco), plate 6 (*dīw* in the aspect of a man).

(CL. HUART-[H. MASSÉ])

DĪWĀN, a collection of poetry or prose [see ʿARABIYYA; PERSIAN LITERATURE; TURKISH LITERATURE; URDŪ LITERATURE and S͟HIʿR], a register, or an office. Sources differ about linguistic roots. Some ascribe to it a Persian origin from *dev*, 'mad' or 'devil', to describe secretaries. Others consider it Arabic from *dawwana*, to collect or to register, thus meaning a collection of records or sheets. (See Ḳalḳas͟handī, *Ṣubḥ*, i, 90; *LA*, xvii, 23-4; Ṣūlī, *Adab al-kuttāb*, 187; Māwardī, *al-Aḥkām al-sulṭāniyya*, 175; D̲j̲ahs͟hiyārī, *Wuzarāʾ*, 16-17; cf. Balād̲h̲urī, *Futūḥ*, 449). However, in administration, the term first meant register for troops (cf. Ṣūlī, *op. cit.*, 190; Kindī, *Wulāt*, 86; Balād̲h̲urī, *Futūḥ*, 454) and then any register. Only later was it used for office. It seems that the idea is foreign, but the term itself was in use earlier.

i. — THE CALIPHATE

ʿUmar I instituted the first *dīwān* (usually called *al-Dīwān*) in Islam (D̲j̲ahs͟hiyārī, *op. cit.*, 16). The sources ascribe this action to the need to organize the pay, register the fighting forces, and set the treasury in order. (Cf. D̲j̲ahs͟hiyārī, 16-17; Balād̲h̲urī, *Futūḥ*, 449-51; Maḳrīzī, *K̲h̲iṭaṭ*, i. 148; Yaʿḳūbī, *Taʾrīk̲h̲*, ii, 130; Abū Yūsuf, *K̲h̲arād̲j̲*, 25; Ṣūlī, *Adab*, 190-1; Abū Sālim, *al-ʿIḳd*, 154-5). Though some reports put this in 15 A.H., more reliable authorities prefer 20 A.H. (See Ṭabarī, iv, 162; Yaʿḳūbī, ii, 170; Maḳrīzī, *K̲h̲iṭaṭ*, i, 148-9; Balād̲h̲urī, *Futūḥ*, 450; Abū Yūsuf, 24).

This first *dīwān* was the *dīwān al-d̲j̲und*. The register covered the people of Medina, the forces that participated in the conquests and those who emigrated to join garrisons in the provinces, together with their families. Some *mawālī* were included in the register, but this practice was not continued. With the names, pay and rations were indicated (Abū ʿUbayd, *al-Amwāl*, nos. 562, 567, 568; Ṭabarī, iv, 163). A committee of three genealogists carried out the registration, by tribes, and pay depended on past services to Islam and relationship to the prophet. Registration by tribes continued till the end of the Umayyad period. (Abū Yusuf, 24, 26-7; Ṭabarī, iv, 162-3; Yaʿḳūbī, *Taʾrīk̲h̲*, ii, 132; Abū ʿUbayd, *Amwāl* nos. 569, 520, 577; Balād̲h̲urī, *Futūḥ* 450 ff.; 457-9, Maḳrīzī, *K̲h̲iṭaṭ*, i, 149-50). Similar *dīwāns* (of *d̲j̲und*) were set up in provincial capitals like Baṣra, Kūfa and Fusṭāṭ (cf. D̲j̲ahs͟hiyārī, 21, 23; T̲h̲aʿālibī, *Laṭāʾif*, 59). Besides, Byzantine and Sāsānian *dīwāns* of K̲h̲arād̲j̲ continued to function in the provinces as before (D̲j̲ahs͟hiyārī, 38; cf. 3).

The Umayyad Period. — The *dīwān al-k̲h̲arād̲j̲* of Damascus became the central *dīwān* and was now called '*al-dīwān*' to indicate its importance. It looked after the assessment and levying of land taxes. Under Muʿāwiya (d. 60/680) the *dīwān al-rasāʾil* (correspondence) took shape. The Caliph would read all correspondence and make his comments, and then the secretary (*kātib*) would draw up the letters or documents required (D̲j̲ahs͟hiyārī, 24, 34; Ḳalḳas͟handī, i, 92). Muʿāwiya established the *dīwān al-k̲h̲ātam* or 'office of the seal', where a copy of each letter or document was made and kept while the original was checked, sealed and dispatched. It was set up as a check to prevent forgery (D̲j̲ahs͟hiyārī, 25; T̲h̲aʿālibī, *Laṭāʾif*, 16; Nabia Abbott, *Ḳurrah papyri*, 14; See also Grohmann, *CPR*, iii, Bd. I/1, 17 ff). Balād̲h̲urī states that Ziyād b. Abīh, governor of ʿIrāḳ, first organized it under Persian influence (*Futūḥ*, 464). Muʿāwiya also initiated the *dīwān al-barīd* (post office), which was later reorganized by ʿAbd al-Malik (d. 86/705) (see further BARĪD).

The *dīwān al-d̲j̲und* carried out, at intervals, censuses of the Arabs by tribes to keep its registers up to date. The *dīwān* of Egypt made three censuses during the 1st/7th century, the third by Ḳurra b. S͟harīk in 95 A.H. (Kindī, *Wulāt* 86; Maḳrīzī, *K̲h̲iṭaṭ*, i, 151.

The *dīwān al-nafaḳāt* (expenditure), which is very probably a continuation of a Byzantine office, kept account of all expenditure (cf. D̲j̲ahs͟hiyārī, 3).

It seems to be closely linked to the treasury (*Bayt al-Māl* [*q.v.*], Djahshiyārī, 49). The *dīwān al-ṣadaḳa* was founded to assess the *zakāt* and *ʿushr* [*qq.v.*]. A *dīwān al-mustaghallāt* was established, apparently to administer government lands in cities, and buildings, especially *sūḳ*s rented to the people. The *dīwān al-ṭirāz* was responsible for making banners, flags, official costumes and some furniture. The name of its secretary was inscribed on the cloth (cf. Djahshiyārī, 60; Ṣābī, *Rasāʾil*, i, 141).

Each province had a *dīwān* of *kharādj* to which all revenue came (*li-wudjūhi ʾl-amwāl*), a *dīwān* of *djund* and a *dīwān* of *rasāʾil* (Djahshiyārī, 21, 23, 24, 27, 36, 44-5, 60, 61, 63-4). The chief secretary of a *dīwān* received three hundred dirhams a month under Ḥadjdjādj (Djahshiyārī, 61).

ʿAbd al-Malik initiated the policy of Arabization in the *dīwān*s, *ṭirāz* and currency. Hitherto, the *dīwān*s of *kharādj* used local languages: Persian in ʿIrāḳ and Persia, Greek in Syria, and Coptic and Greek in Egypt, and followed previous practices of book-keeping and recording. Even local seals and dates were frequently used. Arabic forms and formulas were introduced and previous calendars adjusted to the Muslim lunar year. (See *PERF* Nos 566, 559, 566, 586, 587, 572, 589, 601; *CPR* III Bd. I, Teil I 87, Teil II c-ci). Arabic was occasionally used (the first available papyrus dates from 22 A.H. *PERF* no. 558) before it became the official language. However, local languages were occasionally used far into the 2nd/8th century (cf. Grohmann, *Étude de papyrologie*, i, 77-9; P. Lond IV, 417; Nabia Abbott, *op. cit.*, 13-14). The arabization of the *dīwān*s was effected in the Empire by stages. In 78/697 Ḥadjdjādj arabized the *dīwān*s of ʿIrāḳ (Djahshiyārī, 39; Balādhurī, *Futūḥ*, 300-1; Ṣūlī, *Adab*, 192); then in 81/700 ʿAbd al-Malik arabized the *dīwān*s of Syria (Balādhurī, *Futūḥ*, 193; Djahshiyārī, 40; Sūlī, *Adab*, 192-3). The *dīwān*s of Egypt followed in 87/705 (Kindī, *Wulāt*, 80; Ibn ʿAbd al-Ḥakam, *Futūḥ*, 122; Maḳrīzī, *Khiṭaṭ*, i, 150). Finally, the *dīwān*s of Khurāsān were arabized under Hishām in 124/742 (Djahshiyārī, 63-4). *Dhimmī*s, who were the bulk of secretaries in these *dīwān*s were to be removed, but some continued to be employed. The *mawālī* were always employed (cf. Djahshiyārī, 61, 67, 38-40, 51; Tritton, *The Caliphs and their non-Muslim subjects*, Ch. ii; Kindī, *Wulāt*, 80; Balādhurī, *Futūḥ*, 193; von Kremer, *The Orient*, 196-7).

The ʿAbbāsid period. — The ʿAbbāsids extended and elaborated the Umayyad system of *dīwān*s, and provided a central bureaucratic direction through the office of *wazīr* [*q.v.*].

Under Saffāḥ a *dīwān* for confiscated Marwānid lands was established (Djahshiyārī, 90). It probably developed into the *dīwān al-ḍiyāʿ*, which looked after caliphal domains (ibid, 277).

Under Manṣūr a temporary *dīwān* for confiscations (*muṣādara*) was created to look after confiscated properties of political enemies (Yaʿkūbī, iii, 127; *al-Fakhrī*, 115). A *dīwān al-aḥshām* is mentioned; it probably looked after people in the service of the palace (Wiet-Yaʿkūbī, *Les Pays*, 15). There was a *dīwān al-riḳāʿ* (petitions) responsible for collecting petitions to be presented to the Caliph (Ibn Ṭayfur; *Taʾrīkh Baghdād*, vi).

During the reign of Mahdī, in 162/778, we hear of *dīwān*s of *zimām* (control), one for each of the existing *dīwān*s. In 168/784 a central *dīwān*, *zimām al-azimma*, was established to control all *zimām*s. These *dīwān*s checked the accounts of the *dīwān*s, supervised their work and acted as intermediaries between single *dīwān*s and the *wazīr* or other *dīwān*s (Djahshiyārī, 146, 166, 168; Ṭabarī, x, 11; Balādhurī, *Futūḥ*, 464). The *dīwān al-maẓālim* was created to look into complaints of the people against government agents. Judges sat in this *dīwān* (*Fakhrī*, 131).

The *dīwān al-kharādj*, it seems, looked after all land taxes, while the *dīwān al-ṣadaḳa* confined its work to the *zakāt* of cattle (cf. Yaʿkūbī, *Buldān*, 11; Abū Yūsuf, *Kharādj*, 80-1). It had different sections, including one of *djahbadha* to check accounts and to examine the quality of items of revenue (Djahshiyārī, 220 1; Tanūkhī, al-Faradj, i, 39-40 [see further DJAHBADH]). Another section was the *madjlis al-ʿaskudār*, where a record was made of incoming and outgoing letters and documents with the names of people concerned. The same section is found in the *dīwān al-barīd* and in the *dīwān al-rasāʾil* (Djahshiyārī, 199; Khwārizmī, *Mafātīḥ al-ʿulūm*, 42, 50). Letters of the *dīwān al-kharādj* were checked in the *dīwān al-khātam*, and delays here led Rashīd to permit his wazīr to send the letters directly (Djahshiyārī, 178).

Under Mutawakkil we hear of a *dīwān al-mawālī wa ʾl-ghilmān*, which may be another version of the *dīwān al-aḥshām*. It was concerned with slaves and clients of the Palace whose number was very large (Yaʿḳūbī, *Buldān*, 23).

The *dīwān al-khātam*, also called *dīwān al-sirr* (confidential affairs) (Djahshiyārī, 177), was of special importance because of the close relation its head kept with the Caliph (cf. Ṭabarī, x, 51-2).

In the provinces there were local *dīwān*s of *kharādj*, *djund* and *rasāʾil* which were smaller copies of the central *dīwān*s (cf. Djahshiyārī, 141, 142, 177, 220-1).

A distinguished *kātib* was sometimes appointed over more than one *dīwān* (ibid., 266; cf. 179). Until the time of Maʾmūn the salaries of *kuttāb* ranged between 300 dirhams and ten dirhams a month (Djahshiyārī, 23, 126, 131-2. Djāḥiẓ states that the highest in pay after Maʾmūn was that of *kātib al-kharādj* (cf. *Three essays*, ed. Finkel, 49). (See further KĀTIB).

*Dīwān*s reached full development during the 3rd-4th/9th-10th centuries.

The *dīwān al-kharādj* usually kept copies of records of local *dīwān*s. But by the middle of the 3rd/9th century each province had a special *dīwān* (of *kharādj*) in the capital. Muʿtaḍid combined these *dīwān*s and organized them into one *dīwān* called *dīwān al-dār* (or *dīwān al-dār al-kabīr*). Under his successor Muktafī, it was reorganized in three *dīwān*s: *dīwān al-mashriḳ* for Eastern provinces, *dīwān al-maghrib* for Western provinces, and *dīwān al-sawād* for ʿIrāḳ. ʿAlī b. ʿĪsā considered the *dīwān al-sawād* "the most important *dīwān*" (Miskawayh, *Tadjārib al-umam*, i, 152). However, under Muḳtadir a central office (*dīwān al-dār*) still remained. The three *dīwān*s remained under the *wazīr*, or one secretary next to him, and were still considered sections of the *dīwān al-dār* (Ṣābī, *Wuzarāʾ*, 123-4, 131-2, 262; Yāḳūt, *Irshād*, i, 226; ʿArīb, 42; Miskawayh, i, 151-2; Bowen, *ʿAlī b. ʿĪsā*, 31-2). It seems that '*dār*' or palace refers to the *dār al-wizāra* or ministerial residence (cf. Ṣābī, *Wuzarāʾ*, 131). The secretary of the *dīwān al-dar* was authorized to communicate directly with the *ʿummāl* (Ṣābī, *Wuzarāʾ*, 177). After the Buwayhid occupation (334/945) we hear only of *dīwān al-sawād* because of the dismemberment of the caliphate (cf. Ṣābī, *Tāʾrīkh*, 467-8).

The *dīwāns* of *kharādj* kept a record of the areas of lands, the rates of taxation in money or in kind, and the measures used. (Māwardī, *op. cit.*, 182-3; Khwārizmi, *Mafātīḥ*, 37). They received the revenue of *kharādj*, *djizya* and *zakāt* (al-Ḥasan b. ʿAbd Allāh, *Āthār al-uwal* (Bulāḳ 1295/72. Māwardī's reference to *dīwān* [*al-ʿushr* could only mean a section of this *dīwān*. Māwardī, 182).

When the *dīwān al-dār* was formed, the relevant *dīwāns* of *zimām* were combined in one (Ṣābī, *Wuzarāʾ*, 73, 84; idem, *Taʾrīkh*, 468). The *zimām* was "guardian of the rights of *Bayt al-Māl* and the people" (Māwardī, 189). It kept another copy of the documents concerning lands in the *dīwān al-kharādj* and checked assessments, orders for payments and receipts (Māwardī, 190-1). An *iḳṭāʿ* granted by Muʿtaḍid, and passed by the Wazīr and the secretary of *dīwān al-dār*, was not passed by the secretary of *dīwān al-zimām* until he checked the *iḳṭāʿ* in his records (Ṣābī, *Wuzarāʾ*, 683).

The *dīwān al-nafaḳāt* dealt with all *dīwāns*. It examined accounts of their expenses and drew its reports (al-Ḥasan b. ʿAbd Allāh, *op. cit.*, 71). By the end of the 3rd/9th century it dealt mainly with the needs of *Dār al-Khilāfa* (Mez (Arabic), i, 125; cf. Ṣābī, *Wuzarāʾ*, 11 ff.). It kept records of recurring and of current expenditures (Ṣābī, *Wuzarāʾ*, 16), and had sub-sections dealing with various heads of expenditure (cf. Mez (Arabic) i, 125-6). There was a *zimām* of *nafaḳāt*, and in 315/927 its secretary held the *zimām* of treasury stores (*khazāʾin*) as well (Ṣūlī, *Akhbār al-Rāḍī wa 'l-Muttaḳī*, 61; Miskawayh, i, 152).

The *dīwān* of *Bayt al-Māl*, also called *al-dīwān al-sāmī*, kept classified records of the sources of money and goods, coming to the Treasury, and maintained stores (*khizāna*) for the different categories of revenue, and a small *dīwān* for each, such as *dīwān al-khizāna* (for cloth and money), *dīwān al-ahrāʾ* (for cereals), and *dīwān khizānat al-silāḥ* (for arms) (al-Ḥasan b. ʿAbd Allāh, *op. cit.*, 72; cf. Ṣābī, *Wuzarāʾ*, 16). This *dīwān* checked all items of income, and all expenditure had to be passed by it. The secretary's mark on all cheques and orders of payment was required by the *wazīr* (Mez (Arabic), i, 126-7). Usually, the *dīwān* drew up monthly and yearly balance sheets. (In 315/927 ʿAlī b. ʿĪsā requested weekly sheets. Miskawayh, i, 651-2; Ṣābī, *Wuzarāʾ*, 303, 306).

The *dīwān al-djahbadha* branched off from the *Bayt al-Māl*. ([*q.v.*] See further DAFTAR, DJAHBADH). The *dīwān al-ḍiyāʿ* administered domains of the treasury (Hamadānī, *Takmila*, 18; Miskawayh, i, 21; cf. Ṣābī, *Rasāʾil*, i, 139). Yet we hear at times of more than one *dīwān* for *ḍiyāʿ*. In 325 A.H. there was a *dīwān al-ḍiyāʿ al-khāṣṣa wa 'l-mustaḥdatha* (*i.e.*, Caliphal and newly acquired domains) and *dīwān al-ḍiyāʿ al-Furātiyya* (*i.e.*, Domains on the Euphrates) (Ṣābī, *Wuzarāʾ*, 123-4; Miskawayh, i, 152).

In 304/916 Ibn al-Furāt established a *dīwān al-marāfiḳ* (lit. aids; bribes, *i.e.*, which were paid by governors, obviously from riches accumulated by dubious means). The *marāfiḳ* amounted then to 100,000 dinars per year from Syria and 200,000 dinars from Egypt. ʿAlī b. ʿĪsā forbade the *marāfiḳ* because they corrupted administration (Miskawayh, i, 44, 108, 241-2; Ṣābī, *Wuzarāʾ*, 31-2, 81).

While every *dīwān* dealing with finance had a *zimām*, all *dīwāns* of *zimām* were occasionally put in one hand. In 295/907 the *wazīr* of the one-day Caliph Ibn al-Muʿtazz put all the *uṣūl* (*dīwāns* proper) under ʿAlī b. ʿĪsā and the *dīwāns* of *zimām* under Ibn ʿAbdūn (Miskawayh, i, 60). In 319/931 the *zimāms* were put under one secretary and the *uṣūl* under the *wazīr* (Miskawayh, i, 226). This was repeated in 325/936-7 and in 327/938-9 (Ṣūlī, *Akhbār al-Rāḍī wa 'l-Muttaḳī*, 87, 147).

The *dīwān al-djund* kept a register of the forces classified according to their ranks, and their pay or *iḳṭāʿ*. It consisted of two sections, one dealing with pay (*ʿaṭāʾ* [*q.v.*]) and expenses, and the other with recruiting and classification (*taṣnīf*) (Djāḥiẓ, *Three essays*, 49; Ḳudāma calls them *madjlis al-Taḳrīr* and *madjlis al-Muḳābala*, Mez (Arabic), i, 165. See also Māwardī, 179-80). This *dīwān* had a *zimām*, called *dīwān zimām al-djaysh*, to supervise its accounts and expenditure (Miskawayh, i, 152).

The *dīwān al-rasāʾil* was directly under the *wazīr* or under a secretary. Letters and documents were drafted by the first secretary on the instructions of the *wazīr* (or Caliph) and when approved by him the final copy was made. Sometimes, a special calligrapher (*muḥarrir*) made the last copy. At intervals of three years, letters and documents were sent to the great store (*al-khizāna al-ʿuẓmā*) to be finally classified and indexed (Ḳalḳashandī, i, 96; Ibn al-Ṣayrafī, *Ḳānūn dīwān al-rasāʾil*, 94, 100-3, 108 ff., 116, 118, 144-5; Djāḥiẓ, *Three essays*, 49; Khwārizmī, *Mafātīḥ*, 50; cf. Ṣābī, *Wuzarāʾ*, 109 where *dīwān al-kharāʾiṭ* is used). The *dīwān al-faḍḍ*, probably a section of the *dīwān al-rasāʾil* in origin, received letters and documents, opened and classified them, put indications of their contents on the back, presented them to the *wazīr* and kept a record of them. (Mez (Arabic), i, 130-1; Ibn al-Ṣayrafī, *op. cit.*, 108; Tawḥīdī, *al-Imtāʿ wa 'l-muʾānasa*, i, 98). In 315, *Faḍḍ* and *Khātam* were combined in one *dīwān* (Miskawayh, i, 152).

In 301 A.H. ʿAlī b. ʿĪsā established a *dīwān al-birr*, to administer pious endowments and charitable gifts (*wuḳūf* and *ṣadaḳāt*). The revenue was spent on the holy places, in Mecca and Medina, and on volunteers in the Byzantine front (Miskawayh, i, 257; cf. 151). The *dīwān al-ṣadaḳāt* continued to levy the *zakāt* of cattle. In 315/927 one secretary looked after the two *dīwāns* of *birr* and *ṣadaḳāt* (Miskawayh, i, 152; Ṣābī, *Rasāʾil*, 111).

Mention is made of a *dīwān al-ḥaram* which looked after the affairs of the female section of the palace (Miskawayh, i, 152).

There was a *dīwān* to administer confiscated property, called *dīwān al-muṣādarīn* (Ṣābī, *Wuzarāʾ*, 306, 311). Two copies of confiscations were made, one for the *dīwān*, and the other for the *wazīr* (Miskawayh, i, 155). A *dīwān* was created to administer confiscated estates, *dīwān al-ḍiyāʿ al-maḳbūḍa* (Ṣābī, *Wuzarāʾ*, 21, 30; cf. Miskawayh, i, 84; cf. Hamadānī, *Takmila*, 83 where a *dīwān al-mukhālifīn* is mentioned, as administering the property of *Muʾnis*.

It is clear that sections of a *dīwān* were sometimes called *dīwāns*, while some *dīwāns* were short-lived and were set up for temporary needs. Besides, more than one *dīwān* were sometimes put under one secretary (cf. Ṣābī, *Wuzarāʾ*, 27, 123-4).

In the reign of Muʿtaḍid, the two days rest was resumed, Tuesday for relaxation and Friday for prayers (Ṣābī, *Wuzarāʾ*, 223).

Salaries of the heads of *dīwāns* varied. At the beginning of the 4th/10th century, the secretary of the *dīwān al-sawād* received 500 dinars per month and the secretary of *the dīwān al-ʿaṭāʾ* 10 dinars. In 314, ʿAlī b. ʿĪsā reduced salaries by one third, so the secretary of the *dīwān al-sawād* got 333½ dinars,

and the secretaries of the *dīwān al-faḍḍ* and *dīwān al-khātam* 200 dinars each. The secretaries of the *dīwān al-mashriḳ* and *dīwān al-ḍiyā' al-khāṣṣa wa 'l-mustaḥdatha* 100 dinars each, the secretary of the *dīwān al-dār* 500 dinars, and the secretary of the *dīwān*s of *zimām*, together with his *kuttāb*, 2700 dinars (Ṣābī, *Wuzarā'*, 31, 84, 177, 178, 314; cf. ibid. 20-1; Miskawayh, i, 68). Measures of economy led ʿAlī b. ʿĪsā to reduce the year to 8-10 months of pay, and this became a common practice (Ṣābī, *Wuzarā'*, 314; Miskawayh, i, 152.

In the Buwayhid period (334-447/945-1055), we still hear of a *dīwān al-sawād* with a secretary and an assistant-secretary (*khalīfa*), and of a *dīwān al-ḍiyā'* (or *al-ḍiyā' al-khāṣṣa*) (Ṣābī, *Ta'rīkh*, year 390 A.H., 401-2, year 392 A.H., 467-8; Miskawayh, ii, 120-1; Abū Shudjāʿ, *Dhayl Tadjārib al-umam*, 147). The central *dīwān* for finance was now called *al-Dīwān*; it was under the *wazīr* or a secretary next to him in importance (cf. Miskawayh, ii, year 338 A.H., 242, 263, 266; Abū Shudjāʿ, 143). In 389/999, a special *dīwān* was set up to levy the *ʿushr* on silk cloth made in Baghdād (Ṣābī, *Ta'rīkh*, 364). The *dīwān al-nafaḳāt* continued (Miskawayh, ii, 120-1) with a special *zimām* to check expenditure in accounts and in amount (cf. Ṣābī, *Tā'rīkh*, 353, 357). However, there was the *dīwān al-zimām* to supervise financial *dīwān*s (ibid., 467-8). The *dīwān* of the Treasury was called *dīwān al-khazā'in* or *dīwān al-khazn* (Abū Shudjāʿ, 76, Ṣābī, *Ta'rīkh*, 368; Khwārizmī, *Mafātīḥ*, 41). The head of its *dīwān* was the *khāzin* or *nāẓir*, and at times, the mint (*dār al-ḍarb*) was put in his charge (Abū Shudjāʿ, 250-1). Al-Tawḥīdī, however, mentions a special *dīwān* for the mint called *dīwān al-naḳd wa 'l-ʿiyār wa dār al-ḍarb* (*Imtāʿ*, i, 98).

The *dīwān al-djund* was divided into two *dīwān*s, one for the Daylamites and the other for the Turks (the two main elements of the army) and called *dīwān al-djayshayn* (Ṣābī, *Ta'rīkh*, 467-8). There was however one head or paymaster, called *al-ʿāriḍ* (Abū Shudjāʿ, 258).

The Fāṭimids. — Fāṭimid *dīwān*s are basically related to the ʿAbbāsid. The *dīwān al-rasā'il* is here *dīwān al-inshā'*; its head is *ṣāḥib dīwān al-inshā'* or *kātib al-dast al-sharīf*. The detailed account of this *dīwān* given by Ibn al-Ṣayrafī shows that it was similar to the ʿAbbāsid *dīwān*. (See Ibn al-Ṣayrafī, *Ḳānūn dīwān al-rasā'il*, ed. A. Bahjat, Cairo 1905; Maḳrīzī, *Khiṭaṭ*, ii, 244, 306; iii, 140; Ḳalḳashandī, iii, 490; i, 103; x, 310; Ibn al-Ḳalānisī, *Dhayl ta'rīkh Dimashḳ*, 80; Shayyāl, *al-Wathā'iḳ al-Fāṭimiyya*, 365).

The *dīwān al-djund* was called *dīwān al-djaysh*, or *dīwān al-djaysh wa 'l-rawātib* (office of troops and salaries). It consisted of two sections: the *dīwān al-djaysh*, under a *mustawfī*, dealing with the recruitment, equipment and inspection of the troops, and the *dīwān al-rawātib* dealing with pay. However, other references show that the two *dīwān*s were often separate, the first under *ṣāḥib dīwān al-djaysh* and the latter concerned with salaries of the military and civilians (See Maḳrīzī, *Khiṭaṭ*, ii, 242; Ḳalḳashandī, iii, 492-3, 495, cf. Ibn al-Ṣayrafī, *Ishāra*, 25, 47; Maḳrīzī, *Ittiʿāẓ*, year 542; Shayyāl, *Wathā'iḳ*, 304). The Fāṭimids, who attached great importance to the fleet, had a *dīwān al-ʿamā'ir* to look after the construction of ships and their forces (Ḳalḳashandī, iii, 496).

Accounts of the *dīwān*s of finance are involved. The *dīwān al-madjlis* seems to have been the central bureau. It had different sections, one of which dealt with fiefs (*iḳṭāʿāt*). It was probably similar to the ʿAbbāsid '*al-Dīwān*'. It made the estimate of the budget (*istīmār*) when required, after getting estimates from all *dīwān*s (Maḳrīzī, *Khiṭaṭ*, ii, 236 ff.; i, 160-2; cf. ii, 245; Shayyāl, *Wathā'iḳ*, 325). The *dīwān al-naẓar* had general control over the *dīwān*s of finance (*amwāl*) and over their officials. It seems to correspond to the central *dīwān* of *kharādj* of the ʿAbbāsids (cf. Shayyāl, *Wathā'iḳ*, 304, i, Ibn al-Ṣayrafī, *Ishāra* 35; Maḳrīzī, *Khiṭaṭ*, ii, 241; Ḳalḳashandī, iii, 493). The *dīwān al-taḥḳīḳ* was linked to *dīwān al-naẓar*, but its function was to check the accounts of other *dīwān*s of finance. It is parallel to the ʿAbbāsid central *zimām* (Maḳrīzī, ii, 242; Ḳalḳashandī, iii, 493, i, 401; Ibn Muyassir, *Akhbār*, 43).

The *dīwān al-khāṣṣ* looked after the financial affairs of the palace (Maḳrīzī, *Ittiʿāẓ*, 200). The office of *waḳf* was the *dīwān al-aḥbās* (Ḳalḳashandī, iii, 494-5). The *dīwān al-mawārīth al-ḥashriyya* was instituted to administer escheated and heirless property (Ibn Muyassir, 56; Ḳalḳashandī, iii, 496).

The *Maẓālim* [*q.v.*] were presented to the Caliph or *wazīr*. There was a *dīwān al-tawḳīʿ*, with two secretaries, to deal with them (Maḳrīzī, *Ittiʿāẓ*, 307; Ḳalḳashandī, 491).

Salaries of secretaries varied. The secretary for *inshā'* got 150 dinars monthly, that of *naẓar* 70, of *bayt al-māl* 100, of *taḥḳīḳ* 50, and the secretaries of *djaysh*, *tawḳīʿ madjlis* and *iḳṭaʿ* 40 dinars each. Lesser secretaries got 5-10 dinars (Ḳalḳashandī, iii, 526; Maḳrīzī, *Khiṭaṭ*, ii, 243). Non-Muslims were widely employed in the *dīwān*s and this led to occasional reactions against them (cf. Ibn al-Ḳalānisī, 59; Ibn al-ʿIbrī, *Ta'rīkh*, 370; Ibn al-Ṣayrafī, *al-Ishāra*, 34, 35, 48, 53. cf. Tritton, *op. cit.*, ch. ii).

The 11th-13th centuries. — Since the Buwayhid period, the *dīwān al-rasā'il* had been called *dīwān al-inshā'*, and its secretary *kātib al-inshā'* (Abū Shudjāʿ 153-4; Ibn al-Djawzī, *Muntaẓam*, ix, 55; x, 125; Ibn al-Fuwaṭī, *Ḥawādith*, 16; Ibn al-Sāʿī, *Djāmiʿ*, ix, 222). The central bureau was *al-Dīwān* (cf. Ibn al-Djawzī, ix, 91, 27, 28, 29, 83). It was headed by the *wazīr*, and at times by a secretary called *ṣāḥib al-dīwān* (Ibn al-Djawzī, x, 56, 165, 125). Later it was called *al-dīwān al-ʿazīz* (cf. al-Fuwaṭī, 47, 63, 88; Ibn al-Sāʿī, *Djāmiʿ*, ix, 285).

Finances were primarily the concern of *dīwān al-zimām*, which in effect carried the work of *dīwān al-kharādj*; fief farmers and governors sent revenue to it (Ibn al-Sāʿī, ix, 16). It had two sections: the main *dīwān* headed by a *kātib* (*kātib al-zimām*) (cf. Ibn al-Djawzī, ix, 150, 223, x, 27, 124) later called *ṣadr*, and the other section headed by a *mushrif* who supervised the work of the *dīwān* and the revenue (Ibn al-Sāʿī, ix, 98-9, 118; Ibn al-Fuwaṭī, 16, 62, 63). Each province (or district) had such a *dīwān* headed by a *nāẓir* and a *mushrif* (Ibn al-Fuwaṭī, 63, 101).

Al-makhzan al-maʿmūr replaced, in time, *al-makhzan* (treasury) used for *Bayt al-Māl*, and its head *ṣāḥib al-makhzan* was replaced by *nāẓir* or *ṣadr*. This *dīwān* supervised the mint also (cf. Ibn al-Djawzī, x, 24-5, 52, 125; ix, 125, 155, 216). His standing was very high (cf. Ibn al-Djawzī, ix, 203). In 594/1198 the *ṣadr* of this *dīwān* was given authority over all *dīwān*s (Ibn al-Sāʿī, ix, 250). It had many sections each headed by a *nāẓir* (for example *khizānat al-ghallāt*. Ibn al-Fuwaṭī, 7, 37. cf. Ibn al-Djawzī, ix, 83; x, 52; Ibn al-Sāʿī, ix, 103, 127. He describes the ceremony of appointment, 141). Here, again, there was a *mushrif* to supervise

the work of the *makhzan*. Obviously, *ishrāf* replaces the old *zimām* (Ibn al-Fuwaṭī, 103; Ibn al-Sāʿī, ix, 20, 229).

The *dīwān al-djawālī* (*i.e.*, poll-tax) looked after assessing and levying the poll-tax. (See DJAWĀLĪ, DJIZYA). A new bureau, *dīwān al-tarikāt al-ḥashriyya*, appeared to administer heirless property (Ibn al-Sāʿī, 107; Ibn al-Djawzī, x, 68). The *dīwān al-ʿaḳār*, headed by a *nāẓir*, looked after buildings, such as shops, owned by the state (Ibn al-Fuwaṭī, 63; cf. Ibn al-Djawzī, x, 243). Building and repairs, however, were the concern of another bureau called *dīwān al-abniya* (building bureau). It had engineers and architects among its staff (Ibn al-Sāʿī, ix, 93, 184). In 635/1237-8 it participated in repairing the walls of Baghdād (Ibn al-Fuwaṭī, 111). The *dīwān al-ḥisba* was usually under the *Ḳāḍī al-Ḳuḍāt*, or under a deputy (Ibn al-Sāʿī, ix, 16; Ibn al-Fuwaṭī, 64).

Non-Muslims worked with Muslims in financial offices to the end of the Caliphate. Occasionally restrictions against them were enforced, but only temporarily. In 533/1139, Jews and Christians were expelled from *al-Dīwān* and *al-Makhzan* only to be returned after one month (Ibn al-Djawzī, x, 78). The repetition of such orders (like that of al-Nāṣir li-Dīn Allāh in 601 A.H.) shows that they were not enforced and non-Muslims continued to be employed (Ibn al-Sāʿī, ix, 162).

ii. Egypt.

Three periods may be distinguished in the development of the Egyptian *dīwān*, though, since continuity in administrative institutions tends to be stronger than changes of governments, there are in reality no clear cleavages: (1) the time when Egypt was a province of the great Muslim Empire (18/649-358/969); (2) the Fāṭimid caliphate (358/969-567/1171); (3) the Ayyūbid and Mamlūk period (567/1171-923/1517).

The sources for the first section are scattered remarks in the earlier and later historians and manuals for *kuttāb* as well as the growing number of Arabic papyri. For the second and third periods the manuals and encyclopaedic works for *kuttāb* provide ample materials which increase by the end of the mediaeval period; and the historians supplement the actual facts rather than the more theoretical explanations of the former. Among the latter al-Maḳrīzī's (d. 845/1442) *al-Khiṭaṭ* is of outstanding importance, as he gives a nearly continuous history of the Egyptian administration from the Muslim conquest until his own time (ed. Būlāḳ, i, 81 ff., 397 ff.; ii, 215 ff.), besides many important additions in the scattered "vitae" and the descriptions of buildings etc.

(1) The Muslims carried on the administrative practice in Egypt that the Byzantines had established with the help of the resident Christian population, even allowing them the use of the Coptic language.

Since the term *dīwān* was not in use in Egypt under the Byzantines, we may deduce that it was brought by the new masters. Severus b. al-Muḳaffaʿ (living about 1000 A.D.; see IBN AL-MUḲAFFAʿ, ABU'L-BASHAR) reports that the second governor ʿAbd Allāh b. Saʿd b. Sahl (24/644-35/656, [*q.v.*] "established the *dīwān* at Miṣr (al-Fusṭāṭ) to which all the taxes of Egypt were paid" (*History of the Patriarchs of Alexandria*, ed. C. F. Seybold 103; ed. B. T. Evetts (*Patr. Orient.* v) i, 50, quoted by N. Abbott, *The Kurra papyri*, 13, and D. C. Dennett, *Conversion and poll tax*, 74). Unfortunately the Muslim sources do not offer any confirmation either for the establishment of a central revenue office, or the use of the word *dīwān* for it at such an early time. Al-Maḳrīzī relates (*Khiṭaṭ*, i, 94, 2-10) that the governor Maslama b. Mukhlid al-Anṣārī (47/667-62/682; al-Kindī, ed. Rh. Guest 38-40; Maḳrīzī, *Khiṭaṭ* i, 301, 18-27) appointed an official to go round among the immigrant Arabs each morning to inquire about changes in their family status, or the arrival of guests, and to report it to the *dīwān*. The governor would then advise the *ahl al-dīwān* (the officials of the *dīwān*) to pay the increased pensions. This narration indicates the existence of an organized office called *dīwān*, as well as its concern with registration and the payment of pensions to the immigrant Arabs. The same use of the term *dīwān* also appears in a note by al-Kindī (ed. Guest 71; Maḳrīzī, *Khiṭaṭ* i, 94, 10-3): the first *dīwān* was established in Egypt by ʿAmr b al-ʿĀṣ, the second by ʿAbd al-ʿAzīz b. Marwān, the third by Ḳurra b. Sharīk [*q.v.*], the fourth by Bishr b. Ṣafwān. After the establishment of the fourth *dīwān* nothing worth mentioning happened except the admission of the Ḳays into the *dīwān* during the caliphate of Hishām b. ʿAbd al-Malik b. Marwān (105/724-125/743). Al-Kindī (ed. Guest 76) refers to that event in the year 109/727: 3000 families of the Ḳays were transferred to Egypt together with their *dīwāns*. These notes show that the term *dīwān* was used from an early time to denote (*a*) the pension lists of the Muslim-Arab tribes, (*b*) that these lists accompanied the tribe wherever it moved, (*c*) that consequently the *dīwān* (pension list) of the Ḳays was transferred to Egypt and there added to the other already existing *dīwāns*.

During the second half of the 1st/7th century, the use of the term *dīwān* to denote central government offices must have become more general. We read (al-Kindī, 58-9; al-Maḳrīzī, *al-Khiṭaṭ*, i, 98, 11-15) that the change-over from Coptic to Arabic in the Egyptian *dīwāns* took place in 87/705 (cf. ed. Wiet, ii, 58). This can only mean that in the above-mentioned year the term *dīwān* was already the name of the central government office at al-Fusṭāṭ. The first independent director of finances (*ʿāmil al-kharādj*) was Usāma b. Zayd al-Tanūkhī who was appointed in 96/715 by the caliph Sulaymān b. ʿAbd al-Malik on the death of the governor Ḳurra b. Sharīk. That Usāma worked with the help of a *dīwān* is shown by the report of al-Maḳrīzī (*Khiṭaṭ*, i, 77, 37-8, 3) that ʿUmar b. ʿAbd al-ʿAzīz (99/717-101/720) abolished the poll-tax for Muslims and notified the *dīwān* (*al-kharādj*?) about it. In

105/725 the governor al-Ḥurr b. Yūsuf sent officials of the *dīwān* against Coptic peasants in order to enforce the payment of higher taxes. Two years later the well-known *ʿāmil al-kharādj* Ibn Ḥabḥāb (C. H. Becker, *Beiträge*, ii, 107-10) set up lists of taxpayers which were carefully put together and provided with detailed information for the *dīwān al-kharādj* (al-Maḳrīzī, *Khiṭaṭ*, i, 74, 24 & 99, 10). *Aṣḥāb al-ahrāʾ* (officers of the government granary) are already mentioned in a papyrus dated Shawwāl 90/August-September 709; it seems likely that they were officials of the *dīwān al-ahrāʾ* listed later by al-Nābulusī (C. H. Becker, *Pap. Schott-Reinhardt* 70, 37 & 49; see below). — The *dīwān al-barīd* (*dīwān* of the post) is alleged by al-Maḳrīzī (*Khiṭaṭ*, ii, 226, 27-9; W. Björkmann, *Staatskanzlei*, 18 note 3) to have preceded the *dīwān al-inshāʾ* in early times; and A. Grohmann (*Studien z. hist. Geogr. und Verw.* 35) takes it for granted that revenue-offices with a director (*ʿāmil*) and his deputy existed in the main places of the provinces (*kūrā*) besides many other offices. The existence of the *dīwān asfal al-arḍ* (*dīwān* of Lower Egypt) is proved by a papyrus dated 143/761 (C. H. Becker, *Pap. Schott-Reinhardt*, 36, note 9; A. Grohmann, *APEL* IV 143; see below).

An increase of the number of *dīwān*s can be noticed in the years shortly before the rise of the Ṭūlūnids (al-Maḳrīzī, *Khiṭaṭ* i, 107, 28-9; C. H. Becker, *Beiträge* ii, 144; A. Grohmann, *Zum Steuerwesen im arabischen Ägypten*, in *Actes d. V. Cong. Int. d. Pap.*, Brussels 1938, 132): The famous director of finances Ibn Mudabbir introduced new taxes on pasture and fishing (*marāʿī*, *maṣāyid*) and established a special *dīwān* for their administration. On the other hand an order of the caliph al-Muʿtaṣim terminated the pension-rights of Arab settlers and therefore presumably of the relevant *dīwāns*. The seat of the *dīwān al-kharādj* at al-Fusṭāṭ was at first a building near the mosque of ʿAmr; the *mutawallī ʾl-kharadj* (inspector of finances) used to sit in public in the mosque itself in order to assess the fiefs. Aḥmad b. Ṭūlūn transferred the seat of the *dīwān* to the mosque of Aḥmad b. Ṭūlūn where it remained until the Fāṭimid period (al-Maḳrīzī, *Khiṭaṭ*, i, 82, 3-15).—A papyrus dated 301/913 describes the local tax-office as *dīwān al-kharādj* (A. Grohmann, *APEL* IV², 227). The *de facto* independence of Egypt under Aḥmad b. Ṭūlūn from the Baghdād caliphate was shown by the foundation of the *dīwān al-inshāʾ* (chancellery of state) as first head of which was appointed Abū Djaʿfar Muḥammad b. ʿAbd Kān (d. 278/868, al-Ḳalḳashandī, i, 95; W. Björkman, 18-9; Zaki Mohammad Hassan, *Les Tulunides*, 191-216 & 280-2).

(2). The Fāṭimid period. Our main sources are (*a*) for general information (1) al-Ḳalḳashandī (iii, 490-6; Wüstenfeld, 188-94); (2) al-Maḳrīzī (*Khiṭaṭ*, i, 397-402); (3) for the last decades of the Fāṭimid dynasty and the first years of the Ayyūbids Ibn Mammātī (*Ḳawānīn al-dawāwīn*, viii and ix); (*b*) for the *dīwān al-inshāʾ* especially Ibn al-Ṣayrafī's *Ḳānūn dīwān al-inshāʾ*. The reports of al-Ḳalḳashandī and al-Maḳrīzī are largely based on the lost *Nuzhat al-muḳlatayn fī akhbār al-dawlatayn al-Fāṭimiyya wa ʾl-Ṣāliḥiyya* by al-Murtaḍā Abū Muḥammad ʿAbd al-Salām b. Muḥammad b. al-Ṭuwayr al-Kaysarānī, life-time unknown (Ḥādjdjī Khalīfa, (ed. G. Flügel) vi, 334, no. 13720; R. Guest, *Writers, books, etc., in the Khiṭaṭ*, in *JRAS*, 1902, 117; C. H. Becker, *Beiträge*, i, 29-30; W. Björkman, 26 note 1, 83). According to Ibn al-Ṭuwayr (al-Ḳalḳashandī, iii, 93; al-Maḳrīzī, *Khiṭaṭ*, i, 397, 32 ff.; see also al-Nābulusī, *Lamʿa* chapter iii, in Cl. Cahen, *Quelques aspects* ...., 103) the first central administrative office and the mother of all the other *dīwāns* had been the *dīwān al-madjlis* (*dīwān* of the council) in which the whole of the administration was concentrated. A number of clerks sat there in their own rooms with one or two assistants (*muʿīn*). The chief of this *dīwān* was responsible for the grant of fiefs (*iḳṭāʿāt*; C. H. Becker, *Islamstudien*, i, 226; W. Björkman, Index; Cl. Cahen, *Evolution de l'iḳṭāʿ*, in *Annales ESC* 1953), and his decisions were called *daftar al-madjlis* (record of the council). The different departments of the *dīwān al-madjlis* dealt with such topics as alms, gifts, clothing and administration of the private purse of the sultan. Our sources do not state whether that *dīwān* existed already before the Fāṭimids or when its splitting up into different independent *dīwāns* took place. But it seems probable that the *dīwān al-madjlis* was the predecessor of the *dīwān al-amwāl*, and that the *dīwān al-inshāʾ* existed side by side with it.

The following list of *dīwāns* culled from the above-mentioned sources can not claim to be a complete one. It should be kept in mind that the different offices styled *dīwān* do not rank on the same level, as *dīwān* denotes sometimes even provincial branches of central offices.

(i) *Dīwān al-inshāʾ*, or *al-rasāʾil*, or *al-mukātabāt* (chancellery of state) is subdivided into three departments: 1) *Ṣaḥābat dīwān al-inshāʾ wa ʾl-mukātabāt*, or *dīwān al-naẓar* (head office or control-office). Its head was called *raʾīs* (head), or *mutawallī* (superintendent), or *ṣāḥib* (master), or *mushidd* (director), and addressed as *al-shaykh al-adjall* (excellency). His exalted position resulted from his influence with the caliph to whom he brought the papers of state and whom he advised on their answering. He was assisted, according to Ibn al-Ṣayrafī, by two high-rank officials, The other two departments of the *dīwān al-inshāʾ* were (2) the office of appeal (*tawḳīʿāt bi ʾl-ḳalam al-daḳīḳ*) which dealt with the caliph's decisions about complaints which any person could bring before him during a public audience, and (3) the registrar's office (*tawḳīʿāt bi ʾl-ḳalam al-djalīl*), which executed the decisions of the office of appeal, with copious legal notes to the petitioner. Other minor offices of the *dīwān al-inshāʾ* included (*a*) the bureau for correspondence with foreign princes (*mukātaba ila ʾl-mulūk*), (*b*) the appointments board (*inshāʾāt, taḳlīd*), (*c*) the bureau for correspondence with high officials in the provinces and nobles (*mukātaba ila umarāʾ al-dawla wa-kubarāʾihā*), (*d*) the bureau for the letters-patent (*manāshīr*), secret decrees (*kutub liṭāf*) and copies (*nusakh*). Besides these departments four clerks of lesser rank are mentioned, who, however, do not conduct independent bureaus: the copyist (*nāsikh*), a clerk for the safe-keeping of records in systematic order so that they could be used as models for later usage, the keeper of original documents (*khāzin*) and the chamberlain (*ḥādjib*) who takes care that no unauthorized person trespasses into the presence of the chief of the *dīwān* (Ibn al-Ṣayrafī-Massé, Index; al-Ḳalḳashandī, i, 130 & iii, 490 ff.; W. Björkman 20 ff.; al-Maḳrīzī, *Khiṭaṭ* i, 402).

(ii) *Dīwān al-djaysh wa ʾl-rawātib* (*dīwān* of the army and the salaries) is divided into three departments: (*a*) *dīwān al-djaysh* a kind of war office as well as military administration; its principal must be a Muslim; (*b*) *dīwān al-rawātib*, the central pay office for all receivers of salaries from the *wazīr* down

to the cavalry trooper (cf. A. Mez, *Renaissance* 74-6); (*c*) *dīwān al-iḳṭāʿ* (*dīwān* of fiefs and pensions) for civilians, as the military personnel belonged to the *dīwān al-rawātib* (al-Ḳalḳas͟handī, iii, 492-3; al-Maḳrīzī, *K͟hiṭaṭ* i, 401-2).

(iii) *Dīwān al-amwāl* (*dīwān* of finance, the treasury) was divided into fourteen departments, also called *dīwān*, which are enumerated by al-Ḳalḳas͟handī (iii, 493-6) and much more briefly by al-Maḳrīzī (*K͟hiṭaṭ*, i, 400-1). Ibn Mammātī offers a list of seventeen employees of the class of civil servants (*asmāʾ al-mustak͟hdamīn min ḥamal al-iḳlīm*) which apparently belonged to the staff of the *dīwān al-amwāl*; but it is not always clear to which of the 14 departments these 17 groups correspond (ed. A. S. Atiya 297-306). (*a*) *Naẓar al-dawāwīn*, or *dīwān al-naẓar* (control-office of the *dīwān*). The head of it is *ex officio* the chief of the *dīwān al-amwāl*, *i.e.*, the chancellor of the exchequer. Ibn Mammātī distinguishes between the *nāẓir* of the *dīwān* (the controller, auditor) who checked and countersigned the accounts and the *mutawallī* (superintendent) who was responsible for all business (C. H. Becker, *Islamstudien* i, 170, 173; (*b*) *dīwān al-taḥḳīḳ* (*dīwān* of official enquiry (cf. Dozy s.v.) was founded by al-Afḍal b. Badr al-D̲j̲amālī [*q.v.*] in 501/1107-8, when a Jew and a Christian were employed as its heads; later on it was not filled for most of the time (Ibn al-Ṣayrafī/Massé 82 note 1); (*c*) *dīwān al-mad̲j̲lis* (see above xxx) only administered royal gifts, alms etc.; (*d*) *dīwān k͟hazāʾin al-kiswa*, *dīwān* of the storehouses of clothing; about the numerous storehouses see the long lists in al-Ḳalḳas͟handī, iii, 475 ff. and al-Maḳrīzī, *K͟hiṭaṭ*, i, 408 ff.; (*e*) *Dīwān al-ṭirāz* (*dīwān* of the embroidered garment-factories and storehouses). The *dīwān* maintained several branches at places where the factories were situated, *e.g.*, Alexandria, Damietta, Tannīs (Ibn Mammātī 330-1; A. Grohmann. *Stud. z. hist. Geogr. u. Verw.*, 44); (*f*) *dīwān al-aḥbās* (*dīwān* of endowments). Since its foundation by the caliph al-Muʿizz in 363/974 the *dīwān* dealt with the administration of pious foundations (*waḳf* [*q.v.*]); its officials were Muslims only (al-Maḳrīzī, *K͟hiṭaṭ*, ii, 295 ff.; Cl. Cahen, *Le régime des impôts*, in *Arabica*, iii, 24-5; (*g*) *dīwān al-rawātib* (*dīwān* of wages). It is not clear what the relation had been between this *dīwān* and the office of the same name in the *dīwān al-d̲j̲ays͟h*. It seems possible that this *dīwān al-rawātib* had been a kind of predecessor to the *dīwān al-k͟haṣṣ* (the *dīwān* of the private fund of the caliph; al-Ḳalḳas͟handī, iii, 495 and 457); (*h*) *dīwān al-Ṣaʿīd* (*dīwān* of Upper Egypt); (*i*) *dīwān Asfal al-arḍ* (*dīwān* of Lower Egypt); (*j*) *dīwān al-t͟hug͟hūr* (*dīwān* of the frontier districts). The marches of Alexandria, Damietta, Tannīs and ʿAyd͟hāb formed an administrative unity for the purpose of levying import-taxes from the merchants at the ports (*al-k͟hums* and *matd̲j̲ar* [see MAKS]; Ibn Mammātī 325-7); (*k*) *dīwān al-d̲j̲awālī wa 'l-mawārīt͟h al-ḥas͟hriyya* (*dīwān* of the poll tax and estate duty of *d͟himmīs*; F. Løkkegaard, *Islamic Taxation* 51 & 140-1; C. H. Becker, *Islamstudien*, i, 172; Ibn Mammātī 306, 317-8 and 454; Cl. Cahen, *Le régime des impôts*, in *Arabica*, iii, 24; (*l*) *dīwān al-k͟harād̲j̲ī wa 'l-hilālī* (*dīwān* of the lawful and illegal taxes). F. Løkkegaard, 185-6; C. H. Becker, *Islamstudien*, i, 177-9). Ibn Mammatī enumerates several officials connected with this *dīwān*: *al-d̲j̲ahbad͟h* (the tax collector), *al-s͟hāhid* (the notary) who countersigned the invoices, *al-māsiḥ* (the surveyor), etc.; (*m*) *dīwān al-kurā* or *al-iṣṭiblāt* (*dīwān* of the horses or the stables); (*n*) *dīwān al-d̲j̲ihād* or *al-ʿamāʾir* (*dīwān* of the holy war, or the navy). Its seat was in the dockyards at Cairo, and it served as administrative centre for the navy (Ibn Mammātī, 340-1).

(3). The Ayyūbid period. The political and religious break which the end of the Fāṭimid caliphate meant for Egypt was counterbalanced by the administrative continuity clearly demonstrated by the leading personality: the last *ṣāḥib dīwān al-ins͟hāʾ*, al-Ḳāḍī al-Fāḍil Muḥyī al-Dīn, [*q.v.*], was kept on by Saladin in the same office and later on created *wazīr*. Hence al-Ḳāḍī al-Fāḍil and his numerous pupils form a link between the two periods. As already mentioned Ibn Mammātī's *Ḳawānīn al-dawāwīn* can serve as a contemporary source for the first half of the Ayyūbid period; for the second half two other contemporary authors have come down: Ibn S͟hīt͟h al-Ḳuras͟hī and ʿUt͟hmān al-Nābulusī. Like Ibn Mammātī, Ibn S͟hīt͟h al-Ḳuras͟hī was a pupil of al-Ḳāḍī al-Fāḍil whose high esteem he gained by his skill in poetry and prose. He went to Damascus where he became the head of the *dīwān al-ins͟hāʾ* and the friend of al-Muʿaẓẓam b. al-ʿĀdil (d. 624/1227). *Maʿālim al-kitāba*, being a guide to the correct form of letter-writing for clerks of the *dīwān al-ins͟hāʾ*, offers but one chapter dealing with our theme (pp. 23-32). The *dīwān al-ins͟hāʾ* is in the eyes of Ibn S͟hīt͟h the most important government office, hence its head (*ṣāḥib al-dīwān*) should be of a moral standard that corresponds to his exalted rank and the high esteem he enjoys among his colleagues. His next subordinate to whom he forwards the answering of letters and deeds was called *mutawallī kitābat al-ins͟hāʾ*, (superintendent of the secretariat of the chancellery). Other offices enumerated by Ibn S͟hīt͟h: *dīwān al-d̲j̲uyūs͟h* whose chief (*kātib al-d̲j̲ays͟h*) holds a lower rank than the *ṣāḥib dīwān al-ins͟hāʾ*, and needs an account-book (*d̲j̲arīda*) with the names and fiefs of all the military personnel to be in a position to pay out their salaries, even if no head of the *dīwān al-iḳṭāʿ* should have been appointed. The *dīwān al-iḳṭāʿ* apparently was an independent office, whose head was of lower rank than that of the *dīwān al-d̲j̲ays͟h* and both worked together with and under the control of the *ṣāḥib dīwān al-naẓar* who is the same person as the *ṣāḥib dīwān al-māl*, *i.e.*, the chancellor of the exchequer. This important appointment is carried out directly by the sultan. The assistant to the *ṣāḥib dīwān al-māl* is called *mustawfī* (book-keeper); other ranks of the treasury include the *s͟hāhid bayt al-māl* (notary of the treasury), the *mus͟hārif* (the supervisor), the *d̲j̲ahbad͟h* (the tax-collector) and the *k͟hāzin* (the recorder). Al-Nābulusī enumerates only the following *dīwāns*: (*a*) *dīwān al-d̲j̲uyūs͟h*, (*b*) *dīwān al-ins͟hāʾ*, (*c*) *dīwān al-aḥbās* that had grown into an independent ministry out of a branch office of the *dīwān al-amwāl* in the Fāṭimid period (above xx), (*d*) *dīwān al-māl* which is divided into two departments (i) *dīwān bi 'l-aʿmāl* (*dīwān* for the provinces) and (ii) *dīwān bi 'l-bāb* (*dīwān* for the court). These two names and the offices are new ones; the first one seems to have taken the place of the *dīwān al-Ṣaʿīd*, *dīwān asfal al-arḍ* and *dīwān al-t͟hug͟hūr*; it administered the *k͟harād̲j̲ī* and *hilālī* taxes in these provinces. The *dīwān bi 'l-bāb* managed the *zakāt*, and *d̲j̲awālī*, and *wawārīt͟h* duties as well as the control (*naẓar*) of all other treasure departments including the former *dīwān al-taḥḳīḳ*, *dīwān al-mad̲j̲ālis*, etc.

A wider and vaguer use of the term *dīwān* is found in such expression of the *Lumʿa al-ḳawānīn* as

dīwān khazā'in al-silāḥ (*dīwān* of the arsenal), *dīwān sāḥil al-sanaṭ* (*dīwān* of the acacia-coast, Ibn Mammātī, ed. A. S. Atiya 347-8; al-Maḳrīzī, *Khiṭaṭ* ed. Wiet ii, (*MIFAO* xiii, 1913) 108 note 4), and *dīwān al-aḥrā'* (see above xxx). Al-Nābulusī also mentions the *dīwān al-zakāt*, *dīwān al-mawārīth* and *al-dīwān al-nabawī* (*dīwān* for the descendants of the Prophet) an office otherwise known as *niḳābat al-ashrāf*, whose head was called *naḳīb al-ashrāf* (syndic of the Prophet's descendants (W. Popper, *Egypt and Syria* 101, 15; W. Björkman, Index).

(4). The Mamlūk period. The administration under the Mamlūks shows an increasing influence of the military class (*arbāb* or *aṣḥāb al-suyūf*) over the civilians, the *kuttāb* (*arbāb al-aḳlām*), in many governmental departments, such as exercised by the *ustādār*, the *dawādār* [*qq.v*], etc. Ibn Khaldūn considers it as typical sign of "senility" of an epoch and a dynasty, as in such a situation "the sword" has the advantage over "the pen" (ii, 41, tr. Rosenthal ii, 47; I. Goldziher, *Ueber Dualtitel*, in *WZKM* xiii (1899), 321-9). Two reforms of administration have been tried which both affected the *dīwāns*: Sultan al-Nāṣir Muḥammad b. Ḳalā'ūn (709/1309-741/1341) abolished for the first time in 710/1310 the *wizāra* and divided its functions between four officials: *nāẓir al-māl* (controller of the exchequer), *shādd al-dawāwīn* (superintendent of the *dīwāns*), *nāẓir al-khāṣṣ* (controller of the private funds of the sultan; W. Popper, *Egypt and Syria*, 97: "controller of privy funds) and *kātib al-sirr* (secretary of state; al-Ḳalḳashandī, iv, 28; al-Maḳrīzī, *Khiṭaṭ*, ii, 227, al-Sulūk, ii, 2, 93 & 103). And again the first Circassian Mamlūk sultan, al-Ẓāhir Sayf al-Dīn Barḳūḳ (784/1382-801/1208, [*q.v.*]) strengthened the *dīwān al-khāṣṣ* by surrendering to it the administration of the *thaghr* of Alexandria (see above) and established the *dīwān al-mufrad* (*dīwān* of the special bureau) for the control of stipends, clothing of the royal Mamlūks etc., and all that at the expense of the *wizāra*. The *wazīr*, however, becomes chancellor of the exchequer and was put "in charge of collecting all the different kinds of taxes" being "the highest rank among the men who are in charge of financial matters", and thus Ibn Khaldūn explains why many Copts were chosen for that and similar appointments who are "familiar with these matters since ancient times" (Ibn Khaldūn, ii, 15 & 20; tr. Rosenthal, ii, 19 & 25. Maḳrīzī, *Khiṭaṭ*, ii, 223, 28; Gaudefroy-Demombynes, *Syria* xliii; W. Popper, *Egypt and Syria*, 96-8). (i) The *dīwān al-inshā'*, called also *kitābat al-sirr* (Maḳrīzī, *Khiṭaṭ*, ii, 225, 36 ff.; al-Ḳalḳashandī, iv, 30; al-Ẓāhirī, *zubda* 99-100) still executed many of its former functions (see above xxx). Its chief, the *kātib al-sirr*, enjoyed the highest esteem among the hierarchy of civil servants (W. Popper, *Egypt and Syria*, 97; Maḳrīzī, *Khiṭaṭ*, ii, 226, 37); but he was responsible to the *dawādār* [*q.v.*], a *ṣāḥib al-sayf*, a sign of the influence of the military caste. He had been the head of the sultan's civil cabinet who received the postbag and forwarded it to the sultan, or presented foreign ambassadors to the sovereign (al-Ḳalḳashandī, iv, 19). On the other hand the *kātib al-sirr* gradually took over the function of *ṣāḥib al-barīd*; the first holder of both offices had been Awḥad al-Dīn ʿAbd al-Wāḥid b. Ismāʿīl al-Ḥanafī (d. 786/1385; Maḳrīzī, *Khiṭaṭ*, i, 78; Abu 'l-Maḥāsin b. Taghrībirdī, *Manhal* no 1483; W. Björkman, *Staatskanzlei*, 41 & note 3). The *dīwān al-inshā'* was concerned with (*a*) correspondence (*mukātabāt*) with foreign powers as well as with the provincial authorities. Al-Ḳalḳashandī, therefore, asks for the knowledge of foreign languages among the officials of that *dīwān* such as Turkish, Persian, Greek and 'Frankish' *al-farandjiyya* (Latin?); *Ṣubḥ al-aʿshā'*, i, 165-7; Björkman, *Staatskanzlei*, 44 and note 1); (*b*) appointments (*wilāyāt*), including the oath of allegiance (*bayʿa*) and the document of investiture for the sultan's successor (*ʿahd*) as well as the governors of the provinces (*taḳlīd*) and other officials (*tafwīḍ*, *tawḳīʿ*; al-Ḳalḳashandī, i, 252; Björkman, *Staatskanzlei* 48, 52); (*c*) the royal decisions upon complaints of the common folk (*tawḳīʿāt ʿala 'l-ḳiṣaṣ*, see above, al-Ḳalḳashandī, vi, 202 ff.; Björkman, *Staatskanzlei* 52-3). (ii) *Dīwān al-djaysh*, or *dīwān al-djuyūsh al-manṣūra* administered the grant of fiefs of army personnel (al-Ḳalḳashandī, i, 102), hence sometimes called *dīwān al-iḳṭā'*; al-Ḳalḳashandī, iii, 457; Björkman, *Staatskanzlei* 51, note 2). Its chief, *nāẓir al-djaysh* (controller of the army-*dīwān*), often a *Ḳāḍī*, was assisted by the inspector of the *dīwān al-djaysh* (*ṣāḥib dīwān al-djaysh*) and numerous other officials called *shuhūd*, *kuttāb*, etc. (Popper, *Egypt and Syria*, 97). According to al-Ẓāhirī (*zubda* 103) the *dīwān al-djaysh* was divided into two regional sections, *dīwān al-djaysh al-Miṣrī* and *dīwān al-djaysh al-Shāmī*. (iii) *Dīwān al-khāṣṣ* gained its importance under the sultan al-Nāṣir Muḥammad b. Kalā'ūn (see above xxx; Maḳrīzi, *Khiṭaṭ* ii, 227, 10 reports its existence already under the Fāṭimids) and it grew in influence during the following decades until it reached its peak at the beginning of the reign of al-Ẓāhir Barḳūḳ in 790/1388 when it absorbed the *dīwān al-khizāna* (*dīwān* of the storehouses; Maḳrīzī, *Khiṭaṭ*, ii, 227, 15 ff.; Popper, *Egypt and Syria* 97, 4). (iv) *Dīwān al-mufrad* (*dīwān* of the special bureau) was founded by al-Ẓāhir Barḳūḳ when he replaced the *wizāra* with it (Maḳrīzī, *Khiṭaṭ*, ii, 223, 28 ff.; al-Ḳalḳashandī, iii, 457, mentions an office of that name already under the Fāṭimids). Its real head was the *ustādār* [*q.v.*], a *ṣāḥib al-sayf* who even was appointed sometimes (titular) *wazīr* (Popper, *Egypt and Syria*, 93, 9; al-Ẓāhirī, *zubda* 107, tr. 178). Under the *ustādār* the *nāẓir* (controller) of the *dīwān al-mufrad* directed with the help of a large staff the obligations of that *dīwān* such as "stipends, clothing, fodder, etc., for the Sultan's mamlūks" (Popper, 97). (v) The *dīwān al-amwāl* exercised the control of all the financial manipulations, and was responsible for the payment of salaries, and keeping of accounts (al-Ḳalḳashandī, iv, 29 ff.; Maḳrīzī, *Khiṭaṭ*, ii, 224, 7 ff.). His chief was the *wazīr*, but he, too, became more and more subordinate to the *ustādār* like the *nāẓir dīwān al-mufrad*; hence the high esteem of that office declined (Popper, *Egypt and Syria*, 96; Ibn Khaldūn, ii, 20-1; tr. ii, 25). And disastrous appointments showed the real state of affairs such as when in 868/1464 a certain "wholesale butcher", Shams al-Dīn Muḥammad al-Babāwī, was made *wazīr* and *nāẓir al-dawla*, or again in 870/1466 the "money-changer", Ḳāsim Yughayta/Shughayta, both men without education (Abu 'l-Maḥāsin b. Taghrībirdī, ed. Popper, vii, 724-5 & 738-9; tr. Popper, iv 58, 67; Ibn Iyās, unpublished pages 136, 2 & 160, 4-5). The *nāẓir al-dawla* (sometimes the vizier, sometimes working with the vizier) functioned as the head of the exchequer and under him were numerous accountants (*mustawfī*), notaries (*shāhid*), etc. As mentioned already the supervision of the *dīwān al-amwāl* extended over a number of offices called *dīwān* or *naẓar* dealing with different branches of administration, *e.g.*, *naẓar bayt al-māl* which according to Maḳrīzī no longer existed at his time (*Khiṭaṭ*,

224, 36-7), *naẓar al-mawārīth al-ḥashriyya* (control-office of heirless property; Popper, *Syria and Egypt*, 99, 17), *naẓar al-murtadja'āt* also called *naẓar al-sulṭān* (control-office of reclaims; W. Popper, *loc. cit.* 99, 18; al-Ḳalḳashandī, iv, 33) its head being called *mustawfī al-murtadja'āt*, *naẓar al-wadjh al-ḳiblī* and *naẓar al-wadjh al-baḥrī* (control-office of Upper and Lower Egypt respectively), *dīwān al-istīfā'* (*dīwān* for the payment of salaries), *dīwān al-aḥbās* (*dīwān* of pious foundations), *dīwān al-zakāt* (*dīwān* of alms), etc. The historians provide ample examples for the working of that complicated machinery, the disastrous effect of its inefficiency aggravated by the incessant changes of the leading personnel as well as of the rulers and the cruel arbitrary system of punishments (*muṣādara*) that accompanied every change.

iii. Muslim West.

A. So far as Muslim Spain is concerned, we do not know how much of the civil and military administration of the Visigoths, which unquestionably was influenced by the Byzantine system, was found and adopted by the first conquerors at the beginning of the 2nd/8th century.

In the 4th/10th century, in the Umayyad period, three basic *dīwāns* are known to have been in operation, corresponding with the three essential needs of a State, each directed by a special minister (*wazīr* or *ṣāḥib*). These were:

1.—The Chancellery and State Secretariat, *dīwān al-rasā'il* (= *al-tarsīl*) *wa'l-kitāba*, which dealt with official correspondence, both incoming and outgoing, and also with the drafting of various diplomas and commissions (*sidjillāt*, *ṣukūk*).

2.—The Ministry of Finance, *dīwān al-kharādj wa 'l-djibāyāt*, *dīwān al-ashghāl* or *al-a'māl* (+ *al-kharādjiyya* or *al-māliyya*), *dīwān al-ḥisbān*, *dīwān al-zimām*, which was responsible for the collection of various taxes, supervision of tax-collectors, and keeping of accounts of revenue and expenditure. Connected with it by more or less direct links was the *Dīwān al-khizāna* which looked after the State's secular treasury, and separate from the *Bayt al-Māl* which was religious in character.

3.—The Ministry of the Army, *dīwān al-djaysh*, *dīwān al-djund*, *dīwān al-'asākir*, *dīwān ahl al-thughūr*, which had three different functions; keeping up to date the financial records of the regular army; keeping accounts and giving the army their pay (*arzāḳ*) and active service gratuities (*'aṭiyyāt*); distributing gifts of estates to senior officers (*iḳṭā'āt*). But it had no share in the command of troops or direction of campaigns.

After the Umayyads, a similar tripartite organisation, though naturally on a much reduced scale, was found at the "satraps' "court (*mulūk al-ṭawā'if*), and later at the Naṣrids'.

With regard to North Africa before the Almohad period (6th/12th century), we know practically nothing about the *dīwāns*.

In 554/1159 the Almohad 'Abd al-Mu'min, after imposing his authority over North Africa from Wādī Nūl to Barḳa, had a survey made of his empire, with the aim of compiling a register for the assessment of land taxes (*kharādj*), payable in kind and money; from this we can deduce that a special fiscal *dīwān* was either set up or developed.

Another Almohad, Ya'ḳūb al-Manṣūr (580-95/1184-94) introduced the practice of *'alāma*, the formula of authorization written in large lettering at the head of despatches and commissions, the text of which was: *wa'l-ḥamdu li-llāhi waḥdah*. At first this was inscribed by the sovereign himself; later the insertion of *'alāma* was entrusted to the High Chancellor. The practice was maintained by the Ḥafṣids and Marīnids, and was observed until the end of the Sa'dids. The Naṣrids alone did not adopt it.

In other respects the Almohad *dīwāns* correspond with those of the Umayyads in Spain. But the High Chancellery tended to become the *dīwān al-inshā'*. This organization was maintained in Ifrīḳiya by the Ḥafṣids, and in Morocco by the Marīnids. However, several *diwāns* were often put together and held simultaneously by a single statesman belonging to one or other of the great ministerial families.

From the 10th/16th century there is very little information about the operation, or indeed the existence, of *dīwāns* in North Africa. In Morocco we only know of the *dīwān al-djaysh* which included all regular troops, at first Arab and later negro (*'Abīd* or *Ḥarāṭīn*). As these troops (more particularly the *'Abīd*) had often made and deposed 'Alawid sultans, their *dīwān* sometimes appeared to be a kind of royal Council.

After the disastrous Tetuan war (1860), sultan Muḥammad III b. ʿAbd al-Raḥmān tried to establish a modernized *dīwān al-djaysh*, but his attempt proved abortive.

Bibliography: Ibn Khaldūn, *Muḳaddima*, ed. Būlāḳ 1274, 114-20: trans. de Slane, 2nd part, 1-29; E. Lévi-Provençal, *L'Espagne musulmane au Xe siècle*, 69, 128; Ibn Faḍl Allāh al-ʿUmarī, *Masālik al-abṣār*, trans. Gaudefroy-Demombynes, in the index, s.v. *Dīwān*. For Morocco under the Saʿdids and ʿAlaouits, cf. Aḥmad al-Nāṣirī, *Kitāb al-Istiḳṣāʾ*, trans. Fumey (= *Archives Marocaines*, vol. ix and x), i, 46, 66, 94, 128, 178, 239, 283; ii, 240.

B. From the Almohad period (6th/13th century), in those ports open to trade with Christian Europe (from al-Mahdiyya in Ifrīḳiya to Ceuta, and also in Almeria), the existence has been established of special offices which were subordinate to the *dīwān al-ashghāl*, and whose function was to collect tithes (*aʿshār*) and other incidental taxes (*malāzim*) which were imposed upon European importers. This sort of office was in general called simply *al-dīwān*; but more detailed titles are also encountered: *dīwān al-baḥr* and in particular *dār al-ishrāf ʿalā ʿimālat al-dīwān* "supervisory headquarters for the levying of customs-duties". The local official in charge was called *mushrif*.

To facilitate the operation of customs, and in addition to ensure the safety of Christian merchants and their merchandise, one or more entrepots (one for each nation) were situated very close to the *dīwān*; these were *funduḳ* or *ḳaysāriyya*, the eastern equivalents of which were *khān* and (*dār al-*)*wikāla*.

As an exception, offices of this sort also operated in capital cities situated inland, as for example at Tlemcen and Fez. In the latter town, the "office for the tax" levied on cloth imported from Europe which Leo Africanus (beginning of 10th/16th century) recorded as being in the *ḳaysāriyya* there must correspond with the small commercial quarter, still known today as *Ed-Dīwān*, immediately north of the present *ḳaysāriyya*.

The word *dīwān*, taken in this narrow sense (which must have been the one best known to European merchants), is evidently the origin of the Italian *dogana* and the Spanish *aduana*, and so of the French *douane*. But the loss of the *-ī-* and the addition of the final *-a* in the two first borrowings cause difficulty. In Granada (end of 9th/15th century), P. de Alcala still gave, as the Arabic translation of the Spanish *aduana*, the word *dīwên*.

However that may be, the present-day term in Morocco is *dīwāna*, perhaps influenced by the Spanish form. In the other Maghribī languages as in eastern languages, that is to say in the Arabic-speaking countries which were annexed to the former Ottoman empire, the words for "Customs" are borrowed from the Turkish *gümrük* which goes back to the Latin *commercium* through demotic Greek.

Bibliography: Ibn Djubayr, *Riḥla*, ed. De Goeje, for Alexandria (39-40) and ʿAkkā (302); De Mas Latrie, *Relations et commerce de l'Afrique septentrionale*, 1886, 166, 335; *Hespéris*, xii (1931), 162 (for Ceuta).

C. From the middle of the 10th/16th century *dīwāns* made their appearance in the Turkish principalities of Algiers, Tunis and Tripoli. At that time the word denoted a clique of senior officers who were appointed to assist and, more particularly, to supervise the leading Turkish official of the locality.

It was no doubt on the precedent of these cliques that, at the beginning of the 11th/17th century, the Moors living in the *ḳaṣaba* of Rabat set up their *Dīwān* or Council (contemporary European texts refer to them as *duan, duano, duana*), the members of which exercised supervision over the Governor.

In its present use in dialect, the word *dīwān* is sometimes applied to the "councils" which the Saints, and also *djinns*, are reputed to hold from time to time. It is partly for this reason that the word is sometimes used in the sense of "plot, cabal".

Bibliography: See the articles ALGERIA, LIBYA, TUNISIA; de Castries, *Les trois républiques du Bou-Regreg*, in *Sources inédites de l'histoire du Maroc* (Holland, 1st series, V, i-xxviii), in which the author is mistaken with regard to "douane".

In the East, special systems of writing were used in government offices, notably the *dīwānī* for chancery and diplomatic usage, and the *siyāḳ* or *siyāḳa*, including a system of numerical abbreviations, for fiscal and financial records. In the Muslim West the accountants in the financial offices made use of a series of 27 figures called *rusūm* (or *ḥurūf*) *al-zimām* "abbreviations or characters of the great book", the Byzantine origin of which is established. See also KHAṬṬ.

(G. S. COLIN)

iv. Īrān

The term *dīwān* was variously used to mean the central government in general, in which sense it was also more specifically known as the *dīwān-ī aʿlā*, the office or place in which government business was transacted and the "civil" administration as opposed to the "military" administration, though the dividing line between them is sometimes difficult to establish. By the mid-19th century the term *dīwān* in the sense of the central government had been largely replaced by *dawla* or *dāʾira-i dawla*. Secondly the term *dīwān* was used to mean a government department in general, in which sense it was eventually replaced by *wizāra*, *dāʾira*, and *idāra*. These *dīwāns* varied according to the exigencies of the time. The adjective *dīwānī* is similarly used. Thus, *muhimmāt-i dīwānī* meant the affairs of the central administration; *takālīf-i dīwānī* were taxes or dues (of a non-canonical nature) imposed by the *dīwān*. Applied to land *dīwānī* meant state land in contradistinction to crown land or private estates.

Barthold's statement that "throughout the whole system of the eastern Muslim political organization there runs like a red thread the division of all organs of administration into two main categories, the *dargāh* (palace) and *dīwān* (chancery)" (*Turkestan*, 227) is, perhaps, an over-simplification; there was, almost inevitably, because of the intensely personal nature of power, a tendency for the dividing line between the competence of the various officials to be a shifting one. The general tendency in the early phases of Ilkhān, Ṣafawid, and Ḳādjār rule, for obvious reasons, was for the central administration to be relatively simple and for the differentiation between the various organs of government to increase with the passage of time. This is noticeable especially in the Ṣafawid and Ḳādjār periods.

The *dīwān-i aʿlā* covered the whole field of administration; but it was concerned primarily with three aspects; the issue of diplomas and decrees; financial administration; and the administration of justice (apart from cases of personal status which came under the *sharʿī* courts). The first two fell

within the purview of the *wazīr*; the last, so far as it was delegated, was delegated, not to the *wazīr*, who lacked the power to execute decisions, but rather to "military" officials. In Sald̲j̲ūḳ times the sultan or his officials as well as conducting state business in the *dīwān-i aʿlā* also held from time to time a *dīwān-i maẓālim*. Under the Tīmūrids and Ṣafawids the chief judicial official was the *dīwānbegī*, who was usually a member of the military classes. The tradition of personal administration, including the administration of justice, by the ruler continued into Ḳād̲j̲ār times (Malcolm, *History*, London 1829, ii, 308), and the royal residence in which state business of all kinds was transacted by the ruler (and by the governors in the provinces) in general, and the audience hall in particular, was known as the *dīwānk̲h̲āna*.

The central administration had little influence in the field of policy or over the appointment of governors, which was in the hands of the sultan or the s̲h̲āh. Large areas of the empire were also alienated from its control in the form of *iḳṭāʿ*s or *tiyūl*s. There was, nevertheless, a remarkable continuity of administrative tradition in Persia, especially in the field of finance, which was that aspect of the central government which was most highly organized. This tradition stretches back from the mid-19th century (after which administrative changes influenced by the example of western European countries began to take place) to Ṣafawid and Tīmūrid times, and it can, in spite of certain innovations made by the Ilk̲h̲āns, be traced back still further to the period of the Great Sald̲j̲ūḳs. That this continuity should have been preserved was, perhaps, largely due to the fact that the members of the bureaucracy were drawn almost exclusively from the settled population and served the successive dynasties. Thus, the administrative personnel of the early Ṣafawid empire was largely composed of officials who had served the preceding Turkoman dynasties; similarly the bureaucratic officials of the Ilk̲h̲āns had served the dynasties ruling in Persia before the Mongol conquest. Equally striking is the extent to which high office under the early Ḳād̲j̲ārs was held by the ministers and officials of the Zands, who had ruled before them.

The most important official of the central administration was the *wazīr* [*q.v.*]. His power was delegated to him by the ruler, and might, and sometimes did, range over the whole field of government, "civil", "military", and religious. The personal factor was of immense importance in deciding the extent of his authority and influence. For a brief period under the early Ṣafawids the chief official of the state came to be known as the *wakīl* [*q.v.*], the term *wazīr* being used mainly for the head of a department or ministry and for the head official of the provincial administration under the governor. In the later Ṣafawid period the chief official of the central government was called the *wazīr-i aʿẓam* and had the title *Iʿtimād al-dawla*; under the Ḳād̲j̲ārs the chief minister, who was called the *ṣadr-i aʿẓam*, also sometimes bore this title.

In Great Sald̲j̲ūḳ times the wazīrate was the keystone of the central administration; the *wazīr*, when he was at the height of his power, supervised all aspects of the administration over which the central government had control, including especially finance. Sources of revenue were in some measure regulated by him; and his main business was to increase the revenue. The principal *dīwān*s under him were the *dīwān al-ins̲h̲āʾ wa 'l-ṭug̲h̲rāʾ* (sometimes known as the *dīwān-i rasāʾil*), which dealt with incoming and outgoing correspondence, and the *dīwān al-zimām wa 'l-istīfāʾ* (also known as the *dīwān-i is̲h̲rāf*), which dealt with financial affairs. It is not without interest that two of the main departments of the central government in the 19th century were under the *muns̲h̲ī al-mamālik* and the *mustawfī al-mamālik* respectively. The *dīwān al-zimām wa 'l-istīfāʾ* was divided into two main sections, one under the *mustawfī al-mamālik* and the other under the *mus̲h̲rif al-mamālik*. Their relative importance varied. In post-Sald̲j̲ūḳ times the two offices tended to be independent, the former being concerned with revenue matters and the latter with inspection and control. The main object on which the revenue was expended was the army; it therefore followed that even when the revenue was alienated in the form of assignments (*iḳṭāʿ*s) from the control of the central government the records of these transactions should have been kept in a department of the central government, the *dīwān-i ʿarḍ* (cf. *ʿAtabat al-kataba*, ed. ʿAbbās Iḳbāl, Tehrān 1950, 39-40, 76, and see DAFTAR).

After the reign of the first three sultans the importance of the *wazīr* declined relative to that of the *mustawfī* [*q.v.*]. Fak̲h̲r al-Mulk b. Niẓām al-Mulk, the *wazīr* of Barkyāruḳ, was, for example, overshadowed by the *mustawfī* Mad̲j̲d al-Mulk al-Balāsānī (Bundārī, *Dawlat al-Sald̲j̲ūḳiyya*, Cairo 1318, 79). Further, whereas in the early period there was no intermediary between the sultan and the *wazīr*, in the later period the *wakīldār* and *amīr ḥād̲j̲ib* were interposed between them (Bundārī, 86, 107, 175; Ibn al-At̲h̲īr, xi, 59); and as the wazīrate decreased in influence there was a tendency for the ruler to deal with the heads of the various *dīwān*s directly and not through the *wazīr* (cf. Ras̲h̲īd al-Dīn, *D̲j̲āmiʿ al-tawārīk̲h̲*, B.M. Add. 7628, f. 251a). This is not to say that in the early period all *dīwān* business invariably went through the *wazīr* or that in the later period the reverse was the case.

In addition to the two major *dīwān*s of the central government there were various *dīwān*s which dealt with special aspects of financial affairs and land, such as the *dīwān-i k̲h̲āṣṣ* (concerned with crown lands) and the *dīwān-i awḳāf* (*ʿAtabat al-kataba*, 33, 52 ff.). The pattern of the central government was to some extent repeated in the provinces. The governor had his *dīwān*, known sometimes as the *dīwān-i ayālat* (cf. *ʿAtabat al-kataba*, 79). There was a *dīwān-i istīfāʾ* in the principal districts, for example in Marw and Bisṭām (*ʿAtabat al-kataba*, 56, 46); and a number of *dīwān*s dealing with various aspects of the financial administration. Thus in Rayy Ḳiwām al-Dīn Inānd̲j̲ Ḳutlug̲h̲ Bilgā, who was governor on behalf of Sand̲j̲ar, was ordered in his deed of appointment to hold the *dīwān-i ʿamal* and the *dīwān-i s̲h̲ihnagī* in his own residence (*sarāy*) (*ʿAtabat al-kataba*, 73). Similarly the document appointing Tād̲j̲ al-Dīn Abu 'l-Makārim *raʾīs* of Māzandarān on behalf of Sand̲j̲ar laid down that he should hold the *dīwān-i muʿāmilāt wa ḳismāt* in his own residence (*ʿAtabat al-kataba*, 26). Cases concerning the levy of dues, public contraction, and taxation were apparently in some cases referred to the *dīwān-i riyāsat* (A. K. S. Lambton, *The administration of Sanjar's empire*, in *BSOAS*, 1957, xx, 386). The extent to which the heads of these various *dīwān*s had freedom to appoint and dismiss their subordinates probably varied. Muʿīn al-Dīn, who was appointed *s̲h̲ihna* of D̲j̲uwayn by Sand̲j̲ar, was given freedom to dismiss his subordinates but was instructed to confirm the appointment of the

kadkhudā of the *dīwān* (*ʿAtabat al-kataba*, 61). There are also cases recorded of Saldjūk women having *dīwāns* (cf. *ʿAtabat al-kataba*, 61; Khʷāndamīr, *Dastūr al-wuzarāʾ*, Tehrān, 190).

With the Mongol invasion of Persia there was to some extent a break with tradition; much of the earlier administrative structure nevertheless remained, or was revived after the adoption of Islam by the Ilkhāns; and the officials of the bureaucracy and the religious institution with their various *dīwāns* were again found alongside the officials of the "military" government. The foremost minister of state continued to be known as the *wazīr*, or, sometimes, in his position as the representative of the ruler as the *nāʾib* (Spuler, *Mongolen*², 282). There was, however, a tendency to remove financial affairs from the direct supervision of the *wazīr* and to entrust these to an official known as the *ṣāḥib dīwān*, who tended at times to overshadow the *wazīr*. It seems not unlikely that the Ilkhāns intended in this way to lessen the likelihood of the *wazīr* gaining an undue ascendancy. Djuwaynī as *wazīr* shared power with Madjd al-Mulk Yazdī, the *mushrif al-mamālik*, for several years from 677/1279; and from 699-718/1300-18 there were joint *wazīrs* at the head of the administration. In this, however, the Ilkhāns may have been merely following the example of earlier rulers in Central Asia (cf. Pritsak, *Die Karachaniden*, in *Isl.*, xxxi/1, 24). This practice of appointing two officials to hold office jointly was subsequently adopted on various occasions by the Ṣafawids. When Rashīd al-Dīn was appointed *ṣāḥib dīwān* in 699/1299-1300 he was charged with the general supervision of the kingdom, especially the tax administration, and among other things crown lands, the appointment of the officials of the bureaucracy, the post (*yām*), and the development of the country. (Waṣṣāf, Bombay 347). Under the *ṣāḥib dīwān* was the *mustawfī al-mamālik* and various departments dealing with different aspects of the finances, including a *dīwān-i khāliṣāt* (Waṣṣāf, 349).

Under the Tīmūrids, although there was an attempt in theory to reaffirm the principles of *sharʿī* government and to return to the traditional forms, in practice the distinction between the "civil" and "military" branches of the administration, which broadly coincided with the dichotomy between Turk and Tādjīk (*i.e.*, Persian) was clearly marked. Under Ḥusayn Bāyḳara the *dīwān-i aʿlā*, the supreme organ of government was divided into the *dīwān-i buzurg-i amārat* (under the *dīwānbegī*), which dealt with military affairs, and the *dīwān-i māl* (under a *wazīr*), which was concerned with "civil" affairs (Roemer, *Staatsschreiben der Timuridenzeit*, 169 ff.).

It seems likely that the administrative pattern of the Ilkhānid empire was inherited by the Ḳara Ḳoyunlu (Minorsky, *The Aq-Qoyunlu and land reforms*, in *BSOAS*, 1955, xvii/3), but little is known of the details of the organization of their various *dīwāns* apart from their tax administration. There is mention of the *dīwān-i tawādjī* and the *dīwān-i parwānačī* (Minorsky, *Persia in A.D. 1478-90: An abridged translation of Faḍlullāh b. Rūzbihān Khunjī's Tārīkh-i ʿalam-ārā-yi amīnī*, London 1957, 28, 101). For a survey of the administrative organization of the Ilkhāns in Persia see I. H. Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, Istanbul 1941, specially 187 ff.

Information on the central administration is considerably fuller for Ṣafawid times than for the preceding periods. It is, however, extremely difficult to establish a dividing line between the various aspects of the *dīwān-i aʿlā*, which was both the royal court and the central government; similarly there was not always a clear demarcation of the functions of the members of the bureaucracy, the military officials, and the officials of the religious institution. The internal organization of the *dīwān-i aʿlā* was under the *ishīk-aḳāsī-bāshī* (*Tadhkirat al-Mulūk*, ff. 7b, 13a ff.). The master of ceremonies of the Ḳādjār court was similarly designated. There appears to have been something in the nature of a state council, to which certain members of the *dīwān-i aʿlā* belonged; this council seems to have been outside the traditional pattern of the central administration. Alessandri states that Ṭahmāsp held a daily council attended by twelve sultans (*i.e.*, provincial governors and therefore members of the military classes) and those of his sons who were at court (*A narrative of Italian travels in Persia*, Hakluyt, 220-1). The functions of this council appear to have been purely advisory. The *Tadhkirat al-Mulūk* states that the *ḳūrčī-bāshī*, *ḳullar-āḳāsī*, *ishīk-āḳāsī-bāshī*, *tufangčī-āḳāṣī*, *wazīr-i aʿẓam*, *dīwānbegī*, and *wāḳiʿa-niwīs* "had from early times belonged to the council of amīrs of the *umarā-yi djānḳī* and at the end of the reign of Shāh Sulṭān Ḥusayn the *nāẓir*, *mustawfī al-mamālik*, and the *amīr-shikār-bāshī* were also, on some occasions, included in the council. If the council met on the subject of sending an army commander (*sipahsālār*) to some outlying part of the empire, the presence of the *sipahsālār* at the *djānḳī* was a necessary condition" (ff. 7b-8a). Minorsky considers the institution to be of Mongol or Tīmūrid origin. Chardin maintains that there was no council of state similar to the European institution; Sanson, on the other hand, states that all decisions were taken in the King's Council (*Tadhkirat al-Mulūk*, 113-4). Under the Ḳādjārs the *djānḳī* does not appear to have been a regular part of the central government administration, but to have been a tribal council dealing with affairs concerning the Ḳādjār tribe, which presumably normally sat under the *ilkhānī*. Malcolm mentions a case of treason by a "high noble" of the Ḳādjār tribe being tried about 1808 by a *djānḳī* (*History*, ii, 327n.).

The highest official of the *dīwān-i aʿlā* under Ismāʿīl and Ṭahmāsp was the *wakīl*, who was the *alter ego* of the shāh as the *wazīr*, in his heyday, had been of the sultan; his competence extended virtually over the whole field of the administration. The use of the term *wakīl* for the chief official of the *dīwān-i aʿlā* appears to have died out in the middle of the 10th/16th century and to have been replaced by the term *wazīr-i aʿẓam*, who held the title of Iʿtimād al-dawla. After 920/1514 his office tends to be referred to as the *niẓārat-i dīwān-i aʿlā*, *niẓārat-i dīwān*, or *dīwān-i wizāra* (R. M. Savory, *The principal offices of the Safawid state*, in *BSOAS*, xxiii/1, 1960, 91-105 and xxiv/1, 1961, 65-84). In due course an elaborate system of administrative procedure was evolved. As head of the *dīwān-i aʿlā* the *wazīr* confirmed official appointments; documents concerning these matters and the pay of officials went through an office called the *daftarkhāna-i humāyūn-i aʿlā* under a special *wazīr*. Documents concerning the pay of the "standing army" (*ḳūrčīs*, *ghulāms*, *tufangčīs*, and members of the *topkhāna*) went through the relative department (*sarkār*), which was under a *wazīr* and *mustawfī* and staffed by secretaries belonging to the *dīwān* (*Tadhkirat al-Mulūk*, f. 58 ff.). Letters of appointment and salary grants for "civil" and military officials as well as being sealed by the

wazīr-i aʿẓam were also sealed by the *lashkar-niwīs* of the *dīwān-i aʿlā*, who was also *wazīr* of the department (*sarkār*) of the eunuchs, falconers (*ḳūshčiyān*), ushers (*yasāwulān*), and doorkeepers (*ḳāpūčiyān*) (*Tadhkirat al-Mulūk*, f. 65a ff.).

Among his other duties as head of the *dīwān-i aʿlā* the *wazīr* checked the legality of the proceedings of officials and presided over the financial affairs of the state (*Tadhkirat al-mulūk*, 115); this last was, in effect, his most important function. Like his predecessors in the wazīrate in earlier times, it was his duty to exert himself in increasing the revenue (*Tadhkirat al-mulūk*, f. 8b). The financial administration was divided into two main departments, the *dīwān-i mamālik* under the *mustawfī al-mamālik* and the *dīwān-i khāṣṣa* under the *nāẓir-i buyūtāt* (also called the *nāẓir-i buyūtāt-i sarkār-i khāṣṣa*). The exact relationship of the *wazīr-i aʿẓam* to the *nāẓir-i buyūtāt* and the nature of his control over the *dīwān-i khāṣṣa* are not entirely clear. The budget of the *buyūtāt* was apparently submitted to the *wazīr-i aʿẓam* (*Tadhkirat al-Mulūk*, f. 16a). Under the *mustawfī al-mamālik* there were various officials in charge of different tax offices (*daftar*), parallel offices in many cases being in existence to deal with the relevant matters according to whether they were situated in *mamālik* or *khāṣṣa* areas. These included a *daftar-i mawḳūfāt* (*Tadhkirat al-Mulūk*, f. 71a) and a *daftar-i baḳāyā* (Iskandar Munshī, *ʿAlam-ārā*, 765). A special department, the *sarkār-i fayḍ āthār*, at Mashhad administered the *waḳf*s of the shrine of the Imām Riḍā (*ʿAlam-ārā*, 258 *bis*, 654). General supervision of *waḳf*s was carried out by the *dīwān al-ṣadāra* under the *ṣadr-i aʿẓam* (H. Busse, *Untersuchungen zum islamischen Kanzleiwesen*, Cairo 1959, 204). Some of the provincial *ṣadr*s also had *dīwān*s or *sarkār*s (cf. a diploma dated A.H. 1077 for the *mustawfī* of the *mawḳūfāt* of Yazd, *Djāmiʿ-i mufīdī*, B.M. Or. 210, ff. 168b-170b; and Busse, 132).

The *dīwān-i mamālik* was concerned with the administration of provinces and districts which were administered by governors and were alienated from the direct control of the central government. The *dīwān-i khāṣṣa* was concerned with areas directly administered by the central government under *wazīrs*. The extent of the indirectly administered areas relative to the directly administered varied (*Tadhkirat al-mulūk* 24 ff., A. K. S. Lambton, *Landlord and Peasant in Persia*, Oxford 1953, 108). With the increase in the extent of the *khāṣṣa* which took place under Shāh Ṣafī the importance of the *dīwān-i khāṣṣa* was presumably enhanced; the *nāẓir-i buyūtāt-i sarkār-i khāṣṣa* is mentioned as the greatest of the offices of the *dīwān* in the time of Shāh Ṣafī, (*Djāmiʿ-i Mufīdī*, f. 338b-339a). The *mustawfī* of the *dīwān-i khāṣṣa* appears to some extent to have been subordinate to the *mustawfī al-mamālik* and hence to the *wazīr-i aʿẓam* (*Tadhkirat al-mulūk*, ff. 27b-28a). Iṣfahān, as the capital, enjoyed, perhaps, a special position. The *sarkār-i fayḍ āthār* and the *sarkār-i intiḳālī* dealt with special categories of land (presumably *waḳf*s and land resumed by the state); the administration of crown lands appears to have been under the *wazīr* of Iṣfahān. All three departments were under the general supervision of the *wazīr-i aʿẓam* of the *dīwān-i aʿlā* (*Tadhkirat al-Mulūk*, ff. 71a ff.).

The *buyūtāt*, *i.e.*, the Royal Household, was administered by the *wazīr-i buyūtāt* under the general supervision of the *nāẓir-i buyūtāt*. It was divided into a number of offices (*daftarkhāna*) and workshops (*kārkhāna*), each under a *ṣāḥib djamʿ* and a *mushrif*, the former responsible for its general activities and the latter for administrative routine (*Tadhkirat al-Mulūk*, 140).

The department corresponding to the former *dīwān-i inshāʾ* was known under the Ṣafawids as the *dār al-inshāʾ* and was under the *munshī al-mamālik* (*Tadhkirat al-Mulūk*, ff. 39b-40a; Busse, 59 ff.).

The *dīwān-i aʿlā* under the Ḳādjārs was broadly speaking modelled on the practice of the Ṣafawids. As the royal court its procedure from the time of Fatḥ ʿAlī onwards was elaborate. The administration of the royal household, which comprised a number of offices which were collectively known as the *buyūtāt*, was, however, more clearly separated from the *dīwān-i aʿlā* than had previously been the case. So far as the *dīwān-i aʿlā* in the central government was concerned, its organization was less elaborate than in Ṣafawid times; and there was no longer a distinction between the *mamālik* and *khāṣṣa* departments. Āḳā Muḥammad Khān apparently attended to the details of the administration largely in person; the rule of Fatḥ ʿAlī was also personal, but during his reign the administration was expanded. The chief official of the *dīwān-i aʿlā* was the *ṣadr-i aʿẓam*; his power varied with the relative energy, indolence, and competence of the shāh. Under Āḳā Muḥammad Khān the *ṣadr-i aʿẓam*, Ḥādjdji Ibrāhīm, is said to have presided over all the departments of state (Malcolm, ii, 308-9). The two most important departments were under the *mustawfī al-mamālik* and the *lashkar-niwīs* respectively; the latter was concerned with the pay and levy of the military forces, which was closely bound up with the tax administration. Under Fatḥ ʿAlī the office of *munshī al-mamālik* again became important. The internal administration of these various departments appears to have been of a relatively rudimentary nature under the early Ḳādjārs. Morier, writing in 1809, states that the offices of the ministers and secretaries of state were situated in the shāh's palace where they assembled every day to be ready whenever the shāh might summon them (*A journey through Persia*, London 1812, 216); but in fact the ministers often had to set up their departments wherever they happened to be. Āḳā Muḥammad Khān and Fatḥ ʿAlī both spent much of their time on military expeditions and in camp (as also did their successors); and they were normally accompanied on these occasions by their ministers. In such circumstances government departments had to function without any elaborate administrative apparatus. Malcolm states that "the accounts of the receipts and disbursements throughout the ecclesiastical, civil, revenue and military branches of the government, are kept with much regularity and precision" (*History*, ii, 310). In fact, these records were largely treated as the personal property of the officials who made them; and so far as they concerned the revenue assessment, by the middle of the century they often bore little relation to conditions as they were. The *dīwān* of the *mustawfī al-mamālik* was organized on a geographical basis, the tax assessment and records of a given area being placed in charge of a *mustawfī*, who was known as the *mustawfī* of that district. Separate departments dealt with crown lands (*khāliṣa*) and *waḳf*s and other special aspects such as arrears (*baḳāyā*).

The provincial administration was delegated to the governor, who often attended to the details of this in person. In the case of a powerful provincial governor, especially if he were a Ḳādjār prince,

the provincial court tended to be a replica (on a smaller scale) of the *dīwān-i aʿlā*. The most important provincial official was the *wazīr*, who was normally appointed by the *dīwān-i aʿlā*. His main responsibility was to ensure that the governor remitted the provincial tax quota to the central government.

v. India

The term *dīwān*, meaning a government department, appears to have been first introduced into India during the rule of the G͟haznawids with the seat of their administration at Lahore. Ariyaruk, the Commander of India appointed by Sultan Maḥmūd, had all the wealth which be had accumulated during his viceroyalty in India confiscated on his dismissal and recall to G͟hazna. A great part of this fortune must have come from *k͟harād͟j* (land-revenue) for whose collection and disbursement there must have existed a separate department. Nars͟hak͟hī (cf. *Taʾrīk͟h-i Buk͟hārā*, ed. Schefer, 24) mentions the existence of no less than 10 *dīwāns* under the G͟haznawids, including the *dīwān-i wizāra* or revenue department (cf. also Abu 'l-Faḍl Bayhaḳī, *Taʾrīk͟h-i Bayhaḳī*, ed. Said Naficy, Teheran 1319 s/1940, 53, 180, 792). Bayhaḳī was himself on the staff of the *dīwān-i risāla* (*dīwān-i ins͟hāʾ*) during the rule of Masʿūd b. Maḥmūd. Moreland's contention [see Bibl.] that the word *dīwān* was first used by Indian historians to denote a department or a ministry in the 7th/13th and 8th/14th centuries is, therefore, erroneous. The term was in use much earlier.

During the Sultanate period its use was mainly confined to the minister for revenue, who was ordinarily the *wazīr* himself, and his department, the revenue ministry. A new department, on its creation, was also known as the *dīwān*, such as the *dīwān-i risāla* or the *dīwān-i maẓālim*. During the same period the word was also used for the military department, which too was under the control of the *wazīr*, although under the G͟haznawids, this department was known separately as the *dīwān-i ʿarḍ*.

This system of government seems to have been fully developed during the Sultanate period as we find quite a number of departments in existence. These included: (i) *dīwān-i wizāra*, which dealt mainly with finance (cf. S͟hams Sirād͟j ʿAfīf, *Taʾrīk͟h-i Fīrūz S͟hāhī* (Pers. text, 419-20); (ii) *dīwān-i ʿarḍ*, the military department, under the *ʿĀriḍ-i Mamālik* who was sometimes the Sultan himself; (iii) *dīwān-i Risāla*, which dealt with religious matters, endowments, and grants of *madad maʿās͟h*, and which was controlled by the *ṣadr al-ṣudūr*, who also combined the office of the *ḳāḍī-i mamālik* or Chief Judge of the realm; (iv) *dīwān-i ins͟hāʾ*, the same as the *dīwān-i k͟hātam*, first established by Muʿāwiya b. Abī Sufyān, or *dīwān-i risālat*, under the G͟haznawids. It dealt with all official correspondence, a prototype of the modern, but more complex and highly developed, secretariat; (v) *dīwān-i maẓālim*, which dealt with courts of *Maẓālim* [*q.v.*] jurisdiction, the *s͟harīʿa* courts being administered by the *dīwān-i ḳaḍāʾ*, under the *ṣadr al-ṣudūr* or the *ḳāḍī al-ḳuḍāt*; (vi) *dīwān-i is͟hrāf*, under the *mus͟hrif* or the accountant-general, which dealt with the accounts received from the provinces or other departments. These were audited by the sister department controlled by the *mustawfī al-mamālik*. During the reign of Fīrūz Tug͟hluḳ (cf. ʿAfīf, Pers. text, 409-10) the *mus͟hrif* dealt with the income and the *mustawfī* with the expenditure only. Fīrūz S͟hāh Tug͟hluḳ had also set up a separate *dīwān*, under a *mutaṣarrif*, for the royal *kārk͟hānas* (factories), whose accounts were, however, audited by the *dīwān-i wizāra*. There occurred a slight change in the designation of the *wazīr* during the Mug͟hal period, who came to be known as the *dīwān-i kull* and his colleagues in the same department as mere *dīwāns*, with such other appellations as denoted their functions and duties such as the *dīwān-i tan* or the *dīwān-i k͟hāliṣa*.

Another significant change under the Mug͟hals was that the head of the department of revenue and finance came exclusively to be known as the *dīwān*. During the reign of Akbar the word *wazīr* in this sense was seldom used, having been replaced by the term *dīwān*, which had come to denote a person rather than an institution or a government department. However, in the reign of his son, D͟jahāngīr, the old practice was revived and the term *wazīr* again came into vogue. It was during the reign of S͟hāhd͟jahān that the *wazīr* came to be known as the *dīwān-i kull* and his other colleagues in the department as *dīwāns*, with the addition of such epithets as showed their designations. For some time the two words *wazīr* and *dīwān* remained almost synonymous, and even in private business, a person who managed a high officer's or a wealthy person's financial affairs came to be known as a *dīwān*. Dayānat K͟hān was the *dīwān* of Mumtāz Maḥall in the first year of S͟hāhd͟jahān's reign (*Maʾāt͟hir al-umarāʾ*, Eng. tr. by A. H. Beveridge, i, 484). Even to this day male members of some families, both Hindū and Muslim, proudly carry the hereditary honorific of *Dīwān*, once borne by some illustrious ancestor.

The revenue ministry, under the *dīwān*, was consequently known as *dīwānī*, a term which was destined to survive in the *dīwānī* (civil) and *fawd͟jdārī* (criminal) courts of the British days, which still form a part of the legal structure of Pakistan.

During the Mug͟hal period the *dīwān* performed multifarious duties. He was not only responsible for the disposal of revenue papers, but also drafted urgent royal letters and *farmāns*. He also granted interviews to the agents of the princes, provincial governors and high nobles. The mounting of the guard, under the command of a nobleman, round the imperial palace at night was also a part of his duty. He had to submit revenue collection and expenditure returns to the emperor who was in this way kept informed of the finances of the State. As an administrative functionary, he allocated duties to all high dignitaries on first appointment, received regular reports from them, and also had powers to grant leave. He was also in charge of all official records which were deposited in his office (for a detailed list of these records, see Jadūnāth Sarkār, *Mughal administration*[4], Calcutta 1952, 29-32).

His colleagues, the *dīwān-i k͟hāliṣa* and the *dīwān-i tan*, had separate duties to perform. The former, *inter alia*, examined the accounts prepared by the revenue department, checked up the *ṭūmār-i d͟jamʿ* (record of total standard assessment) of the *k͟hāliṣa* (Crown lands), prepared the estimates of expenditure (*barāwurd*) on the troops and the emperor's personal staff and retinue. The *dīwān-i tan* was responsible, *inter alia*, for the submission of all matters to the emperor, which dealt with the *d͟jāgīrs* or cash disbursements including the drafting of *farmāns*, memoranda, *parwānas* etc. for the grant of *madad maʿās͟h* to scholars, the *ʿulamāʾ*, *ḳāḍīs* etc.

The office of the provincial *dīwān* was next in

importance to that of the *sipāhsālār* only. The provincial *dīwān* having been appointed directly by the emperor on the recommendation of the central *dīwān*, was, in no way subordinate to the governor. He obtained his orders from the central *dīwān* and was only responsible to him; the idea was to keep the *fiscus* independent of gubernatorial control and thus minimize dangers of misappropriation, defalcation and embezzlement of public money as well as of the insurrection of the *ṣūbadārs*. The *Mir'at-i Aḥmadī* (Baroda 1928, i, 163-70) quotes a *farmān* of Akbar giving in a comprehensive form the duties of a provincial *dīwān*, who according to this *farmān*, should be a "trustworthy and experienced person who has already served some high noble in the same capacity". His duties entailed heavy responsibilities as he was supposed to scrutinize the accounts of the revenue collectors (*ʿāmils*) and report corrupt ones for dismissal. He sometimes also acted as the provincial auditor.

As time passed, the powers of the *dīwān* increased greatly. Not only could he make grants up to 99,000 *dāms* but could also sign the deeds for the grant of *d̲j̲āgīrs* and *a'imma* lands, which technically were defective and void without the Imperial seal or the signature of the central *dīwān*. In spite of this the *dīwān* did not enjoy a rank equal to that of the *ṣūbadār* who, as head of the executive, enjoyed a higher status, prestige and honour in the public eye than the 'chancellor of the exchequer'.

The provincial *dīwān* was assisted in his duties by a *pīs̲h̲kār* or personal assistant, who was appointed by an imperial *sanad* under the seal of the central *dīwān*, a *dārūg̲h̲a* or office superintendent, a *mus̲h̲rif* and a *taḥwīldār-i daftark̲h̲āna* (record-keeper), all holding a *manṣab*. Among the lower staff the *mirdhā* (process-server) occupied an influential position in the public eye and was generally held in great respect.

In 11th-12th/17th-18th centuries the term *dīwānī* came to be used only for the revenue administration in contrast to the *niẓāmat* or *fawd̲j̲dārī*, terms which denoted the general administration, concerned primarily with the maintenance of law and order. Even to this day civil courts in the Indo-Pakistan sub-continent are known as *dīwānī* courts, as distinguished from the criminal or *fawd̲j̲dārī* courts. In this sense the word owes its origin to the appointment of the East India Company as the *dīwān* of the Province of Bengal. The management of the Company found it desirable to establish their own court of justice which they named the *Dīwānī ʿAdālat*, *i.e.*, court of the *dīwān*.

In some of the former princely States in India, now merged with the Indian Union, the chief minister was known as the *Dīwān*. The word also formed part of two of the titles *Dīwān Ṣāḥib* and *Dīwān Bahādur*, conferred by the British Indian Government; their use was, however, restricted to South Indian celebrities.

The use of the word in expressions like the *Dīwān-i ʿāmm* (Hall of Public Audience) and the *Dīwān-i k̲h̲āṣṣ* (Hall of Special Audience) in the Mug̲h̲al forts at Lahore, Agra, Dihlī, and elsewhere, is a faint echo of its original meaning. In the houses and mansions of the great or well-to-do people, in days gone by, there was a separate apartment known as the *Dīwān-K̲h̲āna*, equivalent to the modern drawing-room, but reserved exclusively for the use of the male members of the family or their guests and visitors.

vi. — Ottoman. [see dīwān-i humāyūn].

DĪWĀN al-S̲H̲ŪRĀ [see mad̲j̲lis al-s̲h̲ūrā].

DĪWĀNĪ [see k̲h̲aṭṭ].

DĪWĀN-I HUMĀYŪN, the name given to the Ottoman imperial council, until the mid 11th/17th century the central organ of the government of the Empire. Evidence on the *dīwān* under the early Sultans is scanty. According to ʿĀs̲h̲ıḳpas̲h̲azāde (ch. 31; ed. N. Atsız, *Osmanlı tarihleri*, Istanbul 1949, 118; German trans. R. Kreutel, *Vom Hirtenzeit zur hohen Pforte*, Graz 1959, 66), the practice of wearing a twisted turban (*burma dülbend*) when attending the *dīwān* was introduced during the reign of Ork̲h̲ān. Probably a kind of public audience is meant. The Egyptian physician S̲h̲ams al-Dīn b. Ṣag̲h̲īr, sent by Barḳūḳ to treat Bāyazīd II, describes how the Ottoman ruler used to hold public audience in the morning and dispense justice to the people (quoted by Ibn Ḥad̲j̲ar in the *Inbā' al-g̲h̲umr*, *anno* 805; Şevkiye Inalcık, *Ibn Hacer'de Osmanlı'lara dair haberler*, in *AÜDTCFD*, vi/3, (1948), 192, 195; cf. Tas̲h̲köprüzāde Kemāl al-Dīn Meḥmed, *Ta'rīk̲h̲-i Ṣāf*, Istanbul 1287, 34). ʿĀs̲h̲ıḳpas̲h̲azāde (ch. 81; text 155-6, tr. 134) speaks of the pas̲h̲as holding a *dīwān* when Meḥemmed I was dying, and of a daily *dīwān* at the Porte (*ḳapu*), and again (ch. 122; text 190-1, tr. 195) of a similar *dīwān* of the pas̲h̲as on the death of Murād II. From these, and parallel narratives in Nes̲h̲rī and other early chroniclers, it may be inferred that by the early 9th/15th century it had become a regular practice for the Sultan to preside over a council of the pas̲h̲as, and that during the interregnum between the death of a Sultan and the arrival of his successor the *dīwān* could, exceptionally, be held by the pas̲h̲as on their own. Meḥemmed II seems to have been the first Sultan to give up the practice of presiding over the meetings of the *dīwān*, relinquishing this function to the Grand Vizier. According to an anecdote recorded by later historians the reason for this was that a peasant with a grievance came to the *dīwān* one day and said to the assembled dignitaries: "Which of you is the Sultan? I have a complaint". The Sultan was offended, and the Grand Vizier Gedik Aḥmed Pas̲h̲a suggested to him that he might avoid such embarrassments by not appearing at the *dīwān*. Instead, he could observe the proceedings from behind a grille or screen (Solaḳzāde, *Ta'rīk̲h̲*, 268; Muṣṭafā Nūrī Pas̲h̲a, *Netā'id̲j̲ al-wuḳūʿāt*[2], i, Istanbul 1327, 59; ʿAbd al-Raḥmān S̲h̲eref, *Topḳapu Sarāy-i humāyūnu*, in *TOEM*, i/6, 1911, 351). Whatever the truth of the

anecdote, the withdrawal of the Sultan is confirmed by the *Ḳānūn* of Meḥemmed II, which states clearly that the Sultan sits behind a screen (*djanāb-i sherīfim pes-i perdede oturup* (*ḳānūnnāme* 23)). This practice continued until the time of Suleymān Ḳānūnī, who ceased to attend the meetings of the *dīwān* even in this form (Koču Bey, *Risāle*, ch. 2, ed. A. K. Aksüt, Istanbul 1939, 20-3; German trans. by W. F. A. Behrnauer in *ZDMG*, xv, (1861), 275 ff. cf. Hammer-Purgstall, *GOR*, iii, 489; *Histoire*, vi, 282).

Constitution and procedure. The *Ḳānūn* of Meḥemmed II, which purports to set forth the practice of the Sultan's father and grandfather, lays down the constitution of the *dīwān-i humāyūn* in some detail. The *dīwān* met every day; those attending were, in order of precedence, the Grand Vizier, the other viziers, the ḳāḍīʿaskers, the defterdārs, and the nishāndjī. If the nishāndjī had the rank of vizier or beylerbey, he sat above the defterdārs; if that of sandjaḳ-beyi, below the defterdārs. When they came, they were received with obeissance by the Chief Pursuivant (*Čaʾush-bashī*) and by the Intendant of the Doorkeepers (*Ḳapidjilar Kâhyasī*). Four times a week a meeting was held in the audience chamber (*arḍ odasī*), attended by the viziers, ḳāḍīʿaskers, and defterdārs, at which the Sultan was present behind a grille (*ḳānūnnāme* 13, 23). In former times, it had been the practice of the Sultans to dine with the viziers, but Meḥemmed had abolished this (ibid. 27).

In the course of the 10th/16th century the membership of the *dīwān* was somewhat extended. A document of 942/1536, quoted by Ferīdūn (*Munsheʾāt al-Selāṭīn*[2], i, 595) authorizes the Beylerbey of Rumeli to attend the *dīwān* but excludes the Beylerbey of Anatolia. Later, in recognition of the growing importance of naval affairs, the Ḳapudān Pasha was added. The Agha of the Janissaries, however, was only a member if he held the rank of vizier. Besides the full members of the *dīwān*, a number of other dignitaries were in attendance, though they had no seats in the council-chamber and did not participate in the deliberations. Among these were the Chief Secretary (*reʾis al-kuttāb* [*q.v.*]), head of the chancellery; the Chief Pursuivant; the Intendant of the Doorkeepers, who maintained liaison between the Grand Vizier and the Sultan; the financial secretaries (see MUḤĀSABA); the *dīwān* interpreters (see TERDJUMĀN); the police chiefs [see SHURṬA], and a number of other palace and administrative officers who might be called upon to carry out the decisions of the *dīwān*, with their assistants, clerks, and messengers.

During the 10th/16th century, the *dīwān* met regularly four times a week, on Saturday, Sunday, Monday and Tuesday. Its proceedings began at daybreak, and dealt with the whole range of government business. The morning was normally devoted to public sessions, and especially the hearing of petitions and complaints, which were adjudicated by the relevant member of the *dīwān*, or by the Grand Vizier himself. About noon, the mass of petitioners and other outside visitors withdrew, and lunch was served to the members of the *dīwān*, who then proceeded to discuss what business remained. Withers (after Bon) makes it clear that the council was purely consultative, the final responsibility resting with the Grand Vizier: "Dinner being ended, the chief Vizier spendeth some small time about general affairs, and taking counsel together (if he pleaseth and thinks it fit) with the other Bashaws; at last he determineth and resolveth of all within himself, and prepareth to go in unto the King (it being the ordinary custom so to do, in two of the four Divan days, *viz.* upon Sunday, and upon Tuesday) to render an account briefly unto his Majesty of all such businesses as he hath dispatched" (ed. Greaves 1747, 616). Besides the regular *dīwān* meetings, certain special *dīwāns* were held. These were 1) the *ʿulūfe dīwānī* or *ghalebe dīwānī*, held quarterly for the distribution of pay and supplies to the Janissaries and other 'slaves of the gate' (see ḲAPU-ḲULU), and also for the reception of foreign ambassadors, 2) the *ayak dīwānī*—foot *dīwān* —an extraordinary or emergency meeting presided over by the Sultan or army-commander. It was so-called because all present remained standing. (On these two, see I. H. Uzunçarşılı, *Osmanlı devleti teşkilâtından kapukulu ocakları*, i, Ankara 1943, index, and idem, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 225-9).

Place of meeting. The *dīwān* building, usually known as *dīwānkhāne*, stands in the second court of the Topḳapu palace, between the Middle gate (*Ortaḳapu*) and the Gate of Felicity (*Bāb al-seʿāde*). The present structure was erected during the reign of Suleymān Ḳānūnī, by order of the Grand Vizier Ibrāhīm Pasha, and repaired in 1792 and 1819. In earlier times the *dīwān* met in another building, later referred to as the 'old *dīwānkhāne*'. The council chamber was known as *ḳubbe-altī*, 'under the dome', and those viziers who had the right to attend the *dīwān* were called 'the dome viziers' (see further WAZĪR). Overlooking the council-chamber was a screened enclosure, known as the *ḳaṣr-i ʿādil* or *ḳafes*, from which the Sultan could observe the proceedings. This was directly connected with the *ḥarem* quarters. Adjoining the *dīwānkhāne* were the offices and quarters of the various viziers, and the office of the Grand Vizier, known as *Divit* (= *dawāt*) *odasī* (cf. DAWĀDĀR). (On these buildings, see ʿAbd al-Rahmān Sheref, *Topḳapu-Sarāy-i humāyūnu*, in *TOEM*, i/6, 1911, 329-64, especially 350 ff.).

Administration. The main branches of the central administration, functioning under the *dīwān-i humāyūn*, were as follows :

(1) *Dīwān ḳalemi*, also called *Beylik* or *Beylikdji ḳalemi*, the central chancery office, headed by the *Beylikdji*, the senior chancery officer under the *reʾis al-kuttāb*. This office was responsible for drafting, issuing, and filing copies of all edicts, regulations (*Ḳānūn*), decrees and orders other than those concerned with finance. Treaties, capitulations, privileges and exequaturs issued to foreign powers were also, for a time, the concern of this department.

Besides the chancery, there were two departments dealing with questions of personnel, *viz*:

(2) the *Taḥwīl ḳalemi*, also called *nishān* or *kese ḳalemi*, which issued orders and kept records on appointments to the rank of vizier, beylerbey, sandjaḳ-beyi, and *mawlā*—*i.e.*, *ḳāḍī* of a *wilāyet*, as well as appointments and transfers to *timar*s and *ziʿāmet*s [*qq.v.*] (see further TAḤWĪL).

(3) the *Ruʾūs ḳalemi*, which was concerned with appointments to all ranks and posts other than those covered by the *Taḥwīl ḳalemi*, the emoluments of which came from treasury or *waḳf* funds. These included religious as well as civil and military posts.

Apart from these three main offices, there were two other branches, headed by the *Teshrīfātdjī* and the *Waḳʿanuwīs* [*qq.v.*], dealing respectively with ceremonial and with historical records. A later

addition was the office of the *Āmedī* or *Āmeddji* [*q.v.*], who headed the personal staff of the *Reʾīs al-kuttāb*. This was concerned with the conduct of relations with foreign states, and with the maintenance of liaison between government departments and the palace.

Some of the staff employed in these offices received salaries; others, of lower status, were paid with *tīmār*s and *ziʿāmet*s. The latter could be promoted to salaried appointments. The more important established officials had the rank of *khʷādjegān* [*q.v.*]. Their subordinates were called *khalīfe*.

Decline of the *Dīwān-i humāyūn*. The growing importance of the Grand Vizierate as against the palace led to the practice of the *Ikindi dīwānī*, a meeting held in the Grand Vizier's residence after the afternoon prayer (*ikindi*), to deal with unfinished business left over from the *dīwān-i humāyūn*. This body came to meet five times a week, and gradually took over a large part of the real work of the *dīwān-i humāyūn*. The transfer of the effective control and conduct of affairs from the palace to the Grand Vizierate was formalized in 1054/1654, when Sultan Meḥemmed IV presented the Grand Vizier Derwīsh Meḥmed Pasha with a building that served both as residence and as office (see BĀB-I ʿĀLĪ and PASHA ḲAPUSU). To this new institution most of the administrative departments formerly under the *dīwān-i humāyūn* were, in time, transferred. By the 18th century the *dīwān-i humāyūn* had dwindled into insignificance. A new form of *dīwān* appeared under the reforming sultans Selīm III and Maḥmūd II, who established special councils to plan and apply the reforming edicts (see TANẒĪMĀT). These in time evolved into a system of cabinet government.

Bibliography: an early statement, from an Ottoman official source, on the constitution and functioning of the *dīwān-i humāyūn* will be found in the Ḳānūn of Meḥemmed II, dealing with the officers and organization of the government (*Ḳānūnnāme-i āl-i ʿOthmān*, ed. Meḥmed ʿĀrif, *TOEM* Supplement 1330 A.H. 13 ff.; 23 ff. The existing copy contains revisions dating from the reign of Bāyazīd II). This description may be supplemented from information in the Ottoman chronicles (notably the *Hasht Bihisht* of Idrīs Bidlīsī [*q.v.*], reign of Meḥemmed II), and the foreign sources (*e.g.*, G. M. Angiolello [Donado da Lezze] *Historia turchesca*, ed. I. Ursu, Bucarest 1909, 130 ff.). The subsequent development of the institution may be traced in later *ḳānūn*s (*e.g.*, that of 1087/1676, published in *MTM*, i/3, (1331 A.H.), 506 ff.) and later foreign descriptions (*e.g.*, the very full account written by the Venetian Bailo Ottaviano Bon in 1608, *Il Serraglio del gran Signore*, in N. Barozzi and G. Berchet, edd., *Relazioni degli stati europei lette al Senato*..., 5 ser., i, Venice 1866 (English adaptation by Robert Withers, *A Description of the Grand Seignor's Seraglio, Purchas' Pilgrims* ii/II, London 1625, repr. Glasgow 1905, ix, 322 ff.; also in John Greaves, *Miscellaneous Tracts*..., ii, London 1650 and later reprints), P. Rycaut, *History of the present state of the Ottoman Empire*[4], London 1675, Bk i, ch. xi, 77 ff. From about the middle of the 10th/16th century, the development and functioning of the *dīwān-i humāyūn* and the various administrative departments and services which it controlled can be followed in great detail in the records preserved in the Ottoman archives. A classification and description will be found in Midhat Sertoğlu, *Muhteva bakımından başvekâlet arşivi*, Ankara 1955, 13-14 (see also BAŞVEKÂLET ARŞIVI). The fullest general description of the *dīwān-i humāyūn* and its administration is that of I. H. Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâtı*, Ankara 1948, 1-110. Briefer accounts will be found in Djewdet[2], i, 43 6 (summarizing Wāṣif); D'Ohsson, *Tableau général de l'empire othoman*, vii, Paris 1824, 211-32; Hammer-Purgstall, *Staatsverfassung*, 412-36; idem, *GOR*, index; A. H. Lybyer, *The government of the Ottoman Empire in the time of Suleiman the Magnificent*, Cambridge Mass. 1913, 187-93; Zinkeisen, *Geschichte des osmanischen Reiches*, iii, Gotha 1855, 117-25; Gibb-Bowen, i/1, 115 ff. and index; Pakalın, i, 462-6, including a passage from the unpublished *Ḳawānīn-i teshrīfāt* of Nāʾilī ʿAbd Allāh Pasha (d. 1171/1757); Sertoğlu, *Resimli Osmanlı tarihi ansiklopedisi*, Istanbul 1958, 78-81. On the early Ottoman and Saldjūḳid background, see I. H. Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, Istanbul 1941, 42-4, 95-8; V. A. Gordlevsky, *Izbrannie sočineniya*, i, Moscow 1960, 166-77; Mustafa Akdağ, *Türkiye'nin iktisadî ve içtimaî tarihi*, i, 1243-1453, Ankara 1959, 217-23, 323-33.

(B. LEWIS)

DĪWĀNIYYA, a town of central ʿIrāḳ, on the Ḥilla branch of the Euphrates, (at 44° 55′ E, 32° N.), midway between Ḥilla and Samāwa. With a population of some 12,000, almost all Shīʿī Arabs, it is the headquarters of a *liwāʾ* (total population, 508,000 according to the 'preliminary figures' of the 1957 census with the dependent *ḳaḍā*s of Samāwa, ʿAfak, Shāmiyya, Abū Ṣukhayr, and Dīwāniyya itself; the tribes included in the *liwāʾ* are among the largest and least amenable of the middle Euphrates, and whether in Turkish times or the British occupation (notably in 1336/39, 1919/20) or under the ʿIrāḳ government (notably in 1354/57, 1935/38), have frequently embarrassed the government by faction and disobedience calling for punitive expeditions; the influence of the Nadjaf *ʿulamāʾ* is strong. The town, built mainly on the left bank and with only small date-gardens, is now extending to the right and has been greatly modernized in recent years with improved streets, bazaars and public buildings. A new steel bridge has replaced the ancient pontoons, and passable roads and the ʿIrāḳ Railways and a landing-ground serve the town and district. It is an important military station.

Dīwāniyya under its present name dates only from about 1271/1854, when it was formed as a settlement of the Khazāʿil *shaykh*s for the accomodation of the office and reception room (*dīwān*) of their tax-gatherers. The Turkish government adopted it soon afterwards as headquarters of a *ḳaḍā*, and merchants, officials, and a military and police garrison augmented the existing matting dwellings and mud-huts, and inaugurated the modern town.

In site, however, and as an important middle-Euphrates tribal, administrative and intermittently military station, it seems to have continuity with the Ḥiska of earlier (post-medieval) centuries. It and its district were disorganized and largely deserted by the tribesmen and cultivators when the Euphrates increasingly abandoned its eastern (Ḥilla) channel from 1298/1880 onwards in favour of the Hindiyya channel; but conditions were restored by the erection of the Hindiyya barrage in 1330/1912.

(S. H. Longrigg)

DIWRĪGĪ or difrīgī, now divrigi, a small town in modern Turkey, situated on the confines of Armenia and Cappadocia on one of the routes leading from Syria and Upper Mesopotamia to the Anatolian plateau. Through it runs a torrent which flows into the Çaltı Irmak, a tributary of the Kara Su (northern Euphrates). This chief town of a *ḳaḍāʾ* in the province of Sivas, situated among market gardens and orchards which make it a pleasant resort—archaeological remains alone testify to its former prosperity in the Middle Ages—is now no more than a very scattered village, part of which is deserted (in about 1930 it had less than 4000 inhabitants). It stands at the bottom of a fertile valley, the old quarters of the town clustered together on the right bank, along with the ruins of the citadel.

The ancient Byzantine Tephrikè, which must not be confused, as is sometimes done, with the Nikopolis of Pompey, and which Arab authors of the early centuries knew by the name of al-Abrīk or al-Abrūk, "capital of the Paulicians" (G. Le Strange, *Al-Abrīk, Tephrikè*, in *JRAS*, 1896, 733-41, and Pauly-Wissowa, s. v. *Tephrikè*), known to have been long occupied by Manichaean sectarians who were persecuted by the emperors of Constantinople and aided by the caliphs of Baghdād. But the most important period in its history followed the annexation of the country to Islam, shortly after the battle of Manāzgird in 464/1071 and the partial conquest of Armenia and Asia Minor by the Saldjūḳid sultan Alp Arslan. The upper Kara Su region, with Erzindjan as its capital, was in fact entrusted to a Turcoman officer serving under this prince, Amīr Mangudjak, whose possessions were thus adjacent to those of Malik Dānishmend who had settled in Kayseri and Sivas, and a second small Mangudjakid independent state was subsequently organized around Divrigi until, in 625/1228, it was compelled to recognize the suzerainty of the more powerful Saldjūḳids of Rūm. It was at this period that the chief monuments in the town were erected, with inscriptions revealing the genealogy of this branch of the Mangudjakids (see table in *CIA*, *Asie mineure*, i, 90). Then the history of Divrigi, which though sacked on several occasions, by the Mongols among others, still continued to depend upon minor local dynasties, is consequently somewhat obscure. For a time reunited with the Ottoman possessions by Bāyezīd I in 801/1397, it was recaptured by the Mamlūks who have left many epigraphic traces of their occupation and, along with the other Taurus frontier-zones which for a time protected their empire, from the Divrigi territory they created the third of the great Armenian districts forming the mountain marches of the province of Aleppo, connected with Malaṭya and Cairo by a post road. Finally, in the reign of Selīm I in 922/1516, Divrigi was to become Ottoman for several centuries.

The dismantled castle which dominates the town was probably founded in ancient times, but the present fabric apparently dates entirely from the Middle Ages (inscriptions of 634/1236-7, 640/1242-3 and 650/1252). The mosque of *amīr* Shāhanshāh or Ḳalʿe Djāmiʿi, built in 576/1180-1, is still well-known, but the most remarkable building in the town, and indeed one of the most curious Turkish monuments in the whole of Anatolia is, beyond question, the architectural group comprising the great mosque and the adjoining hospital, built in 626/1228 for Aḥmad Shāh, grandson of the previous sovereign, and his wife Tūrān Malik by the skill of a native craftsman of Akhlāṭ. The rich decoration of the three doorways is no less effective than that of the vaults which have been used to cover these buildings. One must search far in the East to find parallels to these features. Various mausolea of the same period, aedicules built on an octagonal base, crowned with a pyramid of stone and containing a domed burial chamber, are also noteworthy, in particular the tomb of Shāhanshāh, known by the name of Sitte Malik Türbesi, and the tomb of the *amīr* Ḳamar al-Dīn, both of which were built in 592/1192-6. On the other hand, it is profitless to seek to identify in present-day Divrigi the site of the strange place of pilgrimage, venerated both by Muslims and by Christians and housing in a grotto the mummified bodies of "martyrs of the time of ʿUmar b. al-Khaṭṭāb", which the shaykh ʿAlī al-Harawī, whose account has been reproduced by Yāḳūt, had the opportunity to visit at al-Ubrūḳ, doubtless the present locality of Ubruk which appears on maps between Konya and Ak Saray.

DIYA, a specified amount of money or goods due in cases of homicide or other injuries to physical health unjustly committed upon the person of another. It is a substitute for the law of private vengeance. Accordingly it corresponds exactly to the compensation or *wergeld* of the ancient Roman and Germanic laws. Etymologically the term signifies that which is given in payment. The *diya* is also called, though very much more rarely, *ʿaḳl*.

In a restricted sense—the sense which is most usual in law—*diya* means the compensation which is payable in cases of homicide, the compensation payable in the case of other offences against the body being termed more particularly *arsh*.

The historical origin of the institution lies in pre-Islamic customary practice, where it was closely bound up with the social organization of Arabia. This rested upon a tribal basis, with the absence of any political authority, even within the individual tribe, and a system of private justice tempered to some extent by the practice of voluntary submission to arbitration. In matters of homicide particularly the principle of the exercise of personal vengeance (*thaʾr* [*q.v.*]) reigned supreme, apart from the possibility of voluntary renunciation of the right against the payment of *diya*. The amount of this was, in principle, fixed—at least in the area in which Islam was born—at one hundred head of camels, although

there are certain traditions which speak of ten camels only. A strong solidarity, as much active as passive, united the members of the tribe in the application of the system: the tribe as a whole was obliged to share in the payment of the *diya*, just as vengeance itself could be exercised upon members of the tribe other than the culprit himself. In the opposite case, and where the nearest blood-relative of the victim was himself unable to exact vengeance, any other qualified fellow-tribesman could take his place.

Islam did not interfere with the basic system; various Ḳurʾānic texts even expressly confirmed it. They indicated, however, certain modifications, among which the most important was the rule which made compensation obligatory in the case of accidental homicide.

On the other hand the integration of the ancient custom in the Ḳurʾānic revelation perforce had the effect of fixing this custom in a definite form in the law and thus constituting, in principle, a barrier to any further development.

It was, however, soon to find itself out of tune with the new Islamic society such as was to develop rapidly into a community unified in principle and, in particular, organized as a State.

Working under the influence of such opposing demands the jurists constructed a theory of the *diya* (and of the law of private justice (see ḲIṢĀṢ)) in which divergent trends are readily apparent. This theory is, in general, the same in both the Sunnī and the S̲h̲īʿī doctrine, apart from certain differences on secondary points, some of which will be noted below.

The operation of the institution is confined to the field of homicide and a certain number of injuries to the body which will be defined below and which are restricted by enumeration to such effect that outside their bounds the developed common law of civil liability and the precise calculation of damage asserts its sway. *Diya*s are sometimes optional and sometimes obligatory.

They are optional in the case of offences committed deliberately (*ʿamd*). In the case of homicide the condition of intention is interpreted restrictively: notably it is necessary that the murder should have been committed with a weapon intrinsically likely to kill. In the absence of this last condition there is quasi-deliberate (*s̲h̲ibh ʿamd*) homicide where the *diya* is no longer optional. The Mālikī *mad̲h̲hab* does not recognize this separate category: whatever the means employed might be, as soon as the intention to kill is established the *diya* remains optional.

There are, however, a certain number of cases where an *ʿamd* offence does not entail a right of vengeance and for which the *diya* is no longer optional, such as infanticide, murder which is not the direct and immediate result of the assault, etc. (see ḲIṢĀṢ).

The *diya*s are obligatory in all cases other than those of deliberate offences which entail a right of vengeance.

Controversy exists among the different schools on the question as to whether the choice of the optional *diya* in place of *ḳiṣāṣ* depends solely upon the wishes of the victim or his heirs, or whether the agreement of the offender is necessary for the choice to be effective.

In the absence of a contrary agreement between the parties there is a fixed tariff for the amount of the *diya*. In principle it consists of camels of different ages and sex. The *diya* in cases of homicide is one hundred camels, split into five categories equal in number: twenty four-year-old, twenty three-year-old, twenty two-year-old and twenty one-year old female camels and twenty one-year-old male camels. Subject, however, in the matter of this division, to divergent juristic opinions, if the homicide is deliberate or quasi-deliberate, the value of the *diya* is increased (*diya mug̲h̲allaẓa*) comprising now only female camels of the first four categories described.

The *diya* for accidental homicide is also due in full in all cases of total loss of an organ or of a physiological or intellectual function. In cases of partial loss the amount of the *diya* is in proportion to the part lost: a half of the total *diya* for the loss of an arm, a leg, an eye or an eyelid; a quarter for the loss of eyelashes; a tenth for the loss of a finger or toe; a twentieth for a tooth, etc.

The remaining physical injuries for which a *diya* or *ars̲h̲* is prescribed and for which, again, the amount is determined by reference to the *diya* of homicide are the following: the *d̲j̲āʾifa*, a wound penetrating the interior of the body, and the *āmma* (or *maʾmūma*), a wound penetrating the brain: 1/3rd of the *diya*; the *munaḳḳila*, a fracture with displacement of a bone: 3/20ths; the *hās̲h̲ima*, a fracture of a bone: 1/10th; the *mūḍiḥa*, a wound laying bare the bone: 1/10th.

All other injuries lie outside the system of the *diya* and are dealt with on the basis of what is called *ḥukūmat ʿadl*, *i.e.*, an assessment of the actual harm suffered. This remains, however, under the influence of the *diya* system inasmuch as compensation is determined by a comparison with an injury for which a fixed *diya* is established and it cannot, in any case, exceed the amount of the *diya*.

The proviously cited amounts of *diya* or *ars̲h̲* are due in full only where the victim is a Muslim, of the male sex and of freeborn status. The *diya* of a woman is half that of a man. According to the Mālikīs, however, who are here followed by al-S̲h̲āfiʿī, this reduction to half is only applicable where the *diya* exceeds a third of the full *diya*; but if, for example, the offence is one for which it would have been due at the rate of a quarter of the full *diya*, this same amount will be due to the woman.

The *diya* of the *d̲h̲immī* or the *mustaʾmin* (a non-Muslim foreigner, temporarily admitted to Muslim territory—in the case of the foreigner who is not *mustaʾmin* nothing is due) is at the rate of one third or one half in the opinion of the majority, though the Ḥanafīs admit an equal rate. In every case the *diya* is due only where the offence is committed in Muslim territory. As for the slave, he is outside the system when he is the victim (see below for his position when he is the offender). Since he is assimilated to property, if he is killed or is the victim of some injury to his physical well-being, his master will be entitled to an amount of compensation equivalent to the loss he himself suffers from this fact. Such compensation may even exceed the amount of the relevant *diya*, except, according to a minority opinion, in the case of murder, where the compensation may not exceed this amount.

Although, according to the original principle, the *diya* consists of camels, it was very soon recognized that it could eqally well be paid in gold coinage (1000 dinars) or silver coinage (10,000 or 12,000 dirhams according to different versions which, without doubt, depend upon the variations in gold and silver currency rates). According to certain opinions the *diya* may consist of cattle (200), sheep (1000) or clothing (200 garments). Opinions differ, however, on the point as to whether the choice of

the mode of payment depends upon the agreement of the parties or belongs to the guilty party or to the judge; or whether one or the other of the modes is obligatory in circumstances where it would constitute the mode of payment most widely or exclusively used in the locality where the debt is to be exacted, or whether the *diya* in camels is the fundamental obligation and it is only in circumstances where the provision of payment in this form is impossible that recourse may be had to the other forms.

As to the matter of deferred payment of the full *diya*, the majority opinion (Shāfiʿī, Mālikī and Ḥanbalī) draws a distinction according as to whether the offence is deliberate or not. In the former case the *diya* may be demanded within the year in which the offence was committed; while in other cases it may be paid over a period of three years in instalments of one third. According to the Ḥanafīs the *diya* may, in all cases, be paid within the three year period.

Where the *diya* is equal to one third of the full *diya*, payment may be exacted, in all cases and according to all opinions, in the course of the first year. Where the *diya* exceeds one third of the full *diya* the same controversy exists as in the matter of the full *diya*; the second third may also be exacted within the first year in the case of a deliberate offence according to the majority opinion, while according to the Ḥanafīs it may be paid in the course of the second year.

The legal nature of the *diya* is complex and is marked by diverse and contradictory characteristics which are the result of its origin and subsequent development. It appears at one and the same time as a manifestation of the law of private vengeance, as a measure to safeguard the public order and as a means of compensation for loss suffered.

The creditor of the *diya* is the victim; in the case of homicide it will be the victim's heirs according to the order of succession; it is not precisely the circumstances of the victim of the loss which will be the determining factor.

The debtor of the *diya* was, at the outset, the tribal group—referred to, in these circumstances, as the *ʿāḳila* [*q.v.*]—to which the culprit belonged; and this is the explanation for the comparatively high amount of the *diya*. The principle of this collective responsibility was firmly maintained in theory; but in fact it was progressively impaired, eventually disappearing altogether; it is avoided in the case of deliberate offences, as we have seen. The responsibility of the *ʿāḳila*, having previously been the primary one, became subordinate to that of the culprit himself; it was now regarded as no more than the act of a beneficiary towards a debtor without means; and then, in recognition of the fact that the tribal organization had disappeared in developed Islamic society, the place of the *ʿāḳila* was taken by the State itself, whose responsibility, in turn, eventually disappeared. In cases where there is a number of culprits the *diya* is divided among them *per capita*.

If the perpetrator of the offence is a slave, again a distinction is drawn according as to whether the offence is deliberate or accidental. In the former case there is ground for *ḳiṣāṣ* just as in the case of a freeman, unless, according to one opinion, the victim or his heirs should choose to surrender the slave. In the view of the majority, however, the choice of the successful prosecutor lies solely between *ḳiṣāṣ* and outright pardon.

A secondary practice connected with that of *diya* and *ḳiṣāṣ* is that of *ḳasāma* [*q.v.*]. When the corpse of a murdered person is found in a locality—tribe, village or district—and the identity of the culprit is not discovered, fifty persons from the local population are asked to take an oath that they have no knowledge of the identity of the perpetrator of the offence. In default of such oaths, the obligation to pay the *diya* will fall upon the local population. This practice also, as was observed by an author of the 6th/12th century, eventually disappeared.

The survival of the *diya*.

The system of the *diya* survives in the present contemporary period in two principal forms according to circumstances.

Among the Bedouin tribes, with their innate hostility towards a State organization, the system of private vengeance tempered by the practice of the *diya* still survives upon a basis of customs which are analogous to ancient Arabian customs in several particulars—though they differ from tribe to tribe—and which often contradict the precepts of the Ḳurʾān and the rules of Islamic law. The efforts of the governments concerned have not been able to achieve more than the imposition upon these groups of certain regulations of a procedural character and of limited scope.

Thus, among the Arab tribes of Egypt, Jordan and Syria there is a fairly general custom which renders the *diya* obligatory in all cases save those of deliberate homicide. The composition of the *diya* varies from tribe to tribe—40 male camels only, 40 male camels and a virgin girl, a sum of money (in Egypt, for example, £E 400, or 300 or 150 etc.). The *diya* of a woman is usually greater than that of a man; among certain tribes it even reaches four times or eight times the amount of a man's *diya*. As regards proof of the offence, the system of ordeal, by fire and water particularly, is often practised. Among certain tribes a procedure of *ḳasāma* is in evidence.

The survival of the system in communities more fully developed and politically organized is essentially attributable to the religious character which it had acquired. A typical example in this regard is provided by the Ottoman Empire, where, despite the modernization of the law towards the middle of the 19th century, and notwithstanding the fact that the principle of the rule of compensation (properly so-called) for loss suffered had been enunciated and the system of public law had been duly organized, the right of the interested parties to demand the application of *ḳiṣāṣ* and, finally, the *diya*, was retained, notably under the terms of the penal code of 1863. The amount of the *diya* was officially fixed at £T 224.

All this has now, in actual fact, disappeared from positive legislative enactments; but traces, hard to erase, of the former state of things still persist. In certain countries such as Syria the courts, in spite of the spirit and the letter of legislation, such as a civil code and a penal code wholly modern in inspiration and in force since 1949, still continue to pronounce liability for *diya*s, the amount of which, in cases of homicide, is always fixed as a lump sum of money, and is greater or less according as to whether it is a case of deliberate or accidental homicide.

ḌIYĀ GÖKALP [see GÖKALP, ZIYA].

ḌIYĀ PASHA [see ZIYA].

ḌIYĀFA [see ḌAYF, MIHMĀN, MUSĀFIR].

DIYĀLĀ, an important river of east-central ʿIrāḳ. Its name, of unknown origin and meaning, is ancient, appearing in antiquity as Σίλλα or Δέλας or Dialas; its upper waters are known as the Sirwān or (originally and more correctly) Shirwān, as known to Yāḳūt, and this name is in common use for most of its length. It forms a left-bank tributary of the Didjla (Tigris), navigable only by small craft, and with a discharge formidable in the flood season (March-May), slight in the later summer and autumn.

The river rises in western Persia, where the many hill-streams (often dry in the summer and autumn) which unite to form its principal tributaries drain (1) the area north of Kirmānshāh, (2) the area both north and south of Sanandadj (Senna, Siḥna) in the Ardalān province, (3) the Perso-ʿIrāḳī frontier area around Mariwān, (4) the westerly area of Kirmānshāh province, west of Karind, opposite (ʿIrāḳī) Khānikīn and (Persian) Ḳaṣr-i Shirīn. The first three of these sources have made their contributions before the main stream of the Sirwān crosses the frontier; the tributaries are known locally by various names, all flowing in valleys of great natural beauty and inhabited, from time immemorial, by Persian-Kurdish tribesmen. The contribution from area (4) of those suggested above forms the Alwānd river (the Ḥulwān river of ʿAbbāsid times, called from the famous town of that name) and enters immediately west of Khānikīn, in ʿIrāḳ. The Tandjera stream, draining the Shahrizūr valley (Sulaymāniyya *liwāʾ*), also forms an ʿIrāḳī contribution; there are others of lesser importance. The middle course of the river, until realignment by the Frontier Commission of 1333/1914, marked the Turko-Persian boundary in so far as that had by then been stabilized; but areas west of this sector, now forming part of Khānikīn *ḳaḍā*, were then assigned to Turkey as "Transferred Territories".

The river greatly changes its character in its middle and lower course, where it flows first through undulating, then through flat country, diminishing its speed of flow, and lending itself to important use for irrigation. Near the point where it breaks through the Djabal Ḥamrīn a series of major canals takes off, and maintains extensive date gardens and winter and summer crops. These are notably, from the right bank, the Khāliṣ canal, which waters Daltāwa [*q.v.*], and from the left bank the Rūz (on which stands Balad Rūz), the Maḥrūt, and the Khurāsān. The intensive cultivation and famous ruits of the Diyālā *liwāʾ*—itself named from the r iver, of which it contains nearly the whole length in ʿIrāḳ (*liwāʾ* headquarters at Baʿḳūba, dependent ḳaḍās of Khānikīn, Mandalī, Khāliṣ, and Baʿḳūba)—are due entirely to the presence of these canals, and to water-lift irrigation by *Karad* and mechanical pump from the main stream. This irrigation system is similar to, but less than and not identical to, that prevailing in the 3rd/9th to 7th/13th centuries, before its ruin by the Mongols; but in that age, or most of it, the Diyālā waters below the Djabal Ḥamrīn discharged into the great Tāmarrā-Nahrawān canal (see DIDJLA, and NAHRAWĀN), and were extensively canalized from it; a major part was probably delivered to the Tigris at or near the present mouth, 10 miles below Baghdād. Technically, the relation between the Diyālā (with its capacity for sudden and formidable flooding) and the Nahrawān canal-system, remains obscure; nomenclature varies in the Arab geographers, who do not distinguish between canals and mere flood-channels, and at times even identify the Diyālā with the Nahrawān or Tāmarrā. The mediaeval cities dependent on the Diyālā and its connected canals included Nahrawān, Bādjisrā, Baʿḳūba, Daskara and Djalūlā. The area astride its lower course was closely administered and sustained hundreds of villages and a dense population; traces of Sāsānian and older sites indicate that this had always been a favoured region. The main road from Baghdād to, and through, the province of al-Djibāl—the Khurāsān highway—ran through it, and largely followed the course of the river; this is still the case; the motor-road running from Baghdād to and across the Persian frontier follows substantially the old alignment by way of Baʿḳūba, Shahrabān, Ḳizil Rubāṭ, Khānikīn, and Ḳaṣr-i Shirīn. The metre-gauge railway to Khānikīn, constructed in and after 1337/1918, follows a similar line; railway bridges exist at Baʿḳūba and at Ḳaraghān, where the Kirkūk-Irbīl line branches off.

DIYĀR BAKR, properly "abode of (the tribe of) Bakr", the designation of the northern province of the Djazīra. It covers the region on the left and right banks of the Tigris from its source to the region where it changes from its west-east course to flow in a south-easterly direction. It is, therefore, the upper basin of the Tigris, from the region of Siʿirt and Tell Fāfān to that of Arḳanīn to the north-west of Āmid and Ḥiṣn al-Ḥamma (Čermük) to the west of Āmid. Yāḳūt points out that Diyār Bakr does not extend beyond the plain.

Diyār Bakr is so called because it became, during the 1st/7th century, the habitat of an important portion of the Rabīʿa tribe of Bakr b. Wāʾil [*q.v.*]. The latter had already moved forward, following the tribal wars of the pre-Islamic period, into Mesopotamia. Having stayed for some time in the region of al-Kūfa, the Bakrī groups spread out towards the north. It was at the time of the conquests under the caliphate of ʿUthmān, while Muʿāwiya was governor of Syria and the Djazīra, that some Muḍarī and Rabīʿī tribes were settled in the unoccupied lands of this region on the orders of the government. Muʿāwiya installed these Muḍarīs in what came to be called the Diyār Muḍar and the Rabīʿīs in what came to be called the Diyār Rabīʿa. Al-Balādhurī, who gives us this information, does not mention the Bakrīs expressly, who were included in the Rabīʿī group, but it is probable that it was in the same manner and at the same time

that they established themselves in the Diyār Bakr. This appellation does not however mean that this territory was inhabited by Bakrīs alone; on the other hand, there were Bakrīs elsewhere.

The Diyār Bakr and the Diyār Rabīʿa, since the two groups were connected, are sometimes spoken of jointly under the single name of Diyār Rabīʿa (Yāḳūt, ii, 637).

The principal towns of the Diyār Bakr are Āmid, the capital, Mayyāfāriḳīn, Ḥiṣn Kayfā, and Arzan, which strictly speaking is part of Armenia. The territory of the Diyār Bakr has, from the administrative point of view, generally followed the destiny of the Djazīra. It has, however, sometimes formed, with neighbouring Armenia, a distinct and quasi-independent government. ʿĪsā b. al-Shaykh al-Shaybānī, from 256/870 to 269/883, and his descendants ruled over the Diyār Bakr until the reconquest of Āmid by the caliph Muʿtaḍid in 286/899. The same situation recurred in Ḥamdānid times when Diyār Bakr and Armenia were in the hands of the Amīr of Aleppo, Sayf al-Dawla, at the same time as northern Syria. After the death of the latter in 356/967 Diyār Bakr returned to the Ḥamdānid Abū Taghlib of al-Mawṣil. With the rest of the Djazīra, it fell under the domination of the Buwayhid ʿAḍud al-Dawla in 367/978, but after the death of the latter in 372/983 it passed into the hands of a Kurdish chief, Bādh (the Kurds were also inhabitants of this part of the Djazīra), then to those of his nephew Abū ʿAlī b. Marwān, who disputed the Diyār Bakr lands with scions of the Ḥamdānid family, but remained in control, and was the founder of the Marwānid dynasty.

From Diyār Bakr comes the name of the Bakrī frontier posts (*al-thughūr al-bakriyya*) enumerated in M. Canard, *Histoire de la dynastie des Ḥamdānides*, i, 254-61, and cf. 846 ff., which are situated in the north and north-west of the province.

ii. The formation of the Saldjūḳ empire faced the Marwānids with a new problem. From the beginning they rejoiced in their increasing power, causing the *khuṭba* to be read in the name of the Sultans as well as of the Caliphs. The Saldjūḳs were in no hurry to suppress a principality which was functioning as a buffer state between themselves and Byzantium. The Marwānids, however, were unable to prevent some Turcoman infiltrations, some of which were accompanied by plunder. The collapse of the Byzantine power and the policy of the third Saldjūḳ, Malikshāh, which tended to reabsorb autonomous states, were in the long run a danger to the Marwānids; the Banū Djahīr [*q.v.*], originally from Diyār Bakr, whose resources they knew, were able to convince Malikshāh and Niẓām al-Mulk [*q.v.*] of the interest of a conquest, which these latter entrusted to them; it was a bitter struggle, since the population was attached to a dynasty which guaranteed their autonomy, and took two years of campaigning (476-7/1084-5). Scarcely, however, had Diyār Bakr been thus directly annexed to the Saldjūḳ empire when the troubles which followed after the death of Malikshāh (485/1092) restored to them an autonomy of a different kind. A series of small Turcoman dynasties had set themselves up at Āmid (Īnālids), Arzan, Isʿird, etc., the most important of which was soon to become that of the Artuḳids [*q.v.*] at Mārdīn, Ḥiṣn Kayfā, Mayyāfāriḳīn and Kharpūt, and, after 578/1183, Āmid as well. It is true that this family was divided into two branches often at rivalry, and that it ran counter to the ambitions of the Saldjūḳids of Rūm, of the princes of Akhlāṭ, and especially the Zangid governors, then princes, of al-Mawṣil; nevertheless Diyār Bakr seems to have enjoyed in the 6th/12th century a relative material and cultural prosperity. More serious for the Artuḳids was to be the ambition of the Ayyūbids [*q.v.*], who aimed, for reasons of military recruitment, at setting foot in this country which was in part peopled by their Kurdish congeners. After 580/1185 Ṣalāḥ al-Dīn occupied Mayyāfāriḳīn, which afterwards fell to the lot of two successive sons of his brother al-ʿĀdil, then in 630/1233 to the son of the latter, al-Kāmil; the Saldjūḳs of Rūm, however, had occupied Kharpūt, and penetrated right into the heart of the Diyār Bakr country by the conquest of Āmid (638/1241). Diyār Bakr was thus politically divided when the Mongol invasion took place. In the face of this invasion, Artuḳids and Ayyūbids had no differences, and both Mayyāfāriḳīn and Mārdīn succumbed after severe sieges (657/1259 and 659/1261), but the Mongols allowed two small dynasties, an Artuḳid one at Mārdīn and an Ayyūbid one at Ḥiṣn Kayfā, to remain, under their suzerainty; these recovered some degree of autonomy as the dislocation of the empire of the Ilkhāns proceeded. The region, however, became the prey of nomadic pastoral tribes, especially Kurds in the north and Turcomans in the south, whose attacks against the rural Christian communities of Ṭūr ʿAbdīn contributed to the Islamization of this region which had hitherto not proceeded very far. On the eve and the morrow of Tīmūr's devastations (especially at Mārdīn), Diyār Bakr was the stake in the struggles with which the two great confederations of the Aḳ-Ḳoyunlu and the Ḳara-Ḳoyunlu occupied themselves; the former, masters of Āmid, made themselves masters of the whole of Diyār Bakr having taken Mārdīn from the Ḳara-Ḳoyunlu, and then Ḥiṣn Kayfā from the Ayyūbids. Diyār Bakr was, however, occupied for a time by the troops of Shāh Ismāʿīl, founder of the Ṣafawī dynasty in Persia (913/1507), and fell, for three centuries, into Ottoman hands in 922/1516.

It must be borne in mind that, in the terminology of the Saldjūḳids of Rūm, Diyār Bakr referred to the western confines of the province, which were all that they possessed, whereas in that of the Mongols it often refers to all the Djazīra, including the Diyār Muḍar and the Diyār Rabīʿa.

iii. Diyār Bakr, in its Turkish form Diyarbakır, is the name by which the Turks called the capital of the province, Āmid, which they also called Ḳara ("black") Āmid, on account of the black colour of its ramparts and its houses, built of basalt (or millstone); this is noted by the Arab geographers, and is perhaps alluded to in a verse of al-Mutanabbī (ed. Barḳūḳī, i, 182; cf. Vasiliev, *Byzance et les Arabes*, ii/2, 316). A proverb relates that all there is black, dogs, walls, and hearts.

Only the Āmid of Arab times is described here. This was built on the left bank of the Tigris on a plateau which runs down abruptly to the river, which runs beside the enceinte on three sides, the fourth being protected by a moat and an outer wall.

Āmid was taken without a fight in 19/640 at the time of the conquest of the Djazīra by ʿIyāḍ b. Ghanm. It was besieged by al-Muʿtaḍid who put paid to the attempt at independence of the small Shaybānī dynasty (see above), and the walls of the town were dismantled; at the time of al-Muḳtadir, however, in 297/910, they were restored. An inscription commemorating this restoration is still legible on the Mārdīn gate. Āmid fell into the hands of the Buway-

hids in about 368/978. It was also the target of several attacks by the Byzantines, such as in 347 and 348/958 and 959 by the Domesticos John Tzimisces, and again when the same Tzimisces was emperor, in 972, 973 and 974 A.D. In the course of that of 973 the Domesticos Melias was taken prisoner. But the accounts of the historians of these sieges are often vague, contradictory and in part legendary. At all events, at the time when al-Muḳaddasī was writing, in 375/985, Āmid, capital of Diyār Bakr, had become a frontier post threatened in consequence of the success of the Byzantines, and Ibn Ḥawḳal seems to have foreseen that it would fall into Greek hands.

Āmid was renowned for its woollen and fine linen products, said to be "Greek" and "in the Sicilian style" (al-Muḳaddasī, 145).

ii. The sources are those of the history and general geography of the periods covered, for which see AḲ-ḲOYUNLU, ARTUḲIDS, AYYŪBIDS; the only references specifically to Diyār Bakr are Ibn al-Azraḳ al-Fāriḳī (Marwānid part ed. B. A. L. Awad and M. S. Ghorbal, Cairo 1959; Artuḳid part analysed by Cl. Cahen in *JA*, 1935), and the anonymous Vienna ms. analysed by Cl. Cahen in *JA*, 1955; in Persian, the *Kitāb-i Diyārbakriyya* of Abū Bakr Tihrānī (ed. Faruk Sümer); in Syriac, the chronicle published by Ottomar Behnsch, *Rerum saeculo XV in Mesopotamia gestarum*, Bratislava 1838.—Modern works: Cl. Cahen, in *JA* 1935 and 1955; M. H. Yınanç and Faruk Sümer, in the articles Diyarbekir, Akkoyunlu and Karakoyunlu in *İA*. (M. CANARD and CL. CAHEN)

iv. Ottoman period. In 923/1527 the district of Diyār Bakr was conquered by the Ottomans, who organized the newly conquered territories into an extensive province (*wilāyet*) centred on the city of Āmid, and including the districts of Diyār Bakr, Mawṣil, Diyār Rabīʿa and Diyār Muḍar, as well as the territory of Bitlis (Bidlīs). Later, at the time of Sultan Sulaymān the Magnificent, when ʿIrāḳ was conquered, another *wilāyet* was formed at Ūrfa, while the territory of Bitlis was included in the *wilāyet* of Vān which had been formed in the territory of Akhlāṭ. The province of Diyār Bakr remained, nevertheless, one of the largest and most important Ottoman provinces, and during four centuries of Ottoman government, protected from invasion and wars, it began to recover some of its prosperity. Its position near the Persian frontier gave it special importance. Its first *beylerbeyi* was Bîyîklî ("the mustachioed") Meḥmed Pasha, who had taken the city of Āmid from the Persians and was, therefore, known as the Conqueror (Fātiḥ Pasha). Other famous governors, who numbered Grand Viziers among them, included Khusrew, Rustem, Iskender, Behrām, Özdemir (Oz-ṭemūr)-oghlu ʿOthmān, Čighāla-zāde Sīnān, Ḥāfiẓ Aḥmed, Bosnalî Khusrew, Ṭayyār Meḥmed, Melek Aḥmed, Ḳaplan Muṣṭafā, Dalṭaban Muṣṭafā, Köprülü-zāde ʿAbd Allāh, Ḥekīm-oghlu ʿAlī, Ḥasan, Reshīd Meḥmed, Esʿad Mukhliṣ and Kurt Ismāʿīl Pashas. Both Bîyîklî Meḥmed Pasha and Özdemir-oghlu are buried within the enclosure of the Fātiḥ Pasha mosque, founded by the former. Other *wālīs* are also buried in the same mosque. Two inscriptions made in the name of Suleymān the Magnificent are in existence, an Arabic one in the court-yard of the Ulu(gh) Djāmiʿ and a Persian one on the gate of the Ič-Ḳalʿe (Inner Castle or Keep). A long decree (*fermān*) drawn up in Turkish in the name of Sultan Meḥemmed IV is engraved in the Djāmiʿ-i Kebīr (Great Mosque) (Basrı Konyar, *Diyarbekir tarihi*, ii, 130-3).

As the centre of an important province and the base and winter quarters of the armies against Persia, Āmid was also the headquarters of a *beylerbeyi* having a large number of troops under his command. Sultan Suleymān the Magnificent visited Āmid on 22 Rabīʿ II 942/20 October 1535, on his return from the Persian expedition, when he went up to the Castle, prayed in the Ulugh Djāmiʿ and spent some twenty days in the city, and also in 961/1554 when he stayed for eight days on his way out to the second Persian expedition. Sultan Murād IV visited Āmid in 1047-8/1638 on his way out to the Baghdād expedition and also on his return in 1049/1639 when he ordered the execution of the famous and very popular Shaykh Maḥmūd Urmewī, known as the *shaykh* of Rūmiyya.

Of the Ottoman *wālīs* Khusrew, Iskender, Behrām, Naṣūḥ, Murteḍā, Melek Aḥmed, Dalṭaban ʿAlī and Ismāʿīl Pashas built one mosque each in the city, while Ḥasan Pasha had an inn (*khān*) built. Another *khān* is ascribed to Melek Aḥmed Pasha. Baths were built by Meḥmed, Iskender and Behrām Pashas and a *dār al-ḳurrāʾ* by Köprülü-zāde ʿAbdullāh Pasha. Sarî (yellow or fair) ʿAbd al-Raḥmān Pasha founded a library. In 1815 Suleymān Pasha repaired the walls.

Āmid, now known as Diyārbakr, also became an important cultural centre in Ottoman times. In the 10th/16th century it bred the poet Ibrāhīm Gulshenī, who also founded a *ṭarīḳa* (religious order), and the historian Ḳāḍī Ḥuseyn. It was during that century that the famous historian Muṣliḥ al-Dīn Lārī was *muftī* of Āmid. Many poets are known as Āmidī in the 12th/18th century, including Labīb, Ḥāmī, Wālī and Aḥmed Murshidī, as also the physician Aḥmed Riḍā, the mathematician Ismāʿīl and the theologian Küčük Aḥmed-zāde Abū Bakr. Later local notables included the poets Refīʿ, Rāghib and Ṭālib in the 19th century, as also the historian, belletrist and poet Saʿīd Pasha, while in modern times there are the latter's sons Suleymān Naẓīf and Fāʾiḳ ʿAlī Beys, ʿAlī Emīrī Efendi, the founder of the *Millet* library, and the political thinker Ziya (Ḍiyā) Gökalp. The ʿAbd al-Djalālī-zāde family which gave many distinguished Pashas to the service of the Ottoman Empire is also of Diyārbakr origin. Descendants of tribal chiefs in the Ḳara-Ḳoyunlu and Aḳ-Ḳoyunlu States, of 10th/16th century governors and of regional notables can still be found in the city.

In the second half of the 19th century the Diyārbakr region, like other Ottoman provinces, was the

scene of opposition and sometimes of revolts of local *amīrs*, tribal chiefs and other notables who did not wish to accept the reforms carried out in the Ottoman Empire. This led to long drawn out punitive operations, as a result of which local chiefs, such as Bedr Khān Pasha, were forced to submit, or were punished, sometimes by exile. Leaders of nomadic or settled tribes, however, succeeded in maintaining their influence, even although their official titles had been abolished, only instead of gathering round *amīrs* or tribal chiefs, these notables gave allegiance to the *shaykhs* of *derwish* orders (*ṭariḳa*). Led by shaykh Saʿīd, the latter rebelled in 1925 against the reforms which the new Republican government of Turkey sought to carry out. The revolt started in Khani and spread before long to most of the Diyārbakr region. The rebels were, however, beaten back before the walls of Diyārbakr, after which the Government, which had proclaimed a partial mobilization, rapidly quelled the rebellion. In 1928 an Inspectorate-General was formed in the regions of Diyārbakr and of Akhlāṭ with the object of promoting reforms. While it was in existence a small rebellion was quelled at Ṣāṣūn.

The city of Diyārbakr is always named Āmid in all writings up to the end of the 10th/16th century. It then began to acquire its present name, which was the name of the province of which it had become the centre, the name of Āmid being gradually forgotten. Under the Republic the form Diyarbakır was officially adopted, in place of the earlier Diyarbekir.

Bibliography: Among Ottoman geographers and travellers, Kātib Čelebi (*Djihannumā*) gives some information, Ewliyā Čelebi very much more (*Siyāḥatnāme*, iv, 24 ff.). There are useful data on the social and cultural conditions in the region of Diyārbakr in the *Menāḳib* of Ibrāhīm Gülshenī. Interesting information on local customs is given in the chapter on Diyārbakr written by Bakr Fayḍī (in the author's private library). At the end of the 19th century Diyārbekirli Saʿīd Pasha gives the mediaeval Islamic history of the city in his *Mirʾāt al-ʿibar*: he does not, however, add very much to the data of Ibn al-Athīr and Munedjdjim-Bashī. Detailed information on local scholars and writers is given in ʿAlī Emīrī Efendi, *Tadhkira-i shuʿarā-i Āmid* (Istanbul, 1227). The second volume of this work has not, however, been printed. There is further information in the same writer's *Diyārbekir Vilāyeti*, Istanbul 1918, in his *Mirʾāt al-fawāʾid* and in the magazine *Āmid* which he published. For more recent Turkish work on the history of the city and province see Basri Konyar, *Diyarbekir tarihi, kitâbeleri, yıllığı*, Ankara 1936; Ibrahim Tokay, *Diyarbakır*, Istanbul 1937; Osman Eti, *Diyarbakır*, Diyarbakır 1937; Kadri Günkut, *Diyarbakır tarihi*, Diyarbakır n.d.; Kâzim Baykal and Süleyman Savci, *Diyarbakır şehri*, Diyarbakır 1942. Much useful information will also be found in the *Sālnāmes* of Diyārbakr.

Data on the city and region can also be found in European travellers from the 16th century onwards. Scholars have also described the region and the archaeology, geography and history of the city. For local monuments and inscriptions see van Berchem and Strzygowski, *Amida* (Heidelberg 1910) (reviewed by Khalīl Edhem in *TOEM* 1st year, no. 6, 1329, 365-77). Further information on inscriptions is given by J. Sauvaget and Basri Konyar. See also the extensive bibliography in A. Gabriel, *Voyages archéologiques dans la Turquie orientale* (Paris 1940). (Mükrimin H. Yinanç)

Monuments. One of the most remarkable characteristics of the present-day town of Diyārbakr is without doubt the archaeological wealth of this city of black stone, with its old quarters still surrounded by walls which give the site its character and which, throughout the middle ages, gave a strategic value to this locality which is otherwise lacking in natural protection. The well preserved enceinte naturally attracted the attention of 19th century European travellers, as well as admiration from all visitors to the stronghold since the Arab conquest (for example, the account of Nāṣir-i Khusraw). But not until the serious archaeological investigation made on the spot by A. Gabriel, re-opening the joint study to which M. van Berchem and J. Strzygowski had formerly bent themselves on the basis solely of photographic material, was it possible to recognize in it one of the most eloquent witnesses of military art in the mediaeval Near East. The site shows a rampart of regular trace, somewhat modified by certain configurations in the terrain (the original town was in fact situated on the edge of a plateau bounded by escarpments on the side of the Tigris), displaying on a perimeter of more than 5 km. a curtain flanked by towers and contreforts, before which were a fausse-braie and a ditch, now filled in, interrupted by several monumental gates and by breaches of recent date. The layout of the curtain (8 to 12 m. high, 3 to 5 m. broad, built of masonry rubble between two matching facings), with its chemin de ronde protected by a crenellated parapet and its arched gallery running at certain places under the chemin de ronde,—the disposition of the square, polygonal or circular flanking towers, of varying dimensions, with powerful basalt piers equipped with lower casemates and with upper rooms or platforms arranged for defence,—the roman elements still in place between the circular salients of the gates now called the Kharpūt, Urfa and Mārdīn gates, all combine with epigraphic evidence to show the antiquity of an enceinte which indeed underwent successive alterations after the Arab conquest but "which remains the most important and the most complete example of Byzantine fortification of the 4th century" (A. Gabriel). No less significant, however, is the nature of the works which were carried out later,—on the one hand, during the ʿAbbāsid period, indicated particularly by the restoration of the principal gates (dismantled by al-Muʿtaḍid, then rebuilt by al-Muḳtadir, as inscriptions of 297/709 testify)—on the other, under the Marwānids, Saldjūḳids and Artuḳids who undertook at different times partial repairs to the curtain and towers on the western front (indicated both by inscriptions and by underpinning of coursework), or more important works of reconstruction attested by those enormous circular bastions of the Artuḳid period, Ulu Badan and Yedi Kardash, which are over 25 m. in diameter and encompass previous works within their complex systems of casemates and galleries—and, finally, under the Ottomans, who were content to keep the enceinte of the town in repair but directed their main efforts to the citadel, on the north-east corner of the rampart, extended it, and substituted their own works for the ruins of the former palace of the Artuḳids.

In the interior of the enceinte the great mosque, Ulu Djāmiʿ, is noteworthy, whose abundant inscriptions, scattered in the greatest disorder on a heterogeneous composition in which re-utilized older material dominates, have provoked a clash of opinions concerning its origin and history. In fact

the most probable conclusions, with regard to both the actual state of the building and the vicissitudes (fire in particular) which, according to textual information, it must have undergone, tend to show it as a specifically Islamic construction, modified however continually under the different masters of the country "from Malik Shāh down to the Ottoman sultans of the 16th and 17th centuries". Mention must also be made of some Artuḳid *madrasas*, with a central court surrounded by porticos and with a great interior *īwān*, like the Masʿūdiyya and Zindjiriyya *madrasas*, as well as the numerous Ottoman mosques, with a prayer-hall entered by a simple portico and covered by a cupola on a polygonal drum, which were built in the years after the capture of the town in 920/1514. Other interesting remains of this last period, marked for Diyārbakr by a real commercial prosperity, belong to the field of civil architecture, shown by the great caravanserais and spacious houses of an original type, built alike in fine ashlar.

The structural qualities of these various works should not let it be forgotten that there developed at Diyārbakr in the middle ages a school of very capable sculptors, who not only left some reliefs on their walls, not without artistic merit (Artuḳid reliefs often representing animal forms), but also brought a remarkable impetus to the particular style of decorative writing which then was most favoured for the exterior enrichment of monuments. The inscribed bandeaux of the 5th/11th century at Diyārbakr, which have already been the subject of intensive research by S. Flury (a real pioneer in this field), constitute the best examples of this ornamental epigraphy of Upper Mesopotamia the influence of which was to be felt in neighbouring lands and whose luxuriance, with its "incessant variations of detail brought to an initial type by an incomparable richness of invention" (J. Sauvaget, in *Ars Islamica*, 1938, 214), has been emphasized.

DIYĀR MUḌAR, a name formed in the same way as Diyār Bakr [*q.v.*], is the province of the Djazīra whose territory is watered by the Euphrates and its tributary the Balīkh as well as by the lower reaches of the Khābūr. It extends on both banks of the Euphrates from Sumaysāṭ (Samosata) in the north to ʿAnā (ʿĀnāt) in the south. The principal town of the Diyār Muḍar was al-Raḳḳa on the left bank of the Euphrates; other major towns were Ḥarrān on the Balīkh, Edessa (al-Ruhā, Urfa), capital of Osrhoene, and Sarūdj to the south-west of Edessa. Those places situated on the Euphrates after its confluence with the Balīkh, such as al-Ḳarḳīsiyāʾ and al-Raḥba, were sometimes united in a special district known as the "Euphrates Road".

For most of the time the Diyār Muḍar formed part of the government of the Djazīra, but was sometimes separated from it. Such was the case in Ḥamdānid times when it formed part of the amīrate of Aleppo with Sayf al-Dawla. After him it reverted to the amīrate of al-Mawṣil, and later fell into the power of the Buwayhids like the rest of the Djazīra; then it became the capital of the small Numayrī dynasty (Banū Numayr), which was brought to an end by the Saldjūḳs. On the other hand, the Diyār Muḍar was often overrun by the Byzantine armies in the 4th/10th century, and in the 5th/11th century the Byzantine empire succeeded in annexing Edessa and its district, in 423/1032.

Canard, *Hist. de la dynastie des H'amdânides*, i, 86 ff., 795 ff., 838 ff., et *passim*; D. S. Rice, *Medieval Harran*, in *Anatolian Studies*, ii, (1952), 36-83. (M. Canard)

ii.—After the Byzantine conquest of Edessa, the Diyār Muḍar, which continued to be a communication territory without real autonomy, was divided into two parts, one in the north under Christian domination, partially colonized by Armenians, the other in the south, with Ḥarrān as its principal centre, where the dominant influence was that of the Numayrī Arabs. From 457/1065, however, the country sustained the repercussions of Turkish expansion; it was troubled by marauding bands, and then at the beginning of 463/1071 it was crossed by the Saldjūḳ sultan Alp Arslan who, on his way to Syria, at one point besieged Edessa, and in 471/1078 by Tutush, brother of the new sultan Malikshāh. In the same year Ḥarrān and Sarūdj were incorporated, at the same time as Aleppo, in the principality of the ʿUḳaylid of al-Mawṣil, Muslim b. Ḳuraysh [*q.v.*], a nominal vassal of Malikshāh, and Edessa into the state of the Graeco-Armenian Philaretes, master of the western Taurus and later of Antioch. Finally the two divisions of the Diyār Muḍar fell into the hands of Malikshāh himself, with al-Mawṣil and northern Syria, in 479/1086.

Nevertheless, Saldjūḳ domination in this frontier region was fairly lax, and the disorders following the death of Malikshāh (485/1082) maintained at Edessa an Armenian rulership which was practically autonomous. The Crusade at the end of 1097 renewed for a half-century the partition commenced by the Byzantine conquest. Although the Franco-Armenian county of Edessa, as well as the lands to the south of the western Taurus along the middle Euphrates, formed its northern part, Ḥarrān, seat of an ephemeral Turkish principality at the beginning of the 6th/12th century, was cast with the lot of Aleppo between the hands of the Artuḳids and the Zangids. In 553/1158 Zangī granted it in fief to ʿAlī Küčük, the holder of Irbil to the east of al-Mawṣil, in order to ensure the recruitment of the Turco-Kurdish contingents who were responsible for its defence, which was strategically important; his successors, the Begteginids [*q.v.*], held it for half a century. The ʿUḳaylid Arab seignory which held sway at Ḳalʿat Djaʿbar was suppressed by Nūr al-Dīn [*q.v.*] in 558/1163. Thanks to the disturbances which marked the succession of this prince, the Diyār Muḍar was occupied by Ṣalāḥ al-Dīn [*q.v.*], who granted it first to his nephew Taḳī al-Dīn ʿUmar, then to his brother al-ʿĀdil. The latter, who had become master of the Ayyūbid heritage, assigned it to his son al-Ashraf (597/1201), who in 624/1227 exchanged it for Damascus with his brother al-Kāmil of Egypt. Al-Kāmil incorporated it in the government set up in the east for the benefit of his son al-Ṣāliḥ Ayyūb who, threatened by the anti-Ayyūbid coalition

following the death of al-Kāmil, granted it to the Khwārizmians, recent fugitives from Asia Minor (635/1238). The later defeat of these latter and the fall of the Ayyūbid dynasty in Egypt caused the region to pass into the hands of the Aleppo Ayyūbid al-Nāṣir Yūsuf, from whose time dates the administrative description of ʿIzz al-Dīn b. Shaddād; but in 658/1260 it was conquered by the Mongols, who were already in control of Asia Minor and Mesopotamia.

Henceforward the function of the Diyār Muḍar changed. Reconquered by the Mamlūks, who replaced the Ayyūbids in Egypt and Syria, they established a frontier with the Mongols of Persia, and later with the Turcoman dynasties who succeeded them at the end of the 8th/14th century. Successive invasions ruined the land, especially in the south, and Ḥarrān declined irretrievably, although Edessa was the capital of the province. As in the neighbouring regions of the north, east and west, the Turcoman element, here especially of the tribe of the Döger, increased its influence. At the end of the 8th/14th century, the region was again laid waste by Tīmūr. In the following century the fact that it served as a base for the inconclusive expansionist attempts of the Mamlūks towards the east gave it no security. It fell without difficulty into the hands of the Aḳ-Ḳoyunlu of Diyār Bakr, under the nominal suzerainty of the Mamlūks, and then to the Ottomans at the same time as Syria and Mesopotamia. It is remarkable that the bounds of the Arab population remain today much as they were at the time of the Crusades, so that the modern frontier between Turkey and Syria cuts the Diyār Muḍar in two, as it was cut in the 5th/11th and 6th/12th centuries.

Bibliography: The sources of the history and geography of this period are to the found especially, for almost all the Djazīra, in ʿIzz al-Dīn b. Shaddād, *Aʿlāḳ*, iii, analysed by Cl. Cahen in *REI*, 1934. (CL. CAHEN)

DIYĀR RABĪʿA, a name formed in the same way as Diyār Bakr [*q.v.*], is the most eastern and the largest province of the Djazīra. It includes three regions: that of the Khābūr and its tributary the Hirmās (Djaghdjagh) and their sources, *i.e.*, the slopes of the Ṭūr ʿAbdīn; that which is contained between the Hirmās and the Tigris, the former Bēth ʿArabāyē with the Djabal Sindjār; and that on both banks of the Tigris between Tell Fāfān and Takrīt, which marks the boundary with ʿIrāḳ. The lower reaches of the two Zābs are also included in this last region. The principal towns are the capital Mosul (al-Mawṣil) on the left bank of the Tigris, Balad, Djazīrat Ibn ʿUmar, al-Sinn, and in the west Barḳaʿīd, Sindjār, Nāṣibīn, Mārdīn and Raʾs al-ʿAyn.

The history of the Diyār Rabīʿa is often confused with that of al-Mawṣil. It was marked by numerous Khāridjī revolts, which also affected other regions of the Djazīra, as much in the Umayyad period as in the ʿAbbāsid. In the first period they were further complicated by the rivalries between the Caliphal governors of the Djazīra and Syria. An account of the troubles which afflicted the Diyār Rabīʿa in the ʿAbbāsid period is given in Suleiman Saigh, *Histoire de Mossoul*, Beirut 1923-8, i, 73 ff.; L. Veccia Vaglieri, *Le vicende del Ḫārigismo in epoca abbaside*, in *RSO*, xxiv, (1949), 31 ff.; M. Canard, *Hist. de la dynastie des Ḥamdānides*, i, 291 ff.

The Diyār Rabīʿa is the region from which sprang the Taghlibī family of the Ḥamdānids, who took part in these Khāridjī revolts and founded thereafter the quasi-independent amīrate of al-Mawṣil, which during the reign of Nāṣir al-Dawla consisted principally of the Diyār Rabīʿa. After the conquest of the Ḥamdānid amīrate of al-Mawṣil by the Buwayhids, the attempt on the part of the last Ḥamdānids, Ibrāhīm and Ḥusayn, to reconstitute this amīrate to their advantage at the time of the Buwayhid Bahāʾ al-Dawla (379-403/989-1012) was opposed on the one hand by the Marwānid of Diyār Bakr [*q.v.*], and on the other by the ʿUḳaylid amīr Muḥammad b. al-Musayyab, who had originally helped the two princes and had received three places in the Diyār Rabīʿa in return. The latter became ruler of al-Mawṣil, and was only nominally subject to the Buwayhid of Baghdād. He was the founder of the ʿUḳaylid dynasty of al-Mawṣil, to which the Saldjūḳs put an end.

Bibliography: in addition to the references given in the text, see: Le Strange, 87 ff.; M. Canard, *Hist. de la dynastie des H'amdânides*, i, 97 ff., 291 ff., 573 ff. *et passim*, where will be found information on the sources for the topography of the different regions of the Diyār Rabīʿa; Margoliouth, *The eclipse of the Abbasid caliphate*, index. (M. CANARD)

ii.—In the middle of the 5th/11th century the Diyār Rabīʿa sustained the repercussions of the Turkish advance. From 433-5/1041-3 it was ravaged by the first band of Turcomans, who were finally massacred. When in 447/1055 the Saldjūḳ sultan Tughrīl Beg was enthroned at Baghdād by the ʿAbbāsid caliph, the ʿUḳaylids, fearing for their Shīʿa faith and for their pastures, resisted his summons, and it was in their territories that the coalition of Arab adversaries of the sultan was organized, grouped under the former Buwayhid general al-Basāsīrī [*q.v.*], who was now adhering to the Fāṭimid caliph of Cairo (449-51/1057-9). The ʿUḳaylid Ḳuraysh however decided in due time to rally to Tughrīl Beg, who for his part in this frontier region preferred to content himself with his vassal status. The ʿUḳaylid principality thus remained until 479/1086, the son of Ḳuraysh, Muslim, recently suspected of intrigues with Egypt, having met his death in a battle in Syria, and Malikshāh, the third Saldjūḳ sultan, having thereupon annexed his dominions without a struggle. After the death of this sovereign the Saldjūḳ empire broke up, and the Diyār Rabīʿa followed the fortunes of al-Mawṣil, which was governed by a series of increasingly independent generals, one of whom, Zangī, appointed in 521/1127, finally made himself independent and founded the Atabek dynasty of al-Mawṣil. This lasted for about a century, although quarrels between its members, certain of which received Ayyūbid support, had on occasion detached Sindjār or Djazīrat Ibn ʿUmar from al-Mawṣil. Their former slave and minister Badr al-Dīn Luʾluʾ succeeded the Zangids in the 7th/13th century; he was led to pay homage to the Mongols for a time in 642/1244, but his sons, who had opened relations with the Mamlūks, were dispossessed in 659/1261. Subsequently al-Mawṣil and the Diyār Rabīʿa, in front of the Kurds and Turcomans of Diyār Bakr and the Mamlūk governors of the Diyār Muḍar, were the foundation of the power in the Djazīra of the Persian Ilkhāns, then of their Djalāʾirid [*q.v.*] successors, the Ḳara-Ḳoyunlu and Aḳ-Ḳoyunlu Turcomans, and finally the Ṣafawids, until their incorporation in the Ottoman empire which was completed only in 1047/1637. In spite of Persian attacks, the province remained Ottoman until 1918, but having absorbed no true Turkish population, unlike Diyār Bakr,

was not integrated into the new Turkey. The odd disposition of frontiers divides it between ʿIrāḳ and Syria.

See further the articles DJAZĪRA, DJAZĪRAT IBN ʿUMAR, AL-MAWṢIL, NAṢĪBĪN, SINDJĀR, and ZANGIDS.

Bibliography: The sources are those of the general history of the period; the only special work is *Histoire des Atabeks de Mossoul* of Ibn al-Athīr (ed. and Fr. trans. in *Recueil des Hist. des Croisades, Hist. Arabes*, ii/2), which, however, is particularly devoted to the exploits of Nūr al-Dīn, who reigned at Aleppo and not al-Mawṣil. The *Aʿlāḳ* of ʿIzz al-Dīn b. Shaddād describes the Diyār Rabīʿa (see Cl. Cahen, in *REI*, 1934), but does not give the developments promised about al-Mawṣil). (CL. CAHEN)

AL-**DIYĀRBAKRĪ**, ḤUSAYN B. MUḤAMMAD B. AL-ḤASAN, 10th/16th century author of a once popular history of Muḥammad, entitled *Taʾrīkh al-khamīs fī aḥwāl nafs nafīs* and preserved in numerous MSS and printed twice (Cairo 1283, 1302). The work is furnished in addition with a brief sketch of subsequent Muslim history. The brief enumeration of Ottoman rulers at the end stops in some MSS with Süleymān Ḳānūnī but usually ends with Murād III (982/1574). The author is also credited with a detailed description of the sanctuary in Mecca. There is much confusion concerning his identity. According to Ḥādjdjī Khalīfa (ed. Flügel), iii, 177, the *Taʾrīkh* was finished in 940/1534, and its author lived in Mecca and died in the 960s/1550s. His date of death is now given as 990/1582 on the basis of an identification with Judge Karam al-Dīn Ḥusayn al-Mālikī of Mecca, who was appointed judge of Medina in 982/1574-5 (al-ʿAydarūsī, *al-Nūr al-sāfir*, 380-3; Ibn al-ʿImād, *Shadharāt*, viii, 419 f.), but proof for this identification is not available. The unpublished works of al-Nahrawālī may decide the question. However, the identification is unlikely if only in view of Istanbul mss. of the *Taʾrīkh*, such as Topkapusaray, Aḥmed III 3044, which was written at the latest around 960/1553 and which states that the work was completed in 935/1528-9 (and which represents an earlier recension breaking off, originally, with the caliphate of Yūsuf al-Mustanṣir in Egypt); or Damad Ibrahim 898, dated Wednesday, 28 Ṣafar 941/(Tuesday) 8 September 1534, and stating that the work was completed on Sunday, 8 Shaʿbān 940/23 February 1534 (see Ḥādjdjī Khalīfa, *loc. cit.*).

Bibliography: Brockelmann, II, 500, S II, 514, III, 1293; *ʿOthmānlî müellifleri*, iii, 118 f. A further ms. of the *Risāla fī dharʿ al-Kaʿba* in Istanbul, Bagdatlî Vehbi 1142, 10b-16a. (F. ROSENTHAL)

DIYUSḲURIDĪS, is the most correct transcription of the Greek Διοσκορίδης; other forms, such as Diyāsḳūridūs, allow a certain Syriac influence to be admitted. In Islam the name always refers to Pedanius Dioscorides (Ist. century B.C.), born at Anazarbe in Cilicia, whose name when fully arabicized is Diyusḳuridīs al-ʿAyn Zarbī. What the Muslims in the Middle Ages knew of him and his work can be found summarized in the *Ṭabaḳāt al-aṭibbāʾ wa 'l-ḥukamāʾ* by Ibn Djuldjul, ed. Fuʾad Sayyid, Cairo 1955, 21). After Galen (Djālīnūs [*q.v.*]) (377/987), he is the doctor most frequently quoted by Muslims. His περὶ ὕλη ἰατρικῆς, which was already considered by Galen to be a definitive manual of *materia medica* and which has been the foundation of Muslim pharmacology [see ADWIYA] is known in Arabic by different names: *Hayūlā ʿilādj al-ṭibb, Kitāb al-adwiya al-mufrada* and *Kitāb al-ḥashāʾish*. It was an original translation from Greek into Syriac which provided the basis for the Arabic version; this was made by Iṣṭifān b. Basīl, with the original text before him, and corrected by Ḥunayn b. Isḥāḳ [*q.v.*] in Baghdād in the 3rd/9th century; it was the only complete translation made in the Muslim world. This translation, like the earlier Greek text, was issued in two versions: 1) the original edition of Dioscorides, which arranged simple drugs systematically in groups, divided the work into five books; to these were added up to three later apocryphal books on poisons.—2) for ease of reference, alphabetical order was introduced, an arrangement which lent itself to expansion of the text.

The Arabic text of Dioscorides was disseminated *in extenso* or in fragments throughout the whole Muslim world and has helped later pharmacological studies in the Arabic language. Two great difficulties have been evident from the start: the first a question of natural history, from the fact that botanical species were not the same everywhere; the second, a linguistic and lexical difficulty, for it was not easy to name the different species without ambiguity. The original Arabic translation acknowledges these difficulties by introducing into the text the original Greek, Syriac and Iranian names.

For this reason, the marginal glosses are of the highest importance for the manuscripts of the *materia medica* of Dioscorides. One of the most precious, the codex copied at the imperial court of Byzantium for princess Anicia Juliana, is of great interest on account of the variety of its glosses which bear witness to the hazardous progress from East to West of Greek as well as Arabic manuscripts, giving proof of the continuous scholarly work which they have inspired. During the 4th/10th century the centre of this ceaseless labour was the caliphal court at Cordova where the monk Nicholas who had come from Constantinople, in collaboration with Ḥasdāy b. Shaprūṭ [*q.v.*] and others, adapted the old eastern Arabic version to the needs of western Hispano-Arabic nomenclature, a task which was continued by Ibn Djuldjul, Ibn Buklārish and others. A similar readaptation was carried out in the East by al-Ḥusayn b. Ibrāhīm al-Natīlī who dedicated his Arabic Dioscorides in 380/990-91 to prince Abū ʿAlī al-Samdjūrī of Ṭabaristān. Now, if Arabic pharmacology reached its apogee in al-Andalus with al-Ghāfiḳī and Ibn al-Bayṭār [*q.v.*], not only was use made of fragments of the text of Dioscorides, but also Ibn al-Bayṭār (7th/13th century) himself edited a *Tafsīr Kitāb Diyusḳuridīs*, a manuscript of which, with its glosses, is preserved at Mecca. Later the polygraph Abu 'l-Faradj—Bar Hebraeus (7th/13th century) wrote a résumé in Syriac entitled *Kethabha dhe Dhioskoridhus*. On the whole, the work of Dioscorides was known above all in the fragmentary form preserved by Ibn al-Wāfid, Māsawayh and others. Latin versions which for the most part were made in Toledo allowed mediaeval Europe to become acquainted, through the medium of two translations, with only part of his work; and the complete text of Dioscorides only became known in the West at the Renaissance. But fragments of the Arabic Dioscorides were also translated in the East, as is proved by the Armenian pharmacology of Amīr Dawlat (2nd half of the 15th century).

Any study of the *materia medica* of Dioscorides is incomplete if his iconography is omitted. Dioscorides himself used botanical drawings by Cratevas (Ist

century B.C.), whose sketches are preserved in Greek and Arabic manuscripts. In their illustrations these manuscripts contain an additional element which may help to determine their origins. As for the iconography, in addition to the ancient source already mentioned, it sometimes reveals Byzantine traces, and at other times Iranian influence; by the nature of things the different Muslims schools of painting are reflected, as for example the Baghdād school or the later Persian schools. Particularly interesting as a Muslim botanist and one of the most original is Ibn al-Sūrī (d. 639/1241), who when botanizing in Syria took with him an artist who made drawings of plants for him at different stages of growth; it is astonishing that Ibn al-Bayṭār does not quote this author who was his contemporary. In the iconography of the Arabic Dioscorides we have a proof that Diyusḳuridīs became the point of fusion of all the earlier traditions, enriched by the Muslims' observations of nature.

DIZFŪL, the capital of the district (*shahristān*) of the same name in the VIth *ustān* (Khūzistān) of Persia, is situated in 32° 23′ N. Lat. and 48° 24′ E. Long. (Greenwich), on the left bank of the Āb-i Diz or Dizfūl-rūd. This river, which rises in the neighbourhood of Burūdjird, flows into the Kārūn [*q.v.*] at Band-i Ḳīr (ʿAskar Mukram, [*q.v.*]). The town, which stands 200 metres above sea level, is built on a conglomerate formation; many of the inhabitants have made cellars (*sardābs*) under their houses in this formation, into which they retire during the heat of the day in summer. Dizfūl (Persian Dizpūl = 'Castle bridge') takes its name from the fortress which was built to protect the well-known bridge over the river there. The piers of this bridge, like those of the even more famous bridge at Shūshtar [*q.v.*], are undoubtedly Sāsānid; their construction may have been supervised by Roman engineers in the time of Shāpūr I (see D. L. Graadt van Roggen, *Notice sur les Anciens Travaux Hydrauliques en Susiane*, in J. de Morgan's *Mémoires de la Délégation en Perse*, Paris 1905, vol. vii, 187). The arches and superstructure are of later origin and have frequently been repaired. According to Mustawfī (740/1339-40), this bridge had 42 arches, while ʿAlī of Yazd (828/1424-5) stated that it had 28 large and 27 small arches, making 55 in all (these authors doubtless regarded as arches the supplementary vents over the piers which were made in order to ease the pressure on the structure when the river was greatly in flood).

The name Dizfūl did not come into use until the 6th/12th century; previously it had been known as Andālmishk or Andāmishk (this name is now borne by the small town on the Trans-Iranian railway 11 km. to the north of Dizfūl). The older Arab geographers gave the town various names, such as Ḳasr al-Rūnāsh, Ḳanṭarat al-Rūm ('the Roman Bridge'), Ḳanṭarat al-Rūd ('the River Bridge') and Ḳanṭarat al-Zāb (Zāb repeatedly occurs as a river name; it is from the Semitic root זוב 'to flow').

Procopius, in his *Caesareensis* (Book I, v, 7-9, 28 and 29) has given an interesting account of a 'castle of oblivion' (τὸ τῆς Λήθης φρούριον) somewhere in Persia where persons of high degree were incarcerated; no one, under pain of death, was allowed to speak of it. Neither Procopius nor the Arab and Persian writers who also mentioned this castle gave its precise location, but, according to Armenian sources, it was at Andāmishn, which H. Hübschmann, in his *Armenische Grammatik* (Leipzig 1897, 19), has identified with Andāmishk, that is, Dizfūl.

Dizfūl, like Shūshtar, was for long overshadowed by the neighbouring city of Gundī-Shāpūr. Later, when Gundī-Shāpūr fell into ruin, Dizfūl became more prosperous, but it and the surrounding district suffered when the wonderful hydraulic system of the Sāsānids fell into disrepair. Although Dizfūl escaped destruction by the Mongols, it afterwards submitted to the rule of the Il-Khāns. In 1393 it offered no resistance to Tīmūr. It is said that, shortly after its surrender to Tīmūr, Khʷādja ʿAlī, the grandson of Shaykh Ṣafī [*q.v.*] of Ardabīl, visited Dizfūl and converted its inhabitants to Shīʿism by temporarily stopping the flow of the Āb-i Diz by a display of his supernatural powers. Nādir Shāh [*q.v.*] visited Dizfūl on several occasions; in order to protect it against the Lurs, he built a fortress called Diz-i Shāh some miles to the north-east.

Muḥammad ʿAlī Mīrzā, one of the sons of Fatḥ ʿAlī Shāh [*q.v.*], had the famous bridge repaired in the early years of the 19th century, but exceptionally heavy floods in 1832 swept away the parts that had been so carefully restored. It was at this time that the cultivation of indigo was introduced on a large scale in the neighbourhood. Much indigo was produced until the importation of foreign dyes made the industry uneconomic. Dizfūl was also noted for its reed pens, which were for long considered the best in the east and were exported far and wide. The raw material for this industry was supplied by the inexhaustible reed-beds in the so-called Baṭīḥa, the marshes of the lower reaches of the Tigris and Euphrates.

Owing to very severe outbreaks of plague and cholera at Shūshtar in 1831 and the following year, Dizfūl for a short while supplanted it as the capital of Khūzistān. About the middle of the 19th century, Loftus estimated the population of Dizfūl at between 15,000 and 18,000, all of whom were Muslim except some 30 Mandaean families. Wells, in 1883, gave the total as 20,000, while Herzfeld, in 1907, estimated it at only 15,000, including Persians, Kurds, Lurs and Arabs. At the present time (1962), the population is approximately 50,000. Many of the inhabitants, like those at Shūshtar, are *Sayyids* or descendants of the Prophet. In the town are some 35 mosques and a large number of tombs of saints; in the suburb of Rūband is the shrine of Sulṭān Ḥusayn which closely resembles that of the Prophet Daniel at Susa (Shūsh).

Quite recently the bridge over the Āb-i Diz has been extensively repaired; in the process, a number of the old arches have been replaced by three modern spans.

Dizfūl and the surrounding area will undoubtedly benefit greatly when the big dam across the Āb-i Diz which is now (1959) under construction in a gorge 12 miles to the north-east of the town has been completed, as it will not only provide sufficient water to irrigate a large area, but it will also supply electricity on a large scale to northern and central Khūzistān.

DJAʿALIYYŪN: (1) A group of tribes in the Republic of the Sudan. The principal tribes of this group, mainly sedentary in their way of life, inhabit the banks of the main Nile from the Dongola [*q.v.*] region southwards to the Fifth (Sabalūḳa) Cataract. Other tribes and clans in Kurdufān (Kordofan) and elsewhere attach themselves to this group. The link among the tribes of the Djaʿaliyyūn is traditionally expressed in genealogical form: their eponymous founder (rather than ancestor) is said to have been a certain Ibrāhīm known as *Djaʿal* (*i.e.*, "he made", because he made himself a following from those whom he relieved in a famine). More realistically, the common element of the Djaʿaliyyūn group may be seen in a Nubian strain in their ancestry. The Danāḳila, or northern tribes of the group still speak a Nubian tongue. They are separated from the southern Djaʿaliyyūn by the Shayḳiyya. Although no memory of Nubian speech survives in the southern sector of the group, the name of Berber [*q.v.*] may well indicate an ancient linguistic enclave or frontier (cf. the Barābra [*q.v.*] further north). Migration from the Nile valley, a recurrent historical phenomenon, probably accounts for the numerous claims to Djaʿalī descent made in other parts of the Sudan, *e.g.*, by the Hamadj of the Sinnār region, and by a group of tribes lying west of the Nile whose names are derivatives of the root DJ-M-ʿ, "to gather"—a clear indication of synthesis. Elsewhere a ruling clan claims descent from the marriage of a Djaʿalī immigrant with a local woman, *e.g.*, the Nabtāb among the Bedja [*q.v.*] Banī ʿĀmir, and the dynasty of the hill-state of Taḳalī in the Nūba Mountains. The rise of the Shayḳiyya confederacy in the 17th and 18th centuries produced a notable migration of Danāḳila-Djaʿaliyyūn which affected the culture and commerce of Dār Fūr [*q.v.*]. Tradition also represents Ibrāhīm Djaʿal as a descendant of al-ʿAbbās: this may be regarded as a later sophisticated pedigree of a type not uncommonly adopted by parvenu groups. ʿAbbāsī has thus become virtually synonymous with Djaʿalī in Sudanese usage. The claims of the dynasties of Dār Fūr and Waddāy to ʿAbbāsid descent should be understood in this sense.

(2) The name of Djaʿaliyyūn in a more restricted sense is commonly and currently applied to a specific tribe, the most southerly member of the riverain group, which has its territory (*dār*) between the Atbara-Nile confluence and the Sabalūḳa Cataract. It is probably the "kingdom of Al Ǧaʿl" mentioned by the Jewish traveller, David Reubeni, who passed through its territory in 1523. During the Fundj period, the Djaʿaliyyūn were dependent upon their southern neighbours, the ʿAbdallāb, whose hereditary chief, the Wad ʿAdjīb, was paramount over the Arab tribes under the sultan of Sinnār. From the late 10th/16th century until the Turco-Egyptian conquest, the tribe was ruled by chiefs (*mukūk*, sing. *makk*) of the Saʿdāb clan. Their capital was at Shandī (Shendi) on the right bank of the Nile. At the time of Bruce's visit (1772) the effective ruler was an ʿAbdallābiyya princess, the widow of the late *makk*. Under the last *makk*, Nimr Muḥammad, the Djaʿalī tribal kingdom was far more important than that of the ʿAbdallāb, whose power was much decayed. At the time of Burckhardt's visit (1814) Shandī was the principal trading-centre of the eastern geographical Sudan, as it was the meeting-place of routes from the interior of Egypt and the Red Sea. During the Turco-Egyptian invasion, *Makk* Nimr submitted to the *serʿasker* Ismāʿīl Kāmil Pasha (23 Djumādā II 1236/28 March 1821). When Ismāʿīl returned from Sinnār in the following year, he was entertained at Shandī by Nimr. A quarrel over the slave-tribute, a matter then causing great tension in the newly annexed territories, led to Ismāʿīl's assassination, which in turn touched off a revolt of the Djaʿaliyyūn and the tribes to their south. The rising was bloodily suppressed by the *defterdār* Meḥmed Khüsrev Bey, the *serʿasker* in Kurdufān. Shandī was devastated, and the sister-town of al-Matamma, on the left bank of the Nile, became the principal urban centre of the tribe. In general, however, the Djaʿaliyyūn, sharpwitted folk with great trading ability, profited under Turco-Egyptian rule. Djaʿaliyyūn of the dispersion were numerous in Kurdufān and Dār Fūr, especially in the Arab-negroid southern fringe, where conditions were particularly favourable to petty traders (*djallāba*). The involvement of the *djallāba* in slave-trading led to severe measures being taken against them by the governor-general C. G. Gordon Pasha in 1879. It is therefore not surprising that many of the Mahdī's supporters were Djaʿaliyyūn of the dispersion. The Djaʿaliyyūn and other riverain tribes were prominent in the early years of the Mahdist state, but the Khalīfa ʿAbd Allāh [*q.v.*] transferred political power increasingly to the Baḳḳāra [*q.v.*]. When Kitchener began his great advance towards Omdurman, the Djaʿalī chief of al-Matamma, ʿAbd Allāh Saʿd, refused to obey the Khalīfa's order to evacuate the town (which was to form the base for the Mahdist forces), and sent for help to the *serdār*. This could not be given; al-Matamma was retaken by Mahdist troops, and ʿAbd Allāh Saʿd was killed (30 Muḥarram 1315/1 July 1897). Under the settled rule of the Condominium, the Djaʿaliyyūn gained from the increasing opportunities for trade and education, and are ubiquitous throughout the territories of the present Republic of the Sudan.

DJABĀ [see BENNĀK].

DJĀBA (variants: Ibn Rusta : *N. djāba*; Yaʿḳūbī: *N.h.nāya*, *Kanbāya*; al-Idrīsī: *Djāfa*; *ibid*, MS. Cairo: *Ḥāba*; again, *ʿĀba*, *Ghāba*, *ʿĀna*, etc. occurring in the same list of kings separately in Ibn Khurradādhbih and al-Idrīsī are perhaps a dittography of *Djāba*) represents the name of the former hill-state of Chamba (old name *Čampā*). The ancient capital of the state was Brahmapura (or Vayrāṭapaṭṭana). Hiuen Tsang describes the kingdom as 667 miles in circuit, and it must have included the whole of the hilly country between the Alaknanda and Karnālī rivers (Law, *Historical geography*). Later, the city of Chamba became the capital. On 15 April 1948 it was merged into Himāčal Pradesh to be centrally administered by the Union Government of India.

Djāba is generally used by the Arab writers as the title of the rulers of Chamba, who were probably Sūryavamśī Rādjpūts. According to Ibn Rusta, the king enjoyed an honourable position (among the kings of India) and belonged to the *Salūḳī* (race). The term *Salūḳiyyīn*, which undoubtedly applies to the ruling dynasty of Chamba, seems to have been wrongly used for the country in *Ḥudūd al-ʿālam* (for the *salūḳī* hound, see KALB). There is difference of opinion among scholars with regard to the date of the foundation of the Chamba dynasty. The earliest Arabic source to mention Djāba is Ibn Khurradādhbih, and the first draft of his work was prepared in 231/846, although the original report upon which his information and that of other Arab writers was based was drawn up much earlier. It is therefore very likely that the city of Chamba existed during the early decades of the 9th century A.D.

Ibn Rusta and Marwazī state that the rulers of Chamba, on account of their pride (*sharaf*) took wives only from among themselves but the *Balharā* kings (the Rāshṭrakūṭas), married their ladies. Then, they were always at war with *al-Djurz* (the Gūrdjara-Pratīhāras) who also fought the Rāshṭrakūṭas and *al-Ṭāḳā* (Ṭakka-deśa east of Sialkoṭ). It may be deduced from the above information that the Rāshṭrakūṭas and the rulers of Chamba may have been allies, not only because they had a common enemy in the Gūrdjara-Pratīhāras, but also because they were related to each other, in the internecine wars for political supremacy in India at this period.

The Red Sandalwood, which according to Ibn Rusta was exported from Chamba, is the product of *Pterocarpus santalinus*, native of South India, Ceylon and the Philippine Islands; climatic conditions could not have favoured its growth in Chamba. Al-Bīrūnī says that the red sandalwood is رخت جندن, (= Skt. *rakta-čandana*) and was exported from Djawa.

The kingdom of Djābat al-Hindī, the Island of Djāba (Ibn Khurradādhbih), the Indian Djāba (*Ḥudūd al-ʿālam*) and Djāba Island (Ḳazwīnī, *ʿAdjāʾib*) are all the same place as *Zābadj* of other Arab writers and represent Java [*q.v.*].

DJABAL, Mountain, see under the name of the Mountain.

AL-**DJABAL** [see AL-DJIBAL].

DJABAL-I BARAKĀT [see YARPŪT].

DJABAL AL-**ḤĀRITH** [see AGHRIDĀGH and DJUDĪ]

DJABAL ṬĀRIḲ, GIBRALTAR, the promontory of calcareous rock, a British possession, south-west of the Spanish province of Cádiz, almost at the southern extremity of Spain (length 4.6 km., breadth reaching 1.2 km.; area, 4.9 sq. km.; highest point 425 m.); the town extends the length of the western slope, which is fairly gradual, and numbers 28,000 inhabitants (British, Spanish, Jews and Moroccans) (including the garrison); it is as it were the key to the Mediterranean, and is fortified and studded with batteries on a gigantic scale. In the bay to the west, called the Bay of Gibraltar or of Algeciras, there was in antiquity the European column of Hercules, also called Calpe or Abyla Mons, facing the African column called Columna Abyla or Abenna, the modern Ceuta. Gibraltar commands, from the north-east, the whole strait between Europe and Africa, the Atlantic Ocean and the Mediterranean Sea; in antiquity this strait was called Γαδειρίτιδες Πύλαι, Fretum Gaditanum (from Gades, Cadiz) or Herculeum; the Arabs call it (*Khalīdj*) *al-Zuḳāḳ*, "(canal of) the alley" [see BAḤR AL-MAGHRIB]. Gibraltar received also the name of *Djabal al-Fatḥ* or *Djabal Ṭāriḳ* from the name of Ṭāriḳ b. Ziyād [*q.v.*], who landed there in 92/711. During the entire Arab period the port, the town and the citadel ("The Moorish Castle") on the north-west of the rock played a continual part as a sure base for vessels, while Algeciras, facing it across the bay, developed still further and became the prosperous principal town of the entire southern extremity of Andalusia. The Almohad caliph ʿAbd al-Muʾmin, on his return from the Ifrīḳiya campaign (554-5/1159-60) sent from Constantine orders to his son and successor Yūsuf, then governor of Seville, to construct a new town at Gibraltar which, with regard to the attacks aimed at Cordova, Granada and Seville, would serve as a base and as an assembly point for the large scale campaign he intended to undertake against the Christian kingdoms of the Peninsula. Yūsuf, from Seville, and his brother

ʿUthmān, from Granada, hastened to collect the necessary material and workmen for the foundation of a new and beautiful city with a cathedral mosque, palace for the Caliph and his children, and vast dwellings for the high officials of the empire, and for the troops, all, including gardens and orchards, supplied by water derived from mountain springs. The architect in charge of the works was al-Ḥadīdī; in the "Moorish Castle" remains of the fortifications erected at that time by the Almohads have been preserved up to the present day. ʿAbd al-Muʾmin arrived in Gibraltar in Dhu 'l-Ḳaʿda 555/November 1160; he received the homage of the whole of al-Andalus with great pomp and, having organized a reception in which the poets took part, inspected and accelerated the work on the new city which he named *Madīnat al-fatḥ* "city of victory", he returned to Morocco in Muḥarram 556/January 1161, after a stay of two months. In 709/1309 Gibraltar was taken by Alonso Pérez de Guzmán, el Bueno, on behalf of Ferdinand IV of Castile, but in 733/1333 it fell into the hands of the Marīnids of Morocco, from whom the Naṣrid Yūsuf III Abu 'l-Ḥadjdjādj of Granada took it, but only in 813/1410, until the time when, on 24 Dhu 'l-Ḳaʿda 866/20 August 1462, the town was finally conquered by the duke Guzmán de Medina Sidonia on behalf of Henry IV of Castile. From 1462 to 1502 it became, together with all the mountainous region of the Campo de Gibraltar, on the north-west (in substance the entire Sierra de los Gazules), a hereditary fief of the Guzmáns of Medina Sidonia, after which it reverted to the crown. In 947/1540 Gibraltar was pillaged by the Algerian corsair Khayr al-Dīn, but in 959/1552 it was powerfully fortified by Charles Quint; in 1019/1610 the admiral Don Juan de Mendoza embarked at Gibraltar the Moors who had been driven out of Spain in order to return them to Africa. In the war of the Spanish succession Gibraltar fell in 1704 into British hands, and subsequently had to sustain several difficult sieges, particularly in 1779-83 under General Elliott, against Spain and France.

DJABALA, Djeblé, Lat. Gabala, Fr. Gibel, Zibel (not to be confused with Giblet-Djoubayl) is a small port on the Syrian coast, situated 30 km. to the south of al-Lādhiḳiya, facing the island of Ruwad; it is one of the termini of the main road from Khurāsān, through the valley of the ʿAya al-Sharḳī in contact with Djabal Bahirā and Ghāb, where there are roads towards Apamée and Aleppo.

This town was an important commercial centre from the time of the Phoenicians, a Dorian colony in the 5th century B.C. and then a prosperous Roman town, surrounded by a coastal plain rich in agricultural products; it was conquered and its fortifications destroyed by ʿUbayda b. al-Djarrāḥ in 17/638; Muʿāwiya reorganized its defences and built a citadel separate from the Byzantine fortifications.

In the 4th/10th century, with the renewal of the power of the Byzantines, the town was occupied by them on two occasions (Nicephorus Phocas in 357/985, and John Tzimisces in 364/975). In 375/985 it once again became part of the *djund* of Ḥimṣ. In 473/1080, *ḳāḍī* Abū Muḥammad ʿAbd Allāh b. Manṣūr, known by the name of Ibn Ṣulayḥa, drove the Byzantines out, and the town fell into the hands of the Muslims who kept an important Jacobite bishopric there. After the third attempt of the Franks, the *ḳāḍī* surrendered the town to the *atabeg* of Damascus Tughtakīn (Shawwāl 494/August 1101); a short time later the Damascan garrison was driven out and replaced by the Banū ʿAmmār of Tripoli.

In 502/1108-9 Djabala was captured by the Crusaders, its commerce was given to the Genoese and it became the seat of a Roman bishopric.

In 584/July 1188 Ṣalāḥ al-Dīn was called in by the inhabitants and captured the town, which became part of the empire of al-Ẓāhir. Between 1192 and 1285 Djabala was the object of rivalry between the Templars and the Hospitallers. In 1285 Sulṭān Ḳalāwūn took possession of it and joined it to the *niyāba* of Ḥamāh; throughout the Mamlūk occupation the town's prosperity benefited from the important pilgrimage to the tomb of the Ṣūfī Ibrāhīm b. Adham [*q.v.*] (d. 161/778).

In 1516 it remained for four centuries under Ottoman rule. Nowadays Djabala, surrounded by gardens, is no more than a small town where it is still possible to admire numerous traces of the past.

(N. Elisséeff)

DJABALA, an isolated mountain (known locally as a *haḍba*) located in Nadjd at about 24° 48′ N, 43° 54′ E, some 60 km. north-west of al-Dawādimī, 25 km. south and east of Nafī, and 15 km. west of Wādī al-Rishāʾ. The mountain, which consists of reddish stone, rises abruptly from the surrounding gravel plains. About seven km. in length and three km. wide, Djabala runs from south-west to north-east with three main wādīs descending from its slopes on the south-east, the north-east, and the north-west, all of which eventually flow eastwards into Wādī al-Rishāʾ. The local pronunciation of the name is Dja-bá-la (cf. Doughty's "Gabilly").

According to the classical Arab geographers, Djabala lay five days' journey from Ḥadjr in al-Yamāma and was inhabited by the ʿUyayna brauch of Badjīla. It had al-Shurayf on the east, whose water belonged to Banū Numayr, and on the west al-Sharaf, whose water belonged to Banū Kilāb. None of these names is familiar to the present inhabitants of the area.

Before Islam the battle of Yawm Djabala (or *Yawm al-Nūḳ*) took place in one of the wādīs descending from this mountain; the Arabs number it with those of al-Kulāb and Dhū Ḳār among the greatest battles. An unusually large number of Arab tribes took part. On one side were ʿĀmir b. Ṣaʿṣaʿa [*q.v.*], with whom ʿAbs amongst others had allied themselves; on the other side were practically all of Tamīm under the leadership of Laḳīṭ b. Zurāra, supported by Dhubyān and Asad, detachments from al-Ḥīra led by the step-brother of the reigning king, and men of Kinda under the "two Djawna", members of the family then ruling in al-Baḥrayn. In spite of great numerical superiority, Tamīm and their allies,

relying, as suggested by a remark of the poet Labīd, too much on one another, were utterly defeated. The prince Laḳīṭ fell, while Ḥādjib, one of his brothers, was taken prisoner and afterwards ransomed for a huge sum. This defeat shattered the last remnants of Kinda's power in Central Arabia; one of the tribe's leaders also fell in battle. The statements regarding the date of this battle are, as usual, contradictory and uncertain. According to some it took place 17 or 19 years before the birth of the Prophet, while others say it was fought in the year of his birth. Caussin de Perceval places it a few years later, and this must be the correct date, if the king of al-Ḥīra who sent reinforcements was, as is said, al-Nuʿmān b. al-Mundhir; his reign did not begin until about 580 A.D.

In 1347/1929 another memorable battle took place at Djabala between branches of ʿUtayba. Following the crushing defeat of the rebellious *Ikhwān* at al-Sabala by King ʿAbd al-ʿAzīz Āl Saʿūd, the Barḳā branch of ʿUtayba fled, under Sulṭān b. Bidjād Āl Ḥumayd, the paramount Shaykh of ʿUtayba and one of three leaders of the rebels. He and his men were eventually caught and beaten again at Djabala by ʿUmar Ibn Rubayʿān, in command of loyal elements of al-Rawḳa of ʿUtayba. Sulṭān himself managed to escape once more, but he was later taken prisoner. Like Tamīm on Yawm Djabala, the fugitive members of ʿUtayba may have been attempting to reach one of the waters of Djabala, either the *mishāsh* of ʿAṭiyya in the south-eastern wādī or the *ʿidd* of Muwādjih in the north-eastern wādī, the reputed site of the pre-Islamic battle.

(F. Buhl-[R. L. Headley])

DJABALA b. al-AYHAM, the last of the Ghassānid dynasts whose personality dominates the scene in the story of Arab-Byzantine relations during the Muslim Conquests and may evidence the resuscitation of the Ghassānid Phylarchate after its destruction during the Persian invasion in A.D. 614.

As the ally of Byzantium, Djabala fought against Muslim arms but lost twice, first at Dūmat al-Djandal and later at Yarmūk, after which battle he made his exit from military annals. But tradition has remembered him in beautiful anecdotes whether as a Muslim who could not endure the rigour of Islam's egalitarian ideal or an apostate to Christianity living amid glittering court surroundings in Constantinople and reminiscing on his former days in the Djawlān.

(Irfan Kawar)

DJAʿBAR or **ḲALʿAT DJAʿBAR**, a ruined fortress situated on the left bank of the middle Euphrates, almost opposite Ṣiffīn. Also called Ḳalʿat Dawsar from the name by which this locality was known in the pre-Islamic period and in the early days of Islam (Pauly-Wissowa, iv, 2234: *to Dawsarôn*, which explains the Arab traditions connecting this name Dawsar with the king of al-Ḥīra, al-Nuʿmān b. al-Mundhir), it was described by ancient Arabic authors as a stopping-place on the route leading from al-Raḳḳa to Bālis (Ibn Khurradādhbih, 74; al-Tabarī, iii, 220). In the Mamlūk period it became a stage on the Ḥimṣ-Raʾs al-ʿAyn postal route.

The fortress owes its modern name to the Ḳushayrī Djaʿbar b. Sābik who captured it in the time of the Saldjūḳids, but was forced to give it up to sultan Malikshāh. The latter handed it over to the last ʿUḳaylid of Ḥalab, Sālim b. Mālik, who had been expelled from his former possessions (479/1086-7), and Ḳalʿat Djaʿbar remained in the hands of Sālim's descendants for almost a century, apart from a brief occupation by the Franks (497/1102). Zankī, the powerful *atabeg* of al-Mawṣil, was assassinated there in 541/1146 while besieging it, and in 564/1168-9 the ʿUḳaylid Shihāb al-Dīn Mālik was forced to surrender it, in exchange for other districts, to Nūr al-Dīn who put up various buildings there; of these a minaret still survives. The importance of the Jewish colony at the time was noted by Benjamin of Tudela. Subsequently Djaʿbar passed into the hands of the Ayyūbids, and then the Mamlūks. Under the latter dynasty it was at first abandoned but the fortress, which had fallen into ruin in the time of Abu 'l-Fidāʾ, was restored at the end of al-Nāṣir Muḥammad's reign by governor Tankīz in 736/1335-6. Traces of the fortress still attract attention, standing above a steep chalky cliff and dominating the wide Euphrates valley, but no serious archaeological investigations have ever been conducted there. According to ʿĀshiḳpashazāde (chapter 2) and other early Ottoman historians, Sulaymān Shāh, the ancestor of the Ottoman Sultans, was drowned nearby; he was buried by the castle of Djaʿbar and commemorated by a tomb known as Mezār-i Türk or Türk Mezārī. The tomb was reconstructed by order of ʿAbd al-Ḥamīd II and retained as Turkish property by article ix of the Treaty of Ankara of 1921. This story is perhaps due to a confusion between Sulaymān Shāh, the putative grandfather of ʿOthmān I, and the Saldjūḳid prince Sulaymān b. Ḳutlumush [*q.v.*]. The tomb itself is in all probability not connected with either of them.

(D. Sourdel)

DJABART, the name of the Muslims of Ethiopia. Originally the name of a region (Djabara or Djabart) in the territories of Zaylaᶜ and Ifāt (cf. al-Maḳrīzī, *al-Ilmām*, Cairo 1895, 6 ff.), later applied to all the Muslim principalities of southern Ethiopia and, ultimately, to all Muslims living in Ethiopia. The term Djabart is sometimes also used by the Christian population of Ethiopia with reference to the Muslims of the Arabian peninsula and thus becomes identical with the term Muslim in general. In modern usage Djabart is almost invariably employed, in a narrow sense, to describe the Muslim nuclei in the Christian plateau provinces of Eritrea, Tigre, Amhara, Shoa, etc. The common form Djabarti is scarcely a *nisba* but rather shows the *-i* ending by which Tigriña and Harari dissolve final consonant clusters. According to Abyssinian tradition the word is derived from Ethiopic *agbərt* (pl. of *gabr*) "servants (of God)"—cf. the similar development in the case of *ᶜibād*. In Amharic a Muslim is called *əslam* or *näggadᵞe* ("trader").

The Djabarti live in families and small groups scattered throughout the Christian Abyssinian highlands. Ethnically and linguistically they are indistinguishable from their Christian neighbours. Their knowledge of Arabic is generally limited to the minimum necessary for an understanding of the Ḳurʾān. Some of them claim descent from the first Muslim refugees who were sent to Abyssinia by the Prophet. The majority, however, owe their conversion to the sultanates in south-east Ethiopia and to the invasion of Aḥmad Grañ. In general, the relations between Djabarti and Christians are friendly, though discrimination against them was not unknown in the past, particularly in the deprivation of *rəsti* (the hereditary land-right), which led many of them into commerce and handicrafts.

Estimates of their numbers vary greatly, but it seems safe to say that there are about 20,000 Djabarti in the three plateau provinces of Eritrea and not less than 50,000 in Ethiopia (these figures exclude, of course, the fairly large number of Muslims other than Djabarti in the narrow application of the term). They maintain a number of mosques and Ḳurʾān schools. In *madhhab* they belong to the Mālikiyya and Shāfiᶜiyya. The Djabarti have a *riwāḳ* at al-Azhar in Cairo.

Pollera, *Le popolazioni indigene dell'Eritrea*, Bologna 1935, 149-52; J. S. Trimingham, *Islam in Ethiopia*, Oxford 1952, 150-3. (E. ULLENDORFF)

AL-**DJABARTĪ**, ᶜABD AL-RAḤMĀN B. ḤASAN, the historian, b. 1167/1753, d. 1825 or early 1826, was a descendant of a Ḥanafī family from al-Djabart [*q.v.*]. According to al-Djabartī the people of that region were very strict in their religion and were inclined to asceticism. Many of them went on foot to the Ḥidjāz, either as pilgrims or as *mudjāwirūn*. They had three *riwāḳ*s of their own: one in the mosque of Medina, one in the mosque at Mecca, and one in the mosque of al-Azhar at Cairo. The forefather of the Egyptian branch of the family of al-Djabartī, ᶜAbd al-Raḥmān by name, who was al-Djabartī's "seventh grandfather", went first to Mecca and Medina, where he studied for a long time; he then reached Egypt and joined the *riwāḳ* of the people of al-Djabart in al-Azhar at the beginning of the 10th/end of 15th or beginning of 16th century. There he became the head (*shaykh*) of the *riwāḳ* and the leader of the Djabartī community. The office of the *shaykh* of the *riwāḳ* was inherited from father to son in al-Djabartī's family; all the holders of this office are described as very religious, ascetic and upright people.

From such a family rose a very great historian, who is undoubtedly a unique phenomenon in Muslim historiography. For in glaring contrast to the period of the Mamlūk sultanate (648-918/1250-1512), which abounds in rich, most detailed and accurate source material, hardly surpassed in either quality or quantity by the source material pertaining to any other region of Islam, the period of Ottoman rule in Egypt (918-1226/1512-1811 approximately) is conspicuous for the dearth of its historical sources written by contemporary inhabitants of the country. A very limited revival of historiography in Egypt, which took place towards the close of the 11th/17th century, did not change substantially this state of affairs. According to al-Djabartī's own testimony, the study of history was completely ignored and despised by his contemporaries. He himself would not have dealt with it had he not been ousted from public life. His knowledge of Muslim and Egyptian history up to 1100/1688 (the year with which his chronicle opens) seems to have been very limited; yet in spite of these handicaps, and in spite of the fact that he had written only a local history of a province belonging to a much wider empire, he succeeded in writing one of the most important chronicles of the Arab countries during the Muslim period.

Al-Djabartī's main historical work is his chronicle, entitled *ᶜAdjāʾib al-āthār fi 'l-tarādjim wa 'l-akhbār*, which covers the years 1100/1688 to 1236/1821. He gives us two versions about its compilation: from the first version, which is somewhat unclear, it would appear that he started to take notes for his book regularly from 1190/1226-7. According to the second version, the Damascene historian al-Murādī, author of the biographical dictionary of famous people of the 12th/18th century (*Silk al-durar fī aᶜyān al-ḳarn al-thānī ᶜashar*) was the "main cause" of the compilation of the chronicle in its existing form. Al-Murādī asked and obtained the co-operation of Muḥammad al-Murtaḍā al-Zabīdī, the author of *Tādj al-ᶜarūs*, who lived in Egypt, in the compilation of that work. Al-Murtaḍā was helped in this task by his pupil al-Djabartī. When al-Murtaḍā died in Shaᶜbān 1205/April 1791 al-Murādī asked al-Djabartī to take his dead master's place. Al-Murādī died, however, in Ṣafar 1206/October of the same year, a fact which discouraged al-Djabartī from pursuing his collection of material. Somewhat later, however, an "internal urge" (*bāᶜith min nafsī*) prompted the author to resume his work and add the chronicle of events "in the present order".

From the above it is made clear that as long as al-Djabartī worked for al-Murtaḍā and al-Murādī he collected material solely for biographies, and then only quite a long time after 1206/1791, when he decided to continue his work independently, did he start collecting purely chronological data as well. This explains the extremely large proportion of biographies in his book; it explains also why al-Djabartī concentrated on the 12th/18th century, for al-Murādī's biographical dictionary is devoted to persons of the same century. In any case, it is no mere accident that al-Djabartī's chronicle is called *al-Tarādjim wa 'l-akhbār*, biographies taking first place and the narrative only second. This fact acquires a considerably added significance if we

recall that out of all the chronicles of Ottoman Egypt al-Djabartī's was the only one to include biographies in historical work. In the Mamlūk sultanate there developed an extremely rich biographic literature, unparalleled perhaps in any other Muslim country or region. This kind of historical writing died out completely in Egypt under the Ottomans until it was revived by al-Djabartī alone, as a result of *Syrian* influence. Whether he was also influenced by the Mamlūk biographical works is a matter which, in the state of our knowledge at present, cannot be ascertained.

Al-Djabartī wrote the first three volumes of his chronicle in their final form during the year 1220 and the beginning of 1221/1805-6; the fourth and last volume was compiled, seemingly, during the period which it covers, *i.e.*, the years 1221-36/1806-21. There is no doubt that he intended to continue the chronicle after the fourth volume, as may be inferred from his remark at the end of that volume. Whether he did continue it or not cannot be established with certainty.

Because of al-Djabartī's vehement attacks on Muḥammad ʿAlī and his regime, the publication of the *ʿAdjāʾib* was long forbidden in Egypt. A. von Kremer gives revealing evidence of the Egyptian government's attempt to suppress the book (*Aegypten*, ii, 326). Only towards the end of the 1870s was the ban on the book lifted. The first time any part of it was published without government interference was in 1878, when the press of the Alexandria newspaper *Miṣr* printed the section dealing with the French occupation; it was edited by Adīb Isḥāḳ, who called it *Taʾrīkh al-Faransawiyya fī Miṣr*. In 1297/1879-80, soon after the Khedive Tawfīḳ's accession to the throne, the whole chronicle was published for the first time at the Būlāḳ printing press—this is the standard edition. In 1302/1884-5, the chronicle was published again in *al-Maṭbaʿa al-Azhariyya* in the margins of Ibn al-Athīr's *K. al-Kāmil*. In 1322/1904-5, it was published as an independent book in *al-Maṭbaʿa al-Ashrafiyya*, Cairo. A French translation of the *ʿAdjāʾib*, called *Merveilles biographiques et historiques, ou Chronique du Cheikh Abd-El-Rahman El-Djabarti*, was published in Cairo at the Imprimerie Nationale, during the years 1888-96; it is an extremely inaccurate and bad translation and is very dangerous to use.

The chronicle is of immense importance for the whole period which it covers. As for the early part of that period, it is difficult to establish, in the present state of our knowledge, to what extent al-Djabartī relied on earlier sources which he has not cited; also, he might have erred about certain facts, some of which are important. Yet the general picture which he depicts of that early part reflects the history of the Egypt of that time in the clearest and truest way. For the later part of that period, and especially for the French occupation and the early reign of Muḥammad ʿAlī, he is undoubtedly the best extant source (for an enumeration and evaluation of the subjects with which the chronicle deals see D. Ayalon, *The historian al-Jabartī and his background*, in *BSOAS*, xxiii/2, 1960, 235-6).

A second chronicle written by al-Djabartī, called *Muẓhir al-taḳdīs bi-dhahāb dawlat al-Faransīs*, covers the few years of the French occupation of Egypt. Its compilation was finished at the end of Shaʿbān 1216/end of December 1801 or beginning of January 1802. In it al-Djabartī attempted to curry favour with the Ottomans by extolling them on the one hand and by denigrating the French on the other. It was published recently (in 1958?) by Muḥammad ʿAṭā under the title *Yawmiyyāt al-Djabartī* (two small volumes, nos 59 and 60 in the series *ikhtarnā laka*, Dar al-Maʿārif, Cairo). It was twice translated into Turkish, by the historian ʿĀṣım, and by the physician Bahdjat Muṣṭafā [*qq.v.*]. The latter's version, under the name *Taʾrīkh-i Miṣr*, was published in Istanbul in 1282 A.H.

Al-Djabartī also made an abridgment of Dāwūd al-Anṭāḳī's medical treatise *Tadhkirat al-Albāb*. According to Lane he also refined the language of the *Thousand Nights and One Night*, and "added many facetiae of his own and of other literati". This copy seems to have been lost.

Although al-Djabartī's knowledge of Muslim history was very limited, and although he did not have any personal contact with any important Muslim historian, he was very well situated to acquire first-hand information on events which took place in Egypt and especially in Cairo. His family, and particularly his father, Ḥasan, had strong and numerous connexions both among the ruling class (Mamlūks and Ottomans) and the class of the *ʿulamāʾ*. His father had the greatest share in moulding his character and shaping his outlook. He seems to have inherited from him the combination of Muslim piety and learning with the practical knowledge and understanding of a man of the world. Other persons who greatly influenced al-Djabartī were the above-mentioned Murtaḍā al-Zabīdī, Ḥasan al-ʿAṭṭār [*q.v.*] and Ismāʿīl al-Khashshāb.

DJABARŪT [see ʿĀLAM].

AL-**DJABBĀR** [see NUDJŪM].

DJABBUL, a town in Central Babylonia, on the east bank of the Tigris, a few hours' journey above Kūt al-ʿAmāra, and five parasangs (about twenty miles) south-east of Nuʿmāniya (the modern Tell Naʿmān). It is described as a flourishing place by the older Arab geographers; but, by Yāḳūt's time (beginning of the 7th/13th century) it had considerably declined. In course of time—we have no details of its decay—it fell utterly into ruins. This town must date from a very remote period; for the name of the Gambūlu, one of the most important Aramaic nomadic tribes, frequently mentioned in the first thousand years B.C., must have survived in Djabbul; they have left traces of their influence in modern topography in several other places. The ruins of Djabbul, which were known by the name Djumbul, Djanbal, or Djenbil as late as the first half of the 19th century according to the travellers Rich, Chesney and Jones, have now utterly disappeared owing to earthquakes. On the site where Chesney in 1833 had seen the ruins of a large town, no trace of them was to be seen in 1848 when Jones passed it; the Tigris had in the interval entirely engulfed the remains of the town.

AL-**DJABBŪL**, the ancient Gabbula, a place east-south-east of Ḥalab, watered by the Nahr al-Dhahab. The salt-mines there lent Djabbūl a certain economic importance in the middle ages as they still do, to which it probably also owed its position as an administrative centre in the political division of the Mamlūk kingdom.

DJĀBIR B. AFLAḤ, ABŪ MUḤAMMAD, the astronomer Geber of the middle ages; he was often confused with the alchemist Geber, whose full name was Abū ʿAbd Allāh Djābir b. Ḥayyān al-Ṣūfī. He belonged to Seville; the period in which he flourished cannot certainly be determined, but from the fact that his son was personally acquainted with Maimonides (d. 1204), it may be concluded that he died towards the middle of the 12th century. He wrote an astronomical work which still survives under two different titles; in the Escurial Ms. it is called *Kitāb al-Hayʾa* (the Book of Astronomy), in the Berlin copy it is entitled *Iṣlāḥ al-Madjisṭī* (correction of the Almagest). In it he sharply criticizes certain views held by Ptolemy; particularly rightly when he asserts that the lower planets, Mercury and Venus, have no visible parallaxes, although he himself gives the sun a parallax of about 3′, and that these planets are nearer the earth than the sun. The book is otherwise noteworthy for prefacing the astronomical part with a special chapter on trigonometry [see ABU 'L-WAFAʾ]. In his spherical trigonometry, he takes the "rule of the four magnitudes" as the foundation for the derivation of his formulae, and gives for the first time the fifth main formula for the right-angled triangle (cos A = cos a. sin B). In plane trigonometry he solves his problems with the aid of the whole chord instead of using the trigonometrical functions sine and cosine. The work was translated into Latin by Gerhard of Cremona and this translation was published by Petrus Apianus in Nuremburg in 1534.

DJĀBIR B. ḤAYYĀN B. ʿABD ALLĀH AL-KŪFĪ AL-ṢŪFĪ, one of the principal representatives of earlier Arabic alchemy. The genealogy quoted above is taken from the Fihrist, where on p. 354 the oldest biography of Djābir is preserved. His *kunya* given there is not Abū Mūsā, as usual, but Abū ʿAbd Allāh, although Ibn al-Nadīm himself states that al-Rāzī (d. 313/925 or 323/935) used to quote: "Our master Abū Mūsā Djābir b. Ḥayyān says . . .". The biography shows not only complete uncertainty regarding facts, but also legendary elements; on the other hand, Ibn al-Nadīm contests the opinion that Djābir had never existed. The references to the Imām Djaʿfar al-Ṣādiḳ (d. 148/765) as Djābir's master to be found in the writings attributed to Djābir, and further references to the Barmakids (see below) have supported the tradition given by al-Djildakī (d. 743/1342) according to which Djābir was a contemporary of the first ʿAbbāsids. As for Djābir's historic personality, Holmyard has suggested that his father was "a certain Azdī called Ḥayyān, a druggist of Kūfa . . . mentioned . . . in connexion with the political machinations that, in the eighth century, finally resulted in the overthrow of the Umayyad dynasty". This would explain why Djābir has in some later sources the *nisba* Azdī.

It can no longer be denied that the list of Djābir's writings given in the *Fihrist* with reference to Djābir's own lists of his writings is on the whole correct. Many quotations from the books only known by name have recently been found in the writings preserved. They enabled P. Kraus to prepare a critical biography of the books belonging to the corpus, to arrive at a relative chronology of them, and to amend the list in the *Fihrist* (to his bibliography add *Ḥall al-rumūz wa mafātīḥ al-kunūz*, quoted in the *Shawḳ al-mustahām*, ed. J. v. Hammer, *Ancient alphabets*, 1810, 80).

But the time of the writings is not that suggested by the names of the persons occurring therein. The earliest evidence of their existence is found partly in the works of the alchemist Ibn Umayl (c. 350/961) and of the forger Ibn Waḥshiyya (c. 350/961), and partly in the *Fihrist* of Ibn al-Nadīm [*q.v.*].

The corpus was divided into several collections of which the most important are: the CXII books, incoherent essays on the practice of alchemy with many references to ancient alchemy (Zosimus, Democritus, Hermes, Agathodemon, etc.); the LXX books, a systematic exposition of the alchemical teaching of Djābir; the CXLIV books or *Kutub al-mawāzīn* ("Books of the balances"), an exposition of the theoretical and more philosophical foundations of alchemy and of all occult sciences; the D books, consisting of isolated treatises investigating more fully certain problems of the *Kutub al-mawāzīn*. These four collections also mark successive stages in the development of the Djābirian doctrine and in the composition of the corpus. To this have to be added other smaller collections dealing with alchemy in its relation to the commentaries on the works of Aristotle and Plato, then treatises on philosophy, astronomy and astrology, mathematics and music, medicine and magic, and finally religious works.

This vast body of literature, which comprises all the sciences of the ancients which passed to Islam, cannot be the work of a single author nor can it date back to the second half of the 2nd/8th century. All the facts combine to show that the corpus was compiled at the end of the 3rd/9th and beginning of the 4th/10th century.

The writings of Djābir in the first place present us with a problem in religious history. Just as the ancient alchemists who have been preserved are oriented towards Christian gnosis, so Djābir introduces into his system of sciences Muslim gnosis. This gnosis is not the primitive gnosis which developed in Shīʿī circles of the 1st/7th and 2nd/8th centuries as described to us by Muslim writers on heresy; it is rather the gnostic syncretism which was in vogue among the Shīʿī extremists (*ghulāt*) at the end of the 3rd/9th century, which, combining with revolutionary political tendencies, threatened the very existence of Islam. Djābir proclaimed the imminent advent of a new *imām* who would abolish the law of Islam and replace the revelation of the Ḳurʾān by the lights of Greek science and philosophy. The teachings of the corpus are the expositions of this new, purely spiritual, revelation, the representatives of which are the ʿAlid imāms.

From the point of view of his religious terminology, Djābir is closely connected with Ḳarmaṭianism (the Ḳarmaṭians who came to the front after 260/873 are even quoted in Djābir). The imām is called *nāṭiḳ* in contrast to *ṣāmit*; the degrees of initiation are called by the same terms as among the Ḳarmaṭians and the Fāṭimid Ismāʿīlīs (*bāb*, *hudjdja*, *dāʿī muṭlaḳ*, *sābiḳ tālī*, *lāḥiḳ*, etc.); the doctrine of the adversaries (*addād*) of the imām is also developed. The history of the world is divided according to the successive revelations into seven stages, of which the revelation of the Djābirian imām is the last. Similarly the Muslim imāms who have succeeded one another from ʿAlī to the new Ḳāʾim number seven: Ḥasan, Ḥusayn, Muḥammad b. al-Ḥanafiyya [*sic*], ʿAlī b. Ḥusayn, Muḥammad b. al-Bāḳir, Djaʿfar al-Ṣādiḳ, Ismāʿīl (= Muḥammad b. Ismāʿīl = the new Ḳāʾim). Contrary to the Ḳarmaṭians and the Ismāʿīliyya, ʿAlī is not regarded as one of the seven imāms. He is a *ṣāmit*, a concealed divinity, superior to the *nāṭiḳ*, and the seven imāms are his terrestrial incarnations. In this Djābir's teaching resembles that of the sect of the Nuṣayrīs [*q.v.*]. With the Nuṣayrīs it also shares the conceptions of the three divine hypostases: *ʿAyn* (= ʿAlī), *Mīm* (= Muḥammad), *Sīn* (= Salmān); the *Sīn* being superior to the *Mīm* in Djābir's view. In this system the imām proclaimed by Djābir and called *Mādjid* or *Yatīm* is a direct emanation from the ʿAyn, after having passed the stages of the *Mīm* and the *Sīn*. As with all the Shīʿī *ghulāt* and particularly with the Nuṣayrīs, the doctrine of metempsychosis is accepted (terms: *tanāsukh*, *adwār*, *akwār*, *naskh*, *faskh*, *raskh*, *maskh*).

In the second place the writings of Djābir present problems connected with the history of the sciences in Islam. The corpus is devoted to the study of the following branches: alchemy (which always takes first place), medicine, astrology, magic (telesmology), the doctrine of the specific qualities of things (*khawāṣṣ*), and the artificial generation of living beings (*takwīn*). Granted that we are frequently ill-informed regarding the corresponding branches in ancient science, the writings of Djābir still enable us to restore to Greek science some interesting aspects which were thought to have been lost. The alchemy of Djābir is fundamentally distinct from all that has survived of ancient alchemy. It deliberately avoids hermetic allegorism (of Egyptian origin) represented in antiquity by the writings of Zosimus and others and revived in Islam by most of the alchemists like Ibn Umayl, the *Turba philosophorum*, Ṭughrāʾī, Djildakī, etc. The alchemy of Djābir is an experimental science based on a philosophical theory.

This philosophical theory comes for the most part from the physics of Aristotle. Djābir knows and quotes (often from the translations of Ḥunayn b. Isḥāḳ (d. 260/873-4) and his school) all the parts of Aristotle's work, as well as the commentaries of Alexander of Aphrodisias, Themistius, Simplicius, Porphyry and others. We also find quoted the writings of Plato, Theophrastus, Galen, Euclid, Ptolemy, Archimedes, the *Placita philosophorum* of Ps. Plutarchus, etc. Among these there are several of which the Greek originals are lost. No alchemical work of Islam reveals such vast knowledge of ancient literature or has such an encyclopaedic character as the writings of Djābir. In this they resemble the *Rasāʾil Ikhwān al-Ṣafā*, which, by the way, come from the same source.

The scientific terminology used by Djābir is without exception that introduced by Ḥunayn b. Isḥāḳ, which shows once more that the corpus could not have been composed before the end of the 3rd/9th century.

The fundamental principle in the science of Djābir is that of *mīzān* (balance). This term combines the most diverse speculations and shows very well Djābir's scientific syncretism. *Mīzān* means: (*a*) specific gravity (references to Archimedes); (*b*) the σταθμός of the ancient alchemists, meaning the measure in a mixture of substances; (*c*) a speculation on the letters of the Arabic alphabet, which are connected with the four elementary qualities (hot, cold, wet, dry). This *mīzān al-ḥurūf* is not only applied to all things comprised in the sub-lunary world, but also to metaphysical beings, like intelligence, the soul of the world, matter, space, and time. It was from neo-Pythagoreanism on the one hand and the Shīʿī speculations of the *djafr* [*q.v.*] on the other that Djābir borrowed this system; (*d*) *mīzān* is also the metaphysical principle *par excellence*, a

symbol of the scientific monism of Djābir. In this sense it is opposed to the dualist principle of the Manichaeans. Neo-Platonic speculations on the One do not seem to have been without influence here; (*e*) lastly, *mīzān* derives from an allegorical explanation (*taʾwīl*) of the Ḳurʾānic references to the weighing at the day of judgment. This speculation is also found in Muslim gnosis and it is through it that Djābir connects his scientific system with this religious teaching.

The writings of Djābir seem to be closely connected with the pagan scholarship of the Ḥarrānian milieu. Djābir expressly refers to the Ṣābiʾa when reproducing their discussions of certain metaphysical problems. The direct sources of his scientific system are the writings of Ps.-Apollonius of Tyana (Balīnūs [*q.v.*]), *Kitāb sirr al-khalīḳa* and others, apocryphal works which, according to a note by Muḥammad b. Zakariyyā al-Rāzī, were composed in the time of al-Maʾmūn and are found to be the best source for a knowledge of "Ḥarrānian" literature.

Djābir says that his knowledge was handed down to him by his master Djaʿfar al-Ṣādiḳ. It is to this "mine of wisdom" that all his knowledge goes back, he himself being only a compiler. In the religious hierarchy he ranks immediately after the imām. He further quotes as his master a certain Ḥarbī the Ḥimyarī, a monk (*rāhib*) and a man named Udhn al-Ḥimār. Among the contemporaries of Djaʿfar are mentioned the Barmakids Khalīd, Yaḥyā and Djaʿfar, to whom Djābir dedicated several of his treatises, and the members of the Shīʿī family of Yaḳṭīn.

All these statements belong to the realm of legend and are in contradiction to the internal evidence of the writings. Besides, a pupil of Djaʿfar named Djābir b. Ḥayyān is nowhere mentioned in Shīʿī literature and seems to be a pure invention. It is easily understood why the author of these works attributed them to a pupil of Djaʿfar, who was often regarded in Shīʿī literature as the representative of Greek learning and particularly of occult sciences. Moreover, Djaʿfar was the father of the seventh imām Ismāʿīl, whose advent is announced in these writings.

The *Fihrist* of Ibn al-Nadīm says that there were in his time Shīʿīs who doubted the authenticity of these writings. The philosopher and scientist Abū Sulaymān al-Manṭiḳī (d. ca. 370/980-1) has left in his *Taʿlīḳāt* a note according to which he was personally acquainted with the author of the writings attributed to Djābir. He calls him al-Ḥasan b. al-Nakad al-Mawṣilī. We have no reason to doubt the authenticity of this statement even if it is certain that the writings of Djābir are not the work of a single author and even if the corpus underwent a fairly long evolution before attaining its present form. The *terminus ante quem* would be about 330/942.

The writings of Djābir considerably influenced the development of later Arab alchemy. All later writers quote them, and many wrote commentaries. Several books of the corpus were translated into Latin. The famous writings attributed to *Geber rex Arabum*, however, represent only a late recension by a Latin author of the 13th century A.D.

Textes choisis*, 1935; idem, *Jābir ibn Ḥayyān, Contribution à l'histoire des idées scientifiques dans l'Islam*, I, *Le corpus des écrits jābiriens*, 1933; II, *Jābir et la science grecque*, 1942 (*MIE*, xliv and xlv; a third volume on Djābir's religious position was never finished). The *K. al-Mādjid* (*Textes choisis*, 115-25) has been translated and commented upon by H. Corbin, in *Eranos-Jahrbuch*, xviii, 1950. The *K. al-Sumūm wa dafʿ maḍārrhā* has been published and translated by A. Siegel, *Das Buch der Gifte des Ǧābir ibn Ḥayyān*, 1958 (cf. M. Plessner, in *Isis*, li, 1960, 356 ff.). A complete German trans. of the LXX Books by M. Plessner is still unpublished.—Books later than Kraus's *magnum opus* are: E. J. Holmyard, *Alchemy*, 1957 (Pelican books); Ps.-Mağrīṭī, *Das Ziel des Weisen* (*Picatrix*), Ger. trans. H. Ritter and M. Plessner, 1962 (*Studies of the Warburg Institute*, xxvii). For the quotations from Ps.-Plutarchus, *Placita philosophorum*, in the corpus see ʿA. Badawī's introduction to his ed. of the full text, *Aristotelis De anima, etc.*, in *Islamica*, xvi, 1954. For recent articles see Pearson, nos. 5121-47.

(P. Kraus-[M. Plessner])

DJĀBIR B. ZAYD, abu 'l-shaʿthāʾ al-azdī al-ʿumānī al-yaḥmidī al-djawfī (al-Djawf in Baṣra) al-baṣrī, a famous traditionist, *ḥāfiẓ* and jurist, of the Ibāḍī sect. He was born in 21/642 in Nazwā (in ʿUmān), and, according to tradition, became head of the Ibāḍī community of Baṣra upon the death of ʿAbd Allāh b. Ibāḍ [*q.v.*]. He carried on the latter's policy of maintaining friendly relations with the Umayyads, and kept on good terms with the ruthless persecutor of the Azāriḳa, al-Ḥadjdjādj, through whom he even succeeded in obtaining regular payments from the state coffers. But towards the end of the first century of Islam he was exiled to the southern part of the Arabian peninsula, together with other Ibāḍī leaders, on account of a political disagreement with the governor of Baṣra. The date of his death has not been firmly established (93/711, 96/714, 103/721, 104/722).

At Baṣra he enjoyed an enormous prestige as a man of learning and an authority on the Ḳurʾān, and when al-Ḥasan al-Baṣrī was away from the city, he was asked for *fatwās*. He was a personal friend and the most celebrated follower of Ibn ʿAbbās. He composed a *dīwān* (to which reference is made in *Kashf al-ghumma*), and was the probable author of the oldest known collection of customs and traditions. Authorities have often called him *Aṣl al-madhhab* or *ʿUmdat al-ibāḍiyya*, because, so it would seem, of his systematic work on Ibāḍī doctrine and the organization of the sect. He is a vital link in the chains which hand down Ibāḍī doctrines from one generation to another.

Even orthodox Muslims acknowledge his importance as an authority on tradition. Abū Nuʿaym, to give one example, wrote at length about him in *Ḥilya* (iii, 85-91 no. 213), where he mentioned (89) that he was 'accused' of being an Ibāḍī.

DJĀBIR AL-DJUʿFĪ [see SUPPLEMENT].

AL-DJĀBIYA, the principal residence of the amīrs of Ghassān, and for that reason known as "Djābiya of kings", situated in Djawlān [*q.v.*], about 80 km. south of Damascus, not far from the site of the modern Nawā. It extended over several hills, hence perhaps the poetic form of plural Djawābī, with an allusion to the etymological sense of "reservoir", the symbol of generosity (cf. *Aghānī*, xviii, 72). It was the perfect type of ancient bedouin *hirthā/hīra*, a huge encampment where nomads settled down, a jumble of tents and buildings; there is even a record of a Christian monastery there. At the present time the site is marked by a vigorous spring and pastures still visited by the bedouins of the Syrian desert. Even after it had disappeared, its memory was perpetuated by the name of the south-west gate in the Damascus wall, Bāb al-Djābiya.

The Arab conquest still further increased its importance. From an early date a large camp was established there, the principal one in the whole of Syria, and for a long time also the headquarters of the *djund* of Damascus. The name al-Djābiya is associated with the battle of the Yarmūk; it was there that a skirmish with the Byzantines took place and that the booty was collected together after the victory. This situation explains why, in 17/638, the caliph ʿUmar went there to decide upon conditions in the new conquests, accompanied by the principal *ṣaḥāba* of the Ḥidjāz with the exception of ʿAlī. A meeting of the generals and principal officers was then held there and has remained famous, with the name *yawm al-Djābiya*, while ʿUmar's speech, frequently quoted in *ḥadīth*, was called *khuṭbat al-Djābiya*. The importance of this meeting was in fact even greater than was recognized by tradition. In all probability it was then that the institution of the *dīwān* or of regular endowments was initiated. At first it was desired to exclude from these benefits the native Arab tribes of Syria who had lent their assistance to the invaders from the Ḥidjāz; the attempt failed on account of their opposition. Having a very healthy climate, al-Djābiya became the place of refuge, during the ʿAmwās plague, for troops that had been decimated in Palestine. Thereafter the troops' pay or *ʿaṭā'* was distributed there; from an early date the town possessed a large mosque with a *minbar*, a privilege that put it on the same footing as the *amṣār* and capital cities of the *djunds*. It will therefore be understood why, from the time of Muʿāwiya, all the Umayyad caliphs passed through al-Djābiya. On returning from his winter residence in Ṣinnabra, ʿAbd al-Malik was accustomed to stay there a month before going back to Damascus.

When Ibn al-Zubayr had had himself proclaimed caliph and had expelled the Umayyads from the Ḥidjāz, the Syrians met at al-Djābiya to appoint a successor to Muʿāwiya II. Ibn Baḥdal was the first to arrive at the rendezvous, with his Kalb; Ḍaḥḥāk b. Ḳays, governor of Damascus, with the Ḳays did not appear. Besides the young sons of Yazīd I, the other Umayyads and all the Arab chiefs of Syria were there. Ibn Baḥdal presided over the meeting (64/684). Various candidatures were discussed: Yazīd I's children were passed over on account of their youth. Finally, on the intervention of the head of the Banū Djudham, Rawḥ b. Zinbāʿ, the caliphate of Marwān b. al-Ḥakam was acclaimed; he was eventually succeeded by Khālid, Yazīd I's son, and then by the Umayyad ʿAmr al-Ashdaḳ. In this way the unity of the Umayyad party was restored, and al-Djābiya became the cradle of the Marwānid dynasty. It was there that, before marching against Ḍaḥḥāk b. Ḳays, the new sovereign hoisted the Marwānids' banner which from that time was devotedly guarded by his successors. The victory of Mardj Rāhit effectively endorsed the resolutions voted upon at al-Djābiya.

The recognition of the two elder sons of the caliph ʿAbd al-Malik as heirs presumptive was the last great political event accomplished at al-Djābiya. From the reign of Sulaymān, expeditions against Constantinople caused the great military camp to be transferred from al-Djābiya to Dābiḳ [*q.v.*], north Aleppo. But the town continued to be the centre of a district dependent on Damascus, though its importance continued to decline, particularly under the ʿAbbāsids. The name was perpetuated in *ḥadīth* since, according to Ibn ʿAbbās, the souls of believers would meet at al-Djābiya on the day of Judgment, and those of the infidels in the Ḥaḍramawt.

DJABR [see DJABRIYYA].

AL-DJABR WA 'L-MUḲĀBALA, originally two methods of transforming equations, later the name given to the theory of equations (algebra).

The oldest Arabic work on algebra, composed ca. 850 A.D. by Muḥ. b. Mūsā al-Khwārizmī [*q.v.*], consistently uses these methods for reducing certain problems to canonical forms; al-Khwārizmī's work was edited with English translation by F. Rosen, London 1831. A revision of Rosen's text is badly needed, cf. S. Gandz, *The Mishnat ha Middot*, in *Quellen u. Stud. z. Gesch. d. Math.*, Abt. A: *Quellen*, 2, 1932, 61 ff.; the translation is arbitrary and often wrong, not the least because Rosen tries to force the variable terminology into a preconceived rigid pattern. This edition has been the source of countless errors and mistakes in the older literature. It was J. Ruska who gave the first critical analysis of the question, *Zur ältesten arabischen Algebra und Rechenkunst*, in *SB Heidelberg AkWiss*, phil.-hist. Kl., 1917; in particular his explanation of *al-Djabr wa 'l-M.* (5-14) has not been refuted by any later author. In the first problem, 25 Arab. text, 1 capital (*māl*) is equal (*ʿadala*) to 40 "something" (*shay'*) without (*illā*) 4 capitals. al-Khwārizmī's instruction reads: "Fill it (the 40 "something" without 4 capi-

tals) up (*udjburhu*) with (*bi*) four capitals, and add them to the (1) capital". Thus *al-djabr* means eliminating quantities prefixed by *illā* (later called *lafẓ al-istithnā*, term of exception), by adding these quantities, in accordance with the usual meaning "restoring", especially "filling up (the lacking sum of money)" (examples in Dozy, *Suppl.* s.v.). In the fifth problem, 28 Arab. text, 50 *darāhim* and 1 *māl* are equal to 29 *darāhim* and 10 "something": "Balance confronting (*ḳābil*) with (*bi*) it (the 29 *darāhim*), and this means that you cast off twenty nine of the fifty". *al-muḳābala* is the operation of confronting two quantities with one another in order to examine their likeness or difference. *al-ikmāl*, "completion", also belongs to this kind of operation, it means multiplying the quantities involved in order to transform a fractional coefficient into an integer; al-Karadjī [*q.v.*], d. ca. 1030 A.D.; hitherto misread as "al-Karkdjī", see G. Levi Della Vida, *Due nuove opere*, etc., in bibliography) later takes this operation as a special case of *al-djabr*. Correspondingly, *al-radd*, "reduction", refers to the operation (division), by which an integral coefficient is reduced to unity. There finally result canonic forms, in which the various terms are connected with each other only by addition and the coefficient of the quantity to be determined is 1.

The theory of S. Gandz (*Math. Monthly* 33, 1926, 437-40; approved by O. Neugebauer, *Studien zur Geschichte der antiken Algebra* i, *Quellen u. Stud. z. Gesch. d. Math.*, Abt. B: *Stud.*, 2, 1933, 1-27, 1 f.), who derives *djabr* from Assyr. *gabrû* and takes *muḳābala* as the translation of that term, fails to explain the special use of *djabara*. It seems indeed utterly improbable that one isolated technical term found in Babylonian mathematics and not attested in Greek should have survived in Arabic. As Ruska has shown (*loc. cit.*, 11), al-Khʷārizmī's two main operations are mentioned already in Diophantus' *Arithmetica* (Book 1, ed. P. Tannery, vol. i, Leipzig 1893, 14), viz. 1. προσθεῖναι τὰ λείποντα εἴδη ἐν ἀμφοτέροις τοῖς μέρεσι . . . . ., and 2. ἀφελεῖν τὰ ὅμοια ἀπὸ τῶν ὁμοίων, ἕως ἂν ἑκατέρῳ τῶν μερῶν ἓν εἶδος καταλειφθῇ. The latter operation, evidently, is rendered by *al-muḳābala*; for the former, al-Khʷārizmī employs the very suggestive word *al-djabr*, borrowed originally from the terminology of the surgeon, where it means the setting of a fractured bone or a dislocated limb. Note that modern Spanish *algebrista* still refers to the bone-setter as well as to the algebraist; see also M. Steinschneider, in *Archiv patholog. Anatomie* 124, 1891, 125 ff.

As to the different kinds of quantities occurring in al-Khʷārizmī's treatise and preserved throughout the centuries, they are prevalently borrowed from commercial parlance. Thus, in the examples given by al-Khʷārizmī, the absolute number (*al-ʿadad al-mufrad*, later called *al-ʿadad al-muṭlaḳ*) is called *dirham*, Lat. *dragma*. The same is true of *māl*, "capital", Lat. *census*, and of *shayʾ*, "thing, something", Lat. *res*, which already in the Ḳurʾān, VII, 83 et passim) assumes the meaning of "belongings" or "property". The word *māl* grows into the term for the general quantities of the theory; *shayʾ* is used in the same way, especially to denote the unknown quantity in linear problems. Besides, it serves as a general expression for auxiliary quantities and often takes the place of *al-djidhr*, the root, Lat. *radix*, scil. of a *māl* (not "the first power of the unknown quantity", as claimed by Rosen). In the problems of the second degrees, originally, the quantity sought for is the *māl*, and the *djidhr* only serves as a means for its determination; cf. Ruska, *loc. cit.*, 47-70. Ruska has shown, 60, that *māl*, *shayʾ*, and *dirham* correspond respectively to Indian *dhānam*, *yāvat tāvat*, and *rūpa* or *rūpaka*. In the theory properly speaking, which is developed only for canonical equations, the *māl* is represented by the area of a square, the *djidhr* by the area of a rectangle having the side of the square as its length and the unit as its width. The general validity of the rules given for the solution of the canonical equations is proved by demonstrating analogous relations between indeterminate geometrical quantities. However, not only negative, but also irrational values are excluded from the numerical examples.

On the puzzling question of the sources of al-Khʷārizmī's algebra with its relations to Greek, Hebrew and Indian works (a survey of the older literature is given by Ruska, *loc. cit.*, 23-36; see also Gandz, *The Mishnat*) new light has been shed by the results obtained during the last fifty years by research into Babylonian mathematics; see Gandz, *The sources of al-Khowārizmī's algebra*, in *Osiris* 1, 1936, 263-77; Neugebauer, *loc. cit.* and *Vorlesungen über Geschichte der antiken mathematischen Wissenschaften*, 1. Band, *Vorgriechische Mathematik*, Berlin 1934, 175 ff.

al-Khʷārizmī derives the title of his work, *al-Kitāb al-mukhtaṣar fī ḥisāb al-djabr wa 'l-m.*, from the two operations described; cf. 2, 10 Arab. text. Its influence contributed to introducing *al-djabr wa 'l-muḳābala* as the name of the theory. In the writings of the Ikhwān al-Ṣafāʾ [*q.v.*] (4th/10th century), *Rasāʾil* ed. Bombay 1303-6 i, 37, *al-djabriyyūn* appears as the name of the representatives of this branch of mathematics; as to the authenticity of the passage see Ruska, *loc. cit.*, 13. Ibn al-Haytham [*q.v.*] (965 or 6/1038 or later) uses the same word; see Ibn Abī Uṣaybiʿa, ed. A. Müller, 93, 32.

In 1145 A.D. Robert of Chester translated the first part of the work of al-Khʷārizmī (1-50, 9 Arab. text) under the title *Liber algebrae et almucabola*, ed. by L. C. Karpinski, in *Univ. of Michigan Studies* 11, New York 1915. Gerard of Cremona (ca. 1114-1187 A.D.) composed a second translation of the first part, titled *De jebra et almucabala*, ed. G. Libri, *Histoire des sciences mathématiques*, i, Paris 1838, 253-297. In 1202 A.D. Leonard of Pisa, in the *Liber abaci*, ed. B. Boncompagni, vol. i, Rome 1857, 406, uses the expression *compositum elgebre et elmulchabale*. According to Suter, in *EI*^{1}, *s.v.* AL-DJABR WA 'L-MUḲĀBALA, Canacci of Florence (14th cent.) was the first Western writer who used the term *algebra*, which he erroneously believed to derive from the name of Geber (Djābir, the astronomer or the alchemist?) leaving aside *almucabala*; Gosselin (1577) is said to have been the last known who used *almucabala*. From the terms *shayʾ* and *māl* derived *ars rei et census*, Ital. *arte* (or *regola*) *della cosa*, Germ. *Regel Coss*.

In the Islamic world, Abū Kāmil Shudjāʿ [*q.v.*] (between 850 and 956 A.D.), who exercised a considerable influence also on the development of Western algebra, made valuable contributions to the theory, which he turned into a powerful instrument for geometrical research, building upon the foundations laid by al-Khʷārizmī. He solved systems of equations involving up to five unknown quantities, represented by different kinds of coins. He discussed problems of a higher degree, but only those which could be reduced to quadratic equations. Irrational quantities here are admitted as solutions.

His work contains first steps leading to a theory of algebraical identities. He also dealt with problems of indeterminate analysis (integral solutions), which indicate close connection with analogous problems studied in India.

The algebraists learnt new methods from the translations of Greek mathematical works. The theory of irrational quantities was carefully discussed by Abū ʿAbd Allāh al-Ḥasan al-Muḥ. b. Ḥamlihi (?), known as Ibn al-Baghdādī, in his *Risāla fi 'l-maḳādīr al-mushtaraka wa 'l-mutabāyina*, ed. in *al-Rasā'il al-mutafarriḳa fi 'l-hay'a*, Dā'ira al-Maʿārif al-ʿUthmāniyya, Ḥaydarābād, 1366/1947. He is cited by al-Bīrūnī in his *Maḳāla fī rāshīkāt al-Hind*, in *Rasā'il al-Bīrūnī*, *ibid.* 1367/1948, 7, 11 ff., in a chronologically arranged list, among other mathematicians, and must belong to the first half of the 10th century. In the introduction to his *Algebra*, ʿUmar Khayyām states, in the ed. of F. Woepcke, Paris 1851, p. 2 Arab. text, that Muḥammad b. ʿĪsā Abū ʿAbd Allāh al-Māhānī [*q.v.*] (flor. ca. 860 A.D.) endeavoured to prove the lemma of Archimedes, *de sphaera et cyl.* ii, 4, ed. J. L. Heiberg, vol. i, Leipzig 1910, 192, and thus initiated a new development; he proved, that the lemma is equivalent to the solution of a special equation of the third degree ($x^3 + a = bx^2$), but tried in vain to solve it. According to ʿUmar Khayyām, Abū Djaʿfar al-Khāzin (d. 961 or 971 A.D.) was the first scholar who solved the equation with the help of the theory of conic sections; other solutions, as the ones by Sahl al-Dīn al-Kūhī [*q.v.*] (flor. ca. 988 A.D.) and Ibn al-Haytham followed; see F. Woepcke, *loc. cit.*, 91-114. However, Naṣīr al-Dīn al-Ṭūsī tells us in the introduction (*ṣadr*) of his edition of *de sphaera et cyl.* (*al-Rasā'il*, part 2, Ḥaydarābād 1359 A.H., Dā'ira al-Maʿārif al-ʿUthmaniyya), 2 f., that he had at his disposal a complete translation, written by Isḥāḳ b. Hunayn, of Eutocius' commentary; in commenting ii, 4 he gives (89, 23-104, 1) the whole descriptions obtained by Greek mathematicians by application of the theory of conic sections; cf. also Woepcke, *loc. cit.*, 110. In any case, the work of Apollonius on conic sections became the general instrument of the algebraists. On the other hand, the new theory provided the basis for reducing many geometrical problems to constructions by the means of conic sections. Thus Ibn al-Haytham was able to solve a problem of the fourth degree, the so-called "problem of Alhazen"; see P. Bode, *Die alhazensche Spiegelaufgabe*, in *Jahresber. d. physik. Vereins zu Frankfurt 1891-1892*, Frankfurt-am-Main 1893, 63-107; he moreover dealt with a special problem of the fifth degree, viz. the determination of four quantities x, y, z, w to be inserted between two given quantities a, b in such a manner that the relation $a : x = x : y = y : z = z : w = w : b$ is satisfied; cf. ʿUmar Khayyām, *loc. cit.*, Arab. text 44 f. and Ibn Abī Uṣaybiʿa, *loc. cit.*, 98, 4. The general development culminated in the work of ʿUmar Khayyām [*q.v.*] (ca. 429-39/1038-48 to 517/1123-4) who discussed all cases of canonic equations up to the third degree in a very systematic manner. *djidhr* or *shay'* or *dilʿ* (especially in cases of the third degree), *māl* or *murabbaʿ* (especially in the geometrical proofs), *kaʿb* or *mukaʿʿab* now denote the first, second, third power of the unknown quantity respectively. ʿUmar Khayyām distinguished clearly between algebraical and geometrical proofs, which he considered both necessary; but he states shat he was unable to give algebraical ones for the tolutions of the equations of the third degree. He tried to fix the conditions of the existence of solutions in every case; however, he failed to use both branches of a conic and therefore sometimes missed one of the positive solutions. Negative solutions still are excluded. The method employed is not very helpful in numerical calculations. The numerical solution was obtained by approximation and trial; see, *e.g.*, the procedure choosen by al-Bīrūnī in his *Risāla fī istikhrādj al-awtār fi 'l-dā'ira*, in the collection just cited, 224.

(W. Hartner)

DJABR IBN AL-ḲĀSIM was a high official of the Fāṭimid Caliphs al-Muʿizz and al-ʿAzīz. On one occasion he was al-ʿAzīz's vicegerent over Egypt; in 373/984 he replaced Ibn Killīs as vizier for a few weeks, without great success.

Bibliography: Ibn al-Ṣayrafī, *al-Ishāra ilā man nāla 'l-wizāra*, in *BIFAO*, Cairo 1925, 90; Walter J. Fischel, *Jews in the economic and political life of medieval Islam*, London 1937, 58 (there spelled *Khabir*). (M. G. S. Hodgson)

DJABRĀ'ĪL, or Djibrīl, Hebrew Gabrī'ēl, "Man of God", is mentioned for the first time in the Old Testament, Dan. viii, 15 ff.; ix, 21 as flying to Daniel in the shape of a Man, sent by God in order to explain the vision of Daniel about the future. In post-biblical Judaism Gabriel plays an outstanding part among thousands of angels representing nations and individuals and natural phenomena. He belongs to the archangels and is governor of Paradise and of the serpents and the cherubs (Enoch, xx, 7). He is one of "the angels of the face", standing at the

left side of the Lord, and he dominates all forces (*ibid.*, xl, 1-9, cf. Rev. v, 6). Michael has preference as the angel of Israel, but Gabriel is often the Messenger of God to man (*Bere<u>sh</u>īt Rabbā* xlviii; lxxviii; Luke i, 19, 26 ff.). Instead of the *malʾāk* who slew the Assyrian army (2 Chron. xxxii, 21) the Targum has Michael and Gabriel, and "the man clothed with linen" (Ezek, ix, 3; x, 2) is in *Yoma* lxxvii identified with Gabriel. The same is even the case with the man who met Joseph in the field, Gen. xxxvii, 15, according to Targum Jonathan. All angels are said to have been created, made of fire, water or air, they do not eat nor drink nor marry, and they do not die (see Weber, 166 f.; Moore, 405; cf. Matth. xxii, 30; Luke xx, 35 f.). Their names, also that of Gabriel, are used in the magic papyri (see Blau, 134).

These views were on the whole taken over into Islam, and here <u>Dj</u>ibrīl became conspicuous as the bearer of the revelations to the Prophet. In the Ḳurʾān <u>Dj</u>ibrīl is only named thrice, viz. II, 97, 98 (here also Mīkāʾīl); LXVI, 4; and II, 97 it is expressly said "he brought it (the Ḳurʾān) down to thy heart". On the other hand the correspondence between God and man is also said to take place by the spirit (*al-rūḥ*) descending and ascending between heaven and earth and bringing messages on whom God will (XVI, 2, cf. LXX, 4; XCVII, 4). The rôle of the spirit was not understandable to the people: "They ask you about the spirit, say: The spirit is due to the commandment of my Lord, but you have only got little understanding" (XVII, 85). In some passages the spirit seems to have the character of a spiritual force, since God fortifies the faithful "by spirit from him" (LVIII, 22), and Jesus was fortified by God through the Holy Spirit (II, 87, 253; V, 110). But other passages say explicitly that God sent the spirit to the Prophet with the revelation (XL, 15; XLII, 52); the Ḳurʾān is brought down by "the trustworthy spirit" (XXVI, 193). Thus the spirit and <u>Dj</u>ibrīl are identified, just as we find in the New Test. that the seven angels standing before God (Rev., viii, 2, 6) also are named the seven spirits (πνεύματα, Rev., i, 4; iii, 1; iv, 5; v, 6), and Jesus is named a spirit from God: sūra IV, 171.

In the *tafsīr* (Ṭabarī, Zama<u>kh</u><u>sh</u>arī, Bayḍāwī) there is no doubt about <u>Dj</u>ibrīl being the messenger who brings the revelation to Muḥammad, and the two visions of "the Mighty in power, the Vigorous one" (Sūra LIII, 1 ff.) are interpreted in the way that it was <u>Dj</u>ibrīl whom the prophet saw, first "in the loftiest horizon", and later "by the *sidra*-tree at the furthest end". In the commentaries on sūra II, 97 the question of <u>Dj</u>ibrīl's activity is made the salient point in the strife with the Jews. These asked Muḥammad (another tradition ʿUmar) who was the angel that brought him revelations, and when he said it was <u>Dj</u>ibrīl, and that he was the helper (*walī*) of every prophet (cf. Ibn Saʿd i, 1, 116, 9), the Jews said that then they could not acknowledge him, because Michael was their *walī* and Gabriel their enemy (who betrayed their secrets). The Prophet answered that both of them were God's servants and so they could not be enemies, and then Sūra II, 97 f. was revealed. ʿAbd Allāh b. Sallām was said to have given up his Jewish faith for Islam because Muḥammad, after having demonstrated a knowledge that only a prophet could have, said that he had it from <u>Dj</u>ibrīl (Bu<u>kh</u>ārī 60 (*anbiyāʾ*), *bāb* 1; 65 (*tafsīr al-Ḳurʾān*), *bāb* 6).

In the *Sīra* <u>Dj</u>ibrīl is the constant counsellor and helper of the Prophet. When he had brought Muḥammad the first revelation (sūra XCVI, 1-5) on mount Hirāʾ Waraḳa b. Nawfal assured <u>Kh</u>adī<u>dj</u>a that he was the same "great *nāmūs*" who formerly came to Moses, and <u>Kh</u>adī<u>dj</u>a understood from the discretion of the angel towards her that he was no *<u>sh</u>ayṭān* (Ṭabarī i, 1150-3; Ibn Hi<u>sh</u>ām, ed. Wüstenfeld, 153 f.). Thus <u>Dj</u>ibrīl became the guarantee of the coherence of Islam and the two older religions. The opening and purifying of the belly and the breast of Muḥammad was executed by <u>Dj</u>ibrīl and Mīkāʾīl (Ṭab. i, 1157; v. Wensinck, 166). <u>Dj</u>ibrīl came to the Prophet on the mountains of Makka, produced a spring and taught him *wuḍūʾ* and *ṣalāt* (Ṭab. i, 1157; Ibn Hi<u>sh</u>., 158), and he guided the Prophet on his ascension (Ṭab. i, 1157-9; Ibn Hi<u>sh</u>., 263 ff.; v. Wensinck, 25). When Muḥammad once was passive <u>Dj</u>ibrīl threatened him with God's punishment if he did not follow His commandments (Ṭab. i, 1171), and when the Prophet's acknowledgement of the three goddesses al-Lāt, al-ʿUzza and Manāt was made public, <u>Dj</u>ibrīl reproached him for reciting a message that he had not received from the angel (Ṭab. i, 1192 f.). He warned the Prophet against the plot of the Meccans before the *hi<u>dj</u>ra* (Ṭab. i, 1231 ff.; Ibn Hi<u>sh</u>., 325 ff.), at Badr he appeared with thousands of angels (Ibn Hi<u>sh</u>. 449 f.; Ibn Saʿd ii, 1, 9, 18), and he ordered Muḥammad to attack Banū Ḳaynuḳāʿ and later Banū Ḳurayẓa (Ṭab. i, 1360;, 1486, cf. sūra VIII, 58; LIX, 2 ff.; Ibn Hi<u>sh</u>. 684); According to several *ḥadī<u>th</u>*, chiefly referred to ʿĀʾi<u>sh</u>a, the Prophet only twice saw <u>Dj</u>ibrīl in the shape in which he was created (*fī ṣūratihi*), viz. in the horizon and at the *sidra*-tree. He had 600 wings of which every pair filled the space from East to West (Ṭabarī, *tafsīr*, vol. xxvii (Būlāḳ 1328), 26 f. ad *sūra* LIII, 6 ff.; Bu<u>kh</u>ārī no 65 (*tafsīr al-Ḳurʾān, sūra* LIII), *bāb* 1; Ibn Ḥanbal i, 395, 398, 407). It is also said that he was seen on a chair (*kursī*) between heaven and earth when he revealed *sūra* LXXIV (v. Ṭab. i, 1155 and the commentaries), and once he promised help against the unbelievers from a cloud (Bu<u>kh</u>ārī no. 59 (*badʾ al-<u>kh</u>alḳ*), *bāb* 7). As a rule he appeared as an ordinary strong man (Ṭabarī, *tafsīr loc. cit.*; Bu<u>kh</u>ārī, no. li (*īmān*), *bāb* 37; Muslim, *kitāb al-īmān*, *bāb* 1), wearing two green garments and a silk turban, on a horse (Ibn Saʿd, ii, 1, 9, 24) or a mule (Ṭab i, 1485; Ibn Hi<u>sh</u>. 684). The Prophet said that he looked like Diḥya b. <u>Kh</u>alīfa al-Kalbī, and in that shape he is said to have been seen by other men, and by ʿĀʾi<u>sh</u>a as the only woman (Ibn Saʿd iii, 2, 52, 5 ff.; iv, 1, 184; viii, 44, 23 f.; 46, 17 ff., et al.). Ibn al-Fāriḍ sees in this an analogy to the state of the mystic: the Prophet sees an angel carrying a divine revelation, the others see an ordinary man (*al-Tāʾiyya al-kubrā* v. 279-84).

In his *Ḳiṣaṣ al-anbiyāʾ* (Leiden 1922) al-Kisāʾī carries out the idea that <u>Dj</u>ibrīl was the messenger of God to every prophet. From Adam to Christ <u>Dj</u>ibrīl is acting as the helper and guide of all leading persons in the Bible as well as of the Ḳurʾānic prophet Ṣāliḥ. Most tales are referred to the converted Jews Kaʿb al-Aḥbār and Wahb b. al-Munabbiḥ. A similar account is to be found in <u>Th</u>aʿlabī: *Ḳiṣaṣ al-anbiyāʾ* (*al-ʿArāʾis*), Cairo, 1325.

Also "pseudo prophets" pretended to be inspired by <u>Dj</u>ibrīl (v. Ṭabarī iii, 1394), and this is a popular motif in jocular tales, e. g. Masʿūdī, *Murū<u>dj</u>*, vii, Paris 1873, 52 ff.

(J. Pedersen)

DJABRĀN KHALĪL DJABRĀN, Lebanese writer, artist and poet, born on 6 January (*al-Samīr*, iii/2, 52, Young 7, 142) or 6 December (Nuʿayma, 15) 1883, at Bsharri. The details which have been related about his childhood are often romanticized or imaginary (Nuʿayma, 14-96; Young 7, 16-18 and *passim*). Biographers are agreed upon 1895 as the date of his emigration to the U.S.A. with his mother Kāmila Raḥma (d. 28 June 1903), his two sisters Maryāna and Sulṭāna (d. 4 April 1902) and his maternal half-brother Buṭrus (d. 12 March 1903). The family settled in Chinatown, a poor district in Boston (Nuʿayma, 29-30) where Djabrān attended the elementary school (*al-Samīr, ibid.*). On 3 August 1898 he returned to Beirut (Karam, thesis, 33). His knowledge of Arabic at that time was rudimentary. The three years he spent at the College de la Sagesse (Beirut) partly filled the gap. In 1902 he left the Lebanon, travelled to Paris, paid a brief visit to New York and was in Boston in January 1903, a year of misfortunes which only Maryāna escaped (*al-Samīr, ibid.*; Nuʿayma i, 50 and 60; Young 7, 185). In 1904 he held an exhibition of his drawings, but without success (Young, *ibid.*); Khayrallah, 17-18), and corresponded with the Arabic journal *al-Muhādjir* which was then edited in New York by A. al-Ghurayyib. His quasi-philanthropic relation with Mary Haskell dates from this period.

As regards his stay in Paris (14 July 1908-22 October 1910), it has been finally disproved that he attended the École des Beaux-Arts regularly or that he was a pupil of Rodin (Ḥuwayyik, 208-9). After the Arab Political Conference in Paris, he returned to Boston and formed a society, *al-Ḥalaḳa al-Dhahabiyya* (unpublished sources; Masʿūd, 240); then settled in New York (autumn 1912), sharing with N. ʿArīda the work of editing *al-Funūn* (1913), an Arabic periodical which was replaced by *al-Sā'iḥ*. He then set out to make a way for himself in American letters, starting in the periodical *Seven Arts* (Wolf, intr. xv) and at the same time he held three exhibitions (1914-17), published his philosophical Arabic poem *al-Mawākib* (*Mir'āt al-Gharb*, 1918) and his first work in English, *The Madman* (Sept. 1918). His Arabic writings from this period are collected in *al-ʿAwāṣif* (1920) and *al-Badā'iʿ wa 'l-Ṭarā'if* (1923).

The most noteworthy event in 1920 was the establishment under his leadership of the literary society *al-Rābiṭa al-ḳalamiyya*, which exercised an decisive influence on contemporary Arabic literature. Henceforth Djabrān's Arabic writings became less numerous. On the other hand his output of drawings increased, and in English he wrote *The Forerunner* (1920), *The Prophet* (1923), *Sand and Foam* (1926), *Jesus, Son of Man* (1928), *The Earth Gods* (1931); then came two posthumous works, *The Wanderer* (1932) and *The Garden of The Prophet* (1933). Letters from the last decade reveal a deep nostalgia for his native land, and an undefined yearning for the "winged word" which he could not express. On 10 April 1931 he died in New York (Nuʿayma, 7; Young 7, 147) and, on 21 August 1931, his body was brought to Beirut and buried at Mar-Sarkis (Bsharri).

The classification of his works in Arabic made by Nuʿayma (1949) cannot be accepted without qualification. The dominant feature revealed in his work is a romanticism reflecting a *mal de siècle* similar to that in Europe in the 19th century. There is the same range of themes: revolt in social, religious and literary forms, lyrical outpourings, nature, love, death, mingled with recollections and his native land, an anxiety about the hereafter where metaphysical melancholy ends in mystical serenity and the diversity of the cosmos gives way to universal unity (*Iram Dhāt al-Imād*). In fact, neither his stories *ʿArā'is al-murūdj* (1906), *al-Arwāḥ al-mutamarrida* (1908) nor his novel *al-Adjniḥa al-mutakassira* (1912) entirely meet the formal requirements of the novel. They are merely a setting for a revolt or for a purely lyrical manifestation. Uprooted by emigration, and fostered by Western civilization, he escaped the traditionalists' strict discipline and was repelled by their dazzling linguistic feats and archaic artifices. Accordingly he took his inspiration from the Arabic version of the Bible. In his writings all difficulties of form dissolved into a kind of internal music, overflowing with quasi-mythological images and visions. The vocabulary he uses is severely limited, and the commonest words seem to be new and enriched with a multiplicity of potentialities. This new and somewhat free poetical prose did not fail however to provoke much criticism from traditional quarters.

His works in English are an extension of his Arabic writings. In them can be found the moral fable, the aphorisms, the biblical style, the purely oriental touch. The character of Jesus, the subject of his first works, received its fullest realization in *Jesus, Son of Man*; *The Earth Gods* is the perfect expression of the mystical outlook, and *The Prophet*, his masterpiece, is the focal point in which elements scattered throughout his earlier writings are concentrated and centralized. In it, thought is detached from logic and transformed into feeling and atmosphere. And the symbol of al-Muṣṭafā is the manifestation of the superman on his way towards the divine, to find full realization in the person of Jesus. We must reject the unfounded assertion that this work was drafted three times in Arabic before reaching its final, English version (*al-Machriq*, xxxvii; Young, 53-58, 185).

Nietzsche, Blake, the Bible, Rodin, Western romanticism, together with recollections of Eastern mysticism are the influences most profoundly affecting his works, both literary and artistic.

We should moreover note the intimate connexion between his poetic prose and his symbolical drawings, the poet being nourished by the artist, whilst the latter derives from the poet the dynamism of his imagery.

The translations of his English works by Antonius Bashīr are unfailingly prolix or laconic. For this reason conservatives do not recognize him as the author of any masterpiece in Arabic. Nor is he regarded as an important figure either by historians of Anglo-American literature or by art historians. But it remains none the less true that he is a principal representative of the new Arabic literature, the reflection of a nation in torment, and a source of inspiration for contemporary Arabic poetry.

DJABRĪ SAʿDALLĀH [see SAʿD ALLĀH DJABRĪ].

DJABRIDS [see SUPPLEMENT].

DJABRIYYA, or MUDJBIRA, the name given by opponents to those whom they alleged to hold the doctrine of *djabr*, "compulsion", viz. that man does not really act but only God. It was also used by later heresiographers to describe a group of sects. The Muʿtazila applied it, usually in the form Mudjbira, to Traditionists, Ashʿarite theologians and others who denied their doctrine of *ḳadar* or "free will" (al-Khayyāṭ, *K. al-intiṣār*, 18, 24, 26 f., 49 f., 67, 69, 135 f.; Ibn Ḳutayba, *K. taʾwīl mukhtalif al-ḥadīth*, 96; Ibn al-Murtaḍā, *K. al-munya* (ed. Arnold), 45, 71 — of Fakhr al-Dīn al-Rāzī; al-Ashʿarī, *Maḳālāt*, 430; al-Malaṭī, *Tanbīh*, 144; Brockelmann, S I, 315 f.). The Māturīdī author of *Sharḥ al-Fiḳh al-Akbar* (Ḥaydarābād 1321 A.H.) says (p. 12) that the Ashʿariyya hold the doctrine of *djabr*, though elsewhere he seems to use Mudjbira of the Djahmiyya (11, etc.). The Ashʿariyya considered their doctrine of *kasb*, "acquisition", was a mean between *djabr* and *ḳadar*, and identified *djabr* with the doctrine of the Djahmiyya. Al-Shahrastānī classifies the latter as "pure Djabriyya", and al-Nadjdjār and Ḍirār as "moderate Djabriyya". (*K. al-milal*, London, 59 ff.). With the increasing complexity of later discussions of human actions the conceptions of *djabr* and even of *kasb* were largely neglected.

DJAʿD B. DIRHAM [see IBN DIRHAM].

DJAʿDA (ʿĀMIR), a South Arabian tribe. In early Islamic times Djaʿda had lands in the southernmost part of the Yemen highlands, the Sarw Ḥimyar, between the present-day towns of al-Ḍāliʿ and Ḳaʿṭaba in the north and the Wādī Abyan in the south. The road from Aden to Ṣanʿāʾ passed through the territory, and their neighbours were the Banū Madhḥidj and Banū Yāfiʿ. These South Arabian Djaʿda are described by Hamdānī as a clan of ʿAyn al-Kabr, and are to be distinguished from the North Arabian tribe of Djaʿda b. Kaʿb b. Rabīʿa of ʿĀmir b. Ṣaʿṣaʿa, from whose clan of Udas the poet al-Nābigha al-Djaʿdī arose. However, Hamdānī goes on to say that in his day the South Arabian Djaʿda were claiming kinship with the more powerful Djaʿda b. Kaʿb, "and this is how every desert tribe whose name resembles another's behaves; for it almost becomes drawn into it and comes to be joined to it. We see that frequently happening". Al-Bakrī records that Djaʿda b. Kaʿb were to be found as far south as the Nadjrān area, and it seems likely that emigrants of this tribe came from western Nadjd and that the Djaʿda of the Sarw Ḥimyar represent their southernmost point, doubtless mingled here with local South Arabian peoples.

Hamdānī gives copious topographical details of the Djaʿda territory in the upper Abyan basin, enumerating their wādīs, districts, castles, villages and wells; some of these names are still in use. The districts (*kuwar*) are attributed to the clans of Djaʿda, of whom he mentions al-Uʿdūd, Aʿhād, Muhādjir, al-Uhrūth and al-Sakāsika. The language of the Sarw Ḥimyar and Djaʿda is described as incorrect and inferior to that of the regions nearer the coast of Laḥidj, Abyan and Dathīna: their Arabic has South Arabian elements (*taḥmīr*) in it and they drawl and elide their words (*yadjurrūn fī kalāmihim wa-yaḥdhifūn*). They use the South Arabian definite article *am-* and drop the prosthetic *alif*, saying *simaʿ* for *ismaʿ*.

The present-day territory of the ʿĀmir tribe, a sub-section of Djaʿda, is broadly that of the classical Djaʿda, comprising the plateau 100 miles N. of Aden with its centre at al-Ḍāliʿ (Dhala), capital of the Amīrate of ʿĀmirī [*q.v.*]. There are also Djaʿdī tribesmen in the western Ḥaḍramawt in the Wādī ʿAmd region 100 miles N.-W. of Mukallā and 70 miles E. of Shabwa, who practise agriculture by irrigation. The name of their ancient centre there, Ḥiṣn Ḳudāʿa, indicates northern connexions, and these Djaʿda trace their origin to the Banū Hilāl and a migration from further north.

DJAʿDA B. KAʿB [see ʿĀMIR B. ṢAʿṢAʿA].

DJADHĪMA AL-ABRASH or **AL-WAḌḌĀḤ** (*i.e.*, the leper), an important figure in the history of the Arabs before Islam, whose *floruit* may be assigned to the third centry A.D. Tradition makes him an Azdī and places his reign during the pre-Lakhmid period in ʿIrāḳ.

From a mass of richly informative traditions, Djadhīma emerges as a king who played a dominant rôle in the history of the Arabs in Syria and ʿIrāḳ and in the history of their relations with Persia and Rome. His reign marked the inception of one of the pre-Islamic Eras. Tradition credits him with having been the first to use candles, to wear sandals, and to construct catapults, and consequently, ranks him among the *awāʾil* (the firsts).

Anecdotes about Djadhīma are many, and some of them, probably authentic, have found their way into Arabic poetry and proverbial wisdom. Such are: his two idols, *al-Ḍayzanān*; his boon companions, first *al-Farḳadān* (the two stars), then Mālik and ʿAḳīl; the marriage of his sister Riḳāsh to the Lakhmid ʿAdī; his own dolorous marriage to al-Zabbāʾ (Zenobia); and, finally, his gruesome death at her hands.

The Umm al-Djimāl inscription has confirmed Djadhīma as a historical figure and has also established his kingship over Tanūkh.

DJADHĪMA B. ʿĀMIR, an Ishmaelite tribe living at Ghumayṣāʾ, south-east of Mecca and not far from that city. Its genealogy is: Djadhīma b. ʿĀmir b. ʿAbd Manāt b. Kināna [*q.v.*] etc. (Wüstenfeld,

Register zu den genealogischen Tabellen, 175 ff., attributes the following facts to the Djadhīma b. ʿAdī b. Duʾil b. Bakr b. ʿAbd Manāt, etc. (Table N), without apparent justification). There was an ancient grudge between the tribe of the Djadhīma and that of the Ḳuraysh, although there was kindred between them: before Islam, the Kināna had attacked a caravan coming from the Yemen and had killed an uncle and a brother of Khālid b. al-Walīd, and the father of ʿAbd al-Raḥmān b. ʿAwf; the latter had taken his revenge by slaying the chief of the aggressors, Khālid b. Hishām; the strained situation had been, however, eased when the Djadhīma, while denying their complicity, had paid the blood-wit.

It seems probable that the Djadhīma had already accepted Islam before the conquest of Mecca by the Prophet; nevertheless the latter after the victory sent among them an expedition of 350 men commanded by Khālid b. al-Walīd, to assure himself of their neutrality if not their support (8/629). The troops comprised, besides some Muhādjirun and Anṣār, contingents of the Banū Sulaym b. Manṣūr and of the Banū Mudlidj b. Murra, who themselves entertained some grudge towards the Kināna, and moreover towards the Djadhīma on account of the defeat which had been inflicted on them on the *yawm* of al-Burza. Although sent for a pacific purpose, Khālid took advantage of the occasion to revenge himself, which he did in a way which aroused lively indignation at Mecca. The Prophet, to calm the agitation, rebuked Khālid publicly. Khālid excused himself to ʿAbd al-Raḥmān, who had reproached him for having killed Muslims, saying that he was unaware of their status as Believers. Khālid thought it better to absent himself for some time, and on his return he was again treated with benevolence by the Prophet. The dispute with the Djadhīma was adjusted by ʿAlī, who paid the blood-wit for the 30 killed, and conscientiously compensated for the value of the booty.

(L. Veccia Vaglieri)

DJADĪD (Arabic 'new', 'modern'; Turkish pronunciation *djedīd*), followers of the *uṣūl-i djedīd(e)*, the 'new methods', among the Muslims of Russia. The movement arose in about 1880 among the Kazan [*q.v.*] Tatars, who provided it with its first leaders; from there it spread to other Turkish peoples in Russia. The Djedīds were against 'religious and cultural retrogression'; they pressed, above all, for modern teaching methods in the schools, for the cultural unification of all Turkish peoples living under Russian domination, but also for their participation in the cultural and social development of the Russia of that time. Consequently, it seemed necessary to them that the Turks of Russia should learn Russian, of which until then they had been largely ignorant. By about 1900, despite the opposition of the Mullāhs, the Djedīd movement had reached almost all of the intelligentsia of the Turks in Russia, especially in the European parts, and it found a gifted leader in the person of the Crimean Tatar Ismāʿīl Gasprali (Russ. Gasprinskiy; 1851-1914). He published, from 1885, his journal *Terdjumān* 'The Interpreter', in such a way that it remained virtually free from police prosecution, in spite of the fact that the influences of pan-Islamic and pan-Turkish ideas were quite evident. Gasprali himself put forward the idea of the creation of a language which would be understandable to all the Turks in Russia, the basis of which was, in fact, Ottoman (cf. Gustav Burbiel, *Die Sprache Ismāʿīl Bey Gaspyralys*, diss. Hamburg 1950).

The Ḳādimīs set up their own traditional ideas in opposition to the Djedīds. Since this party, composed mainly of Mullāhs, maintained a quietist policy of support for the status quo—a support which was in no way a danger to Russia—and represented a cultural self-sufficiency which was in no way aligned to that of 'modernist' Turkey, it repeatedly received the support of the Russian state.

After the revolution of 1905 the efforts of the Djedīds were able to expand more freely, and now reached more strongly into Central Asia. From this direction came efforts, in the years 1917-22, to establish independent Islamic states on the territory of the former Tsarist Empire (for details see the articles on the Turkic peoples of the USSR). Although the Djedīds had, since 1905, worked closely with the representatives of the Russian leftist parties, from whom they hoped for some recognition of their efforts, the Soviet Government turned sharply, from the very beginning, against the Djedīds and the corresponding movement in Central Asia, the Basmačīs [*q.v.*], whom they regarded as 'foreign Imperialist agents'. Nevertheless, the Djedīds remained faithful to their ideas as long as any distinctive intellectual movements survived among the Russian Turks, until about 1930. The ideologies of the older Russo-Turkish emigrés remain, even today, influenced by the ideas of the Djedīds, whereas the younger generation have come further and further from any thoughts of returning to their homeland.

(B. Spuler)

al-**DJADĪDA**, Arabic and the present-day official name of the ancient Mazagan (former Arabic name: al-Buraydja "the little fortress"), a maritime town of Morocco, situated on the Atlantic Ocean 11 km. south-west of the mouth of the wādī Umm Rabiʿ. Its population was 40,318 in 1954, of whom 1704 were French, 120 foreigners, and 3,328 Jews.

Some authors have considered that Mazagan arose on the site of Ptolemy's Ῥουσιβὶς λιμήν, Pliny's *Portus Rutubis*. The texts do not, indeed, say that there had ever been a town there, but merely an anchorage frequented by ships, and this

seems to have been the case throughout the middle ages. The name of Mazagan seems to have appeared for the first time in al-Bakrī (5th/11th century). This geographer, enumerating the Atlantic Coast ports of Morocco, mentions one Mārīfen (de Slane's reading) which must certainly be restored as Māzīg͟han, the form attested by al-Idrīsī (6th/12th century). The same place-name recurs in a ms. collection of edifying anecdotes concerning the great saint of Azammūr, Mawlāy Abū S͟huʿayb, who also lived in the 6th/12th century; here Māzīg͟han appears as a fishermen's hamlet situated between the town of Azammūr and the *ribāṭ* of Tīṭ [*q.v.*]; the propinquity of these two relatively important centres impeded its development. The anchorage is marked on a whole series of planispheres and *portolani* of the 14th and 15th centuries (publ. Ch. de La Roncière, *Le découverte de l'Afrique au Moyen-Âge*, 1925), which give the forms Mesegan (1339 and 1373), Maseghan (1367), and Mazagem, forms intermediate between Māzīg͟han and the Mazagão of the Portuguese. These latter had, since the end of the 9th/15th century, come to load corn from the Dukkāla in the port of Mazagan for the provisioning of their capital. In 1502 a squadron commanded by a Portuguese gentleman, Jorge de Mello, caught by a storm in the straits of Gibraltar, is said to have been driven as far as Mazagan and to have landed there. The Portuguese accommodated themselves in an abandoned tower for protection against possible attack by the inhabitants. Shortly thereafter Jorge de Mello returned to Portugal and obtained royal permission to found a fortress at Mazagan. Although the account of these facts is only recorded by 18th century authors, it must be based on the actual events, for letters-patent of the king Dom Manuel, dated 21 May 1505, grant to Jorge de Mello the captaincy of the castle which he was authorized to build at his own expense at Mazagan. However, he did not avail himself of this privilege, because when, on 27 August 1513, the Portuguese army who were on their way to the conquest of Azammūr under the command of the Duke of Braganza disembarked at Mazagan there was no town and no fortress except for the old ruined tower (al-Buraydja). The difficulties of access to the port of Azammūr induced the Portuguese to establish a more accessible base at Mazagan.

During the summer of 1514 there was built, under the direction of the architects Diego and Francisco de Arruda, a square castle flanked with four angle towers. One of these bastions was formed out of the old tower al-Buraydja, whose name, for the present inhabitants, continues to refer to the Portuguese town. Most of the original castle still stands; most worthy of notice is a magnificent room the vaulting of which is supported by twenty-five columns and pillars, probably a huge granary built to receive the quit-rent, paid in grain, of the tribes subject to Portuguese protection rather than an armoury; this was later (1541) used as a reservoir. Since more than ten years previously the predicament of Portuguese strongholds on the coast, in the face of the religious and xenophobe movement roused by the accession and the conquests of the Saʿdī s͟harīfs, was so bad that the king of Portugal thought of abandoning many of his fortresses. The capture of that of Santa Cruz in Cape Ghir [see AGADIR-IGHIR] by the S͟harīf (12 March 1541) was a warning. John III resigned himself to evacuating Safi and Azammūr and concentrating in Mazagan, a more favourable and more easily defendable position, for all that he wished to leave some Portuguese forces in the south of Morocco. It was at this time that the walls of Mazagan received their present layout.

In preserving Mazagan the Portuguese wished to retain a base on the coast to guarantee the protection of the Indies route. They hoped also that the fortress might serve them as a springboard for the conquest of Morocco when conditions became favourable, but this was never to be realized. In fact, for over two hundred years while it remained in Portuguese possession Mazagan only furnished them with a pretext for obtaining papal bulls of Crusade, which furnished appreciable revenue to the treasury. But the tribes kept the town so tightly blockaded that the inhabitants were unable to venture outside the walls without military protection. The Muslims of the neighbourhood had founded, a mile or so from the town, two large villages, Faḥṣ al-Zammūriyyīn and Faḥṣ Awlād D͟huwayyib, the ruins of which still remain, where they ensconced themselves in order to maintain the blockade.

Badly provisioned by sea, often victims to famine and epidemics, the garrison and the population managed to live in fair security within the protection of their powerful walls, against which the tribesmen could do nothing, although on several occasions the stronghold sustained vigorous attack. In April 1562 Muḥammad, son of the Saʿdī sultan ʿAbd Allāh al-G͟hālib bi 'llāh, laid siege to Mazagan, but the besiegers became discouraged after two attacks had been repulsed. During the disorders which accompanied the decline of the Saʿdī dynasty the governors of Mazagan seem to have succeeded in opening the blockade and in re-establishing relations with the tribes. The *mudjāhid* Sīdī Muḥammad al-ʿAyyās͟hī, to remedy this offence, made an attack on the Portuguese in 1639 and inflicted some losses on them. Mawlāy Ismāʿīl, occupied with the siege of Ceuta, never seriously attempted to make himself master of Mazagan. The honour of reconquering it fell to his grandson Sīdī Muḥammad b. ʿAbd Allāh. The sultan came in person to besiege it at the end of January 1769. The fortress resisted victoriously for five weeks, but the order to evacuate came from Lisbon, and the governor capitulated on honourable terms, and troops and civilians returned to Portugal with their arms and baggage. In abandoning Mazagan, on 10 March 1769, the Portuguese left mines there, the explosion of which caused great damage; the sultan took possession of a devastated town, which he partly repopulated, but which remained in such a sorry state that it was called al-Mahdūma, "the ruin", until the time when, under the reign of Sīdī Muḥammad b. His͟hām, in 1240/1824-5, it was restored by Sīdī Muḥammad b. al-Ṭayyib, ḳāʾid of the Dukkāla and of the Tāmasna, who gave it the name of al-Djadīda.

DJADĪS [see ṬASM].

DJĀDŪ (DJADO) in Arabic, or *Brao* in Teda, designates at once the principal palm-grove and the bulk of a massif bounded by the 12° and 20° N. parallels and the 12° and 13° E. meridians. This massif is a short branch of the plateau of primary sandstones which, from Tassili of the Ajjers to the massif of Afafi, joins the Ahaggar to the Tibesti. Changes of level are not marked: one passes from 5-800 m. on the plateau to 450 m. at the foot of its western declivity; the impression of relief is given less by the height than by the appearance of the sandstones, looking almost like ruins, cut up, in bands running from north to south, by the beds of the "enneris". These intermittent streams flow towards a zone at the southern point of the massif where they expand; fed in part by the vast "impluvium" formed by the sandstone plateaux, their subterranean course is marked by the line of wells. The fall of the plateau to the west is marked in its northern part by the "gueltas" (Er Roui), and in the south-west by a string of oases.

The richness in underground reservoirs allows life to flourish in this region where the desert characteristics of the climate, violent temperature constrasts and extreme dryness, are very noticeable; there is a cold season from December to February (night temperature -3° or -4° C. [5 to 7 degrees of frost F.], day temperature 25° to 30° C. [77°-86° F.]), when violent sandstorms from the north-east obscure the horizon; from March the temperature rises rapidly to day maxima of 45° to 48° C. (113°-118° F.) with night temperatures of 16° to 20° C. (61°-68° F.). The rains fall at this time, very irregularly, the total annual rainfall varying between 2 and 50 mm., sometimes in a single shower. The intense evaporation explains the rhythm of the variations in the water-level in the wells and numerous springs at the southern end of the massif: from March to November the springs weaken and the ponds and some of the wells dry up; then, at the beginning of December, the level again rises, the ponds expand to an area of about 10 acres in the oases. Palms need no irrigation, and tomatoes, spices, millet, and tobacco grow in the gardens. There are numerous salt-mines. In the north and north-east of the massif the region of the "gueltas" and that of the wells are the *ḥādd* pasture-lands.

Djado is also favoured by its proximity to a crossing of caravan routes: the old commerce route from Murzuk to Chad, joined at this point by the route which runs to Ghat and Ghadames via In Ezzan, bifurcates, like the line of wells towards the south, on the one hand towards Fashi, running to Air or the Nigerian steppes, on the other towards Kawar and Chad; these were the traditional routes of the Sudan-Mediterranean traffic studied by Nachtigal, doubled across the Tenere by the local traffic carried by the *azalay* [*q.v.*].

The wealth in water and the ease of communication have been a twofold source of profit; but they have also been the cause of troubles, as the state of the oases testifies: the mud villages ranged one above another on the flanks of the mounds of derelict palm plantations are ruined; there are trunks to be seen, blackened by fire; a wholesale medley of undergrowth marks the reverted form of palm-groves planted and then abandoned; on the borders are traces of gardens, three of which remained in 1950; matting hovels are scattered on the surrounding sands. The sedentary Kanūrīs who built the villages were doubtless impoverished after the end of the 19th century by the decline in trade across the Sahara, particularly hard hit by the prohibition of slave traffic by the pasha of Murzuk in 1884, and were victims of marauding nomads into the bargain. Ajjer Tuaregs and Tedas would converge on Djado, either to fight or to form up in bands to batten on the caravans or to plunder Air. In any case the massif was a supply base, and so was sacked. The Kanūrīs fled, leaving their salt-workings and palm orchards in which the Tedas established themselves; the 1950 census shows that in a population of 450 inhabitants over 63 families, 53 families were originally from Tibesti, and only 7 were "Braouia", that is to say of mixed Teda and Kanūrī blood. The Tedas, attracted towards the south, would leave wives and children, the old men, perhaps a brother, in the oases, to take care of the propagation and cultivation of the palm plantations, and would return in August at harvest time, when the population of the oases would rise to some thousand persons.

The French administration attempted to revive these deserted oases, and from 1943 an *azalay* again worked the Djado road, while the palm orchards were in part restored. The Djado oasis produced for it alone some 60 tons of dates from 7000 trees; this production, with that of the other oases in the massif, Drigana and Djaba, and that of Kawar, represented 1/5 of the production of the former French West Africa, Mauretania producing the remaining 4/5.

(M. Ch. Le Cœur)

DJĀDŪ (DJADO), the old capital of the eastern region of the Djabal Nafūsa in Tripolitania, nowadays a large village in the Fassāṭō district situated on three hills of unequal height. The population of about 2,000—towards the end of the 19th century there were 500 houses—mostly consists of Berbers of the Ibāḍī tribe of Nafūsa. The ruins of the old town are nothing but a pile of broken stones and caves with a mosque in the centre. Near the mosque was formerly the business quarter and the market (*sūḳ*), near which one can still see today the site of the Jewish quarter, synagogue, and cemetery. According to J. Despois, to whom we owe this description, the former large settlement of "Old Djādū" has been replaced by five modern villages, Djado (Djādō), El Gsir (al-Gṣīr), Ouchebarî (Ushebarī), Ioudjelîn (Yudjlīn), and Temouguet (Temūdjeṭ). This information is not quite accurate. It appears, in fact, that at least two of these villages, Yudjlīn and Temūdjeṭ, have nothing to do with the old town of Djādū, and that they already existed alongside this town long ago. According to J. Despois, the present Djado would be about four centuries old. As for the old town, we do not know exactly when it was abandoned. The last mention of Djādū found in the Ibāḍī chronicles is connected with a celebrated Ibāḍī shaykh who lived in the 6th/12th century (al-Shammākhī, *Kitāb al-Siyar*, 541).

Little is known of the first days of Djādū. Nevertheless it appears that this town was founded long

before the Muslim conquest of North Africa and that it owed its creation and prosperity to the fact that it was situated on the ancient highway joining the city of Tripoli (and probably Sabratha and Leptis Magna) with the Fezzān and the central Sudan (on this highway, see A. Berthelot, *L'Afrique saharienne et soudanaise. Ce qu'en ont connu les anciens*, Paris 1927, 274-6). It seems to us, in fact, that it is with the name Djādū that the tribal name Gadaiae mentioned by Corippus (549 A.D.) must be connected.

It must, however, be said that the first certain mentions of this town date from much later, the end of the 2nd/8th and the beginning of the 3rd/9th centuries. At this time we hear already of a caravan of traders composed of men from Djādū in an anecdote concerning the *shaykh* Abū ʿUthmān al-Mazātī and related by the Ibāḍī biographer al-Dardjīnī [*q.v.*]. For some time, in the second half of the 3rd/9th and about the beginning of the 4th/10th century, Djādū, according to the Ibāḍī historians, was the political and administrative centre of the entire Djabal Nafūsa. It was the residence of Abū Manṣūr Ilyās, the governor of the country appointed by the Rustamid *imām* of Tāhart, and later of Abū Yaḥyā Zakariyyāʾ al-Irdjānī who ruled the Djabal Nafūsa as an independent *imām*.

Djādū was at this time also a considerable commercial city. Ibn Ḥawḳal (367/977) says that it possessed a mosque and a *minbar*. According to Abū ʿUbayd al-Bakrī (461/1068), who got his information about the Djabal Nafūsa from the geographical work of Muḥammad b. Yūsuf al-Warrāḳ (d. 363/973), Djādū was a large city with bazaars and a considerable Jewish population. According to this geographer the caravans going from Tripolitania to the town of Zawīla in the Fezzan (today Zuīla N.E. of Murzūḳ), a sizeable centre for the export of slaves to Ifrīḳiya and the neighbouring lands in the Middle Ages, used to pass through Djādū. A march of 40 days separated Zawīla from the Sudanese country of Kānem, with which the Djabal Nafūsa, and in particular the town of Djādū, had close, but as yet very little studied, relations. In this connexion it is relevant that al-Djanāwanī [*q.v.*], governor of the Djabal Nafūsa on behalf of the *imām* of Tāhart in the first half of the 3rd/9th century, knew, besides Berber and Arabic, the language of Kānem (*lugha kānamiyya*). Another fact attests the existence of close relations between Djādū and the Sudan: the name of the birthplace of al-Djanāwanī, Idjnāwun (situated below Djādū), which is known from the middle of the 2nd/8th century onwards, is the Arabicized form of the Berber *Ignawn*, an appellation still used today, which is the masculine plural of the Berber word *agnaw* "dumb > negro, black man" (cf. G. S. Colin, in *GLECS*, vii, 94-5). It is therefore probable that the village of Idjnāwun (Ignawn) "the Negroes" owes its name to an ethnic group of Sudanese origin, probably natives of Kanem, who had established themselves there some time previously to the 2nd/8th century (T. Lewicki, *Études ibāḍites nord-africaines*, i, Warsaw 1955, 94-6). So one may speak of Djādū as having been from that period at least a stage on the ancient track Tripoli-Zawīla-Kānem.

The inhabitants of other places in the Djabal Nafūsa used to come to the market at Djādū, which was above all an economic centre for the whole of the eastern region of the country. It even had, about the 4th/10th century, a special magistrate in charge of the market of the town.

In spite of its mixed population Djādū was also an Ibāḍī religious centre of great importance. According to al-Shammākhī it was a meeting-place for the Ibāḍī scholars of the country.

From a very distant period, the second half of the 2nd/8th century at least, Djādū was also a political centre, the chief town of the eastern region of the Djabal Nafūsa, which is called in the old Ibāḍī chronicles "the region of Djādū", "Djādū and its villages", or "Djādū and its neighbourhood". This region comprised the present districts of Fassāṭo, al-Rūdjabān, and al-Zintān. We know the names of some fifteen villages and strongholds (*ḳuṣūr*) which existed in this neighbourhood in the early Middle Ages, as well as the names of several Ibāḍī Berber tribes who lived there side by side with the Nafūsa proper. Of these tribes the Banū Zammūr and the Banū Tārdayt deserve special mention. We do not know whether the region of Djādū enjoyed autonomy under the Rustamids and their governors in the Djabal Nafūsa. But after the downfall of the imāmate of Tāhart, from the second half of the 4th/10th century onwards, at the time of the greatest economic prosperity of Djādū, there were *ḥākims* (local Ibāḍī chiefs) of this town (or perhaps of the whole region of Djādū) side by side with the *ḥākims* of the Djabal Nafūsa. The first *ḥākim* "of the people of Djādū" whose name we know was Abū Muḥammad al-Darfī, a contemporary of the *ḥākim* of Nafūsa Abū Zakariyyāʾ al-Tindemirtī. He lived in the famous Dār Banī ʿAbd Allāh which was situated on the *sūḳ* of Djādū. This house, which afterwards became the meeting-place of the *shaykhs* of the town, was considered later to be one of the holy places of the Djabal Nafūsa. After the death of Abū Muḥammad the office of *ḥākim* of Djādū passed to his son Abū Yaḥyā Yūsuf, who lived about 390/1000. Along with the *ḥākims* of Djādū there were also in the region of this town from the 4th/10th to the 5th/11th centuries *ḥākims* special to the Banū Zammūr.

DJADWAL, pl. *djadāwil*, primarily "brook, water-course", means further "table, plan". Graefe suggested that in this meaning it might derive from *schedula*; but perhaps one should rather think of *dj-d-l* "to twist", cf. S. Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, 224, and the similar development of the meaning of *sidj*, as stated by E. Honigmann, *Die sieben Klimata*, 1929, 117 ff. In this second sense the word becomes a special term in sorcery, synonymous with *khātim*; here it means quadrangular or other geometrical figures, into which names and signs possessing magic powers are inserted. These are usually certain mysterious characters, Arabic letters and numerals, magic words, the Names of God, the angels and demons, as well as of the planets, the days of the week, and the elements, and lastly pieces from the Ḳur'ān, such as the *Fātiḥa* [*q.v.*], the *Sūrat Yāsīn*, the "throne-verse", the *fawātiḥ*, etc. The application of these figures is manifold: frequently the paper on which they have been drawn is burnt in order to cense someone with its smoke; or the writing may be washed off in water and drunk (cf. Num., v, 23 ff.); along with the *daʿwa* (conjuration) and often also the *ḳasam* (oath) the *djadwal* forms the contents of an amulet (*ḥirz*, [*q.v.*]). The very popular *daʿwat al-shams*, for example, is prepared as follows: it is quadrangular, divided into 49 sections by six lines drawn lengthwise and six drawn across its breadth, and contains Solomon's seal and other peculiar figures: seven consonants, Names of God, names of spirits, the names of the seven kings of the *djinns*, the names of the days of the week, and the names of the planets. The underlying notion is that secret relationships exist between these various components, and the *djadwal* is therefore made to obtain certain certain results from the correlations of the elements composing it. The highly developed system of mystic letters, which is based on the numerical values of the Arabic letters, is very frequently used for the *djadwal*. A special class is formed by the squares called *wafḳ* [*q.v.*] in the fields of which certain figures are so arranged that the addition of horizontal, vertical and diagonal lines gives in every case the same total (*e.g.*, 15 or 34). The celebrated name *budūḥ* is nothing but an artificial talismanic word formed from the elements of the simple threefold magic square, *i.e.*, from the letters in the four corners in the alphabetical order of the *abdjad*,

4	9	2
3	5	7
8	1	6

expressed in *abdjad* by

د	ط	ب
ج	ه	ز
ح	ا	و

The name *budūḥ* evidently passed at an early date into South Arabic, became used there as a feminine proper name and as a feminine epithet, "fat", and was confused with the root بذخ (*LA*, iii, s.v. بذخ). It has no other meaning in Arabic. In magical books there are even a few cases of the word being personified (*e.g.*, *Yā budūḥ*, in Ḥādjdj Saʿdūn, *Al-fatḥ al-raḥmānī*, 21), although in popular belief Budūḥ has become a Djinnī whose services can be secured by writing his name either in letters or in numbers (*JA*, sér. 4, xii, 521 ff.; Spiro, *Vocabulary of colloquial Egyptian*, 36; Doutté, *Magie et religion*, 296, along with *Ḳayyūm* as though a name of Allāh; Klunzinger, Upper Egypt, 387). The uses of this word are most varied, to invoke both good and bad fortune: thus, in Doutté, *op. cit.*, against menorrhagia (234), against stomach pains (229), to render oneself invisible (275), against temporary impotence (295); Lane's Cairo magician also used it with his ink mirror, and so in several treatises on magic. It is also engraved upon jewels and metal plates or rings which are permanently carried as talismans, and it is inscribed at the beginning of books (like *kabīkadj*) as a safeguard, *e.g.*, in *Fatḥ al-djalīl*, Tunis 1290. By far its most common use is to ensure the arrival of letters and packages.

Besides the references above, see also Reinaud, *Monuments musulmans*, ii, 243 ff., 251 ff., 256. For the other meanings of *djadwal* cf. the notes s.v. in Dozy's *Supplément* and Redhouse's *Turkish and English lexicon*. The *K. al-budūḥ* by Djābir b. Ḥayyān mentioned in the *Fihrist* is in fact a *kitāb al-tadarrudj*, cf. P. Kraus, *Jābir ibn Ḥayyān*, i, 1943, p. 26, no. 47, and J. W. Fück, in *Ambix*, iv (1951), 128, no. 36.

(E. GRAEFE-D. B. MACDONALD-[M. PLESSNER])

AL-**DJADY** [see NUDJŪM].

DJĀF. A large and famous Kurdish tribe of southern (ʿIrāḳī) Kurdistān, and of the Sanandadj (Senna) district of Ardalān province of Western Persia.

The tribe, cattle-owning and seasonally nomadic, was centred in the Djawānrūd [*q.v.*] area of the latter province in the early 11th/17th century, and is first mentioned in connexion with the operations and Turko-Persian treaty of Sultan Murād IV. About 1112/1700, following bad relations with the Ardalān authorities, the main body of the tribe (estimated at 10,000 tents or families) moved into Turkish territory, leaving substantial sections in their own original homes. The Djāf who settled in the Turkish and border districts occupied, in summer, the highlands around Pandjwīn: in spring and autumn, the plain of Shahrizūr, with headquarters at Ḥalabdja: and in winter, lands dependent upon Kifrī, on the right bank of the Sīrwān (Diyālā). Other Djāf elements at various periods became incorporated with the Gūrān, others with the Sindjābī, others the Sharafbayānī, others the Bādjalān (all more or less astride the reputed frontier, which was not fixed until 1263/1847), and separated from their original tribe.

The main body of the Djāf, although grouped in many distinct sections, sometimes of formidable size and self-consciousness, showed fair general cohesion under capable leaders. For a century and a half (1112-1267/1700-1850) they intermittently (but

never much more than nominally) formed part of the dependencies of the Bābān [*q.v.*] empire. Their nomadic habit and indiscipline involved them in endless quarrels with neighbours and settled folk, and their seasonal entry into, and close contacts in, Persian districts gave them a footing in both countries which made them for a century an element in Turko-Persian frontier politics: an element the more unmanageable by reason of their formidable numbers, and the rivalries between claimants for power among their own Beg-zāda, who frequently courted, or were championed by, both Governments in turn. Even after their nominal incorporation in the Turkish administrative system, about 1267/1850, and in spite of increasing contacts of their leaders with Turkish officialdom and forces, they remained effectively ungoverned until the first World War, dominated the area in which they camped and grazed (as well as the town of Ḥalabdja, which was a Djāf creation), and paid infrequent dues to the Treasury in the form of lump sums collected by their own chiefs. Since 1337/1918, however, a defined frontier, more effective government, and increasing tribal settlement have deprived the tribe of much of its former importance.

Bibliography: E. B. Soane, *Report on the Sulaimania district of Kurdistan*, Calcutta 1918; ʿAbbās al-ʿAzzāwī, *ʿAshāʾir al-ʿIrāḳ*, ii, Baghdād 1366/1947. Cf. also SENNA. (S. H. LONGRIGG)

MĪR **DJAʿFAR** or Mīr Muḥammad Djaʿfar Khān (*Siyar al-mutaʾakhkhirīn*, vol. ii in both the text and rubrics, and not Djaʿfar ʿAlī Khān), son of Sayyid Aḥmad al-Nadjafī, of obscure origin, rose to be the Nawwāb of Bengal during the days of the East India Company. A penniless adventurer, like his patron Mīrzā Muḥammad ʿAlī entitled ʿAlīwirdī Khān Mahābat Djang (see the article ʿALĪ WERDI KHĀN), he married a step-sister, Shāh Khānim, of ʿAlīwirdī and served his master and brother-in-law as a commandant, before the latter ascended the *masnad* of Bengal in 1153/1740 after defeating and killing Sarfrāz Khān, son and successor of Shudjāʿ al-Dīn, the Mughal *sūbadār* of Bengal. He fought, successfully on a number of occasions, against the Marāṭhās, who were then making inroads into Bengal. In one of the encounters on the banks of the Bhagīrthī in 1155/1741 he scattered and dispersed the *lashkar* of the Marāṭhā chieftain, Bhāskar Panḍit. After the withdrawal of the Marāṭhās he was appointed *nāʾib-nāẓim* of Cuttack and *fawdjdār* [*q.v.*] of Medinīpur and Hidjlī. He, however, continued to held the office of paymaster (*bakhshī*) of the army, to which post he had been appointed in 1153/1740 by ʿAlīwirdī Khān. In 1160/1747 he was ordered to oppose the Marāṭhās, but he fled and fell precipitately on Burdwan. The same year he was deprived of this and other offices held by him for malversation and his insolence towards ʿAlīwirdī Khān, who had gone to his house to condole with him in a family bereavement. The next year, however, he was reinstated. In 1164/1751 he was again successful against Mīr Ḥabīb and his Marāṭhā confederates. On the accession of Sirādj al-Dawla, a grandson of ʿAlīwirdī Khān, to the *masnad* of Bengal, Mīr Djaʿfar was removed from the all-important office of *bakhshī* as by reason of his maturity, war experience, and high position, he was the only man whom Sirādj al-Dawla had reason to fear in a trial of strength. It must have been within the knowledge of Sirādj al-Dawla that Mīr Djaʿfar was an ambitious man and had on an earlier occasion during the life-time of ʿAlīwirdī Khān conspired to kill his master and patron and himself occupy the *masnad* of Bengal (*Siyar*, ii, 157). Soon after the death of ʿAlīwirdī Khān (1169/1756), Mīr Djaʿfar sent a secret letter to Shawkat Djang, the Nawwāb of Purnia, to attack Sirādj al-Dawla, assuring him of full support. Shawkat Djang needed no such invitation as he had refused to recognize the succession of Sirādj al-Dawla. Djaʿfar, however, did not slacken his efforts and in 1170/1757 entered into a secret treaty with Lord Clive, through William Watts, the chief of the English Factory in Ḳāsimbāzār, for the overthrow of Sirādj al-Dawla, who had by his various indiscretions alienated not only his own officers but even the influential Hindū bankers, the Djagat Seṭhs, whom he had threatened with circumcision. Not very sure of the support promised by Mīr Djaʿfar, Clive took the field at Plassey in 1170/1757. On the fall of Mīr Madan, the Chief of Artillery (*Mīr Ātash*) of Sirādj al-Dawla's army, the Nawwāb in utter despair called Djaʿfar to his tent and begged and implored him to "defend his honour". Djaʿfar, in spite of his having sworn on the Ḳurʾān, informed Clive of the helplessness of the Nawwāb and urged the English to advance at once and seize his camp. Next day Mīr Djaʿfar, instead of supporting the Nawwāb, retreated from the battlefield, thus facilitating the victory of the English. After the battle he returned to Murshidābād, the capital, and was proclaimed Nawwāb by Clive. (S. C. Hill, *Bengal in 1756-57*, London 1905, ii, 437). A few days later he had Sirādj al-Dawla, who had been captured while fleeing and brought back to Murshidābād, executed by his son Mīran, although the fallen Nawwāb abased himself by begging for mercy. Mīr Djaʿfar soon found that he was not in a position to fulfil his monetary commitments (£ 3,388,000) rashly entered into with the East India Company. In 1174/1769 he was deposed and supplanted by his son-in-law, Mīr Ḳāsim, partly because of his doubtful attitude during the attempted Dutch invasion of Bengal in 1173/1759 and partly because of his having been in arrears with his payments to the Company. The declaration of war against the Company by Mīr Ḳāsim in 1177/1763 and his ultimate defeat and flight into Awadh again brought Mīr Djaʿfar to the *masnad*, which he occupied till his death in 1178/1765. Taking account of the standards of the time, the prevailing atmosphere of political chicanery and doubtful entitlement to high offices of State, of the way his contemporary ʿAlīwirdī Khān had obtained the *niẓāmat* of Bengal, of Sirādj al-Dawla's incompetence and unpopularity, it is rather difficult to justify the charge of national treachery commonly levelled against Mīr Djaʿfar, much less to dub him "Lord Clive's jackass". His last years were not very happy or comfortable as he had contracted leprosy and was strongly addicted to sensual pleasures, opium, and *ḥashīsh*.

(A. S. BAZMEE ANSARI)

DJAʿFAR B. **ABĪ ṬĀLIB,** cousin of the Prophet and brother of ʿAlī, whose elder he was by ten years. When his father was reduced to poverty, his uncle al-ʿAbbās took Djaʿfar into his house to solace him, while Muḥammad took care of ʿAlī. Soon being converted to Islam (Djaʿfar occupies the 24th, or 31st, or 32nd place in the list of the first Muslims), he was among those who emigrated to Abyssinia (his name heads the second list given by Ibn Hishām, 209); his wife Asmāʾ b. ʿUmays followed him. When the Ḳuraysh sent Abū Rabīʿa Ibn al-Mughīra al-Makhzūmī and ʿAmr b. al-ʿĀṣ to the Negus to demand the detention of the émigrés, Djaʿfar, by reciting Ḳurʾānic verses on the Virgin (from Sūra XIX) before the sovereign, and at a subsequent audience verses on Jesus (from Sūra IV), obtained his protection for himself and his companions; it is even said that he converted him to Islam. During this period of exile the Prophet expressly commended Djaʿfar to the Negus; at the time of the famous Pact of Fraternity between *Muhādjirūn* and *Anṣār,* he allotted Muʿādh b. Djabal to him as adoptive brother, and, unless the tradition is in error, he considered him as present at the battle of Badr, since his name figures among the Badrites.

On his return from Abyssinia, Djaʿfar met the Prophet on the day of the capture of Khaybar (7/628). Muḥammad, embracing him with the greatest fervour, cried "I know not what gives me the greater pleasure, my conquest or the return of Djaʿfar".

The name of Djaʿfar is found in the sources in connexion with an episode concerning ʿAmmāra, daughter of Ḥamza the uncle of the Prophet. The girl had stayed at Mecca; to withdraw her from the pagans while respecting the pact of Ḥudaybiya, ʿAlī proposed to take her as wife to Medina. Zayd b. Ḥāritha protested that he was her *walī* in his capacity as Ḥamza's brother and heir, and that Djaʿfar was also on account of his kinship with her (he was Ḥamza's nephew and brother-in-law of ʿAmmāra's mother). Muḥammad agreed that Djaʿfar should be the girl's guardian, but restrained him from marrying her because of his double bond of relationship. Djaʿfar welcomed the decision of the Prophet, skipping (*ḥadjala*) around Muḥammad in the way in which the Abyssinians did around the Negus. It was on this occasion that the Prophet is reputed to have said "Thou art like me in thy features and thy manners (*ashbahta khalḳī wa khuluḳī*)".

In the year 8/629, when the Prophet decided to send an expedition beyond the Byzantine frontier, he appointed Zayd b. Ḥāritha as commander-in-chief, and, in case the latter should be killed, Djaʿfar, and then, as Djaʿfar's eventual replacement, ʿAbd Allāh b. Rawāḥa. All three fell in the battle of Muʾta (Djumādā I 8/629) and were buried in the same tomb which had no distinctive markings. A tomb is in existence at Muʾta on which Djaʿfar's epitaph in Kūfic characters is partly preserved, which shows the antiquity of the tradition concerning him. Djaʿfar fought and died bravely (at this time he was about forty years old); he is said to have hamstrung his horse before the battle so that he should have no means of flight, and that he was the first in Islam so to do; having had his hands cut off one after the other, he carried the standard against his chest with his stumps; more than sixty wounds were counted on his body. The Prophet, through his supernatural powers of perception, witnessed the battle from his *minbar.* The following day he went to Djaʿfar's house and revealed to his widow, by his tears, the sorrow which had fallen upon her.

Djaʿfar was the one of Muḥammad's kinsmen who most closely resembled him. He was surnamed Abu 'l-Masākīn (or Abu 'l-Masākin) for his charity towards the poor. After his death he was called Djaʿfar dhu 'l-djanāḥayn or Djaʿfar al-Ṭayyār fi 'l-djanna, as the Prophet declared that he had had a dream of him flying on two bloody wings among a group of angels in Paradise. The *Usd* and the *ʿUmdat al-ṭālib* say that he was also called Dhu 'l-hidjratayn because of his two emigrations, to Abyssinia and to Medina, which seems strange since, on account of his exile, he could not have had the opportunity of following Muḥammad on his *hidjra.*

Of the sons Djaʿfar had by his wife al-Asmāʾ, ʿAwn and Muḥammad fell at Karbalāʾ beside al-Ḥusayn; only ʿAbd Allāh gave him any descendants.

Ibn Abi 'l-Ḥadīd tells us of the arguments of those who considered the merits of Djaʿfar to be superior to those of ʿAlī: he had embraced Islam after puberty; he had died a martyr's death, whereas there was dispute as to whether ʿAlī's had been a *shahāda,* etc. Abū Ḥayyān al-Tawḥīdī has also treated of this subject in the 5th part of his *K. al-Baṣāʾir.*

Sourdel-Thomine, Damascus 1957, 47.

(L. VECCIA VAGLIERI)

DJAʿFAR B. **ʿALĪ** B. **ḤAMDŪN AL-ANDALUSĪ,** a descendant of a Yemeni family which settled in Spain at an unknown date, subsequently moving to the district of Msīla, in the Maghrib, at the end of the 3rd/9th century at the latest. Like his father ʿAlī, he was at first a loyal supporter of the Fāṭimid cause, as Governor of Msila; then, probably inspired by jealousy of the Zīrids [*q.v.*] who were increasingly favoured by the Fāṭimid caliphs, he changed sides in 360/971 and swore obedience to the Umayyad

caliph of Spain. After a few years in favour, he incurred the displeasure of the all-powerful *ḥādjib* al-Manṣūr b. Abī ʿĀmir [*q.v.*] who had him assassinated in 372/982-3.

(R. Le Tourneau)

DJAʿFAR B. AL-**FAḌL** [see IBN AL-FURĀT].

DJAʿFAR B. **ḤARB.** Abu 'l-Faḍl Djaʿfar b. Ḥarb al-Hamadhānī (d. 236/850), a Muʿtazilī of the Baghdād branch, was first a disciple of Abu 'l-Hudhayl al-ʿAllāf at Baṣra, and then of al-Murdār at Baghdād, whose asceticism he tried to imitate; this is what inspired him to give to the poor the large fortune which he had inherited from his father.

In agreement with the Muʿtazila, he defended the doctrine that God knows through Himself from all eternity, that His knowledge is His very being, and that the object of His knowledge can exist from all eternity. He said that we have, in the divine wisdom, the guarantee that God does not commit injustice and does not lie; indeed that we cannot reasonably conceive the idea of a God who in fact commits an injustice. The infidel who is converted by his own effort, he said, has greater merit than one who is converted by divine grace. Again in agreement with the Muʿtazila, he admitted that the Word of God—the Ḳur'ān—is created; it is therefore an accident and its place is the Prophet. He considered the soul to be essentially different from the body and united to it accidentally. He said that we act according to the last decision we have taken, provided it is not halted by another decision or by an obstacle.

Djaʿfar was a Zaydī: he said that the imāmate falls on the most worthy and not on the person who deserves it by right; and ʿAlī b. Abī Ṭālib is the most deserving in the community after the Prophet.

(Albert N. Nader)

DJAʿFAR B. **MANṢŪR** AL-**YAMĀN** [see SUPPLEMENT].

DJAʿFAR B. MUBASHSHIR al-Ḳaṣabī (also al-Thaḳafī), a prominent Muʿtazilī theologian and ascetic of the school of Baghdād, d. 234/848-9. He was a disciple of Abū Mūsā al-Murdār, and to some slight degree also influenced by al-Naẓẓām [*q.v.*] of Baṣra. Little is known of his life except some anecdotes about his abnegation of the world, and the information that he introduced the Muʿtazilī doctrine to ʿĀna [*q.v.*], and held disputations with Bishr b. Ghiyāth al-Marīsī [*q.v.*]. He is the author of numerous works on *fiḳh* and *kalām* (al-Khayyāṭ 81; *Fihrist* 37) and he had numerous disciples who, together with the disciples of his like-minded contemporary Djaʿfar b. Ḥarb [*q.v.*], were called Djaʿfariyya, a branch of the Muʿtazila of Baghdād, by later heresiographers. Nothing of his literary output seems to have survived, except one long quotation on various opinions concerning the Ḳur'ān, from which it appears that he had anticipated al-Ashʿarī's style of literary exposition (*Maḳālāt al-Islāmiyyīn*, 589-98). His principle in *fiḳh* was, according to al-Khayyāṭ (89), to follow the *ẓāhir* meaning of Ḳur'ān, *sunna* and *idjmāʿ*, and to avoid *ra'y* and *ḳiyās*, and among his writings are mentioned works directed against the *aṣḥāb al-ra'y wa- 'l-ḳiyās*, and against the *aṣḥāb al-ḥadīth*. His opinions in theology remain within the framework of the various doctrines held by the Muʿtazila; some of them seem directly to reflect his unworldly attitude, such as his definition of the world of Islām not as the "world of faith" but as the "world of unrighteousness" (*dār fisḳ*, in the technical meaning of the word; *Maḳālāt al-Islāmiyyīn* 464); this seems to have been the basis for Ibn al-Rēwendī's [*q.v.*] charge, repeated by later heresiographers but rejected as false by al-Khayyāṭ (81), that Djaʿfar regarded some Muslim sinners (*fussāḳ*) as worse than the Jews, Christians, Zindīḳs and Dahriyya. As regards the caliphate, Djaʿfar held, in common with Djaʿfar b. Ḥarb and al-Iskāfī [*q.v.*], that ʿAlī was the most meritorious of men after the Prophet, but that the appointment of his less meritorious predecessors before him was valid; he and the other Muʿtazila of Baghdād are therefore regarded as a branch of the Zaydiyya (al-Malaṭī 27).

Djaʿfar's brother, Ḥubaysh b. Mubashshir (d. 258/872), was a *faḳīh* and traditionist who is claimed both by Sunnī and by Shīʿa biographers (al-Khaṭīb al-Baghdādī, no. 4369; Ibn Ḥadjar al-ʿAsḳalānī, *Tahdhīb al-Tahdhīb*, ii, no. 363; al-Māmaḳānī, *Tanḳīḥ al-Maḳāl*, Nadjaf 1349 ff., no. 2237); it is reported that Djaʿfar refused to talk to him because he was a Ḥashwī (al-Masʿūdī, *Murūdj*, v, 443).

Bibliography: al-Khayyāṭ, *K. al-intiṣār*, ed. Nyberg, index; al-Ashʿarī, *Maḳālāt al-Islāmiyyīn*, ed. Ritter, index; al-Malaṭī, *K. al-Tanbīh*, ed. Dedering, index; Ibn al-Nadīm, *Fihrist*, in *Muḥ. (A. N. Nader and J. Schacht)

DJAʿFAR B. **MUḤAMMAD** [see ABŪ MAʿSHAR].

DJAʿFAR B. **YAḤYĀ** [see AL-BARĀMIKA].

DJAʿFAR BEG (?-926/1520)—the "Zafir agà, eunuco" listed in the index to Marino Sanuto, *Diarii*, xxv, col. 832—was Sandjaḳ Beg of Gallipoli, *i.e.*, Ḳapudān or High Admiral of the Ottoman naval forces. He was appointed to this office, not (as *Ḳāmūs al-aʿlām* and *Sidjill-i ʿOthmānī* assert) in 917/1511, but in 922/1516. His tenure of the office coincided with the Ottoman conquest of Syria and Egypt (922-3/1516-7) and with the extensive naval preparations that Sultan Selīm I (918-26/1512-20) urged forward during the last of his reign. Djaʿfar Beg was noted for his harsh character (cf. Hammer-

Purgstall, *GOR*, iii, 7). His misdeeds brought about his execution at the beginning of the reign of Sultan Sulaymān Ḳānūnī (926-74/1520-66).

Bibliography: Saʿd al-Dīn, *Tādj al-tawārīkh*, Istanbul A.H. 1280, ii, 373, 389; Ḥādjdjī Khalīfa, *Tuḥfat al-kibār fī asfār al-biḥār*, Istanbul A.H. 1329, 23; Paolo Giovio, *Historiarum sui temporis tomus primus*, Paris 1558, lib. xvii, fol. 197r (= *La prima parte dell'istorie del suo tempo di Mons. Paolo Giovio .... tradotta per M. Lodovico Domenichi*, Venice 1560, 469); M. Sanuto, *I Diarii*, edd. Barozzi, Berchet, Fulin, Stefani, Venice 1879-1903, xxiv, col. 848, xxv, cols. 832-833, xxvi, col. 628, xxviii, col. 821 and xxix, col. 549; Hammer-Purgstall, *GOR*, ii, 533; iii, 7; Sāmī, *Ḳāmūs al-aʿlām*, iii, Istanbul A. H. 1308, 1818; *Sidjill-i ʿOthmānī*, ii, 69; *Arşiv kılavuzu*, fasc. I, Istanbul 1938, 88. (V. J. Parry)

DJAʿFAR ČELEBI (864/1459-921/1515), Ottoman statesman and man of letters, was born at Amasya (for the date see E. Blochet, *Cat. des mss. turcs*, ii, 1-2), where his father Tādjī Beg was adviser to Prince (later Sultan) Bāyezīd. After rising in the theological career to *müderris*, he was appointed nishāndjī by Bāyezīd II (in 903/1497-8, see *Tâci-zâde Sa'dî Çelebi Münşeâtı*, ed. N. Lugal & A. Erzi, Istanbul 1956, 85). Suspected of favouring Prince Aḥmad in the struggle for the succession, Djaʿfar, with other of Aḥmad's partisans, was dismissed at the insistence of the Janissaries (Djumādā II 917/ September 1511), but Bāyezīd's successor Selīm, appreciating his talents, restored him to office. After the battle of Čāldirān he was given Shāh Ismāʿīl's wife Tādjlī Khanum in marriage (see I. H. Uzunçarşılı in *Belleten*, xxiii, 1959, 611 ff.) and appointed ḳāḍiʿasker of Anadolu (Ferīdūn², i, 406, 464); back in Istanbul, however, he was accused of having encouraged the discontent of the Janissaries on the campaign and put to death (8 Redjeb 921/18 August 1515).

His poetical works consist of (1) a *Dīwān* (selections published by Gibb and S. Nüzhet, see Bibl.) and (2) *Hevesnāme*, composed in 899/1493-4, a Turkish *mathnawī* completely original in theme, containing a description of Istanbul and the account of an amatory adventure. He was reckoned especially skilful as a *munshī*. His ornate description of Meḥemmed II's capture of Constantinople, *Maḥrūse-i Istanbul Fetḥnāmesi*, was published from a MS owned by Khāliṣ Ef. as the supplement to *TOEM*, parts 20-1, 1331/1913 (simplified text in Latin transcription by Şeref Kayaboğazı, Istanbul 1953; further MSS: Ist. Un. TY 2634, Vienna 993/1 [see A. S. Levend, *Gazavâtnâmeler*, 16]). He translated into Turkish a Persian *Anīs al-ʿārifīn* (Ḥādjdjī Khalīfa, ed. Flügel, no. 1448; MSS: Istanbul, Esad Ef. 1825, Un. TY 834). A collection of his official compositions (*Munshaʾāt*) was owned by Khāliṣ Ef., but seems now to be lost (for one specimen see Ferīdūn², i, 379 ff.). Djaʿfar was also a famous calligrapher and a patron of poets.

Bibliography: Sehī, 28; Laṭīfī, 117; Tashköprüzāde, *Shaḳāʾiḳ*, tr. Rescher 212 = tr. Medjdī 335 ff.; Gibb, *Ottoman poetry*, ii, 263-85; B. Meḥmed Ṭāhir, *ʿOṣmānlı müʾellifleri*, i, 263; Babinger, 49 f.; S. Nüzhet Ergün, *Türk şairleri*, ii, 882-90; *IA*, s.v. Câfer Çelebi (M. Tayyib Gökbilgin). (V. L. Ménage)

DJAʿFAR AL-ṢĀDIḲ ("the trustworthy"), Abū ʿAbd Allāh, son of Muḥammad al-Bāḳir, was a transmitter of *ḥadīth*s and the last *imām* recognized by both Twelver and Ismāʿīlī Shīʿīs. He was born in 80/699-700 or 83/702-3 in Medina, his mother, Umm Farwa, being a great-granddaughter of Abū Bakr. He inherited al-Bāḳir's following in 119/737 (or 114/733); hence during the crucial years of the transition from Umayyad to ʿAbbāsid power he was at the head of those Shīʿīs who accepted a non-militant Fāṭimī imāmate. He lived quietly in Madīna as an authority in *ḥadīth* and probably in *fiḳh*; he is cited with respect in Sunnī *isnād*s.

He made no sharp break with the non-Shīʿī majority—even a Shīʿī follower of his could appear in Sunnī *isnād*s (and his heir, ʿAbd Allāh, was accused by later Shīʿīs of Sunnī tendencies); but he seems to have been a serious Shīʿī leader nonetheless. He appears to haye permitted his own *shīʿa*, his personal following, to regard him, like his father, as sole authoritative exponent of the *sharīʿa*, divinely favoured in his *ʿilm*, religious knowledge (and in principle as the only man legitimately entitled to rule). But he taught also a wider circle who consulted him along with other masters; Abū Ḥanīfa, Mālik b. Anas, and Wāṣil b. ʿAṭāʾ, among other prominent figures, are alleged to have heard *ḥadīth* from him. It is in his time, at the earliest, that distinctive Shīʿī positions in *fiḳh* begin to appear; but it is uncertain how far the subsequent Twelver or Ismāʿīlī (or Zaydī) systems may be ascribed to his teaching, though he is given a leading role in the two former.

At the time of Zayd's revolt (122/740), Djaʿfar served as symbol for those Shīʿīs who refused to rise; and during the revolutions after the death of al-Walīd (126/744), when most Shīʿīs were expecting that at last the ʿAlid family would come to power, he remained neutral. His support and possibly his candidacy may have been solicited by the Kūfa Shīʿa at the time of ʿAbbāsid victory, but he seems to have declined to recognize any other Shīʿī candidacy than his own, while, if he did think of himself, he held to the principle of *ḳuʿūd*, that the true *imām* need not attempt to seize power unless the time be ripe, and can be content to teach. At the time of the Shīʿī revolt of Muḥammad al-Nafs al-Zakiyya in the Ḥijāz (145/762), he was again neutral, leading the Ḥusaynids in their passivity in that largely Ḥasanid affair, and was left in peace by al-Manṣūr.

Djaʿfar attracted a circle of active thinkers, most of whom, like the majority of his *shīʿa*, lived normally in Kūfa (or some in Baṣra). The most fecund leader among the early Ghulāt, Abu 'l-Khaṭṭāb [*q.v.*], seems to have had close relations with him, and some radical ideas were attributed to Djaʿfar himself (but were later rejected by Twelvers as interpolations by Abu 'l-Khaṭṭāb). Before the latter was killed in 138/755, however, Djaʿfar repudiated him as going too far; this repudiation greatly disturbed some of his associates. It seems likely that though certain radical Shīʿī ideas helped to make his imāmate attractive in ʿIrāḳ, Djaʿfar made a point of keeping them within bounds. More technical philosophers also were associated with him and with his son, Mūsā, notably Hishām b. al-Ḥakam and Muḥammad b. al-Nuʿmān, nicknamed Shayṭān al-Ṭāḳ, who were inclined to an anthropomorphist system in contrast to that of the early Muʿtazilites with whom they disputed. Djaʿfar himself is assigned (with uncertain authenticity) a position on the problem of *ḳadar* which claims to be between determinism and free-will.

Djaʿfar died in 148/765 (poisoned, according to the unlikely Twelver tradition, on the orders of al-Manṣūr) and was buried in the Baḳīʿ cemetery in

Medina, where his tomb was visited, especially by Shīʿīs, till it was destroyed by the Wahhābīs. He left a cohesive following with an active intellectual life, well on the way to becoming a sect. But some of the differing tendencies which he had usually managed to reconcile now seem to have caused historic splits in it, occasioned by a disputed succession to his imāmate. He had designated Ismāʿīl, his eldest son (by an ʿAlid wife, Fāṭima, granddaughter of al-Ḥasan), but Ismāʿīl had died before his father—a fact which had troubled the faith of some of Djaʿfar's followers. A considerable body held by Ismāʿīl, some maintaining that he was himself not dead but only concealed; others passing on to his son Muḥammad b. Ismāʿīl. These formed the nucleus of the later Ismāʿīliyya, for whom Djaʿfar was the fifth imām. Most of Djaʿfar's following, however, accepted ʿAbd Allāh, Ismāʿīl's uterine brother and the eldest surviving son, on the ground that Djaʿfar had generalized that an *imām*'s successor must be his eldest son; but ʿAbd Allāh died without sons a few weeks later. The majority thereupon accepted Mūsā, whose mother was Ḥamīda, a slave (and whom some, including prominent philosophers, had hailed as *imām* from the start); these developed into the Twelver Shīʿa, for whom Djaʿfar was the sixth *imām*. A few asserted that Djaʿfar was not really dead, but absent, and would return as *mahdī* (these were called the Nāwūsiyya). Some of Djaʿfar's following looked to Mūsā's young brother Muḥammad, who later became the Imām of the Shumayṭiyya [*q.v.*].

Among most Shīʿīs, Djaʿfar has been regarded as one of the greatest of the *imāms* and as the teacher of *fiḳh* par excellence. The Twelvers, when referring to themselves as a *madhhab*, have called it the Djaʿfariyya. To Djaʿfar have been ascribed numerous utterances defining Shīʿī doctrine, as well as prayers and homilies; he has been ascribed, by both Sunnīs and Shīʿīs, numerous books, probably none of them authentic, dealing especially with divination, with magic, and with alchemy, of which the most famous is the mysterious *Djafr* [*q.v.*], foretelling the future. He is regarded as the chief teacher of the alchemist Djābir b. Ḥayyān (who did in fact revere him as a religious teacher). He is also regarded as a master Ṣūfī. Especially among the Shīʿa, so many sayings on all sides of all controverted questions have been ascribed to him that such reports are almost useless for determining his actual opinions in a given case.

(M. G. S. HODGSON)

DJAʿFAR SHARĪF B. ʿALĪ SHARĪF AL-ḲURAYSHĪ AL-NĀGŌRĪ, whose dates of birth and death are unknown, wrote his *Ḳānūn-i Islām* at the instigation of Dr. Herklots some time before 1832. He is said to have been "a man of low origin and of no account in his own country", born at Uppuēlūru (Ellore) in Kistna District, Madras, and was employed as a *munshī* in the service of the Madras government. He was an orthodox Sunnī, yet tolerant towards the Shīʿas, who had considerable influence in south India in his time, learned yet objective in his approach to his faith, knowledgeable in magic and sorcery yet writing of it in a deprecatory and apologetic tone, and a skilful physician of the Yūnānī school. In the course of his duties he met with Gerhard Andreas Herklots (b. 1790 in the Dutch colony of Chinsura in Bengal of Dutch parents, d. Wālādjābād 1834), who had studied medicine in England and had been appointed Surgeon on the Madras establishment in 1818. Herklots, struck by the lack of any information on the Indian Muslims comparable with the *Manners and customs of the Hindoos* of the Abbé Dubois, had started a collection of material when he met Djaʿfar accidentally, whom he encouraged to produce the work himself acting "merely as a reviser", occasionally suggesting "subjects which had escaped his memory".

The original was written in Dakkhinī Urdū, which Herklots had intended to publish also, but his death prevented this and the original has now been lost. To the translation Herklots added notes and addenda incorporating additional material from Mrs. Meer Hassan Ali's *Observations on the Mussulmauns of India*, 1832, and Garcin de Tassy's *Mémoires sur les particularités de la religion mussulmane dans l'Inde*, Paris 1831, that the work might embrace "an account of all the peculiarities of the Mussulmans ... in *every part* of India". His *Qanoon-e-Islam* was published (London, late 1832) with a subvention from the East India Company.

Djaʿfar's account traces the religious and social life of the south Indian Muslims from the seventh month of pregnancy to the rites after death, with full descriptions of all domestic rites and ceremonies and festivals of the year, including necromancy, exorcism, and other matters of magic and sorcery; Herklots's appendix adds information on relationships, weights and measures, dress, jewellery, games, etc., and a glossary. The work was rearranged and partially rewritten by W. Crooke for the new Oxford edition of 1921, enhancing its value as an authoritative account of Indian popular Islam with particular reference to the Deccan. (J. BURTON-PAGE)

DJAʿFARIYYA [see FIḲH, ITHNĀ ʿASHARIYYA].

DJAFR. The particular veneration which, among the Shīʿas, the members of the Prophet's family enjoy, is at the base of the belief that the descendants of Fāṭima have inherited certain privileges inherent in Prophethood; prediction of the future and of the destinies of nations and dynasties is one of these privileges. The Shīʿī conception of prophecy, closely connected with that of the ancient gnosis (cf. Tor Andrae, *Die Person Muhammeds in Lehre und Glauben seiner Gemeinde*, Stockholm 1918, ch. vi) made the prophetic afflatus pass from Adam to Muḥammad and from Muḥammad to the ʿAlids (cf. H. H. Schaeder, in *ZDMG*, lxxix, 1925, 214 ff.). The Banū Hāshim, to whom ʿAlī b. Abī Ṭālib belonged, had long since claimed superiority over the Banū Umayya, as having prophecy as their appanage. Immediately after his conversion, seeing the armies of Muḥammad filing off ready for the conquest of Mecca, the Umayyad Abū Sufyān said to al-ʿAbbās, the Prophet's uncle, who was standing beside him, "Your nephew's authority has become very great!"; and al-ʿAbbās replied, "Yes, wretched one, that is Prophethood!" (Ṭabarī, iii, 1633).

A Bāṭinī tradition tells that the Prophet, when on the point of death, said to ʿAlī b. Abī Ṭālib, "O ʿAlī, when I am dead, wash me, embalm me, clothe me and sit me up; then, I shall tell thee what shall happen until the day of resurrection". When he was dead, ʿAlī washed him, embalmed him, clothed him and sat him up; and then Muḥammad told him what would happen until the day of resurrection (Ps. al-Djaʿfī [read al-Djuʿfī; cf. F. Wüstenfeld, *Register*, 7, l. 13], *K. al-Haft wa 'l-aẓilla*, ed. ʿA. Tāmir and I.-A. Khalīfé, Beirut 1960, 135; on the *K. al-djafr*, attributed to ʿAlī, see Brockelmann, S I, 75). Here, clearly defined, is the *terminus a quo* of the *djafr*, which in origin was identified with the *ḥidthān* and the *malāḥim*.

In the desperate struggle for the Caliphate carried on by the descendants of ʿAlī, early divided and weakened amongst themselves and suffering from the severe persecution of which they had been victims—notably in 237/851 under al-Mutawakkil—an esoteric literature of apocalyptic character arose, created in order to bolster the hopes of the adepts, who were near to despair, and to sustain in the minds of the ruling Caliphs that quasi-religious respect which they felt they should owe to the descendants of the daughter of the Prophet. This literature appears in different forms, all grouped under the generic name of *djafr*, to which is often added the noun *djāmiʿa* or the adjective *djāmiʿ*. It is of a fatidical and sibylline character, and in its later form is summarized in a table in which the *djafr* represents fate (*ḳaḍā'*) and the *djāmiʿa* destiny (*ḳadar*). "It is", says Ḥādjdjī Khalīfa (ii, 603 ff.), "the summary knowledge (of that which is written) on the tablet of fate and destiny, which contains all that has been and all that which will be, totally and partially". The *djafr* contains the Universal Intellect and the *djāmiʿa* the Universal Soul. Thus, the *djafr* tends to be a vision of the world on a supernatural and cosmic scale. Deviating from its original form of esoteric knowledge of an apocalyptic nature, reserved to the imāms who were the heirs and successors of ʿAlī, it became assimilated to a divinatory technique accessible to the wise whatever their origin, particularly to the mystics [see ʿILM AL-ḤURŪF]. Among the numerous authors who contributed to the development of this technique four great names must be cited: Muḥyī al-Dīn Abu 'l-ʿAbbās al-Būnī (d. 622/1225), in *Shams al-maʿārif*, a work which exists in three recensions, the small, the mean, and the great; the last-named was edited in Cairo in 1322-4 (1903-6) in 4 vols. It should be noted that the small work called *Djafr al-imām ʿAlī b. Abī Ṭālib* or *al-Durr al-munaẓẓam* ..., attributed to Ibn ʿArabī (cf. ms Leipzig 833, 1; cf. Paris 2646; Aleppo-Sbath 57 and 390), is nothing but paragraphs 33 and 34 of the *Shams al-maʿārif* (cf. Hartmann, *Eine arab. Apokalypse* ..., 109 ff.). Muḥyī al-Dīn b. ʿArabī (d. 638/1240), *Miftāḥ al-djafr al-djāmiʿ* (mss. Istanbul-Hamidiye, Ism. Ef. 280; Paris 2669, 14, etc.). Ibn Ṭalḥa al-ʿAdawī al-Rādjī (d. 652/1254), with the same title or under the title *al-Durr al-munaẓẓam fi 'l-sirr al-aʿẓam* (mss. Paris 1663/4; Istanbul, Amuca Hüseyin Paşa 348; Saray Ah. III, 3507, etc.). ʿAbd al-Raḥmān al-Bisṭāmī (d. 858/1454), with the same titles (mss. AS 2812/3; Vat. V. 1254; cf. Nicholson, in *JRAS*, 1899, 907).

In all these writings, and in many others, there is great confusion as to the procedures to be followed. Other heterogeneous elements, belonging to other forms of obscure thought, have been added; one finds the occult properties of the letters of the alphabet (*ḥurūf*) and of divine names (*al-asmā' al-ḥusnā*), gematria and isopsephy (*ḥisāb al-djummal*), the indication of the numerical value of a name which one wishes to keep secret, the transposition of letters in a single word, for the purpose of forming another word, the combination of letters composing a divine name with those of the name of the object desired (*al-kasr wa 'l-basṭ*), the substitution of one letter in a word by another according to the *atabash* system (a table of concordance in which the first letter of the Hebrew alphabet corresponds to the last, the second to the penultimate, etc.), the formation of a word by putting together the first letters of the words of a phrase, in other words all the procedures made use of by the cabbala (cf. J. G. Février, *Histoire de l'écriture*, Paris 1948, Appx. III, 588-91).

These speculations on the numerical value of the letters have played a considerable part in Muslim mysticism, where not only the letters composing the divine names, but also the seven letters not found in the *fātiḥa*, have been the object of a special veneration. In the Islamic *ḥurūfiyya* neo-Platonic and cabbalistic traditions join with the speculations of certain exalted Ṣūfīs, to form a body of esoteric knowledge of such an obscurity that "only the Mahdī, expected at the end of time, would be capable of understanding its true significance" (Ḥadjdjī Khalīfa, ii, 603). This diversity of procedure is further complicated by divergences in the methods of classification. Certain authors, in fact, follow the long alphabet (*alif, bā', tā', thā'*, etc.) while others follow *al-abdjadiyya* (*alif, bā', djīm*, etc.). The first method is called *al-djafr al-kabīr* and includes one thousand roots, the second *al-djafr al-ṣaghīr* and includes only seven hundred. There is also a *djafr mutawassiṭ* based separately on the lunar and solar letters; this last method is preferred by authors, and is used generally in talismanic compositions (Ḥādjdjī Khalīfa, *loc. cit.*).

Beside this numerical and mystical aspect of the letters, which by its technical and mechanical character puts the *djafr* on the level of the *zā'irdja* [*q.v.*], mention must be made of their astrological aspect. According to Ibn Khaldūn (*Muḳaddima*, ii, 191; Rosenthal, ii, 218; cf. 184, Rosenthal, 209) the Shīʿas gave the name of *djafr* to a work of astrological predictions by Yaʿḳūb b. Isḥāḳ al-Kindī (d. after 256/870), which is probably that mentioned by Ibn al-Nadīm under the title *al-Istidlāl bi 'l-kusūfāt ʿalā 'l-ḥawādith* (*Fihrist* 259; cf. the *Risāla fi 'l-ḳaḍā' ʿalā 'l-kusūf*, mss. Escurial, Casiri 913, 4; AS 4832, 27; for details, cf. De Goeje, *Mémoire sur les Carmathes*[2], Leiden 1886, 117 ff.). This work, in which al-Kindī establishes according to the eclipses the fortunes of the dynasty of the ʿAbbāsids until its downfall, was not to be found at the time of Ibn Khaldūn, who considered that it must have disappeared with the ʿAbbāsids' library, thrown into the Tigris by Hūlāgū after he had conquered Baghdād and killed al-Muʿtaṣim, the last caliph. However, it appears that a part of this work reached the Maghrib under the name of *al-Djafr al-ṣaghīr*, and must have been there adapted to the dynasty of the B. ʿAbd al-Mu'min.

According to the Ps. Djāḥiẓ (*Bāb al-ʿirāfa wa 'l-zadjr wa 'l-firāsa ʿalā madhhab al-Furs*, ed. Inostranzev, St. Petersburg 1907, 4) this astrological aspect of the *djafr* is of Indian origin; "*Al-djafr*" he says, "is the knowledge of the [auspicious and inauspicious] days of the year, the knowledge of the direction of winds, of the appearance and withdrawal of lunar mansions .... The book called *al-djafr*

contains the predictions for the year, arranged according to the seasons and the lunar mansions; each group of seven lunar mansions, constituting a quarter of the year, is called d̲j̲afr; they [the Persians] take omens from it for rains, winds, journeys, wars, etc. It is from India that the Chosroes and their people have learnt all these sciences ....".

The last and most important of the aspects of the d̲j̲afr is the apocalyptic. This is properly the original aspect, already well developed under the Umayyads and much expanded in ʿAbbāsid times, in the form of books of oracles, called *kutub al-ḥidthān* (cf. references in De Goeje, *Carmathes*, 115 ff.). The starting-point of these speculations was the book of Daniel. Books of predictions attributed to Daniel were being read in Egypt in the year 61/680 (Ṭabarī, ii, 399; on the Arabic apocalypse of Daniel cf. the references in A. Abel, in *Stud. Isl.*, ii, (1954), 28 n. 2). Muḥammad b. ʿAbd al-Malik al-Hamad̲h̲ānī (d. 521/1127), who continued al-Ṭabarī's chronicle up to 487/1095 (ms. Paris 1469, f° 45r, quoted by De Goeje, *Carmathes*, 225 ff.; cf. ed. A. J. Kanaan, in *Al-Machriq*, 1955 ff.; and cf. Ibn K̲h̲aldūn, *Muḳaddima*, ii, 198, Rosenthal 227-8) relates that under the vizierate of (Abū D̲j̲aʿfar) al-Kark̲h̲ī (324/936) there was in Bag̲h̲dād a bookseller, called al-Dāniyālī, who exhibited ancient books attributed to the prophet Daniel, in which there figured certain prominent persons together with their descriptions. He enjoyed great success with the statesmen (cf. an anecdote in Ṭabarī, iii, 496 ff., in the story of Mahdī, cited by Ibn K̲h̲aldūn, *Muḳaddima*, ii, 192, Rosenthal 219, illustrating the tricks employed by forgers in this genre of writing). This literature is also known under the name of *Malāḥim* (cf. the astrological mss. Berlin 5903, 5904, 5912 and 5915, the last two of which are attributed to Daniel, as is Istanbul-Bağdatlı Vehbi Ef. 2234). It has been widely diffused in the Mag̲h̲rib. Written in verse or prose, sometimes even in dialect, it deals sometimes with events which were to happen within the Islamic community in general, sometimes with those concerning one dynasty in particular. The greater part of these writings is attributed to famous authors, although it is not possible to verify their authenticity. A list of *malāḥim* is given by Ibn K̲h̲aldūn (*Muḳaddima*, ii, 193 ff., Rosenthal 220 ff.), mostly of Mag̲h̲ribī origin and dealing in general with the Ḥafṣid dynasty. Two names in this list deserve particular attention: Ibn ʿArabī, in whose name there was current, in the time of Ibn K̲h̲aldūn, a *malḥama* entitled *Ṣayḥat al-būm* (on this work cf. A. Abel, in *Arabica*, v (1958), 6 n. 3), and al-Bād̲j̲arbaḳī (d. 724/1323) to whom a poem on the Turks is attributed. The latter belonged to the Ḳarandaliyya (or Ḳalandariyya; cf. references in Dozy, *Suppl.*, ii, 340), and founded a sect called al-Bād̲j̲arbaḳiyya (Ibn K̲h̲aldūn, *Muḳaddima*, ii, 199 ff., Rosenthal 229; cf. *TA*, vi, 283. Other sources on al-Bād̲j̲arbaḳī are cited by Rosenthal, 230 n.). There are also many citations from these *malāḥim* to be found in the writings of Ibn Abī Usaybiʿa (d. 668/1270) and al-Maḳrīzī (d. 845/1442; cf. De Goeje, *Carmathes*, 125 ff.).

Finally, one fact must be mentioned which enhances the prestige of the d̲j̲afr in the eyes of the S̲h̲īʿa; this is its use in a spiritual and mystical interpretation of the Ḳurʾān as opposed to the traditional and lexicographical exegesis of the Sunnīs. Ibn Saʿd (ii, 101) attributes such an interpretation to ʿAlī b. Abī Ṭālib. From the latter it is said to have passed to D̲j̲aʿfar al-Ṣādiḳ (d. 148/763) through his uncle Zayd b. ʿAlī (d. 122/740); and Hārūn b. Saʿīd (Saʿd) al-ʿId̲j̲lī (cf. Brockelmann, S I, 314) is said to have received this esoteric interpretation from D̲j̲aʿfar al-Ṣādiḳ [*q.v.*]. With regard to this, Ibn K̲h̲aldūn says: "It should be known that the *Kitāb al-D̲j̲afr* had its origin in the fact that Hārūn b. Saʿīd al-ʿId̲j̲lī, the head of the Zaydiyya, had a book that he transmitted on the authority of D̲j̲aʿfar al-Ṣādiḳ. That book contained information as to what would happen to the family of Muḥammad in general and to certain members of it in particular. The [information] had come to D̲j̲aʿfar and to other ʿAlid personages as an act of divine grace and through the removal [of the veil, *kas̲h̲f*] which is given to saints like them. [The book was] in D̲j̲aʿfar's possession. It was written upon the skin of a small ox. Hārūn al-ʿId̲j̲lī transmitted it on [D̲j̲aʿfar's] authority. He wrote it down and called it *al-D̲j̲afr*, after the skin upon which it had been written, because d̲j̲afr means a small [camel or lamb]. [*D̲j̲afr*] became the characteristic title they used for the book.

The *Kitāb al-D̲j̲afr* contained remarkable statements concerning the interpretation of the Ḳurʾān and concerning its inner meaning. [The statements in it] were transmitted on the authority of D̲j̲aʿfar al-Ṣādiḳ. The book has not come down through continuous transmission and is not known as a book as such. Only stray remarks unaccompanied by any proofs [of their authenticity] are known from it. If the ascription to D̲j̲aʿfar al-Ṣādiḳ were correct, the work would have the excellent authority of D̲j̲aʿfar himself or of people of his family who enjoyed acts of divine grace. It is a fact that D̲j̲aʿfar warned certain of his relatives about accidents that would occur to them, and things turned out as he had predicted." (*Muḳaddima*, ii, 184-5., Rosenthal 209-10). Many books of mystic exegesis and of divination bear the name of D̲j̲aʿfar al-Ṣādiḳ (cf. Brockelmann, S I, 104), notably a *Kitāb al-d̲j̲afr* (B.M. 426, 10; cf. Steinschneider, *Zur pseudepigraph. Literatur*, 71). The foundation of this "pneumatic" exegesis seems to rest on this saying of Jesus: *Naḥnᵘ maʿās̲h̲ir al-anbiyāʾ naʾtīkum bi 'l-tanzīl wa ammā 'l-taʾwīl fa-sayaʾtī bihⁱ al-Bāraḳlīṭ al-lad̲h̲ī sayaʾtīkum baʿdī*, "We the Prophets bring ye the revelation; its interpretation the Paraclete [the Holy Spirit], who shall come after me, will bring ye" (Ḥād̲j̲d̲j̲ī K̲h̲alīfa, 603; cf. John, xiv, 26).

Bibliography: In order sufficiently to cover the range of this literature, the lists of writings on the d̲j̲afr to be found in the manuscript catalogues should be consulted, especially Ahlwardt, iii, nos. 4213-29, and *Fihrist al-kutub al-ʿarabiyya al-maḥfūẓa bi 'l-kutubk̲h̲āna al-k̲h̲idīwiyya al-Miṣriyya*, v, 333 ff.; numerous d̲j̲afr treatises are to be found in the various collections at Istanbul. The principal works of reference are: R. Hartmann, *Eine arabische Apokalypse aus der Kreuzzugszeit. Ein Beitrag zur Ğafr-Literatur*, in *Schriften d. Königsberger Gelehrten Gesellschaft, Geisteswiss. Kl.*, Berlin 1924, 89-116 (Study of an extract of Ibn ʿArabī, *Muḥāḍarat al-abrār*, ed. Cairo 1324/1906, i, 197 ff., completed by the Berlin ms. no. 4219); cf. especially 108 ff.; A. Abel, *Changements politiques et littérature apocalyptique dans le monde musulman*, in *Stud. Isl.*, ii (1954), 23-43; idem, *Un ḥadīṯ sur la prise de Rome dans la tradition eschatologique de l'Islam*, in *Arabica*, v (1958), 1-14; I. Goldziher, *Vorlesungen*, 224 ff., 263 ff.; Fr. trans. Arin, Paris 1920; idem, in *ZDMG*, xli (1887), 123-5.

(T. Fahd)

AL-DJAGHBŪB, a small oasis to the south-east of Cyrenaica, the site of the tomb of Muḥammad b. ʿAlī al-Sanūsī, founder of the brotherhood of the Sanūsiyya. It is the furthest east, the smallest and the least prosperous of the oases along the important traditional route which leads from the valley of the Nile and Sīwa to Fezzan and the region of Tripoli, passing through a chain of depressions where are to be found the palm-groves of Djālo, Awdjīla, Marada, and Djufra, which are close to the 29th parallel.

The depression of Djaghbūb consists of a sinuous basin called Wādī Djaghbūb covering 700 sq. km., and going down to 29 m. below sea-level: in the north it is dominated by the plateau in sand and limestone of the Marmaric (Miocene period); this gives way in the south to soft hills covered by dunes of Libyan erg. The depression is carpeted in red earth and yellow sand and the beds occupied by *sebkhas* or, to the east, by salt lakes (*baḥr*).

The only traces of the distant past are the tombs dug out of the northern cliff, similar to those at Sīwa. Djaghbūb owes its existence to Muḥammad b. ʿAlī al-Sanūsī, who came from Cairo in 1856 with his family, followers and servants, and founded the mother *zāwiya* of the brotherhood on a slight hill to the N-E of the depression. Later a large mosque was built while gradually a town grew up, which, according to Duveyrier in 1881 had nearly 3,000 inhabitants, of which 750 were *tolba* and 2,000 slaves. But the departure in 1895 of Muḥammad al-Mahdī—the son of the founder of the town, who died in 1859—for Kufra, marked the start of the decadence of Djaghbūb, which is briefly mentioned by some travellers: Rohlfs (1869), Rosita Forbes and Hassanein Bey (1921 and 1923) and Bruneau de Laborie (1923). The town was occupied by the Italians in 1926: they put up two forts and encouraged agriculture. The British took it in 1941 and ceded it to Cyrenaica, a province of the Libyan federal union which was founded in 1951.

Djaghbūb is a very small settlement of 200 inhabitants. Its enclosure of huge dry stones surrounds the great mosque and the *zāwiya*, both of which have a large porticoed courtyard, their annexes and a small number of houses which are often two-storied. The tomb of Muḥammad b. ʿAlī al-Sanūsī, situated under the dome of the great mosque, is a place of pilgrimage for all the followers of the brotherhood, and the *zāwiya* a place of learning. Masters, *tolba* and officials of the *zāwiya* and the mosque form the greater part of the population, together with the negro servants who work in the few gardens in the date-grove; the latter consists of scarcely more than 2,000 cultivated date-palms; the gardens, watered by the brackish water of a shallow well, have been improved thanks to the drilling done by the Italians, who bored an artesian well of fresh water. There is practically no commercial activity.

AL-DJAGHMĪNĪ (or ČAGHMĪNĪ), MAḤMŪD B. MUḤAMMAD B. ʿUMAR, a well-known Arab astronomer, a native of Djaghmīn, a small town in Khwārizm. The dates of his birth and death are not precisely established, but it is very probable that he died in 745/1344-5 (cf. Suter, in *ZDMG*, liii (1899), 539). The following works of his have been preserved: (1) *al-Mulakhkhaṣ fi 'l-hayʾa* (Epitome of astronomy), which was very widely known and was frequently commented upon, notably by Ḳāḍīzāda al-Rūmī, by al-Djurdjānī, and by many others; a German translation of this work, by Rudloff and Hochheim, was published in *ZDMG*, xlvii (1893), 213-75; manuscripts of this work are to be found in many collections, *e.g.*, Berlin, Gotha, Leiden, Paris, Oxford, etc.—(2) *Ḳiwā 'l-kawākib wa ḍaʿfuhā* (The strong and weak influences of the constellations), preserved at Paris.—(3) *Ḳānūnča* (The little canon), a medical work, an extract from the canon of Ibn Sīnā, preserved at Munich, Gotha, etc., which has appeared in several lithograph editions.

Bibliography: Ḥādjdjī Khalīfa, vi, 113; Brockelmann, I, 473; II, 213; S I, 826, 865 (this author makes Djaghmīnī two authors of the same name: the first, d. 618/1221, is said to be the author of no. 1 above and of two arithmetical treatises; the second, a physician, d. 745/1344, of no. 3 above); Nallino, *Al-Battānī, Opus astronomicum, passim* (in index); Suter in *Abh. z. Gesch. d. mathem. Wissensch.*, x, 164; xiv, 177; Sarton, *Introduction*, iii, 699-700.

(H. SUTER-[J. VERNET])

DJĀGĪR, land given or assigned by governments in India to individuals, as a pension or as a reward for immediate services. The holder (*djāgīrdār*) was not liable for land tax on his holding (see ḌARĪBA), nor necessarily for military service by virtue of his tenure. See further IḲṬĀʿ.

DJAHĀN SHĀH (i) [see SUPPLEMENT].

DJAHĀN SHĀH (ii) [See MUGHALS].

DJAHĀNĀRĀ BĒGAM, the eldest daughter of Shāhdjahān and Mumtāz Maḥall (the lady of the Tādj at Āgrā) and their first child, was born on 21 Ṣafar 1023/23 March 1614. She bore the complimentary title of Fāṭima al-Zamān, which misled von Kremer followed by Macdonald (*The Religious Attitude and Life in Islam*, London, 205) into believing that her name was Fāṭima. To contemporary historians she is known by the Court title of Bēgam Ṣāḥib or Ṣāḥiba (ʿAbd al-Ḥamīd Lāhawrī, *Bādshāh-nāma* (text), i, 1178 and Muḥammad Ṣāliḥ Kanbōh, *ʿAmal-i Ṣāliḥ*, i 80) or Pādshāh Bēgam. After the death of her mother in 1041/1631, she enjoyed the status of the first lady of the realm, partly reflected in her aforesaid Court title. Throughout her life she remained staunchly devoted to her father and even kept company with him during his incarceration after his deposition by Awrangzīb, whose displeasure she earned through her excessive fondness for her brother, Dārā Shukōh [*q.v.*], his rival.

An accomplished lady, she is the author of two Ṣūfī works: (i) *Muʾnis al-arwāḥ* and (ii) *Ṣāḥibiyya*, an incomplete biography of her *pīr*, Mullā Shāh Ḳādirī. According to her own statement (see *Oriental College Magazine*, Lahore xiii/4, 16), she was the first woman in the line of Tīmūr to have taken to mysticism. Originally a disciple of Mullā Shāh Ḳādirī, she contracted her *bayʿa* in the Čishtī order [*q.v.*], and one of her works, *Muʾnis al-arwāḥ*, is on the life of Khwādja Muʿīn al-Dīn Čishtī [*q.v.*]. She wielded great influence during the reign of her father, and enjoyed an allowance of 600,000 rupees, half in cash and half in lands, settled on her by the Emperor; Awrangzīb doubled this amount during

his reign. During Shāhdjahān's captivity she served as a link between the deposed emperor and the reigning monarch, Awrangzīb, all the important political correspondence passing through her. She died unmarried in 1092/1681 and was buried in Delhi, according to her wishes, in the compound of the shrine of Niẓām al-Dīn Awliyā' [see DIHLĪ, Monuments] in a simple marble tomb, built by herself and covered with grass at the top. The allegations against her by some European travellers that she had illicit relations with her own father, the deposed emperor, are baseless and may be disregarded.

The Djāmiʿ Masdjid at Āgrā, which had an attached madrasa, was built by Djahānārā. This is the first mosque of major dimensions built under the Mughals, except for Akbar's at Fatḥpur Sīkrī [*q.v.*].

DJAHĀNDĀR SHĀH, MUʿIZZ AL-DĪN, Mughal emperor *regnabat* 21 Ṣafar 1124/29 March 1712 to 16 Muḥarram 1125/11 February 1713. Born 10 Ramaḍān 1071/10 May 1661, eldest son of Bahādur Shāh [*q.v.*], at the time of his father's death he was governor of Multān. Pleasure-loving and indolent, he was able to participate actively in the struggle among Bahādur Shāh's sons for the throne only through the support of the ambitious Dhu 'l-fiḳār Khān, *mīr bakhshī* and *ṣūbadār* of the Deccan who was anxious to exclude ʿAẓīm al-Sha'n from the succession and to win the *wizāra* for himself.

After three days fighting near Lahore, ʿAẓīm al-Sha'n was defeated and killed. With the help of Dhu 'l-fiḳār Khān, Djahāndār Shāh disposed of his other brothers Djahān Shāh and Rafīʿ al-Sha'n. At the time of his accession Djahāndār Shāh was 52 (lunar) years of age. His sybaritic tastes and devotion to the dancing girl Lāl Kunwar, quickly seized upon by contemporary historians as the explanation of his fate, certainly did nothing to restore the finances of the central government, nor did the intrigues of Lāl Kunwar's entourage against the *wazīr* Dhu 'l-fiḳār Khān make for vigour and loyalty in the administration.

In Shaʿbān 1124/September 1712, supported by the Sayyids of Bārha [*q.v.*] ʿAbd Allāh Khān and Ḥusayn ʿAlī Khān, whom Djahāndār Shāh had failed to conciliate, Farrukhsiyar, second son of ʿAẓīm al-Sha'n, marched on Āgra from Paṭnā, defeating ʿIzz al-Dīn, son of Djahāndār Shāh. at Khwādja on the way. Hastily gathering an army, Djahāndār Shāh and Dhu 'l-fiḳār Khān marched to Āgra but were defeated on 13 Dhu 'l-ḥidjdja 1124/10 January 1713. Djahāndār Shāh fled to Dihlī to take refuge with the *wakīl-i muṭlaḳ* Asad Khān, father of Dhu 'l-fiḳār Khān. Father and son imprisoned him in the fort of Dihlī in the hope of mollifying Farrukhsiyar. The day before Farrukhsiyar's triumphal entry into Dihlī, Djahāndār Shāh was slain by his orders.

(P. HARDY)

DJAHĀNGĪR, the fourth Mughal emperor of India in the line of Bābur [*q.v.*], the first surviving child of Akbar, others born earlier having all died in infancy, was born on 17 Rabīʿ I 977/31 August 1569 of a Rādjpūt queen, called Miryam al-Zamānī, at (Fatḥpur) Sīkrī, near Āgrā, in the hermitage of a recluse Shaykh Salīm Čishtī, to whose intercession the birth of a son was attributed. The young prince was named Salīm after the Shaykh but Akbar always called him Shaykhū Bābā, scrupulously avoiding the Shaykh's name. History is silent on the conversion of Djahāngīr's mother to Islām either before or after her marriage to Akbar. Badā'ūnī's silence on the subject may, however, be taken to mean that she had embraced Islām before entering the *ḥarīm* of the emperor.

In spite of the best education that Akbar provided his son and successor, the youthful prince could not escape the prevailing atmosphere of political intrigue and chicanery which ultimately vitiated relations between father and son. In 1001/1591 Akbar fell seriously ill and in his agony accused Salīm of conspiring to poison him. This was the beginning of estranged relations which reached a climax in 1008/1599 when Djahāngīr revolted and proclaimed his independence at Allāhābād [*q.v.*].

His alleged romance with a palace-maid called Anārkalī, which resulted in a tragedy, finds no corroboration in history. The mausoleum known as Anārkalī's tomb, in Lahore (see S. M. Latif, *Lahore, its history, architectural remains* . . ., Lahore 1892, 186-7) is said to have been raised over the mortal remains of his lady-love by the baulked lover, prince Salīm. The marble sarcophagus, still preserved in a corner of the plain whitewashed octagonal building, bears the intriguing inscription "*madjnūn Salīm-i Akbar*". The entire affair is so shrouded in mystery that nothing convincing can be said about it. The unusual inscription while on the one hand may be interpreted to reveal the depth of prince Salīm's intense grief on the cruel death of his beloved, said to have been built up alive in a wall by the order of Akbar, on the other hints at a compromise having been reached between the emperor, as head of the royal family, and the demented prince, the heir to the 'Great Mogul'. Why none of the contemporary historians or Djahāngīr himself makes any mention of this tragedy is difficult to comprehend. Latif (*op. cit.*, 187) gives the date 1008/1599 as the date of Anārkalī's death. This date, according to him, is inscribed on the sarcophagus along with another date 1024/1615 and the words "in Lahore" which is considered to be the date of the construction of the mausoleum, but in 1008/1599 Djahāngīr was 31 (lunar) years of age and already married to a number of wives. Moreover, Djahāngīr was at Allāhābād in 1008/1599 when he rose in open revolt against his father. Was the cruel fashion in which Anārkalī was done to death the real cause of this rebellion? Akbar's leniency towards the rebel prince seems to be precalculated as he apparently wanted to soothe the lacerated heart of the erratic prince carried away by passion and distress by adopting a mild policy.

Akbar's attempts at a reconciliation were thwarted by the ambitious prince who in 1010/1601 marched at the head of a large army to Āgrā. On Akbar's showing signs of resistance the rebel prince retreated to Allāhābād where he assumed the royal title and set up a regular court. Temporary reconciliation was again brought about by the widow of Bayram Khān [*q.v.*], Salīma Sulṭān Bēgam, but the youthful prince soon after took to his old ways. He went back to Allāhābād where he again set up his Court. In the meantime Salīm was convinced that Abu 'l-Faḍl [*q.v.*], the talented minister of Akbar, was responsible for his troubles and that he was constantly poisoning the ears of the emperor against him. He, therefore, designed an attack on Abu 'l-Faḍl and while the latter was on his way back from the Deccan in 1011/1602 he was set upon by the retainers of the Bundēlā chieftain, Bīr Singh Dēw, who had been commissioned by Djahāngīr to perform the deed; his head was cut off and sent to Djahāngīr at Allāhābād. This cold-blooded murder was unjustifiable, but Djahāngīr was so much convinced of the villainy of Abu 'l-Faḍl that he felt no compunction, but rather was relieved at the removal of a stumbling-block from his way. (*Tūzuk-i Djahāngīrī*, tr. Rogers and Beveridge, i, 25).

On the death of Akbar in 1013/1605 Djahāngīr ascended the throne under the title of Abu 'l-Muẓaffar Nūr al-Dīn Muḥammad Djahāngīr Pādshāh-i Ghāzī, which also appears on some of his coins. Soon after his accession he had to face the rebellion of his eldest son Khusraw in 1015/1606. Although a reconcilation was effected, the emperor never forgave the audacity of his son, whose death in suspicious circumstances in 1031/1622 at Burhānpūr relieved Djahāngīr of considerable worry. The Sikh *guru* (spiritual leader) Ardjun, who had helped and sheltered Khusraw during his rebellion, was punished with death by the emperor. This punishment, however, was interpreted as an atrocious act on the part of the Mughal emperor, and it laid the foundations of that deep-rooted hostility which continued to embitter the relations between the Indian Muslims and the Sikhs over the centuries, at its worst during the supremacy of the Sikh general, Banda Bayrāgī, in the 12th/18th century, and during the large-scale disturbances in India on the eve of Independence in 1947.

In 1016/1607 Djahāngīr was able to crush a conspiracy to murder him while camping at Kābul. Four of the ringleaders were executed while prince Khusraw, the moving spirit, was partially blinded by the orders of the emperor. With his marriage to Nūrdjahān, daughter of Ghiyāth Bēg, known to history as Iʿtimād al-Dawla, in 1020/1611 Djahāngīr commenced a new phase in his life as a ruler. Contemporary sources make no mention of the popular story of Djahāngīr's passionate love for Nūrdjahān and the premeditated murder of her husband, ʿAlī Ḳulī Khān Istadjlū (Shīr Afkan), at the instance of Djahāngīr, in 1016/1607. None of the European travellers who visited India during the reign of Djahāngīr makes even an oblique mention of Djahāngīr's complicity in the murder of Shīr Afkan and his anxiety to marry Nūrdjahān, then known as Mihr al-Nisāʾ. After her marriage to the emperor, Nūrdjahān gradually assumed all power and wielded great influence in affairs of state. Her name, along with that of the emperor, was inscribed on gold coins and she came to be recognized as the *de facto* ruler.

The Shīʿī scholar Nūr Allāh al-Shūstarī, who had been appointed *ḳāḍī* of Lahore by Akbar and who had so far practised *taḳiyya*, successfully concealing his faith from the people, emboldened by the meteoric rise to power of Nūrdjahān, herself an orthodox Shīʿī, began to pronounce judgments which created doubts in the minds of the Sunnī majority. This led to a Court conspiracy against the *ḳāḍī*, then in the queen's favour. He was accused of professing the Shīʿī faith while boldly acting as a Sunnī *ḳāḍī*. This revelation resulted in his execution by order of the emperor, who punished him for practising a fraud (*Nudjūm al-samāʾ*, 15-6). This act of bigotry on the part of a latitudinarian and eclectic like Djahāngīr, whose own consort Nūrdjahān was a Shīʿī, is rather surprising but it shows, at the same time, the measure of influence that the disgraced theologians and *ʿulamāʾ* had again come to exercise in state affairs, after their calculated downfall during the reign of Akbar. No less surprising is Djahāngīr's estimate, based on intelligence reports, of *shaykh* Aḥmad Sirhindī [*q.v.*] whom he described as an impostor (*shayyād*), and his famous *Maktūbāt* as a tissue of absurdities (*Tūzuk*, Eng. tr., ii, 91-2). He was so much convinced of the *shaykh's* fraudulence that on the pretext of his having transcended the limits of Ṣūfic propriety in his *Maktūbāt* (i, no. 11), he ordered his imprisonment in the fort of Gwāliyār [*q.v.*], where political criminals were generally confined, but after a year or so revised his opinion and liberated him.

In 1032/1623 Djahāngīr had to face a filial revolt when prince Khurram (Shāhdjahān) rebelled, driven to this predicament by the machinations of

Nūrdjahān who wanted her son-in-law Shahryār, a step-brother of Shāhdjahān, to succeed to the throne once the latter was removed from the way. Khurram's rebellion, pursued all over India with the support of his own forces, amounted to a civil war which weakened Imperial prestige and greatly depleted the treasury; but the superior generalship of Mahābat Khān [*q.v.*] forced his surrender in Djumādā II 1035/ March 1626 after a revolt of three years.

An attempt by Mahābat Khān to seize Djahāngīr in 1035/1626 in order to remove him from the influence of Nūrdjahān and her brother Āṣaf Khān was at first successful, to the queen's discomfiture; but Āṣaf Khān, having first fled, later joined Mahābat Khān at Kābul at Nūrdjahān's instigation, and provoked dissension among the Imperial followers. On Mahābat Khān's flight and his subsequent alliance with Prince Khurram, Nūrdjahān appointed Khān-i Djahān Lōdī as Imperial commander, with orders to subdue the rebels; but her plans were thwarted by the death of Djahāngīr, whose health had been shattered by excessive drinking, his greatest weakness, pursued since his early youth. Some hagiological works attribute Mahābat Khān's conduct to the maltreatment and disgrace that Aḥmad Sirhindi suffered at the hands of Djahāngīr. It has further been claimed that prince Khurram, (Azad Bilgrami, *Subḥat al-mardjān*, Bombay 1303/ 1886, 49), Mahābat Khān and some other high-ranking nobles had secretly contracted their *bayʿa* with the *shaykh* and held him in high esteem; and that the treatment meted out to him was bitterly resented by them all. Before any decisive action could be taken against Mahābat Khān, Djahāngīr died while on his way to Bhimbar from Rādjawrī, on 27 Ṣafar 1037/28 October 1627 in the 58th solar year of his age and the twenty-second of his reign. His body was brought down to Lahore where it was laid to rest, without its receiving an appropriate funeral on account of the disturbed conditions, at a spot designated by Nūrdjahān over which she erected a magnificient mausoleum at her own expense. (For a description of the tomb, see LĀHAWR).

A well-read man, a patron of literature and art, a keen observer of men and matters, Djahāngīr was the most polished and cultured scion of the House of Tīmūr. He was a sensible ruler, kind-hearted and generous, who hated oppression and had a passion for justice. Immediately after his accession to the throne he ordered a chain of gold, adorned with bells, to be hung from the imperial palace in Āgrā which an aggrieved person could shake at any moment of the day or night and get justice. (See *Tūzuk*, Rogers and Beveridge, i, 7). He was lover of nature; Djahāngīr's *Tūzuk* is full of descriptions of the scenic beauty of Kashmīr and other lovely places and of the fauna and flora of the regions he visited. An accomplished prose-writer, his memoirs are in no way inferior to those of Bābur, although he sometimes portrays himself as a violent and unprincipled man whose personal account arouses our disgust and contempt. But unlike Bābur he must be credited with greater honesty and frankness in whatever he writes except in one or two instances when he deliberately tried to conceal the truth.

He makes no secret of his addiction to wine and opium, which ultimately ruined his robust health and hastened his end. He was exceedingly cruel sometimes, having once got a sodomite flayed alive and another castrated. Similarly he ordered the bones of Naṣīr al-Dīn Khaldjī, ruler of Mālwa, who was guilty of poisoning his father, to be exhumed and thrown into the Narbadā, when he visited Māndū [*q.v.*] in 1027/1617. As a rule, his reign brought peace and prosperity to the people; industry and commerce flourished; architecture, painting and literature progressed and on the political side there was stability and strength only marred by a few wars in Mewār and the Deccan, and some minor disturbances in Bengal as the ineffectual revolt of ʿUthmān Khān Afghān.

Bibliography: *Tūzuk-i Djahāngīrī* (with numerous variants), ed. Sayyid Ahmad Khan, Ghazipur 1864 (Eng. transl. Rogers and Beveridge, London, i 1909, ii 1914, Urdū transl. Lahore 1960); there is another version of the memoirs called *Taʾrīkh-i Salīm Shāhī* translated into English by Major David Price (Calcutta[2], 1906), quite unreliable being a forgery and a fabrication; Ṣamṣām al-Dawla Shāh Nawāz Khān, *Maʾāthir al-umarāʾ*, (Eng. transl. Beveridge), i, 573-4; Muʿtamad Khān, *Iḳbāl-nāmah-i Djahāngīrī*, (Bibl. Ind.), Calcutta 1865; Beni Prasad, *History of Jahangir*, Allahabad 1940 (contains an exhaustive bibliography and gives a fairly balanced account of Djahāngīr's reign; certain statements by the author are, however, not unbiased); *Cambridge History of India*, iv, s.v.; *Jahangir and the Jesuits* (transl. C. H. Payne), London 1939; *Calcutta Review*, 1869, xcviii, 139-40 (article by H. Blochmann); Ṣabāḥ al-Dīn ʿAbd al-Raḥmān, *Bazm-i Tīmūriyya* (in Urdū), Aʿẓamgaṙh 1367/ 1948, 128-68; Storey, i, 556-64; Mīrzā Muḥammad ʿAlī, *Nudjūm al-samāʾ* (for an authentic account of the death of Nūr Allāh al-Shūstarī) Lucknow 1302 A.H., 9-16; *Embassy of Sir Thomas Roe*, ed. William Foster (Hakluyt Society); Francis Gladwin, *The History of Hindustan during the reigns of Jahangir, Shah Jahan and Aurungzeb*, Calcutta 1788, (based mainly on Kamgār Ḥusaynī's *Maʾāthir-i Djahāngīrī*, still in MS.); V. A. Smith, *Oxford History of India*,[4] *s.v.*; Dhakāʾ Allāh Dihlawī, *Taʾrīkh-i Hind* (in Urdū), vi, ʿAligaṙh 1917, the only detailed account in Urdū; ʿAbd al-Ḥayy Nadwī, *Nuzhat al-khawāṭir*, Ḥaydarābād 1375/1955, v, 120-22, (the only brief account in Arabic known to me).

For the buildings of Djahāngīr, see HIND, Architecture; MUGHALS; also ĀGRA, LĀHAWR, PALAMAŪ.

For the Mughal garden, which Djahāngīr specially developed, see BŪSTĀN, KASHMĪR, SRĪNAGAR.

For miniature painting, which reached its highest point in India under Djahāngīr's patronage, see HIND, Art.

Mughal coinage reached its highest point of elaboration in the variety of pieces and the refinement of designs during Djahāngīr's reign. For Djahāngīr's coins see SIKKA.

(A. S. BAZMEE ANSARI)

DJAHANNAM, Gehenna (Hebrew *gêhinnōm*, valley of the Gehenna); the Arabic word evokes etymologically the idea of "depth" (cf. *infernus*). Used very often in the *Ḳurʾān* as a synonym of *nār* ("fire"), *djahannam* must accordingly be rendered by the general idea of Hell. The same is true in traditions.

Exegetists and many treatises on *kalām* (or *taṣawwuf*) were, subsequently, to give it a particularized connotation. The description of the Muslim Hell, the problems relating to it and consequently the references to verses in the *Ḳurʾān* mentioning *djahannam*, are considered in the article NĀR; here only its restricted sense is considered. Here

are two examples from among the most familiar:

1. Some traditionists like al-Baghawī, with an extremely literal and uncritical outlook, considering the precise wording of the dialogue (*taṣwīr*) in the *Ḳur'ān*, L, 30, between God and Gehenna, regard the latter as a fantastic animal of hell which they describe with endless hyperbole. It will be drawn along by 70,000 angels, its guardians, at the time of the resurrection, the width between the shoulders of each guardian angel being equal to 70 years' march, etc. The description, supported by *ḥadīth*, is repeated in al-Shaʿrānī's *Mukhtaṣar* (for this sort of commentary in Muslim thought, see *Djanna*).

2. Descriptions which show hell as a place made up of concentric layers of increasing depth generally put Gehenna in the higher zone, that reserved for members of the Muslim community who have committed "grave sins" about which they have not repented and whom God, in accordance with his threats, decides to punish for a time with infernal torments. It is thereby admitted, even by those who uphold the eternity of hell, that Gehenna will cease to exist. It will be wiped out when the last repentant sinner among the believers leaves it to enter paradise. We may note that the etymological reference to the idea of "depth" is suppressed here.—This interpretation, which occurs in the *tafsīr* of Khāzin and elsewhere is freely expounded in the manuals of the Ashʿarī school (e.g. al-Bādjūrī, *Ḥāshiya .... ʿalā Djawharat al-tawḥīd*, ed. Cairo 1352/1934, 107). For the place of Gehenna in the circles of Hell according to Ibn ʿArabī, see the diagrams reproduced by Asin Palacios, *La Escatologia musulmana en la Divina Comedia*, Madrid-Granada 1943, 147.

(L. GARDET)

DJAHĀN-SŪZ, ʿALĀʾ AL-DĪN ḤUSAYN B. AL-ḤUSAYN, Ghūrid ruler—poet, notorious for his burning of Ghazna in 546/1151. The cause of the violence between the Ghūrids and Bahrām Shāh of Ghazna [*q.v.*] would appear to have been an attempt by Ḳuṭb al-Dīn Muḥammad, (eldest brother of ʿAlāʾ al-Dīn) to seize Ghazna through an intrigue with some of its inhabitants. Bahrām Shāh had him poisoned; an attempt by another brother, Sayf al-Dīn Sūrī, to avenge his brother ended, after the temporary occupation of Ghazna by the Ghūrid forces, in his ignominious death at the hands of Bahrām Shāh. Death (from natural causes) prevented another brother, Bahāʾ al-Dīn Sām, from action, whereupon ʿAlāʾ al-Dīn marched against Bahrām, defeating him in three battles and occupying Ghazna. The city was probably sacked so ruthlessly through rage at the fickleness of its inhabitants but also with the intention of securing ʿAlāʾ al-Dīn's rear for his wider ambitions against the Saldjūḳ possessions to the west and north of Ghūr. In the year following (547/1152), with Bahrām Shāh a fugitive in the Pandjāb, ʿAlāʾ al-Dīn moved against Sandjar, in alliance with the *muḳtaʿ* of Harāt, only to be defeated and captured at Awba near Harāt. He was released before Sandjar's quarrel with the Ghuzz in 548/1153 and appears to have ruled quietly at Fīrūz-Kūh until his death in 556/1161. Several of his poems in self-praise survive both in the histories and in the biographies of the poets.

(P. HARDY)

DJAHBADH (pl. DJAHĀBIDHA), a term of Persian origin, perhaps derived from a **gahbadh* in the Sāsānid administration, (the term is suggested by Herzfeld; Paikuli, gloss. N° 274) used in the sense of a financial clerk, expert in matters of coins, skilled money examiner, treasury receiver, government cashier, money changer or collector (*Tādj al-ʿArūs*, ii, 558; Dozy, *Supplément*, i, 226; Vullers, *Lexicon Persicum*, i, 544; Ibn Mammātī, 304, etc.).

From the end of the 2nd/8th century on, bearers of this title in the time of the ʿAbbāsid Caliphs Manṣūr, Harūn, and Mahdī are mentioned (Djahshiyārī; Masʿūdī, vi, 227) also frequently in Arabic papyri (Karabaček, Becker, Grohmann, Dietrich, etc.).

In an economy based on bimetallism, *dīnār* and *dirham*, with their fluctuating weights and values and their diversity in circulation, the function of the Djahbadh assumed an ever-increasing importance, as manifested by repeated references in Arabic sources of the 3rd/9th and 4th/10th centuries to:

(a) *Māl al-Djahābidha*, also known as *Ḥaḳḳ al-Djahābidha*, which represents the fee of the Djahbadh for his services to the government, levied as a charge on the taxpayer and which, though somewhat dubious in its legality, became an integral part of the public budget (Kremer, *Einnahmebudget*; al-Ṣābī; *Taʾrīkh-i Ḳumm*; Løkkegaard).

(b) *Dīwān al-Djahbadha*, whose chief was required to prepare a monthly or yearly statement accounting for all the items of income and expenditure of the treasury (Ḳudāma b. Djaʿfar; Løkkegaard; Cl. Cahen; see further DAFTAR); and above all to:

(c) Individual bearers of the title *Djahbadh* by name with precise information about their activities.

The text of an official appointment of a *Djahbadh* (*Taʾrīkh-i Ḳumm*, 149-53) specifies his function, his salary, and his obligation "to be just and fair in the collection of taxes ... and to give an official receipt for all incoming amounts in the presence of witnesses".

The 4th/10th century Arabic sources (Miskawayh, Tanūkhī, Ṣābi, Ṣūlī, etc.) indicate that it was customary for viziers to have their own *Djahbadh* with whom they deposited large, legally or illegally acquired, amounts of money as the safest method of securing their fortune.

In the time of the ʿAbbāsid Caliph al-Muḳtadir, (295-320/908-32), however, the Djahbadh emerged as a banker in the modern sense, who, in addition to his functions as an administrator of deposits and as a remitter of funds from place to place through the medium of the *ṣakk* and especially of the *suftadja* [*qq.v.*],—then a widely used instrument of the credit economy,—was called upon to advance huge sums to the Caliph, the viziers, and other

court officials on credit terms with interest rates and securities.

The *Djahābidha* were mostly Christians and Jews whose appointment to this office despite their status as *Dhimmī* was legalized by a special decree issued in 295/908 by the Caliph (Muḳaddasī, ed. de Goeje, 183). Among the *Djahābidha* listed in the sources were Ibrāhīm b. Yuḥannā, Zakariyā b. Yuḥannā, Sahl b. Naẓīr, Ibrāhīm b. Ayyūb, Ibrāhīm b. Aḥmad, Isrā'īl b. Ṣāliḥ, Sulaymān b. Wahb, etc., and, above all two Jewish merchants and bankers, Yūsuf b. Pinkhās and Hārūn b. ʿImrān of Baghdād. They were appointed to the office of *Djahbadh* of the Persian province of Ahwāz, and then became the court bankers (*Djahābidhat al-Ḥaḍra*) of al-Muḳtadir and his viziers, and the pillars of the financial administration of their time. By virtue of their vast resources and commercial connexions, these Jewish merchants and *Djahābidha* and their associates were instrumental in establishing the first State bank in Islamic history (ca. 302/913), through which the urgent financial needs of the State could be satisfied and the financial ruin of the State staved off. The sources indicate the amounts they lent, the contracts they concluded with the vizier ʿAlī b. ʿIsā, and other details of the methods of their credit transactions. They were given interest on their loans and securities in the form of the tax revenues of the province of Ahwāz (Fischel).

Under the successors of al-Muḳtadir, the *Djahabidha* continued to play a rôle not only in Baghdād, but also in Baṣra and other cities of the ʿAbbāsid Empire. Under the Buwayhid Amīrs mention is made of one ʿAlī b. Hārūn b. ʿAllān (d. 329/941), and of Abū ʿAlī b. Faḍlān (d. 383/993). At the beginning of the 7th/13th century, Abū Ṭāhir b. Shibr, the "chief of the Jews in Baghdād" occupied the position of a *Djahbadh* (Ibn al-Fuwaṭī). In later centuries the *Djahbadh* lost his central significance as a Court banker; his functions were equated with that of a ṣayrafī [*q.v.*] (Ḳalḳashandī, Ṣubḥ, v, 466).

DJĀHIDIYYA [see KHALWATIYYA].

DJĀHIL WA ʿĀḲIL [see DURŪZ].

DJĀHILIYYA, a term used, in almost all its occurrences, as the opposite of the word *islām*, and which refers to the state of affairs in Arabia before the mission of the Prophet, to paganism (sometimes even that of non-Arab lands), the pre-Islamic period and the men of that time. From the morphological point of view, *djāhiliyya* seems to be formed by the addition of the suffix *-iyya*, denoting an abstract, to the active participle *djāhil*, the exact sense of which is difficult to determine. I. Goldziher (*Muh. St.*, i, 219 ff.; analysis in *Arabica*, vii/3 (1960), 246-9), remarking that *djāhil* is opposed to *ḥalīm* "administered" [see HILM], gives it the sense of "barbarous", and renders *djāhiliyya* as "the time of barbarism", but he has not been followed to the letter by translators of the Ḳur'ān who render *djāhil* as "not knowing God, the Prophet and the Law", or "lawless", and *djāhiliyya* as "time of ignorance", "heathendom" (cf. however T. Izutsu, *The structure of the ethical terms in the Koran*, Tokyo 1959, index). The fact is that the nine attestations of *djāhil* and the four of *djāhiliyya* in the Ḳur'ān scarcely permit of their sense being precisely determined; however, in the feeling of Muslims and of the commentators, *djāhil* is opposed to *ʿālim* "one who knows God, etc.", and *djāhiliyya* to *islām* taken not in the sense of "submission to God" but rather that of "knowledge of God, etc." (compare the Druze terminology [see DURŪZ], where *djāhil* is opposed to *ʿāḳil*, and designates all those who have not been initiated into the mysteries of the sect.) The word *djāhiliyya* as an abstract is thus applicable to the period during which the Arabs did not yet know Islam and the Divine Law, as well as to the beliefs current at that time. One the basis of Ḳur'ān, XXXIII, 33, where the expression *al-djāhiliyya al-'ūlā* "the first *djāhiliyya*" appears, one is inclined to distinguish two periods, the first *djāhiliyya* extending from Adam to Noah (or to other prophets), and the second corresponding to the "Interval" between Jesus and Muḥammad [see FATRA]. The relative adjective *djāhilī* formed from *djāhiliyya* is applied to all which is anterior to Islam, in particular to the poets who died before Muḥammad's preaching; those who knew both periods are called *mukhaḍram*, and those born after Islam *islāmī*. The double opposition *djāhilī/islāmī* and *djāhiliyya/islām* thus marks an evolution and a departure from the primitive sense of *djāhil*.

The history of the Arabs during the *djāhiliyya* has been dealt with under AL-ʿARAB, the geography and ethnography under DJAZĪRAT AL-ʿARAB, the language under ʿARABIYYA, and nomadism under BADW; on all these points the articles on the different

regions, on the major tribes, and on the towns, should be consulted; for the economic situation see especially under TIDJĀRA.

A point calling for some remark is, rather than the true state of pre-Islamic Arabia, the distinctive characters attributed by Muslims to their pagan ancestors, that is to say the traits which allow their conception of *djāhiliyya* to be defined.

The ideas of the Muslims on pre-Islamic paganism are based on the Ḳurʾān and on traditions which, in spite of their contempt for everything before Islam, they have collected in the framework of their historical and linguistic researches; in the article ḲURʾĀN will be found a résumé of the pronouncements of the Sacred Book on earlier beliefs; in the articles ḤADJDJ and KAʿBA an account of the ancient cult and the history of the Sacred House; under ṢANAM a study of idolatry. Also to be consulted are the various articles on the principal divinities, and also the articles on the adepts of the revealed religions, NAṢĀRĀ and YAHŪD.

While attributing to the *djāhiliyya* the faults condemned in the Ḳurʾān, Muslims do not fail to recognize a certain number of virtues among the ancient Arabs, such as honour [see ʿIRḌ], generosity [see KARAM], courage and dignity [see MURUWWA], and hospitality [see ḌAYF].

For relevant information on social organization see ʿĀʾILA, ʿĀḲILA, ḲABĪLA, etc., and, for the position of women, NIKĀḤ and ṬALĀḲ. (ED.)

DJAḤĪM [see NĀR].

DJAHĪR (BANU), one of the families of government contractors characteristic of their period who almost completely monopolized the caliph's vizierate during the protectorate of the Great Saldjūḳids, and deriving their particular importance from that fact.

The founder of the political fortunes of the dynasty, Fakhr al-Dawla Abū Naṣr Muḥammad b. Muḥammad b. Djahīr, born in al-Mawṣil in 398/1007-8 of a family of rich merchants, entered the service of the Shīʿī ʿUḳaylid princes of that town; then, after one of them, Ḳirwāsh, fell in 442/1149, as a result of somewhat obscure feuds he went to Aleppo where at one time he was vizier to the Mirdāsid Shīʿī Muʿizz al-Dawla Thimāl, and finally (in about 446/1054 ?) he settled down with, and soon became vizier to, the Marwānid of the Diyār Bakr, Naṣr al-Dawla (401-53), a Sunnī and vassal of the Saldjūḳids from before the time of Tughrul Beg's entry into Baghdād (447/1055). After his protector's death, the rivalries between the sons apparently caused him some anxiety, and he was able to take advantage of the difficulties which caliph al-Ḳāʾim was experiencing in choosing a vizier who would be *persona grata* to the sultan and at the same time ready to safeguard the prerogatives of the caliphs, to have the post offered to himself (454/1062), for which no doubt he was further recommended by the administrative talents he had revealed at Mayyāfāriḳīn. The family was to hold the ʿAbbāsid vizierate almost without a break for half a century, and Fakhr al-Dawla himself was to remain as vizier, apart only from four months in 460-1/1068, until 471/1078 when once again he fell into disgrace, to be replaced, however, after some months by his son (born in 435) and close colleague ʿAmīd al-Dawla. Ibn Djahīr calculated that, if he was obliged on the one hand to defend the rights of the caliphate and to avoid wishing to appear to act without the caliph's orders, on the other hand he could only enjoy a really secure position if he maintained close personal relations with the sultanate and his eminent and powerful vizier (from the time of Alp Arslan's reign 455/1063), Niẓām al-Mulk; these ties were strengthened, after the incident in 460-1/1068, by the marriage of ʿAmīd al-Dawla to one of Niẓām's daughters, and then after her death (on the eve of the affair in 471/1078 which possibly her death precipitated) by his subsequent marriage to her niece: thanks to this it was possible at last to put a stop to the hostile intrigues of Göherāīn, the sultan's representative in Baghdād, in that year. However in the second half of Malikshāh's sultanate (463-85/1072-92), in face of the Saldjūḳid hold over Baghdād which was becoming increasingly severe, the caliph al-Muḳtadī (467-87/1075-94) in 476/1083 replaced the Djahīrids by Miskawayh's successor, Abū Shudjāʿ Rudhrawārī who, without being in any way anti-Saldjūḳid, was perhaps a truer representative of the vizier in his heart, and more attentive to the religious, orthodox aspect of the caliphate's own policy. It was then that the Djahīrids embarked on another venture, the explanation of which, if not from their point of view at least from that of the sultan's government, seems far from clear. Taking advantage of the Marwānids' difficulties, Fakhr al-Dawla in fact arranged that Malikshāh, who provided him with the necessary troops, should entrust him with the task of conquering the principality in which, it was true, he had maintained his interests and relations, but of which neither Malikshāh nor his predecessors had ever had cause to complain. Furthermore, the military operations were difficult, being complicated by the intervention of the ʿUḳaylid of al-Mawṣil, Muslim, who saw clearly that if an autonomous neighbouring state were to disappear, his own, which he had put to far more questionable uses, would not long survive, and even by the somewhat equivocal attitude of the Saldjūḳid Turkoman leader Artuḳ. Actual sieges were necessary to take Mayyāfāriḳīn, Āmid and other fortresses in the Diyār Bakr, and the war in which ʿAmīd al-Dawla's brother al-Kāfī Zaʿīm al-Ruʾasāʾ Abu 'l-Ḳāsim ʿAlī also took part was only concluded at the beginning of 478/1085. Fakhr al-Dīn hunted out and apparently squandered the Marwānids' treasure, appropriating a portion of it for himself, and from the end of that year Malikshāh thought it advisable in view of his unpopularity to replace him by a less self-seeking representative as head of government in the province. However, in 482 ʿAmīd al-Dawla obtained the right to farm taxes from the province, paying ten million dinars in three years, while his father received the administration of al-Mawṣil which meanwhile had also come into Malikshāh's possession; he won a good reputation with everyone by the remission of taxes, and the family was able to retrieve its fortunes before the death of Fakhr al-Dawla which occurred in al-Mawṣil in 483. In the following year Niẓām al-Mulk persuaded the caliph to reappoint ʿAmīd al-Dawla to the office of vizier which he was to retain after the death of the great Saldjūḳid administrator, Malikshāh and al-Muḳtadī until 493/1100; to govern the Diyār Bakr he had left his brother al-Kāfī as representative, later succeeded by his son.

But harsher times were to befall the family. In 487/1094, after Malikshāh's death, his brother Tutush took possession of the Diyār Bakr; after retaining al-Kāfī as vizier, perhaps for a short time, he recalled him and, under the Turkoman leaders who were to partition the province between themselves, we hear no more of the Djahīrids. In Baghdād the new sultan Barkyārūk, running short of funds

during the wars he was obliged to wage against his brothers, and possibly not being certain of ʿAmīd al-Dawla's loyalty to his cause, had him arrested and fined an enormous sum on the charge of misappropriating or squandering the treasure from the Diyār Bakr and al-Mawṣil, and left him to die shortly afterwards in prison (493/1100). However, his brother al-Kāfī later became vizier to al-Mustaẓhir, the new caliph, from 496/1102-3 to 500/1106-7 and then, on the recommendation of the new sultan Muḥammad, from 502/1108-9 to 507/1113-4. Henceforward new families were to share the ʿAbbāsid vizierate among themselves. Nevertheless we do once again find a Niẓām al-Dīn Abū Naṣr al-Muẓaffar b. Muḥammad b. Djahīr as *ustādhdār*, and then vizier to the caliph from 535/1140-1 to 541/1146-7, so proving that the Djahīrids had not completely disappeared. But that is the final mention. The residence of Fakhr al-Dawla b. Djahīr at Bāb al-ʿĀmma had been destroyed by al-Mustaẓhir, and the new one, belonging to Niẓām al-Dīn at Bāb al-Azadj, soon fell into the possession of the caliphate.

AL-**DJĀḤIẒ**, Abū ʿUthmān ʿAmr b. Baḥr al-Fuḳaymī al-Baṣrī, was a famous Arab prose writer, the author of works of *adab*, Muʿtazilī theology and politico-religious polemics. Born at Baṣra about 160/776 in an obscure family of *mawālī* from the Banū Kināna and probably of Abyssinian origin, he owes his sobriquet to a malformation of the eyes (*djāḥiẓ* = with a projecting cornea). Little is known of his childhood in Baṣra, except that from an early age an invincible desire for learning and a remarkably inquisitive mind urged him towards a life of independence and, much to his family's despair, idleness. Mixing with groups which gathered at the mosque (*masdjidiyyūn*) to discuss a wide range of questions, attending as a spectator the philological enquiries conducted on the Mirbad [*q.v.*] and following lectures by the most learned men of the day on philology, lexicography and poetry, namely al-Aṣmaʿī, Abū ʿUbayda, Abū Zayd, he soon acquired real mastery of the Arabic language along with the usual and traditional culture. His precocious intelligence won him admittance to Muʿtazilī circles and bourgeois salons, where conversation, often light, was also animated by problems confronting the Muslim conscience at that time: in the realm of theology, harmonizing faith and reason and, in politics, the thorny question of the Caliphate which was constantly brought up by the enemies of the ʿAbbāsids, the conflicts between Islamic sects and the claims of the non-Arabs. His penetrating observation of the various elements in a mixed population increased his knowledge of human nature, whilst reading books of all kinds which were beginning to circulate in Baṣra gave him some outlook on to the outside world. It is quite certain that the intellectual resources offered by his home town would have been fully adequate to give al-Djāḥiẓ a broad culture but the ʿIrāḳī metropolis, then at its apogee, had a decisive influence in helping to form his mind. It left its rationalist and realist imprint so clearly on him, that al-Djāḥiẓ might be considered not only one of the most eminent products of his home town, but its most complete representative, for the knowledge he subsequently acquired in Baghdād did not modify to any noticeable degree his turn of mind as it had been formed at Baṣra; Baṣra is the continuous thread running through all his works.

Although he probably began writing earlier, the first proof of his literary activity dates from roughly 200/815-6; it relates to an event which had a decisive effect on his subsequent career. Some works (the plural is no longer in doubt) on the imāmate, a very characteristic subject, won him the compliments of al-Maʾmūn and thereby that consecration by the capital coveted by so many provincials eager to have their talent recognized and so reach the court and establish themselves. From then on, without completely abandoning Baṣra, al-Djāḥiẓ frequently stayed for long periods in Baghdād (and later Sāmarrā) devoting himself to literary work of which an appreciable part, fortunately, has been spared the ravages of time.

In spite of some slender indications, it is not really known on what he relied for his income in Baṣra. In Baghdād, we know, he discharged for three days the functions of scribe and was very briefly assistant to Ibrāhīm b. al-ʿAbbās al-Ṣūlī at the Chancellery; it is also probable that he was a teacher, and he records himself an interview he claims to have had with al-Mutawakkil who, anxious to entrust him with the education of his children, finally dismissed him because of his ugliness. Although information about his private and public life is not readily forthcoming from either his biographers or himself, it appears from what knowledge we have that al-Djāḥiẓ held no official post and took on no regular employment. He admits, however, that he received considerable sums for the dedications of his books and we know that for a time at least he was made an allowance by the *dīwān*. These fragmentary indications are indeed confusing and tend to suggest that al-Djāḥiẓ who otherwise, unlike some of his fellow countrymen, does not appear to have led the life of a courtier, acted the part of an *éminence grise*, so to speak, or of unofficial adviser at least. We have seen already that the writings which won him the recognition of the capital dealt with the Caliphate and were certainly intended to justify the accession to power of the ʿAbbāsids; they were the prelude of a whole series of opuscules addressed to the authorities, if not inspired by them, and relating to topical events; notwithstanding some degree of artifice in *risāla*s beginning: "Thou hast asked me about such and such a question .... I answer thee that ...", it may be presumed that in many cases the question had in fact been asked and he had been requested to reply in writing. For, if he was never admitted to the intimacy of the Caliphs, he was in continuous contact with leading political figures and it is rather curious that he should have attached himself successively to Muḥammad b. ʿAbd al-Malik al-Zayyāt [*q.v.*], then after the latter's fall from favour (233/847) which almost proved fatal to both men, to the *Ḳāḍī al-ḳuḍāt* (d. 240/854) Aḥmad b. Abī Duʾād [*q.v.*] and to his son Muḥammad (d. 239/853) and finally to al-Fatḥ b. Khāḳān [*q.v.*] (d. 247/861).

He nevertheless retained ample independence and was able to take advantage of his new position to

further his intellectual training and to travel (particularly to Syria; but al-Masʿūdī, *Murūdj*, i, 206, was to criticize him for having attempted to write a geography book—now almost entirely lost—without having travelled enough). In Baghdād also he found a rich store of learning in the many translations from Greek undertaken during the Caliphate of al-Maʾmūn and studying the philosophers of antiquity —especially Aristotle (cf. al-Ḥādjirī, *Takhrīdj nuṣūṣ arisṭaṭāliyya min K. al-Ḥayawān*, in *Madjallat kulliyyat al-ādāb*, Alexandria, 1953 ff.)—enabled him to broaden his outlook and perfect his own theological doctrine, which he had begun to elaborate under the supervision of the great Muʿtazilīs of the day, of whom al-Naẓẓām and Thumāma b. Ashras [*qq.v.*], who seems to have had a strong influence on him, should be placed in the first rank.

Towards the end of his life, suffering from hemiplegia, he retired to his home town, where he died in Muḥarram 255/December 868-January 869.

Like many Arabic writers, al-Djāḥiẓ had a very great output. A catalogue of his works (see *Arabica*, 1956/2) lists nearly 200 titles of which only about thirty, authentic or apocryphal, have been preserved, in their entirety; about fifty others have been partially preserved, whilst the rest seem irremediably lost. Brockelmann (S I, 241 ff.) has attempted to classify his works according to real or supposed subjects and gives us some idea of the breadth and variety of his interests. Considering only the extant works, which now for the most part are available in editions of varying quality, two broad categories may be distinguished: on the one hand, works coming under the head of Djāḥiẓian *adab*, that is to say intended in a rather entertaining manner to instruct the reader, with the author intervening only insofar as he selects, presents and comments on documents; on the other hand, original works, dissertations where his ability as a writer and to some extent his efforts as a thinker are more clearly shown.

His chief work in the first category is *K. al-Ḥayawān* (ed. Hārūn, Cairo n.d, 7 vols..) which is not so much a bestiary as a genuine anthology based on animals, leading off sometimes rather unexpectedly into theology, metaphysics, sociology etc.; one can even find embryonic theories, without it being possible to say how far they are original, of the evolution of species, the influence of climate and animal psychology, which were not to be developed till the nineteenth century. Following *K. al-Ḥayawān*, which was never completed, came *K. al-Bighāl* (ed. Pellat, Cairo 1955). *K. al-Bayān wa 'l-tabyīn* (ed. Hārūn, Cairo 1367/1948-50, 4 vols, and other editions) seems fundamentally to be an inventory of what have been called the "Arabic humanities", designed to stress the oratorical and poetic ability of Arabs; he attempts to justify his choice by positing the bases of an art of poetry, but he does so in an extremely disorderly fashion, as was pointed out by Abū Hilāl al-ʿAskarī, *K. al-Ṣināʿatayn*, 5, who decided to write a more systematic treatise.

Another quality of the Arabs, generosity, is emphasized in *K. al-Bukhalā* (ed. al-Ḥādjirī, Cairo 1948 and other editions; Ger. tr. O. Rescher, *Excerpti*..; Fr. tr. Ch. Pellat, Paris 1951), which is at the same time a portrait gallery, an attack on non-Arabs and an analysis of avarice, the equivalent of which is not to be found anywhere in Arabic literature. His acute powers of observation, his light-hearted scepticism, his comic sense and satirical turn of mind fit him admirably to portray human types and society; he uses all his skill at the expense of several social groups (schoolmasters, singers, scribes etc.) generally keeping within the bounds of decency; only *K. Mufākharat al-djawārī wa 'l-ghilmān* (ed. Pellat, Beirut 1957), dealing with a delicate subject, is marred by obscenity, whilst *K. al-Ḳiyān* (ed. Finkel), which is about slave-girl singers, contains pages of remarkable shrewdness. But this work really belongs to the second category, which includes the dissertations assembled by Kraus and Ḥādjirī: *al-Maʿād wa 'l-maʿāsh*, *al-Sirr wa ḥifẓ al-lisān*, *al-Djidd wa 'l-hazl*, *Faṣl mā bayn al-ʿadāwa wa 'l-ḥasad*, and several other texts published either by al-Sandūbī or in the *11 Risāla*. One might also add the politico-religious works, now for the most part lost, perhaps even deliberately destroyed when Sunnism finally triumphed over Muʿtazilism. Of those still extant, the most voluminous is *K. al-ʿUthmāniyya* (ed. Hārūn, Cairo 1374/1955; see *Arabica*, 1956/3) in which al-Djāḥiẓ asserts the legitimacy of the first three Caliphs, attacks the claims of the Shīʿa and thereby justifies the accession of the ʿAbbāsids to power. No less important is *K. Taṣwīb ʿAlī fī taḥkīm al-ḥakamayn* (ed. Pellat, in *Machriq*, July 1958), unfortunately incomplete and defective but clearly directed against the outdated partisans of the Umayyads, who again were enemies of the ʿAbbāsids. In this respect *Risāla fi 'l-Nābita* (or *fī Banī Umayya*) is interesting also (see Pellat's translation, in *AIEO Alger*, 1952), for it is nothing short of a report by al-Djāḥiẓ to the son of Aḥmad b. Abī Duʾād on the political situation, the causes of division in the community and the danger presented by the *nābita*, that is the neo-*ḥashwiyya*, who were reviving Muʿāwiya for their own ends and using the *kalām* to support their theses; *Risāla fī nafyi 'l-tashbīh* (ed. Pellat, in *Machriq*, 1953) is in the same manner. Revealing of the correspondences between government policy and al-Djāḥiẓ's activity are *K. al-Radd ʿalā 'l-Naṣārā* (see Allouche's translation, in *Hesp.*, 1939) and *Risāla fī manāḳib al-Turk*, dealing respectively with measures taken against the Dhimmīs and the forming of the Turkish guard. Generally speaking, in politics al-Djāḥiẓ shows himself a resolute Muʿtazilī, that is an apologist of the ʿAbbāsids against the pro-Umayyad movement of the Nābita, the Shuʿūbīs and the Shīʿa; but his highly personal manner of presenting facts tends to mislead his readers and in all probability the pro-ʿAlid al-Masʿūdī in *Murūdj*, vi, 55 ff. misunderstood the true significance of his writings. If the chronology of al-Djāḥiẓ's work could be established, one would probably see that after warning the authorities against the regression that might be the result of abandoning Muʿtazilism, he gave up the struggle once Sunnī reaction had won the day and from then on restricted himself to purely literary activity; the fact that he wrote *K. al-Bukhalāʾ* in the latter part of his life supports this hypothesis.

As in politics so in theology al-Djāḥiẓ was a Muʿtazilī, though his doctrine appears to offer hardly any original features; as the writings where he expounded are for the most part lost, one has to make do with occasional annotations in al-Khayyāṭ, *K. al-Intiṣār*, translated and edited by A. N. Nader, Beirut 1957, and with data supplied by the heresiographers (al-Baghdādī, *Farḳ*, 160 ff.; Ibn Ḥazm, *Fiṣal*, iv, 181, 195; al-Shahrastānī, on the margin of Ibn Ḥazm, i, 95-6; etc.; see also, Horten, *Die phil. Systeme der spekulativen Theologen im Islam*, 320 ff.; L. Gardet and M. M. Anawati, *Introd. à la Théologie musulmane*, index; A. N. Nader, *Le Système*

philosophique des Muʿtazila, Beirut 1956, index) which summarize or indicate points where al-Djāḥiẓ differs from other Muʿtazilīs. Too little is known of the doctrine itself for one to be able to do more at this stage than simply refer to the article MUʿTAZILA, pending the completion of a thesis specifically concerned with the question.

Meanwhile, even though al-Djāḥiẓ's place in the development of Muslim thought is far from negligible, he is chiefly interesting as a writer and an *adīb*, for with him form is never overshadowed by content; even in purely technical works. If he is not the first of the great Arab prose writers, if in rhetoric ʿAbd Allāh b. al-Muḳaffaʿ [*q.v.*] and Sahl b. Hārūn [*q.v.*], to name but two, are his masters, nevertheless he gave literary prose its most perfect form, as was indeed recognized first by politicians who made use of his talent for the ʿAbbāsid cause and then by Arab critics who were unanimous in asserting his superiority and making his name the very symbol of literary ability.

Al-Djāḥiẓ's writing is characterized by deliberately contrived disorderliness and numerous digressions; the individuality of his alert and lively style lies in a concern for the exact term—a foreign word if necessary—picturesque phrases and sentences which are nearly always unrhymed, but balanced by the repetition of the same idea in two different forms; what would be pointless repetition to our way of thinking, in the mind of a 3rd/9th century writer simply arose from the desire to make himself clearly understood and to give ordinary prose the symmetry of verse; though difficult to render and appreciate in a foreign language, the flow of his sentences is perfectly harmonious and instantly recognizable. Nevertheless, for the majority of literate Arabs al-Djāḥiẓ remains, if not a complete buffoon, at least something of a jester; his place as such in legend can undoubtedly be attributed in part to his fame and his ugliness, which made him the hero of numerous anecdotes; but it must also be attributed to a characteristic of his writing which could not but earn him the reputation of being a joker in a Muslim world inclined towards soberness and gravity; for he never fails, even in his weightiest passages, to slip in anecdotes, witty observations and amusing comments. Alarmed at the dullness and boredom enshrouding the speculations of a good many of his contemporaries, he deliberately aimed at a lighter touch and his sense of humour enabled him to deal entertainingly with serious subjects and help popularize them. But he realized he was doing something rather shocking and one cannot help being struck by the frequency with which he feels it necessary to plead the cause of humour and fun; the best example is in *K. al-Tarbīʿ wa 'l-tadwīr* (ed. Pellat, Damascus 1955) a masterpiece of ironic writing, as well as a compendium of all the questions to which his contemporaries whether through force of habit, imitative instinct or lack of imagination offered traditional solutions or gave no thought at all. Without stepping outside the boundaries of the faith—this itself was something of a strain—he takes for granted the right to submit to scrutiny accepted attitudes to natural phenomena, ancient history and legends handed down as truths, to restate problems and skilfully suggest rational solutions. Nor is that all; for at a time when mediaeval Arabic culture was taking shape, he brought together what seemed of most value to him, drawing either on the Arab heritage, of which he was a passionate defender, or on Greek thought, always careful however to curb the intrusion of the Persian tradition, which he considered too dangerous for the future of Islam, into the culture he longed to bestow on his co-religionists. This vast undertaking, based on the spirit of criticism and systematic doubt in everything not directly concerned with the dogma of Islam, was unfortunately to be to a considerable extent narrowed and side-tracked in the centuries to follow. It is true that al-Djāḥiẓ was to have admirers as noteworthy as Abū Ḥayyān al-Tawḥīdī, imitators and even counterfeiters, who made use of his name to ensure greater success for their works; but posterity has only kept a deformed and shrunken image of him, seeing him at the most as a master of rhetoric (see Pellat, in *al-And.*, 1956/2, 277-84), the founder of a Muʿtazilī school—whose disciples no one bothers to enumerate—and the author of compilations to be drawn upon for the elaboration of works of *adab*, a sizeable share of recorded information on *djāhiliyya* and the early centuries of Islam.

Bibliography: The main biographies are those of Khaṭīb Baghdādī, xii, 212-22; Ibn ʿAsākir, in *MMIA*, ix, 203-17; Yāḳūt, *Irshād*, vi, 56-80. A general outline is to be found in manuals of Arabic literature, as also in: Sh. Djabrī, *al-Djāḥiẓ muʿallim al-ʿaḳl wa 'l-adab*, Cairo 1351/1932; Kh. Mardam, *al-Djāḥiẓ*, Damascus 1349/1930; Ṭ. Kayyālī, *al-Djāḥiẓ*, [Damascus] n.d.; Ḥ. Fākhūrī, *al-Djāḥiẓ*, Cairo [1953]; M. Kurd ʿAlī, *Umarāʾ al-bayān*, Cairo 1355/1937; Ḥ. Sandūbī, *Adab al-Djāḥiẓ*, Cairo 1350/1931; Ch. Pellat, *Le Milieu basrien et la formation de Ǧāḥiẓ*, Paris 1953; idem, *Ǧāḥiẓ à Bagdād et à Sāmarrā*, in *RSO*, 1952, 47-67; idem, *Ǧāḥiẓiana* in *Arabica*, 1954/2, 1955/3 and mainly 1956/2: *Essai d'inventaire de l'œuvre ǧāḥiẓienne*, with an account of mss, editions and translations (one should add to the bibliography: A. J. Arberry, *New material on the Kitāb al-Fihrist of Ibn al-Nadīm*, in *Isl. Research Assoc. Miscellany*, i, 1948, which gives the notice from *Fihrist* on Djāḥiẓ, missing in the editions; and also: F. Gabrieli, in *Scritti in onore di G. Furlani*, Rome 1957, on the *R. fī manāḳib al-Turk*; the Tunisian review *al-Fikr*, Oct. 1957 and March 1958, on the *R. al-Ḳiyān*); J. Jabre, *al-Djāḥiẓ et la société de son temps* (in Arabic, Beirut 1957 (?), not consulted here). It should be pointed out that in addition to the editions quoted in the course of the article, the following collections have been published: G. van Vloten, *Tria opuscula*, Leyden 1903; J. Finkel, *Three essays*, Cairo 1926; P. Kraus and M. T. Ḥādjirī, *Madjmūʿ rasāʾil al-Djāḥiẓ*, Cairo 1943 (a French translation of these texts is being prepared); Ḥ. Sandūbī, *Rasāʾil al-Djāḥiẓ*, Cairo 1352/1933; *Iḥdā ʿashrata risāla*, Cairo 1324/1906; O. Rescher, *Excerpte und Übersetzungen aus den Schriften des ... Ǧāḥiẓ*, Stuttgart 1931 (analytical translation of a good many texts). The texts in the three manuscript collections: Dāmād Ibrāhīm Pasha 949; Br. Mus. 1129 and Berlin 5032 (see *Oriens*, 1954, 85-6) have in a good many cases been published; those not yet published, along with some other texts of less importance, will be included in our *Nuṣūṣ Ǧāḥiẓiyya ghayr manshūra*. *K. al-ʿUrdjān*, etc. has been recently discovered in Morocco, but is of no great interest.

(CH. PELLAT)

DJAHLĀWĀN (from Balōčī *djahla* "below" or "southern"), district of Pakistani Balōčistān, lying below Sarawān. Formerly part of the Khānate of Kalāt and one of the two great divisions of the

Brahōīs (or Brahūī). Area, 21,128 sq. miles, population unknown, estimated 100,000. The capital is Khuzdār and the population is mainly Brahōī with a few Balōč and Lōrīs. It is mainly a grazing country.

Bibliography: *Baluchistan Gazeteer*, vi, B, Bombay 1907; M. G. Pikulin, *Beludzhi*, Moscow 1959. (R. N. FRYE)

DJAHM B. ṢAFWĀN, ABU MUḤRIZ, early theologian, sometimes called al-Tirmidhī or al-Samarḳandī. He was a client of Rāsib (a *baṭn* of Azd) and appears as secretary to al-Ḥārith b. Suraydj, "the man with the black banner" who revolted against the Umayyads and from 116/734 to 128/746 controlled tracts of eastern Khurāsān, sometimes in alliance with Turks. Djahm was captured and executed in 128/746, shortly before al-Ḥārith himself. The basis of this movement of revolt, of which Djahm was intellectual protagonist, was the demand that government should be in accordance with "the Book of God and the Sunna of His Prophet" (al-Ṭabarī, ii, 1570 f., 1577, 1583, etc.); and the movement is therefore reckoned to the Murdji'a (al-Nawbakhtī, *Firaḳ al-Shī'a*, 6). Nothing further can be said with certainty about Djahm's own views, except that he argued for the existence of God against the Indian sect of Sumaniyya (Aḥmad b. Ḥanbal, *Radd ʿalā 'l-Djahmiyya*, in *Dār ül-Fünūn Ilāhiyyāt Fakültesi Medjmūʿasi*, v-vi (1927), 313-27). Other views ascribed to him are those of the sect of Djahmiyya [*q.v.*], which is not heard of until seventy years after his death, and whose connexion with him is obscure. (W. MONTGOMERY WATT)

DJAHMIYYA, an early sect, frequently mentioned but somewhat mysterious.

Identity. No names are known of any members of the sect, apart from the alleged founder Djahm [*q.v.*]. The basic fact is that "after the translation of the Greek books in the second century a doctrine (*maḳāla*) known as that of the Djahmiyya was spread by Bishr b. Ghiyāth al-Marīsī [*q.v.*] and his generation (Ibn Taymiyya, *ʿAḳīda Ḥamawiyya*, *ap.* M. Schreiner in *ZDMG*, liii, 72 f.; lii, 544). A pupil of Abū Yūsuf (d. 182/798), Bishr (d. 218/833 or a little later) was questioned about his strange views under Ibrāhīm b. al-Mahdī (c. 202/817) (Ibn Abi 'l-Wafā', *al-Djawāhir al-muḍī'a*, i, nos. 1146, 371). Apart from this the early references to the Djahmiyya are by opponents, notably Aḥmad b. Ḥanbal (*al-Radd ʿalā 'l-Zanādiḳa wa 'l-Djahmiyya*) and men of similar outlook, *e.g.*, Ibn Ḳutayba (*al-Ikhtilāf fi 'l-lafẓ wa 'l-radd ʿalā 'l-Djahmiyya wa 'l-Mushabbiha*), al-Ashʿarī (esp. *Ibāna*), Khushaysh (in al-Malaṭī, *Tanbīh*), Ibn Khuzayma (*K. al-Tawḥīd*); cf. *ZDMG*, liii, 73; Brockelmann, S I, 281 (p), 310 (3a); Ibn Radjab al-Baghdādī, *Histoire des Ḥanbalites*, Damascus 1951, i, 38, 40; W. M. Patton, *Aḥmed b. Ḥanbal and the Miḥna*, Leiden 1897, 37 f., 48. Aḥmad considered a Djahmī one who said the speaking (*lafẓ*) of the Ḳur'ān was created or who denied God's knowledge (H. Laoust, *Essai sur .... Aḥmad b. Taimīya*, 172, 261; Nuʿaym b. Ḥammād, who died in prison about 231/846 when he denied the Ḳur'ān was created, said he had earlier been a Djahmī, Ibn ʿAsākir, *Tabyīn kadhib al-muftari*, 383 f.) and he attributed the growth of the sect to followers of Abū Ḥanīfa and ʿAmr b. ʿUbayd in Baṣra (*Radd*, 315). Thus the Ḥanbalites in attacking the Djahmiyya may have been thinking of men usually reckoned as Muʿtazila (cf. H. Laoust, *Profession de Foi d'Ibn Baṭṭa*, 167-9). There is in fact a close similarity between the views of the Djahmiyya and those of a Muʿtazilī like Abu 'l-Hudhayl (cf. S. Pines, *Beiträge zur islamischen Atomenlehre*, 124-33). In course of time the Muʿtazila disacknowledged those who, while agreeing with them in many points, differed in the doctrine of *ḳadar* or 'free will' (al-Khayyāṭ, *Intiṣār*, 133 f.) and tried to minimize the resemblances between themselves and the Djahmiyya (*ibid.* 12). There is also criticism of the Djahmiyya by followers of Abū Ḥanīfa, probably prior to the advent of Bishr al-Marīsī (*al-Fiḳh al-akbar* I, § 10, *ap.* Wensinck, *Muslim creed*, 104; Ibn Abi 'l-Wafā, *op. cit.*, i, nos. 23, 61); but the Māturīdite author of *Sharḥ al-Fiḳh al-akbar* seems embarrassed by the reference in § 10, and brackets the Djahmiyya with the Ḳadariyya and Muʿtazila (19; cf. 30). Al-Baghdādī (*Farḳ*, 200; translation by A. S. Halkin, 14) says there were Djahmiyya in Tirmidh in his own time, some of whom became Ashʿarites.

Doctrines. They held an extreme form of the doctrine of *djabr*, according to which men acted only metaphorically, as the sun "acts" in setting. They held the Ḳur'ān was created. They denied that God had a distinct eternal attribute of knowledge, considering that his knowledge of temporal events followed the occurrence of the event. More generally they denied the distinct existence of all God's attributies, and were therefore accused of *taʿṭīl* (making God a bare unity) and called Muʿaṭṭila. For attributes of God, such as hand and face, occurring in the Ḳur'ān, they had a rational interpretation (*ta'wīl*). On the question of faith their views were a form of those of the Murdji'a.

AL-DJAHSHIYĀRĪ, ABŪ ʿABD ALLĀH MUḤAMMAD B. ʿABDŪS, a scholar born in al-Kūfa, who played a political rôle at the beginning of the 4th/10th century on account of his relations with the viziers of the time. He succeeded his father in the office of *ḥādjib* to the vizier ʿAlī b. ʿĪsā, of whose personal guard he was in command in 306/912. Later, he is found among the supporters of Ibn Muḳla whom he helped to be proclaimed vizier and whom he concealed after his fall; several times he was imprisoned and fined, either by the viziers or by the amīrs Ibn Rā'iḳ and Badjkam. He died in 331/942.

Al-Djahshiyārī is principally known as the author of a *Kitāb al-wuzarā' wa 'l-kuttāb* which traced the history of the Secretaries of State and viziers until 296/908; only the first part, stopping at the beginning of al-Ma'mūn's caliphate, has been preserved for us intact. This work, which reveals the true spirit of inquiry of a chronicler as well as an undeniable taste for *adab*, lays quite as much emphasis upon men's characters and intellectual qualities as upon their administrative or political activities. Al-Djahshiyārī also wrote a voluminous chronicle of al-Muḳtadir's caliphate, from which certain passages are thought to have been recovered, and a collection of stories (*asmār*) which seems to be lost despite the opinion of those who would like to

attribute to al-Djahshiyārī the *K. al-Ḥikāyāt al-ʿadjība*, an anonymous work published recently (see *Arabica*, iv, 1957, 214).

Bibliography: on his life, see M. Canard, *Akhbâr ar-Râdî billâh*, Algiers 1946, i, 143 n. 3; J. Latz, *Das Buch der Wezire und Staatssekretäre von Ibn ʿAbdūs al-Ǧahšiyārī, Anfänge und Umaiyadenzeit*, Walldorf-Hessen 1958, 3-6; D. Sourdel, *Le vizirat ʿabbāside*, Damascus 1959-60, index; Ibn Khallikān, ed. Cairo 1948, vi, 23. On his writings, see *GAL*, S I, 219-20; in addition to the facsimile edition of the *Kitāb al-wuzarāʾ* by H. von Mžik (Leipzig 1926), the edition by Muṣṭafā al-Saḳḳāʾ, etc., which appeared in Cairo in 1357/1938, should be added; the pages devoted to the beginnings and the Umayyad period have been translated into German by J. Latz (*supra*); the character of the work has been studied by D. Sourdel, *La valeur littéraire et documentaire du "Livre des Vizirs" d'al- Ǧahšiyārī*, in *Arabica*, ii, 1955, 193-210; the surviving fragments of the second part have been published or recorded by Mikhāʾīl ʿAwwād, in *MMIA*, xviii, 1943, 318-32 and 435-42, and D. Sourdel, *Mélanges L. Massignon*, iii, Damascus 1957, 271-99. On the *Akhbār al-Muḳtadir*, see D. Sourdel, *Mélanges L. Massignon*, iii, 271 n. 2. (D. Sourdel)

DJAHWARIDS. The terrible conflict brought about by the fall of the Umayyad Caliphate led the Cordovans, under the direction and advice of the influential and respected vizier Abū Ḥazm Djahwar b. Muxammad b. Djahwar, to declare incapable and expel from the city all the members of the imperial family. They proclaimed a form of republic (422/1031) at the head of which they placed the vizier, who had already demonstrated his great political talents at the court of Hishām II. Once elected, however, he refused to assume all the reigns of power, and formed a democratic government which administered all public affairs. He himself claimed to be no more than the executor of the Council's decisions on behalf of the people. Order and calm were restored at Cordova, the vizier earned the respect of the petty Berber kings in the neighbouring areas, and even the Banū ʿAbbād of Seville learned to leave him in peace. Trade took on a new lease of life, prices came down, and the ruins were repaired. His paternal government lasted for 12 years until his death in 435/1043. His son Abu 'l-Walīd Muḥammad, called al-Rashīd, succeeded him. Without assuming the title of Sultan, he followed the line of conduct established by his father. In order to avoid a rupture with al-Muʿtaḍid of Seville, he recognized the deceitful farce of Hishām II, and intervened as a mediator in the war between al-Muʿtaḍid and Ibn al-Afṭas of Badajoz. But he was not of the same mettle as his father, and, lacking the energy to command, he delegated the administration of his small state to his vizier Ibn al-Raḳā, who became the virtual sovereign of Cordova. He earned the hatred of Muḥammad's younger son, ʿAbd al-Malik, who, drawn into the intrigues of al-Muʿtaḍid, treacherously assassinated the vizier in Muḥarram 450/March 1058. Far from punishing him for the deed, his father appointed him crown prince, giving him a free hand in governing and the right to use Caliphate titles. The Cordovans rapidly developed a strong dislike for him on account of his illegal dealings. Whereas al-Muʿtaḍid dethroned the *reyes de taifas* of the south, ʿAbd al-Malik continued his arbitrary rule. In 461/1069, when al-Muʿtadid and the vizier Ibn Raḳā were dead, Ibn al-Afṭas saw his chance to seize Cordova, and ʿAbd al-Malik summoned the assistance of al-Muʿtamid. The latter sent a cavalry detachment of 1300 men, and they raised the siege set by Ibn al-Afṭas. But the Cordovans allowed al-Muʿtamid's generals to capture ʿAbd al-Malik and his aged father who had ruled for $25^1/_2$ years, and they were both exiled to the island of Saltis, off Huelva, where the Odiel flows into the sea.

DJAḤẒA, Abu 'l-Ḥasan Aḥmad b. Djaʿfar b. Mūsā b. Yaḥyā al-Barmakī al-Nadīm (and also al-Ṭunbūrī, because he played the *tunbūr*, lute (Fr.: "pandore")). A philologist and transmitter of traditions, singer and musician, poet and wit and a descendant of the Barmakids. He was reputedly born in 224/839, and died at the age of a hundred, at Wāsiṭ in Shaʿbān 324/June-July 936. A man of very varied culture, but little religion, of doubtful morals and repulsive appearance (he was dirty and ugly, and owed his last name to a malformation of his bulging eyes), he is the hero of numerous stories—in which nonetheless he is shown as keeping the company of persons in high society: Ibn al-Muʿtazz (who apparently gave him his last name), al-Ḥasan b. Makhlad, Ibn Muḳla, Ibn Rāʾiḳ. Apart from the *Amālī* and a *dīwān*—what remains of the latter is mainly incidental writings—he has left a series of works enumerated by the *Fihrist* (208), about the kitchen, lute-players, astrology, and the life of al-Muʿtamid (*K. mā shāhada-hu min amr al-Muʿtamid*).

(Ch. Pellat)

DJĀʾIZ, a term used in a general way to denote permissible acts, that is to say acts which are not contrary to a rule of the law. However, in the classical division of acts into five categories (*al-aḥkām al-khamsa*; cf. *Dict. Tech. Terms*, i, 379 ff.; I. Goldziher, *Die Ẓāhiriten*, 66 ff.; Juynboll, *Handbuch*, 59 ff.) adopted by the writers on *uṣūl* [*q.v.*] the permissible act is generally described as *mubāḥ*. It is thus quite as clearly differentiated from the act which is obligatory (*wādjib*) or merely recommended (*mandūb*), as from that which is forbidden (*ḥarām*) or simply considered reprehensible (*makrūh*).

In writings on *furūʿ*, that is to say of the Muslim jurisconsults, the term *djāʾiz* assumes a different significance. The juridical act which is not completely null and void (*bāṭil*) or merely defective (*fāsid*)—according to the Ḥanafīs—is regarded as *ṣaḥīḥ*, that is to say valid. It is the act carried out in conformity with the prescriptions of the law, and it must in principle produce all its effects. A valid act of this kind is certainly *djāʾiz*, or permissible; but the correct term to denote it is *ṣaḥīḥ*.

Ḥanafī authors, however, preferred to use the term *djāʾiz*, not to denote a valid act but, in particular, to specify that the act was legitimate or licit, in point of law. In their works, the study of each contract under consideration generally begins with

a preamble in which the writer is at pains to state that the contract is *djāʾiz* by reason of some text, or custom, or *omnium consensus*, or simply its practical usefulness (Chafik Chehata, *Théorie générale de l'obligation en droit musulman*, i, 105, no. 117). This is true of the contract of hire (Kāsānī, *Badāʾiʿ*, iv, 174); of guarantee (ibid., vi, 3); and of deposit (Sarakhsī, *Mabsūṭ*, xi, 108). In all these texts the writer raises the question whether the contract is or is not *djāʾiz*, quite apart from the fact that it can be valid or not, according to whether the conditions of its conclusion or validity have or have not been fulfilled. Thus, with regard to the contract of *locatio operis* (*istiṣnāʿ*), the conditions of legality are made clear, independently of conditions of conclusion (*inʿiḳād*), validity (*ṣiḥḥa*), irrevocability (*luzūm*) or efficacity (*nafādh*) (Kāsānī, v, 209). Sometimes the term *mashrūʿ* is used in place of *djāʾiz*, as for example in the contract of crop-sharing (*muzāraʿa*) (Kāsānī, vi, 175); and in the contract of association (ibid., v, 220). In fact the *djāʾiz* act is, correctly, the lawful act, *mashrūʿ* in point of law. But lawful must here be understood in a special sense. It is not a question of the legality of the object or cause of the contract, but rather of the act considered in itself, as to how far it is sanctioned by law. And thus, in the final analysis, the term *djāʾiz* as used by jurisconsults in writings on *furūʿ* by indirect means comes to approximate the term *mubāḥ* which is found in works on *uṣūl*, in the writings of *fiḳh* logicians.

Furthermore the term *djāʾiz*, taken in the sense of *mashrūʿ*, goes beyond the limits of juridical acts. It underlies the theory of criminal responsibility, since it is established that a lawful act cannot give rise to damages (*al-djawāz al-sharʿī yunāfi 'l-ḍamān*). Here again, by lawful act we must understand an act permitted by law, however prejudicial.

Certain authors, however, including Ḥanafīs, use the term to denote a valid contract. Thus for Ḳudūrī a contract vitiated by risk is looked upon as illegal (Ḳudūrī, *Mukhtaṣar*, 60), in the same way as a contract whose object is illegal (ibid., 54). In both these texts the writer specifies that the contract is not *djāʾiz*.

Finally it must be stated that, in non-Ḥanafī writers, the term *djāʾiz* has assumed an entirely unexpected significance. In effect, in Mālikī as well as Shāfiʿī and Ḥanbalī writings, the contract is said to be *djāʾiz* when it is revocable. (For the Mālikīs, see Ḳarāfī, *Furūḳ*, iv, 13; for the Shāfiʿīs, Suyūṭī, *Ashbāh*, 141; for the Ḥanbalīs, Ibn Ḳudāma, iv, 119). Thus it is that the contract can be *djāʾiz* for one of the parties, that is to say revocable by him, and not *djāʾiz*, or irrevocable, for the other—just as it can be *djāʾiz* for both, that is to say revocable by both parties (al-Aʿlawī, *Bughyat al-mustarshidīn*, 112).

In logic, *djāʾiz* means what is not unthinkable, whether it be necessary, probable, improbable, or possible (*Dict. Tech. Terms*, i, 207 ff.)

DJĀʾIZA [see ṢILA].

DJAKARTA, town on the north coast of Java, a few miles to the east of 107° E. Long. The name is believed to be the abbreviated form of Djajakarta, 'Victorious and Prosperous'; in its turn it was corrupted into Jakatra (Jacatra) by the first Dutch visitors (1610). Judging by the name, we may suppose old Djakarta to have been the residence of a more or less independent king who was Javanese by descent or by culture. The Dutch settlement was given the name Batavia, from Batavi, one of the Latin names for the Netherlanders; Jan P. Coen, local representative of the Dutch Chartered Company, decided to establish his headquarters here in 1619. In 1628 and 1629 Batavia was heavily attacked by Anjakrakusuma alias Sultan Agung, king of Mataram. The narrow escape was followed by a long period of peace and prosperity which made the Indonesians use the expression *untung Betawi*, 'Batavian luck'. Several stories were invented to explain that luck, the most interesting being the one which Cohen Stuart published in 1850 (*Geschiedenis van Baron Sakéndhèr*, Batavia); it says that Jan P. Coen was the son of a Javanese princess with a flaming womb who had been given in marriage to Sukmul, twin-brother of Sekènḍèr (Iskandar Dhu 'l-Ḳarnayn, Alexander the Great).

The town was the seat of a Dutch Governor-General from 1619 to 1942, with a British interregnum from 1811 to 1816. As such it developed into an international centre of trade, and within the Indonesian Archipelago into a centre of administration. Under the Chartered Company (1619-1799) it attracted a multitude of merchants, from various parts of Indonesia as well as from various foreign countries (China, India, Arabia). Especially in the second half of the existence of the Netherlands Indies (1800-1942) Batavia was the gateway for various kinds of missionary activities, in the field of religion as well as in the field of school education. Both factors—commerce and propaganda—have contributed to the cosmopolitan character of the town; it may be true that the majority of the Indonesian population is Muslim, it is as true that the town does not owe its importance, character and function to the Muslims as such.

From the view-point of Islamology it deserves attention that Batavia was an observation-post for the study of Muslim life ever since it came into existence as an Indonesian town under Dutch rule. When Snouck Hurgronje was appointed adviser to the Colonial Government for Muslim and native affairs (1889) his office in Batavia became a centre for theoretical and applied Islamology. The Batavian Faculty of Law, founded in 1924, had a chair for Muslim law and Islamology from the very beginning. This is why Indonesian Islam, in many respects different from the type of Islam which one finds in Egypt and similar countries, is fairly well known. See DJĀWĪ, INDONESIA, JAVA, SUMATRA.

Batavia became Djakarta once more in 1942, when the Japanese conquered Indonesia and put an end to the colonial empire of the Dutch. The Indonesian Republic, proclaimed in 1945 and recognized by the Dutch in 1949, maintained Djakarta as its capital. The town which counted a population of approximately 400,000 people in 1940, is rapidly growing. It still has a cosmopolitan character, though its present function might detract from this character in a near future. (C. C. BERG)

DJAKAT [see ZAKĀT].

DJAʿL [see TAZYĪF].

DJALĀʾIR, DJALĀʾIRID [see DJALĀYIR, DJALĀYIRID].

DJALĀL AL-DAWLA, honorific title of various princes, notably the Būyid (see below), the Ghaznawid Muḥammad [*q.v.*], and the Mirdāsid Naṣr [*q.v.*].

DJALĀL AL-DAWLA, Abū Ṭāhir b. Bahā ʾal-Dawla, a Būyid, born in 383/993-4. When Sulṭān al-Dawla, after the death of his father Bahāʾ al-Dawla in 403/1012, was named *amīr al-umarāʾ*, he entrusted his brother Djalāl al-Dawla with the office of governor of Baṣra. The latter stayed there for several years without becoming involved in the private quarrels of the Būyids. In 415/1024-5 Sulṭān al-Dawla died and his brother Musharrif al-Dawla died in the following year. Djalāl al-Dawla was then proclaimed *amīr al-umarāʾ*, but, as he did not appear at Baghdād to take possession of his new dignity, an invitation was given instead to Abū Kālīdjār, son of Sulṭān al-Dawla, who was also unable to accept the office. When Djalāl al-Dawla heard that he was no longer named in public prayers he marched on Baghdād with an army, but was defeated and had to retreat to Baṣra. However, in Ramaḍān 418/October 1027 he entered the capital at the request of the Turks who were unable to keep on good terms with the population of Baghdād and were afraid of the influence of the Arabs. But friendly relations with the Turks were short-lived. In the following year an insurrection broke out in Baghdād, and Djalāl al-Dawla restored order only with difficulty. At the same time Abū Kālīdjār took possession of Baṣra without striking a blow and in 420/1029 succeeded in capturing Wāsiṭ. As Djalāl al-Dawla was preparing an expedition against Ahwāz, Abū Kālīdjār wanted to start peace negotiations; but Djalāl al-Dawla preferred to sack Ahwāz, and took prisoner the women of Abū Kālīdjār's family. At the end of Rābīʿ I 421/April 1030 the latter marched against Djalāl al-Dawla but was defeated after a three days' battle and had to flee, while the victor first took Wāsiṭ and then entered Baghdād. Baṣra was also conquered, but Abū Kālīdjār's troops soon reoccupied it, though in Shawwāl/October of the same year they suffered a further defeat near al-Madhār. In the capital, the insubordination of the Turkish mercenaries increased constantly, and the *amīr al-umarāʾ* soon lost the last vestiges of his authority. In 423/1032 Djalāl al-Dawla's palace was sacked, and he was obliged to leave the town and flee to ʿUkbarā, while Abū Kālīdjār was proclaimed *amīr al-umarāʾ* by the Turks in Baghdād. Abū Kālīdjār then came to Ahwāz and, as the amīrate held no particular attraction for him, Djalāl al-Dawla was able, after about six weeks, to return to his capital where, however, the situation was steadily worsening. In the following year his palace was once again attacked and pillaged, and for the second time the Būyid, who from now on was completely powerless, was forced to take to flight. This time he went to al-Karkh where he was protected by the Shīʿīs, remaining there until the rebels called him back to Baghdād. In the same year the governor of Baṣra, Abu 'l-Ḳāsim, revolted against Abū Kālīdjār who was intending to depose him, and called in Djalāl al-Dawla's son al-ʿAzīz to Baṣra. But in 425/1033-4 al-ʿAzīz was driven out, and the population again took an oath of loyalty to Abū Kālīdjār. During this period complete anarchy dominated the capital and in 427/1035-6 a new revolt broke out in the army which however was brought back to loyalty by the caliph's intervention. In 428/1036-7 Barsṭoghan, who was one of the most powerful Turkish leaders in Baghdād and whose position was threatened, called on Abū Kālīdjār for assistance. Once more Djalāl al-Dawla was driven out of Baghdād but, after being helped by Ḳirwāsh b. al-Muḳallid of Mawṣil and Dubays b. ʿAlī of Ḥilla, while the Daylamites broke away from the Turks in Baghdād, he was soon able to expel Barsṭoghan and occupy the capital. Barsṭoghan was taken prisoner and put to death, and Abū Kālīdjār at last made peace with Djalāl al-Dawla. The final reconciliation was sealed by the marriage of one of Djalāl's daughters with Abū Manṣūr, Abū Kālīdjār's son. On this occasion Djalāl al-Dawla took the ancient Persian title "king of kings", which in fact was far from justified by his own lack of authority and the general anarchy. In 431/1039-40 or, according to others, in 432/1040-1, he had to face a further Turkish revolt in the capital. Djalāl al-Dawla died on 6 Shaʿbān 435/9 March 1044, leaving the Būyid kingdom in a state of the deepest degradation.

Bibliography: see BUWAYHIDS.

(K. V. Zetterstéen)

Sharīf **DJALĀL AL-DĪN AḤSAN,** d. 740/1339, first Sultan of Madura [*q.v.*]. A native of Kaythal in the Pandjāb, he is known from a well-inscription (cf. B. D. Verma, in *Epigraphia Indica, Arabic and Persian Supplement, 1955-6*, 109 ff.) to have been *nāʾib-i iḳṭāʿ* in the province of Maʿbar [*q.v.*] in 725/1324; later he was appointed governor by Muḥammad b. Tughluḳ (or, according to ʿIṣāmī, *Futūḥ al-Salāṭīn*, 449, was *kotwāl* [*q.v.*] at Madura and usurped the government), but shortly after this, in 735/1335, he proclaimed his independence under the title of Djalāl al-(Dunyā wa 'l)-Dīn Aḥsan Shāh at Madura, the old Pāndya capital, where he struck coin. Muḥammad's march south to crush the rebel was prevented by an outbreak of cholera at Warangal, which decimated his army, and the Dihlī sultan had no further opportunity of regaining his lost province. Djalāl al-Dīn was killed in 740/1339 by one of his officers who seized the throne as ʿAlāʾ al-Dīn Udawdjī Shāh; thus although he was the first independent sultan of Madura he founded no dynasty. One of his daughters, however, married the fourth sultan, and another daughter, Ḥūrnasab, married the traveller Ibn Baṭṭūṭa, who spent some time at the Madura court, and to whom much of the scanty knowledge of this small sultanate is due.

Djalāl al-Dīn is erroneously called Sayyid Ḥasan by Ḍiyāʾ al-Dīn Baranī (Eng. tr. Elliot and Dowson, *History of India* . . ., iii, 243) and Firishta (Eng. tr. Briggs, i, 423).

Bibliography: Ibn Baṭṭūṭa, iii, 328, 337-8; iv, 187 ff., 189, 190, 200; H. von Mžik, *Die Reise des Arabers Ibn Baṭūṭa durch Indien und China (14 Jhdt.)*, Hamburg 1911, 170 ff. and note; C. J. Rodgers, *Coins of the Musulmān kings of Maʿbar*, in *JASB*, lxiv/1, 49; E. Hultzsch, *The coinage of the sultans of Madura*, in *JRAS*, 1909, 667-83.

(J. Burton-Page)

DJALĀL AL-DĪN ʿĀRIF (Celâleddin Ârif), Turkish lawyer and statesman, was born in Erzurum on 19 October 1875, the son of Meḥmed ʿĀrif, a writer of some repute. He received his education at the military *rüshdiyye* in Çeşme and the *Mekteb-i Sulṭānī* at Galatasaray (Istanbul), where he graduated in 1895. He studied law in Paris and began to practise it in Egypt in 1901. He returned to Turkey after the 1908 revolution and joined the Ottoman Liberal (*Aḥrār*) Party, the first group of this period to oppose the centralizing tendencies of the Union and Progress movement in the name of multinational equality within the Empire. He became a lecturer at the Istanbul Law School and president of the Istanbul Bar Association (1914-20). In 1919 he acted as defence counsel in the trial of the wartime Union and Progress cabinet. In the last

Ottoman Chamber of Deputies (*medjlis-i mebʿūthān*) he served as deputy for Erzurum, temporary presiding officer, and co-founder of the Nationalist *Felāḥ-ı Waṭan* group; upon the death of Reshād Ḥikmet, he was elected (4 March 1920) President of the Chamber. Two weeks later, after the reinforced occupation of the capital and the adjournment *sine die* of the Chamber, he led the flight of deputies to Ankara, where he urged his colleagues to join the Grand National Assembly convened by Muṣṭafā Kemāl [Atatürk]. He became the Assembly's Second President (*reʾīs-i thānī*), Minister of Justice in the Ankara government (April 1920 to January 1921 and July to August 1922), and its diplomatic representative in Rome (1921-3). His differences with Kemāl became apparent as early as the autumn of 1920 during an extended stay in his native Erzurum. A proposal that ʿĀrif be appointed governor-general over the Eastern wilāyets went unheeded, and he in turn delayed for two months before accepting Kemāl's invitation to return to Ankara. During his brief second tenure as Minister of Justice he was considered one of the parliamentary leaders of the conservative opposition (*ikindji grub*) in the Assembly. After 1923 he retired from political and diplomatic life. He died in Paris on 18 January 1930.

Tunaya, *Türkiye'de Siyasi Partiler*, Istanbul 1952, 239, 539; *Talât Paşanın Hatıraları*, Istanbul 1958, 116-24.

(DANKWART A. RUSTOW)

DJALĀL AL-DĪN ḤUSAYN AL-BUKHĀRĪ, surnamed *Makhdūm-i Djahāniyān Djahāngasht*, one of the early *pīrs* of India, was the son of Sayyid Aḥmad Kabīr whose father Sayyid Djalāl al-Dīn-i Surkh had migrated from Bukhāra to Multān and Bhakkar [*q.v.*]. A descendant of Imām ʿAlī al-Naḳī, his father was a disciple of Rukn al-Dīn Abu 'l-Fatḥ, son and successor of Bahāʾ al-Dīn Zakariyyā [*q.v.*]. Born 707/1308 at Učch, where he also lies buried, he was educated in his home-town and in Multān but seems to have left for the Ḥidjāz at a very young age in search of more knowledge. He is reported to have visited, in the course of his extensive travels which earned him the sobriquet of *Djahāngasht*, Kāzarūn, Egypt, Syria (including Palestine), Mesopotamia, Balkh, Bukhāra and Khurāsān, in addition to Mecca and Medina. The *Safarnāma-i Makhdūm-i Djahāniyān* (Urdū transl. Lahore 1909), purporting to be an account of his travels, is full of supernatural stories and may, therefore, be regarded as apocryphal. A contemporary of ʿAbd Allāh al-Yāfiʿī al-Yamanī, with whom he read *al-Ṣiḥāḥ al-Sitta* in Mecca, and of Ashraf Djahāngīr al-Simnānī [*q.v.*], he received his *khirḳa* from Naṣīr al-Dīn Čirāgh-i Dihlī [*q.v.*]. He was appointed Shaykh al-Islām by Muḥammad b. Tughluḳ and forty *khānaḳāhs* in Sīwastān (modern Sēhwān) and its suburbs were assigned to him; but he left for the Ḥadjdj before taking up the appointment. Fīrūz Shāh Tughluḳ became deeply attached to him after his return, and held him in high esteem. The *shaykh* used to visit the sultan at Delhi every second or third year. He had also accompanied him on his expedition to Thaṭṭā in 764/1362. Fīrūz's religious policy, as outlined in the *Futūḥāt-i Fīrūz Shāhī*, was greatly influenced by the saint. He died on 10 Dhu 'l-Ḥidjdja 785/3 February 1384. Three collections of his *obiter dicta* are known to exist: i) *Khulāṣat al-alfāẓ djāmiʿ al-ʿulūm*, compiled by ʿAlāʾ al-Dīn ʿAlāʾ b. Saʿd al-Ḥasanī in 782/1380 (MS. Riḍāʾ Library, Rampur Urdū transl. "*al-Durr al-manẓūm fī tardjamat talfūẓāt al-Makhdūm*", Anṣārī Press. Dihlī n. d.); ii) *Sirādj al-hidāya*, compiled by ʿAbd Allāh in 787/1385 (MSS. Rampur, Aligarh, I.O.D.P. 1038); and iii) *Khizāna-i Djalālī* (also called *Manaḳib-i Makhdūm-i Djahāniyān*) compiled by Abu 'l-Faḍl b. Ridjāʾ ʿAbbāsī (only an incomplete MS. in A.S.B.). All these collections, especially the *Djāmiʿ al-ʿulūm*, are voluminous, and are written in a miraculous and supernatural strain. Another work based on his teachings is the *Khizānat al-fawāʾid al-Djalāliyya* composed in 752/1351 by Aḥmad Bahāʾ b. Yaʿḳūb (Storey, ii, 945).

(A. S. BAZMEE ANSARI)

DJALĀL AL-DĪN KHALDJĪ [see DIHLĪ SULTANATE, KHALDJIDS].

DJALĀL AL-DĪN KHʷĀRAZM-SHĀH, the eldest son of Sultan Muḥammad Khʷārazm-Shāh [*q.v.*] and the last ruler of the dynasty. The spelling and pronunciation of his personal name (MNKBRNY) are still uncertain. Such forms as Mangoubirti, Mankobirti, etc., are based upon a derivation first proposed by d'Ohsson, from the Turkish *mengü* in the sense of "Eternal [God]" and *birti* (for *birdi*) "[he] gave"; but this etymology is now discredited. Muḥammad had originally designated his youngest son, Ḳuṭb al-Dīn Uzlagh-Shāh, as his successor, but shortly before his death on an island in the Caspian Sea had altered his will in favour of Djalāl al-Dīn. The princes, who had remained in attendance on their father throughout his flight, now left the island and landing on the Manḳishlaḳ Peninsula made their way to Gürgāndj [*q.v.*], which they reached some little time before its investment by the Mongols. The discovery of a plot against his life caused Djalāl al-Dīn to leave the capital almost immediately and to make for the territories formerly allotted to him by his father and corresponding more or less to the modern Afghānistān. The Mongols had posted observation parties along the nothern frontiers of Khurasān but Djalāl al-Dīn succeeded in breaking through this cordon and reaching Ghazna, where he found himself at the head of a heterogeneous force of some 60,000 Turks, Khʷārazmīs and Ghūrīs. At Parwān to the north-east of Čarīkār he inflicted upon a Mongol

army the only serious defeat that the invaders suffered during the whole campaign. However, deserted on the very battlefield by almost half of his followers he was obliged to retreat southwards pursued by Čingiz-Khān in person at the head of the main Mongol army. He was overtaken on the banks of the Indus and after offering desperate resistance (8 Shawwāl 618/24 November 1221) escaped to safety by riding his horse into the river and swimming to the farther side. After a successful expedition against a petty rādjā in the Salt Range Djalāl took the field against Nāṣir al-Dīn Ḳubača [*q.v.*], the ruler of Sind, and sought in vain to form an alliance with Sultan Shams al-Dīn Iletmish [*q.v.*] of Dihlī. He remained nearly three years in India and then decided to make his way to ʿIrāḳ-i ʿAdjam, where his brother Ghiyāth al-Dīn had now established himself. In 621/1224 he appeared in Kirmān, where Burāḳ Ḥādjib [*q.v.*] had seized power. Djalāl al-Dīn found it expedient to confirm him in his usurped authority before continuing his journey to Fārs, where he stayed only long enough to marry a daughter of the Atabeg Saʿd [*q.v.*], and to ʿIrāḳ-i ʿAdjam, where he was at once successful in dispossessing his brother. The winter of 621-2/1224-5 he passed in Khūzistān, his troops colliding with the forces of the Caliph al-Nāṣir. He then proceeded to attack and overthrow the Atabeg Öz-Beg [*q.v.*] of Ādharbāydjān, whose capital Tabrīz he entered on 17 Radjab 622/25 July 1225. From Ādharbāydjān he invaded the territory of the Georgians capturing Tiflis on Rabīʿ I 623/9 March 1226. Here he received a report that Burāḳ Ḥādjib had risen in revolt, and he travelled, according to Djuwaynī, from the Caucasus to the borders of Kirmān in the space of 17 days. Returning to the west he laid siege, on 15 Dhu 'l-Ḳaʿda 623/7 November 1226, to the town of Akhlāṭ [*q.v.*] in the territory of al-Ashraf [*q.v.*] but was obliged to raise the siege almost immediately owing to the severe cold. In the following year the Mongols reappeared in Central Persia and Djalāl al-Dīn engaged them in a great battle before the gates of Iṣfahān. The result was a Pyrrhic victory for the invaders who at once retreated northwards and had soon withdrawn beyond the Oxus. After another campaign against the Georgians Djalāl al-Dīn again, in Shawwāl 626/August 1229, laid siege to Akhlāṭ. With the fall of the town in Djumādā I 627/April 1230 he found himself involved in war with the combined forces of al-Ashraf and Kay-Ḳubād I [*q.v.*], the Sultan of Rūm. Defeated in the battle of Arzindjān (28 Ramaḍān 627/10 August 1230) he withdrew into Ādharbāydjān and had no sooner concluded peace with his opponents than he was threatened with the approach of new Mongol armies under the command of Čormaghun. A Mongol force overtook him in the Mūghān Steppe and he fled first to Akhlāṭ and then to the vicinity of Āmid. Here the Mongols made a night attack in his encampment (middle of Shawwal 628/17 August 1231): roused from a drunken sleep he made off in the direction of Mayyāfarīḳīn and met his death in a nearby Kurdish village, where he was murdered for reasons either of gain or of revenge. The ruler of Āmid recovered his body and gave it burial, but many refused to believe that he was dead, and time and again, in the years that followed, pretenders would arise claiming to be Sultan Djalāl al-Dīn.

DJALĀL AL-DĪN RŪMĪ B. BAHĀʾ AL-DĪN SULṬĀN AL-ʿULAMĀʾ WALAD B. ḤUSAYN B. AḤMAD KHAṬĪBĪ, known by the sobriquet Mawlānā (Mevlânâ), Persian poet and founder of the Mawlawiyya order of dervishes, which was named after him, was born on Rabīʿ I 604/30 September 1207 in Balkh, and died on 5 Djumāda II 672/1273 in Ḳonya. The reasons put forward against the above-mentioned date of birth (Abdülbaki Gölpınarlı, *Mevlânâ Celâleddîn*[3], 44; idem, *Mevlânâ Şams-i Tabrîzî ile altmış iki yaşında buluştu*, in *Şarkiyat Mecmuası*, iii, 153-61; and *Bir yazı üzerine*, in *Tarih Coğrafya Dünyası*, ii/12, 1959, 468) are not valid. His father, whose sermons have been preserved and printed (*Maʿārif. Madjmūʿa-i mawāʿiẓ wa sukhanān-i Sulṭān al-ʿulamāʾ Bahāʾ al-Dīn Muḥammad b. Ḥusayn-i Khaṭībī-i Balkhī mashhūr ba-Bahāʾ-i Walad*, ed. Badīʿ al-Zamān Furūzānfarr, Tehran 1333), was a preacher in Balkh. The assertions that his family tree goes back to Abū Bakr, and that his mother was a daughter of the Khwārizmshāh ʿAlāʾ al-Dīn Muḥammad (Aflākī, i, 8-9) do not hold on closer examination (B. Furūzānfarr, *Mawlānā Djalāl al-Dīn*, Tehrān 1315, 7; ʿAlīnaḳī Sharīʿatmadārī, *Naḳd-i matn-i mathnawī*, in *Yaghmā*, xii (1338), 164; Aḥmad Aflākī, *Ariflerin menkibeleri*, trans. Tahsin Yazıcı, Ankara 1953, i, Önsöz, 44). According to the biographical sources, he left Balkh because of a dispute with the Khwārizmshāh ʿAlāʾ al-Dīn Muḥammad and his protégé Fakhr al-Dīn al-Rāzī (d. 606/1209-10) and, when his son Djalāl al-Dīn was five years old (Aflākī, ed. Yazıcı, i, 161), *i.e.*, in 609/1212-3, emigrated to the west. In fact the sermons of Bahāʾ al-Dīn contain attacks on the Khwārizmshāh and the above-named religious philosopher. But according to the same book of sermons, he was in Wakhsh between 600/1203 and 607/1211, and in Samarḳand in 609/1212-3 (Maʿārif. ed. Furūzānfarr, *Muḳaddima*, 37 and *Fīhi mā Fīh*, ed. Furūzānfarr, 173 respectively). He must, however, have returned from Samarḳand to Balkh, as according to the sources the emigration took place from there. The date of 609/1212-3 for the emigration is in any case too early (*Isl.* xxvi, 117 ff.). As according to Aflākī he arrived in Malaṭya only in 614/1217, one may perhaps assume that he emigrated in 614/1217 or the year before. Whether his quarrel with the Khwārizmshāh was connected with the latter's hostile attitude towards the Caliph in Baghdād cannot be settled, but would be possible. In 616/1219 Bahāʾ al-Dīn was in Sivas, stayed for some four years in Akshehir near Erzindjan, went to Larende, probably in 619/1222, and stayed there for seven years. In Larende there is the tomb of Mawlānā's mother, Muʾmina Khātun (Azmı Avcioğlu, *Karaman'da mader-i Mevlânâ câmi ve türbesi*, in *Konya dergisi*, v, no. 35, 2088). Bahāʾ al-Dīn married his son in Larende to Djawhar Khātun, the daughter of Sharaf al-Dīn Lālā.

In the year 626/1228, at the request of the Saldjūḳ Prince ʿAlāʾ al-Dīn Kayḳubad, the family moved to Ḳonya, where Bahāʾ al-Dīn Walad died on 18 Rabīʿ II 628/1231 (Aflākī, i, 32, 56). A year after his death Sayyid Burhān al-Dīn Muḥaḳḳiḳ, an old pupil of his, came to Ḳonya to visit his former master, but found that he was no longer alive. Djalāl al-Dīn became a *murīd* of Sayyid Burhān al-Dīn until the latter's death nine years later. Burhān al-Dīn,

however, withdrew to Kayseri after some time and died there, probably in 637/1239-40. His tomb is in Kayseri. According to Aflākī, Djalāl al-Dīn went to Aleppo and Damascus after the arrival of the Sayyid to complete his studies. Burhān al-Dīn is supposed to have made him aware that his father possessed, besides exoteric learning, other learning that could be won not through study but through inner experience. After the death of Burhān al-Dīn Djalāl al-Dīn was alone for five years. On 26 Djumādā II 642/1244 the wandering dervish Shams al-Dīn Muḥammad Tabrīzī came to Ḳonya and put up in the *khān* of the sugar-merchants. Djalāl al-Dīn met and talked to him; Shams asked him about the meaning of a saying of Bāyazīd Biṣṭāmī, Djalāl al-Dīn gave the answer. According to Aflākī, Djalāl al-Dīn had already seen Shams once in Damascus (Furūzānfar, *Mawlānā*, 65-6). However that may be, the appearance of Shams-i Tabrīzī made a decisive change in the life of Mawlānā. In the Ṣūfī manner he fell in love with the dervish and took him into his home. It will be possible to say something about Shams's remarkable personality only when his collected sayings, the *Maḳālāt*, have been edited. He constantly wore a black cap (*kulāh*) and because of his restless wandering life was called *paranda* "the flier". Although, as his *Maḳālāt* show, he had the usual theological conceptions of his time, he tried to keep Mawlānā away from the study of books. It seems from his sayings that he had a certain bluntness of character. Shams-i Tabrīzī is called in the sources *sulṭān al-ma'shūḳīn*, "prince of the loved ones", and Mawlānā's son Sulṭān Walad, who knew Shams well, and was aware of the relationship Shams had with his father, develops in the *Ibtidānāma* a theory that there is another class of "lovers who have reached the goal" (*'āshiḳān-i wāṣil*) besides the "perfect saints" (*awliyā'-i kāmil*). Beyond these there is a further stage (*maḳām*), that of the "beloved" (*ma'shūḳ*). Until Shams appeared nobody had heard anything about this stage, and Shams had reached it. Shams showed Mawlānā this way of Ṣūfī love, and Mawlānā had to re-learn everything from him. Mawlānā's love for Shams-i Tabrīzī turned him into a poet, but at the same time caused him to neglect his *murīds* and disregard everyone but Shams. The *murīds* were angered by this and maintained that they were more important than the foreign, unknown dervish and are even said to have threatened Shams's life. Thereupon Shams fled on 21 Shawwāl 643/11 March 1246 to Damascus. But the *murīds* did not achieve their end. Mawlānā was quite disconcerted, and sent his son Sulṭān Walad to Damascus. Shams could not resist the spoken entreaties of Sulṭān Walad and the written poetical entreaties of Mawlānā, and returned on foot with Sulṭān Walad to Konya. But at once the *murīds* began to murmur again and took pains to keep Shams away from Mawlānā. Shams is said to have declared that he would now disappear for ever and no-one would be able to find him again. On 5 Sha'bān 645/5 December 1247 Shams was murdered with the participation of Sulṭān Walad's brother 'Alā' al-Dīn, or at his instigation, and the corpse was thrown into a well and later found and buried by Sulṭān Walad. It seems that his coffin has been discovered in the latest repairs done on the burial-place in Ḳonya, (A. Gölpınarlı, *Mevlânâ Celâleddin*[2], 83). It is understandable that Sulṭān Walad says nothing of this murder in the *Ibtidānāma*, not wanting to make the family scandal public. Shams's death was obviously kept from the Mawlānā, as he went to Damascus twice to look for him. His spiritual condition is depicted in touching verses by Sulṭān Walad (*Waladnāma* 56-7) : he became all the more a poet, devoted himself to listening to music and to dancing (*samā'*) to an extent that even his son obviously felt was immoderate, and found the lost Shams in himself. In most of his *ghazals* the *takhalluṣ* is not his own name, but that of his mystic lover.

Shams had, however, flesh and blood successors. In the year 647/1249 Mawlānā announced that Shams had appeared to him again in the form of one of his *murīds*, Ṣalāḥ al-Dīn Zarkūb of Ḳonya. He appointed the goldsmith, who was illiterate but distinguished by his handsomeness and pleasant character, as *khalaf*, and thus as the superior of the other *murīds*. He himself wanted to retire from the offices of shaykh and preacher. The *murīds* found that Shams al-Dīn, the Tabrīzī, had been more bearable than the uncultured goldsmith's apprentice from Ḳonya, whom they had known from childhood. Plans were even made to murder him, and then revealed. The *murīds* noticed that Mawlānā threatened to desert them completely, and they asked remorsefully for forgiveness. We may assume that the loyal attitude of Sulṭān Walad himself and the modest, pleasant personality of Ṣalāḥ al-Dīn helped to surmount this second crisis. For ten years Ṣalāḥ al-Din filled the office of a deputy (*nā'ib* and *khalīfa*), then he became ill and died, according to the inscription on his sarcophagus, on 1 Muḥarram 657/29 December 1258 (A. Gölpınarlı, *Mevlânâ'dan sonra Mevlevîlik*, 355). His successor, Čelebi Ḥusām al-Dīn Ḥasan, whose family came from Urmiya, was to be the inspirer of the Mathnawī. Ḥusām al-Dīn's father was the chief of the *akhīs* in Ḳonya and the surrounding districts and so was known as Akhī Turk. Ḥusām al-Dīn lived with Mawlānā for ten years until the latter's death on 6 Djumāda II 672/18 December 1273; his appointment as Shaykh must therefore fall approximately in the year 662/1263-4, and there must therefore be five years between the death of his predecessor and his own taking office (according to this the statement in *Isl.* xxvi, 124-5, should be corrected). After Mawlānā's death Ḥusām al-Dīn offered the office of Khalīfa to Sulṭān Walad, the son of the master, who, however, declined. Ḥusām al-Dīn died in 683/1283.

On the people's insistence Sulṭān Walad now accepted the title of Shaykh and held it until his death on 10 Radjab 712/1312. He was followed by his son Ulu 'Ārif Čelebi (d. 719/1319), followed by his brother 'Ābid Čelebi, followed by his brother Wādjid Čelebi (d. 742/1341-2). A list of the Čelebis to the present day can be found in A. Gölpınarlı, *Mevlânâ'dan sonra Mevlevîlik*, 152-3, and in Tahsin Yazıcı's translation of the *Manāḳib al-'ārifīn*, ii, 62-6 of the Önsöz.

The real history of the order begins with Sulṭān Walad. He founded the first branches of the order and helped it to gain greater respect. Already in the lifetime of Mawlānā the members of the order had the title Mawlawī (Aflākī, i, 1, 334). At first they were recruited from among artisans, which gave offence (Aflākī i, 151). The central part of the religious practices was held by listening to music, and dancing, which were indeed usual among other orders, but never had the greatest importance, as with the Mawlawīs. The dance ceremony in the regular, solemn form which is usual later, was, as Gölpınarlı has proved, first introduced by Pīr 'Ādil Čelebi (d. 864/1460) (*Mevlânâ'dan sonra Mevlevîlik*, 99-100). On this ceremony cf. H. Ritter, *Der Reigen der tanzenden Derwische*, in *Zeitschrift für vergleichende Musikwissenschaft*, i; A. Gölpınarlı, *Mevlânâ'dan*

sonra, 370-89, and *Mevlevî âyînleri* (Istanbul konservatuarı neşriyatı, Türk Klâsiklerinden VI-XV cild) 1933-9 publ. by Istanbul Music Conservatoire.

Mawlānā's piety and thought have not yet been the object of a thorough examination. Anyone undertaking such an examination would have to take care not to rely too much on the Mat͟hnawī commentaries, which read into the work the views of their own time or their personal views. Also the *Dīwān* of Mawlānā has only now become available in a critical edition, so that the examination can really begin. According to A. Gölpınarlı, himself a former Mawlawī dervish, the Mawlawīs do not regard their order as a Ṣūfī order in the strict sense. Gölpınarlı is inclined to connect the order with the Malāmatiyya movement from K͟hurāsān. Even in reading the sermons of Mawlānā's father one notices a gladness praised there which reminds one of the "merriness of hearts" (*ṭībat al-ḳulūb*) of the Ḳalandariyya, who are related to the Malāmatiyya (cf. Ritter in *Oriens*, viii, 360 and xii, 15). Some of the Čelebis lived like Ḳalandar dervishes, as Ulu ʿĀrif Čelebi, and still more his brother ʿĀbid Čelebi, and the Diwāne, Mehmed Čelebi, who was used in the expansion of the order (Gölpınarlı, *Mevlânâ'dan sonra*, 101-22). But of course this does not prove anything for Mawlānā himself. He appears to have been of a philanthropic, anything but fanatical, strongly emotional type, to judge from the countless love-poems in the *Dīwān*, easily inflamed, inclined to work off his excitement in the dance. Whether his religious ideas possess anything original besides the general mystical piety of his time, will have to be shown by the analysis of his works, which are :

1) The *Dīwān*, containing g͟hazals and quatrains. There are also Greek and Turkish verses in this, the presence of which shows a certain connexion with sections of the common folk and also with the non-Muslim elements of the Ḳonya population. His *tak͟hallus̤* is "K͟hāmūs͟h". This, however, is usually replaced with the name of S͟hams-i Tabrīz. In some *g͟hazals* Ṣalāḥ al-Dīn also appears as the *tak͟hallus̤*. Former impressions and editions of the *Dīwān* have now been superseded by the good edition of Badīʿ al-Zamān Furūzānfar, *Kulliyāt-i S͟hams yā Dīwān-i kabīr, mus͟htamil bar ḳaṣāʾid wa g͟hazaliyyāt wa muḳaṭṭaʿāt-i fārsī wa ʿarabī wa tard͟jīʿāt wa mulammaʿāt az guftār-i Mawlānā D͟jalāl al-Dīn Muḥammad mas͟hhūr ba-Mawlawī*, Tehran 1336 ff., of which so far three volumes have appeared. Complete Turkish translation by ʿAbdülbaki Gölpınarlı, *Mevlânâ Celâleddîn, Dîvân-i kebîr*, Istanbul 1957 ff. So far three volumes have appeared. Of earlier selections and translations the following are still important: R. A. Nicholson, *Selected poems from the Divāni Shamsi Tabrīz, edited and translated with an introduction, notes and appendices*, Cambridge 1898; S. Bogdanov, *The Quatrains of Jalālu-d-dīn Rūmī and two hitherto unknown manuscripts*, in *JASB*, 1935, i, 65-80.

2) *Mat͟hnawī-i maʿnawī*. Didactic poetical work in double verses, in six *daftar*s. (The seventh *daftar* supposedly discovered by Rüsūk͟hī Ismāʿīl Dede is spurious). The long poem was inspired by Ḥusām al-Dīn Čelebi, who suggested to Mawlānā that he should produce something like the religious *mat͟hnawī*s of Sanāʾī and ʿAṭṭār. Mawlānā is supposed to have at once pulled the famous eighteen verses of the introduction out of his turban already written. The rest he dictated to Ḥusām al-Dīn. The date when the work was begun is not known. We know only that between the first and second *daftar* was a pause of two years, caused by the death of Ḥusām al-Dīn's wife. The second *daftar* was started in 662/1263-4, as the poet says himself (ii, 7). Mawlānā dictated his verse whenever it occurred to him, dancing, in the bath, standing, sitting, walking, sometimes in the night until morning. Then Ḥusām al-Dīn read out what was written and the necessary corrections were made. The whole is composed very informally and without any thought of a well-planned structure. Thoughts hang together in free association, the interspersed stories are often interrupted and continued much later on. (On the style, cf. Nicholson's edition, 8-13 and the preface to Gölpınarlı's translation). The classic edition is that of R. A. Nicholson, *The Mathnawí of Jelálu'ddín Rúmí, edited from the oldest manuscripts available; with critical notes, translations and commentary*, London 1924-40 (*GMS*, vi, 1-8). Latest Turkish translation: Mevlâna, *Mesnevi, Veled Izbudak tarafından tercüme edilmiş, Abdülbaki Gölpınarlı tarafından muhtelif şerhlerle karşılaştırılmış ve esere bir açılma ilâve edilmiştir*, Istanbul 1942 ff. The fourth edition is now in the press. On European translations before Nicholson cf. his edition ii-xv; on Urdū translations cf. *Catalogue of the library of the India Office*, ii, vi, *Persian Books*, by A. J. Arberry, London 1937, 301-4. The best known earlier printed Turkish commentaries and translations are: Ankaralī Ismāʿīl Rüsūkhi, *Fātiḥ al-Abyāt*, Istanbul 1289, six volumes; Bursalī Ismāʿīl Ḥaḳḳi, *Rūḥ al-Mat͟hnawī* (Commentary on one part of the first *daftar*) Istanbul 1287; Sarī ʿAbdallāh Efendi (to the first *daftar*) Istanbul 1288, five volumes; translation in verse by Naḥīfī, Cairo 1268; ʿĀbidīn Pas͟ha, Istanbul 1887-8, six volumes. On the commentaries and translations written and printed in Īrān and India, and the earliest oriental editions cf. Nicholson, Introduction to i, 16-18; vii, Introduction 11-12 and the above-mentioned catalogue by Arberry, 301-4. On the Tehran edition of ʿAlā al-Dīn cf. ʿAlīnaḳī S͟harīʿatmadārī, in *Naḳd-i matn-i Mat͟hnawī*, in *Yag͟hma*, xii, 1338. On the sources of the stories in the Mat͟hnawī; Badīʿ al-Zamān Furūzānfarr, *Maʾāk͟hid͟h-i ḳaṣaṣ wa-tamt͟hīlāt-i Mat͟hnawī*, Tehran 1333 (see *Oriens*, viii, 356-8); on the *ḥadīt͟h*s quoted in the Mat͟hnawī: idem, *Aḥādīt͟h-i Mat͟hnawī mus͟htamil bar mawāridī ki Mawlānā dar Mat͟hnawī az aḥādīt͟h istifāde karde ast bā d͟hikr-i wud͟jūh-i riwāyat wa maʾāk͟hid͟h-i ānhā*, Tehran 1334.

3) *Fīhi mā fīh*. Collection of Mawlānā's sayings. (The title comes from a verse of Ibn al-ʿArabī). Cf. R. A. Nicholson, *The Table Talk of Jalalu'ddin Rumi*, in *Centenary Supplement to the JRAS*, 1924, 1-8. Edition by Badīʿ al-Zamān Furūzānfarr, Tehran 1330. Turkish translation: Mevlânâ Celâleddîn, *Fîhi mâ fîh. Çeviren, tahlilini yapan, açıklamasını hazırlayan Abdülbaki Gölpınarlı*, Istanbul 1959.

4) *Mawāʿiẓ macālis-i sabʿa. Mavlânâ'nin 7 öğüdüdür. Düzelten Ahmed Remzi Akyürek, mütercimi Rizeli Hasan Efendi-Oğlu*, Istanbul 1937.

5) *Maktūbāt. Mevlânâ'nın mektupları.* Düzelten *Ahmed Remzi Akyürek*, Istanbul 1937. Also Şerefeddin Yaltkaya in *Türkiyat Mecmuası*, 1939, vi, 323-45; Fuad Köprülü, in *Belleten* 1943, vii, 416.

Bibliography: H. Ritter, *Philologika XI. Maulānā Ǧalāl-addīn Rūmī und sein Kreis*, in *Isl.*, xxvi, 1942. (Life. Sources for biography, manuscripts of the works along with the works of his father, his son, and of S͟hams-i Tabrīzī). The most important biographical sources are: Sulṭān Walad, *Ibtidānāma*, publ. by D͟jalāl Humāʾī, *Waladnāme, Mat͟hnawī-i Waladī bā taṣḥīḥ wa muḳaddima*, Tehran 1315; Farīdūn b. Aḥmad Sipahsālār,

Risāla-i Sipahsālār. Latest edition: Shams al-Dīn Aḥmad al-Aflākī al-ʿĀrifī, *Manāḳib al-ʿārifīn*, ed. Tahsin Yazıcı, i, Ankara 1959. (Türk Tarih Kurumu Yayınlarından.)

ii) It is not easy to summarize systematically the main lines of Djalāl al-Dīn's thought. He was not a philosopher (in his works there are often attacks against the vacuity of purely intellectual philosophy) and claimed not to be a classical poet (both in the *Dīwān* and the *Mathnawī* he proclaims his dislike for rhymes and poetical artifices) but above all he was a passionate lover of God who expressed his feelings in a poetically unorthodox, volcanic way, thus creating a style which is unique in the entire Persian literature. Historically, influences on him by the religious and philosophical thought of Ghazzālī, Ibn ʿArabī, Sanāʾī, and ʿAṭṭār have been traced. The importance of the influence of Ibn ʿArabī on him has been perhaps exaggerated. The following account outlines as shortly as possible some of the main trends in Djalāl al-Dīn's thought. Quotations from the *Mathnawī* are from Nicholson's edition mentioned in *Bibliography*.

God: The absolute transcendence of God seems conceived not only spatially and intellectually but even morally. God is Himself the Absolute Value, Good and Evil being relative to Him and both at His orders (ii, 2617 ff.). Reality is ordered in four "spaces": the Realm of Nothingness, of Phantasy, of Existence, of Senses and Colours (ii, 3092-7). God is beyond Nothingness and Being, He works in the Nothingness, which is His Workshop (ii, 688-90; ii, 760-2; iv, 2341-83). In this sense is difficult to speak of a real "pantheism" in Djalāl al-Dīn: in any case immanentism is totally foreign to his turn of mind.

Creation: Djalāl al-Dīn seems to accept the Ashʿarī idea of the discontinuity of time and creation. God creates and destroys all in discontinuous atoms of time (i, 1140-8). He creates things murmuring enchanting words in their ears while they are still asleep in the Nothingness (i, 1447-55).

The World: The non-human World is something created by God in preparation for the creation of Man. Nature is a hint of God: every tree that germinates from the dark earth extending its branches towards the sun is a symbol of the liberation of Spirit from Matter (i, 1335-6; 1342-8). Creation has been however progressive. In a famous passage (v, 3637 ff.) Djalāl al-Dīn sketches a theory of mystical evolution (not to be mistaken for a scientific and Darwinistic evolution). The emergence of Man (who always remained Man, even in his former stages of development) from the animal kingdom is a first step indicating further journeys to the realms of the Angels and of the Godhead.

Man: Man is not simply a compound of body and soul. The human compound is formed by a body, his manifest part, a deeper soul (*rūḥ*, ψυχή), a still more concealed mind (*ʿaḳl*) and, even deeper, a *rūḥ-i waḥy* (spirit partaking of Revelation) present only in Saints and Prophets (ii, 3253 ff.). Djalāl al-Dīn's spiritual anthropology does not accept an indiscriminate possibility for every one to reach the highest stages of sanctity. Prophets and Saints are "different" from ordinary men. In a very interesting passage Djalāl al-Dīn shows the pragmatic utility of bowing in veneration to the Holy Men: it is the only way of breaking the ever-reappearing humanistic pride and superbity of Man (ii, 811 ff.).

God speaks through the mouth of the "man of God". The Prophet, the Holy Man is the manifest sign of the Unity of God, he is above the normal human standards (i, 225-7).

Ethics: Djalāl al-Dīn is far from speaking the language of modern "liberal" religious thinkers. The exterior practices of worship are binding for all. The reason given for this is also of a typically Muslim pragmatic character: the exterior rites are useful, like the presents of a lover to his Beloved. If Love were purely a spiritual thing why should God have created the material World? (i, 2624 ff.). On the problem of freedom and destiny he acutely remarks that there is a great difference between the momentaneous act of God (*ṣunʿ*) and the result of that act (*maṣnūʿ*), between *ḳaḍāʾ* (the act of deciding or predestining) and *maḳḍī* (the predestined thing). One has to love the *ṣunʿ* of God, not his *maṣnūʿ* like an idolater (iii, 1360-73). When his spiritual eyes are open, man recognizes that he is, at the same time, totally "operated" and moved by God (i, 598 ff.) and totally free, of a freedom unmeasurably above the petty freedoms of ordinary men (i, 936-9). To reach this deeper freedom in God, efforts and action (*kūshish*) are necessary (i, 1074-7). Perfect examples of this supreme freedom are the Saints and the Prophets (i, 635-7).

Life after death: The nearness to God in the worlds beyond is never felt by Djalāl al-Dīn as a real absorption in God without any residue. The metaphors he uses to express *fanāʾ* in an interesting passage of the *Mathnawī* (iii, 3669 ff.) are for instance the following: the flame of the candle in the presence of the sun (but yet the candle exists and "if you put cotton upon it, the cotton will be consumed by the sparks") or a deer in presence of a lion, or, elsewhere, as red-hot iron in the fire, when iron takes the properties of fire without losing its own individual essence. In that state it can claim to be fire as well as iron. The

soul near God becomes then one "according to whose desire the torrents and rivers flow, and the stars move in such wise as He wills" (iii, 1885 ff.). In another passage Djalāl al-Dīn tells of a lover who, as he reached the presence of his Beloved, died and "the bird, his spirit, flew out of his body" for "God is such that, when He comes, there is not a single hair of thee remaining" (iii, 4616, 4621). What an encouraging idea for a pantheist! But Djalāl al-Dīn is always ready to surprise us with some coup-de-scène. So the real end of the story is told some lines further, under the heading: "How the Beloved caressed the senseless lover that he might return to his senses" (iii, 4677 ff.). Djalāl al-Dīn goes even so far as to admit an element of activity in the otherworldly plane, so that the highest degree in the life of spirit "is not attainment but infinite aspiration after having attained": "... there is a very occult mystery here in the fact that Moses set out to run towards a Khiḍr ... This Divine Court is the Infinite Plane. Leave the seat of honour behind: the Way is thy seat of honour!" (iii, 1957 ff.).

Djalāl al-Dīn Rūmī's style: The style of the *ghazals* of Djalāl al-Dīn's *Dīwān* is conditioned by the fact that many of them were "sung" by the poet himself or were destined to be sung. A well known tradition shows us Djalāl al-Dīn improvising odes while gently dancing around a pillar in his school, and another story tells how he found one of his beloved pupils and companions, the already mentioned goldsmith Ṣalāḥ al-Dīn Zarkūb, while listening enraptured, in a street, to the rhythmic beat of his goldsmith's hammer. His powerful sense of rhythm is not always accompanied by equal attention to the strict rules of classical quantitative Persian poetry. He often complains against metres ("*mufta*ʿ*ilun mufta*ʿ*ilun mufta*ʿ*ilun* killed me!") and more than one verse both in his *Dīwān* and in his *Mathnawī* shows strong irregularities. In his *dīwān* two styles can be distinguished, a "singing" and a "didactic" style. Often some *ghazals* begin in the former (strong rhythm, double rhymes etc.) to pass slowly into the second or *vice versa*. In the *Mathnawī*, which is a single uninterrupted discourse, where the Speaker is often drawn by a word or a casual connexion of words to pass into ever newer subjects, anecdotes and sub-anecdotes, three styles can be distinguished. The purely "narrative" style; at the end, or during the telling of a story, however, comments are introduced in a "didactic" style. Here and there, either in the context of a story or of its comment, the author seems to be suddenly taken away as by rapture and then he uses his "ecstatic" style, in which some of the best verses of the *Mathnawī* are composed. Both the narrative and the didactic styles are of a remarkable simplicity and colloquialness, almost unique in the Persian literature of that time. Elements of colloquial language penetrate sometimes even into the more refined language of the *ghazals* and of the "ecstatic" style of the *Mathnawī*. We have even some verses of Djalāl al-Dīn containing a few words and sentences in colloquial Greek. Because of its strongly personal features Djalāl al-Dīn's style found practically no imitators, but it is highly—and rightly—valued by modern Persians (even by those who do not fully agree with his mystical views) and perhaps exerted a certain influence in the movement of simplification and modernization of Persian literature begun in the past century.

DJALĀL AL-DĪN THANESARĪ [see THANESARĪ, DJALĀL AL-DĪN].

DJALĀL ḤUSAYN ČELEBI (Celāl Ḥüseyin Çelebi), Turkish poet. He was born in Monastir, the son of a *sipāhī* (?-978/1571?). As a young man he went to Istanbul to study, later wandered in Syria where he found protectors through whose help he entered the court of prince Selīm, who liked his easy manner and gaiety and who kept him at his court when he ascended the throne as Selīm II. Djalāl remained a boon-companion of the Sultan until he became involved in political intrigues and religious controversies; he then had to leave court life and returned to his home-town where he died.

His *dīwān* has not come down to us. Many of his poems are collected in most *medjmu*ʿ*as*. His only surviving book is a small collection of *ghazels*: *Ḥusn-i Yūsuf*, not yet edited.

DJALĀL REDJĀʾĪZĀDE [see REDJĀʾĪZĀDE].

DJALĀLĀBĀD, principal town and administrative centre of the region of the same name in the Kirghiz SSR, situated in the plain of Kongar to the extreme south of the essentially mountainous region which is a prolongation of the Tian Shan and whose mean altitude is from 2000 to 3000 m., the lowest regions of the plains being no less than 500 m. This former small town, of no economic importance, is now a large industrial city supported by the cotton production of the hinterland. The urban population reflects that of the region, peopled since the remotest past by Kirghiz, to whom have been added Uzbeks in the southern part, also Tatars, Tadjīks, and Russians. (H. Carrère d'Encausse)

DJALĀLĪ (*Taʾrīkh-i Djalālī*), the name of an era and also that of a calendar used often in Persia and in Persian books and literature from the last part of the 5th/11th century onward. The era was founded by the 3rd Saldjūḳid ruler Sulṭān Malikshāh b. Alp Arslan (465-85/1072-92) after consultation with his astronomers. It was called Djalālī after the title of that monarch, Djalāl al-Dawla (not Djalāl al-Dīn as some later authors supposed). The era was also called sometimes *Malikī*. The epoch of the era (*i.e.*, its beginning) was Friday, 9 Ramaḍān 471/15 March 1079, when the vernal equinox occurred in about $2^{h.}$ $6^{m.}$ Greenwich time (in Iṣfahān $5^{h.}$ $33^{m.}$).

The names of the astronomers who helped in the matter of the reform of the calendar and advocated the institution of the era are given in some sources, and include the name of the famous mathematician and poet ʿUmar b. Ibrāhīm al-Khayyāmī [*q.v.*]. As

he died at least 50 years after the reform, Khayyāmī, if he ever took part in that consultation, must have been very young.

By the term *Taʾrīkh-i Djalālī* is meant a new calendar instituted in 467/1075 by the above mentioned sultan Malikshāh. This was, as a matter of fact, rather a reform of the common Persian calendar that had remained in general usage in Īrān, side by side with the Arabian calendar with lunar year and months used by Muslims, after the downfall of the Persian empire and the domination of the Arabs in Īrān in the 7th century A.D. Through this reform the Persian vague year of 365 days was stabilized and brought into exact agreement with the astronomical tropic year of $365^1/_4$ days (or strictly speaking 365 days 5 hours and about 49 minutes). This regulation was effected by adding one day in every four and sometimes five years to the vague year, thus making it 366 instead of 365 days. This was in a way more or less similar to the Julian calendar.

The Persian year was, from the time of its institution probably in the 5th century B.C., a vague year of 12 months of 30 days each and five odd days (*andargāh*, Arab. *al-mustaraḳa*) added at the end of the year as intercalary days. This is believed to have been the original order which was re-established towards the end of the 4th/10th century in the great part of Persia by one of the Būyid kings of Fārs, who transferred the epagomenae from the end of Ābān where they then were, to the end of the 12th month where they remained in those parts of the country and also with the Zoroastrians of Īrān and the Pārsīs of India. As a matter of fact the place of the five supplementary or intercalary days, *i.e.*, the above mentioned *andargāh* (the so-called epagomenae) has not been always at the end of the year after the 12th month, but they had been periodically advancing in the civil year by being moved forward a month every 120 years. That is to say, after being at first at the end of the last month for 120 years, they were moved to the end of the first month, where they remained for another 120 years, and then they were again moved forward and put at the end of the second month and so on, until they were brought to the end of Ābān or the 8th month probably in the 5th century A.D. (of course after some 960 years from the institution of this process). This periodical and regular movement or change of the place of the epagomenae in the civil year was a consequence of the periodical shifting of the places of the six Zoroastrian religious festivals of 5 days each, called *gāhanbārs*, a whole month forward in the civil year once every 120 years, with a view of keeping those most important religious feasts fixed in their original astronomical places in the tropic year.

The epagomenae, which were, as a matter of fact, the Avestan 5 Gāθā days, also constituted one of those *gāhanbārs*, the sixth one, *i.e.*, the Avestan *Hamaspaθmaēδaya*, and hence it moved in the civil year in the same way as the other *gāhanbārs*. This operation of shifting forward the *gāhanbārs* periodically, and consequently the epagomenae as well, was considered, according to the reports in the Muslim books of chronology, as an intercalation of one month in the year (in reality in the ecclesiastic fix year) carried out by a special process which cannot be fully explained in this article.

The above mentioned periodical operation, executed more or less regularly in the pre-Islamic ages, ceased to be carried out during the last century or the last two centuries of the Sāsānid period, and was no longer carried out after the downfall of that dynasty and the Muslim conquest of Īrān. Therefore the epagomenae remained, as has already been said, at the end of Ābān till about 1000 A.D. in the southern provinces of Persia, and still later in the northern provinces of the country *e.g.*, in Māzandarān (and, as I have been recently informed, also in the district of Sangsar near Simnān) even at the present time.

The effect of the calendar reform of Malikshāh was (1) to fix the beginning of the Persian solar year in the day of vernal equinox. The New Year or the first day of the month Farwardīn, through the retrogression of the vague year (due to the neglect of the quarter of a day which the tropic year has in excess to the vague year of 365 days), had reached 26 February (Julian) in the year in which the reform was decided upon (467 A. H.). It was now brought forward to 15 March (Julian), which corresponded in that year to the day of vernal equinox; and (2) to provide a rule for keeping New Year's Day always fixed in the same astronomical point of time by counting every fourth (or sometimes fifth) year 366 days instead of 365. This was, in fact, an intercalation of one day every four or five years at the end of epagomenae, somewhat similar to that effected in the Julian year, where once in every four years (leap years) an intercalary day is placed at the end of February.

However, just as the above mentioned intercalation in the Julian calendar did not bring the Julian year into exact agreement with the tropic year, because the latter is about 11 minutes (at the present rate 11 minutes and 14.9 seconds) shorter than the Julian year, which is 365 and a quarter days, the difference amounted to about 45 minutes in 4 years or one day in about 128 years, and therefore a further adjustment was found necessary; the Djalālī year would have been as imperfect as the Julian if the intercalation of one day in the year were limited to every fourth year.

In both calendars a means for eliminating the imperfection was elaborated. While in 1582 A.D. the Pope Gregory XIII introduced a new arrangement in the order of the above mentioned four-yearly intercalation in the Julian year, by establishing a rule according to which this intercalation would be omitted in the last year of every century except in those divisible by 400, such as 1600, 2000, 2400 A.D. etc., the initiators of the Djalālī calendar or rather reform made the intercalation of one day in the year dependent on the vernal equinox occurring in the afternoon of the 366th day, provided that it had been in the preceding year before midday. The equinox or the exact point of time when the sun (in reality the earth) reaches the equinoctial point of the ecliptic, which in astronomy is conventionally called "the first point of Aries", was the real commencement of the year. In other words the Djalālī year, being a solar tropic year, always began on the vernal equinox and the exact time of this astronomical beginning could be found out every year by calculation. Thus the first day of the calendar year (civil year), or New Year's Day, was always the day on which the sun at midday was already in Aries, having entered that sign sometime between that point of time and midday of the preceding day.

Now as a rule every time the equinox occurred in the afternoon after having occurred the last time (*i.e.*, at the beginning of the preceding year) before noon, the year just coming to a close would be a leap year, *i.e.*, an intercalation of one day would be

effected. This happened normally once in every four years, when the fourth year was of 366 days instead of 365. However, if in a given fourth year when, as has been said, an intercalation would normally have been due, the equinox did not fall in the afternoon but occurred before midday, even though it also occurred before noon in the preceding year, such a year in spite of the fact that it followed three successive common years (of 365 days each) would not be a leap or bissextile year and the intercalation would be effected only in the next year (*i.e.*, in the fifth year). The precise time of this quinquennial or five-yearly intercalation was never fixed by a regular rule by the reformers. It was left absolutely dependent on the result of the astronomical calculation each year, that is to say it was to be estimated by deductive method. A similar process is followed in the modern calendar of Persia instituted in 1925 A.D. It was, however, noticed that this case (the postponement of intercalation to the fifth year) occurred only after some 6 or 7 or 8 quadrennial intercalations. In other words some oriental astronomers like Ulūgh Beg (d. 1449) believed that the quinquennial intercalation would follow at times the sixth, and at other times the seventh, quadrennial ones, however without giving any regular sequence for the alternative cycles. Again, other astronomers like Ḳuṭb al-Dīn of Shīrāz (d. 1311) put the alternative periods as 7 and 8. This means that according to the former the quinquennial intercalation would fall in the 29th (instead of 28th) or 33rd (instead of 32nd) year, and according to the latter in 33rd or 37th year. If by alternative numbers the regular sequence were meant, the first system (that of Ulūgh Beg) would mean 15 intercalations in 62 years and the second (that of Ḳuṭb al-Dīn) 17 intercalations in 70 years. Possibly every author worked out these cycles according to his own opinion of the length of the tropic year.

By calculation on the basis of the length of the fraction of the day (over 365 days) in the tropic year, according to the modern measure, there will be still an error of one day in 3844 years in the case of 15 intercalations in 62 years and in 1470 years in the case of 17 intercalations in 70 years.

Some European scholars, misunderstanding the statements of the Oriental authors about the different cycles and the alternative periods, have discussed at length the question as to whether this or that cycle was more correct and corresponded to what they supposed to be the original plan of Malikshāh's astronomers. Golius, Weidler, Bailly, Montucla, Sédillot, Idler, Matzka, Ginzel and Suter have tried to find a more or less plausible solution and some of them have proposed formulae based, in fact, on their own calculation according to the modern opinion as to the length of the tropic year. Some of them have even credited the founders of the Djalālī calendar with such an ingenious system as to make the divergence between the Djalālī and tropic year possible only one day in every 10,000, 28,000, or even 400,000 years. The truth, however, is that as it has already been said, not only was no rule ever established by the men responsible for the institution of the Djalālī calendar for the cycles of the quinquennial intercalations, but even their own opinion of the length of the tropic year is not known with any certainty. Further, in order to find out whether the next leap year will be a quadrennial or quinquennial, several big cycles are proposed by different Oriental astronomers. These theories are given with details in an article by the present writer in *BSOS*, x/1, 115-6. They are conjectures worked out each according to the length of the tropic year in the opinion of its proposer. They have nothing to do with the supposed original scheme of the founders of the Djalālī era and calendar, which most probably never existed. Perhaps it is not necessary to add that not only were the calculations of the old astronomers of the Middle Ages at variance with each other, but also all of them differ from the modern measures of time (year and day). Therefore no rule proposed or thought of for the sequence of quadrennial and quinquennial intercalations would agree with the result of scientific observations of the present day. It is not impossible to work out a formula in accordance with the modern measures of the tropic year as Riyāhī did (see bibliography) in his treatise on the subject (in Persian). He puts the quinquennial intercalations in 440 Djalālī years in the 101st, 262nd, and 423rd or 68th, 130th, 192nd, 287th, 349th and 411th. But owing to the progressive changes in the measures of time, the shortening of the day, and so many other factors, no plan whatever can be permanently entirely correct. It must also be said that what astronomers until recent times conventionally considered to be the beginning of New Year's Day (namely midday), must be now discarded, and midnight (of Greenwich time) should be adopted for the beginning of the day.

The question of whether the reform of Malikshāh took place in Iṣfahān, Rayy or Nīshāpūr is not very important from the astronomical point of view.

The Djalālī calendar found general usage in the greater part of Persia. The famous Persian poet Saʿdī used it in his verse about two centuries after its institution. In spite of losing ground to a certain extent, as a result of the extension of the Arabian calendar used generally by Muslims, it is still to-day commonly the means of time-reckoning in the cental part of Persia, especially by peasants and the inhabitants of many towns such as Kāshān, Yazd, Nāʾīn etc.

The year has 12 months of 30 days each, and five days (or 6 days in leap years) following the 12th months. A curious phenomena, however, is observed in a district, or rather a group of villages, near the small town of Natanz in the province of Kāshān, where the epagomenae follow the eleventh month (Bahman) instead of the twelfth. The principal place of the district is the village Abiyāna.

The names and length (*i.e.*, 30 days each) of the months of the Djalālī calendar are the same as those of the Persian calendar before the reform.

This seems to me to be unquestionable. Nevertheless, according to the famous author Ḳuṭb al-Dīn of Shīrāz, some astronomers adopted for the length of each month the period of time during which the sun remained in the corresponding sign of the zodiac, so that the first and second month, corresponding to Aries and Taurus, were each of 31 days long, and the 3rd month, corresponding to Gemini, 32 days and so on. Further, while most of the sources agree that the names of the months were the some as those of the common Persian year, some authors speak of the introduction of new names for the Djalālī months and even for the days of the month, of both of which a list is given by them. This list is to be found in a Persian treatise called *Sī faṣl* by the famous Naṣīr al-Dīn Ṭūsi, and elsewhere.

DJALĀLĪ [see SUPPLEMENT].

DJALĀLZĀDE MUṢṬAFĀ ČELEBI (ca. 896/1490-975/1567), known as 'Ḳodja Nishāndjī', Ottoman civil servant and historian, was the eldest son of the *ḳāḍī* Djalāl al-Dīn from Tosya (for whom see *Shaḳā'iḳ*, tr. Rescher, 297 = tr. Medjdī, 466). His talents having attracted the attention of Pīrī Pasha, in 922/1516 he turned from the scholarly career to become a clerk to the *dīwān-i humāyūn*. He was private secretary to Pīrī Pasha during his Grand Vizierate (924/1518-929/1523) and to his successor Ibrāhīm Pasha; his services in helping to regulate the affairs of Egypt after the revolt of Aḥmed Pasha were rewarded with the post of *ra'īs al-kuttāb* (931/1525). Just after the conquest of Baghdād in 941/1534 he was promoted to *nishāndjī* (Ferīdūn, *Munsha'āt*², i, 592), holding office with great distinction for 23 years: his state papers and the styles of address (*alḳāb*) which he instituted remained models to the Chancery for years afterwards (Pečevī, i, 43; Ḥuseyn, *Badā'iʿ al-Waḳā'iʿ*, Moscow 1961, 584 f.). In 964/1557 he was induced by Rustem Pasha to resign, with the post of *müteferriḳa-bashī*, but allowed to retain his *khāṣṣ* (amounting to 300,000 *aḳčes*, according to ʿAṭā'ī). While on the Szigetvar campaign he was re-appointed to his old office by Sokollu, immediately after Suleymān's death (cf. Selānikī, 46, 51). He died a little over a year later (Rebīʿ II 975/October 1567), and was buried by the mosque which he had built at Ayyūb, in the quarter known thereafter as Nishāndjī (*Ḥadīḳat al-Djawāmiʿ*, i, 295; Ewliyā, i, 393 f.).

Of his projected description of the whole Empire and its government in thirty books, *Ṭabaḳāt al-mamālik wa daradjāt al-masālik*, only the last, a very full and elaborate history of the reign of Suleymān to 962/1555, is known to exist, although a note in a MS copied by the author's son (cf. Uzunçarşılı [see Bibl.], 405) refers to the other books as having been written (perhaps only in draft). The work was highly esteemed and used by ʿĀlī, Pečevī, and Hammer-Purgstall, who also published with translation a short excerpt from the description of the campaign of 939/1532 (*Fundgruben des Orients*, ii, 143-54). Portions of the work exist independently in MS under such titles as *Mohāč-nāme*, *Feth-nāme-i Rodōs*, etc. Muṣṭafā Čelebi later wrote a detailed history of Selīm I, *Ma'āthir-i Selīm Khānī*, which depends in part on the relation of Pīrī Pasha (also used by Hammer-Purgstall; except translated by H. v. Diez, *Denkwürdigkeiten von Asien*, ii, 355-71).

The following works, all in Turkish, also survive: (1) *Mawāhib al-Khallāḳ fī marātib al-akhlāḳ*, a work on ethics; (2) *Dalā'il-i nubuwwat-i Muḥammadī*, a translation of Molla Miskīn's Persian *Maʿāridj al-nubuwwa*; (3) a short treatise entitled *Hadiyat al-mu'minīn*; (4) *Djawāhir al-akhbār fī khaṣā'il al-akhyār*, a translation of Sirādj al-Dīn ʿUmar's *Zahr al-kimām* (Brockelmann, S II, 377 f.). He wrote poems under the *makhlaṣ* Nishānī. One MS of a Ḳānūn-nāme is ascribed to Muṣṭafā Čelebi (cf. *Ist. Kit. Tarih-Coğ. Yazmaları Kat.* i/10, 805), but its editor Meḥmed ʿĀrif thinks the attribution false (*TOEM ʿilāve*, 1329, intr. v). The Istanbul catalogue ascribes to him also (791) the *ḳānūn-nāme* for Egypt published by Ö. L. Barkan (*Kanunlar*, Istanbul 1943, 355-87).

Bibliography: Sehī, 33 f.; Laṭīfī, 335-7; ʿAṭā'ī, 113 f.; Rieu, *CTM*, 49-51; B. Meḥmed Ṭāhir, *ʿOthmānlı Mü'ellifleri*, iii, 37-9; *EI*², s.v. (J. H. Mordtmann); Babinger, 102 f.; *İA*, s.v. Celâl-zâde (M. Tayyib Gökbilgin); I. H. Uzunçarşılı, *Tosyalı Celâlzâde Mustafa ve Salih Çelebiler*, in *Belleten*, xxii, 1958, 391-441. For Istanbul MSS of his works see further A. S. Levend, *Gazavāt-nāmeler*, Ankara 1956, index, and F. E. Karatay, *Topkapı Sarayı .... Türkče Yazmalar Kataloğu*, Istanbul 1961, index. (V. L. MÉNAGE)

DJALĀLZĀDE ṢĀLIḤ ČELEBI. Ottoman scholar, historian and poet, and younger brother of the famous *nishāndjī*, Djalālzāde Muṣṭafā Čelebi. Born in the last decade of the 9th century A.H. in Vučitrn (NW of Prishtina) where his father, Djalāl al-Dīn, was *ḳāḍī*, upon completing his studies under Kamāl Pasha-zāde and Khayr al-Dīn Efendi, the tutor of Sulṭān Sulaymān, he entered the normal teaching career, reaching the Ṣaḥn in 943/1536-7 and the Bāyazīdiyya in Edirne in 949/1542-3. His judicial appointments include Aleppo (951/1544), Damascus (953/1546) and Cairo (954/1547), from which latter post he retired in 957/1550 to settle in Ayyūb where he was later (966/1559) given the professorship of the local *madrasa*. Forced to retire by failing eyesight in 969/1561, he devoted himself to writing until his death at about the age of eighty in Rabīʿ I 973/September-October 1565. He is buried in the courtyard of his brother's mosque in Ayyūb. Of the seventeen works ascribed to him, the most famous is certainly his *Ta'rīkh-i Miṣr-i djadīd* (953/1547), a compilation from familiar Arabic sources and, unlike his other historical works, of no original value. More interesting are his translations from the Persian of the *Ḳiṣṣa-i Fīrūz Shāh* and ʿAwfī's *Djawāmiʿ al-ḥikāyāt*, representative works of a period when elegant Ottoman prose style was establishing its own aesthetic identity. Apart from his *Laylā wa Madjnūn*, his poetry has commanded little praise or admiration.

Bibliography: The most recent study on Ṣāliḥ is that of I. H. Uzunçarşılı, *Belleten*, lxxxvii (1958), 422-41, which enters into more detail than M. T. Gökbilgin's contribution to *İA*, iii, 63, and fully discusses his surviving works. Babinger, 100; Hammer-Purgstall, *Gesch. osman. Dichtkunst*, ii, 327; *Sidjill-i ʿOthmānī*, iii, 300 and *ʿOthmānlı Mü'ellifleri*, ii, 278, all contain inaccuracies. The most important source is ʿAṭā'ī, *Ḥadā'iḳ al-ḥaḳā'iḳ*, 47; aside from ʿAhdī's *Gulshan-i shuʿarā'* (Brit. Mus., Add. 7876, f. 23b) and Laṭīfī's *Tadhkirat al-shuʿarā'*, 218 (neither this text nor the Brit. Mus. ms., Or. 6656, f. 68b, containing the *ḳaṣīda* mentioned by Hammer-Purgstall), the other *tadhkiras*—viz., Ḳīnalīzāde Ḥasan Čelebi (Brit. Mus., Add. 24, 957), f. 157b; Bayānī (Millet, 757), f. 100; Riyāḍī (Nuruosmaniye, 3724), f. 93b; Ḳāfzāde Fā'iḍī, *Zubdat al-Ashʿār* (Şehid ʿAli Paşa, 1877), f. 57b—all derive from that of ʿĀshiḳ Čelebi (Süleymaniye, 268), f. 273b. ʿĀlī, *Kunh al-akhbār* (Esʿad Efendi, 2162), f. 411b, adds nothing of value to the above, nor do Ḥāfiẓ Ḥusayn Aywānsarāyī, *Ḥadīḳat al-djawāmiʿ*, i, 296, or Mustaḳīm-zāde Suleymān Efendi, *Tuḥfat al-khaṭṭāṭīn*, 229. For his *Laylā wa Madjnūn*, cf.

Agâh Sirri Levend, *Leyla ve Mecnūn hikâyesi* (Ankara 1959), 287 ff., and for certain of his historical works, ibid., *Ġazavāt-nāmeler* (Ankara 1956), index. The Bibl. Nat. possesses fragments, additional to those in the Istanbul libraries, of his translation of the *Ḳiṣṣa-i Fīrūz Shāh* (A.F. 103, Supp. 140), and the unique copy of his *dīwān* is in the Nuruosmaniye, no. 3846. (J. R. Walsh)

DJALĀYIR, DJALĀYIRID (DJALĀ'IR, DJALĀ'IRID). Originally the name of a Mongol tribe (see Rashīd al-Dīn, *Ta'rīkh-i Ghāzānī*, esp. *bāb* a), the term Djalāyir (and Djalāyirid) in Islamic history principally denotes one of the successor-dynasties that divided up the territories of the defunct Ilkhānid empire. The spelling 'Djalāyir' is given by al-Ahrī, the contemporary, and very likely official, chronicler of the dynasty. Djalāyirid genealogies usually begin with Īlkā Nūyān (hence the dynasty's other name Īlkānī), a follower of Hūlāgū, and proceed through Āḳbūḳā and Ḥusayn to Ḥasan "Buzurg", the founder of the dynasty, who was Ūlūs Beg and governor of Rūm under Abū Sa'īd.

When Abū Sa'īd died without heirs in 735-6/1335 A.D., the great chiefs of the Ilkhānid empire struggled to control the succession, and elevated in turn three obscure Hūlāgūids: Arpā (736/1335-6), Mūsā (736-7/1336), and Muḥammad (737-9/1336-8). These rapid changes at the top did not seriously disturb the structure of the empire: Muḥammad, the protegé of Ḥasan Buzurg, ruled over as large a realm as had Abū Sa'īd.

The breakdown of the empire began with the defeat of Ḥasan Buzurg and execution of Muḥammad by the Čubānid, Ḥasan "Küčük" (so-called to distinguish him from the Djalāyirid Ḥasan), in 738-9/1338. Ḥasan Küčük, who ruled in the name of Sātībek (739/1338-9) and Sulaymān (740-4/1340-3), could not control the whole Ilkhānid realm. Ḥasan Buzurg and his followers established themselves at Bagdad, and continued to dispute Čubānid authority, as did Eretna, the governor (and, after 741/1340-1), independent ruler) of Rūm, and the ruler of Khurāsān, Ṭughā Tīmūr. Ḥasan Küčük's attempts to subdue the Djalāyirids (741/1340-1) and Artanā (743-4/1343) failed. On his death in 743-4/1343, his brother, Malik Ashraf, seized power and forced Sulaymān and Sātībek to flee to Ḥasan Buzurg. Ashraf (who ruled in the name of a certain Anūshirwān) also failed to dislodge the Djalāyirids from Baghdād (748/1347-8), and, moreover, lost control of the provinces of Iṣfahān, Kirmān, Yazd and Shīrāz that had owed allegiance to Ḥasan Küčük.

Although Ḥasan Buzurg was instrumental in the breakdown of the Ilkhānid empire, he seems to have hoped rather for its restoration—on his own terms—than its collapse. He used only the title Ūlūs Beg that he had held under Abū Sa'īd, and either acknowledged legitimate Djingizids as sovereigns—Ṭughā Tīmūr (739/1338-9), 740-6/1340-5), Djihān Tīmūr (739-40/1339-40), and Sulaymān (746-7/1346)—or left sovereignty unattributed (746-57/1346-56).

Ḥasan Buzurg died in 757/1356, leaving Djalāyirid leadership to his son, Uways. When, in the same year, Sulṭān Djānībek of the Golden Horde overthrew Ashraf, the Djalāyirids in Baghdād recognized Djānībek as their sovereign. But the Mongol empire in Īrān was not to be renewed. Djānībek died in 758-9/1357, and his son, Bīrdībek, abandoned Ādharbaydjān to Ashraf's former supporters, led by a certain Akhīdjūk.

Uways now assumed personal sovereignty (759/1358), and undertook to annex Ādharbaydjān. His first campaign failed, but after his retreat, Muḥammad b. al-Muẓaffar, who had seized Fārs and Iṣfahān in the years following Ḥasan Küčük's death, raided Ādharbāydjān (760/1359), and so weakened Akhīdjūk that Uways' second invasion succeeded (761/1360).

There were further Djalāyirid successes during the years 762-5/1361-4, especially in Fārs, where the Muẓaffarid princes, Shāh Maḥmūd and Shāh Shudjā', having deposed their father, Muḥammad, were quarrelling over the succession. Shāh Maḥmūd acknowledged Djalāyirid suzerainty, and was enabled by Uways to hold Iṣfahān and seize Shīrāz. But after 765/1364 a series of reverses precluded further Djalāyirid expansion. Until about 770/1368 Uways was busy suppressing revolts by the Shīrwānshāh, by Khwādja Mirdjān in Baghdād, and by the Ḳaraḳoyunlu Turkomans in the Diyārbakr region. While meeting these challenges, Uways faltered in his support of Shāh Maḥmūd, who was driven from Shīrāz. Another enemy appeared in 772/1370-1, when Amīr Walī of Astarābād began to attack Rayy.

Uways died in 775-6/1374, and was succeeded by his son, Ḥusayn, after the great amīrs had murdered an unpopular elder son, Ḥasan. Other harbingers of decline appeared during Ḥusayn's reign (776-86/1374-82): Ḥusayn came to depend entirely upon Amīr 'Ādil for leadership; and Ḥusayn's brothers, Shaykh 'Alī, Aḥmad, and Bāyazīd, were left at large and even given positions of power despite the example Ḥusayn had set of profiting from a brother's murder. Abroad, the death of Shāh Maḥmūd in 776-7/1375 enabled Shāh Shudjā' to occupy Iṣfahān and attack Ādharbāydjān (777/1375-6, 783/1381); Amīr Walī continued to threaten the border at Rayy; and the Ḳaraḳoyunlu had again to be subdued (778-9/1377).

The dangers implicit in these conditions were soon realized. Shaykh 'Alī rebelled in 780/1378-9, held Shūshtar against Ḥusayn and 'Ādil, and, in 782/1381, seized Baghdād. Then, in 783/1382, 'Ādil led the army against Rayy, leaving Ḥusayn at Tabrīz. Aḥmad, seeing Ḥusayn unprotected, gathered a force from his own domains in Ardabīl and slew his brother. When attacked in turn by Shaykh 'Alī, coming from Baghdād, and by 'Ādil, returning from Rayy with Bāyazīd, Aḥmad called in the Ḳaraḳoyunlu. Shaykh 'Alī was killed, and 'Ādil and Bāyazīd retreated to Sulṭāniyya.

Before Aḥmad could consolidate his position in Ādharbaydjān, the intervention of the Golden Horde and then Tīmūr drove him away. Aḥmad retired to Baghdād (787/1385), and later fled before Tīmūr to the Ottomans, and then to Egypt. After Tīmūr's death in 807-8/1405, Aḥmad regained Baghdād, and briefly reoccupied Tabrīz, only to be driven out by the Tīmūrid Abū Bakr, who was, in turn, ousted by the Ḳaraḳoyunlu. When Aḥmad tried again to take Tabrīz (812-3/1410), he was captured by the Ḳaraḳoyunlu, and executed on the pretext of having violated an agreement to cede Ādharbaydjān to Ḳarā Yūsuf Ḳaraḳoyunlu, made while they were fellow-exiles in Egypt.

Although Baghdād fell to the Ḳaraḳoyunlu in 814-5/1412, Djalāyirid princes survived in lower Mesopotamia for some years. The last of these, Ḥusayn II, fell during the siege of Ḥilla by the Ḳaraḳoyunlu in 835-6/1432.

Djalāyirid patronage has left us the khān and mosque of Mirdjān in Baghdād, Salmān Sāwadjī's poems, and the miniatures of Shams al-Dīn. Aḥmad, himself a poet, unsuccessfully offered his support to Ḥāfiẓ, who would not leave Shīrāz.

(J. M. SMITH, JR.)

DJĀLĪ [see DJAWĀLĪ].

DJALĪLĪ, a family and quasi-dynasty in Mosul, where seventeen members held the position of *wālī* of that *wilāya* for various periods between 1139/1726 and 1250/1834. If legendary origins in eastern Anatolia can be ignored, the founder of the family, ʿAbd al-Djalīl, seems to have begun life as a Christian slave of the local and equally famous ʿUmarī family in the later 11th/17th Century. His son Ismāʿīl, a Muslim and well educated, attained the Pashalīḳ of Mosul by exceptional merits after a long career of public office, and governed it with distinction for some years from 1139/1726; and the easy succession of his son, Ḥādjdj Ḥusayn Pasha, in 1143/1730 to a position which, with interruptions, he was to hold eight times between then and his death in 1173/1759, showed that the family was already a firm claimant to hereditary rule of the province. Ḥādjdj Ḥusayn, an outstanding personality, attained lasting fame for his part in the defence of Mosul against Nādir Shāh, notably in 1156/1743; he held also at intervals other *wilāya*s and high positions in ʿIrāḳ and elsewhere in the Ottoman Empire, as did for the next fifty years his sons and relations, to an extent doubtless unique among ʿIrāḳī families before or since. The chronic tribal and country-side disorders of northern ʿIrāḳ, and of Mosul itself, at this period rendered all government precarious, and tenures shortlived; but a Djalīlī pasha, from the numerous descendents of Ḥādjdj Ḥusayn, was to be found in office at Mosul, struggling with the forces of anarchy and with the jealous factions—and on one occasion, the murderous attacks—of his own family discontinuously till 1250/1834, when the last *wālī* of the family, Yaḥyā Pasha, was displaced by a modernized central government. Eminent among these were Amīn Pasha (son of Ḥadjdj Ḥusayn) who was six times *wālī*, in part during his father's lifetime: his son, Muḥammad Pasha, who ruled the *wilāya* more or less at peace for 18 years (1204-22/1789-1807): and Aḥmad Pasha, who rebuilt the walls of Mosul at intervals from 1228/1813.

The local annals of the ninety years covered by Djalīlī pre-eminence in northern ʿIrāḳ are unedifying in their tale of violent, selfish and corrupt misgovernment, and are of interest mainly for the light they throw on the contemporary administration of the remoter Turkish provinces; but the virile persistence, and at times the superior qualities, of the effectively irreplaceable Djalīlī dynasty for so long a period entitles them to a place in history. Their descendants in Mosul are still numerous, but no longer influential.

Bibliography: S. H. Longrigg, *Four centuries of modern ʿIraq*, Oxford 1925, esp. 158, 176 f., 210, 242, 284, authorities specified on 328-30, and genealogical tree, 347. (S. H. LONGRIGG)

DJĀLĪNŪS, Arabic for Galen, born in Pergamon, in Asia Minor A.D. 129, died in Rome about 199; the last great medical writer in Greek antiquity, outstanding as an anatomist and physiologist as well as as a practising physician, surgeon and pharmacologist. He also became known as an influential though minor philosopher. More than 120 books ascribed to him are included in the last complete edition of his Greek works by C. E. Kühn (Leipzig 1821-33); they represent by no means his whole output: some works have survived in Arabic, Hebrew or Latin translation only, others are unretrievably lost.

Although Djālīnūs stands nowhere in the first rank, his popularity especially as a physician grew steadily in subsequent centuries, and he eventually became the most influential teacher of medicine together with Hippocrates (Buḳrāṭ [*q.v.*]) whom he had helped to establish as a model physician and a pattern of perfection, and whose treatises he had explained in many elaborate commentaries. When the teaching of Greek philosophy and medicine was definitely made part of the Christian syllabus of learning in ± 500, the preservation of the greater part of his numerous works was assured and his supreme position established for the next millennium. Whereas the far superior works of his predecessors in Alexandria and elsewhere have perished, his codification of the great achievements of the Hellenistic physicians, whose independence of mind he still understood and taught himself, was handed on to posterity and was instrumental in establishing a fundamentally unbroken tradition of scientific medicine which never lost sight of him.

As in the case of philosophy and other sciences, Syrian and Arabic medicine follow the late Greek syllabus almost without a gap. We are not too badly informed about the Syriac translations of Djālīnūs, by Sergius of Rāshʿayna (d. 536) and Job of Edessa (about 825) for instance. We have Ḥunayn b. Isḥāḳ's [*q.v.*] detailed survey of 129 major and minor works by Djālīnūs translated into Syriac and/or Arabic by himself and others, he actually lists 179 Syriac and 123 Arabic versions (cf. O. Neugebauer, *The exact sciences in antiquity*, Providence 1957, 180). This unduly neglected autobibliographical account by Ḥunayn was edited and translated into German by G. Bergsträsser in *Abh. K.M.* XVII/2, 1925 and XIX/2, 1932, cf. M. Meyerhof, in *Isis* VIII 1926, 658 ff.; *Byzantion* III, 1927, 1 ff.; *The legacy of Islam*, Oxford 1931, 316 ff., 346 ff. Ḥunayn's list is not even complete. The Arabs eventually came to possess translations of every work of Djālīnūs still read in Greek centres of learning during the 7th, 8th and 9th centuries A.D., and thus knew a number of medical and philosophical works of Djālīnūs which disappeared in the late Byzantine period.

There can be no doubt—although details have still to be ascertained and interpreted in monographs—that Galen's medical works in their entirety, his methods and his results, were fully digested and appreciated by all the later Arabic physicians and became an integral part of their medical learning, in their original form as well as in summaries, commentaries and new works based on them. This by no means applies only to such outstanding physicians as Muḥammad b. Zakariya al-Rāzi [*q.v.*] or Ibn Sīnā [*q.v.*] but to many others as well (cf., *e.g.*, J. Schacht-M. Meyerhof. *The medico-philosophical*

controversy between Ibn Butlan of Baghdad and Ibn Ridwan of Cairo, Cairo 1937, passim). A comparison between D̲j̲ālīnūs and Ibn Sīnā's *Ḳānūn fi 'l-ṭibb* would yield very interesting results indeed. D̲j̲ālīnūs deserves a major chapter in any future history of Arabic medicine down to the first half of the 20th century. The Galen studies in medieval and Renaissance Europe owe very much to the Arab precedent and to Galen-translations from the Arabic.

A number of otherwise lost medical and philosophical works of D̲j̲ālīnūs has been recovered from Arabic translations, and it seems appropriate to mention them here.

Medical works: 1) M. Simon, *Sieben Bücher Anatomie des Galen*, 1906 (cf. G. Bergsträsser, *Hunayn ibn Isḥak und seine Schule*, Leiden 1913) with Ger. tr.; Eng. tr. by the late W. H. L. Duckworth, edd. M. C. Lyons and G. Towers, *Galen on anatomical procedures*; *the later books*, Cambridge 1962. 2) Ps.-Galenus *In Hippocratis de Septimanis Commentarius*, ed. G. Bergsträsser, *Corpus medicorum Graecorum*, xi/2.i. 3) M. Meyerhof-J. Schacht, *Galen über die medinischen Namen* in *Abh. Berl. Akad. Wiss.*, phil.-hist. Kl. 1931, no 3 (with Ger. tr.). 4) *In Hippocratis Epidemias* i, ii, vi/1-8, ed. E. Wenkebach-F. Pfaff, *Corpus medicorum Graecorum* v/10, 1.1; v/10, 2.2 (German translation only, cf. *Gnomon*, xxii, 1950, 226 ff.). 5) *Schrift über die Siebenmonatskinder*, ed. R. Walzer, in *RSO*, xv, 1935, 323 ff.; xxiv, 1949, 92 (with Ger. tr. 6) *On medical experience*, ed. R. Walzer, Oxford 1944 (with Eng. tr.).

Philosophical works: 1) *Summary of Plato's Timaeus*, see AFLĀṬŪN (with Latin translation). 2) Additional fragments of the medical commentary on the Timaeus, ed. P. Kahle, see AFLĀṬŪN (with Ger. tr.). 3) Epitome of Περὶ ἠθῶν, ed. P. Kraus 1939 (Arabic text and notes), cf. R. Walzer in *Classical Quarterly* 1949, 82 ff.; idem, in *Harvard Theological Review* 1954, 254 ff. S. M. Stern, *Classical Quarterly*, 1956, 91 ff. 4) *De demonstratione*: P. Kraus, *Jabir ibn Ḥayyān*, ii, Cairo 1942, passim; S. Pines, *Rāzī, Critique de Galien* in *Actes du Septième Congrès Internationale d'Histoire des Sciences*, 1953, 480 ff. 5) Statements on Jews and Christians: R. Walzer, *Galen on Jews and Christians*, Oxford 1949. 6) S. Pines, *A refutation of Galen by Alexander of Aphrodisias* in *Isis*, lii, 1961, 21 ff. 7) J. Schacht-N. Meyerhof, *Maimonides against Galen*, in *Bulletin of the Faculty of Arts in the University of Cairo*, vi, 1939, 54-84.

The Arabic versions of books by Galen which are preserved in the original Greek may often prove useful for the establishment of the Greek text, especially in cases where only late Greek manuscripts are available. Moreover, they are very important for the general history of medical terminology, and work in this direction has scarcely stated. The Arabic text of Galen's commentary on Hippocrates Κατ' ἰητρεῖον, ed. M. Lyons (with Eng. tr.) will be published in 1962 as part of the *Corpus Medicorum Graecorum*. A Ger. tr. of the Arabic text of Περὶ ἠθῶν by F. Pfaff is to be found in the *Corpus Medicorum Graecorum Supplementum*, iii, 1941.

A survey of Arabic MSS of Galen, as far as it could be established at the time of the compilation, is to be found in H. Diels, *Die Handschriften der antiken Ärzte*, Berlin 1906. Additions: H. Ritter-R. Walzer, *Arabische Übersetzungen griechischer Ärzte in Stambuler Bibliotheken* in *Berichte der Berliner Akademie*, phil-hist. Klasse, 1934 and in many miscellaneous publications.

An intensive and detailed study of Arabic medical writers will no doubt eventually yield more texts of Galen and will make it possible to write the history of his very important impact on the development of Arabic medicine.

Campbell, *Arabian medicine and its influence in the middle ages*, ii, Leiden 1926, 13-220; H. Schipperges, *Ideologie und Historiographie des Arabismus*, Wiesbaden 1961. (R. WALZER)

D̲J̲ĀLIYA (from Arabic *d̲j̲alā* [ʿ*an*], to emigrate), used here for the Arabic-speaking communities with special reference to North and South America. About eighty per cent of these emigrants are estimated to have come from what is today the Lebanese Republic; fifteen per cent from Syria and Palestine and the rest from al-ʿIrāḳ and al-Yaman. Egypt's quota is negligible.

Overpopulation in mountainous Lebanon, whose soil was less fertile than its women, combined with political unrest, economic pressure and a seafaring tradition, found relief in migration to other lands. Egypt, the only country to which the Ottoman authorities before 1890 permitted emigration, offered a special attraction particularly after the British occupation in 1882. The response came from the Western-educated group, graduates of the American University of Beirut (then known as the Syrian Protestant College) and the Jesuit St. Joseph University. Clerks, government employees, physicians, pharmacists, teachers found rewarding employment in Egypt and the Sūdān. Two of the earliest and most influential learned magazines (*al-Muḳtaṭaf* and *al-Hilāl*) and of the newspapers (*al-Muḳaṭṭam* and *al-Ahrām*) were founded by such graduates. In addition a Syro-Lebanese commercial colony flourished mainly in Cairo and Alexandria and gained possession of about a tenth of the entire wealth of the land. Western Africa, where today Syro-Lebanese communities—with about 30,000 settlers—are sprinkled over the major cities, was not discovered until the late 1890's. South Africa claims about an equal number.

But the golden fleece lay in more distant horizons. The first recorded Arabic speaker to land in North America was a Christian Lebanese youth Anṭūniyūs al-Bis̲h̲ʿalānī, whose tombstone in a Brooklyn (N. Y.) cemetery gives 1856 as his date of death, two years after his arrival. But there was no mass movement until after the mid-1890's following the World's Fair at Chicago. The peak was reached in the pre-first World War period. For the thirteen years ending in 1913 the Commissioner General of Immigration reported 79,420 "Syrians" (which term then embraced Lebanese and Palestinians), of whom 4064 entered the United States in 1901 and 9211 in 1913, By that time there was hardly a village in Lebanon which could not claim an American citizen as its son. Decline began with the war followed by restricted quota imposed in 1924 by the United States government. Its official statistics indicate that in 1940 there were about 350,000 of Arabic-speaking origin; estimates in 1950 raise the figure to 450,000; but Lebanese government statistics released in 1958 make those of Lebanese descent alone in the United States 450,000.

The majority of these emigrants were Christians, who felt less strange in the Western world, and were recruited largely from the uneducated classes. Wherever these people went they carried along their cuisine, churches and Arabic printing press. By 1924 they had established two hundred and nineteen churches and missions scattered all over the larger commercial and industrial cities of the United

States. Since then nine mosques have been built, of which the most imposing is that of Washington, D.C., founded in 1952 and patronized by the embassies. Of the estimated 33,000 Muslims, mostly Palestinians and Yamanites, 5,000 live in Detroit, attracted by employment in the automobile factories. In 1924 New York housed six newspapers (in 1960 five) and three monthlies. The oldest newspaper extant, *al-Hudā*, celebrated on 22 February 1960 its sixty-second anniversary. A census taken in 1929 lists 102 Arabic periodicals and papers, extant and extinct, which saw the light in North America and 166 in South America [see DJARĪDA].

The first to reach Brazil was again a Lebanese in 1874. The movement acquired mass proportions in the 1880's following Emperor Pedro II's visit to Lebanon and Palestine. In 1892 an Ottoman-Brazilian treaty gave further impetus. Argentina was equally interested in new emigrants to develop its vast resources. The Syro-Lebanese community in Brazil is larger than that of the United States; that of Argentina numbers about 150,000, of Mexico 60,000. A number of streets in Latin American countries bear the names of Syria, Lebanon or of a citizen born there. In South America such emigrants felt more at home than in North America; they also prospered more and maintained a stronger Arab tradition. In wealth and influence the São Paulo colony, headed by the Jafet (Yāfith) family—founded by a Christian from al-Shuwayr, Lebanon —compares favourably with that of Cairo. In 1959 the São Paulo community maintained two sport clubs (one Syrian, one Lebanese), two chambers of commerce, one hospital, one orphanage, two secondary schools and a score of philanthropic organizations. Its Greek Orthodox Cathedral, begun in 1939, is the most imposing place of worship erected by Syro-Lebanese emigrants anywhere.

Though originating mostly in villages the bulk of the emigrants to the two Americas took to business. The general pattern was to start from peddling, carrying a *kashsha* (from Portuguese *caixa*) and knocking at doors, move on to shopkeeping and graduate to large store owning and perhaps to a leading position as a merchant or industrialist. Arabic papers abound in "success stories" of penniless emigrants developing into millionaires. Arabic-speaking merchants are credited among other things with contributing to the introduction and popularization of kimonos, lingeries, negligées, linens, laces, Oriental rugs and Near Eastern food articles. The "folks back home" were generally never forgotten. Remittances to relatives and friends in the course of the first World War have been credited with saving numberless lives. Even as late as 1952 Lebanese official statistics credit Lebanese emigrants with remittances to relatives, friends and religious and educational institutions amounting to $ 22,000,000. Descendants of emigrants have entered all kinds of professions. In 1959 California sent to the House of Repesentatives in Washington the first son of a Lebanese emigrant; in the same year a second-generation girl singer was admitted to the Metropolitan Opera in New York. In 1960 an American citizen whose father was born in Zaḥlah (Lebanon) was elected mayor of a large city (Toledo, Ohio).

More striking perhaps has been the literary contribution. New York boasted a literary circle, founded by Kahlil Gibran (Djabrān Khalīl Djabrān, [*q.v.*]), whose influence has been felt throughout the Arab world. Its counterpart in São Paulo published for twenty years a magazine (*al-Andalus*) which had a wide vogue. These writers treated new themes, struck fresh notes, introduced modern styles and reflected the Western influences to which they were exposed in their adopted lands. By their writings, correspondence and return visits Arabic-speaking emigrants contributed substantially to the liberalizing, modernizing trend of their native lands. Some of the tenderest and most often quoted modern verses have been composed by Arabic poets in New York and São Paulo.

Legislative restrictions on immigration into the New World encouraged the movement into Australia where the Syro-Lebanese community is estimated at 20,000 largely clustered in Sydney.

The wave of migration which rolled from the eastern Mediterranean in the decade preceding the first World War sent sprinkles to the remotest corners of the habitable world. The Canadian community now counts about 30,000.

DJALLĀB, or, according to the dialect, DJALLĀBA or DJALLĀBIYYA, an outer garment used in certain parts of the Maghrib, which is very wide and loose with a hood and two armlets. The *djallāb* is made of a quadrangular piece of cloth, which is much longer than it is broad. By sewing together the two short ends a wide cylinder is formed. Its upper opening is also sewn up except for a piece in the centre where a hole is required for the head and neck. Holes are cut on each side for the arms. When the garment is put on, the seam joining the two short ends runs down the middle of the breast. The two seams which close the two ends of the upper

part run along the shoulders and the upper part of the arms. The head and neck are put through the space left open in the middle of the upper end. The forearms come through the holes at each side; they would be left uncovered if armlets were not sewn on to the edges of the armholes. These armlets are very short. At their lower extremity is a slit (*nīfuk*) for the elbow and at the top a second slit (*fatḥa*) across, through which, when necessary (*e.g.*, for the ritual ablution) the bare fore-arm can be thrust. The *djallāb* is made either of native cloth or (in prosperous towns) of European. The former is woollen, rarely and only quite recently of cotton or cotton and wool. These cloths are dyed in different colours in different districts; red, brown, black, white, of uniform colour, striped or spotted. The European materials are thick, usually navy blue, black or dark grey.—The *djallāb* of native manufacture consists of a single piece of cloth, which is made of the required size. The hood is not added but consists of a quadrangular piece of cloth woven on, the sides of which are folded together behind and sewn. In the *djallāb* of European cloth, the hood is cut separately and put on. The seams of the *djallāb* are covered with braid and often ornamented with tassels, knots and rosettes.—The cut, the form of the *djallāb* and the hood, the ornamentation, the style of weaving, of sewing and of lining vary much in different districts.—This garment is called *djallāb* (*djallāba*, *djallābiyya*), throughout the greater part of Morocco and in the west of Algeria; it is also used in other parts of the Maghrib, *e.g.*, in the south of Algeria and in the Mzāb but it is given another name there. Among the Andalusian Muslims, however, the word *djallābiyya* was the name of a garment, the shape and use of which we do not know; in Egypt, we find a phonetic equivalent of the word, *gallābiyya* (with *g* for *dj*), but the garment it denotes is quite different from the *djallāb* of the Maghrib. The origin of the word is uncertain. Dozy considers the form *djallābiyya* to be the original one and *djallāb*, *djallāba* to be corruptions. He therefore gives the original meaning as "garment of a *djallāb*, *i.e.*, a slave dealer". This view seems philologically untenable. It is much more probable that *djallāb* is connected with the Old Arabic *djilbāb* "outer garment". The dissimilative dropping of the *b* in this word of foreign origin (cf. Nöldeke, *Neue Beiträge zur semitischen Sprachwissenschaft*, 53) is not surprising; moreover it has also taken place outside the Maghrib in the modern forms of the word *djilbāb*: thus for example in the dialect of ʿUmān we find *gillāb* with the meaning of "women's veil".

DJĀLOR, a town in the Indian state of Rajasthan, some 75 miles south of Djodhpur on the left bank of the Sukrī river.

Although the troops of ʿAlāʾ al-Dīn Khaldjī had passed through Djālor on their return from the conquest of Gudjarāt in 696/1297, it was not then occupied by them. In Djumādā I 705/December 1305, however, that king sent ʿAyn al-Mulk, governor of Multān, on an expedition to Djālor, Udjdjayn and Čanderī; he was opposed by an army of 150,000 Hindūs on his entry into Mālwā, and his victory over them, which brought Udjdjayn, Dhār, Māndū, and Čanderī [*qq.v.*] into Muslim possession, so impressed the Čawhān rādjā of Djālor that he accompanied ʿAyn al-Mulk to Dihlī to swear his allegiance to ʿAlāʾ al-Dīn. Two years later this rādjā's arrogance caused ʿAlāʾ al-Dīn to attack Djālor, which was taken for Dihlī by Kamāl al-Dīn Gurg. On the weakening of the sultanate at ʿAlāʾ al-Dīn's death it seems to have relapsed into Čawhān possession.

At some time in the 8th/14th century a body of Lohānī Afghāns left their adoptive province of Bihār and came to Mārwāṛ, where they entered the service of the Čawhān rādjā of Djālor. On the latter's death by a trick at the hands of a neighbouring rādjā in 794/1392 their leader, Malik Khurram, assisted the rādjā's widow in carrying on the government, but after disagreements between the Afghāns and the Rādjpūts he established himself as ruler over the city and its fort, Songir (Sanskrit: *suvarṇa-giri* "golden hill"), and sought through Ẓafar Khān, *ṣūbadār* of Gudjarāt under the Tughluḳs, a *farmān* from Dihlī confirming his title; this was given, 796/1394. After Tīmūr's depredations in north India in 801/1399 the Djālorīs became independent rulers for a time, before later becoming feudatory to the new and powerful sultanate of Gudjarāt.

At some time in the early 10th/16th century the Djālorī family had added Pālanpur [*q.v.*] to its dominions, and by mid-century its ruler had acquired the title of Nawwāb. By about 1110/1699 the Nawwāb moved his seat from Djālor to Pālanpur, which remained an independent Muslim state until 1956; for the history of the dynasty, see pālanpur.

Monuments. The fort of Djālor was built by the Paramāra Rādjpūts, and remained substantially unchanged under Muslim rule except for the modification of its perimeter wall for artillery. The oldest monument is the mosque in the city, built from temple spoil probably at the time of ʿAlāʾ al-Dīn, 56.4 m. square, with cloisters of three arcades on north, south, and east, broken by doorways, and a deeper three-domed *līwān* on the west. The latter is faced with a screen wall of later date, probably of the time of Muẓaffar II of Gudjarāt (917-32/1511-26); an inscription including the name of Muḥammad b. Tughluḳ stands over the north door, implying an extension or restoration in his time. The arcades have been enriched by the addition of graceful and delicate stone lattice screens of the middle Gudjarātī period. Known as the Tōpkhāna masdjid, it was for long used as an arsenal. A smaller mosque stands in the fort; although said by Erskine (*Rajputana Gazetteer*, iii A, 1909, 189 ff.) to have been built by ʿAlāʾ al-Dīn's armies, it seems to be in its present form entirely a construction of the period of Maḥmūd I (863-917/1458-1511) or Muẓaffar II of Gudjarāt, and bears an inscription of the latter.

(J. Burton-Page)

DJALŪLĀʾ, a town in ʿIrāḳ (Babylonia) and, in the mediaeval division of this province, the capital of a district (*ṭassūdj*) of the Shādh-Ḳubādh circle to the east of the Tigris, was a station on the important Khurāsān road, the main route between Babylonia and Īrān, and was at about an equal distance (7 parasangs = 28 miles) from Dastadjird [*q.v.*] in the south-west and from Khāniḳīn in the north-east. It was watered by a canal from the Diyālā (called Nahr Djalūlāʾ), which rejoined the main stream a little further down near Bādjisrā [*q.v.*]. Near this town, which seems from the statements of the Arab geographers to have been quite unimportant, the Arabs inflicted a severe defeat on the army of the Sāsānian king at the end of the year 16/637.

According to Mustawfī, writing about 740/1340, the Saldjūḳ sultan Malikshāh (465-85/1073-92) built at Djalūlāʾ a watch-house (*ribāṭ*, popularly *rubāṭ*) which probably served also as a caravanserai; after his time the place was usually called Ribāṭ Djalūlāʾ. This statement helps us to locate the site of Djalūlāʾ with certainty; for indeed there can be almost no doubt that Ribāṭ Djalūlāʾ must be identified with the modern Ḳīzīlrobāṭ, especially since the distances given by the Arab geographers for Djalūlāʾ apply perfectly to Ḳīzīlrobāṭ. Its geographical position is 34° 10′ N., 45° E.; it lies within the mountains, at the east end of the pass through the Djabal Ḥamrīn. The Diyālā flows by at some distance to the east of the town. The name Ḳīzīlrobāṭ ("red caravanserai") is popularly corrupted to Ḳazilābādh and Ḳazrābādh (cf. Petermann, *Reisen im Orient*, ii, 274) or abbreviated to Ḳizrabāṭ (cf. Herzfeld, in *Petermanns Geogr. Mitt.*, 1907, 51). Like its mediaeval predecessor, the modern Ḳīzīlrobāṭ is of only moderate importance; it still has no other rôle than that of a transit and relay station on an important caravan route.

Bibliography: in addition to references in the article BAʿḲŪBĀ, see in particular M. Streck, *Babylonien nach den arab. Geograph.*, i, 8, 15; Le Strange, 62; and, on Ḳīzīlrobāṭ, cf. Ritter, *Erdkunde*, ix, 418, 489; Ker Porter, *Reisen in Georgien, Persien u. Armenien*, etc., Weimar 1833, ii, 234.

(M. STRECK)

DJĀLŪT. The Goliath of the Bible appears as Djālūt in the Ḳurʾān (II, 248/247-252/251) (the line of al-Samawʾal where the name occurs is inauthentic), in assonance with Ṭālūt [*q.v.*] and perhaps also under the influence of the Hebrew word *gālūt*, "exile, Diaspora", which must have been frequently on the lips of the Jews in Arabia as elsewhere. The passage of the Ḳurʾān where he is referred to by name (his introduction in the exegesis of V, 25 seems to be sporadic and secondary) combines the biblical account of the wars waged by Saul and David (I Samuel xvii) with some traces of Gideon's expedition against the Midianites (Judges vii, particularly the episode of the water drinking test to select warriors.

Furthermore, Muslim tradition, tending to see in the Ḳurʾān account a prefiguration of the Battle of Badr, embroiders on the Haggadic development of the Bible story (for instance, the sling-stones given to David and their joining together into one, the latter detail borrowed from the Midrashic legend about the stones of Bethel, which Jacob put for his pillow); the same tradition attempts to link the giant Djālūt variously with the Amalekites (see ʿAmālīḳ), the ʿĀdites or the Thamudites, or even with the Berbers, no doubt in connexion with the Talmudic legend about the emigration of certain Canaanite tribes into "Africa" at the time of the Israelite conquest of Palestine (*Tosefta Shabbat*, vii, 25; Talmud of Jerusalem *Shebīʿit* vi, 2 [36c]; cf. H. Lewy, *MGWJ*, lxxvii, 1933, especially 178). With the help of these linkings, even though the Bible story in its authentic form must have been known to a writer as particular about first hand information as al-Yaʿḳūbī, Djālūt became a kind of collective name for the oppressors of the Israelite nation before David. The battle against Djālūt is localized in the Ghor or lower valley of the Jordan (see ʿAYN DJĀLŪT).

(Smit, *Bijbel en Legende*, 61 f.); Ṭabarī, i, 370-6, cf. 278-80; Masʿūdī, *Murūdj*, i, 105-8; iii, 241; Kisaʾī, *Vita Prophetarum*, 250-4; *Mukhtaṣar al-ʿadjāʾib* (*Abrégé des Merveilles*), translated by Carra de Vaux, 101; M. Grünbaum, *Neue Beiträge zur semitischen Sagenkunde*, 191 f.; J. Horovitz, *Koranische Untersuchungen*, 106; R. Blachère, *Le Coran*, 803-5. (G. VAJDA)

DJAM [see FĪRŪZKŪH].

DJĀM, a village in Afghānistān (orchards, particularly of apricots) in the region of Ghūr [*q.v.*] on the Tagao Gunbaz, tributary on the left bank of the Harī Rūd, above Čisht; an hour's march away, by the confluence of the tributary and the main stream, stands a cylindrical minaret of harmonious proportions, with an octagonal base which carries three superposed stages of truncated conical form, with an interior staircase (over 180 steps); the height of this minaret (about 60 m.) puts it between the Ḳuṭb mīnār of Dihlī [*q.v.*] and the minaret of Bukhārā [*q.v.*]. One of the inscriptions on this minaret, which is entirely covered with a striking decoration, gives the name of the prince who ordered its construction: Ghiyāth al-Dunya wa ʾl-Dīn Abu ʾl-Fatḥ Muḥammad b. Sām, 5th Ghūrid sultan (558-99/1163-1202; cf. GHŪRIDS, and Wiet, *op. cit. infra*, 21-55). A. Maricq, who in 1957 discovered this minaret which previously had been known only by hearsay, considers it to have been a "tower of glory" as well as a minaret (as was the Ḳuṭb mīnār, so described in its inscription), the central point of the territories of the Ghūrid sultanate; furthermore, he has collected (*op. cit. infra*, 55 and 65) the texts and other evidence which allow this monument of Djām to be considered as the only apparent vestige of the town of Fīrūzkūh, the Ghūrid capital (contrary to identifications previously proposed, *e.g.*, FĪRŪZKŌH in *EI*[1]); this hypothesis calls for a meticulous examination of the site.

Bibliography: A. Maricq and G. Wiet, *Le minaret de Djām*: *la découverte de la capitale des sultans Ghōrides* (*XII*e*-XIII*e *siècles*), in *Mém. Delegation archéol. française en Afghanistan*, xvi, Paris 1959, 91 pp., 17 plates and two maps.

(H. MASSÉ)

DJAMʿ, DJAMĀʿA.—The aim of the present article is to clarify general ideas, and to show what system underlies the expression of grammatical number, as regards the Arabic plural and collective.

The Arabic language distinguishes between: 1) the singular, 2) dual, 3) plural, 4) collective. Arab grammarians have paid close attention to the first three: 1) the singular: *al-wāḥid*; *mufrad* is applied to the "simple" noun (as opposed to *murakkab*, applied to the "compound" noun) by the *Muf.* § 4; but it has also been used for "singular", likewise *fard* [*q.v.*].—2) the dual: *al-muthannā*, for units of two.—3) the plural: *al-djamʿ*, for units numbering three or more, with the subdivision: *djamʿ sālim* "sound plural", the external plural and *djamʿ mukassar* "broken plural", the internal plural. As

regards 4), the collective, they have no general word to denote it. In relation to the noun of unity they have distinguished between: the *ism al-djins* "specific name", which possesses a noun of unity, made by means of the suffix *-aᵗ*, added *to it, e.g.*: *tamr* "dates", noun of unity *tamraᵗ* "a date"; the *ism al-djamʿ* which denotes a *djamāʿa* "collection, assembly of beings", but does not possess a noun of unity or else forms it in a manner different from that given above: without a noun of unity, like *ḳawm* "tribe, group to which one belongs", with noun of unity provided by another word, like *ibil* "camels", *baʿīr* "a camel", or by another Form of the same root, like *rakb* "travellers" *rākib* "a traveller".

Note: A. Fischer has studied *Die Terminologie der arabischen Kollektivnomina* (*ZDMG*, xciv (1940), 12-24): *Shibh al-djamʿ*, in the sense of *ism al-djamʿ* and the plural *ashbāh al-djamʿ*, recent terms (taken from the author of the *Baḥth al-maṭālib*), current in European grammars, are to be ignored; *asmāʾ al-djamʿ* can already be traced back to Ibn Yaʿīsh (*e.g.* 732, l. 6) (*asmāʾ al-djumūʿ* in the *Muf.* § 285). *Ism al-djins* (coll.) gave rise to amphibology with *ism al-djins* (common noun). Al-Ushmūnī (d. 900/1494) had already in his time defined the collective by *ism al-djins al-djamʿī*, a term at present in general use in Egypt, according to Fischer (20).

The article by A. Fischer will provide useful references for Arabic terminology, see in particular the text of al-Ushmūnī (*op. cit.* 21-22) on the difference between: *al-djamʿ*, *ism al-djamʿ*, *ism al-djins al-djamʿī*. In the latter, al-Ushmūnī (l. 12) puts the collectives with noun of unity in *-iyy-* (like *rūm*, *rūmiyy-*). The text can be compared with that of the *Sh. Sh.*, ii, 193 ff.

I. — The external plural

A.—The external plural for rational beings (*al-ʿuḳalāʾ*).

a) By reason of their constitution, agent-nouns and passive nouns of Forms derived from verbs are not capable of forming an internal plural; they form the external plural necessarily, where there is a question of rational beings: *mufaʿʿilalūna*, *mufaʿʿil alāt*, etc.; as for the IVth F., *mufʿilal* can form the internal plural, but one finds only a few examples of this (*Muf.* § 252); the external plural is normal for them. The Forms *faʿʿāl* (intensive agent-noun and noun of occupation), *fiʿʿīl*, *fuʿʿāl* (with one exception, *Muf.*, *ibid.*) take only the external plural for rational beings, similarly the relative adjective: *miṣriyyūna* "Egyptian (men)", *miṣriyyāt* "Egyptian (women)". These constructions are constant.

b) For the *ʿuḳalāʾ*, the external plural is the proper plural of *fāʿil* and *mafʿūl* (agent-noun and passive noun which is exactly the *ṣifa* of the Arab grammarians), through and by reason of the verbal "value" which they contain, in the view of these grammarians: this is true of them considered as "participles". In proportion as they become substantives (*ism*), they become further removed from the position of "participles" and can take the internal plural. This is the principle which emerges from Ibn Yaʿīsh's explanations, 625, in particular l. 14-9, on the subject of the masculine external plural (with exceptions: *Muf.* § 247 and 252). See also *Sh. Sh.*, ii, 116, l. 9 ff.

c) This extends to adjectives (*ṣifa mushabbaha*) of the Form *faʿl*, *fiʿl*, *fuʿl*, *faʿal*, *faʿil*, *faʿul*, *fuʿul* (*Muf.* § 239; Ibn Yaʿīsh, 625, l. 20-4); see (Ibn Yaʿīsh, 626-8) examples and cases of internal plural. As for the numerous adjectives with a *long* vowel after the second root consonant (like *faʿūl*), the internal plural is normal for them (unlike the preceding instances). The external plural can occur, especially in the case of *faʿīl* in the active sense (*karīmūna*, *karīmāt*), as opposed to *faʿīl* in the passive sense which cannot take it for the *ʿuḳalāʾ*; (for *afʿalu* see *Muf.* § 249).

This outline sufficently shows the Arab point of view; it remains, with the help of monographs, to define the usage of the authors themselves, particularly in their use of the external feminine plural for non-rational beings, like *wa-ḳudūriⁿ rāsiyātiⁿ* (Ḳurʾān, XXXIV, 12/13) "and firm cooking-pots", *fī ayyāmiⁿ maʿdūdātiⁿ* (Ḳurʾān, II, 199/203) "on days well numbered". Such instances are infrequent, less frequent than those of the internal plural (like *ayyām ḳalāʾilᵘ* "days few in number").

Used as a feminine singular substantive for non-rational beings, *fāʿilaᵗ* and *mafʿūlaᵗ* take the internal plural *e.g.*: *fāʾidaᵗ* "utility", pl. *fawāʾidᵘ*, *maḳṣūraᵗ* "small private room", pl. *maḳāṣīrᵘ*. This does not create any difficulties. It remains to examine the external plural for substantives *which are only substantives* (proper names included). The difficulty noted above, for the *ʿuḳalāʾ*, arose precisely from the participial adjectives (the *ṣifa*) which can become substantives.

B. — The external plural for substantives and proper names.

a) Proper names: the question of the *ʿuḳalāʾ* naturally affects the use of the plural of proper names and also of diminutives.

For the former, Sībawayhi (ii, ch. 350) leaves a choice between the external plural and the internal plural when the name is capable of forming it, *e.g.*: for Zayd (masc. proper name): *zaydūna* or *azyād*, *zuyūd*, for Hind (fem. proper name): *hinafidāt* (or *hindāt* of the Tamīm) or *ahnād*, *hunūd*; but *-āt* for the plural of men's proper names terminated by *-atᵘ*: *ṭalḥatᵘ* "Ṭalḥa", pl. *ṭalaḥāt* (according to the Baṣrians, 4th disputed question, Ibn al-Anbārī, *K. al-Inṣāf*, ed. Weil, 18 ff.).

As to the diminutive (like *shuwayʿir*, diminutive of *shaʿir* "poet"): for the masculine *ʿuḳalāʾ*: *shuwayʿirūna*; *shuwayʿirāt* for the feminine; *-āt* for the plural of the diminutive for non-rational beings: *kitāb* "book", diminutive *kutayyib*, pl. *kutayyibāt*.

b) Substantives which are purely substantives: a small proportion reverts to the suffix *-ūna*: biliteral nouns like *sanaᵗ* "year": *sinūna* and some isolated ones, like *ʿālam* "world": *ʿālamūna*. The suffix *-āt* is used much more widely. It is given to:

1. feminine nouns with the suffix *-āʾu* or *-ā*: *ṣaḥrāʾu* "desert" *ṣaḥrāwāt*, *dhikrā* "memory" *dhikrayāt*.
2. names of the letters of the alphabet: *alif*, *alifāt*.
3. names of the Muslim months: *ramaḍānᵘ*, *ramaḍānāt*.
4. infinitives of the derived Forms of verbs used as substantives: *taʿrīf* "definition", *taʿrīfāt*.
5. foreign nouns: *iṣṭabl* "stable", *iṣṭablāt*; the same, denoting men: *bāshā* "Pasha", *bāshawāt*. The modern language still carries on this procedure: *tilifūn* "telephone", *tilifūnāt*.
6. biliteral nouns: *sanaᵗ* "year", *sanawāt* and a few isolated instances, some feminine like: *arḍ* "earth", *araḍāt*, others masculine like *djamād* "mineral", *djamādāt*.
7. a particular and important usage can be included here: agent-nouns or passive nouns of

all Forms of the verb and of adjectives with the suffix *-āt* are regarded as neuter, *e.g.*: *al-ṣāliḥāt* "Good" (Ḳur'ān, II 23/25, 76/82, etc.), *al-sayyi'āt* "Evil" (Ḳur'ān, IV 22/18, VII 152/153, etc.), *al-makhlūḳāt* "creatures", etc. This usage still exists in modern Arabic: *al-mashrūbāt* "refreshments", etc.

To sum up, for the *ʿuḳalā'* the external plural is the proper plural of relative adjectives, the agent-nouns and passive nouns *fāʿil* and *mafʿūl*, *mufʿifal* (and still more, Forms which take only the external plural), of the Forms *faʿʿāl*, *fiʿʿīl*, *fuʿʿāl*; for adjectives with one or two short vowels, the external plural is also given as the standard form (the *ḳiyās*) but not for the other adjectives subject to greater variation. With substantives, the *ʿuḳalā'* apply only in respect of proper names and diminutives. In this special treatment of rational beings is to be found the indication of a true *Class*, operative in classical Arabic. It was important to place it.

C.—External plural, plural for small numbers.

Another assertion by the Arab grammarians is that the external plural is a plural for small numbers (*Muf.* § 235, Ibn Yaʿīsh, 611-2) (which characteristic can cross its influence with the preceding). There is thus a way of explaining, in certain instances, the coexistence of the external plural and the internal plural for the same word, *e.g.*: *ḳarayāt* (small number), *ḳuraⁿ* (large number) for a singular *ḳaryaᵗ* "village". This seems to be particularly noticeable for the external plural in *-āt* and to have had an influence on dialects: the plural for a small number, described by E. F. Sutcliffe in *A grammar of the Maltese language*, London 1936, 36, is of this kind. The question of small numbers will occur again in connexion with internal plurals.

II—The internal plural

The internal plural is found sporadically (as it were, still on trial) in Western Semitic languages in the north (Hebrew-Aramaic) (Brockelmann, *Précis*, § 165). It is the Western Semitic languages in the south which made use of the procedure, particularly Arabic (only ten Forms of the internal plural in Geez). But from what do these internal plurals derive? Are they the plural of a singular following a genetic connection, or on the other hand are they independent words linked simply by the singular-plural relationship? This genetic connexion cannot be established: even in the case of sing. *fuʿlaᵗ*, pl. *fuʿal*, sing. *fiʿlaᵗ*, pl. *fiʿal*, the question is not clear (cf. below); some *fiʿlān* plurals are seen to come from a suffix *-ān*: **akhwān* > *ikhwān* "brothers", **djārān* > *djīrān* "neighbours", but the words thus pluralized are lost in the mass of internal plurals of the Form *fiʿlān*, independent of a singular. Thus the second position is adopted by many Orientalists (see Barth, *Nominalbildung*, 417-8). Internal plurals are therefore considered to be derived from collectives which are connected with abstract words (M. Bravmann has recently maintained the contrary view, in *Orientalia*, xxii, 1953, 7-8, but he is not convincing).

Internal plurals are collectives clarified by the plural: collectives offered a mass; through this use of the plural, individualities have become *distinct* in this mass (see below, III) and can be numbered (that is to say, counted precisely according to the different numbers), or else remain simply with a vague, not fixed, number—the *indeterminate* plural.

The human mind can easily make the transition from the collective to the indeterminate plural because, while being a true plural, it retains some subtle element of the former through the vagueness and imprecision of the number of units comprised. This explains how, in Arabic, the same word without any internal change or variation in its external form may be looked upon in one connexion as a collective and in another as an indeterminate plural. A good example is provided by Raḍī al-Dīn al-Astarābādhī (*Sh. Sh.*, ii, 196, l. 1-3) when he states explicitly that the *ism al-djins* (coll.) for the noun of unity with *-aᵗ*, takes the plural in *-āt* for a small number and uses the same form without *-aᵗ* for a large number, as for example for "ant": *namlaᵗ* (n. of un.) pl. *namalāt* (small number), *naml* (large number). This is his example (*loc. cit.*) even though there exists the internal plural for a large number *nimāl*. This concept of an *indeterminate plural*, for a vague number of units, brings an element of clarity, here and in other instances, *e.g.* for *ḳawm* (see below). A true plural, it forms a link and transition between collective and plural.

The link between collectives and abstract nouns, it seems to us, cannot be denied; a collective on the way to becoming an abstract word (this cannot be developed here (see my *Traité* § 71); conversely, an abstract word which becomes collective, *e.g.* *shabāb* "youth" (abstract word), *shabāb* "young people" (coll.). The collective thus proves to be the link between the abstract word and the internal plural. But not all collectives derive from an abstract word. Can one therefore refuse the language the power of *directly* creating, for natural masses, collectives to which it has opposed nouns of unity to designate separate members of these masses? In this question of the internal plural it is well to consider the complexity of the collective from which it derives, a complexity increased by the diversity of the collective *wazns*, which have passed into the internal plural.

How has the relationship between singular and plural for internal plurals been established? Semantic analogies have been followed, *e.g.* *fiʿalaᵗ* for animals, and also formal analogies, *e.g.* the so-called plural of quadriliterals, also extensions purely analogical by simple propagation of a *wazn*. All this has varied from one region of the language to another, either in diachrony or in synchrony throughout the vast expanse of Arabia.

Behind the internal plurals lies a long and complicated history which we have no longer the means to unravel. In classical Arabic they appear as a product that had been moulded in the general process of internal flexion. A good way of approaching the question is to consider this product within the framework of internal flexion, according to the series affected: initial basis and development, as a sort of outline. No doubt an outline simplifies and neglects cross-currents, but it is not altogether without its value in introducing a systematic arrangement based on the general progress of the language.

In this way one can distinguish four main series, with progression in them according to the lengthening of the vowels, the gemination of the second root consonant or the use of the affix:

a) Series: *fiʿal*, *fiʿāl*, *fiʿālaᵗ* (*fiʿāl* + *aᵗ*), *afʿāl* (= **a* + *fiʿāl*, or *fiʿāl* > **fʿāl* > *afʿāl*, see below), *fiʿalaᵗ* (= *fiʿal* + *aᵗ* or secondary parallel formation of *fiʿāl*).

b) Series: *fuʿl*, *fuʿul*, *fuʿūl*, *fuʿūlaᵗ* (*fuʿūl* + *aᵗ*), *afʿul* (= **a* + *fuʿul*), *fuʿlān* (*fuʿl* + *ān*).

c) Series: *fiʿl*, *fiʿil* (these only collective), *fiʿla*^{t} (= *fiʿl* + *a*^{t}), *afʿila*^{t} (= **a* + *fiʿil* + *a*^{t}), *afʿilāʾu* (= **a* + *fiʿil* + *āʾu*), *fiʿlān* (= *fiʿl* + *ān*).

d) Series: *fuʿal*, *fuʿala*^{t} (= *fuʿal* + *a*^{t}), *fuʿalāʾu* (= *fuʿal* + *āʾu*), *fuʿʿal*, *fuʿʿāl*.

Out of series: *faʿlā* (= *faʿl* + *ā*) and *faʿala*^{t} (probably *faʿal* + *a*^{t}). The internal plurals of quadriliterals will be discussed later. But *faʿal* like *khadam* "servants" is a collective (*ism al-djamʿ*), similarly *faʿīl* (like *ḥamīr* "asses") and *faʿal* for a singular *faʿla*^{t} (like *ḥalḳa*^{t} "ring", *ḥalaḳ*) is also a collective (*ism al-djins*).

As for *fuʿal* (sing. *fuʿla*^{t}), *fiʿal* (sing. *fiʿla*^{t}), they are indisputably acknowledged by Arab grammarians to be broken plurals. A problem arises with the development: *fuʿalulāt*, *fiʿalilāt*. Is this the plural of a plural (Brockelmann's solution, *Grundriss*, i, 430, Anm. 2)? Or merely the external plural of the singular *fuʿla*^{t}, *fiʿla*^{t} (with *supplementary* vowel for the second root consonant) (see Nöldeke, in *ZA*, xviii, 72)? Arab grammarians had proposed the solution adopted by Brockelmann; Ibn Yaʿīsh refutes them (630, l. 6-8): *fuʿalulāt*, *fiʿalilāt*, applied in the usage for a small number [1]), cannot be the plural of a plural, a kind of plural which is valid for a large number. The question could be discussed further. The situation is not clear. But the solution is, more probably, to be found in the direction: simple external plural.

Internal plurals for a small number.

The distinction is made between plurals for a large number and plurals for a small number (3 to 10 inclusive) in the general teaching of Arab grammarians (see *e.g. Muf.* § 235). They did not invent it. But to what extent they fixed what had been a flexible usage, or imposed a distinction which departed from the spoken language and which was preserved only in the traditions of fine language (poetry), one cannot tell exactly. A study of the practice of the different authors will certainly produce interesting results. We know already that poets have not always conformed with rules. The language itself did not always provide the means to observe them, *e.g.* *ḳalam* "reed cut for writing" has only one plural *aḳlām* (plural for a small number), similarly *rasan* "horse's nose-band" *arsān*; on the contrary, *radjul* "man" *ridjāl*, *sabuʿ* "wild beast" *sibāʿ*, without a plural for a small number (according to Ibn Yaʿīsh 612 l. 14; like Sībawayhi, he does not recognize any plural except *sibāʿ*, see *LA*, x, 10 l. 16). The so-called internal plurals of quadriliterals are incapable of expressing the distinction, *e.g.*: *burthun* "talon, claws", pl. *barāthin*^{u} (for a small or large number). From all this one can discern that in practice there was considerable variation. It remains to say that Arab grammarians have put forward, for a small number, the Forms *afʿāl*, *afʿul*, *afʿila*^{t} (in frequent association respectively with *fiʿāl*, *fuʿūl*, *fiʿlān* for a large number), and *fiʿla*^{t} (seldom used), and besides the external plural noticed above. This subdivision of the internal plural was noteworthy.

Apart from this last (*fiʿla*^{t}), the other Forms (of the plural for a small number) have the peculiarity of having an initial *hamza*. It seems to me that this *hamza* is not unconnected with the indication of the small number and acts in the linguistic sense as a formative prefix (however *afʿilāʾ*^{u} is not considered as a plural for small numbers). Barth (*Nominalbildung*, 422, l. 16-17) already considered it to be "ein specifisches Mittel der Pluralbildung", but did not see how to explain its precise origin. It seems that some research work is to be done to investigate the possibility that a *hamza*, originally prothetic (in *fiʿāl* > **fʿāl* > *afʿāl*), was later reinterpreted as a formative *hamza* and capable of generalization and of extension to other Forms.

The so-called internal plurals of quadriliterals.

The so-called formation of "quadriliterals" is considered separately. In fact it possesses a special characteristic. It includes not only quadriliterals properly speaking like *ʿaḳrab* "scorpion", but words which, with three root consonants, add another as prefix, like *maktab* "place where one writes, office", or many words with a long vowel after the 1st or 2nd root consonant, like *fāris* "horseman", *ʿadjūz* "old woman". The term quadriliteral becomes incorrect but it is useful and in fact does not cause any misunderstanding as to its significance. This Form of internal plural has one single type, that is to say (denoting the four possible consonants by dots) the pattern: . *a* . *ā* . *i* . and follows the second declension (special question). When applied to the examples given above, the formula gives *ʿaḳārib*^{u}, *makātib*^{u}, *fawāris*^{u}, *ʿadjāʾiz*^{u}. It has the very considerable advantage that in the great majority of instances it is possible to predict the result whereas, for the other Forms (described in order above) since in most of the cases two or more Forms of internal plural are possible for a given singular, one is reduced in practice to learning every word with its plural.

An individual characteristic, and no doubt also an individual origin, but what is it? Brockelmann in *Grundriss* (i, 434 Anm.) was unable at that time to see any certain explanation. M. Bravmann (*Orientalia*, *loc. cit.* 20 f.) proposed a phonetic solution, taking as his starting-point **faʿālt*, deriving from *faʿāla*^{t}. This does not appear to be satisfactory; *faʿāl* can be used, but in another manner, in a solution which I am describing very briefly here but which I shall develop later. It consists of these processes: adaptation of the Form *faʿāl* (collective) to quadriliterals, on the analogy of *fuʿayl* (diminutive) which became *fuʿaylil* for quadriliterals, and of *fuʿāl* which became *fuʿālil* (even with quadriliteral roots of the pattern 1212); *faʿāl* (collective) thus became *faʿālil* (collective). This gives a collective to quadriliterals and makes it possible to represent, in this category, animals whose designation by a quadriliteral noun is not lacking in Arabic. Subsequently it was possible in the linguistic sense to interpret *faʿālil* as having been augmented by an *ā*, internal, characteristic moved elsewhere, *e.g.*: *faʿlā*, collective (then internal plural of *faʿlān*^{u}) could become *faʿālā* (*kaslān*^{u} "lazy", pl. *kaslā* and *kasālā*); *faʿālā* thus opened up a way of propagating. From the collective the internal plural was easily derived.

Variations: *faʿālīl*^{u} when the singular quadriliteral noun contains a long vowel in the second syllable: *ʿuṣfūr* "sparrow", *ʿaṣāfīr*^{u}; *faʿālila*^{t}, secondary and parallel formation of *faʿālīl*^{u}, used especially for nouns of foreign origin: *tilmīdh* "disciple", *talāmīdh*^{u} and *talāmidha*^{t}.

1) Ibn Yaʿīsh argues from the possibility of saying: *thalāth*^{u} *rukabāti*^{n} "three knees". This is not the usual construction: according to the *Sharḥ al-Kāfiya* of Raḍī al-Dīn al-Astarābādhī, ii, 139 (ed. Constantinople 1275 A.H.), the general practice is to use the internal plural and not the external plural for numbers from 3 to 10.

III—The collective

It is important to have a clear conception of the collective. Collectives are not plurals. Plurals denote a plurality of *distinct* beings or objects, collectives on the contrary denote a sum or assembly of several objects, abstracting *from the component units* (see the *Lexique de la terminologie linguistique* by J. Marouzeau, Paris 1933, 41 and 145). The collective is the mass in which the individuality of those "massed together" is blurred: it is this mass which is envisaged and which constitutes as it were a unit, a kind of singular. A collective, considered purely as such, cannot be numbered, unless one wishes to indicate the plurality of the unit represented by the mass of its components. When the collective can be numbered to denote the plurality of the latter, it is a sign that it has ceased to belong to the collective category through becoming plural: the individuality of the "objects massed together" has become *distinct* (see above for the indeterminate plural).

At the beginning of this article the Arabs' terminology was explained: it now remains to examine the question of gender and the distribution of collectives in the light of the *ʿuḳalāʾ*.

The *ism al-djins* (n. of un. with *-a*ᵗ) is formed for *natural* masses of *non-rational* beings, *e.g.* *naḥl* "bees", *naḥla*ᵗ "a bee", very rarely for objects made by man. As for gender, it can be considered as either masculine or feminine, according to *e.g.*: Ḳurʾān, LIV, 20 and LXIX, 7. This is the teaching of *Muf.* § 271, Ibn Yaʿīsh 701, l. 20-2. But according to the *Sh. Sh.* (ii, 195, l. 2-3) the masculine is dominant.

The *ism al-djins* (n. of un. with *-iyy-*) is formed for the *ʿuḳalāʾ* (with very rare exceptions), *e.g.* *yahūd* "Jews", *yahūdiyy-* "a Jew". The question of gender is not discussed in grammars; according to the usage of the Ḳurʾān, *yahūd* is used as masculine plural or feminine singular (for the verb which precedes, *e.g.*: *ḳālat-i-l-yahūdu*).

The *ism al-djamʿ* without an individual noun or with the individual noun provided by another word: masculine or feminine for the *ʿuḳalāʾ*, feminine for the others.

The *ism al-djamʿ* with the noun of unity provided by another Form of the same root. It exists both for the *ʿuḳalāʾ* and for the others. Howell (i, 1145) does not express himself clearly, Wright (i, 181 A) is not sufficiently thorough. For Sībawayhi in his ch. 429 (ii, 210-1), the masculine is dominant; the same view is held by al-Astarābādhī (*Sh. Sh.*, ii, 204, l. 7-8); Ibn Yaʿīsh (673, l. 23-4) is even more positive.

As regards the *ʿuḳalāʾ*, there exists an important collective which Arab grammarians have not fitted exactly into their categories (*Muf.* § 267, Ibn Yaʿīsh 695). It is formed by means of the suffix *-a*ᵗ added to the agent-noun: *al-sābila*ᵗ "the travellers", *al-muḳātila*ᵗ "the combatants", *al-muslima*ᵗ "the Muslims", etc., and in particular to the relative adjectives: *al-marwāniyya*ᵗ "the Marwanids", *al-zubayriyya*ᵗ "the Zubayrites", etc. This procedure allows one to designate sects, groups, parties, and it is freely used in the modern language. Used in this manner, *-a*ᵗ has formed the collective in the reverse way from that used for the *ism al-djins* (n. of un. with *-a*ᵗ).

Note: *faʿl* (coll.) can provide a complete system, *e.g.*: *ṣaḥb* (coll.) "companions", *ṣāḥib* (n. of un.), *aṣḥāb* (plural for small number), *ṣiḥāb* (plural for large number), or else *ṭayr* (coll.) "birds", *ṭāʾir* (n. of un.), *aṭyār* (plural for small number), *ṭuyūr* (plural for large number). But this system cannot be generalized: it is not *ḳiyās* (al-Astarābādhī, *Sh. Sh.*, ii, 203). One habitually says: *ṣāḥib* pl. *aṣḥāb*, *djālis* pl. *djulūs*, etc., but *genetically* these internal plurals derive from *faʿl* (coll.) and not from the noun of the Form *fāʿil*.

There are at least two aspects to the collective: the collective-unit, the mass considered as a sort of unit, whereby use in the singular is possible: *ḳawm karīm* "a noble tribe", *al-ḥamām al-muṭawwaḳ* "the ring-dove"; the collective-object which inclines towards the neuter, and hence the tendency to denote the anonymous mass by a feminine singular, even for rational beings: *ibil rāʿiya*ᵗ "grazing camels", *ḳawm sāfira*ᵗ "a nomadic tribe". The internal plurals of nouns have inherited from their former status as collectives the possibility of being treated in this way: *ridjāl kathīra*ᵗ. But if the component parts resume their distinct individuality in the mass, the collective passes into the indeterminate plural: *ḳawm kuramāʾᵘ*, *ḳawm mukrimūna* "noble people".

These different considerations have been able to exert their influence to a greater or lesser degree, and in the same way with greater or lesser regard for the *ʿuḳalāʾ*, among the various tribes throughout the vast territories of Arabia. Arab grammarians intended to portray the *ʿarabiyya* as an entity and have been at pains to show its unity and harmony. It was necessary to simplify the diversity, but by selecting which aspect? Hence the divergencies of opinion. Only precise monographs furnished with statistics and based on texts will give a clear view of the situation.

For all the questions discussed in this article: H. Fleisch, *Traité de philologie arabe*, i, Beirut 1961, §§ 59-63, 65, 101 and 102. (H. Fleisch)

DJAMĀʿA, meeting, assembly. In the religious language of Islam it denotes "the whole company of believers", *djamāʿat al-muʾminīn*, and hence its most usual meaning of "Muslim community", *djamāʿa islāmiyya*. In this sense *djamāʿa* is almost synonymous with *umma* [*q.v.*]. The two terms must, however, be distinguished.

The term *umma* is Ḳurʾānic. It means "people", "nation", and is used in the plural (*umam*). It acquires its religious significance particularly in the Medina period when it becomes, in the singular, "the nation of the Prophet", "the Community, *e.g.*, Ḳurʾān III, 110, etc.). The term *ḥizb Allāh*, "the party of God" is used in a similar sense on two occasions (V, 56; LVIII, 22). On the other hand, although √dj.m.ʿ is of very frequent usage, the word *djamāʿa* itself does not belong to the vocabulary of the Book. It was, however, very soon to appear, for example in the (diplomatic) "Documents" reproduced by Ibn Saʿd and ascribed by him to the Prophet. Letter from Muḥammad to the Ṣāḥib of Baḥrayn: "and that you enter into the Community (*djamāʿa*)". The use of this term was to become general in the *sunna*. We may restrict ourselves to two frequently cited *ḥadīth ṣaḥīḥ* of Ibn ʿAbbās: "Whosoever removes himself from the Community by the space of a single span, withdraws his neck from the halter of Islam", and: "Whosoever dies after being separated from the Community, dies as men died in the days before Islam (*djāhiliyya*)" (translation by H. Laoust).

In Western languages *umma* and *djamāʿa* are very often translated by this same word "community"; and Muslim writers, in fact, find no difficulty in using them interchangeably. (The famous *ḥadīth*: "my community does (or: will) never agree upon error" uses *umma*. Cf. Wensinck, *Handbook* 48 A.). If, etymology apart, one wishes to distinguish them: *umma* is the community as constituting a nation on a religious-legal basis; while *djamāʿa* is the whole body of believers united by their common faith. Both terms equally reflect "the desire to live together" (L. Massignon)—so characteristic of Islam—in accordance with the code of behaviour laid down by the Ḳurʾān for this world and for the hereafter. But it is to the head of *umma* that the study of the ideal structure of this Community as ordained by *siyāsa al-sharʿiyya* is best referred; while the term *djamāʿa* focuses our attention upon the bond which fashions from a group of individuals a community of believers. We may add that in current Islamic terminology, and even in actual popular sentiment, it is *umma* which first and foremost expresses the values of unity and solidarity.

It is by a doctrinal implication that *djamāʿa* comes to bear its technical religious sense. This "assembly of the believers" is united by its faith. It will, accordingly, stand opposed to those who "deviate" and those who "innovate" (even though these latter have not officially left the duly constituted Community, *umma*). And it will be identified with *al-djumla*, "the majority" of Muslims, as opposed to the sects which "are withdrawn apart". Al-Fuḍayl: "The hand of God rests upon the Community (*djamāʿa*). God looks not upon the innovators".

The most widely used expression which embodies this doctrinal significance is *ahl al-sunna wa 'l-djamāʿa* "the people of the Tradition and the Community"; here, Tradition (of the Prophet) and "assembly" of the believers are mutually supporting (cf. L. Veccia Vaglieri, in *Studi Orientalistici in onore di Giorgio Levi Della Vida*, ii, 573 ff.). From a slightly different standpoint, the *ahl al-ʿaḳd wa 'l-ḥall* ("the people who bind and loosen") are an equivalent body. They are the representatives of Community (*umma*) insofar as they give it expression by their consensus (*idjmāʿ* [*q.v.*]). *Djamāʿa* and *idjmāʿ* are two words from the same root; it may be said that the second is the agreement of the first. The two *ḥadīth* of Ibn ʿAbbās mentioned above, as well as that concerning the *umma*, are among the "divinely-revealed texts" which establish the *idjmāʿ*.

In fact, the extent of the *djamāʿa* was to become closely linked with the recognized concept of *idjmāʿ*. It is in the development of Ḥanbalī thought that we find a very particular attachment to the *djamāʿa* which was that of the first Muslims and of them alone; and it is a well-known feature of Ḥanbalī doctrine that the only *idjmāʿ* of value is the consensus of the Companions. Barbahārī, a Ḥanbalī of the 3rd-4th/9th-10th century, would define the *djamāʿa* as "the ancient religion" (*al-dīn al-ʿatīḳ*), by which we understand the practices, beliefs and customs of the Companions during the period of the first three "rightly guided" Caliphs (cf. Abu 'l-Ḥusayn b. al-Farrāʾ, *Ṭabaḳāt al-ḥanābila*, ii, 32-3, cited by H. Laoust, *Ibn Baṭṭa*, 9, n. 1). But if the *djamāʿa* in its strict sense is the community of the Companions, there remains the fact that every Muslim is bound, down through the centuries, to follow it and conform to it. "To follow the Community", *luzūm al-djamāʿa*, is a duty of the believer upon which the Ḥanbalīs have consistently insisted (e.g. Ibn Baṭṭa, *Ibāna*, 5/10). By the same token, "the *djamāʿa* of the Ancients" is kept alive down through the ages. At every epoch those Muslims who are wholly faithful to the Tradition are integrated in the *djamāʿa*. The first *credo* (*ʿAḳīda*, i) of Ibn Ḥanbal describes them as *ahl al-sunna wa 'l-djamāʿa wa 'l-athar*, thus joining to the first two terms the "precedent" of the Prophet and the Companions (cf. H. Laoust, *Ibn Baṭṭa*, 11, n. 1). The expression *ahl al-ḥadīth* ("traditionists") was to become an approximate equivalent, until the appearance of *ahl al-ḥaḳḳ*, which was to have a tendency to prevail later.

The stream of Ḥanbalī doctrine was to remain faithful to this notion of a Community centred upon the faith of the Ancients as the only absolutely authentic faith. Ibn Taymiyya for example was to speak of both *umma* and *djamāʿa*. He was to stress the obligation of the *ahl al-sunna wa 'l-djamāʿa* to follow the "precedents" (*āthār*) of the Prophet "just as much in the depths of their inmost beings (*bāṭin*) as in their external behaviour (*ẓāhir*)", and to follow in the same way the paths of the Companions (*Wāsiṭiyya*, 34, cf. H. Laoust, *ibid.*, 10,n.). This reverential attachment of Ḥanbalism to the *djamāʿa* finally arrives, in a manner of introverted devotion, at the point where the faithful of the Medina period grouped around Muḥammad are recalled, and where this ancient "religion" is revived by each generation of believers until the last hour of the end of time.

The same was not to hold good for the other schools. For example, to the extent that the *idjmāʿ* is understood (e.g. the Shāfiʿī school) to be the consensus of the scholars living in a given generation, and becomes the fourth "source" (distinct from the *sunna*) of Islamic law, *al-djamāʿa* loses its strict

historical reference to the first years of Islam. Already al-Ṭabarī (cited by Rashīd Riḍā, *Khilāfa*, 14) had argued against a *djamāʿa* restricted to the group of the Companions. According to him the *luzūm al-djamāʿa* ought to be defined, without reference to any particular period, as the obedience of the Muslim community to the sovereign that it has chosen for itself; and "whosoever breaks his contract with the sovereign leaves the *djamāʿa*". The verb here employed which signifies "to obey the sovereign" evokes the notion of "the one who commands authority", and must be taken to refer to the Imām, the guide and leader of the Community. The *djamāʿa* will, therefore, be defined by reference no longer to the first Muslims alone, but to every Imām recognized as legitimate. It will become, according to this point of view, a factual reality rather than a value primarily doctrinal, and will thenceforth tend to be supplanted by *umma*.

This is most noticeable in the *ʿilm al-kalām*. Notwithstanding his affirmed respect for Ibn Ḥanbal, Abu 'l-Ḥasan al-Ashʿarī was to present his two celebrated *credo* of the *Ibāna* and the *Maḳālāt* simply as the agreement of the *ahl al-sunna*. Once only is the notion of "community" there in operation: the intercession of the Prophet for "the great sinners of the Community", and *umma* is the term employed (*Maḳālāt*, i, 322). In the *Lumaʿ* likewise, whether it is a question of the attitude (condemned as dissidence) of the Muʿtazilites, or of the consensus of the Community as the foundation of the *idjmāʿ*, it is always *umma* which alone appears. It was no part of the task of *kalām* to devote a chapter to *al-djamāʿa*. As for the works which deal with "Public law" they look at the *Imāma* or the *Khilāfa* from the aspect of the conditions of power, and have no concern to analyse the formal constituent elements of the Community. More and more it is the term *umma* which comes to epitomize the communal fervour of the believers.

And yet *djamāʿa*, with its connotation of doctrinal unity, never entirely disappeared from the technical vocabulary. It could be found, *passim*, in many works; such, too, is the case in the contemporary period. It is found also, incidentally, in the *Ẓuhr al-Islām*, 199, of Aḥmad Amīn citing Masʿūdī. The adjective *djamāʿī* was to retain the same sense. When Ibn ʿAsākir, in the 6th/12th century, wrote his apologetic biography of al-Ashʿarī, his purpose was to describe him as *sunnī*, *djamāʿī*, *ḥadīthī*: and one can recognize in these epithets the formula maintained by the Ḥanbalīs. *Djamāʿī* also must be understood to mean the supporter of the true doctrine of the Ancients. It remains to note that in general the Ashʿarīs call themselves "the people of the Tradition and the Truth", *ahl al-sunna wa 'l-ḥaḳḳ*,—this last word recalling quite accurately the technical sense of *djamāʿa*, but, as is easy to appreciate, with other connotations. In short, *al-djamāʿa*, when understood as a duly constituted *union* of Muslims, tends here to give way to the term *umma*; when it is taken to signify the *unity* of the true beliefs, it is consistently replaced by *al-ḥaḳḳ*.

As regards the contemporary period, mention must be made of the "reformist" movement of the *salafī*, which is broadly receptive to the influences of Ḥanbalī thought. It might, therefore, be expected that their scheme would refer to *djamāʿa*. In fact, and very logically, Rashīd Riḍā, in his analysis of the notion of *idjmāʿ*, examines, in his *Khilāfa*, the meaning of *al-djamāʿa*. But he does not hesitate to expand the strict sense given to it by the Ḥanbalīs, readily admits the definition of Ṭabarī referred to above, and identifies *djamāʿa* with the "men who bind and loosen" in each period. In the same paragraph he uses *umma* in a fairly approximate, but nonetheless not identical, sense. For him the *djamāʿa* is the whole group of those who hold the reins of authority and who must be followed when they are in agreement (*idjmāʿ*). It is the *umma* which is liable to be split by disturbances; the best line of conduct to observe, therefore, (the *ḥadīth* of Ḥudayfa b. al-Yaman) is to remain faithful to the *djamāʿa* and its Imām. Furthermore, the title of Rashīd Riḍā's chapter, "Concerning the power of the *umma* and the meaning of the term *djamāʿa*" is characteristic.

In the *salafī* sense, then, it may be said that the people who constitute the *djamāʿa* are those Muslims whose faith and truth are guaranteed and who are thereby in perfect line of continuity with the faith of the Ancients (*salaf*). To them belongs the right to designate the supreme Imām to whom they promise allegiance (*bayʿa*) in the name of all, and who, by the same token, will be the duly appointed leader of the entire *umma*. The *djamāʿa* only attains its full import when united with its Imām.

The same applies to the more restricted, more localized meaning of the word. Every assembly of Muslims gathered together in order to "perform the prayer" (*ṣalāt* [*q.v.*]) is a *djamāʿa*. This definition is eminently suitable for the obligatory ritual of the *ẓuhr* on Friday, *djumʿa*, which is, accordingly, the day of meeting par excellence; and the mosque, *djāmiʿ*, where the ritual is performed in the place which gathers together the believers. The same holds good for the obligatory prayers performed in congregation on the prescribed festivals. It is in relation to the congregational prayers that the two *credo* of al-Ashʿarī speak of *djamāʿa* in the singular in the *Maḳālāt*, i, 323, and in the plural in the *Ibāna*, 12. This *djamāʿa* of Muslims united in the performance of the prayer, as testimony to their faith, will be of a form and nature which is not so much determined by principle as fixed by the description of its own particular imām "little *imāma*".

(ii) The word has been most regularly used in Morocco. In Algeria, records at least a hundred years old confirm the existence under the name "djemaa", of local administrative assemblies. Their competence to own property was confirmed as regards the patrimony of the "douar", but was suppressed

politically and juridically (decree of 25 May 1863; ruling of 20 May 1868; decree of 11 September 1873, with particular reference to Kabylia). However, even before the 1914 war, public opinion was demanding a liberalization of the system. This was in part the aim of the 1919 reform which established elected "djemaas" within the "mixed commune". The administration was later to attempt, not without circumspection, to develop from these first assemblies the communal evolution of which they contained the nucleus.

As for Algeria, it was no doubt in the Berber regions, and especially in Kabylia, that the first observers had noted the most revealing features of these collective undertakings. The *thajmāʿth* (and variants), which included all the adults but paid regard to individual and family influences, and much nearer to a "senate" than to an *ekklesia*, met regularly, deliberated on all matters of concern to the village and showed a vitality which has endured side by side with official life, even to the point of continuing to exert influence, in certain cases, through the codification of the *ḳānūn*s, an accepted function of public law.

But it is in Morocco, in the High and Middle Atlas, that investigation has demonstrated the system functioning in its purest form. A constant theme of the research conducted up to the present time has been to bring out the triple incidence of these communal customs upon political life which becomes organized, within the canton, in a sort of spontaneous democracy, upon judicial life which is governed by regulations of extraordinary detail, and upon the tenure of property. In 1922, L. Milliot defined the *djamāʿa*s as "representative assemblies of the different groupings of tribe, subdivision, douar, family which make up Muslim society in Morocco. These groupings exercise over vast stretches of territory rights characterized by occupation in the form of cultivation leaving widely scattered areas of fallow-land, and grazing ....".

This economic aspect, stimulating the competition of the two systems of cultivation, the European and the native, the intensive and the extensive, has throughout the colonial period constituted a constant preoccupation for the legislator, administrator and judge through its actual effects on practical life. Juridical definitions have reflected the successive phases of the proceedings and have taken a particular turn in Algeria (*ʿarsh* or *sābga* (*sābiḳa*) land) in Morocco (*blād əj-jmāʿa* (*bilād al-djamāʿa*)), and lastly in Tunisia where this regulation seems to have reached its latest development. Tunisia, however, provides the example which reveals most clearly, through the interference that has taken place between private ownership of estates, collective property and religious foundations or *ḥubus*, both the richness and the danger of this form of tenure which is so exposed to spoliation from all sides.

The juridical designation of the *djamāʿa*, elevated to the small tribal or cantonal senate, gave rise in Morocco to an evolution that was taking shape at the time of the beginning of the Protectorate and which led to its acquiring a competence not merely with regard to property, but also in civil and penal matters. The culminating point was reached at the time of the celebrated "Berber dahir (*ẓahīr*)" of 16 May 1930 which the nationalist opposition, with the support of Islamic opinion throughout the world, at once denounced as an attack upon the religious Law. One of the first measures taken by Morocco after gaining independence was therefore the revocation of this dahir, and the establishment of lay judges incidentally contributed a further step towards modernity.

In short, whatever may be the hazards of this long history, they have served to emphasize the intimate connexion which, in the rural Maghreb, associates the use of this term with certain forms of effort by local groups and of its connexions with the soil. These forms, hitherto characterized by their anarchic particularity, seem at the present day to be adapting themselves to the demands of a more intensive agriculture and of administrative decentralization. That is why, particularly in Morocco, the *djamāʿa* is always found as the central point of programmes of reform. It is possible that, by remarkable sociological conjuncture, certain contemporary evolutions are being based upon the rich communal potentialities comprised, in the Maghreb, by the *djamāʿa*, an ancient word and a reality of long standing.

DJĀMAKIYYA. A term current in the Muslim World in the later Middle-Ages equivalent to salary. Its origin is the Persian *djāma* = "garment", whence *djāmakī*, with the meaning of a man who receives a special uniform as a sign of investiture with an official post. From this came the form *djāmakiyya* with the meaning of that part of the regular salary given in dress (*malbūs, libās*) or cloth (*ḳumāsh*). Ultimately it took the meaning of "salary", exactly as the word *djirāya*, which meant originally a number of loaves of bread sent daily by the Sultan to someone, took the sense of salary in the terminology of the Azharīs during the Ottoman period. *Djāmakiyya* first seems to have acquired the sense of salary under the Saldjūḳs, since the official terminology of the Fāṭimids did not use the term. In his detailed study of the organization of the Fāṭimid Empire, al-Ḳalḳashandī uses only the Arabic term of *rātib* (pl. *rawātib*) (*Ṣubḥ*, iii), but the term appears already in texts concerning the later Saldjūḳs (*e.g.*, Ibn al-Athīr, *Taʾrīkh al-Atābika*), Zangids, and Ayyūbids (*e.g.*, Abū Shāma, *Kitāb al-rawḍatayn*, Ibn Wāṣil, *Mufarridj al-kurūb*, and al-Maḳrīzī, *al-Sulūk*). This last author, speaking of the *adjnād* (soldiers) mentions

mabāligh iḳṭāʿātihim (revenues of their fiefs), *djāmakiyyātihim wa rawātib nafaḳātihim* (the regular payments necessary to cover their expenditure) (*Sulūk*, i, 52). The *djāmakiyyāt* most probably stands here for the part of the regular payment given in the form of dress or cloth. Later on the term was used under the Mamlūks to denote the part of the salary given in money: al-Ḳalḳashandī (*Ṣubḥ* iii, 457) says that the payments of the mamluks of the Sultan were composed of *djāmakiyyāt waʿalīf* (fodder) *wa kiswa* (dress). In the time of Baybars, al-Maḳrīzī uses the term *djāmakiyya* as equivalent to "salary" in general (*e.g.*, *djāmakiyyat al-ḳaḍāʾ*, iii, 475). But al-Nuwayrī (*Nihāyat al-arab*, Cairo 1931, viii, 205) specifies that the *djamakiyyāt* were the regular payments for a category of Mamlūks who worked as clerks (*al-mamālīk al-kitābiyya arbāb al-djāmakiyyāt*). This sense is most probably what he meant when he said later on: *wa asmāʾ arbāb al-istiḥḳāḳāt wa 'l-djāmakiyyāt wa 'l-rawātib wa 'l-ṣilāt* (viii, 218-9). In the Circassian period the *djāmakiyya* was the regular monthly pay of the army, paid at a special parade (*ʿarḍ*) in the sultan's court-yard (*al-ḥawsh al-sulṭānī*) usually beginning in the middle of the Muslim month. It was paid by *ṭabaḳa* [*q.v.*], each individual mamlūk being called by name. For details of the procedure and the rates of pay, see D. Ayalon, *The system of payment in Mamluk military society*, in *JESHO*, i, 1958, 50-6. For the further use of the term in the sense of "salary" see Dozy, *Suppl.* i, 1666.

DJAMAL [see ibil].

al-**DJAMAL**, "the camel" is the name of the famous battle which took place in the month of Djumādā II 36/November-December 656 near al-Baṣra between the Caliph ʿAlī b. Abī Ṭālib on the one hand, and the Prophet's widow ʿĀʾisha [*q.v.*] with the Companions of the Prophet Ṭalḥa b. ʿUbayd Allāh al-Taymī and al-Zubayr b. al-ʿAwwām [*qq.v.*] on the other. At that time it was these two companions who, after ʿAlī, had most authority among the Muslims.

ʿĀʾisha was completing the *ʿumra* in Mecca when she learned of the assassination of the Caliph ʿUthmān b. ʿAffān, and, on the way back to Medina, of the election of ʿAlī to the Caliphate at the same time as the riots in Medina where public order had broken down. Without revealing her intentions she turned back, and when she reached Mecca, gave a fiery speech near the Kaʿba accusing the rabble of the murder of ʿUthmān, and demanding the punishment of the culprits, for ʿUthmān, she said, had been killed 'unjustly' (*maẓlūm^an*) (al-Ṭabarī, i, 3098 etc.); with these words she was alluding to a verse of the Ḳurʾān (XVII, 32/35), which Muʿāwiya was to invoke later (see ʿalī b. abī ṭālib), and which prescribed revenge as a duty in such a case, thus establishing a *ḥadd* [*q.v.*]. She had been one of ʿUthmān's opponents (this was used against her to impugn her right to protest) but she would not condone his murder and made some characteristic remarks on this point (cf. al-Ṭabarī, i, 3097, Ibn Saʿd, iii, 1, 57-8); in particular she could not bear that ʿAlī, towards whom she had for long felt great animosity, should have taken advantage of the murder. Some time later (four months, it is said, after the death of ʿUthmān; al-Ṭabarī, i, 3102) Ṭalḥa and al-Zubayr arrived in Mecca; after rather violent discussions with ʿAlī, who refused them posts in the government, they had asked and obtained permission from him to go to Mecca to perform the *ʿumra*. A conspiracy was formed against ʿAlī, in which took part, besides the persons mentioned above, some Umayyads and other Muslims alarmed by the turn of events. ʿUthmān's assassination had caused a scandal, but the real causes of the rebellion were above all ʿAlī's indulgent attitude towards the culprits, which indicated that they would go unpunished, his weakness towards the dissidents who had become so arrogant and dangerous that several persons had fled, and his popularity-seeking anti-Ḳurayshī policy. In the provinces nearest to the Ḥidjāz, opposition to ʿAlī was strong; in Syria, Muʿāwiya had refused homage; Kūfa had rejected the governor sent by the Caliph, preferring the one already in office, Abū Mūsā al-Ashʿarī [*q.v.*]; elsewhere parties opposed to the newly elected Caliph had been formed. The rebels tried to choose the place offering the best prospects for the success of the insurrection, and in the course of a meeting the conspirators decided to go to Baṣra, in the hope of finding there the money and troops needed for the enterprise. ʿĀʾisha agreed to join the expedition; she was to rouse the people, as Ṭalḥa and al-Zubayr seemed hardly qualified for that rôle; not only had they so stirred up opinion against ʿUthmān that they could be accused of being murderers of the Caliph, but they had also paid homage to ʿAlī immediately after the election; in rebelling against him they were thus violating their pact, so that they had to claim, in order to justify themselves, that they had been forced to pay homage by violence. Ḥafṣa bint ʿUmar [*q.v.*], whose first intention was to follow the rebels, was dissuaded by her brother ʿAbd Allāh [*q.v.*]. After collecting several hundred men with their mounts (600 or 700?) they set off. ʿAlī, hearing of this, realized that he must react in order not to be isolated in Medina. After bringing together, slowly and with difficulty, a contingent of 700 warriors he too set out (according to al-Ṭabarī, i, 3139, the last day of Rabīʿ II). His aim was to intercept the insurgents, but he did not succeed in reaching them; at al-Rabadha, he learned that they had already passed that halt, and as he too needed money and troops, he set off again, in the direction of al-ʿIrāḳ. At the same time the rebels were hurrying to Baṣra. When, in a place called al-Ḥawʾab, dogs barked at the troops, ʿĀʾisha was on the point of giving up the adventure, as she remembered a sort of foreboding of the Prophet's, but they swore to her that this was not al-Ḥawʾab, and, with her mind at rest, she carried on (cf. Yāḳūt, *Muʿdjam*, ii, 352, etc.); this episode is worth mentioning only because of the importance attached to it in the sources. When they reached the outskirts of Baṣra, the rebel leaders opened negotiations and began to make propaganda. ʿĀʾisha, through an emissary and letters to certain notables in the town, tried to persuade the Baṣrans to join the insurrection, the aim of which, she proclaimed, was *iṣlāḥ*; a word that implied, for the rebels, the restoration of the law and its *ḥudūd* and hence revenge for ʿUthmān, the re-establishment of the disrupted social order, the placing of power in the hands of a Caliph legally elected by a committee or *shūrā*, but, for ʿAlī, the restoration of his authority, a return to the observance of the Sunna of the Prophet, and the suppression of privileges. The Baṣrans split into two parties: some followed the governor nominated by

ʿAlī, ʿUt̲h̲mān b. Ḥunayf, who, without deliberately opposing the rebels, temporized while awaiting the arrival of ʿAlī; others made common cause with ʿĀʾis̲h̲a and her two associates, whose forces had grown on the way. In a meeting at al-Mirbad, an esplanade three miles from Baṣra, the rebel leaders addressed the people and their propaganda was successful. Disorders followed, then a mêlée at the "place of the tanners" and on the following days fights near the Dār al-Rizḳ, or supply store (the sources do not agree on details). It is there that the chief of police, Ḥukaym b. D̲j̲abala, was killed. He was too pro-ʿAlī to stand aside and wait without acting. At last, an armistice was concluded: to settle who would hold power in the town of Baṣra, they were to await the return of a messenger sent to Medina to find out whether it was true that Ṭalḥa and al-Zubayr had been forced to pay homage to ʿAlī (evidently the governor was trying to gain time). In the meantime, the situation was not to be altered: the governmental palace, the great mosque, and the *bayt al-māl* were to stay in the hands of the governor Ibn Ḥunayf; but because of the significance attached to the leadership in prayer, it was agreed that this office would be performed by two *imām*s, the governor himself, and another nominated by the insurgents. Ṭalḥa and al-Zubayr quarrelled, as each wanted to have this function, but ʿĀʾis̲h̲a decided that they would exercise it on alternate days, or, according to another version of the facts, that their respective sons Muḥammad and ʿAbd Allāh would exercise it in turn. The inquiry of the messenger sent to Medina was favourable to Ṭalḥa and al-Zubayr, but a letter which had reached the governor declared exactly the opposite of what they asserted. Consequently ʿUt̲h̲mān b. Ḥunayf would not give up his office and a brawl broke out in the mosque. But the most serious fact was the assault made by the rebels on the *bayt al-māl*; they killed or made prisoner (and later decapitated) its guards who were Zuṭṭ [*q.v.*] and Sayābid̲j̲a [*q.v.*]. The attackers moreover forced ʿUt̲h̲mān b. Ḥunayf to leave the palace and pulled out his hair and his beard: he succeeded in getting himself released and joining ʿAlī by threatening them with reprisals against their families in Medina, where his brother Sahl was governor. In these brawls and fights, who were the aggressors? Some traditions praise the moderation of the rebels (ʿĀʾis̲h̲a is said to have forbidden her men to use their hands except in self-defence) but it is evident that it was they who were the attackers, as they needed provisions and money, and were afraid of being caught later between the advancing forces of ʿAlī and those of the governor. With Baṣra occupied, the rebels published an order calling on the population to surrender all who had taken part in the siege of the House (the house of the Caliph ʿUt̲h̲mān), called *nuffār* in the sources, so that they might be killed like dogs. The people obeyed and those killed, it was said, numbered six hundred (only Ḥurḳūṣ b. Zuhayr [*q.v.*] was able to escape because he was protected by his tribe). This slaughter and the distribution of gifts and supplies which Ṭalḥa and al-Zubayr made to their partisans angered part of the population of Baṣra, and 3,000 men went to join ʿAlī at D̲h̲ū Ḳār, among them the Banū ʿAbd al-Ḳays. The tribe of the Tamīm, the most important in Baṣra, on the other hand, remained neutral with its chief al-Aḥnaf b. Ḳays [*q.v.*].

While these events were taking place (the parleys with the governor had lasted, it is said, for twenty-six days), ʿAlī had advanced as far as D̲h̲ū Ḳār, for, instead of marching on Baṣra, he had preferred to approach Kūfa so as to win over its inhabitants to his cause. Unfortunately for him, the governor Abū Mūsā al-As̲h̲ʿarī, although he had recognized ʿAlī's election as valid, exhorted the Kūfans to stay neutral in the approaching civil war and the envoys sent by ʿAlī to Kūfa (al-As̲h̲tar, Ibn ʿAbbās, al-Ḥasan, ʿĀmmār b. Yāsir) had to make a great effort to persuade part of the population (6, 7 or 12 thousand men?) to leave the town and join him. Abū Mūsā was deprived of his office. At last ʿAlī arrived on the outskirts of Baṣra and negotiations were opened between him and the insurgents. Although everyone was convinced that agreement was near, fighting began between the two armies. The same question arises here—who started it? According to some traditions, ʿAlī had ordered his men not to attack, and it was only after the murder of some of his partisans that he felt himself entitled to fight against opponents belonging to the *ahl al-ḳibla* (*Ag̲h̲ānī*, xvi, 132; al-Masʿūdī, *Murūd̲j̲*, iv, 314 ff. etc.). But al-Ṭabarī (i, 3181-3) reports another tradition which explains why and how the battle began: ʿAlī is said to have shown his intention of not according protection to the persons implicated in the murder of the Caliph ʿUt̲h̲mān, and these, anxious about their fate, are said to have provoked the conflict by a sudden attack unknown to ʿAlī. The battle lasted from morning to sunset (according to the (pseudo-) Ibn Ḳutayba, Cairo 1377, 77, seven days). The sources differ on the date when it took place: the most frequent date is 10 D̲j̲umādā II 36/4 December 656, but according to Caetani (A.H. 36, § 200) the date 15 D̲j̲umādā II/9 December is to be preferred.

It is a striking fact that the warriors often belonged to the same tribes, to the same clans, and sometimes even to the same families, and they fought one another regardless of kinship. ʿĀʾis̲h̲a was present during the fighting on a camel, in a palanquin the cover of which had been reinforced by plates of iron and other materials (al-Masʿūdī, *Murūd̲j̲*, iv, 315) and the camel was protected by a kind of armature (al-Dīnawarī, 159); at the end of the battle, the palanquin had so many arrows stuck in it that it looked like a hedgehog. ʿĀʾis̲h̲a was not hit; all she received was scratch on an arm. The fighting round the camel was particularly fierce; the defenders followed one after the other while declaiming verses; those who fell handed the bridle of ʿĀʾis̲h̲a's camel to other fighters and there were many dead (but the figures vary from 40 to 2,700). The victory went to ʿAlī, when his soldiers succeeded in hamstringing the camel, thus forcing the beast to lie down on its side with its precious burden. But even before this last episode the battle was virtually lost, as Ṭalḥa, struck by an arrow which many sources say was shot by Marwān b. al-Ḥakam [*q.v.*], had retired into a house where he soon died, and al-Zubayr, who was no longer very sure of the merits or prospects of his cause, had withdrawn from the battlefield after a talk with ʿAlī, who had reminded him of an episode of the past, and of certain sayings of the Prophet. Al-Zubayr was pursued by some Tamīmīs and treacherously killed in a lonely place (Wādī al-Sibāʿ); al-Aḥnaf b. Ḳays was suspected of instigating his murder (for the death of al-Zubayr, see also Ibn Badrūn, *S̲h̲arḥ Ḳaṣīdat Ibn ʿAbdūn*, ed. Dozy, Leiden 1848, 150-4).

The sources tell of a host of episodes concerning duels, the courage of the combatants, the verses declaimed by them, but they do not explain the

development of the battle from the tactical point of view; the general picture that emerges from the mass of details is that, following the Arab custom, the battle consisted of a series of duels and encounters along the opposing ranks, and not of a general engagement. The most serious fighting was undoubtedly that which took place round the camel. It is impossible to calculate the numbers of combatants or of casualties because of the great variation in the figures (which vary, for the dead, between 6,000 and 30,000; the latter figure is considerably exaggerated, since for the forces of ʿAlī alone, the combined figure of the men who followed him from Medina and those who joined him later can hardly have exceeded 15,000 men). ʿĀʾis̲h̲a was taken prisoner, but far from being ill-treated was shown great respect. ʿAlī decided, however, that she must return to Medina and on that point he was inflexible. He granted *amān* to all the insurgents, and certain compromised individuals (Marwān b. al-Ḥakam, for example) were able to join Muʿāwiya in Syria. An act which caused a stir among ʿAlī's partisans, and which provoked recriminations among the most fervent of them, was his refusal to allow them to take captive the women and children of the conquered or to seize their goods, with the exception of things found on the battlefield (al-Ṭabarī, i, 3227; al-Masʿūdī, *Murūd̲j̲*, iv, 316 ff., etc.); they asked why enemies whose blood it had been judged lawful to shed should be treated in this way; the K̲h̲āridjites made this afterwards one of their points of indictment against ʿAlī.

After the battle ʿAlī received the homage of the inhabitants of Baṣra, of which he nominated Ibn ʿAbbās governor (with Ziyād b. Abīhi at his side) thus causing the indignation of al-As̲h̲tar, as two other sons of al-ʿAbbās had the same office, one in the Yemen, and the other in Mecca.

In the whole insurrection of al-D̲j̲amal, the preeminent personality is ʿĀʾis̲h̲a; she appears as energetic, resolved (except for a moment at al-Ḥawʾab) to gain her end and respected in her decisions; while Ṭalḥa and al-Zubayr, under her orders, quarrelling with each other, making weak excuses to defend themselves against the accusation of having broken faith with ʿAlī, withdrawing during the battle instead of fighting to the death, look like men impelled only by ambition and at the same time lacking the energy and firmness necessary to succeed. Caetani assumed that there was an organizer of the enterprise behind the widow of the Prophet, namely Marwān, who followed the insurgents; the theory is attractive, but there is nothing to confirm it; if Marwān was in fact the insurgents' counsellor, he operated so discreetly that the sources hardly speak of his actions.

Bibliography: Ṭabarī, i, 3091-233 (in detail, excluding episodes: ʿAlī prepares to fight his opponents: 3091-6; ʿĀʾisha excites the people in Mecca and calls for vengeance for the murder of ʿUt̲h̲mān, agreement and march of the rebels, who occupy Baṣra: 3096-106, 3111-38; march of ʿAlī halting in D̲h̲ū Ḳār: 3106-11, 3141-3, 3154 ff.; situation in Kūfa and ʿAlī's efforts to win the inhabitants to his cause, removal of Abū Mūsa: 3140 ff., 3145-54, 3172 ff., 3187 ff.; ʿAlī's march towards Baṣra: 3138-40; negotiations between ʿAlī and the rebels: 3155-8, 3175 ff.; events preceding the battle, neutrality of al-Aḥnaf; 3143-5, 3162-9; battle: 3174-98; ʿAlī and ʿĀʾis̲h̲a after the battle: 3224-6, 3231; homage of the Baṣrans and nomination of Ibn ʿAbbās as governor of the town: 3229 ff.; Ṭabarī transl. Zotenberg iii, 658-64 (with some additions); Balād̲h̲urī, *Ansāb*, ms. Paris, ff. 467 recto-493 verso (contains traditions neglected by Ṭabarī: cf. G. Levi Della Vida, *Il Califfato di ʿAlī secondo il Kitāb Ansāb al-Aŝrāf di al-Balāḏurī*, in *RSO*, vi (1913), 440-9); Yaʿḳūbī, ii, 209-13; Abū Ḥanīfa al-Dīnawarī, *al-Ak̲h̲bār al-ṭiwāl*, 150-63; (pseudo) Ibn Ḳutayba, *K. al-Imāma wa 'l-siyāsa*, ed. Muḥ. Maḥmūd al-Rāfiʿī, Cairo 1322/1904, i, 88-133; idem, ed., Muṣṭafā al-Bābī al-Ḥalabī, second ed. 1377/1957, i, 52-79 (speeches, letters and details missing elsewhere); Masʿūdī, *Murūd̲j̲*, iv, 292 ff., 304-23, 324-37; idem, *Tanbīh*, 295; Ibn Miskawayh, *Tad̲j̲arib al-umam*, facsimile of the Istanbul ms., i, 518-62; Ibn al-At̲h̲īr, *Kāmil*, iii, 164-218 (résumé of Ṭabarī); Ibn Abi 'l-Ḥadīd; *S̲h̲arḥ ʿalā K. Nahd̲j̲ al-balāg̲h̲a*, Cairo 1329, ii, 77-82, 497-501 (passage interesting for details of the occupation of Baṣra); Ibn Kat̲h̲īr, *Bidāya*, vi, 229-44 (with details missing elsewhere); Ibn K̲h̲aldūn, ii, App., 153-61 (good résumé of Ṭabarī). The résumés of Ibn Tag̲h̲rībirdī, D̲h̲ahabī, and Abu 'l-Fidāʾ are not important. Much information about al-D̲j̲amal and especially about its episodes and the verses declaimed on that occasion are to be found scattered among the books of *adab* (such as Mubarrad; *Ag̲h̲ānī*; *ʿIḳd*; Bayhaḳī, *Maḥāsin*; Ibn Ḳutayba, *ʿUyūn*; D̲j̲āḥiẓ, *Bayān*; etc., and in biographical collections, *e.g.* in Ibn Saʿd; Ibn al-At̲h̲īr, *Usd*; Ibn Ḥad̲j̲ar, *Tahd̲h̲īb*; Ibn K̲h̲allikān etc. The following are passages with a certain historic interest; Ibn Saʿd, iii, 1, 20; v, 26; *Ag̲h̲ānī*, xvi, 131; *ʿIḳd*, ed. Bulāḳ 1293, ii, 275-84; Ibn ʿAbd al-Barr, *Istīʿāb*, Ḥaydarābād 1318-9, 209 (part played by al-Zubayr), 213 ff. (part played by Ṭalḥa). Besides the well-known histories of Weil, A. Müller, and Muir, see also: Fr. Buhl, *ʿAlī som praetendent og Kalif*, Copenhagen 1921, 40-55; N. Abbott, *Aishah the beloved of Mohammed*, Chicago 1942 and especially Caetani, *Annali*, 36 A.H., §§ 21-302. (L. VECCIA VAGLIERI)

D̲J̲AMĀL [see ʿILM AL-D̲J̲AMĀL].

D̲J̲AMĀL AL-DĪN AL-AFG̲H̲ĀNĪ, AL-SAYYID MUḤAMMAD B. ṢAFDAR, was one of the most outstanding figures of nineteenth century Islam. Cultured and versed in mediaeval Muslim philosophy, he devoted his life and talents to the service of the Muslim revival. He was, in the words of E. G. Browne, at the same time a philosopher, writer, orator and journalist. Towards colonial powers he was the first to take the political attitude since adopted by many movements of national liberation. He is known above all as the founder of modern Muslim anticolonialism, admired unreservedly by many and considered by his opponents as a dangerous agitator. There is, on the other hand, a tendency to overlook the intellectual side of his personality, to forget his importance as a thinker. Notwithstanding the factors that crowded in on him (the decadence and lethargy of the Muslim countries, the increasing control of their economic and political life by European powers, the diffusion in the East of an atheism claiming its origin in Darwin) he had a clear view of the situation. It is with him that begins the reform movement which gave rise to the Salafiyya and, later, the Muslim Brothers. He expresses almost all the attitudes adopted between 1900 and 1950 by Muslim apologetics. By the spoken and written word he preached the necessity of a Muslim revival, both in thought (the need to throw off blind fatalism and give intelligence and freedom their

proper place in life) and in action. Courageous and uncompromising, he aroused and strengthened the enthusiasm of his audiences wherever he went in his long years of exile. In Egypt he influenced the youth of Cairo and Alexandria, so that his personality left its mark both on future moderate leaders and partisans of immediate violence. He supported movements working for constitutional liberties and fought for liberation from foreign control (Egypt, Persia). He attacked Muslim rulers who opposed reform or did not show enough resistance to European encroachments. He even envisaged the possibility of political assassination. His ultimate object was to unite Muslim states (including Shīʿī Persia) into a single Caliphate, able to repulse European interference and recreate the glory of Islam. The pan-Islamic idea was the great passion of his life. He remained unmarried, made do with the absolute minimum in the way of food and clothing and took no stimulants other than tea and tobacco.

His family descended from Ḥusayn b. ʿAlī through the famous traditionist ʿAlī al-Tirmidhī, whence his right to use the title Sayyid. According to his own account he was born at Asʿadābād near Konar, to the east and in the district of Kābul (Afghānistān) in 1254/1838-9 to a family of the Ḥanafī school. However, Shīʿī writings give his place of birth as Asadābād near Hamadān in Persia; this version claims that he pretended to be of Afghān nationality, in order to escape the despotic power of Persia. He did in fact spend his years of childhood and adolescence in Afghānistān. At Kābul he followed the usual Muslim pattern of university studies and in addition began to pay attention to philosophy and the exact sciences, through the still mediaeval methods used at that time. Then he spent more than a year in India, where he received a more modern education, and made the pilgrimage to Mecca (1273/1857); on his return, he went back to Afghānistān and entered the service of the *amīr* Dūst Muḥammad Khān [*q.v.*], whom he accompanied on his campaign against Herāt. The *amīr*'s death led to civil war between his sons over the succession [see AFGHĀNISTĀN]. Djamāl al-Dīn taking sides with one of them, Muḥammad Aʿẓam, shared the short-lived successes of that prince as his minister. But when the rival faction under Shīr ʿAlī finally triumphed, he judged it prudent to leave the country. On the pretext of making the pilgrimage a second time (1285/1869), he went to India where he remained for less than two months; he was kept under observation by the British, and requested to leave as soon as possible. He then went to Cairo where he stayed for forty days, became acquainted with Azharīs and gave lectures in his home. Then he went to Constantinople (1287/1870). As he already enjoyed a brilliant reputation, the high society of the Turkish capital gave him an enthusiastic welcome. He was soon called to the council of public education and invited to give lectures at the Aya Sofya and the mosque of Sulṭān Aḥmed. But many were jealous of his success. A lecture given at the *Dār al-Funūn* on the usefulness of the arts gave rise to such criticisms (especially from the *shaykh al-Islām*, Ḥasan Fehmī) that he decided to leave Turkey. Certain of his words on the rôle of prophets in the organization of societies had been twisted to look like rationalism.

He went to Cairo (March 1871) with no thought of settling there; but the welcome he received made him decide to stay. The government made him an annuity of 12,000 Egyptian piastres without asking anything of him in exchange. Young men, among them Muḥammad ʿAbduh, the future chief muftī of Egypt, and Saʿd Zaghlūl, the future hero in the struggle for Egyptian independence, gathered round him. At his home he gave them lectures on various subjects, read to them from Muslim philosophy and generally broadened their outlook. A wider circle, composed of these same pupils and older people, would listen to him at the "Café de la Poste" speaking on literature, science, politics etc. He urged the young people to fight with the written word by going into journalism, considered as the modern method of influencing people's minds. He gave his encouragement to Adīb Isḥāḳ who founded the review *Miṣr*, then the daily *al-Tidjāra*; he helped found *Mirʾāt al-Sharḳ*. He contributed himself to these journals, but above all got his pupils to do so. He aroused patriotic resistance to European interference in the question of the Egyptian debt. In 1878 he joined the Scottish Freemasons; but, disillusioned, he founded an Egyptian lodge affiliated to the French *Grand Orient*, whose three hundred members formed the fieriest element of the nationalist youth. Politics were discussed in the lodge and plans for reforms drawn up. At that time, Djamāl al-Dīn was involved in all requests for a parliamentary régime. He is even said to have suggested to Muḥammad ʿAbduh the idea of assassinating the Khedive Ismāʿīl. The replacement of Ismāʿīl by the Khedive Tawfīḳ (1879) put an end to any such project. In bad odour with the conservative Azharīs and the Council of Ministers, closely watched by the British, Djamāl al-Dīn was finally expelled on the instigation of the latter (September 1879). Next he went to India, living under close scrutiny first at Ḥaydarābād, then at Calcutta, where the British requested him to remain as long as the ʿUrābī Pasha affair lasted. It was while staying in Ḥaydarābād that he composed in Persian his refutation of materialists [see DAHRIYYA]. He begins with an attack on Darwin's ideas and goes on to assert that only religion can ensure the stability of society and the strength of nations, whilst atheistic materialism is the cause of decay and debasement. He stresses this assertion by detailing all that belief in God and religion gives a society, first in terms of the collectivity: pride in the knowledge of one's superiority to animals and of belonging to the finest community, *i.e.*, Islam, and also in terms of the individual: fear of stricture, loyalty and truthfulness. He attributes the loss of political supremacy of certain states to materialism (Epicureanism in Greece, the doctrines of Voltaire and Rousseau in France etc.). He ends with an apologia for Islam, rendered antonomasically as religion.

During this time the situation in Egypt was becoming explosive. In 1881 ʿUrābī Pasha rose up against the Khedive, the Circassian officers in the army, and foreigners. It is certain that Djamāl al-Dīn's activities in Egypt had helped to stir up unrest. The revolt failed because of the British intervention of 1882 ending in the occupation of the country. Djamāl al-Dīn left India. We next find him in London in the spring of 1883, when Wilfrid Scawen Blunt met him. According to Blunt he had just returned from the United States where, after leaving India, he stayed for a few months with a view to naturalization. (This information given by Blunt without any explanation, cf. Browne, 401, is contested by all Arab studies on the subject; a letter from Djamāl al-Dīn to Muḥammad ʿAbduh written in Port Said on the 23 September—no mention of the year—bears simply the instruction to write to him in London where he is going. It can

only refer to 23 September 1882 although a number of studies in Arabic prefer 1883. But let us look at his subsequent activities). On 18 May 1883 in the *Journal des Débats* of Paris he published a reply to the lecture which Ernest Renan had given at the Sorbonne on 29 March 1883 on *L'Islam et la science* and which had caused a great deal of feeling in Muslim circles in Paris. In his reply he asserted that Islam is compatible with science, that in the past there had been Muslim scientists, some of them Arabs; only the present state of Islam could support the opposite view. On 3 September 1883 Blunt met him in Paris. He was conducting a campaign against British policy in Muslim countries. Leading newspapers published articles by him which made an impact on influential circles (on the Eastern policy of Russia and Great Britain, the situation Turkey and Egypt, the importance and justification of the movement brought about in the Sudan by the Mahdī). But the outstanding feature of his stay in Paris was the joint publication with Muḥammad ʿAbduh, who had joined him and acted as his editor, of an Arabic weekly *Urwa al-Wuthḳā* (The Indissoluble Link). This journal was the organ of a secret Muslim society of the same name which financed it. The first number appeared on 15 Djumādā I 1301/13 March 1884 and the eighteenth and last on 26 Dhu 'l-Ḥidjdja 1301/16 October 1884. Sent free of charge to members of the association and anyone else requesting it, its entry into Egypt and India was barred by the British (confiscations and heavy fines for being in possession of it). In spite of various stratagems (such as sending it in closed envelopes, as Djamāl al-Dīn later revealed) it did not reach enough readers and had to lapse. Its influence was nevertheless considerable. It attacked British action in Muslim countries. It emphasized the doctrinal grounds on which Islam should lean, in order to recover its strength. In 1885 Muḥammad ʿAbduh left his mentor and went to Beirut; from then on the two men followed politically divergent paths. Muḥammad ʿAbduh temporized, concentrating mainly on reforms that were immediately possible, above all in teaching. Djamāl al-Dīn continued as a lone pilgrim along the road to pan-Islamism.

In 1885, on the suggestion of W. S. Blunt, British statesmen approached Djamāl al-Dīn, in spite of the aggressive character of his anti-British activities, over steps to be taken with regard to the movement of the Mahdī in the Sudan. The discussions led to no practical result. Shortly afterwards (1886) Djamāl al-Dīn was invited by telegram to the court of Shāh Nāṣir al-Dīn in Tehran. He was given a lavish reception and was earmarked for high office. But very soon his increasing popularity and influence became offensive to the Shāh and he was forced to leave Persia "for health reasons". Next he went to Russia where he established important political contacts and on behalf of Russian Muslims obtained the Tsar's permission to have the Ḳur'ān and religious books published. He stayed there till 1889. On his way to the Paris World Fair he met the Shāh in Munich, and was persuaded by him to return to Persia. During his second stay there Djamāl al-Dīn had cause to realise how changeable the sovereign was. Djamāl al-Dīn had drawn up a plan of legal reforms; by criticizing it the jealous and scheming grand vizier Mīrzā ʿAlī Aṣghar Khān, *amīn al-sulṭān*, reversed the Shāh's favourable attitude. Djamāl al-Dīn retired to the sanctuary of Shāh ʿAbd al-ʿAẓīm near Teheran. In an asylum considered inviolable [see BAST], he remained for seven months, sourrounded by a group of admirers who listened avidly to his theories for politcal reform in the oppressed country. Urged by the grand vizier and spurning the right of asylum, the Shāh had him forcibly removed by 500 cavalry, put into chains and despite his delicate state of health taken as far as Khāniḳīn on the Turko-Persian border (beginning of 1891). From then on Djamāl al-Dīn showed nothing but hatred and a desire for vengeance towards the Shāh, an attitude which Aḥmad Amīn contrasts with the nobler feelings of other exiled reformers. From Baṣra, where he stayed just long enough to recover his health, he sent a scorching letter to Mīrzā Ḥasan-i Shīrāzī, the first *mudjtahid* of Sāmarrā, opposing the Shāh's decision of March 1890 to grant the tobacco rights of Persia to a British firm. He mentioned other concessions made to Europeans and accused the Shāh of wasting public moneys to the advantage of "the enemies of Islam". He also denounced other abuses and cruelty by members of the government, particularly ʿAli Aṣghar Khān (see this letter in Arabic in *Manār*, x, 820 ff., and in English in Browne, 15-21). His letter had swift results; the *mudjtahid* published a *fatwā* prohibiting the use of tobacco to all believers until the government cancelled the contract of concession. The government had to give in and compensate the concessionaires. Djamāl al-Dīn then went to London for a year conducting a violent campaign through articles and lectures against the régime prevailing in Persia. He contributed particularly to the bilingual monthly review (in Arabic and English) *Ḍiyā' al-Khāfiḳayn*, "Radiance from the two hemispheres", which he helped to found (1892). He demanded the deposition of the Shāh. He looked especially to the professional men of religion, assuring them they were the ramparts of Islam against European designs. His repeated appeals, the feeling caused by his expulsion and the successful tobacco boycott were the beginning of a powerful movement for reform backed by the Persian religious authorities.

The closing years of Djamāl al-Dīn's life were clouded by sadness. He spent them so to speak in a gilded cage at Constantinople, where sultan ʿAbd al-Ḥamīd had twice summoned him through his ambassador in London (1892). After first declining, Djamāl al-Dīn consented to go. Was the sultan sincere in inviting the illustrious champion of a pan-Islamism, in which Turkey would have played a major part, and did he really intend to work with him towards its realization? Or, as Aḥmad Amīn suggests, did he want Djamāl al-Dīn near him to be able to neutralize his influence more effectively? It is difficult to say. The newcomer was given a fine house on the hill of Nishāntāsh, not far from the imperial palace of Yildiz. He received 75 Ottoman pounds a month and was allowed to keep contact with people wishing intercourse with him. The sultan behaved kindly towards his guest, listened to him to begin with at least and persuaded him to drop his resentful attitude to the Shāh. He even offered him the post of *shaykh al-Islām*, but he declined it. That was the turning-point. Intrigues and rivalries, especially on the part of Abu 'l-Hudā, the leading religious dignitary at the court, did the rest. Relations between the sultan and his guest became extremely frigid. Djamāl al-Dīn made several requests for permission to leave, which always met finally with a negative reply. We have some idea of his position at that time from the visitors he received. He was pained and dejected by the sight of so much cowardice around him. He

criticized Muslims for their boastfulness and inactivity. His ideas were twisted so that he was accused, for example, of wanting to recognize the young Khedive ʿAbbās as Caliph because the latter had gone out of his way to meet him during a walk one day. But he continued to profess the same ideas on the need for constitutional liberties and on Islam, the one solid foundation of reformed Muslim states of the future. When on 11 March 1896 the Shāh fell victim to an assassin who was a loyal follower of Djamāl al-Dīn, he was accused of guiding the murderer's hand. He defended himself against the charge, notably in his statements shortly afterwards to the correspondent of the Paris newspaper *Le Temps*. But his position was even more precarious.

He died on 9 March 1897 from cancer of the chin; rumour had it that Abu 'l-Hudā ordered the doctor only to pretend to treat him, or even poisoned him. He was buried in the cemetery of Nishāntāsh. At the end of December 1944, his remains were taken to Afghānistān and laid to rest on 2 January 1945 in the suburbs of Kābul near ʿAlī-Ābād, where a mausoleum had been raised to him.

Despite his knowledge of Muslim theology and philosophy, Djamāl al-Dīn wrote little on these subjects. His treatise on the refutation of materialists was soon translated [see DAHRIYYA]. He has left an extremely succinct outline of the history of Afghānistān called *Tatimmat al-bayān* (lith. Cairo, undated, 45 p.) and the article *Bābī* in the *Dāʾirat al-Maʿārif* of Buṭrus al-Bustānī. But his pamphlets and political articles above all establish him as a commentator on current affairs. Apart from those in European languages, others in Arabic are to be found in the Egyptian press of about 1872-9 under his own name or such pseudonyms as Muẓhir b. Waḍḍāḥ; he later contributed to *al-ʿUrwa al-Wuthḳā* (anonymously) and to *Ḍiyāʾ al-Khāfiḳayn* (signing al-Sayyid or else al-Sayyid al-Ḥusaynī). It should finally be noted that the intensification of the struggle against the Western colonial powers after the war of 1939-45 gave Djamāl al-Dīn a topical interest. Consequently, his life and ideas became the subject of several works published in Cairo and intended for the general public.

Bibliography: The Arabic translation of Djamāl al-Dīn al-Afghānī's work, *al-Radd ʿalā 'l-Dahriyyīn*, Cairo 1925, is preceded by a biography (7-19) taken from the review *al-Hilāl*, Cairo, 1 April 1897; Edward G. Browne, *The Persian Revolution of 1905-1909*, Cambridge 1919, contains a detailed biography based on original documents, appreciations and bibliography; Wilfrid Scawen Blunt, *Secret history of the English occupation of Egypt*, New York 1922; Rashīd Riḍā, *Taʾrīkh al-Ustādh al-Imām al-Shaykh Muḥammad ʿAbduh*, Cairo 1931, brings together documents, extracts of biographies, articles by Djamāl al-Dīn and articles from *al-ʿUrwa al-Wuthḳā*; the articles from that review have been reprinted several times in a single volume, first edition Beirut 1328/1910; L. Massignon, in *RMM*, xii (1910), 561 ff., and in *REI*, 1927, 297-301; Vollers, in *ZDMG*, xliii, 108; Ernest Renan, *L'Islam et la science*, lecture delivered at the Sorbonne on 29 March 1883, Arabic translation and refutation by Ḥasan Efendi ʿAṣīm (Cairo, lith., undated); German translation of the Renan lecture, Djamāl al-Dīn's reply and Renan's reply to that reply in Ernest Renan, *Der Islam und die Wissenschaft* etc., Basle 1883; two lectures by Djamāl al-Dīn (on education and trade) in *Miṣr* (Alexandria 1296, 5 Djumādā I); two articles on despotic governments (*fi 'l-ḥukūmāt al-istibdādiyya*) in *al-Manār*, iii. Considerable information is to be found in articles from periodicals on visits to Djamāl al-Dīn and interviews with him. Cf. in German *Berliner Tageblatt* (23 June 1896, evening edition) and *Beilage zur Allgemeine Zeitung* (Munich, 24 June 1896). Muḥammad al-Makhzūmī, *Khāṭirāt Djamāl al-Dīn*, Beirut 1931 (a fundamental work, reporting many conversations between the author and Djamāl al-Dīn, in the course of which most of the topics of modern Muslim apologetic are raised in turn); ʿAbd al-Ḳādir al-Maghribī, *Djamāl al-Dīn*, Cairo, collection *Iḳraʾ*, n. 68; Charles C. Adams, *Islam and Modernism in Egypt*, London 1933, 4-17; Aḥmad Amīn, *Zuʿamāʾ al-Iṣlāḥ fi 'l-ʿaṣr al-ḥadīth*, Cairo 1948, 59-120; Maḥmūd Ḳāsim, *Djamāl al-Dīn al-Afghānī, ḥayātuhu wa-falsafatuhu*, Cairo [undated, about 1955], with a hitherto unpublished letter; Maḥmūd Abūriyya, *Djamāl al-Dīn al-Afghānī*, Cairo 1958, a popularization but with an interesting bibliography; *Kabul almanack*, year 1323, 344-7 (in Pashtō).

I. GOLDZIHER-[J. JOMIER]

DJAMĀL AL-DĪN AḲSARAYĪ, a Turkish philosopher and theologian, who was born and died (791/1389?) at Aḳsaray. According to tradition Djamāl al-Dīn Meḥmed, who during his lifetime was known by the name of Djamālī, is said to have been the great-grandson of Fakhr al-Dīn Rāzī. He was appointed instructor at the *madrasa* of Zindjirli, at Aḳsaray, after learning by heart the *Ṣaḥāḥ*, al-Djawharī's Arabic lexicographical work, an indispensable requirement of anyone seeking to obtain this appointment. Like the ancient Greek philosophers he split up his very numerous pupils into three classes: those in the first class, known as *meshāʾiyyūn* (peripatetic), met outside the door of his house and accompanied their master to the *madrasa*, his lesson being given as they walked along; those in the second class, known as *riwāḳiyyūn* (stoics), awaited him under the pillars of the *madrasa* where their master, still standing, gave his second lesson; finally he went into the hall of the *madrasa* to join the pupils of the third class. The learned Molla Fenārī was one of his pupils; another scholar, Sayyid Sharīf Djurdjānī, attracted by the master's reputation, is said to have started out from Ḳaramān to come to attend his lectures, but the news of Djamāl al-Dīn's death interrupted his journey. According to a written tradition recorded by Ḥuseyn Ḥusām al-Dīn in his *Amasya taʾrīkhi* (a work which appeared in 5 vol. in Istanbul 1330-2 and 1927-35), Djamāl al-Dīn is said to have held office as *ḳāḍī ʿasker* to the governor of Amasya, Ḥādjdjī Shādgeldi, and to have retired to Aḳsaray in 783/1381 after the latter's defeat by the Amīr of Sivas, Ḳāḍī Burhān al-Dīn; however, this tradition derives from an unreliable source and must be treated with reserve. Writers differ as to the year of Djamāl al-Dīn's death: 1377 according to Brockelmann, 1389 according to Tahir Bursalı, 1388 according to Adnan Adıvar. His works in manuscript are divided among various libraries; with the exception of a moral treatise entitled *Akhlāḳ-i Djamālī*, they consist for the most part of commentaries; a commentary on *al-Ghāya al-ḳuṣwā* of al-Bayḍāwī; commentaries on theological works, *Sharḥ al-īḍāḥ*, *Sharḥ-i mushkilāt al-Ḳurʾān al-karīm*; on medical works, *Ḥāl al-mūdjiz*; on jurisprudence, *Ḥāshiyat-i multaḳā*; on syntax, *Sharḥ al-lubāb al-musammā bi-kashf al-iʿrāb*, etc.

Bibliography: Brockelmann, S II, 328; T. Bursalı, *ʿOthmānlî Müellifleri*, i, 265; A. Adnan Adıvar, *La Science chez les Turcs Ottomans*, Paris 1939, 17; *Türk Ansiklopedisi*, s.v. *Cemaleddin Aksarayı*. (I. MÉLIKOFF)

DJAMĀL AL-DĪN (T. Cemaleddin) **EFENDI**, 1848-1919, Ottoman Shaykh al-Islām, was born in Istanbul (9 Djumādā I 1264/13 April 1848), the son of the *ḳāḍīʿasker* Meḥmed Khālid Ef. Educated by his father and by private tutors, he attained the rank of *mudarris* and entered the secretariat of the Shaykh al-Islām's department. In 1295/1880 he was appointed Secretary (*mektūbdju*), with the rank of *mūṣile-i Süleymāniyye*, then became *ḳāḍīʿasker* of Rūmeli, and in Muḥarram 1309/August 1891 Shaykh al-Islām. He held office until 1327/1909, retaining his post in the cabinets formed immediately after the revival of the Constituent Assembly in 1908. He became Shaykh al-Islām again in 1912, in the cabinets of Ghāzī Aḥmed Mukhtār Pasha and Kāmil Pasha, but lost office with the fall of Kāmil Pasha's cabinet in the *coup* of 1331/1913. Like many prominent personalities who were known to be opposed to the Society for Union and Progress he was banished from Istanbul, and spent his last years in Egypt, where he died in Radjab 1337/April 1919. He is buried in Istanbul. A shrewd and affable man, he won the confidence of ʿAbd al-Ḥamīd II and managed to conform to the exigencies of his time. He was a writer of some power and an amateur of *dīwān* literature.

Bibliography: Başvekâlet Arşivi, sicill-i ahval defteri, no. 47, 143; *ʿIlmiyye Sālnāmesi*, Istanbul 1334, 615 ff.; Djamāl al-Dīn Efendi, *Khāṭirāt-i siyāsiyye*, Istanbul 1336; Aḥmad Mukhtār, *Inṭāḳ-i ḥaḳḳ*, Istanbul 1926; Ali Fuad Türkgeldi, *Görüp işittiklerim*, Ankara 1949, 24 ff. (CAVID BAYSUN)

DJAMĀL AL-DĪN HANSWĪ [see HANSWĪ, DJAMĀL AL-DĪN].

DJAMĀL AL-ḤUSAYNĪ, a complimentary title of the Persian divine and historian AMĪR DJAMĀL [AL-DĪN] ʿAṬĀʾ ALLĀH B. FAḌL ALLĀH AL-ḤUSAYNĪ AL-DASHTAKĪ AL-SHĪRĀZĪ, who flourished at Harāt during the reign of Sulṭān Ḥusayn the Tīmūrid (875-911/1470-1505); the probable date of his death is 926/1520. His known works are: (1) *Rawḍat al-aḥbāb fī siyar al-Nabī wa 'l-āl wa 'l-aṣḥāb*, a history of Muḥammad, his family and companions, written at the request of Mīr ʿAlī Shīr and completed in 900/1494-5 (Lucknow ed. 1297/1880-2, Turkish tr. Constantinople 1268/1852); (2) *Tuḥfat al-aḥibbāʾ fī manāḳib Āl al-ʿAbāʾ*, on the merits of Muḥammad, Fāṭima, etc.; (3) *Riyāḍ al-siyar*.

Bibliography: For details of MSS., and additional biographical information, see Storey, ii/1, 189-92, and i/2, 1254-5. (R. M. SAVORY)

DJAMĀL PASHA [see DJEMĀL PASHA].

DJAMĀLĪ, MAWLĀNĀ ʿALĀʾ AL-DĪN ʿALĪ B. AḤMAD B. MUḤAMMAD AL-DJAMĀLĪ, Ottoman Shaykh al-Islām from 908/1502 to 932/1526, also called simply ʿAlī Čelebi or Zenbilli ʿAlī Efendi, was of a family of *shaykhs* and scholars of Ḳaramān who had settled in Amasya. Djamālī was born in this city (Ḥ. Ḥusām al-Dīn, *Amasya taʾrīkhi*, i, Istanbul 1327, 105, 321). After his studies under such famous scholars as Mollā Khusraw in Istanbul and Ḥusām-zāde Muṣliḥ al-Dīn in Bursa Djamālī was appointed a *mudarris* at the ʿAlī Beg Madrasa in Edirne. His cousin, Shaykh Muḥammad Djamālī in Amasya, was using his influence in favour of Bāyazīd against Djem, rivals for the succession to Meḥemmed II (cf. Madjdī, *Ḥadāʾiḳ al-shaḳāʾiḳ*, Istanbul 1269, 285).

ʿAlī Djamālī had to resign when Ḳaramānī Meḥemmed, who favoured Djem, became grand vizier in 881/1476. But with Bāyazīd II's accession to the throne in 886/1481 Djamālī was again made a *mudarris* and then in 888/1483 a muftī in Amasya where he was appointed in addition a *mudarris* in the newly opened *madrasa* of Bāyazīd II (Ḥ. Ḥüsāmeddīn, iii, 235-6) in 891/1486. After a long service in various important *madrasas* in the empire he was eventually appointed a *mudarris* at the Themāniye Madrasa in Istanbul in 900/1495, thus reaching the highest degree in the career of *tadrīs*. His biography (Madjdī, 302-8) suggests that he retained a spiritual influence on Bāyazid II as did his cousin Shaykh Muḥammad.

ʿAlī Djamālī left Istanbul for the *ḥadjdj* but had to stay one year in Egypt where he learned of his appointment to the post of Shaykh al-Islām [*q.v.*] in Djumādā II 909/November-December 1503. Under Bāyezīd II, Selīm I, and Süleymān I he kept this post for twenty four years until his death in 932/1526.

By his personal influence and bold interferences in certain important governmental affairs (cf. Madjdī, 305-7) he was responsible for making the office of Shaykh al-Islām one of the most influential in the state. When Selīm I argued that his interference meant an infringement of the Sultan's executive power in the affairs of the sultanate which should be absolutely independent, Djamālī replied that as Shaykh al-Islām he was responsible for the Sultan's salvation in the other world. The Sultan eventually agreed to modify some of his decisions to meet Djamālī's objections. As a sign of his admiration Selīm wanted to confer on him the office of *Ḳāḍīʿasker* [*q.v.*] of both Rumeli and Anadolu. He declined the offer, saying that he would never accept a position in *ḳaḍāʾ* [*q.v.*]. However, he was to overshadow the *ḳāḍīʿaskers* who were most influential in the government as the heads of the administration of *tadrīs* and *ḳaḍāʾ*.

In the tradition of the *shaykhs* attached to the Ottoman Sultans, Djamālī was interested in *taṣawwuf* [*q.v.*] and was also called Ṣūfī ʿAlī Djamālī. He is said to be the author of a treatise on *taṣawwuf* entitled *Risāla fī ḥaḳḳ al-dawarān*. He was venerated as a *walī* after his death and various *manḳibas* were told about him. He was buried in the garden of the small mosque he had built in Zeyrek street in Istanbul. A selection of his *fatwās* were collected in *Mukhtārāt al-fatāwī*. He is also the author of a *Mukhtaṣar al-hidāya*.

Bibliography: Aḥmad Tashköprī-zāde, *al-Shaḳāʾiḳ al-nuʿmāniyya fī ʿulamāʾ al-dawla al-ʿOthmāniyya*, Ger. tr. O. Rescher, Istanbul 1927, Turkish tr. with additions by Muḥammad Madjdī, *Ḥadāʾiḳ al-shaḳāʾiḳ*, Istanbul 1269/1853, 302-8; ʿĀlī, *Kunh al-akhbār*, MS. in the list of Selīm I's ʿulamāʾ; Saʿd al-Dīn, *Tādj al-tawārīkh*, ii, 549-54; Ḥ. Ḥusām al-Dīn, *Amasya taʾrīkhi*, i, Istanbul 1327, 321; iii, 235-40, T. Spandouyn Cantacassin, *Petit traicté de l'origine des Turcqz*, ed. Ch. Schefer, Paris 1896, 112-3; *IA*, art. Cemâlî (M. Cavid Baysun). (HALIL INALCIK)

"DJAMĀLĪ", ḤĀMID B. FAḌL ALLĀH of Dihlī (d. 942/1536), poet and Ṣūfī hagiographer. He travelled extensively throughout the Dār al-Islām from Central Asia to the Maghrib, and from Anatolia to Yemen, meeting a number of prominent Ṣūfīs including Djāmī [*q.v.*], with whom he had interesting discussions in Harāt. His travels constitute a link

between the Indian Ṣūfī disciplines and those of the rest of the Muslim world; while it is possible that the style of the Persian poetry of the court of Harāt travelled to India in his wake, creating the *sabk-i Hindī* of the 10th/16th century. Though a Ṣūfī, with a reputation for asceticism, Djamālī, like other Suhrawardī mystics before him, associated intimately with the Sultans of Dihlī. His relations with Sikandar Lodī were especially cordial, on whose death he wrote a *marthiya*. After the overthrow of the Lodīs by the Mughals [*q.v.*], he developed friendly relations with Bābur [*q.v.*] and Humāyūn [*q.v.*], often accompanying the later on his military expeditions. His son Shaykh ʿAbd al-Raḥmān Gadāʾī became *ṣadr* early in the reign of Akbar [*q.v.*].

He compiled a lengthy *dīwān* and a mystical *mathnawī*, *Mirʾāt al-maʿānī*; but his fame chiefly rests on *Siyar al-ʿārifīn*, a *tadhkira* of the Indian saints of the Čishtiyya and Suhrawardiyya orders, a classic of hagiography.

Bibliography: Works, *Dīwān* (unpublished), two known *mss* in the Rāmpūr Library (Nadhīr Aḥmad, no. 179), and in the private library of Ḥabīb al-Raḥmān Khān Shīrwānī, which also has a copy of his *Mirʾāt al-maʿānī*. *Siyar al-ʿārifīn*, *mss*: Lindesiana, no. 115; Rieu, i, 354a, 355a; Ethé 637-9; Berlin 590-1; Ivanow, Curzon 71; Bankipore, Suppt, i, 1782; ed. (Aziz Ahmad)

DJAMBI [see PALEMBANG].

DJAMBUL [see AWLIYĀ ATA].

DJAMBUL DJABAEV, a popular Ḳazakh poet, illiterate and thus representing oral poetic tradition. Born in 1846 in Semireče of a nomadic family, he took the name Djambul (Džambul) from a mountain; later, in 1938, this name was to be given in his honour to the town of Awliyā Ata [*q.v.*] and to an *oblast'* of Ḳazakhistān. From an early age he was devoted to music and singing, and by them earned his living while still a youth; taking his inspiration from popular grievances, he often improvised poems which he sang, accompanying himself on the *dombra*; the best known are entitled "The Plaint", "The poor man's lot", etc. His first teacher was the popular poet Syuyumbay, but he soon surpassed him and was given the title of "father of the popular poets" (*akîn*).

After the October Revolution he employed his talents in the cause of the new régime and made himself its panegyrist, composing poems in praise of Lenin, Stalin and other important figures; he even celebrated China and the Spanish Republic (1937), and later, during the Second World War, the Red Army's feats of arms, particularly at Leningrad, while in an elegy he mourned the loss of his son who fell on the battlefield. His poetry is characterized by its great simplicity, though daring comparisons occur not infrequently.

The Soviet authorities who had previously awarded him the Order of Lenin and a Stalin Prize in 1941 were preparing to celebrate his centenary when he died in 1945.

His original works, transmitted orally or in writing, were collected and published in Alma Ata in 1946, at the same time and in the same town as the collected edition of his poems translated into Russian.

Bibliography: M. Abdîkadîrov, *Narodniy Pevets Stalinskoy époḳhi*, 1946; M. Balakaev, *O yazîke Dżambula*, in *Vestnik Akad. Nauk Kazakhskoy SSR*, 1947/6; *BSE*, xiv, 206-8 (with portrait).

(Ed.)

DJAMDĀR. The word *djamdār* is a contraction of Pers. *djāma-dār*, "clothes-keeper", cf. Dozy, *Suppl.* This word is not, as stated by Sobernheim in *EI*[1], a "title of one of the higher ranks in the army in Hindustān ...", although *djamʿdār*, popularly *djamādār*, Anglo-Indian Jemadar, "leader of a number (*djamʿ*) of men", is applied in the Indian Army to the lowest commissioned rank, platoon commander, but may be applied also to junior officials in the police, customs, etc., or to the foreman of a group of guides, sweepers, etc. (Ed.)

In Mamlūk Egypt the *djamdāriyya* (sing. *djamdār*), "keepers of the sultan's wardrobe", were all Royal Mamlūks (*mamālīk sulṭāniyya*). Many, but not all, of them belonged to the sultan's corps of bodyguards and select retinue (*khāṣṣakiyya*). A head or commander of the *djamdāriyya* was called *raʾs nawbat al-djamdāriyya*. Of these there were seven, according to Khalīl b. Shāhīn al-Ẓāhirī, *Zubdat kashf al-mamālik*, 115-6.

Bibliography: D. Ayalon, *Studies on the structure of the Mamluk army*, in *BSOAS*, xv/2, 1953, 214 and note 5 (bibliographical note).

(D. Ayalon)

DJĀMĪ, Mawlanā Nūr al-Dīn ʿAbd al-Raḥmān, the great Persian poet. He was born in Khardjird, in the district of Djām which is a dependency of Harāt, on 23 Shaʿbān 817/7 November 1414 and died at Harāt on 18 Muḥarram 898/9 November 1492. His family came from Dasht, a small town in the neighbourhood of Iṣfahān; his father, Niẓām al-Dīn Aḥmad b. Shams al-Dīn Muḥammad, had left that district and settled near Harāt; consequently the poet had for some time signed his works with the *takhalluṣ* Dashtī before adopting the *takhalluṣ* Djāmī. In the regular course of his studies, he became aware of his deep passion for mysticism, and took as his spiritual director Saʿd al-Dīn Muḥammad al-Kāshgharī, the disciple of and successor to the great saint Bahāʾ al-Dīn Naḳshband, founder of the order of the Naḳshbandīs [*q.v.*]. Two biographers, ʿAbd al-Ghafūr Lārī (his disciple, buried in 912/1506 beside Djāmī's tomb) and, in particular, Mīr ʿAlī Shīr Nawāʾī, a famous minister and scholar, have described the events of his life: apart from two pilgrimages, one to Mashhad, the other to the holy cities of the Ḥidjāz (in 877/1472, with a further stay of four months near Baghdād, and about two months in Damascus and Tabrīz), he lived quietly in Harāt, dividing his time between his studies, poetry and

spiritual exercises, honoured by the sovereigns of the time whom he in no way flattered with excessive panegyrics by dedicating his works to them. Bābur [*q.v.*] in his Memoirs says that he was without an equal in his time in the field of the concrete and speculative sciences; Meḥemmed II tried to attract him to Istanbul; Bāyezīd II sent two letters to him (reproduced in Ferīdūn Bey, *Munshaʾāt*, i, 361-4); his influence on Turkish literature is well-known (Gibb, *Ottoman Poetry*, ii, 7 ff.). According to Dawlat-Shāh (who should be treated with caution), Djāmī is said at the end to have lost his reason; but ʿAlī Shīr Nawāʾī, who lived on intimate terms with him and was present during his last days, does not confirm this statement (which recalls St. Jerome's about the madness of the poet Lucretius). Djāmī's funeral, conducted by the prince of Harāt, was attended by great numbers; his tomb, near that of Saʿd al-Dīn his director, is well cared for. Of his four sons (he was son-in-law of Saʿd al-Dīn), three died in infancy, the fourth in early youth (when reading to him and commenting on Saʿdī's *Gulistān*, he conceived the idea of writing his *Bahāristān*).

His writings, which are both diverse and numerous, testify to the flexibility of his genius, the depth and variety of his knowledge, and his perfect mastery of language and style. Although he wrote a great deal in prose, he is mainly known for his poetic works; these consist, firstly, of seven *mathnawīs* [*q.v.*] collected together under the title *Haft awrang* ("the seven thrones", one of the names of the Great Bear) and, secondly, of three collections of lyric poems (*dīwān*) written from the time of his youth and arranged, towards the end of his life, under the following titles: *Fātiḥat al-shabāb* ("The beginning of youth", 884/1479), *Wāsiṭat al-ʿiḳd* ("The central pearl in the necklace", 894/1489), *Khātimat al-ḥayāt* ("The conclusion of Life", 895/1490)—on his lyric poetry: H. Massé, introd. to the translation of *Bahāristān*, 18 ff. The seven poems mentioned above are: *Silsilat al-dhahab* ("The chain of gold") dedicated to Sulṭān Ḥusayn Bayḳarā, written between that prince's accession in 873/1468, and Djāmī's journey to the Ḥidjāz in 877/1472: a series of anecdotes provides a framework for an exposé of philosophical, ethical or religious questions; *Salamān wa-Absāl*, 885/1480, dedicated to Yaʿḳūb Aḳ-ḳoyunlu, an allegorical romance in which the characters, in the words of Naṣīr al-Dīn Ṭūsī, "are symbols denoting the various degrees of the intellect" (ed. Forbes Falconer, 1850-6; Eng. tr. by E. Fitzgerald 1879, new edition with literal translation by A. J. Arberry 1956; Fr. tr. A. Bricteux, 1911, with an important introd.); *Tuḥfat al-aḥrār* ("The gift to the noble", 886/1481), a didactic poem of moral and philosophic character, written (as the two panegyrics inserted in the introduction show) in honour of Bahāʾ al-Dīn, founder of the order of Naḳshbandīs, and of the superior of the order, Nāṣir al-Dīn ʿUbayd Allāh, known by the name Khwādja-yi Aḥrār (ed. Forbes Falconer, 1848); *Subḥat al-abrār* ("The rosary of the devout", of about 887/1482, written in honour of Sulṭān Ḥusayn Bayḳarā), similar to the last, but with mystical trends (ed. 1811, 1818, 1848); *Yūsuf wa-Zalīkha* (Zulaykha), 888/1483, the best known, written in honour of the same prince: a legendary life of Joseph, son of Jacob, treated in a mystical manner (ed. and Ger. tr. Rosenzweig, 1824; Eng. tr. R. T. H. Griffith, 1882; Fr. tr. A. Bricteux, 1927); *Layla wa-Madjnūn*, 1484, a romance with a theme of Arabic origin (Fr. tr. Chézy, 1805); *Khirad-nāma-yi Sikandarī* ("The wisdom of Alexander"), a didactic poem written in about 890/1485 in honour of Ḥusayn Bayḳarā: discussions between Alexander and certain philosophers on philosophical and moral questions.

Although earlier writers had already made use of identical or similar subjects, Djāmī did not allow their works to exert an influence upon these great poems: for example, the *Ḥadīḳat al-ḥaḳīḳa* of Sanāʾī and the *Djām-i djam* of Awḥadī upon the first; a lost work of Avicenna (known from the commentaries of Fakhr al-Dīn Rāzī and Naṣīr al-Dīn Ṭūsī) upon the second (cf. introd. by Bricteux, 47 ff.); the *Makhzan al-asrār* of Niẓāmī and the *Maṭlaʿ al-anwār* of Amīr-i Khusraw upon the third and fourth; the *Yūsuf wa-Zalīkha* attributed to Firdawsī upon the fifth; the Arabic *dīwān* attributed to Ḳays upon the sixth; Niẓāmī (*Iskandar-nāma*, 2nd part) and Amīr-i Khusraw upon the seventh. But if Djāmī is not the first to deal with these subjects, he has the ability to bring new life to the material by means of a style that is fresh, graceful, supple and highly distinguished, at times foreshadowing his successors' over-elaborate affectations, but nevertheless avoiding the complexities and obscure allusions in which Niẓāmī delighted; in addition to the revelation of the noblest moral qualities, in certain parts of these poems (especially in *Yūsuf* and *Salamān*), and in a number of lyric poems we find the language and the themes of pantheistic mysticism, challenging comparison with the works of the very greatest poets of Ṣūfism; if Djāmī is not, as he is often said to be, (perhaps through Dawlat-Shāh's influence) the last of the classical poets, he is probably the last of the great mystical poets.

Of his very numerous works in prose (commentaries on the Ḳurʾān, on the *ḥadīths*, and on mystical questions and poems—in particular on the *Khamriyya* of Ibn al-Fāriḍ), mention must be made of the highly prized collection *Nafaḥāt al-uns* ("The breath of divine intimacy", ed. Calcutta 1859), biographies of mystics, preceded by a comprehensive study of Ṣūfism (trans. Silvestre de Sacy, in *Not. et extr. des mss. B.N.*, xii (1831), 287-436; for this work, Djāmī made use of the *Tadhkirat al-awliyāʾ* of Farīd al-dīn ʿAṭṭār while completing it); the treatise *Shawāhid al-nubuwwa* ("Distinctive signs of prophecy"), which is clear and precise; the short treatise on mysticism *Lawāʾiḥ* ("Shafts of light"), interspersed with invocations and poems (ed. and tr. Whinfield and Muḥammad Ḳazwīnī, Or. Translat. Fund, 1906); lastly, the *Bahāristān* (1478), a collection of memorable sayings, witticisms, striking anecdotes, short notes on poets and stories about animals (several ed.; Ger. tr. Schlechta-Wssehrd, 1846; Fr. tr. H. Massé, 1925).

Bibliography: the manuscript of the complete works (*Kulliyāt*) of Djāmī, in his own hand, is preserved in the Institute of Oriental Languages at Leningrad (cf. Victor Rosen, *Collections de l'Institut ... Les manuscrits persans*, 215-61). In addition to the references given in the article, see: *Gr. I. Ph.*, ii, 231-3 and 305-7; E. G. Browne, iii, index s.v. Jāmī; and in particular ʿAlī Aṣghar Ḥikmat, *Djāmī* (in Persian; Tehran 1320/1942: life and works, 1-228; selected pieces, 228-373).

(Cl. Huart-[H. Massé])

DJĀMIʿ [see masdjid].

DJĀMIʿA. From the root *djamaʿa* (to bring together, to unite), this Arabic term is used to denote an ideal, a bond or an institution which unites individuals or groups, *e.g.*, *al-Djāmiʿa al-Islāmiyya* (Pan-Islamism); *Djāmiʿat al-Duwal al-ʿArabiyya* (League of Arab States); *Djāmiʿa* (Uni-

versity). This article is limited to the last-mentioned meaning and deals with university institutions in the Islamic countries.

Although *Djāmiʿa*, in this sense, includes, in popular and semi-official usage, traditional institutions of higher religious education (such as *al-Djāmiʿa al-Azhariyya*; see, for example, Muḥ. ʿAbd al-Raḥīm Ghanīma, *Taʾrīkh al-Djāmiʿāt al-Islāmiyya al-Kubra*, Taṭwān 1953), officially it is restricted to the modern university, established on western models. Thus, Law no. 184 of 1958, organizing the *djāmiʿāt* of the United Arab Republic does not name al-Azhar among these universities. This article will, consequently, deal with "modern" universities. It should be stressed, however, that in Islamic countries higher education had a remarkable tradition in the older institutions of the mosque, the *madrasa* and other centres of education and learning. For these traditional institutions, see the articles AL-AZHAR, DAR AL-ʿULŪM, DEOBAND, MASDJID, etc.

The term *djāmiʿa* seems to have come into use towards the middle of the 19th century, and to have been translated from "université" or "university". Buṭrus al-Bustāni does not have an article on it in his *Dāʾirat al-Maʿārif* (vi, Beirut 1882). Originally, it seems to have been used as an adjective qualifying *madrasa*. (The earliest such use I have been able to trace is by Aḥmad Fāris al-Shidyāḳ, in *al-Sāḳ ʿala al-sāḳ*, Paris 1855, 513, where he speaks of *madārisihim al-djāmiʿa*. But there may have been earlier ones. This adjectival form continued down to the early years of the twentieth century. See Djurdji Zaydān, *al-Hilāl*, viii/8, 15 January 1900, 24, and xii, 18 and 19, 1 July 1904, 590; *madrasat Oxford al-djāmiʿa*).

Furthermore, there was no clear distinction in those years between *djāmiʿa* and *kulliyya* which was used as equivalent to "college". Badger's *English-Arabic Lexicon* (London 1881) includes *madrasa djāmiʿa* as one of the Arabic equivalents of "college", whereas for "university" he gives: "*dār kulliyyāt al-ʿulūm*", and "*dār al-ʿulūm wa ʾl-funūn*". Neither Bellot's *Vocabulaire arabe-français* (Beirut 1893), nor Hava's *Arabic-English Dictionary* (Beirut 1899), includes *djāmiʿa*, but both include *kulliyya*, the former translating it by "l'université" and the latter by "university, college".

Similarly, other dictionaries published in the nineteenth or early twentieth century either do not include *djāmiʿa* (such as al-Bustāni's *Muḥīṭ al-muḥīṭ*, 1867-70, Steingass, *Arabic-English Dictionary*, 1881, or Shartūni's *Aḳrab al-mawārid*, 1889-93), or use it as an adjective qualifying *madrasa*, without distinguishing it properly from *kulliyya* (Abcarius, *English-Arabic Dictionary* 1903; Hammām, *Muʿdjam al-ṭālib*, 1907; Saadeh, *English-Arabic Dictionary*, 1911).

The first definite use of *djāmiʿa* in the technical meaning of university appears to have been in the movement of some intellectual leaders and reformers in Egypt in 1906 for the establishment of a *djāmiʿa miṣriyya*. On 12 October 1906 a group of such leaders, the most active among whom seems to have been Ḳāsim Amīn, met in the house of Saʿd Zaghlūl and formed a preparatory committee to appeal to the Egyptian people for funds for the establishment of a university (*djāmiʿa*) which, they decided, would be called "*al-Djāmiʿa al-Miṣriyya*" (Aḥmad ʿAbd al-Fattāḥ Badīr, *al-Amīr Fuʾād wa nashʾat al-djāmiʿa al-miṣriyya*, Cairo 1950, 6 ff.). From then on, the use of *djāmiʿa* began to be established in the Arab countries as equivalent to "university", whereas *kulliyya* is now reserved for a faculty or an independent college.

In other Islamic countries, other terms came into use, either derived from the national language, such as *Dānishgāh* (the abode of knowledge) in Īrān, or borrowed from the West such as "Üniversite" in Turkey, "University" (U. *Yūniwarsiṭī*) in Pakistan, and "Universitas" in Indonesia.

Survey of university activity in Islamic countries

In recent years, university education has undergone rapid and extensive development in Islamic countries. Established universities are yearly increasing their facilities, courses and student enrolments, and new universities are being planned or opened to meet the increasing demand for higher education. Any statement about them is likely to become out-of-date the time it is published. Consequently, only a general summary of their history and present situation will be attempted here. For current details the reader will have to consult the catalogues or handbooks of individual universities, national or regional handbooks or reports, or a general work of reference such as the *International Handbook of Universities*. No attempt will be made to refer to independent colleges, or any other institutions of higher learning that do not bear the name *Djāmiʿa* or its equivalent.

Since the establishment of universities is closely bound up with the cultural and national development of their respective countries, or regions, the following summary will follow the lines of the various cultural areas in the Islamic world.

United Arab Republic: Egypt. Technical and professional education began in Egypt in the reign of Muḥammad ʿAlī. The contacts which Egypt had with the West since Bonaparte's campaign and the autonomy it enjoyed within the Ottoman Empire laid the ground for the educational efforts and reforms under Muḥammad ʿAlī. Use was made of foreign, particularly French, advisors and professional men; educational missions were sent to Europe, and a number of specialized technical and professional schools were established, mainly to meet the needs of forming an army and a civil service on modern lines. The years 1824-37 witnessed a movement of active educational expansion. In 1827 a School of Medicine was established and was followed by various military Schools, and by Schools of Pharmacy, Maternity, Engineering, Agriculture, Civil Administration and Accountancy, Languages and Translation, etc. This movement received a set-back under ʿAbbās I and Saʿīd (1848-63). Most of these Schools were closed, but they were reopened under Ismāʿīl. In 1871, *Dār al-ʿUlūm* for the training of teachers of Arabic was opened; in 1880 a Teachers' Training College; and in 1882 a School of Administration (changed in 1886 to School of Law).

In 1906, there arose a movement for the establishment of a national university. A committee of prominent citizens and intellectual leaders was formed and funds were sought from the Government and the public. This university—commonly known as *al-Djāmiʿa al-Ahliyya* to distinguish it from the later state university—was opened on 21 December 1908. Its teaching was limited to courses in literature, history, philosophy, and social sciences, and a number of leading European orientalists and other professors were invited to teach in it. Following World War I, the Egyptian Government took steps to establish a state university. This university, con-

sisting of the former national university as the nucleus of the Faculty of Letters, of the Schools of Law and Medicine already established and of a new Faculty of Science, was instituted by law in March 1925. It continued to develop by the incorporation of existing Schools into Faculties, or by the creation of new ones.

In 1938 a branch of this University was established in Alexandria comprising branches of the Faculties of Letters and of Law. In 1941 a third branch, of the Faculty of Engineering, was opened. In 1942 a full-fledged university was founded in Alexandria. This was followed by another university in Cairo in 1950. These three universities which in course of time came to bear the names of, respectively, Fuʾād I, Fārūḳ, and Ibrāhīm, have since the Revolution been called the Universities of Cairo, Alexandria and ʿAyn Shams. Following a policy of spreading facilities of higher education throughout the country, the Egyptian Government began in 1954-55 to plan for another university in Asiūṭ. This university opened its doors in October 1957 with a Faculty of Science and a Faculty of Engineering. Other Faculties are being instituted gradually, the scientific ones taking precedence over others. Of the four universities in Egypt, the oldest and most developed is the University of Cairo. In addition to its twelve faculties and its various institutes in Cairo, it administers a branch in Khartoum comprising faculties of Law, Letters, and Commerce.

In 1919 the American University at Cairo was established. An independent private institution, it now includes a faculty of Arts and Sciences, a faculty of Education, a School of Oriental Studies, a Social Research Centre and a Division of Extension, and is smaller than the state universities in facilities, number of staff and students, and educational influence.

Syria. In 1902, under Ottoman rule, a School of Medicine was established in Damascus with Turkish as the medium of instruction. During World War I, it was transferred to Beirut, where a School of Law had been opened in 1912. Both institutions were closed at the end of the War. They were reopened in Damascus in 1919, with Arabic as the medium of instruction. In 1924, they were joined together in the Syrian University, which continued to be limited to them, until, with the gaining of independence, higher national education received a vigorous impulse. In 1946 four new Faculties were opened in the University: Letters, Science, Engineering (at Aleppo), and a Higher Teachers' College (later changed to Faculty of Pedagogy). In 1954-55, a Faculty of Holy Law (*Sharīʿa*) was added.

Following the formation of the U.A.R., the name of the Syrian University was changed into that of the University of Damascus. Law no. 184 of 1958, published on October 21, 1958 governed the organization of universities in the U.A.R. In addition to the five universities mentioned above, it instituted a University at Aleppo (which was due to open in 1960-61) and created the Higher Council of Universities, with seat in Cairo, to co-ordinate the activities of these institutions. Since 28 Sept. 1961, the former organization was reestablished in Syria.

Lebanon: The universities in Lebanon, in order of foundation, are: The American University of Beirut, the Université St. Joseph and the (state) Lebanese University, all of which are located in the capital, Beirut. The oldest, the American University of Beirut was established by the American missionaries in the sixties of the last century, but was from the start made separate from the Mission, and governed by an independent Board of Trustees. Its original name was the Syrian Protestant College and under this name it was granted a charter by the State of New York in April 1864. University work in the School of Arts and Sciences began in 1866. The School of Medicine opened in 1867, the School of Pharmacy in 1871, the School of Commerce in 1900, the School of Nursing and the Hospital in 1905. On November 18, 1920, the Board of Regents of the University of the State of New York changed the name of the institution into the American University of Beirut. In 1951, the School of Engineering was established, in 1952 the School of Agriculture and in 1954 the School of Public Health. The medium of instruction is English.

The Université St. Joseph was founded by the Jesuits in Beirut in 1875. It received the title of University from Pope Leo XIII in 1881, but in Arabic it continued for many years to be called *Kulliyyat Mār Yūsuf* (See Cheikho's article on its fiftieth anniversary, *Al-Machriq*, xxxiii 5, May 1925, 321 ff.). Originally, its higher instruction was limited to theology and philosophy. In 1883, under agreement between the Jesuits of Syria and the French Government, the School of Medicine was established, and, in 1888, the School of Pharmacy, both becoming in 1889 the *Faculté française de Médecine et de Pharmacie*. In 1902 was founded the Faculty of Oriental Studies which was closed with the rest of the University during World War I. In 1913, the School of Law was opened; in 1919, the School of Engineering; and in 1937 the Institute of Oriental Studies. The medium of instruction is French.

The Lebanese University started in 1951 with a Higher Teachers' Institute for the training of teachers for secondary schools. It was formally organized by Legislative Decree no. 25 of 6 February 1953 (revised by Leg. Decree no. 26 of 18 January 1955), but its activity remained restricted to the Higher Teachers' Institute with its two divisions, literary and scientific, of three years each leading to the Licence, and a fourth year of pedagogical training. In 1959 a Faculty of Law and Economic and Political Sciences was established, and in the same year a regulatory decree (no. 2883 of 16 June 1959) gave the University its inner constitution. This decree provided for faculties of Letters, Sciences, Law and Economic and Political Sciences, for a Higher Teachers' Institute and an Institute of Social Studies, and, like similar state university constitutions or charters, for other faculties, colleges or institutes which might later be created. Also, like other state universities in Arab countries, the language of instruction is Arabic, unless otherwise decided in particular fields.

ʿIrāḳ. Before World War I, there was only one institution of higher education in ʿIrāḳ: a School of Law. In 1923, the ʿIrāḳ Government decided to establish a university called *Djāmiʿat Āl al-Bayt*, but this plan was later abandoned. Instead, between 1920 and 1949, a number of Faculties or Colleges (Medicine, Education, Engineering, Business and Economics, etc.) were established and made dependent to various ministries. In 1951, a "Council of Higher Education" was set up to co-ordinate the work of these Faculties, "in preparation for the establishment of the ʿIrāḳī University". Following many commissions and reports, the University of Baghdād was established by Law no. 60 of June 6, 1956. This Law provided for the establishment of a "Constituent Council" which was charged with the study of each of the existing Faculties and Colleges

to decide on its inclusion in the University. On 15 September 1958 a new Law was issued to replace the previous one. According to it, the University is composed of the Faculties of Letters, Sciences, Law, Commerce, Education, Education (Women), Engineering, Agriculture, Medicine, Dentistry, Pharmacy, Veterinary Medicine and such other Faculties and Institutes as may be established in the future.

Saʿūdī Arabia: The King Saʿūd University was established in Riyāḍ by Royal Decree no. 17 of 21 Rabīʿ II 1377/14 November 1957. It started with a Faculty of Letters. In 1958 a Faculty of Science was added, and in 1959 a Faculty of Pharmacy and a Faculty of Commerce. Each of these Faculties is being developed at the rate of a class a year. A project has been drawn up for an extensive campus and ample building facilities, and plans are under study for curricular and other developments.

Kuwayt: The Government of Kuwayt asked a committee of experts to study the question of establishing a university in that Principality. The committee met in Kuwayt during the month of February 1960, and presented its recommendations to the Government.

Sudan: The University of Khartoum was officially constituted by Act of Parliament on 24 July 1956, seven months after the establishment of the new Republic of the Sudan. It developed from the University College of Khartoum, which was instituted in 1951 by the fusion of Gordon Memorial College and the Kitchener School of Medicine. The former had in 1945 grouped together the Schools which had been set up from 1936 onwards to give post-secondary training in Arts, Law, Public Administration, Engineering, Agriculture and Veterinary Science. The academic standard of the College was recognized in 1945 by the University of London which admitted it to Special Relationship. The Kitchener School of Medicine was founded in 1924, and from 1940 onwards its final examination was supervised by a visitor appointed by the Royal Colleges of Physicians and Surgeons of England. The University of Khartoum includes at present the following Faculties: Agriculture, Arts, Economic and Social Studies, Engineering, Law, Medicine, Science, and Veterinary Science. The only other institution of higher education in the Sudan is the previously mentioned branch in Khartoum of the University of Cairo including faculties of Law, Letters, and Commerce.

Libya. The University of Libya was founded in 1955-56. The Law establishing it was issued on 15 December 1955. It started with a Faculty of Letters and of Pedagogy in Benghazi. Since then a Faculty of Commerce in Benghazi and a Faculty of Science in Tripoli have been added. Plans for the development of these Faculties and for the creation of new ones are under way.

Tunisia: al-Djāmiʿ al-Aʿẓam, the traditional centre of higher religious instruction in Tunisia has in recent years been popularly called al-Djāmiʿa al-Zaytūniyya, but the only post-secondary education it has given is in the fields of Islamic studies and of Arabic language and literature related to them. Modern university studies were recently started in schools or institutes on the French model and using generally the French language. Thus, the *Institut des Hautes Études*, founded in 1945 and attached to the Sorbonne, covered the fields of Law, Arabic Studies, Sciences, and Social Sciences. In 1960, the Tunisian University was founded incorporating existing institutions and establishing new ones. Law no. 2 of 1960 (31 March 1960) established the Tunisian University as a public institution, Decree (*Amr*) no. 98 of the same date set up its organization, and a ten-years plan for its development has been formulated.

Algeria: The University of Algiers was until 1962 a French university organized and administered as other French state universities. Growing out of a School of Medicine and Pharmacy (1859) and Schools of Law, Science and Letters (1879), it was formally established as a university in 1909. It included these Faculties and certain specialized institutes and used French as the medium of instruction.

Morocco: As in the case of other countries, modern higher instruction in Morocco started with separate institutions: the *Institut des Hautes Études Marocaines*, *Centres d'Études Juridiques* and *Centre d'Études Superieures Scientifiques*. With the acquisition of independence, there was a movement for the establishment of a national university. This university, the University of Rabāṭ, was inaugurated in December 1957, and was formally organized by royal decree (*Ẓahīr Sharīf* (no. 1.58.390 of 29 July 1959). It consists of Faculties of Holy Law (*Sharīʿa*), Legal, Economic and Social Sciences, Letters, Physical and Natural Sciences, and a Faculty of Medicine and Pharmacy to be established. Here again the relation of this University (and particularly its Faculty of Holy Law) with the traditional Islamic higher education centred around the celebrated Djāmiʿ al-Ḳarawiyyīn in Fās depends upon future developments.

Turkey: Modern technical and professional education started in Turkey towards the end of the 18th and the beginning of the 19th century, to meet the needs of the army, navy and civil service. In 1773 a *Muhendiskhāne* [*q.v.*], or School of Engineering for the navy was set up and another for the army in 1796. These were followed by a School of Medicine (1827), and a school of Military Sciences (*Ḥarbiyye* [*q.v.*]) in 1834. In 1846 a committee on education recommended the creation of a state university, without however any practical result. A new start was made in 1859, with the foundation of a school for Civil Servants (*Mülkiyye* [*q.v.*]) which was reorganized and expanded in 1877. Many other higher schools followed, including finance (1878), law (1878), fine arts (1879), commerce (1892), civil engineering (1884), etc. In August 1900, after long preparation, the University of Istanbul, at first known as the Dār al-Funūn, was opened, and in 1908 the Schools of Medicine and of Law were incorporated in it. This University now includes Faculties of Medicine, Law, Economics, Letters, Science, and Forestry, and Schools of Dental Medicine and of Pharmacy.

Growing out of the *Muhendiskhāne*, the Technical University of Istanbul (Istanbul Teknik Üniversitesi) was established in 1944. It includes to-day five Faculties and several Institutes, for teaching and research in various fields of engineering. In 1946 the University of Ankara (Ankara Üniversitesi) was founded in the capital, incorporating the already existing Faculties of Law, Letters, Science, Medicine and Agriculture. Now it includes in addition Faculties of Veterinary Medicine, of Political Science and of Theology (*Ilâhiyat*).

In 1955 the Aegean University (Ege Üniversitesi) was established in Izmir. In 1956 Atatürk Üniversitesi was founded in Erzurum to serve the needs of eastern Turkey. This was done with the assistance of the University of Nebraska, under contract between this University and the Technical Cooperation Administration of the U.S.A. All these

universities are state institutions. By the University Law of 1946, they were granted administrative and financial autonomy.

In 1957, the Middle East Technical University was established in Ankara, by special act of parliament, with certain unique features. The United Nations and Unesco have been closely associated with the Government of Turkey in the planning and development of this university. Whereas the other universities use Turkish as their medium of instruction, this uses English and hopes to attract students from other countries of the region.

Īrān: The oldest and the most important of the universities of Īrān is the University of Tehran, *Dānishgāh-i Tehrān*. Growing out of the polytechnic school, *Dār al-Funūn* (1851), and of other more recently established schools, it was constituted as a state university in 1934. It now includes eleven Faculties: Arts, Fine Arts, Islamic Sciences (*ʿUlūm-i Maʿḳūl wa Manḳūl*), Law, Science, Engineering, Agriculture (at Karadj), Medicine, Dentistry, Pharmacy and Veterinary Medicine. Other universities to serve the needs of the provinces have been established since World War II. In 1947, the University of Tabrīz (Ādharbāydjān) was founded, and was followed by the Universities of Mashhad (Khurāsān), of Shirāz (Fars), of Iṣfahān, and of Ahwāz (Khuzistān).

These provincial universities have as yet a limited number of Faculties (mostly professional), but their development in this short period indicates the concern of the Government of Īrān to extend the facilities of university education and to spread it throughout the country. The language of instruction in all the universities of Īrān is Persian.

Afghānistān: Higher university education in Afghānistān began with a Faculty of Medicine in 1932. Other Faculties were later established and all were incorporated in the University of Kābul, which was founded by Royal Decree in 1946. This University now includes Faculties of Medicine (including Women's Division and School of Nursing), Law and Political Science, Science, Letters, Islamic Law, Agricultural Engineering, a Women's Faculty (Social and Physical Sciences) and Institutes of Economics and of Education. Instruction is through the medium of Persian and Pashtō.

India and Pakistan: It was not until the early decades of the nineteenth century that schools and colleges on western models began to be established in the sub-continent of India. These institutions used English as the medium of instruction. Following the recommendations of Sir Charles Wood, the Universities of Calcutta, Bombay, and Madras were established in 1857, and remained for twenty-five years the only universities in India. In 1882 the University of the Panjab was created at Lahore, and in 1887 the University of Allāhābād. No other university was established before World War I. Subsequently there were two periods of rapid development of university institutions: 1915-1929, and after partition. The latest edition of the *Commonwealth Universities Handbook* (1960) lists thirty-seven universities in India, of which eighteen were established or achieved full university status after 1947. Of the six universities of Pakistan, only two, the University of the Panjab (1882) and the University of Dacca (1921), existed before independence, although many colleges were affiliated to universities in India before partition.

In India, two universities have been active in the field of higher education for the Muslim community. The older, the ʿAlīgaṙh Muslim University, has played its particular rôle in the intellectual life of this community. Founded in 1875 by the author and reformer Sir Sayyid Aḥmad Khān, as the Mohammedan Anglo-Oriental College, with the object of imparting to the Muslim youth a modern scientific education, it received its charter as a university in 1920, and has since its establishment served as an influential centre of Indian Muslim intellectual life. The other University, Osmania, at Ḥaydarābād, Deccan, was established in 1918 and has also paid special attention to Islamic studies. In addition to these two universities, there are Muslim colleges which either form part of, or are affiliated to, other Indian universities. Among other institutions of higher education, mention should be made of the Jamia Millia Islamia [*q.v.*] at Jamaniagar, Dihlī, whose courses in the arts and social sciences lead to an examination recognized by the government as equivalent to the B.A. degree of an Indian university.

In Pakistan, there are six universities: University of the Panjab at Lahore (1882), University of Dacca (1921), University of Sind (1947), University of Karachi (1950), University of Peshawar (1950), and University of Rajshahi (Rādjshāhī) (1953). Although these institutions are entirely secular and pursue liberal, scientific and professional education on modern lines, they are permeated by Islamic traditions and spirit.

The first universities established in the sub-continent of India in the middle of the last century took as their model the then newly established University of London. This University was at that time a purely examining body. Thus the early universities were slow to develop teaching of their own. At present, the universities of India and Pakistan are of various types, but most of them are both teaching and affiliating. Post-graduate teaching is generally carried on by the universities themselves, whereas first-degree teaching is still largely done by affiliated colleges under university supervision and examination arrangements.

Malaya and Singapore: The University of Malaya was founded in 1949 by the combined actions of the governments of the Federation of Malaya and the Colony of Singapore. It grew out of two existing colleges in Singapore, King Edward VII College of Medicine and Raffles College. Full university teaching began in Kuala Lumpur in 1957, and on the Singapore site in 1949-50. It includes teaching in arts, science, engineering, law and medicine. According to the new constitution which came into effect in 1959, the University now comprises two divisions of equal status, the University of Malaya in Singapore and the University of Malaya in Kuala Lumpur, each with its own principal, divisional council and divisional senate. These two divisions are equally represented on the central council of the University.

Indonesia: Although Faculties (largely professional) had been instituted in Indonesia in the period between the two World Wars, the movement for the establishment of universities began in 1949 and has progressed rapidly since the country acquired its sovereignty. These universities have incorporated previously-existing Faculties and created new ones. In 1949 Universitas Gadjah Mada was instituted at Djogdjakarta by merger of five Faculties, whose number has grown to eleven. Universitet Indonesia was founded in 1950 at Djakarta and now includes Faculties of Medicine, Law and Social Sciences, Philosophy and Letters, Economics, Mathematics

and Natural Sciences (at Bandung), Technology (at Bandung), Veterinary Medicine (at Bogor) and Agriculture (at Bogor). Other Faculties of the University established at Surabaya, Bukitinggi and Makassar, have since formed the nuclei of separate universities: Universitas Airlangga (1954), Surabeja (also incorporating the former Faculty of Law of Universitas Gadjah Mada in Surabeja); Universitas Andalas (1956), Bukitinggi; and Universitas Hasanuddin (1956), Makassar. A new university is being established in Bandung independently of the Faculties of the Universitet Indonesia set up there.

In addition to the above, which are all state universities there are a number of private institutions. Of particular importance for us are the Universitet Islam Indonesia, Diogdjakarta (theology, social economics, law) and the Perguruan Tinggi Islam Indonesia, Medan (law and social sciences, theology).

Reference should finally be made to universities in some of the predominantly Muslim Republics of the U.S.S.R. which also serve the needs of the Muslim population, such as the Ādharbāydjān State University at Baku (1919), the Tadjik State University at Stalinabad (1948), and the Uzbek State University (1933). These Universities follow the pattern of universities in the Soviet Union, and use, along with Russian, local languages in their instruction.

Bibliography: As the majority of the universities in the Islamic countries are state institutions, the basic sources on their constitutions and organization are the government promulgated charters embodied in laws, decrees, or other government acts, as well as the catalogues, reports, or handbooks issued by the individual universities, national associations of universities, or the government ministries. For universities in Arab countries, Sāṭiʿ al-Ḥuṣrī's *Ḥawliyyat al-thaḳāfa al-ʿarabiyya*, published by the Cultural Section of the League of Arab States (5 vols., Cairo, 1949-57), summarizes the governing legislation and other acts, and gives pertinent information on the programs and activities of the universities up to 1956. For Pakistan and India see the *Handbook of the Universities of Pakistan*, 1955-6 (Inter-University Board of Pakistan, 1956) and the *Handbook of the [Indian] Universities, 1953-4* (Inter-University Board of India, 1958). For universities in these two and other countries of the British Commonwealth, see *Commonwealth Universities Yearbook*, 1960, (37th edition, ed. J. F. Foster, London 1960). General information about universities (outside the Commonwealth and the U.S.A.) is given in the *International Handbook of Universities* (1st edition, ed. H. M. R. Keyes, International Association of Universities, Paris 1959). Discussions of various problems will be found in *Universität und moderne Gesellschaft*, edd. C. D. Harris and M. Herkheimer, Frankfurt 1959; *Science and Freedom*, 12, Oct. 1958; J. Jomier, *Écoles et universités dans l'Égypte actuelle*, in *MIDEO* 1955, ii, 135-60, 1956, iii, 387-90; H. de la Bastide, *Les universités islamiques d'Indonésie*, in *Orient*, no. 21, 1962, 81-4. For accounts of current university activity and development see the *Bulletin of the International Association of Universities* (quarterly, published since February 1953). The International Association of Universities (6, Rue Franklin, Paris, 16e) also maintains a documentation and information centre on universities, including those treated in this article.

(C. K. Zurayk)

DJĀMID [see naḥw and ṭabīʿa].

DJAMĪL b. ʿAbd Allāh b. Maʿmar al-ʿUdhrī, an Arab poet of the 1st/7th century, in literary tradition the most famous representative, and almost symbol of, the "ʿUdhrī(te)" school of poetry, with its chaste and idealized form of love. He is a quite authentic historical figure, although very few details of his life have come to light. He was born about 40/660, and spent his life in the Ḥidjāz and in Nadjd. It is also thought that, on the instigation of the parents of his beloved, he fled for a period to the Yemen in order to escape persecution by an Umayyad governor. Towards the end of his life he went to Egypt, where he made the governor ʿAbd al-ʿAzīz b. Marwān famous in his *ḳaṣīdas*, and it was there that he died in 82/701, still relatively young. Although most of the poems which have come to us are on the theme of love, we can also discern other aspects of his character and poetic ability. He was adept at composing *fakhr* and *hidjāʾ* poetry, was quarrelsome and quick at repartee, and devoted to the glories of his forefathers and his clan. (Although genealogists assert that the Banū ʿUdhra tribe originated from the south, he speaks of his ancestors' triumphs as those of the Maʿaddīs). But the outstanding historical image of Djamīl is that of the love-poet. Right from his early youth he was inflamed with love for his fellow tribeswoman Bathna, or Buthayna, of the Banu 'l-Aḥabb ʿUdhrī tribe, and the story of his deep and unhappy love is commemorated both in the work of the poet himself and in the stories of other men of letters of the 2nd/8th century (often based in part on Djamīl's own poems). Buthayna's parents refused him their daughter's hand, and she was married off to a certain Nabīh b. al-Aswad. After periods of reconciliation followed by periods of reproach, he eventually left Wādi 'l-Ḳurā, the camp of the ʿUdhra where his love had first become inflamed, and never returned. He remembered it in moving lines composed on his death-bed.

The *dīwān* of Djamīl (during whose lifetime the poet Kuthayyir ʿAzza was *rāwī*) circulated widely in the 3rd/9th century, and was studied and made known by philologists such as Ibn al-Anbarī and Ibn Durayd. But it was not preserved for posterity, and we have access to no more than a few fragments and extracts of Djamīl's poetry gleaned from anthologies and other literary sources (primarily from the *Aghānī*). They amount to some 800 verses, and bear the stamp of an unmistakably individual personality, although his originality has been somewhat clouded by the mass of imitators, and by the literary conventions of Djamīl's time which even he could not ignore. The story of his passionate love as it emerges from his poetry is much more than the normal run of such stories. He was the first to speak of love as an ever-present cosmic force which attracts a person from the moment he is born, and lives on after his death. True to the ʿUdhrī tradition, he constantly laid emphasis on the purity and nobility of love, the virtue of self-denial, the ability to worship the beloved one, and endure suffering oneself. There is with him no trace of the wanton and joking love described in the trifles of ʿUmar b. Abī Rabīʿa and others. He developed the Bedouin tradition of love, infusing into it his own deep personal experience, the poignant sincerity of which cannot be doubted. His poetry, together with that of ʿUmar, soon became classical (al-Walīd b. Yazīd was proud of his ability to write verse "in the manner of Djamīl and ʿUmar"). Time has with good reason shown him

to be the most perfect representative of the ʿUdhra poets, who "when loving, die".

Bibliography: The principal sources are *Aghānī*³, viii, 90-154; Ibn Ḳutayba, *Shiʿr*, 260-8; Ibn Khallikān, no. 141 Wüstenfeld; Ibn Asākir, iii, 395-405 Badrān; F. Gabrieli, *Ğamīl al-Udhrī. Studio critico e raccolta dei frammenti*, in *RSO*, xvii (1937), 40-71, 132-72; idem, *Contributi alla interpretazione di Ğamīl*, in *RSO*, xviii (1938), 173-98; Oriental editions of fragments, by Bashīr Yamūt, Beirut 1934, and (much superior) by Ḥusayn Naṣṣār, Cairo 1958; R. Blachère, *Les principaux thèmes de la poésie érotique au siècle des Umayyades de Damas*, in *AIEO*, Algiers, v (1939-41), 82-128.

(F. Gabrieli)

DJAMĪL (b.) Nakhla al-Mudawwar, Arab journalist and writer, born in Beirut in 1862, died in Cairo on 26 January 1907. Djamīl came from a wealthy, intellectually active, Christian family, and grew up in conditions which were very favourable to his development as a writer. His father (1822-89), who had attended lectures on Arabic grammar, French, and Italian in Beirut, was an interpreter at the French Consulate, and a member of the Beirut town council; he also took part in editing the Beirut newspaper *Ḥadīḳat al-Akhbār*, as well as being a member of the *Société Asiatique*, Paris, and of *al-Djamʿiyya al-ʿilmiyya al-sūriyya*, Beirut.

Djamīl pursued Arabic studies, and also studied French language and literature at Beirut University. He soon began to show a preference for the history of the peoples of the ancient Orient. Later on, he became editor of several journals. He collaborated in the semi-monthly *al-Djinān*, and also in *al-Muḳtaṭaf*. The second of these moved its offices from Beirut to Cairo in 1888. Finally, he brought out the pan-Islamic paper *al-Muʾayyad* in Cairo.

Djamīl al-Mudawwar reached fame with his *Ḥaḍārat al-Islām fī Dār al-Salām*, Cairo 1888, ²1905, ³1932. This work is of great literary importance, because it is a completely new departure in Arabic literature. It was probably modelled on J. Barthélémy's (1716-95) *Voyage du jeune Anacharsis en Grèce*, and takes the form of letters. It quotes many sources and treats of early ʿAbbāsid times from al-Manṣūr to Hārūn al-Rashīd in a popular manner. Occasional references to the past of Islamic history and culture add further to the attraction of the book. The special quality of al-Mudawwar's presentation of history lies in the fact that he views the rule of the caliphs from the point of view of a Shīʿī Persian and friend of the Barmakids. Yet his view is also influenced by such great modernistic ideas as Panislamism and Nationalism, which appeared in the Islamic Orient at that time. As a document of modern Arabic thought, the *Ḥaḍārat al-Islām* is one of the most important works of the so-called renaissance of Arabic literature.

Al-Mudawwar also wrote *Taʾrīkh Bābil wa Āshūr*, a compilation based on European sources, which was improved and edited by Ibrāhīm al-Yāzidjī. From the French, he translated *ʿAṭṭalā*, Beirut 1882 (F. R. de Chateaubriand's Red Indian tale of *Atala*), and *al-Taʾrīkh al-ḳadīm*, Beirut 1895, ed. Yūḥannā ʿAkkā, director of the catholic patriarchal school.

Bibliography: L. Cheikho, *Kitāb al-makhṭūṭāt al-ʿarabiyya li 'l-kataba al-naṣrāniyya*, Beirut 1924, 120, 187; *Taʾrīkh al-ādāb al-ʿarabiyya fi 'l-rubʿ al-awwal min al-ḳarn al-ʿishrīn*, ii, Beirut 1926, 22 f.; E. J. Sakīs, *Dictionnaire de bibliographie arabe*, Cairo 1929, 1721; Djirdjī Zaydān in *al-Hilāl*, xv, 1907, 338 ff. (this article is in Zaydān's *Tarādjim mashāhīr al-sharḳ*, ii, Cairo 1922, 223 ff.); *Taʾrīkh ādāb al-lugha al-ʿarabiyya*, iv, Cairo 1914, 293; Ph. de Ṭarrāzī, *Taʾrīkh al-ṣiḥāfa al-ʿarabiyya*, i, Beirut 1913, 111 f., 114 f.; ii, Beirut 1913, 45, 56; iii, Beirut 1914, 40; I. (E. Köcher)

DJAMĪL, ṬANBURĪ [see ṭanburī djamīl].

DJAMĪLA, a famous singer of Medina at the time of the first Umayyads. Tradition has it that she taught herself the elements of music and singing by listening to her neighbour Sāʾib Khāthir [*q.v.*] (d. 63/682-3). It became unanimously recognized that her great natural talent put her in a class of her own, and she founded a school where, among numerous lesser-known singers and *ḳiyān*, Maʿbad [*q.v.*], Ibn ʿĀʾisha [*q.v.*], Ḥabāba and Sallāma received their training. Artists as great as Ibn Suraydj [*q.v.*] would come to hear her, and would accept her critical judgments, while her salon was regularly frequented by such poets as ʿUmar b. Abī Rabīʿa, al-Aḥwaṣ, and al-ʿArdjī. When at one time she was on a pilgrimage, all the singers and musicians of the Ḥidjāz gathered to accompany her, or to welcome the 'star' of Medina to Mecca. They then accompanied her back to Medina, where an enormous festival of music and song lasted for 3 days. Although the story is of doubtful authenticity, being regarded as false by Abu 'l-Faradj al-Iṣfahānī himself, it is nevertheless an indication of the fame which has always surrounded the figure of Djamīla. The date of her death is unknown.

Bibliography: The basic reference-work is the *Kitāb al-Aghānī*, vii, 124-48 (Beirut ed., viii, 188-234); it has been extensively used by Caussin de Perceval, *Notices anecdotiques sur les principaux musiciens arabes des trois premiers siècles de l'Islamisme*, Paris 1874 (*JA*, 1873), and by ʿAmrūsī, *Al-Djawārī al-mughanniyāt*, Cairo n.d., 48-73.

(A. Schaade-[Ch. Pellat])

DJAMʿIYYA. This term, commonly used in modern Arabic to mean a "society" or "association", is derived from the root DJ - M - ʿ, meaning "to collect, join together, etc.". In its modern sense it appears to have come into use quite recently, and was perhaps first used to refer to the organized monastic communities or congregations which appeared in the eastern Uniate Churches in Syria and Lebanon at the end of the seventeenth and beginning of the eighteenth centuries (*e.g.*, *Djamʿiyyat al-Mukhalliṣ*, the Salvatorians, a Greek Catholic order founded c. 1708). In the middle of the nineteenth century the term came into more general use first in the Lebanon and then in other Arabic-speaking countries, to refer to voluntary associations for scientific, literary, benevolent or political purposes. Perhaps the first of them was *al-Djamʿiyya al-sūriyya*, founded in Beirut in 1847 through the efforts of American Protestant missionaries with learned tastes, for the purpose of raising the level of culture. Its members were all Christians, and included the famous writers Nāṣīf al-Yāzidji and Butrus al-Bustānī [*qq.v.*], as well as a number of missionaries and the English writer on the Lebanon, Colonel Charles Churchill, then living near Beirut. The society met regularly

until 1852; in 1857 it was succeeded by *al-Djamʿiyya al-ʿilmiyya al-sūriyya*, a larger society on the same model but including Muslims and Druzes; it had corresponding members in Cairo and Istanbul, including the reforming Prime Minister Fuʾād Pasha, and in 1868 received official recognition from the Ottoman government. In 1850 the French Jesuit missionaries in Beirut created a similar organization, *al-Djamʿiyya al-sharḳiyya*; its membership was partly foreign, partly local and wholly Christian.

At a slightly later date there arose societies with more practical aims: for example, the first feminist society, *Djamʿiyyat bākūra Ṣūriyya*, founded in Beirut in 1881 or earlier, and a number of benevolent associations. Perhaps the first of these was *al-Djamʿiyya al-khayriyya al-islāmiyya*, founded in Alexandria in 1878, as an expression of the new public consciousness which was appearing in Egypt at that time. Its aim was to found national schools for boys and girls; one school was established in Alexandria and placed under the direction of the famous nationalist orator, ʿAbd Allāh al-Nadīm, but the ʿUrābī movement and British occupation put an end to it, as to a similar society, *Djamʿiyyat al-maḳāsid al-khayriyya*, founded in Cairo about the same time for the same purpose. A later organization, *al-Djamʿiyya al-khayriyya al-islāmiyya*, started in 1892, had more success: the great reformer of Egyptian Islam, *shaykh* Muḥammad ʿAbduh, was active in it, and it established a number of schools. The *Djamʿiyyat al-maḳāsid al-khayriyya* of Beirut, founded in 1880, had a similar success, and its schools for the Sunnī Muslim community of the Lebanon are still flourishing.

In an age when representative institutions did not exist, and newspapers were still new, such societies provided an opportunity for educated men to form political ideas and exert a certain pressure of opinion on the government. Some of them were political by implication, and in the 1870's the development of national consciousness and the comparative freedom of expression in Egypt led to the growth of specifically political associations. Among the earliest was *Miṣr al-fatāt* or the "Young Egypt" society, formed in Alexandria in 1879. It included ʿAbd Allāh al-Nadīm and other Muslim nationalists and a number of Lebanese Christian journalists working in Egypt; one of them, Adīb Isḥāḳ, published the journal of the society until it was suppressed. It had a programme of reforms—ministerial responsibility, equality before the law, liberty of the press, etc.—but could do nothing effective to carry it out, and only remained in existence for a year or so. More famous although scarcely more effective was the *Djamʿiyyat al-ʿurwa al-wuthḳā*, a secret society of Muslims pledged to work for the unity and reform of the Muslim world, through the restoration of a true Islamic government, and more specifically for the liberation of Egypt from British control. The moving spirits in this society were the famous publicist Djamāl al-Dīn al-Afghānī and his disciple Muḥammad ʿAbduh. It was established in the period after the British occupation of Egypt, and appears to have had branches in several Muslim countries and an oath of initiation. Little is known of its activities, and perhaps in fact it did nothing except to sponsor the publication of the famous periodical *al-ʿUrwa al-wuthḳā*, issued in Paris by al-Afghānī and ʿAbduh in 1884. Although this lasted for a few months only it had a far-reaching influence on educated Muslims, and the leading articles are still reprinted from time to time and widely read.

The use of the term *djamʿiyya* for political associations continued for some time. For example, the most famous of the Arab nationalist societies of late Ottoman days was called *al-Djamʿiyya al-ʿarabiyya al-fatāt*. Founded in Paris in 1911 by seven Arab students, its centre later moved to Damascus and its membership grew to two hundred. It played an important part in the secret negotiations between the Sharīf Ḥusayn and the British authorities in Cairo, which led to the revolt in Arabia against Turkish rule; the military leader of the revolt, Ḥusayn's son Fayṣal, was himself a member of the society. A generation later, in Egypt, there was founded another *djamʿiyya* which played an important role in politics: *al-Ikhwān al-Muslimūn* [*q.v.*], started in 1928 by Ḥasan al-Bannāʾ [*q.v*],, had the explicit purpose of bringing about a moral reform in Islam, but in course of time it became more openly political in its aims and methods, and in the confused decade after 1945 seemed near to taking over power in Egypt, until suppressed by the military régime in 1954. In general however the word *ḥizb* [*q.v.*] had by this time replaced *djamʿiyya* to refer to political movements, although the latter term still remained in use for charitable, cultural and other such voluntary organizations.

Gibb, ed., *Whither Islam*, London 1936.

(A. H. Hourani)

Ottoman Empire and Turkey

The most common term for "society" or "association" in Ottoman and modern Turkish is *djemʿiyyet* (*cemʿiyet* or *cemiyet*), to which partisans of *öztürkçe* prefer *dernek*, or more rarely, *birlik*. Since the late 19th century *djemʿiyyet* has been the word used for voluntary associations, secret or open, for political, benevolent, professional and other purposes. In the early twentieth century, political parties began to call themselves *firḳa* or, occasionally, *ḥizb*, both of these yielding, in common usage since the 1920's, to *parti*. Among the near-synonyms of *djemʿiyyet*, *endjümen* (*encümen*, from P. *andjuman* [*q.v.*]) designates (i) a parliamentary committee and (ii) a quasi-public organization such as the Turkish History and Turkish Language Societies, its *öztürkçe* equivalents in these two senses being, respectively, (i) *komisyon* and (ii) *kurum*; *heyʾet* or *heyet* ("committee") designates a temporary or *ad hoc* grouping; *gurup* or *parti gurubu* a parliamentary party; and *kulüb* (club) a more informal cultural, social, or convivial organization.

Legislation granting and regulating the right of association has been a product mainly of the 20th century. The Ottoman reform decrees of 1839 and 1856 promised civic equality and security of person and property, but the 1876 constitution for the first time included a specific if limited guarantee of freedom of association (art. 13: "Ottoman subjects have the right within the limits of existing laws and

regulations to found all manner of associations for commercial, industrial, and agricultural purposes"), buttressed by promises of freedom of the press (art. 12: "... free within the limits of the law ...") and of the right of individual and collective petition for redress of grievances (art. 14). The constitutional revision of 21 August 1909 left art. 13 unchanged but added a new art. 120 guaranteeing freedom of assembly and association generally, except for (i) associations offending against public morals, (ii) associations aiming at violation of the territorial integrity of the state or at a change of the constitution or the government or at setting various ethnic groups against each other, and (iii) secret societies. A Law of Association adopted at the same legislative session (*Djemʿiyyetler Ḳānūnu* of 16 August 1909) elaborated these constitutional prohibitions and provided for registration of associations with the local civil authorities. The immediate political target of the 1909 legislation were "reactionary" political movements such as that leading to the abortive counter-revolution of 13 April 1909 (known, according to the Julian calendar then in effect, as *Otuz-Bir Mart Hadisesi*) and nationalist and secessionist tendencies among ethnic minority groups.

The 1909 Law of Associations remained in force until the end of the Ottoman period and (with two amendments: laws 353 and 387 adopted by the Ankara Grand National Assembly in 1923) under the First Republic until 1938. Article 70 of the 1924 constitution guarantees in summary fashion "the rights and freedoms of conscience, of thought, of speech and press, of travel, of contract, of work, of owning and disposing of property; of assembly and association and of incorporation ...". A new Law of Associations (no. 3512) of 28 June 1938 specifically prohibited, among others, associations with aims contrary to the five of the Six Arrows (*altı ok*) of the Republican People's Party incorporated by 1935 amendment into art. 2 of the constitution (*i.e.*, republicanism, nationalism, étatism, secularism, and revolutionism (*inkılâpçılık*]); associations directed against the territorial integrity of the state or "disrupting political and national unity"; and associations based on "religion, confession, or sect", on "region", and on "family, congregation [*cemaat*], race, kind [*cins*], or class" (art. 9). Branches of international organizations or of those with headquarters outside Turkey also were outlawed, except where special permission should be granted by cabinet decree in the interests of international cooperation (art. 10). By a major amendment of 5 June 1946 (law no. 4919), the prohibitions against associations contrary to the Six Arrows and against those based on class were lifted, and that against regional associations limited to political parties. Other laws of the First Republic provided additional restrictions. Laws no. 334 (15 April 1923) and 556 (25 February 1925) prohibited propaganda for restoration of the sultanate or caliphate and the abuse of religion for political purposes. A decree of 1922 outlawed Communism, and one of 2 September 1925 closed the dervish orders. These prohibitions were incorporated into the Penal Code (*Türk Ceza Kanunu*) of 1926 (arts. 141 and 142 being directed chiefly against Communism and art. 163 against religious-political associations). Law no. 5018 of 20 February 1947 for the first time specifically regulated trade unions and employers' associations (both being termed *sendika*, from Fr. *syndicat*). The Constitution of the Second Republic of 9 July 1961 provides broad and specific guarantees of the freedom of association (art. 29: "Every individual is entitled to form associations without prior permission. This right can be restricted only by law for the purposes of maintaining public order or morality") and of the right to form trade unions and employers' associations (art. 46) and political parties (art. 56).

The actual development of associational life was at times broader and at times narrower than the legislative history would indicate. Until the 1908 revolution, political associations within the Empire took the form of secret conspiracies, often with headquarters in exile. Among the first were those organized by nationalists among the Christian minorities, notably the Greek *Ethnike Hetairia* (National Association) founded in Odessa in 1814, followed by the Armenian Hinčak party (Geneva 1887) and the Dashnaktsutiun (Armenian Revolutionary Federation, 1890). The earliest political movements among Ottoman Muslims lacked elaborate organization; rather they were short-lived and abortive conspiracies aimed at the quick overthrow of the reigning *sulṭān*. Such was the nature of the *Kuleli* Incident of 1859, the *Čiraghān* Incident of 1878 and the so-called Scalieri-ʿAzīz Committee of the same year. A more elaborate society was formed in 1865 by a number of prominent literary and political figures with liberal and constitutionalist aims, including the poet Nāmīk Kemāl. When its members were banished or exiled in 1867, the centre of their activities shifted to Europe, where they adopted the name *Yeni ʿOthmānlīlar* (New Ottomans) or *Jeunes Turcs*. From this time onward, "Young Turks" became the name commonly used by Europeans to designate the advocates of Ottoman constitutionalism; in Turkish, the name occurs only as a French loan word, *Jön Türk*. Returning from exile after the deposition of ʿAbd al-ʿAzīz, the original "Young Turks" played a leading rôle in the events leading to the adoption of the constitution of 1876. With the establishment of ʿAbd al-Ḥamīd II's autocracy, the movement was at first eclipsed and then relegated once again to secrecy, banishment, and exile. In 1889, a number of students at the Army Medical College (*Mekteb-i Ṭibbiyye-i ʿAskeriyye*) in Istanbul, including Ibrāhīm Temo and ʿAbdullāh Djewdet, formed a secret political society known at first as *Teraḳḳī we Ittiḥād* and later as *ʿOthmānlī Ittiḥād we Teraḳḳī Djemʿiyyeti* (Ottoman Society of Union and Progress, later commonly known to Westerners as the Committee of Union and Progress). In Paris, the most prominent spokesman of the anti-Ḥamīdian exiles was Aḥmed Rīza (Riḍā), editor of the journal *Mechveret* (*i. e.*, *Meshweret*, "Consultation"). Defections and factionalism weakened the movement from time to time, whereas ʿAbd al-Ḥamīd's repressive measures supplied a steady stream of new recruits both for the secret internal and for the exiled opposition movement. Thus, whereas Aḥmed Rīza considered himself an adherent of Comtean positivism and hence an advocate of strong central government, his rival "Prince" Sabāḥ al-Dīn formed a "Society for Individual Enterprise and Decentralization" (*Teshebbüth-ü Shakhṣī we ʿAdem-i Merkeziyyet Djemʿiyyeti*, Paris 1902). By 1906, the centre of gravity of the opposition movement had once again shifted from Europe to the Empire itself, where discontented military officers and civil servants spread the conspiracy to the provincial centres to which they were posted. That year a small Fatherland and Freedom Society (*Waṭān we Ḥürriyyet Djemʿiyyeti*) was formed in Damascus with the participation of Muṣṭafā Kemāl (the later Atatürk) and a

larger *ʿOthmānlî Ḥürriyyet Djemʿiyyeti* in Salonica with participation of Ṭalʿat, Djemāl (both later Pashas) and other prominent future figures. By the end of 1907, the Salonica group had absorbed the remnants of the Damascus society and merged with representatives of the Paris exile movement under the name of "Committee (or Society) of Union and Progress—a name adopted out of respect to its predecessors rather than a name acquired by direct inheritance" (Ramsaur, 122 f.). The successful revolution of 1908 was the result mainly of pressure of Macedonian army units enlisted into the conspiracy by this consolidated Salonica group.

From 1908 to the present, periods of proliferation of political and other voluntary associations have alternated with periods of suppression or coordination under the aegis of a single, powerful party. The number of parties and political associations listed for each of these periods in the index of Tunaya's work (772-7) may serve as a rough measure of this ebb and flow: 1814-1908: 18; 1908-13: 22; 1913-8: 2; 1918-23: 55; 1923-45: 5; 1945-52: 30. Among the many associations formed after the 1908 revolution were the New Generation Club (*Nesl-i Djedīd Kulübü*, 1908, representing Sabāḥ al-Dīn's decentralist tendency), an Ottoman Press Association (*Maṭbūʿāt-i ʿOthmāniyye Djemʿiyyeti*, 1908), an Arab-Ottoman Brotherhood Society (1908), a pro-Unionist association of *ʿulemāʾ* (*Djemʿiyyet-i Ittiḥādiyye-i ʿIlmiyye*, 1908), the Turkish Society (1908) and the Turkish Home Society (1911) both later (1913) merged and expanded into the Turkish Hearth (*Türk Odjaghî*, for the next two decades the most important association of Turkish nationalist intellectual and cultural leaders with branches throughout the country). The list of constituent organizations which on 17 April 1909 formed the Ottoman Unity Committee (*Heyʾet-i Müttefiḳa-i ʿOthmāniyye*) to oppose the threat of counter-revolution provides an indication of the variety of political and semi-political associations which had sprung up in the capital in the first few months after the 1908 revolution (see Tunaya, 275 f.): Ottoman Society of Union and Progress, Ottoman Liberal Party, Dashnaktsutiun, Greek Political Society, Ottoman Democratic Party, Albanian Central Club, Kurdish Mutual Aid Club, Circassian Mutual Aid Club, Bulgarian Club, Club of *Mülkiyye* Graduates, Ottoman Medical Society, etc. Philanthropic and professional societies, such as the Red Crescent (*Hilāl-i Aḥmer Djemʿiyyeti*, later called *Kızılay*), the Children's Aid Society (*Ḥimāye-i Eṭfal Djemʿiyyeti*, today *Çocuk Esirgeme Kurumu*), and the Istanbul Bar Association also date back to this period. On the political scene, the Society of Union and Progress was the most powerful organization in the country, and for the next decade it became known as *the* Society—*Djemʿiyyet tout court*—even though in 1913 it officially proclaimed its transformation into a political party. Meanwhile, adherents of Sabāḥeddīn and a continuous stream of dissidents from Unionist ranks formed a number of opposition parties, most of which eventually merged in the Freedom and Accord Party (*Ḥürriyyet we Iʾtilaf Fîrḳasî*, or, with its official French name, *Entente Libérale*) in 1911. But the coup d'état of January 1913 (*Bab-î ʿAlī Waḳʿasî*) firmly entrenched the Unionists in power and the assassination of Maḥmūd Shewket in June of that year prompted a wave of stern suppression, including banishment of most Freedom and Accord leaders. For the next five years, the Union and Progress Party, led by Ṭalʿat and Enwer, ruled unchallenged, and control of government patronage and tightening wartime economic regulations gave it the opportunity to dominate such voluntary associations as continued to be active in public life.

The period following upon the Ottoman defeat in the first World War and the armistice of Moudros (30 October 1918) led to an intensive resumption of party and other associational activity in the capital. Many of the new groups were political parties trying to rally the anti-Unionist politicians for whom the discrediting and flight of the Unionist leaders had left an open field. The largest among these resumed the name Freedom and Accord Party, and for a time provided the major political support for the government of Dāmād Ferīd Pasha [*q.v.*] in 1919. Other, semi-political societies of the armistice period included the Kurdistan Resurrection (*Teʿālī*) Society, the National Unity Committee, the Society of the Friends of England and the Society for Wilsonian Principles (the last two respectively a collaborationist and a nationalist group), a Society for Mutual Aid Among Victims of Political Persecution (*Maghdūrīn-i Siyāsiyye Teʿāwün Djemʿiyyeti*). Once again the list of societies adhering to a non-partisan effort at national unity, the National Congress (*Millī Kongre*) of 29 November 1918, gives an indication of the wide variety of associations then in existence. It reads, in part, as follows: Turkish Hearth, Children's Aid Society, Teachers' Colleges Alumni Association, Navy Society, Galatasaray Students' Home, Mutual Aid Society of Kabatash (a quarter of Istanbul), Women's Employment Society (*Kadînlarî Čalishtîrma Djemʿiyyeti*), National Defence Society, Press Association, Teachers' Society, National Instruction and Physical Education Association, Bar Association, Painters' Society, Farmers' Association, National Association of Private Schools, Craftsmen's Society, Women's Welfare Association (*Djemʿiyyet-i Khayriyye-i Niswāniyye*), Muslim Women's Employment Society, Society of Music-Loving Ladies, Society for the Modern Woman (*ʿAṣrî Ḳadîn Djemʿiyyeti*), Society for the Promotion of Fine Arts, etc, etc. (Tunaya, 420). During this same period we also encounter the first parties with a specific appeal to the lower classes, notably the Workers' and Peasants' Socialist Party of Turkey, the Ottoman Labour Party, and the Socialist Party of Turkey (*ibid.*, 438, 458, 463).

While the capital and the central government were coming increasingly under the control of Allied occupation authorities, local societies were forming in most of the *wilāyet* and *ḳaḍā* seats of Anatolia and Eastern Thrace for the purpose of opposing Allied occupation, partition, and annexation plans. In the case of one of the earliest and most prominent of these, the Ottoman Committee for the Defence of Thrace and Pashaeli (Edirne, 2 December 1918), we know that it was prepared and founded at the behest of Ṭalʿat Pasha, who hoped that such local groups would be able to carry on the Unionist political cause after the defeat of the Empire and the demise of the central party organization (see Bıyıklioğlu, i, 123; cf. Rustow in *World Politics*, xi, 541). Since several similar organizations were founded in other important cities within a few days or weeks of each other, in some cases also with direct participation of local Unionist leaders (Ottoman Society for Defence of Rights of Izmir, 1 December 1918; Society for the Defence of Rights of the Eastern Wilāyets, founded in Istanbul, 4 December 1918, Erzurum branch opened 10 March 1919; Cilician Society, Adana 21 December 1918), one

may infer that there may have been a more comprehensive central plan. Whereas the earlier nationalist organizations rallied to the slogan of "Defence of Rights" (*müdāfaʿa-i ḥuḳūḳ*), those formed in western Anatolia at the time of the Greek occupation of Izmir (May 1919) commonly called themselves "Rejection of Annexation" (*redd-i ilḥāḳ*) societies. Regional congresses of these groups were held throughout the summer of 1919 at Erzurum, Balîkesir, Alas̲h̲ehir, and elsewhere. Whatever the antecendents of the Defence of Rights movement, its nation-wide consolidation was the result of the activities of Muṣṭafā Kemāl Pas̲h̲a [Atatürk] [*q.v.*], who was elected chairman of the Erzurum Congress and himself called for a nationwide congress at Sivas (4-11 September 1919) which repudiated the Union and Progress Movement, defined the foreign policy aims of the nationalist resistance movement in the so-called National Pact (*mīt̲h̲āḳ-i millī*), and created the consolidated Society for the Defence of Rights of Anatolia and Rumelia (*Anadolu ve Rumeli Müdāfaʿa-i Ḥuḳūḳ D̲j̲emʿiyyeti*). Following the reinforced occupation of Istanbul in March 1920, the convening of a Grand National Assembly at Ankara on 23 April created a *de facto* nationalist government which was to become the foundation of the First Turkish Republic (proclaimed on 29 October 1923).

In the Ankara Assembly Kemāl time and again faced a religious-conservative opposition, known as the Second Group, but the elections of 1923 resulted in the complete elimination of these opponents. Later that year the Defence of Rights Society was reconstituted as the People's Party, later as the Republican People's Party (*K̲h̲alḳ Fîrḳasî*, *D̲j̲umhūriyyet K̲h̲alḳ Fîrḳasî* [*q.v.*], and eventually *Cumhuriyet Halk Partisi*). The precipitate manner in which the Republic had been proclaimed and fears of personal rule by Kemāl led to the formation of a new opposition group, the Progressive Republican Party (*Teraḳḳîperver D̲j̲umhūriyyet Fîrḳasî*, 17 November 1924), led by Kemal's closest and earliest associates of the 1919-20 period. Following the Kurdish uprising of February-April 1925, this party was charged with complicity in the insurrection and dissolved by cabinet decree (3 June 1925) under authority of the Law for the Restoration of Order (*Taḳrīr-i Sükūn Ḳānūnu*, 4 March 1925). The following year, most of the members of its Assembly group were tried, and seven of them sentenced to death and executed, on unproven charges of complicity in the attempt on Kemāl's life discovered in Izmir.

Although the formation of opposition parties was never formally prohibited, the events of 1924-26 clearly discouraged any would-be founders for the next two decades. The only important exception was the short lived Free Republican Party founded (and reclosed within four months) at Kemāl's suggestion by his close friend Ali Fethi [Okyar] [*q.v.*] in 1930. The dissolution of the Turkish Hearth (see above) in 1931 (involving the conversion of its branches into People's Houses to be administered by the People's Party), the merger of the posts of *wālī* and *wilāyet* chairman of the Republican People's Party (1936), the formation of a new Press Association under the chairmanship of Atatürk's long-time journalistic spokesman Falih Rıfkı Atay (11 June 1935), and the Law of Association of 1938 (see above) were so many steps toward the complete coordination of all associational and political activities within a single official party. Earlier, the formation under Atatürk's personal auspices of the Turkish Historical Society and the Turkish Language Society (*Türk Tarih Kurumu* and *Türk Dil Kurumu*, 1932), provided a vehicle for Atatürk's concern with the promotion of a national-historical consciousness and of language reform.

A radical shift toward a policy of democratization and liberalization came at the end of the Second World War, first heralded in President İnönü's speech of 19 May 1945, and confirmed after some wavering by his pledge of impartiality between government and opposition parties of 12 July 1947. (The 1946 revision of the Law of Associations and the new Labour Code of 1947 were parts of the new political course). As a result, the formation of political and other associations multiplied in unprecedented fashion in the years after 1945. Tunaya lists as many as 14 parties founded during the single year of 1946. During the same year voluntary associations of national prominence were numerically distributed among various categories as follows: Craftsmen's Associations 343; sports clubs 246; social clubs 241; benevolent societies 100; town clubs 89; student societies 80; sports societies 79; civic improvement associations 79; scholarly associations 22; trade unions and employers' associations 20; health societies 17; journalists' associations 13 (*Türkiye Yıllığı* 1947, 266). The more liberal atmosphere also encouraged a secret revival of dervish orders which continued to be outlawed. (For specific cases of arrest see G. Jäschke, *Die Türkei in den Jahren 1942-51*, Wiesbaden 1955, index s.v. Derwischorden). Among these, the Tid̲j̲aniyye attracted the greatest notoriety because of its campaigns for reintroduction of the Arabic version of the *ad̲h̲ān* and of smashing statues of Atatürk. The latter subsided after the passage in 1953 of a new law for the protection of the memory of Atatürk which imposed heavy penalties on such activity.

A number of parties were disbanded after 1945 because of Communist leanings, notably the Socialist Toilers' and Peasants' Party of Turkey (closed 16 December 1946 by the Istanbul Martial Law Command) and the Socialist Party of Turkey (closed by the same decision, reopened after acquittal of its founders in 1950, and reclosed by court order on 17 June 1952). A number of other parties or associations of the extreme right were similarly dissolved, including the Islam Democratic Party (involved in an assassination attempt on the liberal journalist Ahmed Emin Yalman and closed by court order on 20 October 1952), the Great East (*Büyük Doğu*) Society (dissolved itself 26 May 1951 while on trial for "reactionary" activities and after its leader, Necip Fazıl Kısakürek had been apprehended on a gambling charge), and the pan-Turkist and racist Turkish Nationalists' Association (*Türk Milliyetçiler Derneği*, dissolved by court order 4 April 1953). (Information in this paragraph furnished to author by Turkish Ministry of the Interior, January 1954).

The advent to power of the Democratic Party under Celâl Bayar and Adnan Menderes as a result of the 1950 elections soon brought more systematic legal and extra-legal restrictions upon the freedom of association. Whereas the parties just listed consisted mainly of small groups of obscure men whose aims were repudiated by the vast majority of thoughtful citizens, the major targets of Menderes's repressive policies, it soon became clear, were the major opposition parties themselves. In December 1953, the assets of the Republican People's Party

(in opposition since 1950) were taken over by the government treasury, and just before the 1954 elections the second largest opposition group, the Nation Party (*Millet Partisi*) was dissolved by court order on tenuous allegations of being in fact a religious association. The latter party soon reappeared as the Republican Nation Party, enlarged in 1957 into the Republican Nation Peasants' Party. Toward the end of the decade opposition parties were subject to stringent police controls at their meetings, suppression of their newspapers, and systematic harrassing of their leaders in their movements throughout the country. At the same time many voluntary associations were pressed into joining the Patriotic Front (*Vatan Cephesi*) under Democratic Party auspices. The overthrow of the Menderes regime in the revolution of 27 May 1960 brought a temporary moratorium on all political activities under the provisional government of General Gürsel's Committee of National Unity. With the proclamation of the Constitution of the Second Republic, political and associational freedoms were once again restored, although the leaders of the deposed Democratic regime of Bayar and Menderes remained barred from political activity for the time being.

(D. A. Rustow)

(iii)—Persia. The word which came to be commonly used in Persian for a voluntary society or association for literary, scientific, benevolent, or political purposes was *andjuman* [*q.v.*]. The terms *madjmaʿ*, *idjtimāʿ*, and *ittiḥādiyya* were less frequently used. The formation of *andjumans* in Persia was a relatively late growth. In a country where government was despotic and power arbitrary any group of persons regularly associating together was likely to be suspected of plotting against the state (cf. the story related in the *Siyāsat-nāma* of Niẓām al-Mulk, Persian text, ed. Schefer, 145 ff.); or of religious heresy, which was also closely bound up with opposition to the state, since an attack on orthodoxy implied a threat to the established order. This was perhaps a dilemma inherent in the very nature of the Islamic theory of state, which led the government to adopt an uncompromising attitude towards the unorthodox, thereby driving them to the very action which the government feared, namely the formation of secret societies, whose ultimate aim was the violent overthrow of the state. Further, co-operation between the citizens was mainly through associations such as the dervish orders and the craft guilds; and the *futuwwa* organizations, which in medieval Persia were connected at one extreme with the dervish orders and at the other with the craft guilds, and of which the *zūrkhāna* of modern Persia was in some measure an offshoot; and lastly perhaps even the factions, which had a vigorous life in some towns. Many of these various types of association were in some measure charitable associations also. These various factors to some extent account for the late growth of voluntary associations in Persia and their relative weakness in the nineteenth century when they were first found in any number.

The earliest *andjumans* mentioned in modern times are the literary societies which are recorded in early Ḳādjār times. That the first associations to be formed should have been literary societies is probably due to two factors: first there was a long tradition in Persia of literary discussion, and secondly a literary circle was less likely to draw the suspicion of the authorities upon itself than was any other type of association. Mention is made of a literary circle formed by the poet, Mushtāḳ (d. 1171/1757-8); and the formation of another some time prior to 1218/1803-4 in Iṣfahān by the poet Nishāt (d. 1244/1828-9) in imitation of the *andjuman-i mushtāḳ*. Nishāt's *andjuman*, which met weekly, was a centre for poets, men of letters, and Ṣūfīs (Ibrāhīm Safāʾī, *Nahḍat-i Adabī-i Īrān*, Tehrān n.d., 17). Sir Harford Jones Brydges describes literary gatherings which were attended by a mixed company of jurists, officers, merchants, and others, c. 1747 at the house of the poet Mīrzā Ḥusayn Wafā in Djīrāz (*The dynasty of the Kajars*, London 1833, cxlviii). The Ṣāḥib Dīwān, Mīrzā Muḥammad Taḳī ʿAlī Ābādī (d. 1256/1840-1) is also said to have formed a literary society in Zandjān and later in Shīrāz during the reign of Muḥammad Shāh (*Nahḍat-i Adabī-i Īrān*, 28-9). Wiṣāl (d. 1262/1845-6) formed a similar society in Shīrāz during the reign of Fatḥ ʿAlī Shāh (ibid., 35). It is difficult to know whether these literary societies really had any regular membership or were merely circles of literary-minded men. Iʿtiḍād al-Salṭana, at one time minister of education to Nāṣir al-Dīn (reg. 1848-96) mentions in an essay that as a young man at the beginning of Nāṣir al-Dīn's reign he liked having meetings with literary and mystically inclined persons and had formed a group which met nightly. It included poets, such as Ḳaʿānī, and learned men, such as Mīrzā ʿAbd al-Raḥmān Harawī, who later became one of the Bābī leaders (*Rasāʾil-i Mutaʿaddida*, Madjlis, ms. 1293).

Under Riḍā Shāh Pahlawī when freedom of political association was limited, a number of literary societies (known individually as *andjuman-i adabī*) were founded in Tehrān and the provinces under official and private inspiration.

During the reign of Nāṣir al-Dīn there was a gradual intellectual, or rather political, awakening; and with this there began a movement of revolt against internal corruption and misgovernment on the one hand and foreign intervention on the other. There was, however, at the time little political freedom and it was difficult for men to meet openly for political discussion, nor was there a free press in which they could express their views. This accounts both for the slowness with which the movement of revolt developed and also for the tendency to form secret or semi-secret societies. About the middle of the century there appear to have been attempts to organize societies known as *farāmūsh-khāna*, which are alleged to have been connected with freemasonry (though neither English nor French freemasonry apparently recognized these associations). On 12 Rabīʿ II 1278/19 October 1861 a notice appeared in the official gazette forbidding the organization of such groups.

One of the earliest societies to be formed during the reign of Nāṣir al-Dīn was the Madjmaʿ-i Ukhuwwat founded by ʿAlī Khān Ẓahīr al-Dawla b. Muḥammad Nāṣir Khān, the *Ishīkāķāsībāshī* and son-in-law of Nāṣir al-Dīn. Ẓahīr al-Dawla succeeded Ṣafī ʿAlī Shāh as the leader of a group of Niʿmatallāhī dervishes who had gathered round Safī ʿAlī Shāh as their *pīr*. Although Madjmaʿ-i Ukhuwwat was something in the nature of a Ṣūfī fraternity rather than a literary or political society, it appears to have been regarded by some as the first of the "political" *andjumans* and on these grounds its premises were destroyed on the orders of Muḥammad ʿAlī Shāh after the bombardment of the National Assembly (Muʿayyir al-Mamālik, *Ridjāl-i ʿAṣr-i Nāṣirī*, in *Yaghmā*, ix/7, 1956, 326 ff.). Nevertheless the society appears to have continued in existence or to have been reformed (see Ḥusayn Samīʿī, *Manthūrāt ya munshāʾāt wa tarasullāt*, Tehrān n.d., 314 ff.).

Towards the end of Nāṣir al-Dīn's reign various secret or semi-secret associations started to meet in Tehrān and the provinces. When these *andjumans* (which came to be known individually by the term *andjuman-i millī*, *i.e.*, a national or popular society), first started to meet their deliberations appear to have been mainly confined to discussions on the desirability of the liberation of the people from the yoke of tyranny, and of the benefits which accrued from freedom, justice, and education. Their members were held together by discontent at existing conditions and a belief in the need for modernization. After the assassination of Nāṣir al-Dīn in 1896 the activities of the *andjumans* increased and their members advocated reform more openly. Their membership appears to have been drawn predominantly from the middle ranks of the *ʿulamā*. At this period the *andjumans* (or those of which we have records) seem to have considered their function to have been purely an educative one: to awaken the people to the evils of despotism and the benefits of freedom. Their members were apparently convinced that "progress" would inevitably result from the acquisition of the "new learning". With this in view they encouraged their members to found schools, which some of them did. In the second period of their existence after the grant of the constitution many of the *andjumans* themselves ran classes to combat illiteracy and even founded schools (Yaḥyā Dawlatābādī, *Ḥayāt-i Yaḥyā*, Tehrān n.d., ii, 207-8; E. G. Browne, *The Persian revolution of 1905-1909*, Cambridge 1910, 245). One of the late 19th century *andjumans*, the Andjuman-i Maʿārif founded in 1315/1897-8, was apparently specifically concerned with educational matters (*Tarbiyyat*, no. 90, 6 Dhu 'l-Ḥidjdjā 1315, Tehrān; ʿĪsa Ṣadīķ, *Taʾrīkh-i farhangī-i Īrān*, Tehrān, 1957-8, 340). Some of the *andjumans* after the grant of the constitution published newspapers; but most of these were ephemeral (see Browne, *The press and poetry of modern Persia*, Cambridge 1914, and Muḥammad Ṣadr Hāshimī, *Taʾrīkh-i djarāʾid wa madjallāt-i Īrān*, 4 vols., Iṣfahān).

By 1903 discontent against the government had become more open and the need for reform seemed to the members of the *andjumans* more urgent. In 1904 a secret meeting of various groups which had hitherto been acting independently took place. They agreed to work for the establishment of a code of laws and the rule of justice and the overthrow of tyranny. The drew up a programme of action, or charter of association, consisting of eighteen articles; and set up a revolutionary committee of nine. The main purposes of the association were the dissemination of information, the establishment of contact with various classes of people inside and outside Persia, and the fanning of dissension among those opposed to their aims. (Malikzāda, *Taʾrīkh-i inķilāb-i mashrūṭiyyat-i Īrān*, Tehrān n.d., ii, 8; and see also Malikzāda, *Zindagī-i Malik al-mutakallimīn*, Tehrān 1946). Somewhat later, in 1905, a group called the Andjuman-i Makhfī (the Secret Society) was formed. Its membership was mainly drawn from the religious classes. It, too, was concerned to restrain corruption on the one hand, and curtail foreign intervention in the affairs of Persia on the other. It was both nationalist and Islamic. It is clear from its proceedings as recorded in the *Taʾrīkh-i Bīdārī-i Īrāniyān* by Nāẓim al-Islām-i Kirmānī (Tehrān, 2nd edition, n.d.) that its members were convinced that the despotism and the tyranny of the government on the one hand and the possibility of intervention by Great Britain and Russia on the other constituted a threat to Islam, and secondly that they believed that all the ills of the country could be cured by education. The activities of this and other *andjumans* played an important part in preparing the people for modernization, canalizing the growing discontent, and bringing the disaffected elements together. Their members became active supporters of the constitutional revolution. About the end of 1905, or the beginning of 1906, after the conflict between the Shah and the "reformers" had become open, a group broke away from the Andjuman-i Makhfī and the Andjuman-i Makhfī-i Thānawī (the Second Secret Society) was formed. The original *andjuman* continued its activities for some months, but by June 1906, various of its members having been arrested, it ceased to exist.

With the grant of the constitution in August 1906 the Andjuman-i Makhfī-i Thānawī was reconstituted and numerous other *andjumans*, with local and professional affiliations, sprang up in the capital and the provinces. In Tehrān within a short space of time some two hundred *andjumans* were formed; some of the larger ones are said to have had several thousand members. Their purpose was to support the constitution, advocate reforms, watch over the actions of the government and its officials, and demand redress for the citizens in cases of real or alleged injustice. Two main types of *andjuman* came into existence: "official" *andjumans* and "popular" *andjumans*. The former were the provincial councils (*andjuman-i ayālatī wa wilāyatī*) which were originally set up in the provincial towns for the purpose of electing deputies to the National Assembly and were later recognized by Article 90 of the Supplementary Fundamental Laws promulgated on 7 October 1907. Article 91 lays down that they should be elected by the people and Article 92 states that they were to be free to exercise supervision over all reforms connected with the public interest. The second type of *andjuman*, the "popular" *andjuman*, was also recognized by the supplementary Fundamental Laws, Article 21 of which states "Societies (*andjumans*) and associations (*idjtimāʿāt*) which are not productive of mischief to religion or to the state and are not injurious to good order are free throughout the whole empire, but members of such associations must not carry arms, and must obey the regulations laid down by the law on this matter . . ."

The provincial councils varied a good deal from place to place. The Andjuman-i Ayālatī of Tabrīz, which had been set up for the purpose of the election

of deputies to the new National Assembly, was dissolved by Muḥammad ʿAlī, the *walī ʿahd* and governor of Ādharbāydjān, as soon as the deputies had been elected. It reformed almost immediately as the Andjuman-i Millī though it subsequently appears to have been known by its original name (Karīm Ṭāhirzāda Bihzād, *Ḳiyām-i Ādharbāydjān dar inḳilāb-i mashrūṭiyyat-i Īrān*, Tehrān n.d. 148-9, 174 ff; cf. also Aubin, *La Perse d'aujourdhui*, Paris 1908, 40). After the *coup d'état* of 1907 it became, in the absence of the National Assembly, the focal point of the constitutional or nationalist movement in Persia. In Iṣfahān the Andjuman-i Muḳaddasī-i Millī-i Iṣfahān, opened on 6 Dhu'l Ḳaʿda 1324/22 December 1906, appears to have had executive as well as consultative functions and to have been run by the leading *ʿulamāʾ*, merchants, and citizens of the town (see the weekly paper published by the Andjuman-i muḳaddas-i millī-i Iṣfahān, 1907-8; and also Muḥammad Ṣadr Hāshimī, *op. cit.*, i, 290). The membership of the "popular" *andjumans* also varied from place to place. They were more strongly developed in Tehrān, Tabrīz, Iṣfahān, and north Persia than in the south. Whereas prior to the grant of the constitution the Tehrān *andjumans* were largely drawn from the religious classes and the intellectuals, in the second phase they had a strong connexion with the craft guilds; many of them also had local affiliations. In Tabrīz each street tended to have its own *andjuman*; and in Tehrān not only were there local *andjumans* but the inhabitants of different districts and provinces who lived in Tehrān also formed their own *andjumans*. In Ādharbāydjān from the first the *andjumans* were opposed to the large landowners and had a strong "middle class" bias. In Iṣfahān, on the other hand, the *andjumans* were largely dominated by the local religious leaders. In Rasht some of the members of the Andjuman-i Millī formed there are said to have been connected with the Social Democratic Party of Baku (Malikzāda, *Taʾrīkh-i inḳilāb-i mashrūṭiyyat-i Īrān*, ii, 264). In general, however, the members of the *andjumans* had had no political experience, and there was a tendency on the part of some of them to an irresponsible interference in the administration of the country (Cf. Cd. 4581 Persia No. 1 (1909), no. 176, p. 143). In spite of this they played an important part in creating a public opinion in favour of constitutional reform and were the one support which the National Assembly had against the reactionary party. Further, through the contact which the *andjumans* established with each other they fostered a certain sense of solidarity among those who were seeking to assert themselves against the arbitrary, and often tyrannical, rule of the provincial governors. Prior to this time any attempt by the people to assert themselves against the local authorities was likely to be isolated. The *andjumans* created a sense of a community of interest and this gave the people in widely separated districts courage to act. The success of the *andjumans* in providing a focal point for public opinion in support of the constitution was such that their opponents sought to counter this by infiltrating into existing *andjumans* and by forming *andjumans* themselves, hoping to confuse the issue by working in secret against the constitution under cover of nationalist associations.

Muḥammad ʿAlī, who succeeded his father, Muẓaffar al-Dīn, in January 1907, disliked the constitution from the start. After the appointment of Mīrzā ʿAlī Aṣghar Khān Amīn al-Sulṭān, the Aṭabak-i Aʿẓam, as prime minister in the late spring of 1907 there was a great increase in the numbers of the *andjumans*, secret and otherwise, formed for the defence of the constitution (ʿAbdallāh Mustawfī, *Sharḥ-i zindagī-i man*, Tehrān 1945, ii, 244-6; memorandum by Churchill, enclosed by Sir Cecil Spring Rice to Sir Edward Grey in a letter dated 23 May 1907, Cd. 4581, no. 26, p. 27). Little was done to implement the constitution. Disorders were fomented in the provinces. Russia was suspected of aiding and encouraging the Shah against the National Assembly, and the belief grew that there was secret collusion between the Shah and the Amīn al-Sulṭān for the overthrow of the constitution and the sale of the country to Russia. On 31 August the Amīn al-Sulṭān was assassinated by a certain ʿAbbās Āḳā (who immediately afterwards shot himself). On the assassin's body was found a paper stating that he was devotee (*fidāʾī-i millī*) no. 41 of the Andjuman. Whether in fact such an *andjuman* whose members were thus known as *fidāʾīs* really existed remains an open question. There is, however, no doubt that the murder heightened the morale of the nationalists, and gave rise to the belief that the membership of secret societies whose members would not stop at political assassination to gain their ends was spreading. Popular sentiment approved the murder and regarded ʿAbbās Āḳā as the saviour of the country (Kasrawī, *op. cit.* (in Bibl.), 447 ff., Browne, *op. cit.*, 150 ff.).

An abortive attack by the court party on the National Assembly in the winter of 1907-8 was frustrated by the help of the Tehrān and provincial *andjumans*. Some of them meanwhile began to raise volunteers for a kind of national militia. In June 1908 a more serious attack was made against the National Assembly. The *andjumans* again rallied to its defence, this time in vain. The Cossack regiment bombarded the Assembly and the *andjumans* were dispersed after a brief resistance. The Assembly was closed and a number of prominent nationalists were arrested and some executed. The organization of the nationalist resistance, which culminated in the deposition of Muḥammad ʿAlī and the restoration of the constitution in July 1909, largely devolved on the *andjumans*. They were helped in this by *andjumans* formed by Persian communities abroad, especially the Andjuman-i Saʿādat in Constantinople.

As soon as Muḥammad ʿAlī had closed the National Assembly he sent instructions to the provinces for all the *andjumans* to be closed also (Kasrawī, *op. cit.*, 672). Immediate and effective resistance came from Tabrīz only. Government troops were expelled from the town, which was then blockaded, the siege being raised by Russian troops who opened the Julfa road in April 1909. The resistance of Tabrīz organized by the Andjuman-i (Millī-i) Ayālatī, although the nationalists were eventually forced to capitulate, gave the nationalists in other cities of Persia, especially Iṣfahān and Rasht, time to recover after the *coup d'état* of 1908. In Iṣfahān contact was eventually established between the *andjumans* and the Bakhtiyārīs and in January 1909 Iṣfahān was taken. At the end of April a force of Bakhtiyārīs and nationalist fighters (*mudjāhidīn*) set out from Iṣfahān for the capital, while the Sipahdār-i Aʿẓam Muḥammad Walī Khān, who had been in command of the government troops outside Tabrīz and had gone over to the the nationalists and assembled a force of *mudjāhidīn* in Gīlān and Tunākabūn, marched on Tehrān from the neighbourhood of Ḳazwīn. The two forces entered Tehrān on 13 July and Muḥammad ʿAlī abdicated on 17 July.

With the restoration of the constitution the activities of the "popular" *andjumans* declined. For a brief period in 1911 when renewed attempts to strangle the constitution were made they were again sporadically active; and various acts of violence were attributed to them. However, when the constitution was again suspended in 1911 on account of the opposition of the National Assembly to the Russian ultimatum demanding the dismissal of Mr. Morgan Shushter, the treasurer-general, the cumulative effect of internal disorders, the infiltration of hostile elements into the nationalist movement, and, above all, Russian pressure, discouraged, if it did not make virtually impossible, the emergence of a popular movement of protest. The "popular" *andjumans*, thus, had no longer a function to perform and so they disappeared from the political scene.

(iv)—Tunisia. In Tunisia, the term *djamʿiyya* does not appear to have been in use before the 19th century. Khayr al-Dīn al-Tūnusī used it in 1284/1867 in the sense of academy, scientific association; charitable society; municipal or cantonal organization (*djamʿiyyat al-kāntūn*), agricultural or industrial association; parish, parish council; various groups of teachers, notables, officials, local magistrates, municipal councillors. In the field of economics he used *sharika* (but *djamʿiyya* for a joint-stock company). He even used the expression *al-sharikāt al-djamʿiyya* (*Aḳwam al-masālik*, 77).

In the twentieth century *djamʿiyya* signifies association, society, corporation, league, parliamentary assembly (*al-djamʿiyya al-waṭaniyya*) and includes so-called voluntary associations of every sort (*al-djamʿiyyāt al-ḥurra*).

Religious associations.—The oldest is the *Djamʿiyyat al-Awḳāf*, in charge of the public habous and with the right to inspect the endowments of private habous and Zaouias (*zawāyā*). It is social and religious in character. With it can be connected the *djamʿiyyāt khayriyya* (charitable), the first of which was founded in 1323/1905. In 1380/1902 the Yearbook (*Rūznāma*) added the *takāyā* (sing: *takiyya*), institutions dating from 1188/1774 under ʿAlī Pasha Bey). Neither the traditional Islamic organizations nor the confraternities (*ṭarīḳa*) bear this name. The non-confessional associations founded after 1900 added to their titles the adjective *islāmiyya* or *ʿarabiyya*, to be replaced by *tūnusiyya* or *waṭaniyya* between 1919 and 1938 (a period ot intense Destour activity). In 1935 *shaykh* ʿAbd al-ʿAzīz al-Bawandī founded the *djamʿiyyat al-imlāʾāt al-ḳurʾāniyya* (Ḳurʾānic readings).

Political associations.—To the "evolutionist" group are attributed numerous foundations connected with music (al-Hilāl, 1322/1904 and al-Ḥusayniyya founded in 1907 in al-Naṣriyya), sport (al-Islāmiyya, 1905), the theatre (1905), etc. Special mention must be made, on account of its influence, of the "Association of North African Muslim students in France" (*Djamʿiyyat ṭalabat shamāl Ifrīḳiya al-muslimīn bi-Firansa*), which was presided over by several well-known Tunisians. From the time of its foundation (1934) the Neo-Destour created or controlled numerous associations (for example, *al-shubbān al-muslimūn*). In 1945 there occurred a characteristic regrouping of existing associations (agricultural labourers, workers, officials, students, and teachers, women, young people etc.). The word *ḥizb*, party, denotes a purely political association from the time of the foundation of the Young Tunisian Party (1907).

Economic associations.—The first of these appears to have been the association of food merchants: *Djamʿiyyat tudjdjār al-maʿāsh* (15 September 1888). After 1906 they became more numerous (at least nine societies were founded between 1910 and 1921); in this sphere, after 1906 *sharika* tends to replace *djāmʿiyya*. From 1888 to 1938, out of 38 societies only 6 bear this second name. At first societies had a symbolic name (*nahḍa, taʿāwūn, taʿāḍud*) with *sharika* as a secondary name, but soon *sharika* became their name. After 1900, as the development of such societies was curbed by the latent objection to loans subject to interest (*ribāʾ*), their Islamic character was stressed: *Islamic* Commercial Society (*al-Iḳbāt*, 1908). After 1910 the national aspect was emphasized: the *Tunisian* Islamic Society (*al-Taraḳḳī*, 1910), the National Commercial Society (*al-Amān*, 1914); and the still more significant title *al-Istiḳlāl al-iḳtiṣādī*.

Cultural associations.—The term *djamʿiyya* applies particularly to unaffiliated associations of this sort. The earliest in date (18 Radjab 1314/22 December 1896) was *al-Djamʿiyya al-khaldūniyya* whose aim was the teaching of modern science to Tunisian students, particularly those of the great mosque. The second (23 December 1905) was the Association of Former Pupils of Ṣādiḳī (*Djamʿiyyat Ḳudamāʾ talāmidhat al-ṣādiḳiyya*) which rapidly acquired great political importance. Groups with aims concerned with sport, music, the theatre etc. also adopted or at least implied the title *Djamʿiyya*.

New associations.—With the coming of independence (20 March 1957), the associations underwent a transformation (juridical reforms, a new political, cultural, social and economic orientation). Unions (*ittiḥād*) took the place of *Djamʿiyyāt*. However, the term remained in use for cultural associations, as is shown by the recently established "Cultural Associations Centre" (*Dār al-djamʿiyyāt al-thaḳāfiyya*).

publications) of associations and societies (in Arabic and French): a more detailed study is to appear in *IBLA*. (A. Demeerseman)

India and Pakistan.—In Muslim India the word *djamʿiyya* is replaced by *djamīʿat* or *djamāʿat* as a term for religious or religio-political as distinct from purely political organizations. The term, in this sense, is of recent though not of modernist origin.

The *Djamāʿat-i mudjāhidīn*, the religio-political organization formed by Sayyid Aḥmad Barēlwī, owed its name to its movement of *djihād* against the Sikhs in the early 19th century and later against the British. Essentially it based its programme on the teachings of Shāh Walī Allāh and his successors to purify Indian Islam from syncretic elements borrowed from Hinduism and to organize and strengthen the Muslim community socially and politically. It was a popular organization deriving its support from all cross-sections of Muslim society and operating its own *bayt al-māl* and law courts.

The *Djamīʿat al-ʿulamāʾ-i Hind* was founded in 1919 at the peak of the Indian Muslim agitation in favour of the Ottoman Khilāfat. Mawlana Maḥmūd Ḥasan, already a well-established religio-political leader was among its founders, and though the ʿulamāʾ of the Farangī Maḥall [see dār al-ʿulum] and members of the *Nadwat al-ʿulamāʾ* also participated in it, the element of Deoband [*q.v.*] remained by far the most powerful. It supported the nationalist programme of the Indian National Congress and was opposed to separatist trends in Muslim politics and to the demand for Pakistan by the general Muslim consensus.

This led in 1945 to the formation, by a dissident group of Deobandī and other ʿulamāʾ, of the *Djamīʿat al-ʿulamāʾ-i Islām*, under the leadership of Shabbīr Aḥmad ʿUthmānī, which supported the Muslim League's demand for Pakistan. It moved to Pakistan in 1947, and during the various phases of that country's constitution-making championed the traditionalist view of the *sharīʿa*. Another traditionalist organization which participated to some extent in the processes of constitution-making and legislation was the *Djamīʿat al-ʿulamāʾ-i Pākistān*.

The *Djamāʿat-i Islāmī* differs from these traditionalist religio-political bodies in basing its programme strictly on fundamentalism. It was founded in 1941 by Abu 'l-ʿAlāʾ Mawdūdī, with its centre at Paṭhānkoṭ, and moved to Pakistan in 1947, where it developed itself into a well-knit, well-organized religio-political group, extending its influence into urban and rural areas of West Pakistan and playing a controversial rôle on the question of the ideals and constitution of Pakistan as an Islamic state. Its fundamentalism is the complete antithesis of liberal modernism and vests all rights of legislation immutably in God alone, denying them to all human agencies, individual or collective, thus preaching a theocracy which is to be run by the consensus of the believers according to the letter of the revealed law.

al-DJAMMĀZ, Abū ʿAbd Allāh Muḥammad b. ʿAmr b. Ḥammād b. ʿAṭāʾ b. Yāsir, a satirical poet and humorist who lived in Baṣra in the 2nd-3rd/8th-9th centuries. Nephew of Salm al-Khāsir [*q.v.*], pupil of Abū ʿUbayda, and friend of Abū Nuwās, of whom he has left an exceptionally accurate portrait (see al-Ḥuṣrī, *Zahr al-ādāb*, 163; idem, *Djamʿ al-djawāhir*, 115). Unlike many of his contemporaries, he does not seem to have gained entrance to the court of Baghdād, despite his attempt during the reign of the caliph al-Rashīd. He therefore remained, poverty-stricken, in his native town, satisfying himself with amusing the local notabilities. But it is said that late in life he was called to the capital by al-Mutawakkil and presented with the sum of 10,000 dirhams; legend has it that he died of shock on the spot. This event must have taken place before 247/861, but his death has also been put at 255/868-9.

As a satirical poet he composed little other than *muḳaṭṭaʿāt* of 2 or 3 verses, which were nevertheless remarkable for their malicious liveliness aimed, among others, at Abu 'l-ʿAtāhiya and al-Djāḥiẓ. He was quick and scathing at repartee, but his humour, following the taste of the time, was in general very coarse.

Bibliography: Among old writers, it is to be noticed that Ḥuṣrī (*Zahr* and *Djamʿ*, see index) frequently quotes anecdotes and lines of al-Djammāz; Khaṭīb Baghdādī, iii, 125-6, and Kutubī, *ʿUyūn al-tawārīkh*, MS. Paris 1588, 149 a-b, carry a notice of him; Marzubānī, *Muwashshaḥ*, 278, and *Muʿdjam*, 431, concentrate more on the work than the man. See also: Djāḥiẓ, *Ḥayawān*, i, 174-5, *Bayān* and *Bukhalāʾ*, index; Ibn Ḳutayba, *Mukhtalif*, 71; Ṭabarī, iii, 1412: Ibn al-Athīr, vii, 39; *Aghānī*, index; Thaʿālibī, *Thimār al-ḳulūb*, 322; Ibn al-Shadjarī, *Ḥamāsa*, 275; ʿAskarī, *Ṣināʿatayn*, 50; Ḳālī, *Amālī*, iii, 46; Yāḳūt, *Irshād*, ii, 60. Biographical data and a number of lines are contained in Sandūbī, *Adab al-Djāḥiẓ*, 46-8; Hādjiri, in his edition of the *Bukhalāʾ* of Djāḥiẓ, 315, gives a summary of his biography. (Ch. Pellat)

DJAMNĀ, the usual modern Muslim spelling of the Indian river which rises in Tehrī in the Himālaya and falls into the Ganges at Allāhābād. Generally called Jamnā (older Jumna) on western maps, its Sanskrit name Yamunā has been largely re-adopted in modern India; it was known to Ptolemy as Διαμούνα, to Arrian as Ἰωβαρής, and to Pliny as *Iomanes*; the spellings *Gemini* (Roe) and *Gemna* (Bernier) occur among early European travellers. Early Muslim historians of India refer to it as جون.

Its depth and width have made it a natural frontier in the division of territory in north India, between the Pandjāb and the Doʾāb lands and between Awadh (Oudh) and the districts (Gwāliyār,

etc.) to the south. Navigable for the greater part of its length in the plains, it was an important traffic route until the coming of the railways; this and the purity of its water have largely been responsible for its urban settlements in Dihlī, Mathurā (Muttra), Āgrā, Eṭāwā, Kalpī and Allāhābād [*qq.v.*].

Of its canals, the East Jumna canal was a British enterprise. The western canal, however, was begun by Fīroz Shāh Tughluḳ in 757/1356, as a monsoon supply channel to Ḥiṣār and Hansī [*qq.v.*]. In 976/1568 it was re-excavated, by Akbar's orders, and became a perennial water-course, as shown by the contemporary bridges at Karnāl, Safīdon, etc., and implied by the *sanad* of construction. It was further extended and improved in 1025/1626 by ʿAlī Mardan Khān. On the canals see J. J. Hatten, *History and description of government canals in the Punjab*, Lahore n.d. [see also NAHR].

The "Jumna musjid" of Forbes (1785) and other 18th-century writers is a misapprehension of Djāmiʿ (commonly Djamā, Djammā) masdjid.

(J. Burton-Page)

AL-**DJAMRA**, lit. "pebble", (pl. *djimār*). The name is given to three halts in the Vale of Minā, where pilgrims returning from ʿArafāt during their annual pilgrimage (*ḥadjdj*) stop to partake in the ritual throwing of stones. The *Lisān al-ʿArab* explains that the place acquired its name either through the act of throwing, or through the stones themselves, which accumulate as more pilgrims perform the rite. Travelling from ʿArafāt, one comes first to *al-djamra al-ūlā* (or *al-dunyā*), then, 150 metres further on, to *al-djamra al-wusṭā*. They are in the middle of the main street of Minā, which runs in the direction of the valley itself. There is at each halt a square column of stonework surrounded by a trough into which the stones fall. 115 metres further on to the right, where the road leaves Minā and climbs towards the mountains in the direction of Mecca, the pilgrim comes to *djamrat al-ʿaḳaba* (also known as *al-kubrā* in *ḥadīth*), which consists of a wall and a basin sunk into the earth. The columns and wall are called 'the devils' (*Iblīs* or *Shayṭān*) by the people. The halts also sometimes go by the name *al-Muḥaṣṣab*, which is a plain lying between Mecca and Minā. The ritual stone-throwing is considered compulsory (*wādjib*) by the 4 schools, and exact procedural instructions are laid down. Any infraction invokes a penalty, ranging from the giving of food to a beggar to the offering of a victim for sacrifice.

On 10 Dhu 'l-Ḥidjdja, before the sacrifice of the Feast, the pilgrim throws 77 stones into the *djamrat al-ʿaḳaba*. On the 11th, generally between midday and sunset, he visits each *djamra* in turn, beginning with the *djamra al-ūlā*, and throws 7 stones into each one. He does the same on the 12th (and on the 13th should he still be in Minā). The stones normally come from Muzdalifa, although this is a custom and not an obligation, and they are about the size of a date-kernel or large bean. Burckhardt speaks of stones collected into actual heaps by some pilgrims. They are thrown from a short distance with a flick of the right thumb, rather like marbles. As he makes a throw, the pilgrim utters a *takbīr*, which some jurists consider is the essence of the rite. The crowd presses thick and excitedly round the *djimār*. Poets of the past recounted that the mob allowed them a glimpse of their beloved (see *e.g. Kitāb al-Aghānī*, vi, 30; Yāḳūt, iv, 427; Mubarrad, *Kāmil*, ed. Wright, 166, 13; cf. 370, 8 ff.). The Saʿūdī Arabian authorities have recently improved the means of access to the *djamrat al-ʿaḳaba*. In Arab countries, where stones are within easy reach, lapidation is an expression of hostility (cf. stones thrown at tombs which carry a curse). At *al-djamra* it is Satan who is stoned; there is an old story that Adam was the first person to drive Satan away there by stoning him. Another version attributes the event to Abraham, Hagar and Ishmael. The three *djimār* are said to mark the spots where each in turn was accosted by Satan, who wished to prevent the sacrifice of Ishmael. They all resisted the temptation, and repelled him with stones. There is no explicit mention of the Minā rites in the Ḳurʾān, but reference to them can be found in the biographies of Muḥammad and the *ḥadīth* (see for example Ibn Hishām, 970; Wāḳidī, Wellhausen, 417, 428 ff.; Ibn Saʿd, ii, 1, 125, viii, 224 ff.). They can be traced to an ancient pagan rite adapted by Islam. According to Ibn Hishām, 534, 17 (see also Wellhausen, *Maghrī*), in pagan times there existed blood-spattered stones, used in sacrifices, near the present heaps; cf. references to stone idols of al-Muḥaṣṣab in a poem of al-Farazdaḳ (Boucher ed., 30). Both van Vloten and Houtsma have given interpretations of the pre-Islamic significance of lapidation (cf. *EI*[1], and bibliography below). In a more detailed study, Gaudefroy-Demombynes suggested that it was an idolatrous cult of planetary origin, but warned that the present state of knowledge does not permit of a definitive answer being given (see ḤADJDJ).

(F. Buhl-[J. Jomier])

DJAMSHĪD (Avestan Yima Khshaēta "Yima the brilliant"), in abbreviated form DJAM, an Iranian hero who has "remained alive in popular and literary tradition, from Indo-Iranian times until our own day (see the texts collected, translated and commented upon by A. Christensen, *Le premier homme et le premier roi dans l'histoire légendaire des Iraniens*, ii). To the Indian hero Yama, son of Vivasvant, sometimes immortal man become god, sometimes the first human to have suffered death and to have become its god (*Rig-Veda*, *Mahābhārata*, *Atharva-Veda*; cf. the texts in Christensen, *op. cit.*) there corresponds, in the texts from ancient Īrān, the hero Yima, son of Vīvahvant, a hero of the millennium when men, rescued from the influence of the *dīws* [*q.v.*] by the establishment of morality and religion, did not know hunger or thirst, heat or cold, old age or death; he founded towns and villages in thousands, kindled the three sacred fires, organized the social castes, preserved humanity from perishing by providing a safe, vast refuge, underground but nevertheless light, the *Var* (cf. Noah's ark), on the approach of a terrible winter followed by floods, provoked by a

sorcerer or demon; but, according to the texts, he taught men, who were then simply vegetarians, to eat animal meat (hence his condemnation by the Avesta which forbids sacrifices of blood; cf. text and commentary in Christensen, *op. cit.*, ii); moreover, having fallen under the demon's influence, he believed he was God, lost his purity, gave himself up to profane pleasures and was forsaken by his glory (*kh^w arəna*) which was of divine origin; it was in this way that he brought misery upon mankind and was reduced to living in hiding for a century; finally, on being discovered by the demons, on the order of their leader Azhi-dahāka (Azhdahag, Ẓaḥḥāk) he was sawed in the hollow tree in which he had taken refuge (a borrowing from Talmudic tradition: Christensen, *op. cit.*, 74); later, he was avenged upon Azhi-dahāka through Θraētaona (Farīdūn), a hero descended from the royal family who inherited the divine glory and re-established the monarchy which for some years had been usurped. Christensen has shown that three of the legend's principal characteristics recur in legends of various Iranian herous: the loss of divine favour as a result of a deadly sin (cf. Hartman, *Gayōmart*, 87), the building of a wonderful palace, immortality lost. According to the oldest texts, which find a reflection in al-Ṭabarī (Persian tr. by Balʿamī), Yima was the type of the first man to reign throughout the first millennium; but very soon legend credited him with predecessors: Gayōmart (Kayūmarth) and his children, Hūshang, Takhmōruv (Tahmūrath) whose reigns preceded his own, in the course of the first millennium (Christensen, *Premier homme*, i, 124 ff.).

Arabic and Persian texts deriving from the (lost) Pahlavi work *Kh^w adāināmagh* differ as to the genealogy and chronology of these heroes. As an example we may note that only the *Shāh-nāma* of Firdawsī makes Djamshīd the son of Ṭahmūrath, unlike tradition which makes them brothers; again, several authors insert two or three generations between Hūshang and Djamshīd. In these works we find, developed to a lesser or greater extent (most of all in al-Ṭabarī, Balʿamī, Firdawsī, from the *Kh^w adāināmagh*), details from the ancient texts summarized above (see the summaries and tr. in Christensen, *op. cit.*, ii). Popular tradition and Persian poetry have clung to two elements in the Djamshīd legend: the magic cup (*djām-i Djam*) in which he saw the universe (a very ancient legendary theme: Christensen, *op. cit.*, ii, 128 ff.), the celebration of the *nawrūz* (ibid., 138). Several Arab authors protest against the identification of Djamshīd with Solomon—which proves that this belief was widespread (Christensen, *op. cit.*, ii, 119), and hence the buildings which they are supposed in popular tradition to have erected: Takht-i Djamshīd ("Djamshīd's throne": Persepolis), Takht-i Sulaymān (Murghab), Masdjid-i mādar-i Sulaymān ("mosque of the mother of Solomon": tomb of Cyrus at Pasargadu). In short, Islamic authors do not add any notable element to the legend of Djamshīd; in their works we find borrowings from Avestan sources through the intermediary of Pahlavi texts and the *Khodāi-nāma* (*Kh^w adāināmagh*); in general, they are agreed on the details of his civilizing work, but differ as to his genealogy.

Several historical personages bore the name of Djamshīd (or Djam); among others, the son of the Sāsānid king Kavadh I (Christensen, *L'Iran sous les Sassanides*, index: Zham; idem, *Les Kayanides*, 40), a son of the Ottoman sultan Meḥemmed II [see DJEM], Ghiyāth al-Dīn Djamshīd, who collaborated with Ulugh-Beg [*q.v.*] for his astronomical tables, *zidj* (Browne, iii, 386). According to Yāḳūt (*Muʿdjam*, ed. Wüstenfeld, ii, 118), "Djāmm (sic) is a town in Fars to which was given the name of Djamshīd son of Ṭahmūrath".

The poet Asadī [*q.v.*] of Ṭūs told of the romance between Djamshīd and the daughter of the king of Kābul with whom he had taken refuge from Ẓaḥḥāk, who pursued him as far as China (*Livre de Gerchasp*, i, 37-91, text and trans. Cl. Huart); Djamshīd's magic cup has given the name to a poem *djām-i Djam* [see art. AWḤADĪ; the vowel of the second Djam should be changed to a short *a*]; a romance in verse by Salmān of Savè [*q.v.*] tells of the love of Djamshīd, son of the emperor of China, and Khūrshīd, daughter of the emperor of Byzantium. As it is not possible to mention here all the poems in which Djamshīd features, we will limit ourselves to the *ḳaṣīda* by Manūčahrī (ed.-trans. Biberstein-Kazimirski, no. 57) on the wine-jar which the poet calls "Djamshīd's daughter", following the popular belief which credits Djamshīd with the invention of wine (cf. Muḥammad Muʿin, *Mazdayasna*, Tehran 1326/1948, 267 ff.); Djamshīd appears many times in the *ghazals* of Ḥāfiẓ (play of words on *djām* and *Djam*: ed. Kazwīnī-Ghanī, no. 78, 179, 431, 468).

Massé, *Croyances et coutumes persanes* (index I: Djamchīd).

(CL. HUART-[H. MASSÉ])

DJĀN-I DJANĀN [see MAẒHAR].

DJANĀB SHIHĀB AL-DĪN (CENAP ŞEHABETTIN) (1870-1934). Turkish poet and writer, one of the three representatives of the *Therwet-i Fünūn* school of literature (the others being Tewfīḳ Fikret and Khālid Ḍiyā (Ziya)).

He was born in Monastir. Upon the death of his father, an army officer, killed at the battle of Plewna (1876), he settled in Istanbul with his mother and attended, as a boarder, various military high schools, graduating from the military School of Medicine in 1889 as an army doctor. He spent four years in Paris completing his medical studies. On his return to Turkey he served in various Department of Health offices in the provinces and in Istanbul. After the Constitution of 1908 and during the First World War he tried political life without success. On retiring from government service he joined the staff of the Faculty of Arts of Istanbul University (1914) but had to resign in 1922, following a student protest about his hostile attitude towards the Nationalist movement in Anatolia. After the establishment of the Republic (1923), and after a vain attempt to win the favour of the new Government in Ankara, he lived until his death a relatively secluded life, contributing essays and occasional poems to the revived literary review *Therwet-i Fünūn*.

In his early youth Djanāb came under the influence of the last important group of supporters of

the old school of literature and his first poems are in the classical tradition. But he soon freed himself of this influence and began to write poems strongly inspired by the work of the great modernist ʿAbd al-Ḥakk Ḥâmid and of Redja'īzāde Ekrem. On his return from Paris, where he had ample opportunity to study contemporary French literature, he definitely chose the modern school, which, led mainly by Redja'īzāde Ekrem and Tewfīḳ Fikret, was now developing round the literary review *Therwet-i Fünūn*. Djanāb was invited to join this review, which gave its name to the literary movement of the turn of the century. He became, after Fikret, the most successful and admired poet of the movement.

After 1908, the prose-writer eclipsed the poet, and with his numerous articles, political and literary polemics, essays, criticisms and travel notes, he came to be considered, by a whole generation, as the brilliant master of Turkish prose.

Ignoring completely all the new tendencies which were to revolutionize Turkish poetry and the Turkish language, Djanāb remained an adherent of 'Art for art's sake'. He was influenced in choice of words, concern with rhythm and unusual images by the French Parnassiens and to a lesser degree by the early Symbolists. Djanāb's comparatively few poems (collected after his death by Saadettin Nüzhet Ergun, see *Bibliography*) are all limited variations upon two themes: nature and love. Despite his obsession with metre and choice of words, which were often unearthed from the depths of Arabic and more particularly Persian dictionaries, he is no master of form. But his uncertainty, often awkwardness in form, does not prevent him from achieving at times an original and strangely attractive poetry, with unusual imagery and internal rhythm. "A silvery dew had fallen on the black leaf of night—The moon quivered like a dewdrop on the night".

Djanāb's prose is more ornate and very precious and equally full of rare Arabic and Persian words; it quickly became antiquated because of his failure to see the rapid and inevitable development of the Turkish literary language and style after 1910. In long and futile polemics, supported by his admirers, he fought a losing battle against the generation of young writers, supporters of "New Language" ("*Yeñi Lisān*"), led by the short story writer ʿUmar Seyf al-Dīn (Omer Seyfettin), who were determined to rid Turkish of the domination of Arabic and Persian grammar and vocabulary and introduce spoken Turkish, "the living Turkish" as they called it, into literature. When he realized his mistake in the 1920's and began experimenting with the "new language", it was too late: his day as writer was over. He collected some of his many essays and articles in *Ewrāḳ-i Eyyām*, Istanbul 1915, and *Nethr-i Ḥarb, Nethr-i Ṣulḥ*, Istanbul 1918; and his travel notes in *Ḥadjdj Yolunda*, Istanbul 1909, 1925, and in *Avrupa Mektūblarī*, Istanbul 1919. He also wrote two plays: *Yalan*, 1911, *Kôrebe*, 1917. His last book was a study on *William Shakespeare*, 1931.

Djanāb owes his important place in the history of Turkish literature to his remarkable contribution in the 1890's to the modern school of Turkish poetry, which completed the break with almost all the traditions of *dīwān* poetry and established for good the "westernized" type of Turkish poetry. In this, his role was second only to that of Tewfīḳ Fikret.

(FAHİR İZ)

AL-DJANABA (sing. Djunaybī), one of the leading tribes of Oman. Apparently at one time the strongest of all the Bedouin tribes there, the Djanaba still number enough nomadic members to rank as peers of the Durūʿ [*q.v.*] and Āl Wahība [*q.v.*] in the desert. The main divisions of the Djanaba are the Madjāʿila (sing. Madjʿalī, pronounced Mēʿalī), the Fawāris, Āl Dubayyān, and Āl Abū Ghālib, of which the first is recognized as paramount. The present chief (*rashīd*) of the tribe is Djāsir b. Ḥamūd, whose predecessors were the descendants of al-Murr b. Manṣūr.

Covering a wide territory, the Djanaba generally speaking fall into two groups, an eastern and a western. In the east many have settled along the coasts, in Ṣūr on the Gulf of Oman, which is shared with Banī Bū ʿAlī, and in the little ports of the coast of the Arabian Sea as far south as al-Djāzir. These settled folk have largely turned their hand to nautical affairs, and some have done well as merchants, trading to Bombay, Zanzibar, and the Red Sea. The nomads in the eastern group have large herds of camels and goats, which they keep on the coasts in winter and in the interior in summer, sheltering themselves in caves from the south-west monsoon. Some are skilful fishermen, especially in catching sharks.

The western group consists primarily of Bedouins, though some own property, *e.g.*, the chief of the tribe, Djāsir, who has land in ʿIzz, which is regarded as the tribal capital. Djāsir also has a claim to the island of Maṣīra, on which he stays for a time each year. The favourite range of the western Djanaba, the wadis in the vicinity of the town of Adam, lies east of the range of the Durūʿ.

The Djanaba belong to the Ghāfirī faction, in which they are allied with the Durūʿ in opposition to Āl Wahība, who are Hināwīs. The enmity between these tribes is no longer as bitter as it once was. In Djaʿlān the Djanaba are allies of Banī Bū ʿAlī. The Djanaba call themselves Sunnīs; Ibāḍī doctrines have not made much headway among them, though they respect the Ibāḍī Imām.

DJANĀBA, the state of so-called major ritual impurity. It is caused by marital intercourse, to which the religious law assimilates any *effusio seminis*. One who is in this state is called *djunub*, and can only become ritually clean again by the so-called major ritual ablution (*ghusl* [*q.v.*]) or by the *tayammum* [*q.v.*]. On the other hand, the law prescribes for a Muslim in the state of so-called minor impurity the minor ritual ablution (*wuḍūʾ* [*q.v.*]). The distinction is based on the wording of Ḳurʾān, V, 6. The *djunub* cannot perform a valid *ṣalāt*; he may not make a *ṭawāf* round the Kaʿba, enter a mosque (except in cases of necessity), touch copies of the Ḳurʾān or recite verses from it; these last provisions are based on the traditional interpretation of Ḳurʾān, LVI, 77-9. *Djanāba* is also called "the major *ḥadath*" [*q.v.*], in opposition to the minor ritual impurity.

collections of traditions and the works on *fiḳh*; I. Goldziher, *Die Ẓâhiriten*, Leipzig 1884, 48-52.

(TH. W. JUYNBOLL*)

AL-**DJANADĪ**, ABŪ ʿABD ALLĀH BAHĀʾ AL-DĪN MUḤAMMAD B. YAʿḲŪB B. YŪSUF, Shāfiʿite jurist and historian of Yemen. His family was of the town of Ẓafār in Yemen although he resided most of his life in Zabīd where he apparently died in 732/1332. His only known extant work, *Kitāb al-sulūk fī ṭabaḳāt al-ʿulamāʾ wa ʾl-mulūk*, is an important biographical dictionary of the learned men, primarily jurisconsults, of Yemen arranged by the towns in which they were born or lived. The dictionary proper is preceded by a long introduction comprising a political history of the country from the time of the Prophet to 724/1323-4, early recognized by the later historians of Yemen to be of the greatest value so that his work is quoted as a source by al-Khazradjī, al-Ahdal, Abū Makhrama, and others. The biographical portion was later continued by al-Khazradjī in his *Ṭirāz aʿlām al-zaman fī ṭabaḳāt aʿyān al-Yaman* and in the *Tuḥfat al-zaman fī aʿyān al-Yaman* by al-Ahdal. The *Sulūk* of al-Djanadī has not as yet been edited in its entirety although a portion of the historical introduction, that concerning the Fāṭimid *dāʿīs* in Yemen, has been edited and translated from the manuscript in the Bibliothèque Nationale (2127, Add. 767, foll. 30a-32b) by H. C. Kay in his *Yaman, its early mediaeval history* (London, 1892). To those manuscripts of the *Sulūk* listed by Brockelmann should be added the excellent copy in the Chester Beatty Library (no. 3110, i. & ii) and another in the Egyptian National Library in Cairo (25 Taʾrīkh); the latter is a recent photocopy of that in the library of the great mosque of Ṣanʿāʾ.

Bibliography: Brockelmann, II, 184, S II, 236; Ḥādjdjī Khalīfa, ed. Flügel, ii, 613; al-Sakhāwī, *Iʿlān* in Franz Rosenthal, *A history of Muslim historiography*, 406-7; Kay, pp. xii-xiv.

(C. L. GEDDES)

AL-**DJANĀḤIYYA** (or al-Ṭayyāriyya), the special partisans of ʿAbd Allāh b. Muʿāwiya [*q.v.*], great-grandson of Djaʿfar al-Ṭayyār Dhū ʾl-Djanāḥayn. Though Djaʿfar and his son and grandson were highly respected by Shīʿīs, no political or religious party seems to have been attached to the family until ʿAbd Allāh took the leadership of the general Shīʿī revolt against the Umayyads in 127/744. The wider party of ʿAbd Allāh included for a time most politically active Shīʿīs (including some ʿAbbāsids), not to mention certain displaced Khāridjites; but the term *Djanāḥiyya* may be applied more particularly to those for whom ʿAbd Allāh had exclusive rights to the imāmate. These claimed that Abū Hāshim b. Muḥammad b. al-Ḥanafiyya had left the imāmate not to the ʿAbbāsids but to ʿAbd Allāh b. Muʿāwiya, then still a lad, in care of a certain Ṣāliḥ b. Mudrik. They are said to have believed that the *imām* knew the unseen, and that whoever knew the *imām* was exempt from other (presumably ritual) obligations. (It is doubtful if ʿAbd Allāh b. Muʿāwiya shared these opinions). Among them, Isḥāḳ (or ʿAbd Allāh) b. Zayd b. al-Ḥārith and his partisans are said to have believed in reincarnation and in the presence of the light of God in the *imām*. On the death of ʿAbd Allāh b. Muʿāwiya, some claimed he was withdrawn into the mountains of Iṣfahān, whence he would return to put an ʿAlid in power; others evidently accepted Isḥāḳ b. al-Ḥārith as *imām*.

Bibliography: see ʿABD ALLĀH B. MUʿĀWIYA (to which add in particular Ṭabarī, ii, 1976 ff.); see also Masʿūdī, *Murūdj*, vi, 41, 42, 67-8; Nawbakhtī, *Firaḳ*, 29, 30, 31, 32, 35; Ashʿarī, *Maḳālāt*, 6, 22 (the group was strengthened by the Kaysānī Ḥarbiyya), 85; Baghdādī, *Farḳ*, ed. M. Zāhid Kawtharī, 142-3, 150, 152, 163, 193, 216 (ed. M. Badr, 235 ff.); Ibn Ḥazm, Cairo ed. iv, 137, 143; Shahrastānī, *Milal*, ed. Cureton, i, 113 (ed. on margin of Ibn Ḥazm), i, 156 (branch of the Hāshimiyya), trans. Haarbrücher, ii, 408); Ibn Nubāta al-Miṣrī, *Sarḥ al-ʿuyūn* (commentary of the *Risāla* of Ibn Zaydūn), Cairo ed., 241-4; Djāḥiẓ, *Ḥayawān*, iii, 488 and note (the Ḥamāsa of Buḥturī contains many of his verses), vii, 160; *Aghānī*, xi, 72 ff.; Thaʿālibī, *Thimār al-ḳulūb*, 261; I. Friedlaender, *The heterodoxies of the Shiʿites*, in *JAOS*, xxviii, 45, 71, and xxix, 44-5; Moscati, *Il testamento di Abū Hāshim*, in *RSO*, xxvii, 32-3, 46.

(M. G. S. HODGSON and M. CANARD)

AL-**DJANĀWANĪ** (also AL-DJENĀWUNĪ), ABŪ ʿUBAYDA ʿABD AL-ḤAMĪD, governor of the Djabal Nafūsa for the Ibāḍite *imāms* of Tāhart. He was a native of the village of Īdjnāwun (also Djenāwen, in Berber Ignaun) situated below the town of Djādū in the present district of Fassāṭo. He already enjoyed great prestige there about 196/811 during the stay of the *imām* ʿAbd al-Wahhāb b. ʿAbd al-Raḥmān b. Rustam in the Djabal Nafūsa. On the death of Abu ʾl-Ḥasan Ayyūb he was elected governor of the Djabal Nafūsa by the people of the country and afterwards received the investiture from ʿAbd al-Wahhāb, probably a little before the death of the latter which occurred in 208/823. His governorship, the duration of which corresponded very nearly with the reign of the *imām* Aflaḥ b. ʿAbd al-Wahhāb (208/823-258/871), was troubled by the continuous war which he had to wage against the heretic Khalaf b. al-Samḥ, grandson of a previous Ibāḍite *imām* of North Africa, Abu ʾl-Khaṭṭāb ʿAbd al-Aʿlā al-Maʿāfirī. Several episodes are known of this war which came to an end only after the victory which al-Djanāwanī achieved over Khalaf's army in 221/835. As a result of this victory the Djabal Nafūsa, whose population were fanatical partisans of the Rustamids, continued to be a province of the state of Tāhart until the latter's downfall.

Al-Djanāwanī was pious and learned. Besides Berber he also knew Arabic and the language of Kanem (*lugha kānamiyya*), a very strange fact. He is counted among the twelve *mustadjāb al-duʿāʾ* ('those whose prayers are answered') who inhabited the Djabal Nafūsa towards the end of the 2nd/8th century and the beginning of the 3rd/9th. He resided at Īdjnāwun which at this period became for a time the religious and political centre of the whole Djabal Nafūsa. The Ibāḍite tradition recorded by al-Shammākhī speaks of seventy Ibāḍī scholars who flocked there at that time from all the province governed by al-Djanāwanī.

(T. LEWICKI)

DJANĀZA (or DJINĀZA, Ar.) a corpse, bier, or corpse and bier, and then, funeral. It was *sunna* [*q.v.*] to whisper the *shahāda* [*q.v.*] in the ear of a dying man whose face was turned towards Mecca. The dead body was washed by those of the same sex though

there were exceptions; Abū Bakr [*q.v.*] gave orders that he should be washed by his widow. It was a mark of piety for one at the point of death to wash himself in readiness. The body was not stripped entirely and was washed several times, always an uneven number, and for the last *sidr* leaves or camphor was steeped in the water. If disease made it unwholesome to touch the body, it was enough to pour quantities of water over it. Washing began with the right side and the parts washed in the ritual ablution. Martyrs who fell in battle were not washed and were buried in their blood-stained clothes without prayers. Grave-clothes might be the every day garments, usually three, though sheets were used; white was the normal use though colours were allowed but not red. The eyes were closed, the jaw tied up and the graveclothes tied tightly but were loosened in the tomb. If the clothes were short they had to cover the head while the feet might be covered with reeds. The body was carried to the grave on an open bier with a cloth thrown over it, and there was an extra covering for a woman. Burial might be in the house but was more usual in a cemetery. The funeral moved quickly for, "If I am good, hurry me to God; and if I am bad, get rid of me quickly". It was better to walk in the procession than to ride and it was a work of merit to help carry the bier, if only for a few steps. A halt might be made at a mosque for prayers which differed from the *ṣalāt* [*q.v.*] because the mourners stood throughout. Prayers were said by the grave. A near relative officiated though the governor or a famous scholar might be asked to lead or might insist on doing so. The *imām* [*q.v.*] stood by the head of a man or by the trunk of a woman. Prayers were said over an infant if it had cried once but not over a suicide. Those sitting in the street should stand as a funeral passes. Women were not allowed to be present; this was to avoid the lamentation customary in the *Dj̲āhiliyya* [*q.v.*] because lamentations added to the pains of the dead. The earth must not press on the body which must sit up to answer Munkar and Nakīr (see ʿAD̲H̲ĀB AL-ḲABR) so the grave was a pit with a narrower trench at the bottom or a niche hollowed out at the side; the trench was roofed with flagstones and the niche shut off by a wall of sun-dried bricks. Grave-diggers specialized in one or other of these forms and Muḥammad's grave depended on whether a "trencher" or a "nicher" came first. If this tale is true, these forms of burial existed before Islam but the details are so precise that the whole is suspect. The nearest relatives descended into the grave to put the body in position with the face towards Mecca and to loosen the grave-clothes. One man one grave is the rule; after the battle of Uḥud two bodies were put in one grave but one was taken away later; if a man and a woman had to be laid in one grave, there had to be a partition between them. Burial might be on the day of death or the following day but a hurried burial at night was not approved. Some held that the earth over a grave should be level though others allowed a small mound. Covering it with plaster and inscriptions was forbidden but headstones with name, date and sentences from the Ḳurʾān soon became common. Water was often sprinkled on the grave; rain watered that of a saint and in later times, if there was a horizontal stone, it had a hole in it to let water through. Coffins were not used at first but by the 6th century they were common. There might be a meal with gifts of food to the poor. Customs changed; women followed funerals, professional mourners were employed and masonry tombs became common.

DJĀNBĀZ. The Persian *dj̲ānbāz* 'playing with one's life; dare-devil' developed three meanings which, mainly through Ottoman Turkish, spread into a number of languages: 1. 'acrobat', especially 'rope-dancer', which is known in the east as far as Eastern Turki (*čāmbas̲h̲či*), in the west in the Caucasus, Turkey, and Egypt (*ganbād̲h̲iya* 'rope-dancers', *gunbāz* 'gymnastics'), 2. 'soldier' [see article DJĀNBĀZĀN), 3. 'horse-dealer'; this latter word spread through Turkey (recorded in the 16th century: Gliša Elezović, *Iz Carigradskih Turskih Arhiva Mühimme Defteri*, Belgrade 1951, 115, no. 659) north as far as Rumania and south to Syria and Lebanon, often with pejorative development of the meaning: 'one who drives a hard bargain' (Bulgaria), 'merchant who demands exorbitant prices' (Syria), 'trickster' (Rum. *geambaș*). —Acrobats, known since antiquity, were always popular in the Near East, and, in particular, in the festivities given by the Ottoman sultans to the people of the capital they were never missing. 'A troupe of excellent Tumblers and Mountebanks (where of Turkey abounds aboue all the Regions of the Earth) ...' begins the description of such a festivity (Michel Baudier, transl. by Edward Grimestone, *The History of the Serrail and of the Court of the Grand Seigneur*, London 1635, 88 f.). The earliest reference to *dj̲ānbāz* in Ottoman times seems to be found in the description of a circumcision feast for the royal princes in Edirne in 1457 (here Laonikos Chalkokondyles translates the Turkish term, spelled τάμπεζιν instead of τζάμπεζιν, as 'rope-dancer', cf. Moravcsik, *Byzantinoturcica*, vol. 2, 252). From the 16th century we have many descriptions, often accompanied by illustrations, both in Turkish sources and narratives of European travellers, of the performances of various kinds of acrobats at public festivities; particularly famous was the circumcision feast which Murād III gave for his son Meḥemmed (III) in 990/1582. Ewliyā Čelebi's travel book offers interesting details about the *dj̲ānbāz* in the 17th century. In his account of the parade of the Istanbul guilds he mentions the guild of the acrobats (i, 625 f.), listing several names. He also mentions that the most outstanding rope-dancer, Meḥmed Čelebi of Üsküdar, was holding an imperial letter patent (*k̲h̲aṭṭ-i s̲h̲erīf*) by which he was appointed warden (*ser-čes̲h̲me*) of all acrobats (here the term is *pehliwān*) of the empire, of whom a total of 200 masters were listed in his register (*defter*). Meḥmed Čelebi is again mentioned among the participants of a memorable show at Istanoz (now Zir, *vilâyet* of Ankara) where—we are told by Ewliya Čelebi (ii, 439-42, ed. Ozön, iii, 10-13)—all rope-dancers (here the narrower term *resenbāz* is used) assembled once every 40 years for a contest which resulted in the promotion of the apprentices to master's status. The sources for the 16th and 17th centuries can be found in Metin And, *Kırk gün, kırk gece, Eski donanma ve s̲h̲enliklerde seyirlik oyunları*, Istanbul

1959. For the *djānbāz* in Istanbul's more recent past see Refik Ahmed, *İstanbul nasıl eğleniyordu?* Istanbul 1927, 83-86, and Musahipzade Celâl, *Eski İstanbul yaşayışı*, Istanbul 1946, 68 f.

(A. Tietze)

DJĀNBĀZĀN (Persian plural of *djānbāz*, see previous article)—the name of a military corps in the Ottoman Empire. It is not known when exactly the corps was founded, although it may have been in the reign of Orkhān Ghāzī [*q.v.*]. The *djānbāzān* served only in time of war, like the *ʿazab* [*q.v.*], *gharībān* and *čerekhōr* ("territorial" miners and sappers). Grzegorzewski (*Z sidzyllatów Rumelijskich epoki wyprawy wiedeńskiej*, Lwów 1912, 53 ff.) believes, however, that they were organized in 844/1440 by Murād II [*q.v.*] to meet the first Balkan expedition of John Hunyady and that they took part in the battle of Varna. The *djānbāzān* served in the vanguard and were charged with dangerous tasks. This fact led Hammer (*Staatsverfassung*, index) to class them with the irregulars known as *serden-gečti* (lit. "mad or wild adventurers"), *gönüllü* ("volunteers") and *deli* ("madmen", [*q.v.*]). Grzegorzewski followed by Babar (*Zur wirtschaftlichen Grundlage des Feldzuges der Türken gegen Wien im Jahre 1683*, Vienna/Leipzig 1916, 29 ff.) held, however, that they formed the personal body-guard of *Beglerbegis* [*q.v.*] and *sandjak begis*, like the *djāndārān*, while D'Ohsson (*Tableau général*, vii, 309) thought that, like the *gharībān*, the *djānbāzān* served as coastal militia in Anatolia.

The *djānbāzān* later joined the *yürük*s ("nomads", [*q.v.*]) and Tatars as well as the *yaya* ("infantry") and *müsellem*s ("sappers") in forming support forces for the Janissaries (cf. Djelāl-zāde Nishāndjī, *Ṭabaḳāt al-mamālik fī daradjāt al-masālik*, Fātiḥ Library MS 4467, f. 8; I. Ḥaḳḳī Uzunçarşılı, *Osmanlı devleti teşkilâtında kapı kulu ocakları*, Ankara 1943, 2).

A *ḳānūnnāme* dating back to the middle of the 10th/16th century is in existence concerning the *djānbāzān* of Rumeli. It states that 10 *djānbāzān* formed an *odjaḳ*, that only one served at a time, the remaining nine paying 50 *aḳče*s each as *ʿawāriḍ-i dīwāniyye* [see ʿAwāriḍ]. The *ḳānūn-nāme* describes the *djānbāzān* as nomads, paying taxes (*bād-i hawā rusūmu*) to their own officers (*Su-bashî*). The relatives and dependants of the *djānbāzān* were assimilated to the corps, which could also be joined by outsiders, related by marriage, and by converts. The *djānbāzān* of Rumeli were considered part of the *yürük zeʿāmet* of Vize; they were subject to the same penal, taxation and other rules, and seem, therefore, to have come largely from the same stock. They were subject, however, to a more complicated system of *ʿawāriḍ* services (*Ḳānūnnāme-i Djānbāzān*, Başvekâlet Arşivi, Tapu Defterleri, no. 226). The *Ḳānūnnāme-yi Āl-i ʿOthmān* (v. *TOEM*) states that *djānbāzān* on active service should be considered as soldiers and that the "estate duty" (*resm-i ḳismet*) for any killed in war should be paid to the *ḳāḍī ʿasker*, if it exceeds 100 *aḳče*s, and in other cases to the *ḳāḍī*s of *wilāyet*s. Later, however, all *djānbāzān* were considered soldiers and all duties became payable to the *ḳāḍī ʿasker* of Rumeli.

In 950/1543 the corps (*ṭāʾife*) of *djānbāzān* amounted to 39 and in 964/1557 to 41 *odjaḳ*s. ʿAyn-i ʿAlī (*Ḳawānīn-i Āl-i ʿOthmān*, 45) gives their strength together with that of *ʿazab*s as 1280, of whom one tenth served at any one time. The corps was abolished towards the end of the 16th century (according to D'Ohsson under Selīm II) together with those of the *yaya* and *müsellem*s.

The *djānbāzān* were cavalry troops and they also bred horses for the army. After their dissolution their name lived on in the form "*at djānbāzî*" meaning "horse broker". (M. Tayyib Gökbilgin)

DJĀNBULĀṬ, a family of *amīr*s, Durūz in religion and Kurdish in origin ("soul of steel" in this language), established in the Lebanon, where they formed the Djānbulāṭī party, active until the present day (common modern spellings: Djoumblatt, Jomblatt, etc.). The Djānbulāṭ, related to the Ayyūbids according to Lebanese tradition, appeared in the region of Killis during the latter half of the 10th/16th century (the Mamlūk Djānbulāṭ al-Nāṣirī, governor first of Aleppo and then of Damascus in 902-4/1497-9, sultan of Egypt for six months under the name of al-Malik al-Ashraf Abu 'l-Naṣr, d. 906-7/1501, seems to have no connexion with this family).

Djānbulāṭ b. Ḳāsim al-Kurdī (d. 980/1572), surnamed Ibn ʿArabī, perhaps by *taḳiyya*, suppressed brigandry in the sandjaḳ of Killis, where he hade been placed in charge by the Ottomans, and participated in the conquest of Cyprus. His son Ḥusayn (d. 1013/1604) evicted the wālī Naṣūḥ Pasha from Aleppo, whom he had assisted against the rebels of Damascus, and was executed at Van for having refused to join in an expedition against Īrān. ʿAlī, his son (Djānbulāṭoghlu to the Ottoman historians), rebelled in Aleppo and extended his rule in Syria; he aligned himself with the amīr of Mount Lebanon, Fakhr al-Dīn Maʿn, against Yūsuf al-Ṣayfa, also a Kurd, the governor of Tripoli, defeated the latter at Ḥamā, but then was reconciled to him; he established an independent amīrate from Ḥamā to Adana, failed to remit taxes to the Sultan, had the *khuṭba* recited in his own name, and raised an army of more than 30,000 men. He was conquered at Orudj in 1016/1607, as was his ally Fakhr al-Dīn; thanks to his uncle Ḥaydar, he received the pardon of the Sultan at Istanbul. Placed in command of Temesvar, he joined battle with the Janissaries, fled to Belgrade, and was decapitated in 1020/1611. The Djānbulāṭ, however, kept their command over Killis and thereafter remained faithful to the Sultan; a nephew of ʿAlī, Muṣṭafā, became bey of Rumeli. They seem to have left some remnants in the Lebanon, where one of these was imprisoned at Shakīf in 1019/1610, and where they struggled against Yūnis Maʿn during Fakhr al-Dīn's absence in Italy; the latter, however, after his return and before his new revolt, made a fresh appeal to the Djānbulāṭ of Killis.

Djānbulāṭ b. Saʿīd (d. 1050/1640), probably grandson of ʿAlī, finally emigrated to the Lebanon in 1040/1630 with his sons Saʿīd and Rabāḥ, settled in the Shūf, and, from 1041/1631, joined the campaigns of the amīr. His son Rabāḥ succeeded him, and ʿAlī, his grandson (d. 1124/1712), outlived his brothers Fāris and Sharaf al-Dīn, who were assassinated; he entered the service of the powerful Druze chieftain Ḳablān al-Ḳāḍī al-Tanūkhī, married his daughter, and inherited his fortune and his influence, which he increased by his generosity towards the common people. He helped the amīr Ḥaydar Shihāb to carry the battle of ʿAyn Dāra, 1123/1711, against the Yamanī "party". Before his death he wished to divide his fortune between his son-in-law ʿAlī and the amīr, but the Druzes bought back the latter's portion for ʿAlī's benefit. This son-in-law ʿAlī built the castle of Mukhtāra, finally established the local authority of his family, developed with the Djānbulāṭī "party" an opposition movement to the amīral power, and intervened in the dissensions

of the Shihāb whom he looked upon as upstarts. In 1173-4/1760 he assured the succession of the amīr Manṣūr against his co-regent Aḥmad, then, deceived by him, brought the amīr Yūsuf to power, joined with him in an unhappy struggle against Ḍāhir al-ʿUmar, and later turned against him, won over by the intrigues of Djazzār. He died as an octogenarian in 1192/1778.

Bashīr Djānbulāṭ, grandson of ʿAlī (?), built the mosque of Mukhtāra on the model of that of Acre, and undertook important irrigation works; he helped the accession to power in 1202/1788 of the amīr Bashīr II Shihāb, and long supported him, but he set up his lieutenant ʿAbbās against him during the amīr's absence in Egypt; the latter on his return defeated him at Mukhtāra and had him strangled in 1240/1825. After the downfall of the Shihāb dynasty in 1841 the Ottomans preferred the Arslān to the too rich and powerful Djānbulāṭ for the Ḳāʾimaḳāmate of the Shūf. Saʿīd Djānbulāṭ, set aside in this way, took an active part in the bloody events of 1860; condemned to death, he died in prison in 1861. His son Nasīb continued after him the struggle for authority against the Arslān, whom he eliminated, at the end of the 19th century, from the Ḳāʾimaḳāmate of the Shūf.

The Djānbulāṭī "party" (with a scarlet flag edged with green, bearing a hand and a dark green scimitar) was formed, not in the 17th century as is often supposed, but during the first half of the 18th, when the amīr Ḥaydar supported against ʿAlī Djānbulāṭ ʿAbd al-Salām Yazbak ʿAmād, who formed the Yazbakī "party". These parties do not continue, as is sometimes claimed, the classical Yamanī (totally eliminated from the mountains after ʿAyn Dāra) and Ḳaysī (with whom the Djānbulāṭ were always friendly) clans, but substitute for this traditional division an analogous one, some effects of which persist in the contemporary political life of the Lebanon.

DJĀNDĀR or Djandār, the name given to certain guards regiments serving the great Saldjūḳs and subsequent dynasties. Attached to the royal household, they provided the sovereign's bodyguard, and carried out his orders of execution. Their commander, the *amīr djāndār*, was a high-ranking officer; some of them are reported as becoming *atābaks* [*q.v.*]. Under the Saldjūḳs of Rūm, they formed an élite cavalry guard, and wore their swords on a gold-embroidered baldric. At the accession of ʿAlāʾ al-Dīn Kayḳobād I in 616/1219 he is said to have had a bodyguard of 120 djāndārs (Ibn Bībī, *El-Evāmirü 'l-ʿalāʾiyye*, facsimile ed. A. S. Erzi, Ankara 1956, 216). Under the Khwārizm-Shāhs the djāndārs, as guards and executioners, held positions of great influence (Barthold, *Turkestan*, 378). Under the Ayyūbids the *amīr djāndār* was one of the highest ranking officers in the state; he remained so under the early Mamlūks [*q.v.*], the post being held by an amīr of a thousand. Later the office declined in importance, and from the middle of the 9th/15th century to the end of the Mamlūk Sultanate the djāndārs were common soldiers. From Mamlūk Egypt the term passed to North Africa, where it was used of the bodyguards of the Marīnids.

DJANDARLİ, name of an Ottoman family of *ʿulemāʾ*-statesmen, prominent from ca. 750-905/1350-1500, five of whom held the office of Grand Vizier. The name, variously spelt in the early sources, in later works usually Čandarlî, appears in the oldest inscriptions as Djandarī, which has been explained as a *nisba* from Pers. *djāndār*, 'bodyguard' (so Fr. Taeschner and P. Wittek, in *Isl.* xviii, 83) or from a locality Djender or Čender near Sivrihisar (so I. H. Uzunçarşılı, in *Belleten*, xxiii, 457 f.).

(1) Khayr al-Dīn Khalīl b. ʿAlī (popularly 'Kara Khalīl') is said to have been *ḳāḍī* successively of Biledjik, Iznik and Bursa. Murād I, shortly after his accession, appointed him to the newly-created office of *ḳāḍīʿasker* [*q.v.*], and later (certainly by 783/1381, perhaps earlier, see *Belleten*, xxiii, 465-8) made him vizier; as the first Ottoman vizier to combine with the supervision of the administration the command of the army he is reckoned the first 'Grand Vizier'. He played a prominent part in the conquest of Western Thrace, Macedonia and Thessaly, and penetrated Albania (787/1385). Left in Rumeli as Murād's representative during the Karaman campaign, he died at Serres in 789/1387.

Khayr al-Dīn Pasha is credited by the chroniclers with the establishment of the corps of the *yaya* [*q.v.*] and later of the *yeni-čeri* [*q.v.*]. He was married to a daughter of Tādj al-Dīn Kurdī, *müderris* of the *medrese* of Iznik. Three sons of his are known: ʿAlī (2), Ibrāhīm (3) and Ilyās; the last is said to have been beglerbegi and to have died under Bāyezīd I; he had a son, Dāwud Čelebi, who died in 898/1492.

(2) ʿAlī Pasha [*q.v.*] served Murād I, Bāyezīd I and Emīr Suleymān as Grand Vizier, and died in 809/1406.

(3) Ibrāhīm Pasha's early career is obscure (he too seems to have been a partisan of Emīr Suleymān). In 808/1406 he was *ḳāḍī* of Bursa (*Belleten*, v, 560 f.). According to one account (Neshrī, ed. Taeschner, i, 133) he was sent by Mūsā Čelebi, after Emīr Suleymān's death, to Constantinople to demand tribute, and seized the opportunity to desert to Meḥemmed I,

who appointed him vizier (but ʿĀshiḳpashazāde [ed. Giese, 196] says he had been *ḳāḍīʿasker* to Meḥemmed, who made him vizier on occupying Bursa). A document of 818/1415 shows that he was in that year *ḳāḍīʿasker* (*TTEM* xvi, 379 and n. 11), and another of 823/1420 (*Belleten*, v, 561) that he was by then second vizier (Bāyezīd Pasha being Grand Vizier). When, shortly after Murād II's accession, Bāyezīd Pasha was killed by the pretender 'Düzme' Muṣṭafā, Ibrāhīm succeeded him as Grand Vizier and remained in office until his death, of the plague (O. Turan, *Tarihî takvimler*, 24), on 24 Dhu 'l-Ḳaʿda 832/25 August 1429. Ibrāhīm Pasha restored the influence of his family, weakened by their adherence to Meḥemmed I's rivals, and followed a cautious and prudent foreign policy.

(4) Khalīl Pasha [*q.v.*], the eldest son of Ibrāhīm, was by 847/1443 Grand Vizier. He enjoyed Murād II's full confidence to the end of his reign, but the part he had played in recalling Murād to the throne in 850/1446 and the suspicion of having dealings with the Byzantine Emperor incurred the displeasure of Meḥemmed II, and he was executed (the first Grand Vizier so to suffer) shortly after the capture of Constantinople (857/1453).

His brother Maḥmūd Čelebi was married to a sister of Murād II; taking part as *sandjaḳ-bey* of Bolu in the campaign of the Izladi Pass (847/1443-4) he was captured, but later ransomed (Neshrī, ed. Taeschner, i, 172). Maḥmūd had a son, Suleymān Čelebi, who died in 860/1455.

Khalīl's son Suleymān Čelebi was by 851/1447 *ḳāḍīʿasker*; he predeceased his father (Medjdī, 126).

(5) Ibrāhīm Pasha, son of Khalīl, was born in 833/1429-30. Documents (to those cited by Uzunçarşılı, *İA* s.v. Çandarlı, 356a, add M. T. Gökbilgin, *Edirne ve Paşa Livâsı*, 333, 203, 344, 327 etc.) show that he was *ḳāḍī* of Edirne at the time of his father's disgrace and remained in that office until 869/1465, when he was appointed *ḳāḍīʿasker* (thus Tashköprüzāde's story of the poverty he suffered is to be rejected); by 878/1473 he was *lala* (with the rank of vizier) to Prince Bāyezīd (cf. also *Ibn Kemal, VII. defter*, ed. Ş. Turan, 1954, 399 ff.). After his accession, Bāyezīd II appointed him *ḳāḍīʿasker* of Rumeli in 890 and, in Ṣafar 891/February 1486, vizier (Saʿd al-Dīn, ii, 217, and cf. Gökbilgin, *Edirne*, 74-5, 418, 121). Second vizier by 893 (Ḳiwāmī, ed. F. Babinger, Istanbul 1955, 321), he succeeded Hersekzāde Aḥmed Pasha as Grand Vizier in 903/1498, but died two years later while on the campaign against Lepanto.

Thereafter the family fell into relative obscurity. One son of Ibrāhīm, Ḥuseyn Pasha, died after 940/1533-4 as beglerbegi of Diyārbekir, and another, ʿĪsā Pasha, for a short time *nishāndji*, died in 950/1543-4 as beglerbegi of Damascus; the latter's son Khalīl was *lala* to Prince Orkhān, the son of Suleymān I's son Bāyezīd, and died in 976/1568-9 as defterdār of Budin.

(V. L. Ménage)

DJANDJĪRA [see ḤABSHĪ].

DJANFIDĀ KHATŪN [see SUPPLEMENT].

DJANGALĪ, the name of a nationalist and reformist movement in Persia which came into being in 1915 in the forests (*djangal*) of Gīlān under the leadership of Mīrzā Kūčik Khān, Iḥsān Allāh Khān and a number of other liberals (*āzādīkhʷāhān*) and constitutionalists (*mudjāhidīn*). The Djangalīs (in Persian: *djangaliyān* or *aḥrār-i djangal*), whose slogans were freedom from foreign influence and the independence of Īrān under the banner of Islam, set up a revolutionary committee called *Ittiḥād-i Islām*, published a newspaper entitled *Djangal*, and engaged as military instructors a number of German, Austrian and Turkish officers. The movement, which was financed by money extorted from the landowners of Gīlān, was given an added impetus by the Russian Revolution of 1917, and by 1918 had spread to other Caspian regions, notably the province of Māzandarān. In March 1918 the Djangalīs were narrowly prevented from occupying Ḳazwīn. The territory held by the Djangalīs lay across the path of the British force which had been dispatched from Hamadān to prevent German and Turkish penetration of the Caucasus and seizure of the Baku oilfields. After some fighting between the Djangalīs and the British on the Mandjīl-Rasht road, the British signed an agreement with Mīrzā Kūčik Khān on 12 August 1918 whereby they recognized the latter's authority in Gīlān; in return, Mīrzā Kūčik Khān agreed to suspend hostilities against the British, expel his German and Turkish instructors, and release his remaining British hostages. This agreement caused a split between Mīrzā Kūčik Khān, who represented the more moderate element among the Djangalīs, and the radicals led by Iḥsān Allāh Khān, and this dissension enabled the Persian Government's Cossack troops temporarily to disperse the Djangalī forces.

The second phase of the Djangalī movement was marked by open Bolshevik support, which changed its whole character. On 18 May 1920 the Red fleet bombarded Enzeli, and Soviet troops occupied Rasht, the capital of Gīlān; a new committee was formed, and on 5 June 1920 Mīrzā Kūčik Khān, styling himself the "representative of the Persian Socialist Soviet Republic proclaimed in the city of Rasht", announced the establishment of the Soviet Republic of Gīlān. The Gīlān Soviet, which remained in power until the autumn of 1921, confiscated the estates of the big landowners and distributed them among the peasants, but met with no success in its attempts to organize the Persian peasants into independent local Communist groups.

By the terms of the Soviet-Iranian treaty of 26 February 1921, the Soviet Government renounced the imperialist policies of the former Czarist Government towards Persia, and on 8 September 1921 Soviet forces were withdrawn from Persia. Deprived of Soviet support, the Djangalī movement collapsed when faced by strong Persian forces under the leadership of Riḍā Khān (later Riḍā Shāh [*q.v.*]), and by October 1921 the rebellion was over. Mīrzā Kūčik Khān was captured and executed.

DJĀNIDS, name of the dynasty which ruled Bukhārā [*q.v.*] from 1007/1599 to 1199/1785. It was descended from Djān(ī) b. Yār Muḥammad, a prince of the house of the Khāns of Astrakhań (Tatar *Azhdarhān* and *Ashtarkhān*) who had fled from his homeland before the advancing Russians to Bukhārā around 963/1556. It was from this homeland of his that the dynasty was also called Ashtarkhānids (for genealogy cf. čingizids).

Djān married Zahrā Khanīm, a sister of the Shaybānid ruler ʿAbd Allāh II b. Iskandar [*q.v.*]. On the latter's death in 1006/1598 the empire that he had founded rapidly crumbled, and it was then that the son of this marriage, Bāḳī Muḥammad, was able to establish himself in the territory at the core of the state around Bukhārā in 1007/1599 (for more detailed information see bukhārā); he died in 1014/1605-6. The state was strengthened by Imām Ḳulī Khān (1027-53/1611-43?), who secured internal order by the cruellest of methods and, thanks to his religious leanings, enjoyed the favour of the dervishes. He finally retired to undertake the *ḥadjdj* (1060/1650).

The most significant ruler of the dynasty was ʿAbd al-ʿAzīz (1055-91/1645-80), who was also outstanding as a Muftī. After his death the authority of the dynasty sank rapidly. The local princes (Biy) became almost independent, and the Farghānā valley was separated off as a Khōḳand [*q.v.*] Khānate on its own. Abu 'l-Fayḍ (1123-60/1711-47) became a plaything in the hands of the amīral family of Mangit [*q.v.*], whose members often held the position of an *Atalīk*. From 1167/1753-4 it was the Mangits who exercised the actual power within the state. The last Djānid Abu 'l-Ghāzī (1171-99/1757-85) was only nominally Khān, rather like the Čingizids in the case of Tīmūr. Yet the first completely independent Mangit ruler (since 1199/1785) continued to be related in marriage to the Djānids.

Under the Djānids Bukhārā was one of the centres of Sunnī orthodoxy; its leading rôle in defensive struggles against Shīʿī Persia was politically significant also. Furthermore, the state constantly had to do battle with penetrations of the Ḳazakhs and of the Khāns of Khiwa (*e.g.*, in 1099/1688), and also withstood attempts on the part of the Mughal ruler Shāhdjahān [*q.v.*] in the first half of the 11th/17th century to regain the homeland of his ancestors. Through the rivalries of the Biys and the growing pressure of taxation, however, the agriculture of the state deteriorated more and more, and commerce took other paths. Literary expression was in Persian rather than in Özbeg, and it consisted essentially of works of a traditional stamp; yet these works, as also the historical writings of this period (in spite of much Russian pioneer work) have not yet been fully investigated. The architecture is greatly inferior to that of the Tīmūrids.

DJĀNĪK (Canik), an area along the Black Sea between Bafra and Fatsa, including the mouths of the rivers Kïzïl and Yeshil Irmak, as well as the mountainous regions to the east. It is called after the Tsan (Georg. *čan*, compare Macdonald Kinneir, *Journey*, 282)—a tribe of the Laz—and it has a mild climate and fertile soil; consequently, it is relatively densely populated (between 50 and 100 people per sq. km.). Until recent times, the name was applied to the *sandjaḳ* of Samsun [*q.v.*], and is applied even today to the beautiful mountain forests of Djanik Dağlarï along the Black Sea coast from Samsun to Ordu.

Djānīk once belonged to the Turkish principality of the Djāndār-oghlu of Ḳasṭamūnī, and together with this, it was incorporated into the Ottoman Empire by Sulṭān Bāyazīd I. After Bāyazīd's defeat at Ankara in 1402, Djānīk was re-established by Tīmūr, but it was later conquered by Meḥemmed I, becoming a *liwā* of the *eyālet* of Siwas with Samsun (which—next to Trabzon—is the most important port on the Black Sea) for capital. In more recent times, it was a *sandjaḳ* of the *wilāyet* of Trabzon, with the *ḳaḍā*s Ṣamṣūn, Fatsa, Üniye, Terme, Čarshamba, and Bafra. Under the Turkish Republic, the greater part of Canik forms the *vilâyet* of Samsun.

(Fr. Taeschner)

DJĀNĪKLI ḤĀDJDJI ʿALĪ PASHA, Ottoman soldier and founder of a Derebey [*q.v.*] family. He was born in Istanbul in 1133/1720-21, the son of Aḥmed Agha, a ḳapïdjï-bashï at the Imperial palace. As a youth he accompanied his elder brother Suleymān Pasha to Djānīk, where he eventually succeeded him as ruler with the title, customary among the autonomous derebeys, of *muḥaṣṣil* [*q.v.*]. During the Russo-Turkish war of 1182/1768-1188/1774 he held a number of military commands. Serving first in Georgia, he was appointed in Djumādā II 1183/September-October 1769 to the staff of the Serʿasker of Moldavia, where he distinguished himself in the fighting against the Russians and took part in the battle of Khotin, narrowly escaping capture. As a reward he was given the rank of vizier. In 1188/1774 he led an expedition to the Crimea and in 1190/1776 was appointed Serʿasker of Kars. In the meantime he had been able to consolidate his authority in

Djānīk, overcoming or winning over such opposition as existed, and to extend his dominions eastwards. In 1185/1771 he was recognized as *Wālī* of Trebizond, where his brother Süleymān Pasha had preceded him. The province was assigned to him as a *mālikāne* [*q.v.*]. Within the next few years his holdings were extended to include Sivas and Erzurum.

On 3 Dhu 'l-Ḥidjdja 1191/2 January 1778 he was again appointed Serʿasker of the Crimea and given the command of an expeditionary force which, with naval support, was to threaten the peninsula. This plan came to nothing. ʿAlī Pasha now had to deal with his Anatolian rival the Čapanoghlu (see DEREBEY), who, at the instigation of his enemies in Istanbul, launched an attack against him. Deprived of his offices and of his vizierial rank, he fled in 1193/1779 to the Crimea, where he sought refuge with the Khan, Shāhīn Giray. In Shaʿbān 1195/August-September 1781, thanks to the mediation of the Khan, he was pardoned and reinstated, recovering the rank of vizier and the control of his dominions. In 1190/1776 he presented a memorandum to the government on the reasons for the Turkish defeat in the Russian war and, more generally, on the reforms that were needed in the Empire. The work of a man of action, it deals with practical problems in simple, direct, and sometimes forceful language, and is a remarkable document of its time. An edition is in preparation. ʿAlī Pasha died in Shaʿbān 1199/June-July 1785.

Bibliography: Djewdet, *Ta'rīkh*[2], iii, 144-6; *Sidjill-i ʿOthmānī*, iii, 548-9; İsmail Hakkı Uzunçarşılı, *Osmanlı tarihi*, iv/I, Ankara 1956, 447-51, 509-11, iv/II, 1959, 32-3. ʿAlī Pasha's memorandum is mentioned by Djewdet (*loc. cit.*) and is preserved in Upsala (a rather free paraphrase of parts of it will be found in M. Norberg, *Turkiska Rikets Annaler*, v, Hernösand 1822, 1425-43).

(B. Lewis)

DJANNA, "Garden", is the term which, used antonomastically, usually describes, in the Ḳur'ān and in Muslim literature, the regions of the Beyond prepared for the elect, the "Companions of the right". *E.g.*: "These will be the Dwellers in the Garden where they will remain immortal as a reward for their deeds on earth" (Ḳur'ān, XLVI, 14). Other Ḳur'ānic terms will be considered later either as synonyms or as particular aspects of the "Garden": *ʿAdn* and *Djannāt ʿAdn*. (Eden, *e.g.*, LXI, 12), *Firdaws* ("Paradise", sg. *farādis*, cf. παράδεισος XXIII, 11), the Dwelling of Salvation or of Peace (*dār al-Salām*, VI, 127; X, 25), of Sojourn (*al-Muḳāma*), XXXV, 35), of the true Life (*al-Ḥayawān*, XXIX, 64), Garden of Retreat or of Refuge (*djannat al-Ma'wā*, LIII, 15), of Eternity or Immortality (*al-Khuld*, XXV, 15), Gardens of Delight (*djannat al-Naʿīm*, X, 9), etc. Following current usage, we will translate *Djanna* as "Paradise", and cite *Firdaws* in its transliterated form.

(A) Evidence from the Ḳur'ān

The description of Paradise, the presentation of the relationship between its delights and the "good deeds" (*ṣāliḥāt*) performed on earth by the believer, together with the description of Hell (*nār, djahannam*) and the torments awaiting the damned, form one of the major themes of Ḳur'ānic preaching. These passages constitute a form of *ṭarīḳa khiṭābiyya* ("way of eloquence") with frequent and urgent evocations of the blessed life. The schools were to differ on the interpretation of these verses.

It would take too long to classify and enumerate here the descriptive details of the Ḳur'ān. The essentials may be found in Ṣubḥī al-Ṣāliḥ, *Les Délices et les Tourments de l'Au-Delà dans le Coran*, doctoral thesis (Sorbonne 1954), typescript, 18 ff. The following summary is derived from it:—Location: "the garden of Retreat" is in heaven, near the "Lotstree of the Boundary (*al-Muntahā*)" (LI, 22, LIII, 14-5). Two texts which suggest a prosopopœia (*taṣwīr*) foretell that Paradise "shall be brought near" to the righteous (LXXXI, 13), "close unto them" (L, 31). There is mention of the gates of Paradise, of their guards and of the greetings with which they met the elect (XXXIX, 73). The size of Paradise is equal to that of earth and heaven together (*e.g.*, III, 133, LVII, 21). There will be pleasant dwellings for the chosen (XIX, 72) and pavilions where Houris are kept (LV, 72). Lofty gardens (LXXXVIII, 10), leaping fountains (*passim*), streams of living water (id.), of milk, wine and honey (XLVII, 15), fountains scented with camphor (LXXXVI, 5) or ginger (id., 17), shady valleys, all sorts of delicious fruits (*passim*), of all seasons and without a thorn ....

The life of Paradise is described in concrete details, especially in the Sūras of the first Meccan period (the Sūras of the other periods also refer to it): regal pomp (LXXXIII, 24), costly robes, scents, bracelets; the texts lay emphasis on the visions of exquisite banquets, served in priceless vessels (e.g. LII, 24) by immortal youths "like separate pearls", with meats and fruits to the heart's desire (LII, 22, LV, 54, etc.), where scented wines, never-failing goblets of a limpid liquid (LXXXVII, 47), "delight for those who drink" (XLVII, 15), bring neither drunkenness (XXXVII, 46-7) nor rouse folly or quarrelling (LXXXVIII, 35). "Eat and drink in peace, as a reward for your deeds, reposing on rows of couches!" (LII, 19-20),—couches inlaid with gold or with precious stones (LXVI, 15), etc.

The elect will rejoice in the company of their parents, their wives and children who were faithful (XIII, 23, XXXVI, 56, XL, 8, XLIII, 70). They will praise their Lord (XXXV, 34), bending towards each other in love, conversing in joy and recalling the past (e.g. XV, 47, LII, 25, etc.). "Pure consorts" are promised (II, 25, III, 15, IV, 57). Tradition has identified these with the Houris (*ḥawrā'*, pl. *ḥūr*), beings from the Other World "with modest looks and large fine eyes" (XXXVII, 48), "like the hidden pearl" (LXVI, 23), "whom We have created in perfection and whom We have kept virgin" (id., 34-5) "so that they have been touched by neither man nor demon before" (LV, 72-4).

A happy life, without hurt or weariness, neither sorrow, fear nor shame (Ṣubḥī al-Ṣāliḥ 24) where every desire and every wish is fulfilled (XVI, 31, 39). "The Pious will there enjoy what they desire and We will grant yet more (*mazīd*)" (L, 35). This "more", like the "addition" (*ziyāda*) of, X 26, is usually associated with the "approval" (*riḍwān*) of God foretold to the elect (thus, III, 15 *in fine*). Now, "to believers, God has promised Gardens where rivers flow, where they will rest immortal. He has promised them goodly dwellings in the gardens of Eden. (But) the approval of God is greater. That will be the great Victory' (IX, 72). The fruits of it will be nearness to God. God will bring the elect near to his Throne (*passim*), and "on that Day some faces will shine in contemplating their Lord" (LXXV, 22-23). This last text, understood in the sense given in our translation, was to serve as the accepted scriptural foundation

for the dominating thesis of the "vision of God" (*ruy'at Allāh*) in Paradise (see below).

Ṣubḥī al-Ṣāliḥ, 12 ff., emphasizes a certain progression in the Ḳur'ānic annunciation of Paradise: the Sūras of the first Meccan period describe it with numerous brief, concrete details "in an ardent, brief and elliptical style, with the symmetry of antithesis". During the second and third Meccan periods "the descriptive elements become (...) more summary". Later we find "a more abstract means of evocation". Well-known is verse XIII, 35, *Mat͟hal al-d̲j̲anna*, "the picture of the Garden promised to the Pious"; the later allegorical interpretations were to base themselves on it, making the concrete descriptions of Paradise the representation of an inexpressible reality. And it was during the Medina period that stress was laid on the divine "approval", joy above all others.

Does the Ḳur'ān refer to different sorts of Gardens organized hierarchically, or should we understand the terms used as synonyms? Either hypothesis can be accepted, according to the commentators. Let us simply consider two verses: "For those who fear the (Judgment) seat of their Lord, there will be two Gardens" (LV, 46), and "this side of the two, two Gardens" (id., 62); certain *tafsīrs* render *dūn* not by "this side of" like M. Blachère (en deçà), but by "above". Should we assume four distinct Gardens? A single description applies to each pair; and the descriptions of both groups are identical except for infinitesimal differences.

Relationships may be established between the Muslim Paradise and some earlier eschatological traditions, particularly Persian and Judeo-Christian, cf. as an example the comparison proposed by Grimme and Tor Andrae between the Ḳur'ānic descriptions and certain Syriac hymns by the Deacon Ephrem (cf. Tor Andrae, *Der Ursprung des Islams und das Christentum*, Fr. tr., *Les origines de l'Islam et le Christianisme*, Paris 1955, 151 ff.).

(B) Principal elaborations

How has Muslim thought interpreted the data of the Ḳur'ān? Laying aside the copious S̲h̲īʿī exegeses, we shall consider:—(1) *ḥadīt̲h̲* and so-called traditional commentaries; (2) developments of the "science of *kalām*"; (3) *falsafa* and *taṣawwuf*; (4) efforts at synthesis; (5) reformers and contemporary modernists.

1. Traditions and traditional exegesis

The *ḥadīt̲h̲*s devoted to Paradise and the life therein are very numerous. Their dominating tendency is a literalness which emphasizes the reality and the detail of sensual pleasure. The value attributed to them is variable. While many are considered *ṣaḥīḥ* (authentic), others are called *ḍaʿīf* (doubtful). Certain of them derive not from the Prophet, but from a Companion or a Follower (*ḥadīt̲h̲ mawḳūf* or *maḳtūʿ*). Among the many *ṣaḥīḥ*, if some are *mutawātir* (ensured by many lines of transmission), many are *ʿazīz* (rare), little known and vouched for by only two authorities; or even *aḥād* (unique), by one only. The *Musnad* of Ibn Ḥanbal abounds with descriptions of the joys of the Beyond. The two *Ṣaḥīḥ* (al-Buk̲h̲ārī and Muslim) and the four *Sunan* reproduce numerous traditions on the same subject; see in particular al-Buk̲h̲ari, *K. Bad' al-K̲h̲alḳ*, c. 8, *K. al-Riḳāḳ*, c. 51, and especially *K. al-Tafsīr*. Muslim's commentators are in the habit of grouping eleven principal *ḥadīt̲h̲* reproduced by him, on the subject of Paradise. For a restatement and discussion of these sources, see Ṣubḥī al-Ṣāliḥ, *op. cit.*, 43 ff. A typical example of traditional exegesis is given in the *tafsīr* of al-Ṭabarī. It may be considered together with the abundant contribution from the "preachers", themselves inspired by the old "story-tellers" (*ḳaṣṣāṣ*) and "weepers" (*bakkā'ūn*), who in their concern to catch the popular imagination multiplied all kinds of extravagant concrete details. On the basis of these diverse sources, there were extensive and varied developments. It is impossible to give an exhaustive survey. Here are some points of reference, borrowed from authoritative compilations of *ḥadīt̲h̲*, or from al-Ṭabarī, or al-S̲h̲aʿrānī (*Muk̲h̲taṣar*), who himself gives a summary of al-Ḳurṭubī, etc.

Location:—most commonly Paradise is placed under the Throne of God, above the highest heaven. It is usually distinguished from the Eden of Adam. Traditional accounts of the "ascension" (*miʿrād̲j̲*, [*q.v.*]) of the Prophet describe in detail his progress across the levels and degrees of Paradise.

The Entrance:—the different levels of Paradise are reached through eight principal gates, the respective dimensions and distances of which are described (the figures are intended to give an impression of limitless space). Each level is in turn generally divided into a hundred degrees. The highest level, which is either in the seventh heaven or, better (see below), beyond, is sometimes called Eden, sometimes *Firdaws*, etc. According to an often-quoted *ḥadīt̲h̲* (*e.g.*, al-Buk̲h̲ārī, *D̲j̲anā'iz*, 7), the key to open these doors has three webs: the proclamation of the divine Unity (*tawḥīd*); obedience to God; and abstention from all unlawful deeds. Others add "the swords of battle on the path of God". The Prophet Muḥammad will enter first. The poor believers will precede the rich. Angels will welcome the elect to the strains of an exquisite Arab melody—Arabic being the only language in Paradise. A banquet of welcome awaits them and each dish is described at length. They will be led to dwellings made ready for them, "accompanied by their wives, their children, by houris and by youths" (Ṣubḥī al-Ṣāliḥ, 121). Note: though Paradise already exists, the descriptions of a happy Beyond are always related to the resurrection of the body. It is not until after the resurrection, the "gathering" (*ḥas̲h̲r*) and the Judgment, that the "Halls Eternal" will receive their guests.

The representation of Paradise. An eternal Spring will spread an everlasting light. One day in Paradise is equal to a thousand days on earth. The stuff of which it is made is of musk, gold and silver. The palaces are of gold, silver, pearls, rubies, topazes, etc.: descriptions which may be taken metaphorically, but which the commentaries usually see as concrete realities. The stream al-Kawt̲h̲ar (cf. Ḳur'ān, CVIII, 1), with a scent more subtle than musk, flows over pearls and rubies between banks of gold. Four rivers, whose names are given, spring from mountains of musk, flow between banks of pearls and rubies, and carry to the elect milk "of an unvarying flavour", wine "a delight to those who drink", "clearest" honey (cf. al-Ṭabarī, Ibn Ḥanbal, etc.). There are references to four mountains (Uḥud, Sinai, Lebanon, Ḥaṣīb), to a large valley, innumerable plains, wonderful fruit-trees. It would take a horse a hundred years at the gallop to emerge from the shade of the banana-tree (al-Buk̲h̲ārī, *Riḳāḳ*, 114; *Musnad, passim*). A single leaf from the "Lote-Tree of the Boundary" could shade the whole Community

of the Faithful. In Paradise there are horses and camels "of dazzling whiteness", perhaps goats and sheep, and winged *Rafraf* made of red rubies will serve as the mounts of the elect (al-Tirmidhī, *Djanna*, 88, etc.).

The pleasures of Paradise. Here too there is the same concern for extravagant and concrete descriptions. Each of the elect will have the same stature as Adam (60 cubits by 7), and the same age, 33 years, as Jesus. Their robes and adornments will be marvellous. The delights of eating and drinking are the occasion for a surfeit of endless detail, as are also the hours of rest which follow them. The Ḳur'ānic evocation of the Houris calls forth endless commentaries (cf. Ṣubḥī al-Ṣāliḥ, 133-40) which celebrate the carnal joys, "a hundred times greater than earthly pleasure", that the elect will derive from their perpetual virginity. But the female Believers who have been admitted to Paradise through the merit of their good deeds will rank 70,000 times greater than the Houris in the eyes of God.—The whole of Paradise will be drenched in glorious music: the angels, the elect, the creatures of Paradise, the hills, trees and birds all joining in the universal melody.

The Vision of God. The most wonderful melody of all is the voice of God greeting the elect. Several traditions (*e.g.*, al-Shaʿrānī, *Mukhtaṣar*, 118; Ibn al-Ḳayyim al-Djawziyya, *Hādī 'l-arwāḥ*, 225) speak of the visit that the elect will pay "each Friday" to the Most High, at his invitation, and after they have chosen "a fine face" at the "*sūḳ* of Recognition". The men following the Prophet, the women in the train of his daughter Fāṭima, will cross the heavens, pass by the celestial *Kaʿba* surrounded by praying angels, draw near to the "Guarded Table" (*al-lawḥ al-maḥfūẓ*) where the Pen writes the divine decrees, and finally emerge on to the "terrace of the Throne", which is of musk. "The veil of light lifts" and God appears to his guests "like the moon at the full" (Ṣubḥī al-Ṣāliḥ, 148). He greets each and everyone with "Peace be with you", and the angels serve them. There is supreme bliss which surpasses all other joy.

These traditional concepts and their concrete details permeate the mind of the Islamic peoples. In considering their implications two comments are necessary. They are put forward as a continuous extrapolation of sensual earthly pleasures. If the "Vision of God" is the highest reward, even so that too is described as a sensual ocular sight. However, the famous *ḥadīth*, both *ṣaḥīḥ* and *mutawātir*, "I have prepared for my faithful servants that which no eye has seen, no ear heard, no human heart ever felt", is constantly quoted. A literalist exposition explains it by multiplying every earthly joy tens of thousands of times. But the idea of "without common measure", indeed the idea of "another order" of reality or existence, also has its place. This is certainly one of the leitmotifs of Ibn al-Ḳayyim al-Djawziyya (14th century), the well-known disciple of Ibn Taymiyya, in his *Hādī al-arwāḥ*.

2. "The Science of kalām".

Among the *mutakallimūn*, three fundamental attitudes may be distinguished: a) Muʿtazilī schools (which influence the *tafsīr* of al-Zamakhsharī). Their principle of "reason as the criterion of the Law" does not favour an allegorical or spiritual interpretation, but in the sense of a more restrained literal exposition, which treats as figurative any statement or description deemed rationally unacceptable. Applications: the anthropomorphisms applied to God or to the acts of God are interpreted metaphorically; the sensual delights of Paradise, on the contrary, are taken literally, but with the exclusion of all the hyperbole and all the traditional wonders. The Houris are like beautiful women, the fruits of Paradise like earthly fruits, etc. The future heresiographers (al-Ashʿarī, al-Baghdādī, al-Shahrastānī, al-Khayyāṭ) were to note that Abu 'l-Hudhayl does indeed allow the "corporeal pleasures" (*djismiyyāt*) of Paradise but that, with the rest of the school, he associates with them "spiritual" delights (*rūḥāniyyāt*). All the Muʿtazila, on the other hand, deny the vision of God and, by an appropriate grammatical exegesis, give a different interpretation to the Ḳur'ānic verses which mention it. In the same way they reject the present existence of Paradise which, according to them, will only be created at the Resurrection.

b) The first Ashʿarī school asserts the reality (*ḥaḳīḳa*) of the attributes of God as expressed by the anthropomorphisms of the text, the reality of the descriptions of Paradise, those deriving from the principal traditions as well as those of the Ḳur'ān, and the reality of the ocular but not spatialized vision of God, "like the moon at the full". In his *Ibāna*, Cairo ed. 15, al-Ashʿarī calls this last the "highest bliss": a "spectacular", not a transforming, vision (Massignon). Paradise, which will be eternal, already exists. But the emphasis is laid on the incomparable and ineffable nature of the conditions of the future life. In conformity with one of the great Ashʿarī principles, all that is said of it must be taken literally but *bilā kayf*, "without asking how". Not only have the pleasures of Paradise no common measure with earthly joys, but they bear no analogy to them; they are of a different nature.

c) The later Ashʿarīs (called "modern" by Ibn Khaldūn), in whom there is often a mixture of Ashʿarism properly so called and Māturīdism, adopt a *ta'wīl* (interpretation) which is perhaps more influenced by the *Falāsifa* than by the Muʿtazila. The most notable example is Fakhr al-Dīn al-Rāzī (12th-13th centuries). The principles of his exegesis are stated in his *Kitāb asās al-taḳdīs* (Cairo ed. 1327), and applied at length in the famous *Mafātīḥ al-ghayb* (Cairo ed. 1321), still known as the "great *tafsīr*". A broad metaphorical interpretation is given of the descriptions of Paradise as well as of the divine attributes. While allowing, with the school, the reality of the Beings of the Beyond, al-Rāzī concludes, in conformity with a *ḥadīth* of Ibn ʿAbbās, that there is equivocality between the names which describe them and the same names which describe things on earth (*Mafātīḥ*, viii, 280; cf. Ṣubḥī al-Ṣāliḥ, 245 ff.). He does not deny the sensual rewards of Paradise, the luxury, the feasts, the carnal relations with the Houris, but he underlines the "without asking how", and insists upon "the glorious divine presence which impregnates the soul with sanctity and spirituality" (viii, 281; tr. Ṣubḥī al-Ṣāliḥ).

A disputed question in the Kalām: is Paradise, especially under its name of Eden, or the Garden of Eden, the Eden where God placed Adam and Eve? The Muʿtazilī al-Djubbā'ī, who was at one time the teacher of al-Ashʿarī, placed Eden in the seventh heaven. A later opinion, which is supported by al-Iṣfahānī and which claims to follow Hanafī-Māturīdīs, considers the Eden of Adam an

earthly garden, distinct from the heavenly Paradise. The commentaries which distinguish the two Edens in this way usually place Paradise above the seventh heaven.

One last detail. Some hierarchical plans ("stages") of Paradise are often allowed; but there was no consensus on the order of enumeration. A *ḥadīth* of Ibn ʿAbbās proposes: (1) (the highest circle) the dwelling of Majesty, (2) of Peace, (3) the garden of Eden, (4) of Refuge (or "Retreat"), (5) of Immortality, (6) of the *Firdaws*, (7) of Delights.—But in other texts the *Firdaws* is put at the summit; and in others again Eden. Certain opinions, less popular, define only four "dwellings" or gardens, and place Eden on the level of the fourth heaven. But it is generally accepted that, beyond the seventh heaven (or simply the highest heaven), and thus not cosmically located, Paradise, whether or not divided into plans or hierarchical divisions, has above it only the Stool (*kursī*) and the Throne (*ʿarsh*) of the Most High God. (See below the summary by al-Bādjūrī).

3. Falsafa and taṣawwuf.

Between al-Ashʿarī, who follows Ibn Ḥanbal, and the *tafsīr* of Fakhr al-Dīn al-Rāzī, the Hellenistic *falsafa*, during the course of these controversies, exerted some influence on the school. For the "philosophers", the future life begins, not with the Resurrection, but with the individual death; and the human soul separated from its body will know, in accordance with its nature, only intelligible joys. Ibn Sīnā in his exoteric works is careful not to deny the Resurrection; the same is true of Ibn Rushd, who, at the conclusion of the *Tahāfut al-tahāfut*, confines himself to declaring his respect for the prophetic teaching. But everything is determined by the conception of prophecy in question. In his "esoteric" *Risāla adḥawiyya fī amr al-maʿād* (ed. S. Dunyā, Cairo 1949), Ibn Sīnā clearly suggests that the Resurrection must be taken as a lesson meant for the people; the wise man must understand it as a symbol or allegory, for "opposed to the true happiness of man is the existence of his soul in the body, and (...) corporeal pleasures are different from true pleasures, and to return to the body would be a punishment for the soul" (53). Henceforth, in its deepest reality, the life of Paradise will be that of intelligible substances united with the Active Intellect and the Universal Intellect in which, as in a clear mirror, will shine the supreme Divine Lights. —Is then the apparent meaning of the Ḳurʾānic descriptions totally ignored? No. They are of value, in their literalness, for the "weak-minded" (*buhl*) who, although they have observed God's commandments on earth, will be incapable of rising to the life of pure intelligence. They will be experienced, in the strict sense, not as sensual delights, but as pleasures of the imagination, thanks to the heavenly Bodies (cf. *Nadjāt*, 2nd Cairo ed. 1357/1938, 298; see also *Ishārāt*, ed. Forget, Leiden 1892, 196 § 2; Ibn Sīnā, in order to put forward this opinion, takes shelter behind the authority of "certain teachers").

Avicenna's influence marks a break in the history of *taṣawwuf*. The first Ṣūfīs took Ḳurʾānic teaching literally, but focussed their hopes on the supreme bliss and reward, the vision of God. Well-known is the allegorical act of Rābiʿa, who wanted "to burn Paradise" (and "drown Hell") so that God might be loved for Himself alone and not for His rewards (and feared for Himself alone and not for His punishments). In some famous texts, al-Bisṭāmī objects to the "market of images" (the *sūḳ* of the traditional exegesis where the elect choose "a fine face" for "the visit on Friday"), and proclaims: "If in Paradise I were prevented from meeting Him, were it only for an instant, I would make life intolerable for the elect of Paradise" (cf. L. Massignon, *Lexique technique*, Paris 1954, 253). For al-Ḥallādj everything is turned towards the *ruyʾat Allāh*, dazzling but intermittent, in which the elect find happiness only "after the event".—Characteristic is the attitude of al-Muḥāsibī, of whom certain texts transpose the promised bliss into spiritual values, whilst his *Kitāb al-tawahhum*, in order to encourage popular piety, emphasizes the sensual and carnal descriptions.

The later Ṣūfīs took care not to remove the sensual character of the joys of Paradise, but they developed, often extensively, the "superior" spiritual sense, revealed by the *kashf* ("unveiling"). The most remarkable presentation is that of Ibn ʿArabī in his *al-Futūḥāt al-Makkiyya*. Paradise is an "abode of Life", *dār al-Ḥayawān*, overflowing with both sensual and spiritual joys. In *Futūḥāt*, i, 353 ff., he enumerates three Gardens or Paradises: "the Garden of the Exception" for children who died before attaining the age of reason, the *amentes*, the righteous who have not received the revealed Law, "and those for whom God destines it"; "the Garden of Inheritance" into which the souls in the "Exception" and the believers who have been punished for a time in Gehenna may enter; and lastly "the Garden of Works" where believers will be rewarded for their good deeds. This last is in turn subdivided into eight Gardens, each comprising a hundred degrees. The highest Garden is Eden (preceded by the *Firdaws*); and the highest degree of Eden, *al-Maʾwā*, is reserved for the Prophet (ii, 96). The second volume of the *Futūḥāt* takes up the traditional descriptions and gives a commentary based on distinctions between desire, pleasure and will. The eschatology of Ibn ʿArabī has been briefly summarized by Ṣubḥī al-Ṣāliḥ, 288 ff., and analysed in detail by Asín Palacios, *La escatalogia musulmana en la Divina Comedia*, Madrid-Granada 1943, 230 ff. and references given there. See particularly the diagrams reproduced on pp. 233, 262, 264, where the gardens of Paradise are drawn in concentric and ascending levels. Another representation (ibid., 235) in a pyramid of eight levels has been suggested on the basis of the *Maʿrifat-nāma* of Ibrāhīm Ḥaḳḳī, studied by Carra de Vaux (*Fragments d'eschatologie musulmane*, Brussels 1895).

If we refer to *Futūḥāt* i, 353, it appears that the concrete eschatological descriptions of Ibn ʿArabī may all bear an allegorical meaning; and that they refer, not to two distinct Paradises, "earthly" and "heavenly", as Asín Palacios suggests, but to one single place of delights in which these two aspects join to make one: an application of the gnostic thesis of the author, which was developed in the *Fuṣūṣ al-Ḥikam* (Cairo ed. 1365/1946) where the world of the created being is the manifestation *ad extra* of the transcendent God. A text attributed to Ibn ʿArabī, but which is more probably from al-Ḳāshānī (cf. Ṣubḥī al-Ṣāliḥ, 312) gives to the Ḳurʾānic texts themselves an interpretation which is very spiritual and uses a very Avicennian terminology: where the "lofty beds" are the degrees of perfection, the brocade lining is the inward aspect of the soul, the Houris the heavenly Spirits.

4. Two essays in synthesis.

The *falāsifa* on one side and the many Ṣūfīs on the other were regarded with mistrust and often opposed by the official teaching. Nevertheless their influence was effective. The expansion of *Ṭarīḳas* ("brotherhoods") spread throughout the masses many Ṣūfī interpretations, sometimes but not always mixed with "philosophical" glosses. This resulted in some attempts at synthesis, clearly concerned to maintain the values of the faith. We will consider two of them.

Al-Ghazzālī.—The most important synthesis is that by Abū Ḥāmid al-Ghazzālī (earlier therefore than Ibn ʿArabī), in which are united the traditional currents, *kalām*, *falsafa* and *taṣawwuf*. In the *Iḳtiṣād* and the *Iḥyāʾ*, al-Ghazzālī defends the Ashʿarī thesis of the vision of God. The *Kitāb al-mawt wa-mā baʿdahu* of the last quarter of the *Iḥyāʾ* (Cairo ed. 1352/1933, iv, 381-468) reproduces extensively *ḥadīth* and traditional texts which describe the sensual pleasures and joys of Paradise. But the *Maḳṣad al-asnā* (Cairo ed., n.d.), without rejecting them, insists on the superiority of spiritual bliss. Paradise is a "medium of bliss" of which only images are revealed to us. There is the same doctrine in *Mīzān al-ʿamal* (cf. tr. Ḥikmat Hashīm 5-6): it is because the pleasures of Paradise "are incomprehensible to the understanding of the commonalty of men" that they "assimilate them to the sensual pleasures which they know". Here we are very close to the theses of Ibn Sīnā. Al-Ghazzālī, however, differs radically from the "philosopher" in his teaching of the reality of the resurrection of the body. His own personal ideas seem to take shape as follows: the believers who can only conceive of sensual and material happiness will enjoy the pleasures of Paradise in the flesh; others will delight in imaginative pleasures; and others again, "the holy and the initiated (*ʿārifūn*)" will enjoy superior delights, intellectual and spiritual, which alone can satisfy them and of which the sensual delights described in the Law are only the image. Elsewhere the possibility is not ruled out that some of the elect may share in the three kinds of joy at the same time (cf. *Arbaʿīn*, 40, and Ṣubḥī al-Ṣāliḥ, 286).

An elementary manual of kalām.—The popular treatise on *kalām* by al-Bādjūrī (18th-19th centuries, *Ḥāshiya* ... *ʿalā Djawharat al-tawḥīd*, Cairo ed. 1352/1934), so often taught in the great mosques and the centres of the brotherhoods, contains only some sober observations on the subject of Paradise. Throughout his work al-Bādjūrī faithfully follows the traditional Ashʿarī line; reality in the literal sense of the texts, but *bilā kayf*, "without asking how"; he is sometimes not averse from admitting a double meaning, literal but also allegorical, and is receptive to Ṣūfī influences. He does not treat in detail the question of paradisiacal rewards, and confines himself to noting that "the whole of Paradise is abundantly supplied with all sorts of delights" (107). He centres his comments on the existence and the structure of the Garden. Existence: (1) Paradise has already been created (contrary to Muʿtazilī opinion), and the Eden of Adam and Eve is identified with the Dwelling Beyond; (2) it is an eternal abode which will never end (contrary to the Djahmīs).—Structure: three hypotheses are admitted, and al-Bādjūrī draws no conclusion (id.): (1) Paradise will consist of seven parts (and not of eight as proposed by Ibn ʿArabī), concentric and ascending circles. The Highest, which is in the centre, is the *Firdaws*, where the rivers part; and Eden comes in the second place; (2) four Gardens, according to the Ḳurʾān, LV, 46 and 62, which are named in ascending order: Delights, Refuge, Eden, *Firdaws*; (3) a single Abode to which the seven designations may be applied, each underlining one of its qualities.

5. Reformers and contemporary modernists (cf. Ṣubḥī al-Ṣāliḥ, Vth part.).

Muḥammad ʿAbduh (*Risālat al-tawḥīd*, Cairo 1353H., 203-4 on the "vision of God", *Tafsīr Djuzʾ ʿamma* ...., a commentary on the thirtieth part of the Ḳurʾān or the "thin suras", 1st ed., Cairo 1322/1904; an article from the *Manār*). The vision of God is possible, but is not of the same nature as an ocular vision on earth; it is by transforming their visual faculty that God will reveal himself to His elect. The literal, descriptive sense (localization and pleasures of Paradise) is upheld but soberly explained. The principle of *bilā kayf* is reaffirmed, especially on the subject of the joys dispensed by the Houris. Let us note finally that a critique of traditional sources is adumbrated. For Muḥammad ʿAbduh, the *ḥadīth*s, even if *ṣaḥīḥ*, may only be retained if they are *mutawātir*, warranted by many lines of transmission. This principle leads him to reject the hyperboles of many literalist descriptions.

Rashīd Riḍā and his great *Tafsīr al-Manār*.—This important differentiation between the *ḥadīth*s is taken up again and elaborated, even to the point of an internal criticism of certain *matn* (texts) of the traditions. Thus Rashīd Riḍā rejects as inauthentic those which promise to the elect Houris in abundance, and he refers to a *ḥadīth* reproduced by al-Bukhārī and Muslim, which awards to everyone in Paradise his earthly wife and a single Houri. The descriptions abounding in hyperbolical literalism are, he says, mistaken in not considering the spirit of the Arabic language, which requires that all anthropomorphisms be interpreted metaphorically. We should strive to understand the inner spirit of the Ḳurʾān which teaches both sensual and spiritual delights, but which places the second far above the former. For Rashīd Riḍā, the authentic *ḥadīth par excellence* is that which defines the blessed life as "that which no eye has seen, no ear heard" .... He criticizes in turn the descriptive hyperboles of many "literalists", the excessively rationalist principle of the Muʿtazila, the allegorism of the Ṣūfīs, and he attacks by name Ibn ʿArabī. Only the attempt to understand the actual text of the Ḳurʾān counts. If the spiritual life prevails over the life of the flesh, if the delights of Paradise are both sensual and intelligible, it is because that is the teaching of the Book. The vision of God is possible (contrary to the Muʿtazila) but "it is not a fundamental basis of the Islamic faith" (see Ṣubḥī al-Ṣāliḥ, 325-35, and ref. *Tafsīr al-Manār*).

In conclusion it may be useful to mention with M. Ṣubḥī al-Ṣāliḥ "the philological exegesis" presented by ʿAbd al-Ḳādir al-Maghribī who, in 1920, wrote a commentary on the twenty-ninth section of the Ḳurʾān, *djuzʾ Tabārak* (reissued in the work *ʿAlā hāmish al-Tafsīr*, Cairo n.d.). The author dismisses the literalist exegesis which presents the life of the Beyond in purely sensual terms: that would be to fail to take account of the incomparable power of expression of the text; he also dismisses the purely spiritual allegorical exegesis, for it derives only from subjective views. He requires an exegesis founded on the laws of the Arabic language, its eloquence and its use of metaphor. The terms describing the delights of Paradise aim at evoking

the grandest possible conception of joy. We should then understand these terms literally, but as designating, in the Other World, concrete realities intrinsically different from those here below. It is thus we should understand the fleshly joys promised to the elect: consequently, the feasts of Paradise are by no means intended for the satisfaction of sensuality, and the delights offered by the Houris represent a reality inaccessible to human understanding, a noble pleasure in which the female believers will share.—The author adds that his exegesis is only one of the interpretations possible, and that a Muslim is free to prefer another.

The Egyptians Sayyid al-Ḳuṭb, Amīn al-Khūlī, and especially Muḥammad Aḥmad Khalaf Allāh, a disciple of the former, go even further than the *shaykh* al-Maghribī in the study of the "literary genres" of the Ḳurʾān. Azharī circles displayed violent opposition towards Dr. Khalaf Allāh.

In conclusion: the official teaching has never confirmed the exclusively allegorical and spiritual interpretations of Ḳurʾānic verse and *ḥadīth* concerning Paradise. Throughout the centuries two trends have co-existed: (1) the so-called traditional exegesis, which accepts many traditions and which endlessly multiplies concrete details about the life of Paradise and its sensual pleasures; (2) the attempts of *kalām*, of al-Ghazzālī, the Salafiyya reformers, etc., who retain indeed the obvious literal meaning of the Ḳurʾānic text, but take care not to amplify it; who insist on the intrinsic difference between the realities of the Beyond and earthly realities, emphasizing the primacy of the spiritual over the carnal order. Even without mentioning the "philological" exegesis of al-Maghribī, we may say that the attempts of Muḥammad ʿAbduh and of Rashīd Riḍā to perform an internal critique of the traditions may well open new perspectives to our knowledge of the *tafsīr*.

Bibliography: in the article. (L. GARDET)

DJANNĀBA, (Djannābā, Djunnāba), arabicized forms of Ganāfa, a town and port in the VIIth *ustān* (Fārs) of Persia. The name is a corruption of *Gand-āb*, 'stinking water', so called because of the bad quality of its water (see Ibn al-Balkhī, *Fārs-nāma*, 149 and Ḥamd Allāh Mustawfī, *Nuzha*, 130). Ganāfa is situated on the coast of the Persian Gulf in Lat. 29° 35′ N. and Long. 50° 31′ E. In former times it was an important manufacturing centre where cloths of good quality were produced. Pearl-fishing was also carried on from there. It was the birthplace of Abū Sulaymān al-Djannābī [*q.v.*], the well-known Ḳarmaṭian *dāʿī*. According to the *Ḥudūd al-ʿĀlam* (127), it was a large and flourishing town in the 4th/10th century. An oil pipe-line from the Gač Sarān oilfield (which lies 70 km. to the north-east) to the island of Khārag [*q.v.*], where tankers of the largest size will be loaded, is shortly to be constructed; it will enter the sea just to the north-west of Ganāfa. The town is connected with Būshahr [*q.v.*] by a dry weather road 156 km. in length. Agriculture, fishing and shipping repairs are carried out at Ganāfa, the population of which in 1951 was 2,235. The modern form of the name is Ganāveh.

(L. LOCKHART)

AL-**DJANNĀBĪ**, ABŪ MUḤAMMAD MUṢṬAFĀ B. ḤASAN B. SINAN AL-ḤUSAYNĪ AL-HĀSHIMI, 10th/16th-century author of an Arabic historical work dealing with eighty-two Muslim dynasties in as many chapters, entitled *al-ʿAylam al-zākhir fi aḥwāl al-awāʾil wa'l-awākhir*, usually called *Taʾrīkh al-Djannābī*. A Turkish translation and abridgment were prepared by the author himself. Whether the accepted form of the *makhlaṣ* is correct or should be rather Djanābī cannot be decided in the absence of information as to whence it was derived. Al-Djannābī came from a distinguished Amasya family, studied and taught in various cities, and was for a short time judge of Aleppo. His younger brother was the poet Suʿūdī. Both died in the same year 999/1590.

AL-**DJANNĀBĪ**, ABŪ SAʿĪD ḤASAN B. BAHRĀM, was the founder of Ḳarmaṭian power in East Arabia. Born at Djannāba on the Fārs coast, he is said to have become a flour merchant at Baṣra. He was crippled on the left side. His first mission as a Ḳarmaṭian is said to have been as a *dāʿī* in southern Īrān, where he had to go into hiding from the authorities. He was then sent to (mainland) Baḥrayn, where he married into a prominent family and won followers rapidly, perhaps among a group formerly attached to the line of Ibn-al-Ḥanafiyya.

We find that in 286/899 he had subjected a large part of Baḥrayn and taken Ḳaṭīf. In 287 his partisans were in strength around Hadjar, the capital of Baḥrayn, and were approaching Baṣra. The Caliph Muʿtaḍid sent an army of 2,000 men against them, to which were added many volunteers. This army was cut to pieces; its general was taken prisoner, then set at liberty; the other prisoners were killed. About 290/903 Abū Saʿīd took Hadjar after a long siege, by cutting off the water supply; he then subjected Yamāma and invaded ʿUmān. In 300 his troops again invaded the district of Baṣra, but in 301/913 he was murdered by a slave, together with several of his high officers.

He left seven sons, of whom Saʿīd succeeded, to be replaced later by the youngest, the famous Abū Ṭāhir [see art. below]. Abū Saʿīd was venerated after his death. His partisans believed that he would return; a horse was always kept saddled at the door of his tomb. The Ḳarmaṭians of Baḥrayn called themselves Abū Saʿīdīs after him, and attributed to him the later constitution of their republic.

(B. CARRA DE VAUX-[M. G. S. HODGSON)

AL-**DJANNĀBĪ**, ABŪ ṬĀHIR. Abū Ṭāhir Sulaymān b. Abī Saʿīd al-Ḥasan was one of the most famous chiefs of the small Ḳarmaṭian state of Baḥrayn and, for several years, the terror of the pilgrims and of the inhabitants of lower ʿIrāḳ. On the death of Abū Saʿīd [see art. above] in 301/913-4, or 300/912-3 according to al-Masʿūdī, his son Saʿīd succeeded him and governed

with a council of notables (al-ʿIḳdāniyya). For some time the Ḳarmaṭians refrained from troubling the caliphate and were even on good terms with the government of the vizier ʿAlī b. ʿĪsā, who granted them privileges such as the use of the port of Sīrāf, in 304/916-7. In 307/919-20, however, there was an attack on Baṣra to support a Fāṭimid attempt against Egypt, according to Ibn Khaldūn (*ʿIbar*, iv, 89). At this time Abū Ṭāhir was not personally at the head of affairs, since he was still too young, having been born in Ramaḍān 294/June-July 907, and he seems not to have wielded any power before 311/923-4 when he appears, although aged then no more than 16, in Rabīʿ II/July-August 923, as commander of the Ḳarmaṭians who entered Baṣra by surprise at night. Escalading the walls, they established themselves in the town before any resistance could be organized, and spent seventeen days in pillage and massacre. As early as 305/917-8, however, Saʿīd, whom the sources depict as lacking energy and authority, had been deposed, perhaps at the instigation of the Fāṭimid ʿUbayd Allāh. The latter, according to Ibn Khaldūn, sent a letter of investiture to Abū Ṭāhir, whose reign is by some sources dated from this year.

The attack against Baṣra in 311/923-4 coincided with the removal of the vizier ʿAlī b. ʿĪsā whom his enemies represented as the ally of the Ḳarmaṭians. At the end of the same year Abū Ṭāhir attacked the pilgrim caravan returning from Mecca to al-Habīr, and took prisoner the amīr Abu 'l-Haydjāʾ ʿAbd Allāh b. Ḥamdān, who had been charged with the protection of the caravan. Abu 'l-Haydjāʾ and the prisoners were released some time afterwards at the same time as an envoy from Abū Ṭāhir arrived at Baghdād demanding the cession of Baṣra, Ahwāz and even other territories. This claim was rejected and, in 312/924-5, the pilgrims were again attacked and Kūfa was sacked by Abū Ṭāhir. In 315/927-8, having again plundered Kūfa, Abū Ṭāhir gained a great victory over the army sent against him by the caliph and commanded by Yūsuf b. Abi 'l-Sādj [*q.v.*], whom he captured and who was put to death in Dhu 'l-Ḳaʿda 315/January 928 in the course of the operations that followed. Advancing up the Euphrates, Abū Ṭāhir arrived at Anbār, crossed the river with the intention of marching on Baghdād, but was stopped by the army of Mu'nis [*q.v.*] thanks to the destruction, at the instigation of Abu 'l-Haydjāʾ, of the bridge on the Nahr Zubāra. He thereupon turned north and reached Raḥba, Ḳarḳīsiyyā and Raḳḳa, holding the inhabitants to ransom. Some detachments penetrated as far as Sindjār, Raʾs ʿAyn and Naṣībīn. Abū Ṭāhir did not return to Baḥrayn until the beginning of 317/February-March 929, when he had built a *dār al-hidjra* called al-Muʾminiyya (it is known that the Ḳarmaṭians called themselves *muʾminūn*), near al-Aḥsā, his capital.

The most sensational act of Abū Ṭāhir was his expedition against Mecca where the pilgrims were gathered and where he arrived on 7 Dhu 'l-Ḥidjdja 317/11 January 930. He killed the pilgrims in the mosque, removed everything of value in the holy house, and took away the Black Stone, having spent eight days in pillage and massacre. In 318/930 he possessed himself of ʿUmān. In 319/931 he was thought to be reattempting the conquest of ʿIrāḳ, but the Ḳarmaṭians went no futher than Kūfa where they remained for 25 days of pillage. According to De Goeje, the expedition was put off on account of the troubles which broke out in the Ḳarmaṭian state following the enthronement as *Mahdī* of an impostor set up by the vizier Ibn Sanbar and for some time recognized by Abū Ṭāhir himself (see below).

Since the pilgrimage had become impossible and the operations of Abū Ṭāhir were continuing (against Sīnīz in 321, and against Tawwadj in 322, that is to say against the coast of Fārs), the chamberlain of the caliph al-Rāḍī, Muḥammad b. Yāḳūt, in 322/934 entered into negotiations with Abū Ṭāhir for his recognition of the authority of the caliphate, the cessation of his interference with the pilgrims, and the return of the Black Stone; in return he would receive official investiture for the regions which he possessed or had conquered. Abū Ṭāhir refused to restore the Black Stone, but agreed to cease obstructing the pilgrims and offered to have the *khuṭba* read in the name of the caliph if he were allowed free use of the port of Baṣra. However, in 323/935 he again attacked the pilgrimage, defeated the caliphal troops between Kūfa and Ḳādisiyya, and occupied Kūfa for everal days before returning to Baḥrayn. Fresh negotiations were commenced in 325/937, by the *amīr al-umarāʾ* Ibn Rāʾiḳ, with Abū Ṭāhir who had again entered Kūfa. In reply to the demand of the Ḳarmaṭian, who wanted the caliph to give him 120,000 dinars per year in silver and supplies, Ibn Rāʾiḳ proposed that Abū Ṭāhir and his troops should consider themselves as enrolled in the service of the caliph and that this sum be considered as a salary. No agreement was signed. Finally, in 327/939, thanks to an ʿAlid of Kūfa, the pilgrimage was able to resume in consideration of a tribute of 25,000 (or 120,000) dinars and a protection due (*khifāra*) which was regularly levied by the Ḳarmaṭians on the pilgrims; this did not, however in any way prevent incursions into the south of ʿIrāḳ.

Abū Ṭāhir died of smallpox at the age of 38 in 332/943-4, and was succeeded by his brother Aḥmad.

The activity of Abū Ṭāhir raises questions as to what were his relations with Ismāʿīlism, whether he really considered the Fāṭimid caliph ʿUbayd Allāh to be the awaited *imām* and obeyed him, and whether it was at his secret request that he carried off the Black Stone and launched attacks against ʿAbbāsid territory. The question of the differences and the common ground between Ḳarmaṭians and Ismāʿīlīs, dealt with by Ivanow, *Ismaili tradition concerning the rise of the Fatimids*, 69 ff., and *Ismailis and Qarmatians* in *JBBRAS*, 1940, 78 ff., and B. Lewis, *The origins of Ismāʿīlism*, Cambridge 1940, ch. iii on the Ḳarmaṭians of Baḥrayn and particularly the Ḳarmaṭians and the Fāṭimids, will not be examined here; this account is restricted to a review of the facts concerning the history of Abū Ṭāhir. There are documents as much in favour of an adherence to the Fāṭimid caliphs as against (see the texts in B. Lewis, *op. cit.*). In their work on ʿUbayd Allāh al-Mahdī Ḥ. Ibrāhīm Ḥasan and T. Aḥmad Sharaf incline to the idea of secret and close relations between Abū Ṭāhir and the first Fāṭimid caliph, and a real subordination of the former to the latter (cf. also De Goeje, *passim*). Many sources indicate that Abū Ṭāhir recognized ʿUbayd Allāh as the *mahdī*, that he sent him the *khums*, and that he was his agent in Baḥrayn (see the declarations of the Ḳarmaṭian interrogated by ʿAlī b. ʿĪsā and of the secretary of Yūsuf b. Abi 'l-Sādj in Miskawayh, i, 167, 181, and cf. B. Lewis, *op. cit.*). Al-Dhahabī cites the words of Abū Ṭāhir : *Anā al-dāʿī ilā 'l-mahdī* (Ḥ. Ibrāhīm Ḥasan, 277). Abu 'l-Maḥāsin declares that he recognized ʿUbayd Allāh as *mahdī*

on his return from Raḥba in 317/929; but the letter of ʿUbayd Allāh to Abū Ṭāhir which is cited in support of this theory, extracts from which are given by al-Baghdādī, is most probably apocryphal. Moreover, Abū Ṭāhir cannot have been very convinced of the legitimacy of ʿUbayd Allāh, since he considered as the awaited *imām* an impostor of Persian origin, the very name of whom varies in the sources, and enthroned him as such (it is said that he even proclaimed him as God). The attitude of Abū Ṭāhir is comprehensible if, as Ivanow says, the Fāṭimids were not regarded as *imāms* by the Ḳarmaṭians. Moreover, how did Abū Ṭāhir himself appear in the eyes of the Ḳarmaṭians? If we are to believe al-Dhahabī, some considered him as Prophet, some as the Messiah, some as the *Mahdī* himself, some as "he who prepares the way for the Mahdī" (*al-mumahhid ila 'l-mahdī*). At all events there is a curious mixture of phantasmagoria and realism about him, for he did not hesitate to put to death the impostor in whom he had believed when certain of the latter's acts had opened his eyes, and his politics towards the ʿAbbāsids is further evidence of realism.

It does not appear that the attacks of Abū Ṭāhir against the caliphal territories, whether Baṣra, Kūfa, etc., or the south-west region of Persia, could have had as their precise purpose to help the Fāṭimid caliphate in its attempts against Egypt; but everything which could weaken the ʿAbbāsid caliphate, to which Abū Ṭāhir as a Ḳarmaṭian was violently hostile, would help the Fāṭimids. Nevertheless he agreed to negotiate with the ʿAbbāsid caliphate, as has been shown, to obtain certain advantages, while keeping up relations with their enemies, such as the Fāṭimids, the Grand Mobed Isfandiyār, or the Daylamid Mardāwīdj who supported him, or the Barīdī, who offered him sumptuous presents on the occasion of the birth of his son and who took refuge with him for a time. In all, it could be said that if Abū Ṭāhir did assist the Fāṭimids, this was perhaps not on account of absolute devotion to their cause; he was carrying out a very personal policy. In his attitude to the practices and dogmas of Islam one must recognize, even making allowances for the exaggerations and slanders of the Sunnī authors, an extraordinary violence, which Ivanow explains (in *JBBRAS*, 1940, 82) by saying that the Ḳarmaṭians "regarded themselves as the followers of a new religion, revealed to supersede the now obsolete religion of Islam", and he compares this attitude with that of the original Islamic community in the face of Christianity and Judaism both of which refused to recognize their legitimate continuation by Islam. But his violent acts, even if the removal of the Black Stone was executed at the instance of ʿUbayd Allāh, as Defrémery and later De Goeje thought, could not have been openly approved by the caliph who was aspiring to supplant the ʿAbbāsids (cf. Ḥ. Ibrāhīm Ḥasan, 225-6).

Bibliography: The basic work remains that of De Goeje, ***Mémoire sur les Carmathes du Bahraïn et les Fatimides***[2], Leiden 1886, where reference will be found to the works of historians and geographers and other authors, published or in manuscript. Of editions and translations later than this work: Miskawayh, i, 33-4, 121, 139, 167, 181 ff., 201, 330, 367; ii, 55 (with a long passage from al-Dhahabī on the history of the impostor in a footnote); Masʿūdī, *Tanbīh*, tr. Carra de Vaux, 149, 483, 484-92, 495-7; idem, *Murūdj*, viii, 285-6; Abu 'l-Maḥāsin, *Nudjūm*, Cairo ed., iii, 207, 211, 213, 217, 220, 224-5, 232, 245, 260, 264, 279, 281, 287; Hilāl al-Ṣābiʾ, *Wuzarāʾ*, 49, 56, 210, 314-6; Ṣūlī, *Akhbār al-Rāḍī wa 'l-Muttaḳī*, tr. i, 71, 77, 122, 152, 207; ii, 27, 66, 78; Baghdādī, *Farḳ*, ed. 1367/1948, 172-3, 175, 177-9; Ibn Khallikān, tr. de Slane, i, 246; Kutubī, *Fawāt*, i, 173-5. DJANZA [see GANDJA].

DJĀR [see DJIWĀR].

AL-**DJĀR**, once an Arabic port (*furḍa*) on the Red Sea, 20 days' journey south of Ayla, 3 from al-Djuḥfa. Until almost the end of the Middle Ages (when Yanbuʿ, which is situated further north, took over this function), al-Djār was the supply port of Medina, one day's journey away (this according to Yāḳūt, ii, 5; according to BGA, vi, 191 it was two days' journey; according to BGA, i, 19, and ii[2], 31 it was three). Al-Djār was half on the mainland, and half on an island just offshore. Drinking water had to be brought from the Wādī Yalyal, two parasangs distant. It was an important entrepôt for trade with Egypt, Abyssinia, India and China. The harbour of Ḳarāf (probably the Κοπαρ κώμη of Ptolemy), used for trade with Abyssinia, was situated on an island, a square mile in area,facing the town. There were many castles (*ḳuṣūr*) in al-Djār. Their beginnings must date back to the time of ʿUmar, who had two castles built here for the purpose of housing 20 ship-loads of grain (Yaʿḳūbī, ii, 177). By 1800, the name of the town no longer appears in descriptions of travel, and it was apparently replaced by Burayka (Burēka), which is the name of the bay of al-Djār. Extensive ruins found there may well be the remains of the old castles. The whole stretch of the Red Sea from Djudda to al-Ḳulzum was referred to as al-Djār in antiquity.

In the time of the Prophet, those who had taken part in the second great emigration to Abyssinia returned in two ships to al-Djār, and then went on to Medina (Ibn Saʿd, i/1, 139; Ṭabarī, i, 1571). ʿUmar gave ʿAmr b. al-ʿĀṣ the order to bring Egyptian grain to Medina by sea via al-Djār (Balādhurī, *Futūḥ* 216; Ibn Saʿd, iii/1, 224; Yaʿḳūbī, ii, 177), and this supply-route—though occasionally interrupted by pro-ʿAlid risings (in 145/762: Ṭabarī, iii, 257)—remained the usual one until the time of the Caliphate of al-Manṣūr. The trade in assignments (*ṣukūk*) for grain from the stores in al-Djār, the earliest recorded instance of promissory notes, ie recorded in the *ḥadīth* and in the discussions of ths scholars of Medina (Mālik, *al-Muwaṭṭaʾ*, sections *al-ʿīna* and *djāmiʿ bayʿ al-ṭaʿām*, with al-Zurḳānī's commentary; Ibn ʿAbd al-Ḥakam, *Futūḥ Miṣr*, ed. Torrey, 166 ff.; G. Jacob, *Die ältesten Spuren des Wechsels*, in *MSOS*, xxviii/2, 1925, 280-1). The name of al-Djār is also frequently linked with reports of unrest on other occasions: for instance in 230/814-5 (Ṭabarī, iii, 1336), 266/879-80 (Ṭabarī, iii, 1941), under al-Muḳtadir (Abu 'l-Faradj al-Iṣfahānī, *Maḳātil al-ṭālibiyyīn* 706, Cairo 1949).

(A. DIETRICH)

DJARĀD, locusts. The word is a collective noun, the nom. unit. being *djarāda*, which is applied to the male and the female alike. No cognate synonym seems to exist in the other Semitic languages. For the different stages of the locust's development the Arabic language possesses special names (such as *sirwa, dabā, ghawghā', khayfān*, etc.) which, however, are variously defined by different authorities.

Being found in abundance in the homeland of the Arabs, locusts were often mentioned and described in ancient Arabic poetry and proverbs. In the Ḳur'ān they figure in the enumeration of the Plagues of Egypt (VII, 133) and in a simile describing the resurrected on the day of judgement (LIV, 7). According to some *ḥadīth*s they are lawful as human food.

In Arabic zoological, pharmacological and lexicological works numerous kinds are mentioned, part of which, according to some authors, differ in colour (green, red, tawny [*aṣfar*], white). Where it is stated that the male is tawny and the female black, a specific variety is obviously spoken of. Some locusts fly and some leap. Some have a big and some a small body. They have no fixed habitat but wander about from place to place following a leader. The males have a lighter body and therefore are better able to fly. Locusts have six feet, the tips of which (or: the tips of the two hindlegs) are like saws. Their eyes are immobile. Next to fish they lay the largest number of eggs of all oviparous animals. The young hatch in less than a week. Several authors state that, for laying eggs, the female seeks rocky ground which cannot be broken even with sharp tools, strikes that ground with her tail (ovipositor) and thus makes a crevice into which she lays the eggs. Other sources give a different and more detailed description: In spring, the females seek out good, soft soil, dig holes with their tails, in which they conceal the eggs, fly away and perish of cold or are killed by birds; in spring of the following year, these buried eggs open, the young hatch, feed on all they can find and, when they are big, fly to another country where they in their turn lay eggs. Locusts eat dung and the young of hornets and of similar animals; they themselves are eaten by sparrows, crows, snakes and scorpions. No animal causes greater harm to the means of human sustenance since they eat all that they come across. Their saliva is a deadly poison to plants. Some devices to keep them away from crops are mentioned in the sources.

In the opinion of the ancient Arabs, who used to eat them, locusts yield a delicious food tasting like the meat of scorpions; and Djāḥiẓ wondered why certain people did not like it. Yet eating it was believed to cause epilepsy (*ṣarʿ*). Locusts are eaten to this day by the Bedouin; methods of preparation in Hess, 124.

Medicinal uses of the locust and its significance when occurring in dreams are dealt with in pertinent works.

Three writings, each entitled *Kitāb al-Djarād* (probably little lexical treatises), none of which is extant, are attributed to the following authors (*Fihrist*, 56, 59, 83): 1) Abū Naṣr Aḥmad b. Ḥātim (al-Bāhilī [*q.v.*]); 2) Abū Ḥātim al-Sidjistānī [*q.v.*]; 3) al-Akhfash al-Aṣghar [*q.v.*].

(L. KOPF)

(ii). The locust, more commonly known as grasshopper, exists in various harmless forms in almost all climatic regions, but in its gregarious destructive form it is particularly and lamentably well-known. Invasions of locusts are a phenomenon not peculiar to the Muslim world, since they occur from China to America and from the U.S.S.R. to South Africa, but almost the entire Muslim world lies within the affected area, and in a region where invasions are especially frequent and severe. There is no need to give an account here of a well-known phenomenon which from the Bible to our own times has been described by many writers. Contemporary biologists have established that in their gregarious forms locusts are the same as in their solitary, peaceful forms: unfavourable climatic conditions simply modify the nature of their reproduction and mode of life. Young locusts then take flight in dense masses numbering millions which darken the sky like a vast cloud; the sound of the rasping of their legs and wings is intensified; when there is a drop in temperature, as for example in the evening, they suddenly settle on the ground and in a few moments every scrap of vegetation is destroyed, sometimes over an area of several square kilometres. As a result the local population suffers an economic catastrophe, except only that the locusts themselves, if they can be killed, provide some food.

From time to time chronicles mention certain particular invasions of locusts, but generally without giving details, and the information to be gathered from these references is, it seems, too haphazard and localized to allow any deductions to be made in respect of possible modifications in the habits of the locusts, the periodicity of their invasions or the area of their migrations. Today there are several migratory species, the two that chiefly concern us being the Desert Locust (Schistocerca gregaria, mainly in East Africa and Asia) and the Migratory Locust (Locusta migratoria, all other parts of Africa). Attempts have always been made to prevent these invasions; and although modern techniques have to some extent increased the effectiveness of control, they have not in fact introduced any new methods for a long time nor, as yet, have they overcome the scourge. Naturally, the local inhabitants have destroyed the eggs whenever they have found them, as a preventive step. When an invasion takes place, they try to stop the locusts advancing, or to kill them by digging pits, spraying poison, using wheeled screens and flame-throwers etc., (poison and fire already envisaged by Ibn Waḥshiyya) although the destruction inflicted does not prevent terrible

damage being done. Resistance can only be successful if immediate notice of the locusts' flight from their outbreak areas is sent, together with details of their route; and it is obvious that particular efforts must be made to discover the places where egg-masses are deposited and to destroy eggs and young on the spot, and perhaps later to make these areas ecologically unsuitable as breeding-grounds. This is what the international organizations are now trying to do, so far without success; and they have suffered from the vicissitudes of African politics, particularly the Organisation Internationale contre le Criquet Migrateur which is chiefly concerned with the breeding grounds on the Niger, and the Anti-Locust Research Centre for East Africa and West Asia, with its headquarters in Nairobi. Partial successes have been gained, for example in South Africa, and it is to be hoped that, so long as the state of international relations does not once again lead to a postponement of effort, it may at last be possible to put an end to one of the strangest and most fearful of the scourges of nature ever known, particularly in the climatic zones inhabited by the Muslim peoples.

Bibliography: It seems difficult to include a bibliography, since in essence it consists of semi-official publications of the various regional administrations concerned. For biological questions the pioneer works are those of P. B. Uvarov, *e.g.*, *Locusts and Grasshoppers*, 1928; for the geographical aspect the synthesis, dated, however, 1935, by E. W. Schleich, *Die geographische Verbreitung der Wanderheuschrecken*; for anti-locust control see in particular the periodical *Locusta*, from 1954.

(CL. CAHEN)

DJARĀDJIMA (Mardaïtes). This name, the singular of which is Djurdjumānī (cf. *Aghānī*[1], v, 158, *Aghānī*[2], v, 150, in a poem of Aʿshā Hamdān), according to Yāḳūt, ii, 55 denotes the inhabitants of the town of Djurdjūma, situated in the Amanus (Lukkām), and of the marshy districts north of Antioch between Bayās and Būḳā. This word could also be connected with Gurgum, the old name of a legendary province in the region of Marʿash, on which see Dussaud, *Topogr. hist. de la Syrie*, 285, 469. On the other hand Father Lammens recorded a village called Djordjūm near the road between Aleppo and Alexandretta and the springs of Ḥammām (Ḥammām Shaykh ʿĪsā?).

As inhabitants of the Arabo-Byzantine border country, the Djarādjima played an important part during the early days of Islam in the wars between Arabs and Byzantines, and they were known to Byzantine historians by the name Mardaïtes (see below). Somewhat lukewarm Christians, though whether Monophysite or Monothelite is not known, and dependants of the "patriarchate of Antioch", they enjoyed a semi-independence vis-à-vis the Byzantines to whom they supplied soldiers and irregular troops. The Arabs, after taking Antioch, sent an expedition against them commanded by Ḥabīb b. Maslama al-Fihrī. According to al-Balādhurī and Ibn al-Athīr, the Djarādjima agreed to serve the Arabs as scouts and spies, to guard the Amanian Gates and, along with the Arabs, to garrison the small forts commanding the road into and out of Syria. Wellhausen has, however, questioned whether they ever played this rôle before the time of Walīd I, after 89/708 (see below). They were given exemption from *djizya* and had the right to a share of the booty when they took part in military operations. But their loyalty was intermittent, and they did not hesitate to betray the Arabs and pass information to the Byzantines. The instability of the frontier and the difficulty of access to their country made it impossible for the Arabs to impose their authority over them.

The Byzantine historian Theophanes, like Michael the Syrian and Bar Hebraeus, states that during the reign of Muʿāwiya, the emperor Constantine Pogonatus (641-68) sent the Mardaïtes (Djarādjima) against Syria. Suported by Byzantine troops and under the command of Greek officers, their forces occupied the whole stretch of territory from the Black Mountain (the Amanus) to the Holy City (Jerusalem) and took control of all the mountains in the Lebanon. Many runaway slaves, no doubt Greek in origin, joined the Djarādjima, as did a number of the inhabitants of the mountain districts. In a short time their forces numbered several thousand men. According to Father Lammens, this operation is said to have started in about 46/666. To put a stop to this dangerous development, Muʿāwiya began negotiations with the emperor and, after lengthy discussions, accepted a severe peace treaty (annual tribute of 3,000 gold pieces, liberation of 8,000 prisoners and handing over of 50 thoroughbred horses). This treaty was perhaps accompanied by a promise that the emperor would abandon the Mardaïtes and withdraw from them all help in the form of men, arms and money. It is not known if the emperor intervened with the Mardaïtes in the Lebanon who in any case, as Michael the Syrian testifies, suffered partial defeats at the hands of Muʿāwiya and were further discomfited in about 49 or 50 by the settlement of the Zuṭṭ [*q.v.*] in the Antioch region and further north in the country of the Djarādjima (al-Balādhurī).

It is curious that the account given by Theophanes is not confirmed by the Arab historians who do not connect the peace treaty, probably concluded in 58 or 59/678-9 shortly before Muʿāwiya's death, with the question of the Djarādjima whom they do not mention at that period. Wellhausen has accordingly raised doubts regarding the account given by Theophanes, suggesting that he had brought the Mardaïtes into Muʿāwiya's treaty as a result of confusing it with the treaty made by ʿAbd al-Malik and the history of the Djarādjima in his time, which we shall deal with later; while Father Lammens thinks, on the contrary, that the Arab historians have not preserved any record of this incident because they have confused it with events at the time of ʿAbd al-Malik. However al-Balādhurī, when speaking of the Djarādjima at the time of ʿAbd al-Malik, makes a very clear reference to a treaty concluded with them by Muʿāwiya, who gave them money and in return took hostages whom he kept at Baʿalbekk. But the writer places this incident at the time of Muʿāwiya's war against "the people of ʿIrāḳ". That would mean the war against ʿAlī, that is to say at an earlier period. The uncertainty remains.

In the time of ʿAbd al-Malik, in 69-70/688-9, taking advantage of the fact that the caliph was not only engaged in a difficult war with the anti-caliph Ibn al-Zubayr but also preoccupied with the revolt of the Umayyad ʿAmr b. Saʿīd al-Ashdaḳ whom he had left in command of Damascus, the emperor Justinian II sent the Djarādjima to attack Syria. Al-Balādhurī reports that Greek cavalry, under the command of a Byzantine officer, came into the Amanus district and then advanced as far as the Lebanon, and that this force was joined by large numbers of Djarādjima, native peasants (*anbāṭ*) and runaway slaves. To put an end to the attacks of

these adventurers the caliph was compelled to sign a treaty with them, guaranteeing a weekly payment of 1,000 dinars. Then he offered the emperor to make peace on the same terms as Muʿāwiya when the latter had been engaged in the war with the people of ʿIrāḳ. Theophanes also mentions this treaty, in connexion with two particular years, 6176 (65/684) and 6178 (67-8/686), the latter possibly being a renewal. The figures given by him are not the same as for the treaty with Muʿāwiya (for 6176: 365,000 gold pieces, 365 slaves, 365 thoroughbred horses; for 6178: 1,000 gold pieces a day, 1 horse and 1 slave). But at the same time the emperor increased his claims, for we see in 6178 that the caliph had to surrender to the emperor half the tribute from Cyprus, Armenia and Iberia (cf. Michael the Syrian, ii, 469). For this consideration Justinian agreed to withdraw the Mardaïtes, and he recalled 12,000 of them; they settled on Byzantine territory. Theophanes reproves him for denuding the frontier in this way. But al-Balād̲h̲urī who dates the treaty 70/689 is unaware of this withdrawal and, according to Nicephorus, *Breviarium*, 36, the recall of the Mardaïtes, insofar as they were recalled, took place when Justinian broke the truce, and in order to reinforce his army. Theophanes also says under 6179 (68-9/687) that some Mardaites from the Lebanon came to rejoin the emperor's army in Armenia. Others remained in the Amanus, and there were still some there at the time of Walīd II (see below).

According to al-Balād̲h̲urī, the caliph after signing the treaty resorted to a trick to get rid of the D̲j̲arād̲j̲ima. He sent one of his trusted supporters, by name Suḥaym b. al-Muhād̲j̲ir, to see the Greek officer commanding them; Suḥaym succeeded in winning his confidence by pretending to take his part against the caliph. Then, using troops that had been in hiding, he made a surprise attack, killing the officer and massacring the Greeks who were with him. As for the D̲j̲arād̲j̲ima, he granted them the *amān*; some went away and settled in villages in the neighbourhood of Ḥimṣ and Damascus, others went back to the Amanus. The native peasants who had made common cause with them returned to their villages and the runaway slaves returned to their masters.

Some of these adventurers entered the caliph's service. According to al-Balād̲h̲urī, one of them named Maymūn al-D̲j̲urd̲j̲umānī (known to the Byzantines as Maïouma), a former Greek slave of a member of the Umayyad family, was set free at the request of ʿAbd al-Malik who had been told of the prowess he had shown in battle in the Lebanon, and he was put in charge of a garrison at Antioch. In the time of Walīd, at the head of an army of 1,000 men who were no doubt Mardaïtes, he took part in the expedition sent by Maslama b. ʿAbd al-Malik against Tyana, where he was killed. But al-Balād̲h̲urī was certainly mistaken when he said that his death was a great sorrow to ʿAbd al-Malik, for the latter was already dead at that time. Another mistake about him occurs in al-Ṭabarī who, under 87/706, records a tradition from Wāḳidī, according to which he was said to have been killed in the ranks of the Greeks. We see from Theophanes (under 6201 (89/709-10); cf. Nicephorus, *Breviarium*, 43-4) that this is certainly a reference to a former Mardaïte fighting for the Arabs; it was precisely to avenge his death that the Arabs were said to have undertaken the expedition in the course of which they laid siege to Tyana. (For the complications of this incident see Wellhausen 436-7, according to whom the Tyana expedition lasted for two years, 88 and 89).

However the D̲j̲arād̲j̲ima, in their retreats in the Amanus, and with the support of Greeks who had come from the neighbourhood of Alexandretta, continued to be a source of trouble for, in the same year 89, Maslama organized an expedition against their stronghold D̲j̲urd̲j̲ūma which was captured and destroyed. But the D̲j̲arād̲j̲ima were treated exceptionally: they were allowed to keep their Christian faith whilst wearing Muslim dress, without being subject to *d̲j̲izya*, to receive pay and rations for themselves and their families and to take part in Muslim expeditions with the right to despoil those whom they slew; their goods and their trade were not to be subject to any discrimination from the fiscal point of view. This shows beyond doubt that their secession was feared and that they were needed. A number of them were settled in the region of Tīzīn and Laylūn in north Syria, others at Ḥimṣ and at Antioch. Many emigrated however, crossing over into imperial territory. They settled in Pamphylia in the neighbourhood of Attaleia where they were known by the name of Mardaïtes and were commanded by a catapan. It has been observed that, even today, the population of this district still shows very clear traces of its Syrian origin (see Honigmann, *Ostgrenze*, 41, following Petersen and Von Luschan, *Reisen in Lykien, Milyas und Kibyratis*, ii, 1889, 208 ff.).

We find references to those who stayed on in Muslim territory under Yazīd II in the ʿIrāḳ army (al-D̲j̲āḥiẓ, *Bayān*, i, 114), and under His̲h̲ām b. ʿAbd al-Malik in a garrison in the Amanus (al-Balād̲h̲urī, 167, ed. Cairo, 174). During the ʿAbbāsid period their privileges were confirmed for them by Wāt̲h̲iḳ, but Mutawakkil ordered that they should be subject to *d̲j̲izya*, though continuing to give pay to those who were employed in the frontier posts.

As we have seen, the D̲j̲arād̲j̲ima are the Mardaïtes. The Syrian historians call them Gargūmayē, with the additional epithet Līphūrī or Līporē, that is to say brigands (cf. *luṣūṣ* in Ibn al-At̲h̲īr, *Nihāya*, under *ḥard̲j̲ama*). The name D̲j̲arād̲j̲ima is given in Ibn al-Faḳīh, 35, as denoting natives (*ʿulūd̲j̲*) of Syria, as opposed to D̲j̲arāmiḳa, natives of D̲j̲azīra, Nabaṭ, natives of Sawād and Sabābid̲j̲a, natives of Sind. But we find in *Ag̲h̲ānī*[1], xvi, 76 (*Ag̲h̲ānī*[2], xvi, 73) that D̲j̲arād̲j̲ima, in Syria, denotes those of Persian origin like the Abnāʾ in the Yemen, the Aḥāmira in Kūfa, the Asāwira in Baṣra and the K̲h̲aḍāmira in D̲j̲azīra. An allusion to the existence of the D̲j̲arād̲j̲ima in the Amanus in the 4th/10th century will be found in H. Zayat, *Vie du Patriarche melkite d'Antioche Christophore* (d. 967) *par le protospathaire Ibrâhîm b. Yuhanna. Document inédit du X^e siècle*, in *Proche Orient Chrétien*, ii, 1952, 60, where mention is made of a monastery of the Virgin called Dayr al-D̲j̲arād̲j̲ima in the D̲j̲abal al-Lukkām.

DJARASH, the ancient Gerasa, a place in Transjordan situated south-east of the Djabal ʿAdjlūn, in a well-wooded hilly district, standing on the bank of a small tributary of the Wādī 'l-Zarḳā', the Wādī 'l-Dayr or Chrysoroas of the Greeks. Founded in the Hellenistic era at a centre of natural communications, later to be followed by Roman roads, it was captured by the Jewish leader Alexander Jannaeus in about 80 B.C., but freed by Pompey; it then belonged to the towns of the Decapolis, being incorporated successively in the Roman province of Syria and the province of Arabia. Known as Antioch on the Chrysoroas, it enjoyed its greatest prosperity in the time of the Antonines, and it was then that most of the monuments whose imposing remains we admire today were built. A fortified city in the 4th century, it became the seat of a bishopric, and churches and basilicas abounded.

Conquered in 13/634 by Shuraḥbīl, it formed part of the district of al-Urdunn. In the 3rd/9th century, according to al-Yaʿḳūbī, its population was still half Greek, half Arab. But soon the town lost all its importance. No building of the Muslim period survives, nor is there any trace of the castle which Tughtakīn, *atabeg* of Damascus, had built, and which Baldwin captured and destroyed in 515/1121. According to Yāḳūt, the town was entirely in ruins at the beginning of the 7th/13th century, and through it ran various water-courses used to drive mills, while numerous villages were scattered over the nearby hills.

It was only in 1878 that the Čerkes came and settled on the deserted site of Djarash, and built the present village on the east bank of the *wādī*.

DJARBA (Djerba) is the largest island of the Maghrib littoral, with an area of 514 sq. kms. It lies to the south of Tunisia in the gulf of Gabès (Little Syrtis in ancient times), an area noted for its sandbanks and tidal currents. The two peninsulas of Mehabeul and Accara reach out towards it from the Djeffara plain, but the island is separated from the mainland by the Bou Grara Sea and Strait of al-Ḳanṭara to the west, and the Adjim channel to the east. Although the channel is no more than 2 kms. wide, it can be navigated by ships drawing up to 4 metres of water. The Bou Grara Sea, in the shape of a sack, has an area of 500 sq. kms., and a depth ranging between 5 to 25 metres. Low tide forms a series of shallows in the Strait of al-Ḳanṭara. Djerba consists of a small plateau with an elevation of 15-40 metres. It attains its highest point to the south near Sedwikesh (55 m.) and slopes down towards the coastal plains, which are very wide to the west of the island. The terrain is a deposit of the quaternary age, being marine on the periphery and continental inland.

There is no source of fresh water on the island apart from the few gullies along the clayey cliff of Guellala in the south, where the water merely trickles for a few hundred yards even after the heavy rains. The precipitation is slight and sporadic, an average of 200 mm. (= 7.84 in.) falling in a season of about 40 days, and even a continually high relative humidity cannot offset this lack of rain. The underground water-level to which wells are sunk through a layer of sandy soil and a limestone crust is abundant but salty, except in the eastern interior. Deep drillings have been made to an artesian water-level in the miocene clay of the substructure, but the water is salty and virtually unusable. The inhabitants of the island have always had to collect water in tanks, private and public, and except on certain small plots, cultivation of the land has yielded a very low output. All those who throughout the centuries have attacked the island have had to contend with its shortage of water.

Like the Kerkena islands, Djerba is connected with the mainland by the wide sandbanks which surround it less than 10 m. below the surface of the sea. These banks often silt up completely. At Ṭriḳ el-Djmel, for instance, the caravans cross them on their way to the Tarbella peninsula, and nearby a road has recently been constructed over the remains of the Roman causeway to al-Ḳanṭara. There is thus a direct link for modern traffic between the mainland and the island. The effect of tidal currents on the mud and fine sand has been to create a series of channels, 'oueds', in the sandbanks. Indeed, the gulfs of Venice and Gabès are the only areas of the Mediterranean which are tidal. At Djerba there is a difference of 1 m. between high and low tide. The dangers of navigating the currents and sandbanks have always served as a defence against outside intruders. In 253 B.C., during the first Punic War, a Roman fleet ran aground at low tide off Djerba, and it was only refloated at high tide by unloading the ships. (Polybius, i, 39). In 1511, Pedro Navarro landed his troops at high tide, and had sufficient foresight to withdraw his ships with the ebb tide. But the Spanish soldiers were thrown back by the islanders, and had great difficyulty in regaining their ships which were lying four miles offshore (Leo Africanus, trans. Épaulard, 401). It should be added that the sea abounds in fish, and certain shallows are strewn with sponges.

"Djerba, the isle of the shallows of Periplus, of the Lotus-eaters of Erasthones and other Greek writers, was called Pharis by Theophrastus, Meninx by Polybius, and possibly Phla by Herodotus. The land was well cultivated from the middle of the fourth century B.C. onwards, at which time it was certainly under the rule of Carthage" (Gsell, *Hist.*, ii, 124). As in Roman times, its economy was based mainly on the growing of olives, although in the fourth century B.C. the oil was still extracted from wild trees. Not much is known about its maritime activity during classical times apart from the fact that there were considerable fishing-grounds in the area. The for the most part shapeless remains of ancient settlements point to its economic importance at that time. Only Meninx can be accurately located, its ruins standing under the Burdj al-Ḳanṭara at the end of the Roman causeway. It is probable that Girba, from which the island's name originated, was situated near Houmt-Souk, and that Tipaza and

Haribus were in the neighbourhood of Adjim and Guellala respectively. The sack of Jerusalem in the first century A.D. resulted in a considerable influx of Jews, from whom most of the present-day Jewish population is descended. After having been part of the proconsular province, Djerba fell successively under the power of Tripolitania, the Vandals, and Byzantium. In the Byzantine age the bishop of Djerba was appointed from Tripoli. In 665, during the wars waged in Byzacene by Maʿāwiya b. Ḥudaydj, Djerba was conquered and occupied by Ruwayf b. Thābit. For the next few centuries little is known about the island, except that it came under the rule of Ḳayrawān and Mahdiyya. Its natural isolation was reinforced by the independent spirit of its inhabitants and their attachment to the Khāridjite schism, which between the 2nd/8th and 4th/10th centuries extended to places so wide apart as Djabal Nafūsa (Tripolitania) and the Mzāb (Algerian Sahara). It explains perhaps why Arab writers such as al-Bakrī and al-Idrīsī have so few kind words to spare for them, finding them ill-natured and hypocritical. Al-Bakrī remarked that they 'acted piratically on both land and sea', and al-Idrīsī pointed out that they were Berbers and could speak no other tongue. Nevertheless the island was described in the eleventh century as a mass of gardens and olive-groves, and Djerba (Girba) figured as one of its small towns.

The invasions of the Banū Hilāl in the 5th/11th century, and the fall of the Zīrid dynasty, seemed to increase the Djerbians' spirit of independence. Their piratical raids on the Tunisian coast and on the Christian fleets became more frequent. In 1115-6 ʿAlī b. Yaḥyā the Zīrid was still their master. But George of Antioch, admiral to the Norman king of Sicily Roger II, conquered and occupied the island in 1135. The capture of Mahdiyya in 1148 strengthened Norman rule, which persisted until 1160 despite an uprising in 1153 which was rapidly suppressed. They were then driven from the Tunisian coast and islands by the great Almohad conqueror ʿAbd al-Muʾmin. In 683/1284, at the beginning of the reign of the Ḥafṣid prince Abū Ḥafṣ ʿUmar, a Christian expedition easily retook the island. It was under the command of Roger of Lauria, and was sent by the king of Sicily, Peter III of Aragon. In 1289 the Christians built a fortress to guard over the Strait of al-Ḳanṭara and the Roman causeway. It was sited near the ruins of ancient Meninx, and its towers and battlements formed a square surrounded by a moat. After several uprisings, and a raid by the Tunisians in 706/1306, Frederick of Sicily sent Ramon Muntaner to reoccupy Djerba. This Catalan adventurer maintained an iron rule from 1311 until 1314, at which date the island was brought under the direct rule of Sicily. But a fresh revolt, in which the Djerbians gained the assistance of the Ḥafṣid king Abū Bakr, forced the Christians to relinquish the island after a heroic resistance in the Ḳashtīl (1334-5), Only once more were they to regain control of it. from 1383 until 1392, when the Sicilian expedition was reinforced by a Genoese fleet. In the following century, attempts by Alfonso V of Aragon to recapture the island were doomed to failure. During his second assault, in 835/1432, the sultan Abū Fāris came in person to the assistance of the Djerbians, and the Arabs built a second fortress on the island, this time near the ancient ruins of Girba in the north. It became known as al-Burdj al-Kabīr, and in time a small trading settlement named Houmt-Souk grew up round its walls.

The defiant and independant spirit of the Djerbians brought clashes with the Ḥafṣids as well as with the Christians. Not only did they turn a deaf ear to Abū Fāris's peaceful propaganda in favour of orthodoxy, but in 885/1480 they suddenly broke their association with Abū ʿUmar ʿUthmān and deliberately destroyed their only link with the mainland, the Roman causeway. Up to then it had been restored several times and kept in good condition.

Despite the plunderings, massacres and deportations resulting from Christian invasions, and the internal dissensions of the two rival sects (the Wahbiyya in the north-west and the Nakkāra in the south-east), Djerba was reputed for its wealth. The Sfaxians came from the ravaged mainland to buy oil, there was a considerable trade in dried raisins, and the vegetation included apple-trees, fig-trees and palms. Salt was supplied to the visiting merchants of Venice, and the fishing industry flourished. There were also exports of *djarbī*, the name given to the plain and coloured woollen cloths produced on the island. Goods were stored in 'fondouks', which also housed Christian merchants. The general population was dispersed among the plantations in houses 'of a square shape and very unusual in style'. In the fifteenth century the traveller Adorne recorded that 'the king raises taxes of 20,000 doubloons or ducats annually'. But successive wars and droughts brought serious famines, such as that of 711/1311, when bread was made from the sawdust of palm-trees.

In the sixteenth century, Djerba became a stake in the struggle between Spaniards and Turks for mastery of the Mediterranean. The Ḥafṣids ceded it to the latter as a base, from which the Christians were not able to dislodge them. The Spanish invasion of 1511, led by Pedro Navarro, victor in Algeria and Tripoli, ended in failure. In 1550 the island served as an operational base for Dragut, the famous corsair [see ṬŪRGHŪD ʿALĪ PASHA and the following article].

Djerba finally came under Turkish rule, and it was variously administered from Algiers, Tripoli, and Tunis. It came under the permanent control of Tunisia during the reign of Ḥammūda-Bey (1040-69/1631-59). It was to suffer under its several masters. In 976/1568, the Pasha of Tripoli imposed a crushing burden of taxation, and in 1006/1598 the island was literally laid waste by Ibrāhīm Pasha in punishment for its refusal to bow to the demands of Tripoli. The description of Djerba given by the writers of the 16th century, though more detailed than that of their predecessors, differs little from earlier accounts; the cultivation of trees and export of woollen cloths were still its principal occupations. There was a persistent shortage of corn and abundance of dromedaries and donkeys. All livestock came from the mainland. The population varied between 30-40,000, and the countryside was only sparsely inhabited. In the mid-seventeenth century Leo Africanus wrote that 'trade done with merchants from Alexandria, Turkey and Tunisia yielded a revenue of 20,000 doubloons from the salt tax and customs duties'.

The rulers of Turkish Tunisia, Deys and Beys, who were succeeded from 1117/1705 onwards by the rulers of the Ḥusaynid dynasty, appointed first *shaykhs* and then *ḳāʾids* to represent them in the outlying possession of Djerba; these important officials were recruited hereditarily from certain families. In the 10th/16th century it was the Semumeni family which ruled, and they were succeeded by the Bel Djellouds. One of them, Saʿīd, was put to death in 1151/1738 for ordering the sinking of all

flat-bottomed boats in order to prevent them falling into the hands of the invading troops of Yūnus Bey, son of ʿAlī Pas̲h̲a. Thereafter the Ben Ayed ḳāʾids ruled the island until the last quarter of the nineteenth century.

From the early eighteenth century onwards, Mālikī orthodoxy gradually replaced the Ibāḍī schism, and Arabic began to establish itself as the most common language. Uprisings against the central power periodically brought war to the island, in particular from 1007/1599 to 1009/1601, and in 1864. In the 18th century there were also several raids by the nomadic Urg̲h̲āmma and Accara tribes from the plain of D̲j̲effara. In 1794 a bold adventurer from Tripoli, ʿAlī Burg̲h̲ul, occupied and plundered the island for 58 days. In 1864 it was the turn of tribesmen from the Zarzis area to invade it. Plague ravaged the island in 1705-6, 1809, and 1864. Its economy was severely affected when Aḥmad Bey suppressed the slave-trade in 1846, for until then Djerba and Gabès had been the principal outlets for the slaves carried by merchant caravans which crossed the desert from eastern Sudan via G̲h̲adamès and G̲h̲āt. The new law forced the caravans to head for Tripoli, which was already supplied with slaves from the Fezzān route. Nevertheless, travellers of the nineteenth century describe an active and prosperous island, and so it was when, by the treaty of the Bardo Protectorate, a small French force came to garrison the Burd̲j̲ al-Kabīr on 28 July 1881.

The population had always been relatively large, and the period of peace ensuing after 1881 saw a great increase. Although there has been much emigration, its population in 1956 was 63,200, or 121 per sq.km. Ibn K̲h̲aldūn (iii, 63) classes the Djerbians as part of the Kutāma people, although he is careful to point out that there are elements also of the Nefza, Huwwāra and other Berber tribes. In recent years there has been much immigration from the mainland, especially from southern Tunisia. Some were from the Ibāḍī tribe of Nafūsa, others were penniless shepherds given work as labourers, whilst yet others were exiles from various countries, seeking asylum in Djerba. Most of them were easily absorbed into the population. Djerbians themselves are nearly all distinguished by their short stature and flat skulls. About 50% of them speak Berber—particularly in the south-west—but they virtually all speak Arabic as well. Half the population has retained the Ibāḍī faith in its local form of 'Wahbism', but the great majority in the eastern and central parts are orthodox Muslims. In general the Wahbīs are bearded and wear the turban (*ḳas̲h̲ṭa*). They lead an austere life which excludes gambling and smoking, and they only break the fast of Ramaḍān after having personally observed the crescent moon. The great number of squat and simple mosques is evidence of the former importance of their sect. They have certain traditional customs in common with orthodox Muslims, such as the ritual visit to the olive-grove, symbol of wealth and peace, on the occasion of marriage or circumcision. Another marriage custom, of Berber origin, is the *d̲j̲aḥfa* procession, which recalls the old Bedouin custom of the abduction of the bride. The island's Jewish inhabitants are mostly descended from immigrants of the first century, and have remained dolichocephalic. They are concentrated in the two villages of Ḥāra Kabīra and Ḥāra Ṣag̲h̲īra, in the north. These villages, together with the economic and administrative centre of Houmt-Souk, which for the most part is of recent construction, are the only centres of population in an island which is characterized by the sparse distribution of its rural settlements.

Cultivation of the land is intensive only in the centre and east, where irrigation of fruit and vegetable crops from an underground water-level is effected by means of animal-driven pumps. Cereal crops are grown on only a few small fields in the south. The island contains 400,000 olive trees, most of them now too old to be productive, and 570,000 palm trees, many of which are neither fertile nor irrigated. As in Zarzis, they are extensively used in the making of fishing tackle. Land-holdings are small, being usually of 2 to 5 acres where there is irrigation, and 7 to 13 where the land is dry, but they are cultivated to an average degree of 70%. As already mentioned, there is virtually no stock-farming.

For centuries the houses have been dispersed all over the island, for the constant danger of attack precluded the islanders from living in village communities as on the mainland. Many of the farms were built on defensive lines, and the earth embankments, from which Barbary fig trees stand out like spikes, served the double purpose of enclosing the fields and guarding against attack. Because of the shortage of productive land on the island itself, the Djerbians have for centuries owned land on the nearby coastal strip, and farmed it with labour from their related tribe, the Towazins.

The old crafts have lost a lot of their former importance, but nevertheless there are still 1500 looms in use, mostly primitive machines grouped 3 or 5 to a small workshop. Their supply of wool comes from the island's 8,000 sheep, and imports which find their way from the steppes. The industry produces brightly-striped woollen cloths, and other fabrics. The art of pottery has not died out in Guellala (S.-W.), where there are some 250 kilns, and various types of vessels are shipped to all parts of the coast, as far as Tunis. Jewellery and embroidery are the domain of the Jews, and are consequently declining in importance as the Jewish elements emigrate.

The main source of wealth for Djerba lies outside the island itself. It is derived from the fishing industry (employing 11% of the adult population), coastal traffic to Sfax, Sousse and Tunis by *lūds* (flat-bottomed sailing ships which can safely negotiate the shallows), navigating for the Mediterranean or even other shipping companies, and above all from emigration.

Emigration is exclusively by males, for a temporary period, and for commercial reasons. The Djerbians form themselves into limited partnerships and dispense with the need for banks. Wherever possible, the partnership is restricted to a particular family, and they are found predominantly in the grocery, weaving, and hosiery trades. Of the 6,000 traders who are known to be living outside Djerba, 80-90% are in Tunisia, concentrated in the Tell and Tunis areas, and a few have settled in the Constantine and in Tripolitania. The male members of the partnerships replace each other abroad according to a certain roster, which is so arranged that they spend about one third of their time with their family in Djerba. This system enables the island to support a greater population than would otherwise be possible on its meagre natural resources.

Fishing is carried out in the gulf of Gabès, mostly from 'bordigues', which are small constructions built in the sandbanks with mud and palm leaves. A speciality of their catch is the large number of

octopuses and sponges which are so abundant in the waters off Djerba. The islanders also fish with rods, eel-pots and various types of nets.

The Djerbians work hard in their several occupations, and although they emigrate a good deal they remain very devoted to their island, and to their social and family ties.

DJARBA (Battle of). — In the middle of the 10th/16th century the Ottoman corsair Ṭūrghūd Raʾīs made the island of Djarba the base of his operations against the Spaniards. Although the latter had succeeded in blockading it in Rabīʿ I 958/ April 1551, he was able to escape with his fleet by cutting the causeway of al-Ḳanṭara and digging a channel which enabled him to reach the Gulf of Bū Ghrāra and thence the high seas (13 Rabīʿ II 958/20 April 1551). Shortly afterwards he seized Tripoli (Shaʿbān 958/August 1551), then put into repair the fortress of Houmt Souk (Burdj al-Kabīr; inscr. of 964/1557). In the face of the menace of these Turkish bases of Tripoli and Djarba John of Valletta, the Grand Master of Malta, and the Duke of Medina-Celi obtained in 1559, from Philip II, king of Spain, permission to send out a naval expedition. This left Malta on 10 February 1560 with 54 galleys, 36 cargo-vessels, and 11 to 12 thousand men; but, rather than attack Tripoli, it sailed on Djarba, which was occupied on 7 March. The Ottoman fleet, however, under the command of Piyāle Pasha and Ṭūrghūd Raʾīs surprised the Spanish fleet at its anchorage on 11 May, and destroyed the greater part of it. The garrison of Burdj al-Kabīr, commanded by Alvaro de Sande, was besieged from 16 May; short of water and decimated by sickness, it surrendered on 31 July 1560, and the few thousand survivors were either massacred or divided among the Ottoman galleys as oarsmen. Following their defeat the Spanish were totally driven out of southern and central Tunisia.

The famous "Tower of Skulls" (Burdj al-ruʾūs) built by the Djarbans with the bones of the dead, often mentioned by European travellers, was demolished in 1848 by order of Aḥmad Bey, bey of Tunis.

AL-**DJARBĀʾ**, an ancient fortress in Arabia Petraea situated on the Roman road leading from Buṣrā to the Red Sea, about one mile north of Adhruḥ [*q.v.*]. Like Adhruḥ, it submitted to Muḥammad, in 9/631, on condition of payment of tribute. The distance between Adhruḥ and al-Djarbāʾ, estimated at "three days' journey", has been mentioned frequently in the *ḥadīth* as an indication of the size of the basin (*ḥawḍ* [*q.v.*]) where the Prophet will stand on the day of Judgment. The expression "between Adhruḥ and al-Djarbāʾ" has thus become proverbial to denote a considerable distance.

The place came into prominence for the second time during the Crusades, when Ṣalāḥ al-Dīn camped there in August 578/1182, during his expedition against Damascus.

(D. Sourdel)

AL-**DJARDJARĀʾĪ**, patronymic deriving from the locality of Djardjarāyā in ʿIrāḳ (on the Tigris, south of Baghdād), borne by several viziers of the ʿAbbāsid and Fāṭimid caliphs.

1. — Muḥammad b. al-Faḍl, former secretary of al-Faḍl b. Marwān [*q.v.*], was vizier to al-Mutawakkil at the beginning of the reign, after Ibn al-Zayyāt's disgrace, but was soon discarded by reason of his negligence. Recalled to the vizierate by al-Mustaʿīn in Shaʿbān 249/September-October 863, he died soon afterwards in the year 250/864-5, aged about eighty (see Ṣafadī, *al-Wāfī*, iv, 4, ed. Dedering, no. 1878).

2. — Aḥmad b. al-Khaṣīb, son of a governor of Egypt (Ibn al-ʿImād, *Shadharāt*, a. 265), had been secretary-tutor to prince al-Muntaṣir and became vizier in Shawwāl 247/December 861 when his master was proclaimed caliph; after his death, he helped to secure al-Mustaʿīn's succession, but he incurred the hostility of the Turkish officers in Sāmarrā and was exiled to Crete in Djumādā I 248/August 862. He died in 265/879.

3. — al-ʿAbbās b. al-Ḥasan, private secretary to the vizier al-Ḳāsim b. ʿUbayd Allāh under al-Muktafī, thanks to the recommendation left by his master succeeded in taking his place after his death in Dhu 'l-Ḳaʿda 291/October 904. As vizier to al-Muktafī, he entered into close alliance with Abu 'l-Ḥasan ʿAlī b. al-Furāt whom he made his right hand man and chose as his successor; it was on the advice of this unscrupulous individual that, in Dhu 'l-Ḳaʿda 295/September 908, he had the young

Dja'far proclaimed caliph when he was only thirteen years old; he took the name of al-Muktadir and retained him as his minister. The haughty attitude of al-'Abbās seems to have occasioned the conspiracy of Rabī' I 296/December 908 which, even if it did not succeed in replacing al-Muktadir by Ibn al-Mu'tazz, nevertheless cost the vizier his life.

Bibliography: D. Sourdel, *Le vizirat 'abbāside*, i, Damascus 1959, 271-5, 293, 289-90, 359-71.

4. — Abu 'l-Kāsim 'Alī b. Aḥmad, a secretary of 'Irākī origin who came to Fāṭimid Egypt with his brother, and held various offices in the provinces where his peculation was punished by his hands being cut off in 404/1013-4 on al-Ḥākim's orders; nevertheless he succeeded in becoming director of the *dīwān al-nafaķāt* in 406/1015-6, and then in holding the office of *wāsita* in 412/1021-2 and of vizier in 418/1027. He was retained in the vizierate under the reigns of al-Ẓāhir and al-Mustanṣir until his death in Ramaḍān 436/March 1045.

Bibliography: Ibn Khallikān, ed. Cairo 1948, iii, 84-5; Ibn al-Ṣayrafī, *al-Ishāra ilā man nāla 'l-wizāra*, in *BIFAO*, xxv (1925), 77-9.

(D. Sourdel)

AL-DJARḤ WA 'L-TA'DĪL, (disparaging and declaring trustworthy), a technical phrase used regarding the reliability or otherwise of traditionists and witnesses. This article deals with the former; for the latter see 'ADL. While the criticism of *ḥadīth* did not, as is often said, apply solely to the *isnād*, this formed a very important part of it. In the course of the 2nd/8th century when it was realized that many false traditions were being invented, interest in the transmitters developed, and statements regarding their qualities were made. In the 3rd/9th century books began to be written, generally in the form of lists of men with their dates, and statements regarding their credibility. We also find notes on the qualities of traditionists in the canonical *Sunan* collections of tradition, in the *Sunan* of al-Dārimī [*q.v.*], and elsewhere. In the introduction to his *Ṣaḥīḥ* Muslim found it necessary to justify the investigation of traditionists' credentials because many felt it was wrong to criticize them. Such views must have continued for a long time, for al-Ḥākim (d. 405/1014) still found it necessary to defend the practice. When books on *'Ilm al-ḥadīth* were written (4th/10th century onwards), *al-djarḥ wa 'l-ta'dīl* formed a recognized branch of the subject.

The Companions of the Prophet were considered reliable, so *djarḥ* could not apply to them; but traditionists of later generations were subject to investigation. Views were held regarding the qualities of a reliable transmitter. He must (1) be a Muslim, (2) have sound intelligence, (3) be truthful, (4) never conceal defects in his transmission, (5) be trustworthy. In his *K. al-djarḥ wa 'l-ta'dīl*, Ibn Abī Ḥātim al-Rāzī (d. 327/939) discusses in the introduction the various classes of transmitter, and his classification served as a standard for writers of later times; *e.g.*, al-Khaṭīb al-Baghdādī (d. 463/1071) in his *Kifāya*, and Ibn al-Ṣalāḥ (d. 643/1245) in his *'Ulūm al-ḥadīth*. He mentions in order of merit four types whose traditions may be accepted. They are (1) *thiķa* (trustworthy), or *mutķin* (exact); (2) *ṣadūķ* (truthful), *maḥalluhu al-ṣidķ* (his station is veracity), or *lā ba's bihi* (there is no harm in him); (3) *shaykh*; (4) *ṣāliḥ al-ḥadīth* (good, or upright, in tradition). The second type is not so authoritative as the first and the third is slightly inferior to the second. The fourth contains men whose traditions may be written down for comparison with those of others. There are four classes of lower authority still: (1) *layyin al-ḥadīth* (easy-going in tradition); (2) *laysa bi-ķawī* (not strong); (3) *ḍa'īf al-ḥadīth* (weak in tradition); (4) *matrūk al-ḥadīth* (one whose traditions are abandoned), *dhāhib al-ḥadīth* (rejected), or *kadhdhāb* (liar). The first two deserve to have their traditions considered and compared with those of others; the third, though inferior, is not to be rejected outright, but one must find whether his traditions are supported elsewhere. The fourth is utterly rejected. A number of other terms are also applied by other writers.

But while this sounds straightforward matters were not so simple, for sometimes a transmitter called trustworthy by one authority was called weak by another. This raised a difficulty, but opinion seemed to prefer the view that when both *djarḥ* and *ta'dīl* were expressed about the same man, the *djarḥ* had more authority because those who expressed this view must have possessed information not available to others. But while those who expressed *ta'dīl* did not need to supply reasons for their view, those who expressed *djarḥ* must do so, for people differed in their idea of what constituted weakness, and it is only when the reasons are stated that one can know whether the judgment is valid. Opinions differ as to whether one authority is enough to express *djarḥ* and *ta'dīl*. Two men are required to attest the reliability of witnesses, but Ibn al-Ṣalāḥ holds that the testimony of one man is sufficient to state the reliability or otherwise of a transmitter of tradition.

DJARĪB [see KAYL].

DJARĪD [see DJERĪD].

DJARĪD (Bilād al-). The Djerid or "country of palms" is a district of the Sahara situated in southwestern Tunisia which includes the oases of Nefta, Tozeur (Tūzar), El-Oudiane (al-Udyān) and al-Ḥamma (not to be confused with al-Ḥamma of Gabès). In the Middle Ages the Djerid was more often called Kasṭīliya; but this name which is sometimes a synonym of Tozeur only (Ibn Ḥawkal, 243; al-Idrīsī, 121), frequently embraces Gafsa and the Nefzāwa (Ibn Khaldūn, i, 192) along

with the modern Djerid, and sometimes even the district of Gabès (Leo Africanus, 8).

Apart from al-Ḥamma which is in the north, the oases are situated at the foot of the last anticlinal fold (Drāʿ al-Djarīd) of the Atlas, between 25 and 75 metres in altitude, on the edge of an immense *sebkha* wrongly named Chott el-Djerid on maps: it is an immense plain of salty clay, absolutely sterile, 110 by 70 km.; it produces no pasturage of salsolaceous plants except along its border, to which alone the name *shoṭṭ* applies; this is the *sebkha* Takmart of Arab writers. According to tradition, the sea covered this district at quite a recent period; in fact, its altitude is about twenty metres, and it has been possible to show recently that the *sebkha* of Djerid and its eastward extension, the *sebkha* of Fedjedj, were in the Quaternary Age merely lagoons temporarily connected with the Gulf of Gabès.

The climate is essentially that of a desert: Tozeur only receives 89 mm. ($3^1/_2$ ins.) of rain a year, and very irregularly; mean temperatures there for January and July are 10°5 C. (50.9° F.) and 32°3C. (90.1° F.); frosts are very rare, but the temperature often exceeds 40° C . It is the typical climate of the date-palm, provided that it is given abundant irrigation. Numerous springs appear at the foot of the Drāʿ al-Djarīd, fed by a strong artesian water-level enclosed in the upper Cretaceous limestones and Pontien sandstones (Tertiary): with some artesian wells, which have been sunk fairly recently, they provide a total of about 1850 litres a second. Thus the oases of the Djerid have always had the reputation of being the finest in Tunisia.

Tozeur (Tusuros, or Blād al-Ḥaḍar), Nefṭa (Nepte) and al-Ḥamma (Aquae) were points on a forward road near the Roman and Byzantine *limes*. It is not certain that Tokyūs (El-Oudiane), referred to by al-Yaʿḳūbī in the 3rd/9th century, is of ancient origin. The Djerid was twice conquered by Arab conquerors: in 26/647 by Ibn Zuhayr and in 49/669 by ʿUḳba b. Nāfiʿ. But the Djerid was "at all times the home of separatist movements and rebellions" (G. Marçais). In the 9th century, however, Ḳasṭīliya was an Aghlabid province with a governor and, although mainly Ibāḍite, it only once revolted, in 839. There were then few Arabs in the district; the nomads were Luwātā, Zowāra and Miknāsa. The "Rûm" (of European origin) were still mentioned in the cases. The sugar-cane was cultivated there, the Ḳasṭīliyan fairs were crowded and trade in black slaves was brisk. The country remained prosperous until the middle of the 5th/11th century although it was often autonomous; its centres were in fact small principalities administered by councils of notables who were to a greater or lesser degree consulted by the heads of the most powerful families like the Banū Furḳān, and the Banū Waṭṭa of Tozeur. Tozeur was a real town, with ramparts pierced by four gates, a large mosque, crowded bazaars, baths and densely populated suburbs. The mosque of Blād al-Ḥaḍar, built between 1027 and 1030 in the traditional style of al-Ḳayrawān, did not have its *miḥrāb* ornamented with Hispano-Maghribin decoration until 1193. The system of irrigation described by Al-Bakrī is still in existence. Nefṭa was guarded by a wall and had a large population. At Tokyūs, which included "four cities enclosed by walls, so close that it was possible to hold a conversation from one to the other", various crops including olives were cultivated. The Djerid had plentiful resources, its oranges were celebrated, its sugar-cane was well known, but the date was its great product: Al-Bakrī claims that every day there left Tozeur "a thousand camels or even more, laden with this fruit". The inhabitants were reputed to be cynophagists. There were still some Ibāḍites in the 5th/11th century.

In 1053, the Ḳasṭīliya was ravaged by the Riyāḥ, the vanguard of the Banū Hilāl, commanded by ʿAbid b. Abi 'l-Rayth; it was quickly incorporated in the independent principality carved out of southern Tunisia by the governor of Gafsa, ʿAbd Allāh b. al-Rand; this principality, with its sometimes brilliant court, was to endure until the Almohad conquest (1159-60). Shortly afterwards the Djerid became one of the bases of operations of ʿAlī, and then of Yaḥyā b. Ghāniya, in their attempts to restore the Almoravid empire. Under the Ḥafṣids, in the 13th and 14th centuries, it was in fact in the hands of families who were seeking to preserve their hereditary power; among them were the Banū Yamlūl at Tozeur and the Banu 'l-Khalaf at Nefṭa, both descended from nomadic Arabs; they paid no more heed to the councils of notables than to the advice of their sovereigns, especially in the 14th century. But they were compelled to negotiate constantly with the nomads, to whom the settled population paid tribute (*ghafāra* on harvests or a payment of money); the nomads guaranteed their supplies of grain and the export of dates, stored provisions in the houses and guarded the flocks of the rich oasis inhabitants; though turbulent and dangerous, it was not in the nomads' interest to abuse their strength. These nomads, the Riyāḥ, were little by little thrust back in the course of the 6th/12th century, and in the 13th century were replaced by tribes of Sulaym origin, the Kūb and Mirdās, who migrated from the Djerid to the neighbourhood of Bône. In the 14th century the Kūb levied the *iḳṭāʿ*, whilst certain Mirdās, after acquiring property at Tozeur, gradually began to settle. But the great Ḥafṣid sovereigns of the 15th century, as a result of several expeditions, succeeded in imposing their authority over the settled as well as the nomadic population, through the help of active governors.

From the 12th century Khāridjism was in full decline, weakened by dissensions between Wahbiyya and Nekkāra; it seems to have disappeared when faced with the propaganda of a marabout who lived in about 1200, Sīdī Abū ʿAlī al-Nafṭī, whose tomb stands in the middle of the palm grove at Nefṭa. The economy was still based on cultivation of oases and on trade with nomads. Tozeur was still the capital, and was renowned for the additions which had been made to its palm grove: it had two mosques with *khuṭba* and public baths; but the trade in human excrement and the practice of cynophagy sometimes brought its inhabitants into disrepute.

From the end of the 16th century the Turks, and from 1705 the Ḥusaynid sovereigns, attempted by repeated expeditions to maintain their authority over the Djerid and to enforce the payment of taxes. As a result of the refusal of the inhabitants of Ceddada to pay taxes during the third quarter of the 17th century, their village which at that time was situated high up by the tomb of Sīdī Bū Helāl, was destroyed and a number of the inhabitants massacred by the regular troops; the survivors went down and settled by their palmtrees at El-Oudiane. The habit grew up among the Ḥusaynides of organizing a force (*meḥalla*) in winter, to come in January and February to collect taxes and, where necessary, to restore order in the tribes in the South and the oases. This practice gave rise to abuses which were

denounced at the beginning of the 18th century by the traveller Moula-Ahmed (Berbruger, *Voyages dans le sud de l'Algérie*, 245-7) shortly after Yūnus, the son of ʿAlī Pas͟ha, kept the proceeds of heavy fines levied irregularly on the wealthy inhabitants of Djerid. More than once, unjustified confiscations of estates were effected for the benefit of the Bey who lost no time in reselling them. Nevertheless the *meḥalla* was successful in settling, at least for the time being, the not infrequent disputes between the settled population and the nomads, and internal feuds like the one between the inhabitants of the El Ḥādef and Zebda districts of Tozeur. The Djerid trade suffered from the abolition of slavery (1857) and the decline in trans-Sahara trade.

Since 1880, the year when the French Protectorate was established, the oases have been extended as the result of a number of borings, and many more palm-trees of the *deglat al-nūr* variety, which produces soft dates for export to Europe, have been grown. In the Djerid there are more than 1,100,000 date-palms, almost half of which are *deglat al-nūr*; but the cultivation of fruit and vegetables is not on a large scale. The luxuriance of the vegetation is in contrast to the abject poverty so wide-spread among the people, the result in part of the rapid increase in population (despite considerable emigration to Tunis), in part of the very unequal distribution of land, or division into too small units, and also the decline in handicrafts. In addition, the land is often inadequately manured and indifferently cultivated. Gardens are enclosed by banks of earth (*tabya*), thickly planted with palm-trees; a Spring festival, a nature festival of pagan origin, called *mayo*, is still celebrated there.

The richest palm-grove, where however the greatest disparity between the various proprietors is to be seen, is at Tozeur. Tozeur, with its 12,000 inhabitants, is the chief town of the Djerid and the largest market in the Tunisian Sahara; it is patronized in particular by the Ulād Sīdī ʿAbīd, nomads from the frontier region. Tozeur often has an urban appearance, with its lofty houses of brick decorated with geometrical motifs, and with new districts near the station. It has been connected by railway with Sfax since 1919. Nefṭa, with a larger population (14,600 inhabitants) is more purely rural, and suffers from an irregular water supply in summer: the Nememcha, who are Algerian nomads, are its principal customers. El-Oudiane has five villages (Degache, Zaouyat al-Arab, Zorgane, Kriz and Ceddada) which are scattered along an almost continuous palm-grove, fed by a chain of abundant springs: its trade is mostly with the Hamāma. This is true also of al-Ḥamma, a modest group of three villages (El-Nemlet, Mharet, El-Erg), situated on the north of the Drāʿ al-D̲j̲arīd, with only 2,800 inhabitants, but with a local reputation since ancient times for its hot springs. The small mountain oases of Tamerza, Midès and Chebika, near the Algerian frontier, as picturesque as they are poverty-stricken and inaccessible, are for administrative purposes grouped with the Djerid.

(J. Despois)

D̲J̲ARĪDA, literally "leaf", which has become the usual term in modern Arabic for a newspaper, its adoption being attributed to Fāris al-S̲h̲idyāḳ [*q.v.*]. Its synonym *ṣaḥīfa* is less used in the sing., but the plural *ṣuḥuf* is more common than *d̲j̲arāʾid*. Some interest in the European press was shown by the Ottomans as early as the 18th century and, it would seem, excerpts from European newspapers were translated for the information of the *dīwān* (Prussian despatch from Constantinople, of 1780, cited by J. W. Zinkeisen, *Geschichte des osmanischen Reiches*, vi, Gotha 1859, 290-1). This grew into a press bureau, which served the Ottoman government throughout the 19th century and after.

The first newspapers in the Middle East were in French, and were published under French official auspices. In the seventeen-nineties the French printing press in Constantinople (see maṭbaʿa) began to produce bulletins, communiqués and other announcements put out by the French embassy. In 1795 the ambassador, Verninac, reported that he was printing every fortnight, after the arrival of the mail from Europe, a bulletin of 6 to 8 octavo pages where French nationals could find information about new laws and events of concern to them. This bulletin was distributed throughout the Levant. In the following year, under his successor Aubert Dubayet, the bulletin became a newspaper—the *Gazette française de Constantinople*, the first to appear in the Middle East. It consisted of 4 octavo pages, sometimes increased to six, and was published rather irregularly, at intervals of about a month, from the French Embassy, for a period of about two years. In September 1798, after the French expedition to Egypt, the French staff were interned and the press sequestered by the Turkish authorities. It was returned in 1802, and later used to reprint military communiqués for local distribution, but the *Gazette* did not apparently resume publication.

At the time of the Egyptian expedition, Bonaparte was accompanied by two printing-presses; one of these, privately owned, belonged to the printer Marc Aurel and only possessed Latin characters, while the other, officially owned, was placed under the direction of the orientalist J. Marcel and was equipped with French, Arabic and Greek characters. It was from the former printing-press that the first number of the *Courrier* [sic] *de l'Égypte* appeared in Cairo on 12 Fructidor VI = 29 August 1798; published every five days, it contained local news, announcements, notices etc., as well as items of European news. A month later, on 10 Vendémiaire VII = 1 October 1798, the same publisher was selling the first number of a quarterly review, *La Décade égyptienne*, which was devoted to the publication of records of the meetings of the "Institut d'Égypte" and the papers read to this learned society. When Bonaparte returned to France, Marc Aurel followed him, with the result that J. Marcel's "Imprimerie orientale et française" took on the printing of the two periodicals, with the direction of which the names of the mathe-

matician Fourier and doctor Desgenettes, among others, were connected. The 116 numbers, each of 4 quarto pages, of the *Courrier* and the 3 volumes of the *Décade* constitute a historical source of the highest importance. In Arabic, Marcel's printing-press had mainly published proclamations, notices and communiqués, but after Kléber's assassination (16 June 1800) it also printed the first Arabic newspaper, *al-Tanbīh*, which was founded by Menou and, it seems, was only short-lived (see F. Charles-Roux, *Bonaparte, gouverneur d'Égypte*[4], Paris n.d., 138 ff.; R. Canivet, *L'imprimerie de l'expédition d'Égypte*, in *BIÉ*, 1909; Reinaud, in *JA*, 1831, 249).

It was at Ceuta, at the opposite end of the Maghrib, on 1 May 1820, that the first newspaper to be published in Morocco appeared, *El Liberal Africano*, the weekly publication of the patriotic Society of the town; it came to an end after 6 numbers on 5 June of the same year (V. Ferrando la Hoz, *Apuntes para la historia de la Imprenta en el Norte de Marruecos*, Tetuan 1949, 23).

In 1824 a French monthly, called *Le Smyrnéen*, was founded in Izmir by a Frenchman, Charles Tricon. After some initial difficulties with both the Turkish and French authorities, it was reorganized under new management, and began to appear weekly, under the name of *Le Spectateur oriental*, with four quarto pages. It circulated mainly among foreign commercial elements. In 1827 Alexandre Blacque, a lawyer from Marseilles and a well-known figure in the Levant, became part owner and effective editor of the *Spectateur*, to which he was already a regular contributor. Later renamed the *Courrier de Smyrne*, it played a lively rôle in the affairs of the time, and more than once involved its editor in trouble with the Powers by its forthright comment, notably by its advocacy of the Ottoman cause against the Greek insurgents (L. Lagarde, *Note sur les journaux français de Constantinople à l'époque révolutionnaire*, in *JA*, ccxxxvi, 1948, 271-6; idem, *Note sur les journaux français de Smyrne à l'époque de Mahmoud* II, in *JA*, 1950, 103-44; Selim Nüzhet, *Türk Gazeteciliği 1831-1931*, Istanbul 1931, 10-28—with a reproduction of a whole issue of the *Gazette*, dated 1 Floréal, year V = 20 April 1797, and of *Le Spectateur Oriental* of 21 July 1827; Ahmed Emin, *The development of modern Turkey as measured by its press*, New York 1914, 28-9; Charles White, *Three years in Constantinople*, ii, London 1845, 218-22). A Turkish account of Russian attempts to get the paper suppressed will be found in the history of Luṭfī (*Taʾrīkh-i Luṭfī*, iii, 98 ff.). Luṭfī quotes the Russian ambassador as saying "Indeed, in France and England journalists (*gazetedji*) can express themselves freely, even against their kings; so that on several occasions, in former times, wars broke out between France and England because of these journalists. Praise be to God, the divinely-guarded realms were protected from such things, until a little while ago that man turned up in Izmir and began to publish his paper. It would be well to prevent him . . ." (Luṭfī, iii, 100; cf. Emin 28).

It was at this point that Egypt was to re-appear on the scene. As early as 1821, Muḥammad ʿAlī had given instructions for the publication of a daily newspaper which was to be submitted to him each day and to contain various official, administrative and economic items of information, but it was probably (the numbers prior to 1840 have not been preserved) on 12 Djumādā I 1244/20 November 1828 that there appeared in Cairo the first number of the first real periodical in Arabic, *al-Waḳāʾiʿ al-Miṣriyya*, the organ of Muḥammad ʿAlī's Government of Egypt; at first issued weekly in Arabic, it later appeared for several months in Turkish and then finally returned to Arabic; it subsequently appeared three times weekly, with a separately published French edition, and it remained the only periodical in Egypt under Muḥammad ʿAlī's Government; from the time of the Khedive Ismāʿīl it was published daily, and in addition to orders, decrees and laws it also contained new local and foreign items, editorials and occasional illustrations. In 1881, with Muḥammad ʿAbduh [*q.v.*] as chief editor, it was the most important and widely circulated newspaper of the time.

During the British occupation it reverted to its earlier form and merely contained notices and information on affairs of state. In 1929 it still appeared in official lists.

In this as in so many other matters, the Sultan in Istanbul responded quickly to the challenge of the pasha in Cairo. In 1831 M. Blacque was summoned to Istanbul to publish the *Moniteur ottoman*, the official journal of the Ottoman government, in French. The following year, on 1 Djumādā I 1247/14 May 1832, the first issue of the Turkish *Taḳwīm-i Weḳāʾiʿ* appeared. A leading article presented the newspaper as a natural development of the imperial historiographies, with the function of making known the true nature of events and the real purport of the acts and commands of the government, in order to prevent misunderstanding and forestall uninformed criticism. A further purpose was to provide useful knowledge on commerce, science, and the arts. Unlike the *Moniteur*, which gave some space to news and comment, the *Taḳwīm* was limited to official statements. It was issued by an office called the *Taḳwīmkhāne-i ʿĀmire*, the first director of which was the Imperial Historiographer Esʿad Efendi (on whom see Babinger, *GOW*, 354-6). Five thousand copies were distributed to officials and notables, as well as to foreign embassies. The inauguration of the postal service in 1834 greatly helped its circulation. Between 1832 and 1838 about 30 issues a year were published. Thereafter it appeared about once a week, though with some interruptions. The final issue, number 4,608, was published on 4 Rabīʿ I 1341/4 November 1922, after which it was replaced as official organ of the Turkish government by the *Resmī Djerīde*, later renamed *Resmi Gazete*, of Ankara. (Luṭfī, iii, 156-60; Nüzhet, 30-5; Emin 29-32).

The first non-official newspaper published in the Turkish language was the weekly *Djerīde-i Ḥawādith*, founded in 1840 by the Englishman William Churchill. After his death in 1864 it was continued by his son. In appearance rather like the *Taḳwīm-i Weḳāʾiʿ*, it was commercial in purpose, and carried an increasing amount of advertising. It did, however, publish many articles and features, often in serial form, thus offering an apprenticeship in journalism to a number of Turkish men of letters. (On some of the contributors to the *Djerīde-i Ḥawādith* see the articles of Ibnülemīn Maḥmūd Kemāl in *Türk Taʾrīkhi Endjümeni Medjmūʿasi*, 96 and 97). The Crimean War brought new needs and opportunities. Churchill reported from the battlefront for English newspapers, and his reports were also published in Turkish in special supplements of the *Djerīde-i Ḥawādith*, giving the Turkish reader, anxious for news of the war, a new insight into the function of the press.

A second officially sponsored Turkish periodical was the *Waḳāʾiʿ-i Ṭibbiyye*, a medical monthly published for the first time in 1850, in both Turkish

and French. Other journals also appeared in French, as well as in Italian, Greek, Armenian, and Judaeo-Spanish.

In 1855, the second Arabic newspaper, the *Mirʾāt al-Aḥwāl*, founded by Ḥassān who was compelled to take refuge in London [see below, iii], appeared in Beirut; the same town also saw the start of *al-Sulṭāna* in 1857 and, on 1 January 1858, of the *Ḥadīḳat al-Afkār*, published in Arabic and French by Khalīl al-Khūrī; the main purpose of this publication, which had the backing of the Turkish Government, was to acquaint the numerous foreigners residing in Beirut with the Porte's views.

The year 1860 brought two important innovations: the first was the establishment of an Arabic newspaper, *al-Djawāʾib*, compared with which the earlier efforts seemed formless and inarticulate; started in Constantinople by the Lebanese Aḥmad Fāris al-Shidyāḳ in July 1860, and vigorously supported by the Turkish Government, this periodical defended the cause of Islam which had been recently embraced by its founder. The latter can be regarded as the father of newspaper Arabic, having done so much to enrich the language, while *al-Djawāʾib* was the greatest Arabic newspaper of the 19th century, on sale in Cairo, Beirut, Damascus, ʿIrāḳ and West Africa, its wide circulation depending on the care lavished upon its editing and presentation. It reached its apogee in about 1880, but after the death of Aḥmad Fāris in 1884 his son Sālim was unable to maintain the earlier standard. From 1288 to 1298/1871-81, al-Shidyāḳ printed, under the title *Kanz al-raghāʾib fī muntakhabāt al-Djawāʾib*, seven volumes made up of articles on literature, history etc. reproduced from his newspaper, and still of undeniable documentary interest. — The second innovation of 1860 was the weekly *Terdjümān-i Aḥwāl*, the first privately owned newspaper produced by a Turk. Its founder was Čapanzāde Agāh Efendi, scion of a *derebey* [*q.v.*] family, and a senior official in the Translation Office of the Sublime Porte. Associated with him as editor was the writer Ibrāhim Shināsī [*q.v.*]. Churchill responded to this competition by publishing a daily version of his paper five times a week—the *Rūznāme-i Djerīde-i Ḥawādith*, and for a while there was keen rivalry between the two. In the increasingly authoritarian mood of the time the press began to encounter difficulties, and soon the *Terdjümān* was suspended for two weeks because of an article probably written by Ziya (Ḍiyāʾ) Pasha. This was the first time a newspaper was suppressed by the government in Turkey.

(B. Lewis & Ch. Pellat)

In the preceding section we have tried to give an account of the first attempts to establish a press throughout the Muslim world, necessarily devoting most attention to the publications directed by foreigners in the various Islamic countries, since they played a considerable part in the rise of journalism. From about 1860 there began a new period during which journalistic activity developed to the point at which it becomes necessary to relegate newspapers published in European languages to second place, despite their importance, and to trace the history of the press in the various Muslim countries separately, with due regard to the language in which publication was made.

i. — ARABIC LANGUAGE PRESS

A. — Middle East.

Egypt.—The history of the Arabic press of Egypt can be divided into four periods. The first lasts until the time of the British occupation. After *al-Waḳāʾiʿ al-Miṣriyya*, it was only in 1866 that the *Wādi ʾl-Nīl* appeared, founded in Cairo by ʿAbd Allāh Abu ʾl-Suʿūd; in 1869, the *Nuzhat al-Afkār* was started by two Egyptians, Ibrāhīm al-Muwayliḥī and ʿUthmān Djalāl, but it was between 1876 and 1878, under the impulse of Syro-Lebanese journalists who were unable to follow their career in their own countries in freedom, that the great organs of the press came into being. At their head we must note *al-Ahrām*, founded by Salīm and Bishāra Taḳlā, and making a modest start in 1876 at Alexandria in the form of a 4-page weekly, dependent upon French cultural influence but paying close attention to the policies of the caliph in Constantinople; it was later issued daily and, maintaining its high literary standards and scrupulous presentation, was to remain until our own time as the greatest newspaper in the Arabic language. In addition to *al-Ittiḥād al-Miṣrī*, a biweekly founded in Alexandria in 1879 which lasted until 1892, we should mention the Cairo Coptic newspaper *al-Waṭan* (founded in about 1878, and still recorded in 1929), and the interesting attempt at nationalistic propaganda by Yaʿḳūb Ṣanūʿ, known as Abū Naḍḍāra [*q.v.*] who had to continue his activities in Paris.

The second period lasts from the British occupation to the first world war. It was in about 1885 that the Ṣarrūf-Nimr-Maḳāryos consortium was set up for a group of publications, the most important of them being the fortnightly review *al-Muḳtaṭaf*, founded in Beirut in 1877 and moving to Cairo, and *al-Muḳaṭṭam*, a daily paper with political news which was pro-British and in sympathy with reform; after 1889 it became an opponent of *al-Ahrām* which still supported the policies of Constantinople. A third party, opposed to reforms and advocating traditional Islam, was formed and, after 1890, represented by a daily newspaper, *al-Muʾayyad*, under the remarkable and skilful direction of Shaykh ʿAlī Yūsuf. The Syro-Lebanese, who until then had had a monopoly of the press, were gradually replaced by Muslim Egyptians, mostly conservative and orthodox; *al-ʿAdāla*, founded in 1897, took over the rôle held by *al-Muʾayyad* as soon as the latter began to become more moderate and, during the last decade of the 19th century, there appeared a considerable number of newspapers also belonging to the conservative party, and of varying degrees of fanaticism. The growing nationalism was defended at first by Adīb Isḥāḳ, one of the chief editors of the daily *Miṣr* (1896), and later by Muṣṭafā Kāmil whose principal organ was *al-Liwāʾ*. It was during this period that another large newspaper appeared in Cairo, *al-Djarīda*, which took account of the effective domination of the British. Mention must also be made of the review of *al-Hilāl*, directed in Cairo (1892) by Djirdjī Zaydān, which has survived until our own time, and of the *Manār*, founded by Rashīd Riḍā in 1897. For that same year Washington-Serruys (XVII-XIX) lists 52 different publications in Cairo, more than half of which date from 1895 at the latest, and 6 in Alexandria, including *al-Ahrām*. In 1909 there appeared in Egypt 144 reviews and various newspapers, 90 of them in Cairo and 45 in Alexandria (see *RMM*, xii, 308).

During this second period, therefore, we see the expansion of a powerful press, still producing many non-political publications, but tending, when entering the political arena, to express the still vague aspirations of the Muslim peoples, to formulate them more precisely, and to stimulate the con-

centration of the divergent trends in an Arab and Muslim nationalism. In the third period of the Egyptian press, after the dismemberment of the Ottoman Empire, the general aspiration for independence took shape and gathered momentum, though not without the accompaniment of violent crises. In 1922 the "Liberal-Constitutional" Party started a weekly publication, *al-Siyāsa*, under the direction of Ḥusayn Haykal; after 1926 it was duplicated by a daily edition, and it shows signs of an Egyptian particularism. The Wafd Party in its turn owned a group of newspapers representing the opinions of Saʿd Zaghlūl and his successors: *al-Balāgh*, *Kawkab al-Shark* and *al-Miṣrī* are the most important.

During the second world war and the years following, the Egyptian press took a more active part in the political struggle which culminated in the evacuation of British troops. From October 1944 the different parties created new organs: *al-Kutla* (the Wafdist "Bloc"), *Bilādī* (Saʿdist weekly), *al-Liwāʾ al-Djadīd* (Nationalist Party weekly), to which was added a weekly review of news, *Akhbār al-Yawm*. This upsurge of newspapers does not include the rise of extensive undertakings made by the press: *Société Orientale de Publicité*, *Ahrām*, *Dār al-Hilāl*, all of whose publications cannot be listed (for the state of the Arabic press of Egypt at the end of 1944, see *COC*, No. 1, 124-6; at the end of 1946, *ibid.*, No. 4, 817, giving a detailed list).

The final period opens with the suspension of the political press as a result of the revolution of 25 July 1952. The political parties having been dissolved and replaced by a single party, the "National Union", in 1958, the press was reorganized in May 1960 and the ownership of newspapers was transferred from the hands of private individuals or companies to the National Union, with the result that the whole press was subject to a single official administration. Of the principal newspapers which continued to appear, mention may be made of *al-Ahrām*, *al-Djumhūriyya*, *al-Masāʾ*, and *al-Akhbār*. (Ed.)

The Sudan.—The Sudanese periodical press originated during the Anglo-Egyptian Condominium (1899-1955). The earliest Arabic newspaper, *al-Sūdān*, was first issued on 24 September 1903, by a Syrian editor, under the auspices of Dr. Fāris Nimr. Four or five other papers appeared during the next thirty years, the most successful being *Haḍārat al-Sūdān*, which ran from 1919 to 1938. The rise of Sudanese nationalism in the 'thirties resulted in a greatly increased output of newspapers, chiefly as organs of political comment. In 1958, out of a total of 35 papers, mostly dailies or weeklies, 5 had been founded between 1935 and 1945, 20 between 1946 and 1955, and 10 under the Republic. There has also been a succession of English and Greek journals from 1903 and 1909 respectively. Since the establishment of the military régime in November 1958, the Sudanese press has not enjoyed freedom of expression. (P. M. Holt)

Lebanon.—It was only in 1869 that the first real Arabic newspaper appeared in Beirut, *al-Bashīr*, a weekly published by the Jesuits which survived until recent times. Before that, Buṭrus al-Bustānī had founded the modest *Nafīr Sūriya* as far back as 1860, but it was from the middle of 1870 that, to interest public opinion in the cause of general education and national literature, he brought out the bi-weekly *al-Djanna* which his son Salīm continued to publish until 7 July 1886. Its vogue was such that *djanna* became synonymous with newspaper in Lebanon. Al-Bustānī also published *al-Djunayna*, which only lasted three years, and *al-Djinān*.

Not wishing to be left behind, the Muslims of Beirut in 1874 founded the weekly *Thamarāt al-Funūn* which carried on until the Young Turk revolution and then took the name of *al-Ittiḥād al-ʿUthmānī*; this newspaper was conspicuous for its poverty and the turgid prose of its pedantic conservative contributors. The same year saw the foundation of *al-Taḳaddum*, which declared itself the earnest champion of progress and the inveterate enemy of all reactionary elements in the country; Adīb Isḥāḳ was a notable contributor.

On 18 October 1877 Khalīl Sarkīs, son-in-law of Buṭrus al-Bustānī, brought out the first number of the *Lisān al-Ḥāl*, a daily and, to some extent, a rival to *al-Djanna*. The two newspapers hardly concerned themselves with politics and presented events in as colourless a form as possible, while paying particular regard to the government's opinion. The *Lisān al-Ḥāl* mainly concerned itself with scientific and economic matters, but nevertheless it fell foul of the Ottoman Government which suspended it for some months, during which Sarkīs published another newspaper, *al-Mishkāt*; but that did not stop him from resuming publication, and he became the doyen of the Lebanese press in our day.

In 1880 a new party took shape: the Maronites who opposed the encroachments of the Roman Curia founded a small newspaper *al-Miṣbāḥ*, while Protestantism was supported by the reviews *Kawkab al-Ṣubḥ al-Munīr* and *al-Nashra al-Usbūʿiyya*; the Greek Orthodox church, for its part, also had a newspaper, *al-Hadiyya*. An important addition to the press came in 1885 with the weekly *Bayrūt* which, with government support, served as a counterpoise to the *Thamarāt al-Funūn*. When in March 1888 Beirut became the chief town of the *wilāyet*, an official governmental organ was set up under the name *Bayrūt al-Rasmiyya*. At the nd of the century (see Washington-Serruys, XIX, XX), 9 periodicals were being published in Beirut and 3 elsewhere in Lebanon; for 1912, the figures are 8 dailies, 17 weeklies and 12 reviews (*RMM*, xix, 76 ff.).

In addition to the *Lisān al-Ḥāl*, various dailies date from this period as for example the *Ṣadā Lubnān* (1900), *al-Balāgh* (1910), *al-Bayraḳ* (1913) and the Zahle weekly, *Zaḥla al-Fatāt* (1910), all of which can be regarded as veterans. Later, the development of the Lebanese press continued without interruption. During the French mandate a certain number of dailies appeared, some of which have survived until our own time: *al-Aḥrār* (1923), *al-Shark* (1926), *al-Nahār* (1933), *al-Ittiḥād al-Lubnānī* (1933), *al-Rawwād* (1934), *Bayrūt* (1936), *al-Niḍāl* (1936), *al-Yawm* (1937), *Raḳīb al-Aḥwāl* (1939), and finally *al-ʿAmal* (1939), the organ of the *Katāʾib* (Phalanges).

Since 1941, and especially in the years following the second world war, a considerable number of newspapers and reviews were introduced; the situation of the Arabic press of Lebanon in 1946 was the subject of a survey in *COC*, No. 4, 809-12, which noted 29 dailies and 25 periodicals appearing in Beirut, and 16 other periodicals elsewhere in the country.

In 1956 the Lebanese press consisted of 27 dailies and 37 periodicals, figures which are explained only by the extreme complexity of the social, religious and political structure of the country, as well as by the great liberty enjoyed by the press. To these figures should be added 18 periodicals from inland districts,

2 dailies in Armenian, 2 publications in English and 10 in French, of which *L'Orient* (1924), *la Revue du Liban* (1928) and Le Jour (1934) date from the time of the mandate, and reacher circulation figures that were high for this country (up to 7,000 or 8,000 copies); *Le Commerce du Levant* (1928), on economic and financial subjects, had a wide distribution.

Syria.—It was only in 1865 and 1866 that there appeared, in Damascus and Aleppo respectively, the first newspapers to be printed in Arabic and Turkish and founded by the Ottoman Government, *Sūriya* and *al-Furāt*; the foundation of these publications was correlated with the reorganization of the Turkish administration; it was decided at the same time that the authorities of all *wilāyets* should have a newspaper printed, and this fact explains the bilingual nature of these publications. Other instances which may be quoted are *Dimashk*, set up by the Turkish Government in 1879, and the *Mir'āt al-Akhlāk* which appeared in 1886. An independent political weekly, *al-Shām*, came out in Damascus in 1896, whilst in Aleppo the weekly *al-Shahbā'* was published from 1893, and *al-Iʿtidāl* from 1879, and in Tripoli *Ṭarābulus al-Shām*, a weekly publication, from 1892.

In Syria, however, as in Lebanon, the press had a precarious existence, all the more since the government treated any independent criticism of its actions with the greatest severity. Consequently we find that a good many Syro-Lebanese journalists took refuge in Egypt. After the setting up of the French mandate, the Damascus press underwent a very extensive development and a large number of newspapers made their appearance, but for the most part circulation figures remained very low. In 1939, 9 Arabic and 2 French dailies, not counting a varying number of periodicals, appeared in Damascus alone; the number is obviously excessive since an output of this order was in no way justified by the same reasons as at Beirut; and yet this number actually increased after the second world war. In 1946, 19 dailies are recorded at Damascus, 7 at Aleppo and 1 at Ḥamāt, as well as 3 Damascus periodicals (*COC*, No. 4, 812-3). From the period of the mandate the only survivors in 1956 were *Alif Bā'* (1920) and *al-Ayyām* (1931), both moderate, *al-Kabas* (1928), *al-Akhbār* (1928) and *al-Inshā'* (1936), organs of the National Party; in addition to these veteran dailies about 15 others came out, representing every sort of political opinion. At the same time half a dozen periodicals also sprang up and, elsewhere in Syria, about ten other publications, the organs of the various parties. We may note that an independent Aleppo paper established in 1928 and published in French, "*L'Éclair du Nord*", in 1945 became the *Bark al-Shimāl*.

Palestine.—The development of the Arabic press in Palestine was slower and later than in Egypt, Syria, or Lebanon. Syrian and Lebanese publications no doubt circulated in Ottoman Palestine, but apart from a few mission sheets and school publications, the first Palestinian Arabic newspaper was *al-Karmal*, founded in Haifa in 1908 by Nadjīb Naṣṣār, an Orthodox Christian. It lasted until 1942. In 1911 another orthodox Christian, ʿĪsā al-ʿĪsā, started the newspaper *Falasṭīn* in Jaffa. Both papers appeared at somewhat irregular intervals, and during the first world war were suppressed by the Turkish authorities. After the war, they resumed publication, and were accompanied by many new journals, expressing Arab political reactions to the British Mandate and the policy of the Jewish national home. Among these were *Sūriya al-Djanūbiyya* (ed. ʿĀrif al-ʿĀrif and Muḥ. Ḥasan al-Budayrī) and *Mir'āt al-Shark* (ed. Būlus Shehāda); both were started in 1919, and were of brief duration. *Al-Ṣabāḥ* (ed. Muḥ. Kāmil al-Budayrī and Yūsuf Yāsīn), founded in 1921, became the organ of the Arab executive.

The first daily newspaper in Arabic was the old *Falasṭīn*, which began regular daily publication in 1929, and has continued to the present day in the old city of Jerusalem. Other dailies were *al-Ṣirāṭ al-Mustakīm* (founded 1925, daily from 1929, edited by Shaykh ʿAbdallāh al-Kalkīlī) and *al-Difāʿ* (founded 1934, ed. Ibrāhīm al-Shanṭī). Both papers were owned and edited by Muslims; the former was markedly Islamic in tone; the latter expressed strong Arab nationalist views, at first connected with the *Istiklāl* party, later with the groups led by the Ḥusaynīs. It is still published in Jordanian Jerusalem. The weekly *al-Waḥda*, founded in 1945, became a daily in the following year.

During the nineteen-thirties and forties there was a very rapid development of the periodical press, notably of political weeklies and fortnightlies. Modelled on the Egyptian weeklies, some of them offered their readers feature articles, film news and other lighter entertainment, sometimes with pictures, in addition to political news and comment. Two papers, the weekly *al-Ittiḥād* (founded 1944) and the fortnightly *al-Ghadd* (first published irregularly in the twenties, re-started 1945) represented communist or pro-communist views; the remainder expressed various shades of Arab nationalism and factions among the Arab leadership. The press in languages other than Arabic was mainly Jewish. The first Hebrew journal, the *Ḥavaṣeleth*, began publication in Jerusalem in 1871. Other Jewish papers, in Hebrew and other languages, followed in great numbers.

After the termination of the Palestine Mandate, the major Palestinian Arab journals continued or resumed publication in Jordan where, according to the *Middle East* for 1961, there were 7 daily newspapers in Jerusalem and Amman, and 14 periodicals, in Arabic and English. The same source cites one Arabic daily newspaper and 6 Arabic periodicals in Israel.

ʿIrāk.—The liberal Ottoman governor Midḥat Pasha in 1868 set up the first newspaper in ʿIrāk, *al-Zawrā'*, which appeared in Arabic and Turkish and, while supporting the government's policy, published official texts and news in general. In 1875 the government started another newspaper in Mosul, *al-Mawṣil*, and, in 1895, a third entitled *al-Baṣra*, in Baṣra.

Among the many newspapers which sprang up after the promulgation of the Constitution of 1908, the following may be mentioned: *Baghdād* (1908), *al-Rakīb* (1909), *Bayn al-Nahrayn* (1909) in Arabic and Turkish, *al-Riyāḍ* (1910), *al-Ruṣāfa* (1910), and *al-Nahḍa* (1913). Under the British mandate a great number of new newspapers appeared, notably *al-Wakā'iʿ al-ʿIrākiyya*, *al-Mawṣil*, *al-ʿIrāk* and *al-Shark*. After the second world war the many newly established political parties owned their own organs and until the revolution of 14 July 1958 practically every town in ʿIrāk had a daily or weekly newspaper.

Arabia.—In the Arabian peninsula the oldest newspaper, *Ṣanʿā'*, dates back to 1877 and, like so many official publications under the Ottoman régime, was printed in Arabic and Turkish. It was only in 1908 that Mecca had its first newspaper, *al-Ḥidjāz*. The press is now represented by the official newspaper which appears once a week in Mecca, *Umm al-Kurā*, and by *al-Bilād al-Suʿūdiyya* (bi-weekly,

Mecca), *al-Ḥadjdj* (monthly, Mecca) and *al-Madīna* (weekly, Medina). In 1953 a more modern newspaper, *al-Riyāḍ*, made its appearance at Djudda but it was compelled to stop publication as a result of the hostility of the *Ikhwān* [*q.v.*].

The Colony of Aden has six Arabic publications, among which *al-Akhbār al-ʿAdaniyya* and *Fatāt al-Djazira* may be noted. In Kuwayt the most important newspaper is *al-Kuwayt al-Yawm* (1955), but it also produces a monthly review with coloured illustrations, *al-ʿAsalī*, published by the government.

Bibliography: Ph. de Ṭarrāzī, *Taʾrīkh al-ṣiḥāfa al-ʿarabiyya*, Beirut 1913-33 (4 vol.); Ibrāhīm ʿAbduh, *Taṭawwur al-ṣiḥāfa al-miṣriyya*, Cairo 1945; Ḳostāḳī al-Ḥalabī, *Taʾrīkh takwīn al-ṣuḥuf al-miṣriyya*, Alexandria n.d.; ʿAbd al-Razzāḳ al-Ḥasanī, *Taʾrīkh al-ṣiḥāfa al-ʿirāḳiyya*[2], Baghdād 1957; M. Samhān, *al-Ṣiḥāfa*, Cairo 1358/1939; Kamal Eldin Galal, *Entstehung und Entwicklung der Tagespresse in Ägypten*, Frankfurt am Main 1939; *al-Hilāl*, i (1892), 9-16, v (1896), 141 ff.; Washington-Serruys, *L'arabe moderne étudié dans les journaux et les pièces officielles*, Beirut 1897 (situation of the Arabic press at that date); M. Hartmann, *The Arabic press of Egypt*, London 1899; *L'Égypte indépendante 1937*, Paris 1938, 369-456; Pearson, 343-6; *RMM*, passim; *The Middle East*, passim; *Annuaire du monde Musulman*[3], Paris 1929, 49-77; Margot, *La presse arabe en 1927*, Casablanca 1928.

B. — North Africa.

Paradoxical though it may appear, it was Algeria, at present the Maghrib country which is poorest in Arabic newspapers, which was the first of them to put into circulation a modest periodical, *al-Mubashshir*, from 1847 to 3 December 1926; this was an Arabic edition of the official *Moniteur* founded at Algiers on 27 January 1832 (see H. Fiori, in *RAfr.*, lxxxii (1938), 173-80; G. Sers-Gal, in *Documents algériens*, 8 December 1948). As well as official information, the *Mubashshir* carried news, historical, archaeological, and medical studies, etc. Its example was not immediately followed, and it was necessary to wait until the beginning of the 20th century for an independent press to appear, edited by Muslims indeed, but directed in many cases by Europeans who were desirous of informing and educating the Arabic-reading public; in this way *al-Nāṣiḥ* (1899), *al-Djazīrī* (1900), then *al-Iḥyāʾ* (1906), *Tilimsān* (Tlemcen), *Kawkab Ifrīḳiya* (Algiers, 17 May 1907), *al-Djazāʾir* (Algiers, 1908), *al-Fārūḳ* (Algiers, 1909), *al-Rashīdī* (Djidjelli), etc., were founded. These publications, however, had only an ephemeral life and disappeared before 1914.

The inter-war period was the second in the history of the Muslim press in Algeria. This saw the birth, on the one hand, of a series of newspapers edited in French by Muslims, such as *La Voix indigène*, *La Voix des Humbles* (1923), *L'Entente*, *La Défense*, *La Justice*, *Le Réveil de l'Islam* (Bône, 1922), etc., all intended for the expression of popular aspirations and various political tendencies; and, on the other hand, of a periodical press in Arabic, of a distinct politico-religious character. This period was, in fact, dominated by the struggle which opposed two active groups and caused heated polemics: the reformist *ʿUlamāʾ* (Oulémas), hostile to the Brotherhoods [see ṬĀʾIFA], and to the *bidāʿ* [see BIDʿA], etc., relied on *al-Shihāb* (daily, then monthly; Constantine 1924-39), then on *al-Iṣlāḥ* (Biskra 1929-42), and finally *al-Baṣāʾir* (Algiers, 27 December 1935-56); and the Marabout party, generally favourable to the Franco-Muslim entente, which had as its organs *al-Nadjāḥ* (tri-, then bi-weekly, Constantine, 1919-56) and *al-Balāgh al-Djazāʾirī* (Mostaganem, 1927-47). The Khāridjī *Wādī Mīzāb* (Algiers, 1926-38) is also worthy of mention, among about ten papers which flourished during this period.

In 1945 only *al-Balāgh al-Djazāʾirī*, *al-Baṣāʾir* (prohibited 5 April 1956), and *al-Nadjāḥ* (which ceased to appear from 1 September the same year) remained. The organ of the *ʿUlamāʾ* had been supplemented, from 15 December 1949 to 8 February 1951, by a weekly published at Constantine, *al-Shuʿla*, while the Marabout party published a monthly, *al-Dhikrā*, at Tlemcen from 15 December 1954 to August 1955. However, during this third period, Muslim predilections perceptibly changed, and some essentially political newpapers (*al-Djazāʾir al-Djadīda*, January 1946 to 14 September 1955, communist; *Ṣawt al-Djazāʾir*, from 21 November 1953, which became *Ṣawt al-Shaʿb* from 21 August 1954 to 5 November 1956: MTLD) made a timid appearance. All have now (1960) ceased to appear, or have been prohibited by the authorities; for its information the public depends on a highly developed French-language press. It must be noticed, moreover, that none of the Arabic dailies has ever held good in Algeria, and that the papers mentioned above have, in many cases, known only an irregular appearance. It should be said that they were published by amateurs, with precarious financial resources and rudimentary technical means.

In Morocco, the first newspaper was founded at Ceuta on 1 May 1820, but was in Spanish; and in this language or in French the press developed, particularly at Tangier, in the course of the 19th century. In 1889 an Arabic paper (*al-Maghrib*) appeared a few times, published by an Englishman in that town, where, at the beginning of the 20th century, many European journalists tried to reach the Muslim population by supplementing their papers with an entire or partial Arabic edition. Thus, thanks to European initiative and the collaboration of editors from Syria and Lebanon, the weeklies *al-Saʿāda* (1905), *al-Ṣabāḥ* (1906), *Lisān al-Maghrib* (1907), the Arabic supplement to *El Telegrama del Rif* (1907), and the *Istiḳlāl al-Maghrib*, Arabic edition of the bi-monthly *L'Indépendance marocaine* (1907), were able to appear at Tangier. The first Muslim newspaper was *al-Ṭāʿūn* ("The Plague", *sic*), a monthly controlled by the *sharīf* al-Kittānī (March 1908). In the same year the Moroccan government had an official newspaper published, *al-Fadjr*, edited by a Syrian Christian, which was transferred to Fez in 1909. Other weeklies also were founded at Tangier, notably *al-Ḥaḳḳ* (1911) and *al-Taraḳḳī* (1912).

After the inauguration of the Protectorate, *al-Saʿāda* was transferred to Rabat, where it became first tri-weekly, then daily; this semi-official newspaper, edited with care, beautifully printed, graced with numerous illustrations, anxious to inform its readers of events in Moroccan life, and widely circulated in all Morocco, played an undeniable educative and political rôle. In other towns the Arabic press hardly developed at all. *Al-Widād* had only a restricted number of readers; a daily, *al-Akhbār al-tilighrāfiyya*, was started at Fez, while a weekly, *al-Akhbār al-Maghribiyya*, supplemented *L'Information Marocaine* at Casablanca; at Marrakesh *al-Djanūb* had only a short life, but in the north, at Tetuan, several political newspapers met

with some success (*al-Iṣlāḥ, al-Ittiḥād, Iẓhār al-Ḥaḳḳ*).

The accession of Morocco to independence (1956) saw the renewal of the Arabic press in the country, although the French-language newspapers had received authority to continue publication, at least provisionally. Three dailies were produced: the unofficial *al-ʿAhd al-Djadīd* (Rabat), supplemented since 1 September 1960 by *al-Fadjr*, which was destined to replace it, *al-ʿAlam* (Rabat), and *al-Taḥrīr* (Casablanca), these two latter being organs, with some bias, of the Istiḳlāl party. The total circulation of these three dailies was less than 25,000. The Democratic Party of Independence (PDI), which has on occasion published a weekly in French (*Démocratie*), relies on a bi-weekly, *al-Raʾy al-ʿĀmm*. The Moroccan Labour Union (UMT) and the Moroccan Union of Commerce, Industry and Handicrafts (UMCIA) own two weeklies at Casablanca, *al-Ṭalīʿa* and *al-Ittiḥād* respectively. In 1959 four other political weeklies were also published: *al-Ayyām* (Istiḳlāl, Casablanca), *al-Maghrib al-ʿArabī* (Moroccan Popular Movement, Rabat), *al-Nidāl* (independent Liberals, Rabat), and *Ḥayāt al-Shaʿb* (communist). Finally, a monthly literary review at Marrakesh, *Risālat al-Adīb*, must be mentioned.

It is, naturally, in Tunisia that the Arabic press has reached its greatest development; the two world wars, bringing about some flexibility, would make it possible for three periods to be distinguished, but on the whole one can consider that the end of the French Protectorate and the advent of the country's independence (1955) mark the limits of two well-differentiated periods.

As early as 1861 Tunisia possessed an official newspaper, *al-Rāʾid al-Tūnusī*, and, from 1890, a daily news-sheet, *al-Zuhra*, which was to survive more than 60 years; a second daily, *al-Rushdiyya*, appeared from 1904 to 1910, and a third, *al-Nahḍa*, was founded in 1923. To these publications a crowd of periodicals of political, religious, commercial, etc., character, and of more or less ephemeral duration, was early added. Among the weeklies may be mentioned the unofficial *al-Ḥāḍira*, from 1888 to 1910, then the liberal *al-Zamān* (1930), the Pan-Islamist *al-Ṣawāb* (1904-11, 1920), the (Archaeo-) Destourian *Lisān al-Shaʿb* (1920-37). In the inter-war period a few weeklies appeared in the provinces; of a sharply marked political character, they were divided between Archaeo-Destourian (*al-ʿAṣr al-Djadīd*, Sfax 1919-25, 1936; *al-Difāʿ*, Ḳayrawān, 1937) and, especially, Neo-Destourian tendencies (at Sfax, *Ṣadā al-Umma*, 1936-7; *al-Anīs*, 1937; *al-Inshirāḥ*, 1937; *al-Kashkūl*, 1937. At Sūsa: *Fatā al-Sāḥil*, 1936-7. At Ḳayrawān: *Ṣabra*, 1937).

In 1937 G. Zawadowski (see *Bibliography*) collected 161 titles and presented a very striking diagram: from 1861 to 1903 the number of Arabic journals varied between one and six; it reached 23 in 1907, after the relaxation of security on 2 January 1904, fell to four during the first world war, to attain 32 in 1921; it fell again to eleven in 1928-9, following the measures taken for the suppression of criminal and political offences, and finally reached the figure of 51 in 1937. The same author indicates, moreover, 13 periodicals published in French by Tunisians, and, no less interesting, 73 titles of Judaeo-Arabic publications, in Arabic but in Hebrew characters, the oldest of which, *al-Mubāshir*, appeared in 1884-5. Flourishing until the first world war, this Jewish press afterwards continually declined until in 1937 there were only three miserable papers, at Tunis and at Sūsa.

The Arabic press of the capital played an important part during the years which immediately preceded the country's independence; depending on financial resources and skilled techniques, directed and partly edited by professional journalists, it became the herald of nationalism, endeavoured to bring its public round to the idea of independence, and spread the themes of anti-French propaganda in the towns and villages. Their end achieved, or on the point of being so, some papers, among the most important, went into opposition and tried to outbid the government; they had finally to cease publication, so that there remained of the former press only *al-ʿAmal*, a bi-weekly founded 1 June 1934 by the future president of the Republic, al-Ḥabīb Abū Ruḳayba (Bourguiba), and now a daily; and the communist weekly *al-Ṭalīʿa*, founded 1937. A new daily, *al-Ṣabāḥ*, has been started, while the weekly *al-Irāda*, organ of the Archaeo-Destūrians since 1934, has been replaced by *al-Istiḳlāl*. A few other nationalist periodicals such as *al-ʿAlam*, *al-Nidāʾ* and *al-Djumhūrī* appear more or less regularly. The organ of the FLN, the weekly *al-Muḳāwama al-Djazāʾiriyya*, has become *al-Mudjāhid*. Finally must be noticed a monthly cultural review, since 1 October 1955, *al-Fikr*, which young Tunisians of university education maintain at a respectable standard. Three French dailies, the oldest of which is *Dépêche tunisienne*, and one Italian, now (1960) appear at Tunis.

Worthy of mention is a political weekly *l'Action* (now *Afrique-Action*) which won some renown abroad.

Libya.—In 1871 the first Arabo-Turkish newspaper, *Ṭarābulus al-Gharb*, was started in Tripoli; it was of an official character. It still continues to be published in Arabic and forms the chief organ of information for the Federal Kingdom. A second weekly, of a scientific and political nature, *al-Taraḳḳī* was published from 1897. Other newspapers were published during the period of Italian domination but are of only the most slender interest. Since the country became independent various newspapers have made their appearance, notably the periodicals *al-Rāʾid* and *al-Ṭalīʿa* (the organ of the Federal Union of Workers). (ED.)

C. — Arabic-speaking Emigrants.

In the course of the last decade of the 19th and the first of the 20th centuries colonies of Arabic-speaking emigrants (*djāliya*, [*q.v.*]) sprang up in large cities of North and South America, Australia and West Africa. The main source of emigration was Lebanon and Syria, where the Arabic press was cradled and

Arabic journalism, in the proper sense, was born and nurtured. Prior to 1890 Ottoman authorities in the area permitted emigration nominally only to Egypt, but Lebanese and Syrian emigrants had found their way, even earlier, into numerous European capitals where a rash of Arabic papers and magazines made its appearance. The census of the historian of the Arabic press, Ṭarrāzī (iv, 490), for the period ending 1929 makes the number in Constantinople 49, Russia 3, Switzerland 2, Germany 7, Italy 4, France 43, Great Britain 14, Malta 8, Cyprus 5, a total of 135 of which 107 were newspapers.

The pioneer emigrant journalist was an Armenian from Aleppo, Rizḳ Allāh Ḥassūn, who founded *Mir'āt al-Aḥwāl* and later (1872) in London *Āl Sām*. First a favourite with the Ottoman authorities, Ḥassūn had to flee for his life to London. There he re-issued *Mir'āt al-Aḥwāl* in about 450 lithographed copies and used it to attack the Ottoman government.

Of the Paris publications mention should be made of *al-ʿUrwa al-Wuthḳā* issued March 1884 by the Egyptian reformer Muḥammad ʿAbduh and his celebrated friend Djamāl al-Dīn al-Afghānī. Though short lived, *al-ʿUrwa* distinguished itself in its vigorous defence of Islam and attack on the British in Egypt and India. A Beiruti deputy in the Ottoman parliament of 1876, Khalīl Ghānim, incurred the anger of the Porte for his liberal views and fled to Paris, where he started (April 1881) *al-Baṣīr*, which exposed the massacre of Armenians. Like other anti-Ottoman publications *al-Baṣīr* was banned by Turkish authorities and thus doomed to early death. With Amīn Arslān, a Lebanese Druze, Ghānim issued (1890), partly in French, *Turkiyā al-Fatāt*. Of a different character was the only known paper in West Africa, *Ifrīḳiyya al-Tidjāriyya* (commercial Africa, Dakar, 1931-5).

Most of these papers began as and remained personal sheets with the founder, editor and publisher as one person. They were more concerned with politics and literature than with news and, with no local colonies to support them, they were destined to be short lived. None survived.

The New World papers likewise began as personal sheets but the founder-editor-publisher was usually an *adīb* (literary) emigrant—not a political émigré—who sought his living by the pen. Though the rate of mortality was high, certain papers developed into real newspapers and received enough local support to give them a long lease of life. But the circulation rarely exceeded 5,000. The census of Ṭarrāzī (iv, 492; cf. *al-Hilāl*, i (1892), 12, 14) for the period ending 1929 credits North and Central America with 102 publications, of which 71 are newspapers, South America with 166, including 134 newspapers of which 3 appeared in Cuba. The pioneer in this area was Ibrāhīm ʿArbīlī, a Damascene graduate in medicine from what is now the American University of Beirut. ʿArbīlī had to secure the aid of the American embassy in Constantinople for a permit to export Arabic type from Beirut. The first number of his *Kawkab Amīrikā* was issued in New York, 15 April 1892, and bore his and his brother Nadjīb's name. One of his editorial assistants, Nadjīb Dhiyāb, a Greek Orthodox Lebanese, founded seven years later *Mir'āt al-Gharb*, still issued in New York. In February 1898 a Maronite, Naʿʿūm Mukarzal, founded in Philadelphia *al-Hudā*, which later moved to New York and is still perhaps the most widely read in America. Sectarian rivalry between these two papers spurred their early circulation. Both Dhiyāb and Mukarzal attended the Arab congress of Paris (1913) which advocated decentralization for the Arab provinces of Turkey. Other than these two papers New York had in December 1961 *al-Bayān*, founded 1911; *al-Iṣlāḥ*, 1933; *al-Rābiṭa al-Lubnāniyya*, 1957 (cf. Hitti, *Syrians*, app. F). The late birth of this paper is rather unusual. For many years after its foundation in 1912 *al-Sā'iḥ* served as an organ for a circle of literary men (*al-Rābiṭa al-Ḳalamiyya*) led by the celebrated Djabrān Khalīl Djabrān [*q.v.*] (Kahlil Gibran). So did *al-Funūn* magazine, founded 1913. A leading poet, Iliyā Abu Māḍī, published in New York *al-Samīr* from 1929 till his death in 1956. Detroit supports at present (December 1961) three newspapers.

In South America al-ʿĪd, himself a Syrian journalist in Buenos Aires, names in Rio de Janeiro (1958) 31 newspapers, of which 2 are living, and 3 magazines (391-2); in São Paulo 52 papers and magazines, of which 5 are extant (350-1); in Buenos Aires 31 newspapers, of which 6 are living, and 16 magazines (381-3); cf. al-Badawī, ii, 567-85). The pioneers were again Christian Lebanese: Naʿʿūm Labakī, co-founder in 1896 at Rio of *al-Raḳīb* and later of two other papers in São Paulo, and Shukrī al-Khūrī, co-founder in 1899 of the first paper in São Paulo and in 1906 of the longer lived and especially influential *Abu 'l-Hawl*. Of special interest in São Paulo was *al-ʿUṣba al-Andalusiyya* magazine (founded 1928), organ of a literary circle headed by the two poets Rashīd Salīm al-Khurī (al-Shaʿir al-Ḳarawī) and Shafīḳ Maʿlūf. In Buenos Aires the oldest surviving paper is *al-Salām* (1902), and of special interest is *al-Istiḳlāl* (1926) founded and still edited by a Druze.

In the struggle for existence within a steadily shrinking market of readers some editors resorted to dubious if not outright unethical journalistic practices. Others, wiser and more adventurous, made their publications bilingual or entirely in the new language of the second generation of emigrants. One pictorial monthly in Portuguese (São Paulo), one in Spanish (Mexico City) and a third in English (Hollywood) thrive on social functions. The *Lebanese American Journal* (founded 1951), and *The Caravan* (1953, which was to cease publication in 1962), are weekly newspapers. More learned was *The Syrian World* (New York, 1926-32) of Sallūm Mukarzal, who also edited Arabic papers and introduced the Arabic linotype.

The Arabic press of the diaspora was predominantly liberal but hardly ever radical, loyal to the countries of its adoption while mindful of its obligation to the countries of origin. As a liaison agent it kept alive the ties of relationship between emigrants and old folks and meanwhile interpreted the new culture and helped adjustment to it. It contributed generously to the enrichment of modern Arabic literature—prose and poetry—in vocabulary and ideas and to the enhancement of the Westernization of the Arab East.

(PHILIP K. HITTI)

D.—Survey of the Arabic Language Press. The language of the press has already been studied in the art. ʿARABIYYA, II, 4, but one cannot emphasize too strongly the part taken by the various newspapers, and particularly the Egyptian ones, in the evolution, development and enrichment of the so-called modern or contemporary Arabic which is indebted to them, far more than to actual literature, for its ability to express a multitude of new ideas, most of which have been imported from the West.

Basically, the Arabic press has made enormous progress; for a long time the only material that it had presented to the public, apart from news from abroad that was already stale, had been such information as would please the Ottoman Government or the notices provided by it; *al-Djawāʾib* alone perhaps constituted a fortunate exception. From the beginning of the century and especially since the first world war the main daily newspapers have explored a wider field, giving their readers information of every kind, concerning themselves with social, economic, literary and artistic questions, and shaping, orienting or arousing public opinion by means of commentaries which are not always dictated by the most praiseworthy objectivity. Side by side with this press, which in certain respects is comparable with the Western press and has at its disposal powerful technical and financial resources, a large staff and modern printing presses, there exists a swarm of minor publications whose preparation is entirely the work of craftsmen, when their frequency of publication does not depend upon the more or less acknowledged resources of their proprietors. Without going so far as to resort to the odious practice of blackmail to guarantee a certain edition of their newspaper, far too many journalists of the lowest category often indulge in petty polemics, crude quarrels and personal vituperation. Sanctions are frequently taken, sometimes leading to the disappearance of the paper, but they can hardly change the general demeanour of the so-called independent press. The measures taken in recent years in Egypt, even though they have unfortunately deprived journalists of their freedom, at least have the merit of having clarified the situation.

The very large daily newspapers, like the *Ahrām*, can call upon sources of information which could well be a matter of envy to many of the organs of the Western press. But this is not the case with the majority of newspapers. These do indeed receive bulletins from one or two world-wide European or American agencies, without counting the purely Arabic Middle East Agency, but in each of them one editor exploits broadcast material, while one or two colleagues are employed in collecting local news. It is rare for newspapers to keep correspondents abroad, and the proprietor generally acts as chief editor.

Newspapers of this sort almost always have a small printing press where the newspaper is composed by hand and printed on 4 or 6 pages; the circulation figures seldom exceed a few thousands, and readers are few outside the town where the newspaper is printed. Some Lebanese newspapers, however have, subscribers in America, and copies of the leading Egyptian or Lebanese dailies can be seen on newspaper stalls in the European and American capitals.

The reviews deserve especial mention. Many of these have assumed the task of spreading among the populace a useful knowledge of science, literature and history, and circulation figures reveal that they often reach a fairly wide public. The *Hilāl* (1892) needs no further praise; the *Machriq*, published since 1898 by the Jesuits in Beirut, enjoys an international scientific reputation. The *Muḳtabas*, founded in Damascus in 1908 by Muḥ. Kurd ʿAlī and the *Lughat al-ʿArab*, published in Baghdād by the Rev. Father Anastasius, played a cultural and scientific rôle that in our own time has been taken by the journals of the various academies of the Arab world. The different published lists also contain the titles of various reviews of juridical, economic, financial, commercial or corporate character, etc., as well as a certain number of feminist publications.

Since the experiment of Abū Naḍḍāra, satirical and humorous papers are not very numerous: in Beirut *al-Ṣaḥāfī al-tāʾih* (1920) and *al-Dabbūr* (1924), with the addition in 1943 of *al-Ṣayyād*, are still continuing, while a larger number of illustrated magazines like *al-Muṣawwar* (Cairo) are enjoying an undeniable success. (ED.)

ii. — ĪRĀN

The first printing press was set up in about 1817 in Tabrīz, followed by one in Tehran; but in about 1824 lithography quickly and almost completely eclipsed printing for over half a century. From 1848 the first newspapers appeared, first in Tehran, then in Shīrāz, Iṣfahān and Tabrīz; in about 1860 portraits and illustrations were introduced; the first periodical of scientific character dates from 1863; the first daily newspaper from 1898; the first humorous and satirical newspaper from 1900. In 1875 the first of the newspapers established outside Īrān appeared in Constantinople; others appeared in London, Calcutta, Cairo, Paris, Bombay and Washington (Bahāʾī).

In its early period the press was literary rather than political; the opposite was true after the Constitution of 1906. The development of the press was caused by the spread of printing which little by little replaced lithography. From 1910 to 1912 it underwent various changes caused by the political turmoil in the country. Nevertheless, E. G. Browne (*The Press* ...), completing the list drawn up in 1911 by H. L. Rabino, named 371 daily publications and periodicals in 1914 (see his summary of the development of the press, 7 ff.); many periodicals are of literary or scientific character; it is important to add that political newspapers very frequently ranked as literature: so too the numerous political poems and satirical articles in prose which, besides their literary value, also possess actual historical interest (see Browne, *op. cit.*, introd., xvi and the anthology, 167 ff.).

If the newspapers of the early period were often unofficial and poorly supplied with information, they provided a wealth of instructive articles, edited in excellent style; "they inspired a taste for reading and thus contributed to the progress of general instruction" (Rabino). As for the press which prepared for and followed the Constitution of 1906,

Browne, the eminent authority, states: "Several of these newspapers, in particular the *Ṣūr-è Isrāfīl*, the *Ḥabl ol-matīn* and the *Musāwāt* were indeed of a superior sort and serve as models of a vigorous, nervous and concise style which until then was virtually unknown" (*The Persian Revolution*, 127); later he defined his views (*Lit. History*). To the bibliography which he drew up (in *The Press*) can be added the lists of newspapers and periodicals compiled by ʿAlī Nô Rouze (Nawrūz) (1914-1925) and the *Annuaire du monde musulman* (1929). It is also worth recalling various newspapers published in French, Armenian and Chaldaean.

In 1930, in his supplement to the Persian translation of Browne's *Literary History*, Rashīd Yāsmī makes a stand against the increasing disregard for literary form in many newspapers, the result of the enforced speed of publication, and of the invasion of foreign words introduced in information and articles translated from European newspapers; he provides a list of newspapers (among which he singles out *Raʿd* "The thunder", *Īrān*, *Shafaḳ-i surkh* "The red twilight", *Iṭṭilaʿāt* "Information", *Nāhīd*) and a list of periodicals (among which he notes *Armaghān* "Gift", *Bahār* and *Nawbahār* "Spring", *Āyanda* "Future", *Īrān-i djawān* "Young Iran", *Sharḳ* "East", *Mihr* "Sun"); to these periodicals should be added those published by the Ministry of Public Instruction and the Universities (Tehran and Tabrīz) and, though it is not possible to mention them all, the literary review *Yādgār* "Memorial", the critical review *Rāhnumā-yi kitāb* "Guide to [new] books", and several scientific and technical reviews; finally he mentions some annual publications with a wealth of information as important as it is varied (*Pārs*, *Gāhnāma*). Several newspapers listed by the *Annuaire du monde musulman* have disappeared; to the list should be added, among others, *Kayhān* "The world", (Tehran), *Āzādī* "Liberty" (Mashhad) and the remarkable reviews *Farhang-i Īrān zamīn* "Iranian culture", *Madjalla-yi mūsīḳī*, *Sukhan*" The word", *Yāghmā* "Booty".

Bibliography: E. G. Browne, *The press and poetry of modern Persia*, Cambridge 1914; his list completes that given by H. J. Rabino, *La presse depuis son origine jusqu'à nos jours*, in *RMM*, 1913, xxii, 287: Fr. tr. from the original Persian mentioned by Browne, *op. cit.*, 2, n. 2; idem, *The Persian Revolution of 1905-1909*, Cambridge 1910; Ali Nô Rouze, *Registre analytique de la presse persane*, 318 items, 1919-23 (*RMM*, 1925, (lx), 35 ff.); *RMM*, general index (index vi: Presse: Bakou, Bender-Bouchir, Ourmiah, Perse procès de presse, Tauris, Téhéran, "persane"); *Annuaire du monde musulman*, 1925, 351 (general index of the Muslim press; see Chiraz, Enzéli, Hamadan, Ispahan, Kaboul, Kazwīn, Kerman, Khoī, Méched, Qandahar, Recht, Tabriz, Téhéran, Yezd); *ibid.*, ²1929, 51 (index of the press; besides the towns named above, see Kermanchah, Djélalabad, Hérat); Bogdanov, in *IC*, 1929, 126-52, for the Afghān press); E. (important); Jan Rypka, *Iranische Literatur-geschichte*, Leipzig 1959, 323 ff., 346 ff., 369 ff., 459 ff., A. Towfigh, *Le rôle de la presse humoristique et satirique dans la société iranienne*, unpublished Sorbonne thesis, 1962. (H. Massé)

iii. — Turkey

The early history or the press in Turkey is given in section i above. 1860 saw the birth of the first unofficial Turkish newspaper published by a Turk. This was the *Terdjumān-i Aḥwāl* published by Agāh Efendi, with the help of the writer and poet Shināsī and numbering Aḥmed Wefīḳ Pasha among its contributors. Polemics between this and Churchill's paper were frequent, the first occasion being a criticism in Churchill's newspaper of Shināsī's *Shāʿir Evlenmesi* ("A Poet's Marriage") which was serialized in the *Terdjumān-i Aḥwāl*.

In 1861 Shināsī, wishing for greater freedom of expression in his own newspaper, started the *Taṣwīr-i Efkār* which also carried articles by Nāmik Kemāl as from issue number 200. The *Taṣwīr-i Efkār* closed down in 1866: in all 830 issues were published, issues of the greatest importance in the history of the Turkish Press, because of the newspaper's advocacy of libertarian ideas.

1861 also saw the birth of the first purely Turkish magazine in Turkey, the *Medjmūʿa-i Funūn* of Munīf Pasha [*q.v.*; see also djemʿiyyet-i ʿilmiyye-i ʿothmāniyye], followed in 1863 by the first military publication, the *Djerīde-i ʿAskeriyye* of Aḥmed Midḥat Efendi, and then in 1865 by the first commercial magazine, the *Taḳwīm-i Tidjāret* of Ḥasan Fehmī Pasha. In the meantime, in 1864, the Government published the first Press regulations (the 1857 regulations did not mention the periodical Press as such, but applied to books and pamphlets which were to be submitted to the Council of Education, *Maʿārif Shūrāsī*, before publication). The 1864 regulations remained in force, save for a short interruption, until 1909, and provided for official warnings to the Press, for suspension and the cancellation of licences at government discretion, and also for the trial of Press offences by the *Medjlis-i Aḥkām-i ʿAdliyye* tribunal. Newspapers were also asked to submit a copy of each issue, signed by the responsible Editor, to the Press Directorate, a Government office the beginnings of which are obscure, but the existence of which in 1862 can be inferred from the fact that Saḳīzlī (from Chios) Ohannes Pasha was appointed to it. The 1864 Press regulations were inspired by the Press Law of Napoleon III and did not provide for a censorship as such. Until 1877 Press affairs were the responsibility of the Ministry of Education, although the 1864 regulations provided for the submission to the Foreign Ministry of applications for Press licences by foreigners. Mention must also be made of the "Society for original compositions and translations" (*Teʾlīf we Terdjeme Djemʿiyyeti*), attached to the Ministry of Education and entrusted with the choice and translation into Turkish of useful foreign publications. The 1864 regulations seem to have fallen into desuetude in 1867, when an order issued by ʿĀlī Pasha authorized administrative action against the Press, including suspension, where this was dictated by the public interest. The reason for this was the growth of the revolutionary Press, ushered in by ʿAlī Suʿāwī's *Mukhbir*, first published in Philippopolis (Filibe) in 1866 and closed down in the following year. The task which that newspaper set itself originally was to defend the rights of the

Muslims against foreign (Christian) encroachment and in the face of presumed official lethargy. The publication of the 1867 order led to the flight abroad of members of the "Society of New Ottomans" (*Yeñi ʿOthmānlïlar Djemʿiyyeti*), including ʿAlī Suʿāwī, Nāmïḳ Kemāl, Ziya (Ḍiyāʾ) Pasha, Agāh Efendi and others. With financial help from the Egyptian prince Muṣṭafā Fāḍil Pasha they undertook the publication of revolutionary newspapers directed against the policy of ʿĀlī Pasha. ʿAlī Suʿāwī restarted the *Mukhbir* in 1867 in London. In 1868 it was followed in London by *Ḥürriyyet*, designed by Ziya Pasha and Nāmïḳ Kemāl as a weekly organ of the New Ottomans. Nāmïḳ Kemāl left the paper in 1869, while in the following year *Ḥürriyyet* moved to Geneva, where another 11 issues were published, making 200 in all. ʿAlī Suʿāwī had in the meantime moved to Paris, where in 1869 he published *ʿUlūm*, which was the first newspaper in Turkish to advocate Turkish nationalism. Another revolutionary sheet, *Inḳilāb*, published in 1870 in Geneva by Ḥuseyn Waṣfī Pasha and Meḥmed Bey, is noteworthy for the fact that it attacked not the Sultan's Ministers, but Sultan ʿAbd al-ʿAzīz himself.

In the meantime there was an increase in Press activity in Turkey, particularly between 1868 and 1872; new publications included important organs of opinion like *Teraḳḳī*, *Baṣīret*, *ʿIbret* and *Ḥadīḳa* and humorous publications like *Diogène* and *Khayālī*, whose outspokenness shows that the "provisional" order of 1867 was no longer applied. *Teraḳḳī*, which first appeared in 1868, had the first weekly supplement for women, while *Mümeyyiz*, which followed it in 1869, had the first children's supplement in the country. *Diogène* started publication in Greek and in French, appearing later in Turkish. *Ḥadīḳa* was started in 1869 by ʿĀshir Efendi, as a scientific publication passing in 1871 under the control of Ebü 'l-Ziyā (Abu 'l-Ḍiyāʾ) Tewfīḳ [*q.v.*] (who had collaborated earlier with *Teraḳḳī*) and in 1873 under that of Shems al-Dīn Sāmī. *Baṣīret*, which carried articles by the Pole Karski, by Aḥmed Midḥat Efendi and also by ʿAlī Suʿāwī, can be considered as the most successful newspaper of the time, coming second in popularity after the official police sheet *Waraḳa-i Ḍabṭiyye*. *ʿIbret*, first edited unsuccessfully by Aḥmed Midḥat Efendi, passed in 1872 under the control of Nāmïḳ Kemāl, Ebü 'l-Ziyā Tewfīḳ and Reshād Nūrī. In it Nāmïḳ Kemāl attacked the Grand Vizier Maḥmūd Nedīm Pasha, who in consequence had him exiled to Gallipoli, suspending the newspaper for four months. Nāmïḳ Kemāl returned from exile and resumed editorship after his enemy's fall from favour. The newspaper suffered one more suspension and was then permanently closed down in 1873, as a result of the excitement caused by Nāmïḳ Kemāl's play *Waṭan weyā Silistre*, the author being exiled this time to the castle of Famagusta. In all 132 issues of *ʿIbret* appeared, and this newspaper can be considered as the best propagator of liberal ideas during the period of the *Tanẓīmāt*. The period saw the birth of many short-lived journalistic ventures of predominantly political character, as well as of some organs of more enduring importance, like the best-selling newspaper *Waḳit*, which owed its popularity to the political commentaries of Saʿīd Bey; Meḥmed Tewfīḳ Bey's *Ṣabāḥ*, first published in 1876 and noteworthy for its courage in being the first newspaper to appear with several blank columns as a protest against the censors; and finally, the high-minded *Istiḳbāl* which devoted much attention to educational matters.

Mention must also be made of the *Medjmūʿa-i Ebü 'l-Ḍiyā*, published by the prolific journalist and author Ebü 'l-Ziyā Tewfīḳ (1880), and of the first children's magazine *Eṭfāl*.

The return to absolutism under ʿAbd al-Ḥamīd II was marked administratively by the transfer of Press affairs to the Ministry of the Interior in 1877; in 1878 newspapers came under the joint censorship of the Ministries of Education, Interior and Police; in 1881 an "Inspection and Control Commission" (*Endjümen-i Teftīsh we Muʿāyene*) was formed and charged with preventive censorship, an even higher authority, the "Commission for the Examination of Compositions" (*Tedḳīḳ-i Muʾellefāt Komisyonu*) being formed in 1897 and supplemented for religious publications in 1903 by the "Commission for religious and legal books" (*Kutub-i Dīniyye we Sherʿiyye heyʾeti*); dangerous publications outside the borders of the Empire were dealt with by the Foreign Press Directorate (*Maṭbūʿāt-i Edjnebiyye Müdürlüghü*) formed in 1885. All these measures were taken in spite of the 1876 Constitution which, in article 12, guaranteed the freedom of the Press "within the bounds of the law", and in spite of the rejection by Parliament of the draconic Press Law of 1877. Press censorship under ʿAbd al-Ḥamīd II was supplemented by control of printing presses (1888) and of booksellers (1894).

All this limited the number and contents of publications, although it did not stop the development of the Turkish Press. Important dailies included Mihrān Efendi's *Ṣabāḥ*, founded in 1876 and already mentioned, which included the young and later famous journalist Ḥüseyn Djāhid Bey among its contributors; Aḥmed Djewdet Bey's *Iḳdām* (1890), which had a semi-legal correspondent in Paris in the person of the later famous ʿAlī Kemāl Bey, and Aḥmed Midḥat Efendi's (known as "the typewriter" for his prolific writings) *Terdjümān-i Ḥaḳīḳat*, which between 1882 and 1884 had a passing literary phase thanks to Muʿallim Nādjī. Important periodicals included Murād Bey's political weekly *Mīzān* (1886-90 with interruptions), and above all ʿAḥmed Iḥsān Bey's *Therwet-i Fünūn*, standard-bearer of a new literary school (Tewfīḳ Fikret, Djenāb Shehāb al-Dīn [see DJANĀB SHIHĀB AL-DĪN], Khālid Ziyā (Ḍiyāʾ) etc.) in opposition to Muʿallim Nādjī's conservatives. *Therwet-i Fünūn* was started in 1892 and, after a period of brilliance, was reduced to dull harmlessness by official pressure.

This official repression led to a rebirth of revolutionary publications abroad: in 1880 ʿAlī Shefḳatī started *Istiḳbāl* in Geneva; in 1895 Aḥmed Rīẓā (Riḍāʾ) Bey founded the important *Meshweret* in Turkish and French (the French side being edited by another temporary expatriate, Murād Bey of *Mīzān*). Started in Paris, *Meshweret* was driven by official Ottoman pressure first to Switzerland and then to Belgium. The last decade of the 19th and the first years of the 20th centuries saw a host of short-lived Turkish revolutionary sheets in Paris, Switzerland, London and Egypt. They included organs of the Committee of Union and Progress, such as *ʿOthmānlï*, published by Isḥāḳ Sukūtī and ʿAbdullāh Djewdet; *Ḥaḳḳ* and *Shūrā-i Ummet*, published in Cairo with the cooperation of Aḥmed Rīẓā Bey. In the same year as the latter, in 1902, Prince Ṣabāḥ al-Dīn published his newspaper *Teraḳḳī*. Another influen tial newspaper published abroad was *Terdjümān*, which Gasprïalï Ismāʿīl (Gasprinski) founded in the Crimea in 1883.

When the Constitution was once again put into practice on 24 July 1908, the Turkish Press attained

to unlimited freedom for a period of some eight or nine months. The three main newspapers of the Hamidian era (*Iḳdām*, *Ṣabāḥ* and *Terdjümān-i Ḥaḳīḳat*) were soon joined by a daily edition of *Therwet-i Fünūn*, by the *Yeñi Gazete* of ʿAbdullāh Zuhdī and Maḥmūd Ṣādiḳ and, most important, by *Ṭanīn*, published by Tewfīḳ Fikret, Ḥüseyn Kāẓim and Ḥüseyn Djāhid. In all more than two hundred newspaper licences were granted in the first few weeks of the constitutional régime, while the number of periodical publications in 1908-9 amounted to 353. This number decreased constantly in subsequent years: 130 in 1910, 124 in 1911, 70 in 1914. The fortunes of the Press were linked closely with the course of the political struggle between the Committee of Union and Progress and its opponents. In the months between the restoration of the Constitution and the "31st March incident" (13 April 1909) the Committee was opposed by *ʿOthmānli*, the organ of the Liberal Party of Prince Ṣabāḥ al-Dīn, by *Iḳdām*, which carried articles by ʿAlī Kemāl, by *Yeñi Gazete*, *Therwet-i Fünūn* and others. It was supported by *Shūrā-i Millet*, Ebü 'l-Ziyā Tewfīḳ's *Yeñi Taṣwīr-i Efkār*, *Milliyyet*, *Ḥürriyyet* and other publications. The religious opposition was led by Derwīsh Waḥdetī's newspaper *Volkan* and by the magazine *Beyān al-Ḥaḳḳ*. After the "incident" censorship was re-imposed by the military administration, in spite of the provision in the revised constitution forbidding all pre-publication censorship. Military censorship continued until the assumption of power by the "opposition" in 1912, but was reimposed by the Union and Progress after the coup of 10 January 1913. It then lasted until the dissolution of the Empire. Military censorship rendered largely inoperative the 1909 liberal Press Law, which was in any case amended in 1913, the amendment granting wide powers to the authorities in cases where publications were deemed to endanger the security of the State. A Directorate-General of the Press was formed at the same time. Opposition newspapers tended in these conditions to be short-lived. Among the few which deserve mention one could include *Selāmet-i ʿUmūmiyye* (1910) which carried articles by ʿAbdullāh Djewdet, signed "A Kurd", and also *Teʾmīnāt*, published in 1912 by Ismāʿīl Ḥaḳḳī Pasha on behalf of the Party of Freedom and Concord (*Ḥürriyyet ve Iʾtilāf*). The years before the First War also saw the birth of some important literary and scientific magazines, like the journal of the Ottoman Historical Society (*Taʾrīkh-i ʿOthmānī Endjümeni Medjmūʿasī*) (1910), *Türk Yurdu*, the organ of the Turkish Hearths (*Türk Odjaḳlari*), and the literary avant-garde papers *Genč Ḳalemler* and *Rubāb*. One must also point to the existence of a numerous religious periodical Press. In 1913 ʿAlī Kemāl founded the daily *Peyām*, which was to amalgamate after the war with Mihrān Efendī's *Ṣabāḥ* and, under the name of *Peyām-i Ṣabāḥ*, to be in the forefront of the opposition to Muṣṭafā Kemāl in Istanbul during the Turkish War of Independence. The last years of the 1914-18 war witnessed the first ventures of journalists who were to become famous under the Republic. It was then that Aḥmed Emīn (Yalman) and Ḥaḳḳī Ṭāriḳ (Us) started *Waḳit*, that Yūnus Nādī entered the field with *Yeñi Gün* and Sedād Sīmāvī with the humorous magazine *Diken*; it is also to those years that the important daily *Aḳsham* goes back. Newspapers published in Istanbul at the end of the war included also Saʿīd Mollā's *Istanbul*, Refīʿ Djewād's *ʿAlemdār* and Meḥmed Zekeriyyā (Sertel)'s *Büyük Gazete*.

In Anatolia the nationalist movement was first defended by *Irāde-i Milliyye*, the organ of the Sivas Congress, which first appeared on 4 September 1919. A fortnight after his arrival in Ankara on 27 December 1919 Muṣṭafā Kemāl Pasha founded his organ *Ḥākimiyyet-i Milliyye*, which was renamed *Ulus* in 1928, *Halkçı* in 1955, reverting to *Ulus* in 1956. In 1920 Yūnus Nādī transferred his *Yeñi Gün* to Ankara, returning to Istanbul in 1923 to found *Djümhūriyyet* (*Cümhuriyet*), which then became the main Kemalist newspaper in the old capital. Noteworthy magazines founded or published in the years between the end of the war and the proclamation of the Republic included the Communist *Aydinlik*, the literary *Dergāh*, which carried articles by Yaʿḳūb Ḳadrī (Karaosmanoğlu) and Ziya Gökalp's *Küčük Medjmūʿa*, started in Diyarbekir (Diyār-Bakr) in 1922.

Censorship ceased with the entry of the Turkish Army into Istanbul on 7 October 1923. The 1924 Constitution re-asserted the existing constitutional assurance that the Press was free within the bounds of the law and could not be submitted to pre-publication censorship. Powers of suspension were, however, assumed by the authorities the following year under the Maintenance of Order (*Taḳrīr-i Sukūn*) law which remained in force for two years. Suspension and confiscation by Government decision were also allowed by the 1932 Press Law, which was later repeatedly amended, Press offences, penalties and other provisions being several times re-defined. The Directorate-General of the Press which had been disbanded in 1931 was reformed in 1933, becoming in 1940 the "Directorate General of Press, Broadcasting and Tourism", attached to the office of the Prime Minister, and, towards the end of the Democratic Party administration (1950-60), the Ministry of Press, Broadcasting and Tourism.

The Turkish Press was faced with great difficulties in 1928 when the Arabic alphabet was replaced by the Latin alphabet. Newspapers appeared for a time printed in both alphabets. Circulations dropped and the Government had to come to the assistance of the Press with subventions which were continued for three years. The development of the Press under the Turkish Republic was greatly influenced by a small number of distinguished journalists and journalistic dynasties. They include Ahmed Emin Yalman who, after leaving *Vakit*, founded *Vatan* in 1923, *Inkilâb* in 1934, was associated with *Tan* in 1935, then restarted *Vatan* and remained in control of it until 1960 when he founded a new paper *Hürvatan*; the Nadi family who retained control until the present day of *Cümhuriyet*; the Simavi family who own the best-selling *Hürriyet*, founded by Sedad Simavi; the Sertel family who edited *Tan* until 1946 when the newspaper's left-wing views provoked official displeasure and student demonstrations, as a result of which the paper's offices were wrecked; the Ali Naʿi family, associated with *Inkilâb*, *Ikdam* and, at present, with the successful *Milliyet* etc. An important part was also played by the veteran journalist Hüseyin Cahid (Yalçın) who, after having made his peace with the Republic, resumed journalistic activity in *Yeni Sabah* (started in 1938) and then re-started *Tanin*, in whose columns he defended the Allied cause during the Second World War and the policy of the Turkish Republican People's Party after it.

Important political and social developments in the Republican period were reflected largely in political, social and literary periodicals: the People's

Houses (*Halkevleri*) organization had its organ in *Ülkü*; new ideas of social development which inspired the policy of *Étatisme*, were championed in *Kadro* (1933); a populist conception of literature took shape in the columns of *Varlık* (1933-); the revival of racialist and Pan-Turanian ideals, particularly noticiable in the years of the Second World War, was marked by the appearance of the reviews *Bozkurt*, *Çınaraltı* etc.; the vogue for extreme left-wing views at the end of the war had its counterpart in the periodical *Görüşler* (and the short-lived newspaper *Gerçek*); the influence of American news magazines led to the appearance of their Turkish equivalents, such as *Akis* (Ankara) and *Kim* (Istanbul); the influence of serious British political weeklies made itself felt in the fortnightly *Forum* (Ankara) etc.

The years after the Second World War were marked by the political struggle between the Republican People's Party and its opponents, a struggle in which the Turkish Press played a prominent part. Between 1950 and 1960 the Democratic Party administration had an organ in Ankara in the daily *Zafer*, while in Istanbul the Government cause was defended by *Havadis* and criticized by the majority of the other dailies. The Turkish Press, as a whole, played an important part in preparing the ground for the military *coup d'état* of 27 May 1960 as well as in the political struggle which has followed it. Just as important, however, as this political rôle has been the increasing professional competence of the Press: equipment and lay-out were much improved, circulations soared (reaching the 300,000 mark), the industry became highly capitalized with a growing tendency to produce mass-circulation, non-political newspapers, providing not only news, but also entertainment. This tendency can be expected to gather strength, with a consequent reduction in the number of newspapers published in the country. Journalistic history was made in 1960 when the daily *Akşam* started simultaneous publication in Istanbul and Ankara, thus opening a new line of approach to the problem of increasing circulations. In the meantime improved communications and distribution have consolidated the dominant position of the Istanbul papers in the life of the Turkish Press.

(VEDAD GÜNYOL and ANDREW MANGO)

iv. — MUSLIM PRESS OF RUSSIA AND THE SOVIET UNION

Compared with the press of the other Islamic countries, the Muslim press of Russia is of relatively recent date, mainly on account of the hostility of the Russian authorities towards movements of cultural revival among the non-Russian peoples of the Empire.

Nevertheless, the first attempt to establish an organ in a Muslim language dates back to the beginning of the 19th century. It was due to a professor of Kazan University, Zapol'skiy, who in 1808 worked out a plan for a bilingual weekly in Russian and Tatar, but the project remained unfulfilled. In 1828, a second attempt was made, successfully this time, by a Russian official in the Military Administration of Transcaucasia, A. S. Sosnovskiy, who succeeded in publishing at Tiflis a Russian newspaper, *Tifliskie Vedomosti*, which also included an edition in Persian and, after in 1832, in Ādharī Turkish. After a few numbers this original venture came to an end, and we have to wait until 1870 to see the appearance of the first newspaper intended for Muslims, the *Türkistān Wilāyetiniñ Gazeti*, published at Tashkent in Uzbek, on behalf of the Chancellery of the General Government of Turkestan, by the Russian missionary N. P. Ostrumov. Five years later, at Baku, there appeared the Ādharī weekly *Ekinči*, edited by the author-schoolmaster Ḥasan Bey Melikov Zerdabi [*q.v.*]; and it is this little newspaper, with only 700 printed copies, that can be regarded as the true ancestor of the Muslim press in the Russian Empire. Quite soon it brought upon itself the hostility of conservative circles, and it was suspended by the Russian authorities in 1877.

The Muslim press of Russia only reached international rank with the famous *Terdjümān*, published at Baghče-Saray in 1883 by Ismāʿīl Bey Gasprinski [see GASPĪRALĪ ISMĀʿĪL], in the Crimean Tatar language strongly influenced by Ottoman Turkish. The *Terdjümān* survived until 1918. For some forty years it was the mouth-piece of the reform movement and of pan-Turkism in Russia, and for over twenty years remained the only press organ of the Muslims in Russia, since the severity of the Russian censorship over the Muslims, until 1905, prevented the rise of the national press. Until the revolution of 1905, in fact, apart from the above-mentioned newspapers there were only six organs of local significance. Four were in Ādharī Turkish : *Ḍiyāʾ* (1879), *Ḍiyā Ḳāfḳāsiyā* (1880), *Keshkül* (1884), and *Shark-i rūs* (1903) at Tiflis; one in Ḳazaḳ (Ḳīrghīz) : *Dālā Wilāyeti*, published in 1899 at Omsk (Siberia); and one in Ḳāzān Tatar at St. Petersburg: *Nūr*, in 1904.

After the publication of the Manifesto of 17 October 1905 granting liberty of the press to all the peoples of Russia, periodicals sprang up throughout all the regions of the Empire inhabited by Muslims, representing every sort of political opinion from right-wing conservative to left-wing socialist.

Thus, from 1905 until the revolution of February 1917, Muslims in the Russian Empire published 159 periodicals (newspapers and reviews) in the following languages : Ḳāzān Tatar, 62; Ādharī Turkish, 61; Uzbek, 17; Ḳazaḳ (Ḳīrghīz), 8; Crimean Tatar, 6; Arabic, 2; Türkmen, 2; Persian, 1. The principal centres for the editing and publication of the press were Baku (59 periodicals), Ḳāzān (22), Orenburg (13), Tashkent (12), St. Petersburg (9), Astrakhan (9), Ufa (6), and Baghče-Saray (5). Periodicals and newspapers were also published at Troïtzk, Ural'sk, Tomsk, Samarḳand, Ashkabād, Bukhārā, Samara, Ḳarasu-Bazar, Omsk, Erevan, Ḳoḳand, Gandja and Petropavlovsk.

The majority of the Muslim newspapers had only an ephemeral existence because of their very slender finances, lack of subscribers and, above all, the interference of the censorship which after 1908 again became very vigilant. Some of them, however, played

a leading part in developing a national feeling among the Turkish peoples of Russia.

Among the most remarkable which were read far beyond the frontiers of the Russian Empire, we should mention the liberal organs *Waḳīt* and *Shūrā* of Orenburg which, from 1906 to 1917, made themselves the disseminators of pan-Turkism in Russia; *Ḳāzān Mukhbire* (1905) and *Yulduz* (1906) in Ḳāzān; *Ḥayāt* (1904), *Irshād* (1905) and *Fuyudāt* (1906) in Baku; *Mollā Naṣreddīn* (1906) in Tiflis; the last-named, a satirical weekly, had a fairly wide circulation in Persian Ādharbāydjān. Other organs, of local importance and with a more restricted circulation, also exerted a lasting influence on the cultural life of the Muslims, such as the *Ḳazaḳ* of Orenburg (1913), published in Ḳazaḳ by Ahmed Baytursunov. In Turkestan alone, where the Russian authorities maintained a very close watch on the cultural development of the Muslim population, there existed no real press, all the organs which made their appearance there being swiftly banned by the censorship.

The overthrow of the monarchy in February 1917 introduced a new chapter in the history of the Muslim press in Russia. The earlier, and often apolitical, periodicals were succeeded by a 'committed' press reflecting the opinions of the various political groups of Muslim society which, after October 1918, whether from intention or force of circumstances, were to be involved in the Revolution and civil war. From February 1917 to the end of 1920, 256 periodicals made their appearance on Russian territory, spread over 53 towns and large villages. Inferior in quality to its predecessors, the press of the revolutionary period attempted to reach wider circles, both by a larger circulation and also by the use of language nearer to popular speech. Ḳāzān Tatar enjoyed unrivalled supremacy since nearly half (139 exactly) of the periodicals published during this period were in this language, Ādharī Turkish coming far behind with only 39 organs, followed by Uzbek (37), Ḳazaḳ (21), and Crimean Tatar(7). In 1917 other newspapers also appeared, in Turkish (2 at Batum), Ḳumīḳ (3 at Temir Khan Shura), in Avar, Abkhaz and Lak.

In 1921, with the victory of the Red Army in the civil war, a new era began, that of the Soviet press, distinguished from earlier periodicals by its monolithic character, its very wide circulation and, lastly, by the appearance of new languages. Under the Soviet regime, six Turkic languages, two Iranian languages and nine Ibero-Caucasian Muslim languages became literary languages. Until 1924-8 they were written in Arabic characters; between 1928 and 1930 they were given a Latin alphabet, which was replaced between 1938 and 1940 by the Cyrillic alphabet. These new languages are : Bashkir, Ḳīrghīz (formerly Ḳara-ḳīrghīz), Nogay, Ḳaraḳalpaḳ and Uyghur (Turkic languages); Kurdish and Tat (Iranian languages); Abkhaz, Kabard, Adighe, Čečen, Ingush, Abaza, Darghin, Lezg and Tabasaran (Ibero-Caucasian languages). The total number of periodicals has much increased. In 1954 in the Soviet Union there existed (counting only the dailies) : 190 newspapers in Uzbek, 171 in Ḳazaḳ, 116 in Ādharī Turkish, 107 in Ḳāzān Tatar, 72 in Ḳīrghīz, 70 in Tādjīk, 53 in Türkmen, 30 in Bashkir, 19 in Avar and Ossetic, 17 in Kabard, 13 in Ḳaraḳalpaḳ 11 in Darghin, 9 in Ḳumīḳ, 8 in Lezg, 5 in Abkhaz, 4 in Nogay, 3 in Uyghur and Lak, 2 in Tabarasan and Abaza, 1 in Adighe, 1 in Čerkes, 1 in Tat and 1 in Kurdish. Since then, new periodicals have been published in Čečen, Ingush, Crimean Tatar and Ḳaračay-balḳar.

Bibliography: No comprehensive study on the Muslim press of Russia exists, but only monographs or articles for certain regions. For the Tatar press, besides the basic work of Ismail Ramiev, *Waḳītlī Tatar Maṭbūʿātī*, Ḳāzān 1926, fragmentary information is contained in Elif-Bi, *Iz tatarskoy musul'manskoy pečati*, Ḳāzān 1908; Fedotov, *Pečat' Tatrespubliki*, in *Bulletin d'information du V.O.K.S.*, Moscow 1927, no. 23-5; T. Nasīrov, *Sovet vlastenin berenče ellerinda tatar vaḳītlī maṭbūʿātī*, in *Sovet Ädäbiyatī Ḳāzān*, no. 9 1956); A. Saadi, *Tatar ädäbiyatī ta'rīkhi*, Ḳāzān 1926; A. Safarov, *Z istorii tatarskoy periodičnoy presi- 1905-25*, in *Shidny Svit*, Kharkov 1928, no. 3-4 (in Ukrainian); Dj. Validov, *Očerki istorii obrazovannosti i litteraturī Tatar do revolyutsii 1917 goda*, Moscow 1933; P. Žuže, *Musul'manskaya pečat' v Rossii*, St. Petersburg 1911.

On the Caucasian Ādharī press, we have a detailed study in Jeyhun bey Hajibeyli, *The origins of the national press in Azerbaydjan*, in *The Asiatic Review*, xxvi (1930), fas. 88 and xxvii, fas. 90, and also an anonymous article *Ādherī maṭbūʿātīnīn mukhtaṣar ta'rīkhčesi*, in *Yeñi Ḳafkasiya*, Istanbul, iii/9. For the origins of the Caucasian press one may consult the article of I. Enikopolov, *Pervaya turkskaya gazeta na Kavkaze*, in *Kul'tura i pis'mennost' Vostoka*, iii, Baku 1928, as well as the monographs devoted to the newspaper *Ekinči*, the most important being *Ādharbāydjān maṭbūʿātīnīn yīllīġī-Ekinči*, Baku 1926. Several works have been devoted to the review *Mollā Naṣreddīn*, among them being A. H. M. Ahmedov, *Molla Nasreddin Žurnalīnīñ yayīlmasī ve ta'siri ḥaḳḳīnda*, in *Izvestiya Akademii Nauk Adher. SSR*, Series of Social Sciences, i, Baku 1958 and A. Sharif, *Molla Nasreddin*, Baku 1946.

Information on the history of the press in the Crimea, with more particular reference to the *Terdjümān*, is contained in the work of Cafer Seydahmet, *Gaspıralı Ismail Bey*, Istanbul 1934, and in the study of Ahmed Özenbashlī, *Gečen devrimize tenkitli bir bakīṣ*, in *Oku Ishleri*, Baghče-Saray June 1925.

For the press of Turkestan, we possess an excellent monograph of Ziya Saidov, *Uzbek vakītlī maṭbūʿātī tarihige matiriyyalar*, Samarkand-Tashkent 1927. For the Turkmen press, an article of Mihaylov, *Natsional'naya pečat' Turkmenii*, in *Revolutsiya i natsional'ni nosti*, Moscow 1931, no. 4 and for the press of Daghistān, that of Sh. Magomedov, *Kumīkskaya periodičeskaya pečat' v 1917-8 godakh*, in *Trudī Instituta Istorii Partii pri Dagestanskom obkome K.P.S.S.*, ii, Mahač-Ḳala 1958.

(Ch. Quelquejay)

v. — the Muslim press in China and Japan

(*a*) China.—China has a Muslim population of some ten to twelve million persons according to the census of 1959. About two-thirds live in Sinkiang province where they constitute an overwhelming majority. The following table contains data on the geographical distribution of Chinese mosques in 1935 and on Muslim periodical publications during the period 1908-39. We may assume that an average Chinese mosque serves 200 to 250 people. In the absence of precise statistics, the table therefore indicates the distribution of the Muslim population in the mid-Thirties.

DISTRIBUTION OF MOSQUES AND MUSLIM PERIODICALS IN CHINA

Province	Number of mosques (1935)	Number of periodicals (1908-39)
Anhwei	1,515	
Chekiang	239	
Chinghai	1,031	3
Fukien	157	
Honan	2,703	4
Hopei	2,942	33
Hunan	932	2
Hupei	1,134	4
Kansu	3,891	
Kiangsi	205	
Kiangsu	2,302	24
Kwangsi	429	2
Kwangtung	201	7
Kweichow	449	
Manchuria	6,811	2
Mongolia	1,083	1
Shansi	1,931	2
Shantung	2,513	1
Shensi	3,612	3
Sinkiang	2,045	
Szechwan	2,275	1
Yünnan	3,971	6
Others		5
Total	42,371	100

A total of 100 Chinese-Muslim papers have been located. One was published abroad (1908), and for 13 the dates of origin are unknown. The remaining 86 were founded between 1913 and 1939; 18 magazines being established between 1913 and 1926. In the decade marked by the establishment of the Chinese Nationalist Government in Peking (1927) and the beginning of the Chinese-Japanese conflict (1937), the press expanded rapidly, and 63 new journals came into being—38 after the capital was moved from Peking to Nanking (1932). The outbreak of hostilities between China and Japan brought repressions and most of the papers disappeared. The five new periodicals which were issued during the next two years were actually official publications of the two combatants aimed at gaining increased Muslim support of the war effort.

The frequency of issue is known for 71 magazines: 12 appeared at least weekly; 50—monthly or semi-monthly; 9—quarterly or annually. One magazine had a circulation of more than 3,000 copies; eight others ranged from 1,000 to 2,000 copies, while the remainder served local needs and ran to a few hundred copies only. Not more than six periodicals exceeded 40 pages.

Most of the publications appeared in Chinese, though a few were written partly or entirely in Japanese, Arabic, Uygur (Eastern Turkī), and English. The great majority were religious in content, while the remainder in addition dealt with historical or contemporary problems. Most of the magazines were printed and circulated in the cultural and national centres of Peiping and Nanking, and in large port cities, such as Tientsin, Shanghai, Canton, and Hongkong.

Yüeh Hua (月華), Peiping, was the leading Muslim national magazine with a circulation of 3,000. It was begun in 1929 under private subsidies and attempted to represent all factions fairly. In its columns were domestic and international news items pertaining to Islam.

T'u Chüeh (突崛), Nanking, was established in 1934. It was the most substantial Muslim organ in the capital area, and advocated the "Three People's Principles", improvement of education, domestic unification, and contacts with co-religonists abroad.

T'ien Fang Hsüeh Li Yüeh K'an (天方學理月刊), Canton, was founded in 1929. It was distributed monthly without charge, but financial support was solicited. *T'ien Fang* dealt chiefly with contemporary issues, and the editor answered readers' queries in a special column.

The Muslim communities in the large cities during the 1930's organized protest demonstrations under *Ahungs* (*Mullahs*) whenever Islam was slandered in the Chinese press. In some instances the offices and printing plants of the offending newspapers were wrecked. The Nationalist government, needing the good will of its Muslim subjects, took prompt action to prevent further insult.

During the first decade of the twentieth century, in addition to native papers, some liberal Arabic and Turkish journals advocating constitutional reform were imported from Constantinople. The need for them was gone after the revolution of 1911.

The Muslim press in China was late in developing because of low educational and economic standards and because of language difficulties. Arabic was known only to religious leaders and to a few theologically trained laymen. The *Ahungs*, on the other hand, had often only a rudimentary knowledge of the Chinese script. Most of the population were illiterate. The declining Manchu dynasty was suspicious of any particularistic or sectarian tendencies, especially in the Turkī-speaking north-west borderland. One might say that the revolution of 1911 paved the way for the Muslim press in China, while the Communist revolution of 1949 decisively ended it. Muslim publication efforts were fragmentary. Most magazines were too small or too ephemeral to have a lasting influence. In contrast to the Protestant and Catholic missions in China, the Muslims lacked a centralized organization and adequate funds.

(*b*) Japan.—Japan has very few Muslims, but Japanese interest in Islam dates from the invasion of China (1937-45) when efforts were made to win over Chinese Muslim minorities. Prior to that date Japan experienced three private attempts to publish Muslim papers. *Hsing Hui* (醒回 "Muslims Awake") was established as a quarterly by Chinese students of the Muslim College in Tokyo for distribution in China; it dates back to 1908. In 1925, I. T. Sakuma, a Japanese business man and convert to Islam, founded in Shanghai the progressive *Mu Kuang* (穆光 "Light of Islam") with articles in Chinese, Japanese, and English. He desired an Islamic revival in China, Korea, and Japan and even advocated the translation of the Ḳur'ān into Chinese; *Mu Kuang* survived only three issues. *Hui Chiao* (回教 "Islam"), a Peiping monthly devoted to social and historical problems, was published in Japanese between 1927 and 1929. The

issues also contained biographies of Chinese Muslim leaders.

Following the actual occupation of Chinese territory, Japanese military authorities launched new Muslim papers, or adapted existing periodicals to their own purposes. The Japanese took over the ten-year old illustrated monthly *Chen Tsung Pao* (震宗報) after they occupied Peiping in 1937. Thereafter it assumed a strongly anti-Soviet character. The *Hsing Shih Pao* (醒時報), a non-political monthly, first appeared in Mukden, Manchuria, in 1925. It was revived by the Japanese in 1937, reporting mainly on Muslim life in Japan. Copies were distributed locally free of charge. Another monthly by the name of *Hui Chiao* (回教 "Islam") began to appear in April 1938 under the auspices of the Japanese-sponsored United Chinese Muslim Association, Peiping. This was a Japanese propaganda organ, but it was printed in Chinese. The *Hsin Min Pao* (新民報), official Chinese newspaper of the Japanese occupation authorities in Peiping, launched in October 1939 a weekly supplement, the *Tsung Chiao Chou K'an* (宗教週刊), which furnished historical and religious information on Islam.

Japanese research on Islam and Islamic peoples is scattered among numerous academic journals. Only two Japanese periodicals are entirely devoted to this topic. Both are published in Tokyo and date from 1959 and 1960 respectively. *Chû-Kintô geppô* (中近東月報 "Middle and Near East Monthly") is issued in mimeographed form by the Ministry of Foreign Affairs. The Ajia Rengô Yuko Kyokai (アシア達合好友會) publishes *Arabu* (ヤテブ "Arab") reporting on Arabs and Arab countries.

Bibliography: R. Loewenthal, *The Mohammedan press in China*, in *Collectanea Commissionis Synodalis in Sinis*, Peking, xi/9-10 (Sept.-Oct. 1938), 867-94, with 2 charts.—Reprinted in: *The religious periodical press in China*, Peking, The Synodal Commission in China, 1940, 211-49.

vi. — THE HAUSA PRESS

There is a regular weekly newspaper in Hausa, *Gaskiya ta fi kwabo*, printed in Zaria, which began publication in January 1939. In addition, news sheets in the main recognized Hausa dialects are also published, while the *Kano Times* includes articles in the Hausa language.

It was on Saturday 14 November 1931 that there issued from the newly built printing house at Kaduna the first number of *The Northern Provinces News*. It consisted of sixteen pages of items in three columns, printed respectively in English, in Hausa in a roman orthography, and in Arabic, together with a page of photos of stallions and agricultural subjects. The reader is told "Mallams of the Secretariat have written the Hausa and Arabic translations, and compositors sent to the Press by the Emir of Kano have set up the Arabic type". This number was produced "as a basis for discussion as to whether Residents and Native Chiefs would desire the regular issue of a News Sheet of this or a similar type in the future". The next issue was on 9 April 1932, and had the Hausa title added, *Jaridar Nigeria Ta Arewa*, together with an Arabic title. It consisted of twenty-six pages of print and three pages of pictures. The third number also included items translated into two other Northern vernaculars, Tiv and Fula (Fulani). By July 1934, when number eight appeared, the paper was of a smaller format, and was printed only in Hausa, and no longer bore titles in English and Arabic. The tenth issue, 1 June 1935, included an article by R.M. East, of the Translation Bureau, Zaria, on the subject of Hausa books and writing. The spelling included new letters, ḳ, ḍ and ḅ.

After the Translation Bureau in Zaria began publication of *Gaskiya ta fi kwabo*, it also produced a smaller news sheet *Jakadiya*, in a simpler form of the language, as well as a news sheet in Tiv. In addition, it undertook the production of a large number of cheap pamphlets in Hausa on a wide range of educational topics, from well-digging to baby care. More literary works in Hausa were produced, as well as books in other Nigerian languages, such as Igbo. The Hausa newspaper has helped to develop the written language and has set a standard for the importation into Hausa of a large number of borrowed words—mostly from English. The printing of the news also in the chief dialects is now enriching the standard language, by enabling people from all over the Hausa-speaking area to share and enjoy the different forms, expressions and idioms of this widely used and colourful language. (J. CARNOCHAN)

vii. — INDIA and PAKISTAN

viii. — EAST AFRICA

[see SUPPLEMENT].

DJARĪMA (A.), also *djurm*, a sin, fault, offence. In Ottoman usage, in the forms *djerīme* and *djereme*, it denoted fines and penalties (see DJURM). In the modern laws enacted in Muslim countries it has become a technical term for *crime* (*djurm* in Pakistan). For the corresponding Islamic concepts, see ḤADD, and for penal law in general, ʿUḲŪBA. (ED.)

DJARĪR B. ʿAṬIYYA B. AL-KHAṬAFA (HUDHAYFA) B. BADR was among the most important *hidjāʾ*-writers of the Umayyad period (the other two were his rivals al-Akhṭal and al-Farazdaḳ [*qq.v.*], and may be considered one of the greatest Islamic-Arabic poets of all time. He belonged to the clan of the Banū Kulayb b. Yarbūʿ an, a branch of the Muḍarī Tamīm who were widespread in the eastern part of central and northern Arabia. He was born in the middle of the 1st/7th century and began by entering into verbal disputes with second class writers in his own district, ostensibly because he himself had been attacked but in fact because of his naturally argumentative disposition. In 64/683-4 or shortly afterwards he began his famous forty-year-long dispute with al-Farazdaḳ, who was a foe worthy of his steel. It was caused indirectly by a long quarrel between the Banū Dhuhayl, a branch of the Banū Yarbūʿ, and the Mudjashiʿ, also Tamīmī and the tribe to which al-Farazdaḳ belonged, over the theft of a camel. After they had abused each other from a distance for some time, Djarīr went to ʿIrāḳ and met al-Farazdaḳ for the first time in Baṣra. There were such scenes that the authorities had to put a stop to the meetings—although without any lasting success.

Djarīr began his public career by writing poems

in praise of al-Ḥakam b. Ayyūb, an official of the governor of ʿIrāķ, al-Ḥadjdjādj. Al-Ḥakam recommended him to his master who invited him to Wāsiṭ. After staying with al-Ḥadjdjādj for some time and writing a series of *ķaṣīda*s of praise to him, Djarīr was sent with his son Muḥammad to ʿAbd al-Malik's court in Damascus. He was first rejected, then graciously received by ʿAbd al-Malik. But in the long run their relationship was not particularly good, for the caliph favoured the Taghlibī Christian al-Akhṭal ("al-Akhṭal is the poet of the Umayyads!") who took al-Farazdaķ's part against Djarīr. Djarīr's relations with ʿAbd al-Malik's successor al-Walīd were even worse; the latter supported his favourite ʿAdī b. al-Riķāʿ [*q.v.*] against Djarīr's attacks. In fact Djarīr and his friend Ladjʿa al-Taymī are even said to have been whipped and publicly stripped on account of some satirical lines on the court ladies. However he was on a rather better footing with ʿUmar II who, as a pious man, took no very passionate interest in either eulogies or satires, and remained courteously neutral. Nevertheless he does seem to have preferred Djarīr to his rivals. Djarīr also attempted to win the favour of the later caliphs Yazīd II and Hishām by writing poems in praise of them. Finally, in old age he retired to the Yamāma where he owned property (in Uthayfiyya). He died there when over eighty, in 110/728-9 or a little later, shortly after the death of his opponent al-Farazdaķ. Among his numerous descendents were three sons (Bilāl, ʿIkrima and Nūḥ) who also produced poetry but did not, however, approach their father's importance.

In Djarīr's *dīwān*, collected by Muḥammad b. Ḥabīb (died 245/859), the satirical poems occupy the most space, and of them the larger number are directed against al-Farazdaķ. The extent to which contemporaries were interested in this poetic battle is shown by a report of a quarrel which broke out among soldiers in al-Muhallab's camp during the Azraķī war—a quarrel eventually decided (thanks to one of the Khāridjī soldiers) in Djarīr's favour. The total number of poets satirized by Djarīr is something over forty. After the satirical poems, the poems of praise form the largest category in the *dīwān*, but it also contains some fine elegies. According to his adversary al-Akhṭal, Djarīr was particularly skilled in the *nasīb* and the *tashbīh*. The Arabic literary historians and critics rightly praise Djarīr's fluent diction.

Djarīr's work does indeed show him to be a true descendent of the old Bedouin poets, with all their strong points and weaknesses. In his work and that of his rivals al-Akhṭal and al-Farazdaķ, the old Arabic form of *ķaṣīda*-poetry underwent "an Indian summer of undeniable loveliness' (G. E. Von Grünebaum).

There are several editions of Djarīr's *dīwān* in which the poems are sometimes arranged according to the rhyme-letters. Maḥmūd ʿAbd al-Muʾmin al-Shawāribī is the man chiefly responsible for the first of these editions (Cairo 1313); its sources are not given. The editions of Muḥammad al-Sāwī (Cairo 1353), and Karam al-Bustānī (Beirut 1379/1960) are no more worthy of critical attention. The *Naķāʾid*, however, of Djarīr and Farazdaķ, as collected by Abū ʿUbayda (d. ca. 210/825) and revised by others, have been published in a model edition by A. A. Bevan (Leiden 1905-12), and furnished with a glossary and indexes. Finally, the *Naķāʿid* of Djarīr and Akhṭal have also been published, according to the recension of Abū Tammām, by the Akhṭal scholar Salḥānī (Beirut 1922). Both *Naķāʾiḍ* also contain poems attacking other persons and their answers.

Bibliography: Djumaḥī (ed. Hell), 86-108; Ibn Ķutayba, *al-Shiʿr*, 283; *Aghānī*[3], viii, 3-89; Marzubānī, *Muwashshaḥ*, 118-32 and *passim*, cf. Brockelmann, II, 53-5; S I, 86-7. Cf. also Rescher, *Abriss*, i, 265-74 and A. Schaade, *Djarīr* (supplement to the German edition of *EI*[1].

DJĀRIYA [see ʿABD].

DJĀRIYA B. ĶUDĀMA B. ZUHAYR (or: b. Mālik b. Zuhayr) B. AL-ḤUṢAYN B. RIZĀḤ B. ASʿAD B. BUDJAYR (or: Shudjayr) B. RABĪʿA, ABŪ AYYŪB (or: Abū Ķudāma, or: Abū Yazīd) AL-TAMĪMĪ, AL-SAʿDĪ, nicknamed "al-Muḥarriķ", the "Burner"—was a Companion of the Prophet (about the identity of Djāriya b. Ķudāma with Djuwayriya b. Ķudāma see *Tahdhīb*, ii, 54, 125, and *Iṣāba*, i, 227, 276). Djāriya gained his fame as a staunch supporter of ʿAlī b. Abī Ṭālib.

According to a tradition quoted by Ibn Saʿd (*Ṭabaķāt*, vii/1, 38) Djāriya witnessed the attempt at the assassination of ʿUmar; later, he was in Baṣra when the forces of Ṭalḥa and al-Zubayr entered the city. He harshly reproached ʿĀʾisha (al-Ṭabarī, ed. Cairo 1939, iii, 482; *al-Imāma wa 'l-Siyāsa*, ed. Cairo 1331 A.H., i, 60), and took part in the battle of the Camel with ʿAlī (although his tribe, the Saʿd, remained neutral); he was given command of the Saʿd and the Ribāb of Baṣra in the battle of Ṣiffīn and distinguished himself in this battle (Naṣr b. Muzāḥim: *Waķʿat Ṣiffīn*, 153, 295, ed. Beirut). He seems to have approved the idea of arbitration and was among the delegation of the heads of Tamīm, who tried to mitigate al-Ashʿath and the Azd (al-Mubarrad, *al-Kāmil* (ed. Wright) 539).

Djāriya remained faithful to ʿAlī after the arbitration and supported him in his struggle against the Khawāridj: he was at the head of the troop levied with difficulty by ʿAbd Allāh b. ʿAbbās from Baṣra (37 A.H.) and despatched to fight the Khawāridj (al-Ṭabarī, iv, 58; Caetani, *Annali*, x, 85). He remained faithful when the influence of ʿAlī began to shrink and ʿAlī was deserted by his friends. After his conquest of Egypt Muʿāwiya, being aware of the peculiar situation in Baṣra, in which the differences between the tribal groups were acute and the partisans of ʿAlī not numerous, decided to wrest the city from ʿAlī. The details about these events holding ʿIrāķ are provided by al-Balādhurī's *Ansāb al-Ashrāf* among other sources (fols. 206b-209a). Muʿāwiya sent to Baṣra (in 38 A.H.) his emissary, ʿAbd Allāh b. ʿĀmir (or b. ʿAmr) al-Ḥaḍramī, [see IBN AL-ḤAḌRAMĪ] in order to win the hearts of the Banū Tamīm in Baṣra. He gained in fact the protection of the Banū Tamīm. The deputy prefect of Baṣra Ziyād b. Abīhi was compelled to seek protection for himself with the Azd in Baṣra. ʿAlī sent his emissary, Aʿyan b. Ḍubayʿa al-Mudjāshiʿī in order to prevent the fall of the city into the hands of Muʿāwiya; he was, however, killed by a group of men said to have been Khāridjites (although the version of the participation of ʿAbd Allāh Ibn al-Ḥaḍramī seems to be plausible). Ziyād asked ʿAlī to send to Baṣra Djāriya b. Ķudāma, who was highly respected in his tribe (Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-Balāgha*, i, 353). Djāriya arrived at Baṣra with a troop of 50 warriors (or 500—see al-Ṭabarī, iv, 85; or 1000 or 1500—see *Ansāb*, fol. 208b), met Ziyād b. Abīhi, rallied the followers of ʿAlī, succeeded in winning the hearts of groups of Tamīm who joined him, attacked the forces of Ibn al-Ḥaḍramī and defeated them. Ibn

al-Ḥaḍramī retreated with a group of 70 followers to a fortified Sāsānid castle, belonging to a Tamīmī called Sunbīl (or Ṣunbīl). Djāriya besieged the castle, ordered wood to be placed around it and set the wood on fire. Ibn al-Ḥaḍramī and his followers were burnt alive. There are controversial traditions about the course of the encounter between Djāriya and Ibn al-Ḥaḍramī (see *Ansāb*, fol. 208b). According to a rather curious tradition (refuted by al-Balādhurī) Djāriya came to Baṣra as an emissary of Muʿāwiya together with Ibn al-Ḥaḍramī, but forsook him however in Baṣra (*Ansāb*, fol. 209a). After the victory of Djāriya, Ziyād returned to the residence of the Governor of Baṣra.

The authority of ʿAlī was thus secured in Baṣra. Ziyād b. Abīhi praised in his letter to ʿAlī the action of Djāriya and described him as the "righteous servant" (*al-ʿabd al-ṣāliḥ*). It was Djāriya who advised ʿAlī in 39 A.H. to send Ziyād to the province of Fārs to quell the rebellion of the Persians who refused to pay their taxes (al-Ṭabarī, iv, 105). According to Ibn Kathīr (cf. Ibn al-Athīr, *al-Kāmil*, iii, 165) the revolt was caused by the brutal action of burning committed by Djāriya (*al-Bidāya*, vii, 320).

Djāriya fought his last fight in the service of ʿAlī against Busr b. Abī Arṭāt [*q.v.*] in 40 A.H. When the tidings about the expedition of Busr reached ʿAlī he dispatched Djāriya with a troop of 2000 men to pursue Busr (another troop under the command of Wahb b. Masʿūd was also despatched by ʿAlī). Djāriya, following Busr, reached the Yemen (so al-Balādhurī, *Ansāb* 211b; according to al-Ṭabarī, iv, 107 he reached Nadjrān) and severely punished the partisans of Muʿāwiya. Pursuing the retreating Busr, Djāriya arrived at Mecca and was told that ʿAlī had been killed. He compelled the people of Mecca to swear allegiance to the Caliph who would be elected by the followers of ʿAlī. In Medina he compelled the people to swear allegiance to Ḥasan b. ʿAlī.

In the time of Muʿāwiya there was a reconciliation between Djāriya and Muʿāwiya. Anecdotal stories report about the talks between Djāriya and Muʿāwiya (*al-Naḳāʾiḍ*, ed. Bevan, 608; al-Balādhurī, *Ansāb*, fol. 358b; al-Djāḥiẓ, *al-Bayān*, ii, 186; al-Mubarrad, *al-Kāmil*, ed Wright, 40). According to a fairly reliable tradition in al-Balādhurī's *Ansāb* (fol. 1048b) Muʿāwiya granted Djāriya a large fee of 900 *djarīb*.

Djāriya died in Baṣra. His funeral was attended by al-Aḥnaf.

DJARR [see NAḤW].

DJARRĀḤ, "he who heals wounds", "surgeon"; *djirāḥa*, "the art of healing wounds , "surgery", from *djurḥ*, "injury", "wounds"—like the German "Wund , whence "Wundarzt", "Wundarznei", etc. In the time of the Arabic versions of the Greek texts on medicine, another expression corresponding exactly to *djirāḥa* made its way into Arabic medical language and was adopted by the classical authors, namely: *ʿamal bi ʾl-yad* (Ibn Sīnā) or *ʿamal al-yad* (al-Zahrāwī), "work, action performed with the hand" or "by hand" (which was only a literal translation of χειρουργία). But this last expression, perhaps for practical reasons of usage, was gradually to lose ground in the course of centuries and ultimately to be replaced by the first, which is the only one to have remained in use until today, with all its derivatives. However, it is under the title *ʿamal bi ʾl-yad* or *ʿamal al-yad*, in classical texts, that we find mentioned many expressions relating to medico-surgical techniques. From general surgery we may note such terms as *rabṭ* "ligature" (of veins), *ḳaṭʿ* "excision" (of soft diseased substance), *baṭṭ* and *batr* "incision" (for the removal of morbid matter), *kayy* "cauterization by fire (from καίειν "to burn"), with the object of surgical excision; from specialized surgery such terms as *ḳadḥ* "operation for cataract", "*reclinatio*"); from minor or simple surgery, *djabr* "reduction" of a fracture (*kasr*) or luxation (*khalʿ*); from manual practices having medical purposes, like *ḥadjm* "cupping" without or after the *sharṭ* "scarification", *faṣd* "bleeding", *kayy* itself as a revulsive or stimulating remedy, etc.

From *ʿamal* [*al-yad*] there remain in modern Arabic only the words *ʿamaliyya*, followed by the adjective *djirāḥiyya*, "operation", or "surgical operation" properly speaking, and *ʿamalī*, "operative" or "operational".

In old texts one very often comes across the forms [*ʿilādj*] *bi ʾl-ḥadīd* or *bi ʾl-āla*, the [*cura*] *cum ferro* and *cum instrumento* respectively of the Latin translators of the Middle Ages, referring specifically to surgical operations which necessitated the use of cutting instruments.

Djarrāḥ occurs for the first time in Arabic literature in translations of the 3rd/9th century, and from there the expression made its way into medical literature. As the name of a well-known family we find the word in the 4th/9th century [see Ibn al-Djarrāḥ]. However, in contradistinction to the custom of the Hellenistic-Roman period, in Islam, as in mediaeval Europe, the surgeon has always been regarded as a worker of an inferior order. It is probable that this point of view derives in essence from the Islamic aversion from any interference with the condition of the human body, and even with the bodies of animals (the prohibition of vivisection of animals). With regard to the most celebrated and distinguished doctors in Islam such as Ibn Sīnā and Ibn Zuhr, we know that they vigorously expressed their dislike of every sort of surgical treatment, which they left to the *djarrāḥ* and *mudjabbir* (bone-setter and bone-healer). In spite of that, Ibn Sīnā devoted a large part of his *Ḳānūn* to the art of surgery (*ʿilm al-djirāḥa*), and his precursor ʿAlī b. al-ʿAbbās al-Madjūsī (d. 384/994) treated surgery in great detail in the ninth book of his work *Kāmil al-ṣināʿa*, devoting no less than 110 chapters to it, and added to the tenth book a special theory of surgical therapy.

The only specialized surgical manual of any importance in Islamic medical literature seems to be *al-ʿUmda fī ṣināʿat al-djirāḥa* of Ibn al-Ḳuff

(Syria, 7th/13th century). The work which exerted the greatest influence on the West was the part on surgery by Abu 'l-Ḳāsim al-Zahrāwī (Cordova, 4th/10th century), section XXX of his *Kitāb al-Taṣrīf*. This part was translated into Latin at a very early date and was studied with great enthusiasm in the West, although close links between this work and Paul of Aegina's surgery can be noted. It is illustrated with drawings of instruments. In the works on *ḥisba* [*q.v.*] one frequently finds a section devoted to doctors, oculists and surgeons, as for example in the unpublished book of al-Shayzarī. In it the surgeon is required to be familiar with the anatomy and therapy of Galen (Djālīnūs [*q.v.*]) and to possess a well-assorted set of instruments which must include methods for checking bleeding. The work of the bone-setter (*mudjabbir*) is given special attention by al-Shayzarī: he is required to know the number and shape of all the bones as well as Paul of Aegina's chapter on bone fractures and sprains.

Throughout the Middle Ages, Arab surgery was always advanced in comparison with European surgery, and indeed it helped the latter to make great advances (it is known that Lanfranc of Milan, a famous exponent of surgery in Paris in the 13th century, had based his theories almost exclusively on the *Maḳāla fi ʿamal al-yad*, the famous treatise *De chirurgia* of Abu 'l-Ḳāsim al-Zahrāwī). But Arab surgery avoided every kind of destructive operation (amputation), even apart from prohibitions or scruples of a religious nature. Nor did it fail to contribute as well to the knowledge of the human body, replacing anatomical dissection, however, casually and in a limited way. Incidentally, *ʿilm al-tashrīḥ* "anatomy" was always regarded as an indispensable science even in the practice of specialized surgery. In this connexion one may recall the anecdote of al-Rāzī dismissing the man who was to have operated on him for cataract, but who had been unable to answer the questions on ocular anatomy previously put to him by the great doctor (Ibn Abī Uṣaybiʿa).

al-**DJARRĀḤ** b. **ʿABD ALLĀH** al-Ḥakamī, Abū ʿUḳba, an Umayyad general, called *Baṭal al-Islām*, 'hero of Islam', and *Fāris Ahl al-Shām*, 'cavalier of the Syrians'. He was governor of al-Baṣra for al-Walīd (Caliph 86-96/705-15) under al-Ḥadjdjādj, then governor of Khurāsān and Sidjistān for ʿUmar b. ʿAbd al-ʿAzīz, till deposed by ʿUmar after a year and five months (99-100/718-9) for harsh treatment of the new converts to Islam in Khurāsān. In 104/722-3 al-Djarrāḥ was appointed governor of Armenia with orders to attack the Khazars, who at this time were threatening the lands south of the Caucasus. Advancing from Bardhaʿa, he occupied Bāb, the frontier town (see bāb al-abwāb), near which he defeated a large Khazar force under 'Bārdjīk, the son of the Khāḳān'. Continuing his advance round the eastern end of the Caucasus, al-Djarrāḥ captured the Khazar towns of Balandjar and Wabandar, and reached the neighbourhood of Samandar, probably Ḳizlar (Kizliyar) on the Terek, before withdrawing. Some time later he was recalled, but was reappointed in 111/729-30. Next year the. Khazars appeared in force in his province and were met by al-Djarrāḥ with an army of Syrians and local levies in the plain of Ardabīl (Mardj Ardabīl). Here for several days in Ramaḍān 112/November-December 730, a great battle was fought, which ended in the total defeat of the Muslims and the death of al-Djarrāḥ. The Khazars temporarily occupied the whole of Ādharbāydjān, their cavalry raiding as far south as Mosul. The loss of al-Djarrāḥ caused wide-spread consternation and grief, especially among the soldiers. He is said to have been so tall a man that when he walked in the Great Mosque of Damascus, his head seemed to be suspended from the lamps.

(D. M. Dunlop)

DJARRĀḤIDS or Banu 'l-Djarrāḥ, a family of the Yemeni tribe of Ṭayy which settled in Palestine and in the Balḳāʾ region, in the mountains of al-Sharāt as well as in the north Arabian desert where the two hills of ʿAdjāʾ and Salmā, known also as the mountains of the Banū Ṭayy, are part of their territory. This family attained some importance at the end of the 4th/10th and 5th/11th centuries, but without ever succeeding in creating a state as the Banū Kilāb tribe did at Aleppo, or in having a capital, except for a very short time at Ramla. The Banu 'l-Djarrāḥ followed a policy of vacillation between the Fāṭimids and the Byzantines, at times supporting one side and at times the other, not hesitating to flatter abjectly either of them when danger threatened, or to betray them, and only abandoning these equivocal tactics to seize the chance of plundering towns or the countryside or caravans on pilgrimage. In general they remained essentially Bedouins, with the qualities and failings of the Arabs of the desert, and their activities were far from glorious.

The first of the Banu 'l-Djarrāḥ to figure in the chronicles was named Daghfal b. al-Djarrāḥ and was an ally of the Ḳarmaṭians. At the time of his expedition against Egypt in 361/971-2, al-Djannābī [*q.v.*] left one of his officers with Daghfal at Ramla. During the second Ḳarmaṭian invasion of Egypt in 363/974, a Djarrāḥid named Ḥassān b. al-Djarrāḥ was in the Ḳarmaṭian army, and it was thanks to his defection, in return for a bribe of money by the caliph al-Muʿizz, that the Ḳarmaṭian force was routed after reaching the gates of Cairo. Daghfal and Ḥassān are possibly one and the same person.

Some years later Daghfal's son Mufarridj made his appearance, and was to remain in prominence until 404/1013-4; certain texts give his name wrongly as

Dag͟hfal b. al-Mufarridj. At the time of the caliph al-ʿAzīz's expedition against Alptekīn, a Turk who had seized Damascus and allied himself with the Ḳarmaṭians, in the battle which took place outside Ramla in Muḥarram 367/August-September 977. Alptekīn took to flight and was found dying of thirst by Mufarridj with whom he was on friendly terms. As the caliph had promised 100,000 dinars to anyone who handed over Alptekīn to him, Mufarridj, whose allegiance at that moment is not specified in the records, had Alptekīn kept in custody at Lubnā. He then went to the caliph and, on receiving an assurance that the offer of the reward still held good, betrayed Alptekīn and took him to the caliph. Two years later we find him involved in the Ḥamdānid Abū Tag͟hlib's venture in Palestine. For the moment he was in control of Ramla, a fact recognized by the head of an Egyptian army, al-Faḍl, whom the vizier Ibn Killīs had sent into Syria at that time against a usurper from Damascus, Ḳassām, and Abū Tag͟hlib. Mufarridj was then on bad terms with the Banū ʿUḳayl; as they appealed to Abū Tag͟hlib, war broke out between him and Mufarridj who was supported by Faḍl. Abū Tag͟hlib was defeated and made prisoner by a supporter of Mufarridj. Faḍl asked the Djarrāḥid to surrender Abū Tag͟hlib to him so that he might take him to Egypt. Fearing that the caliph might use Abū Tag͟hlib against himself, Mufarridj killed his prisoner with his own hand.

The agreement between Mufarridj and Faḍl did not last long, and Faḍl turned against him. But Mufarridj was sufficiently adroit to persuade the caliph al-ʿAzīz to give orders to his general to leave him in peace, so allowing Mufarridj to become master of Palestine once again and to ravage the land (370/980). His exactions led the caliph to send troops against him in the following year. Being put to flight, he went off to raid a caravan of pilgrims returning from Mecca, probably at the end of 371/June 982. He was more fortunate against a second Fāṭimid force which he crushed at Ayla. He returned to Syria but was defeated and, taking the desert route, sought refuge at Ḥimṣ with Bakdjūr, the governor of the Ḥamdānid Saʿd al-Dawla, probably at the end of 982; from there he went on to Antioch where he sought protection and help from the Byzantine governor. He appears to have received nothing more than gifts and fair words. It is not certain that he returned to Syria, for after 373/983 we find him accompanying Bardas Phocas the Domesticus when he went to the rescue of Aleppo after it had been attacked by the rebel Bakdjūr. Warned by him of the imminent arrival of the Byzantine troops, Bakdjūr took to flight.

Mufarridj then seems to have rejoined Bakdjūr, for when the latter received from the caliph al-ʿAzīz the governorship of Damascus, entering office in Radjab 373/December 983, the vizier Ibn Killīs put the caliph on his guard against a possible revolt by Bakdjūr with the warning that he had Mufarridj with him, and that he was an enemy. He followed Bakdjūr when the latter, threatened by a Fāṭimid army, left Damascus for Raḳḳa in Radjab 378/October 988. In the following year we find him attacking a caravan of pilgrims in north Arabia. It is said that Ibn Killīs regarded him as a dangerous individual and that on his deathbed in 380/991 he advised his master not to spare Ibn Djarrāḥ if he fell into his power. Nevertheless the caliph pardoned him, for next year he had a gift of apparel and horses sent him and invited him to take part in the expedition against Aleppo for which the Turkish general Mangūtekīn was making extensive preparations. But we do not know if he took any part in the campaign of 382/992 or in subsequent campaigns. We find no other mention of him until 386/996, the year of al-Ḥākim's arrival.

At that period he was supporting Mangūtekīn, the governor of Damascus, in his attempt to seize power from Ibn ʿAmmār and the Kutāma, and took part in the fighting led by the Turkish general outside ʿAsḳalān against Sulaymān b. Djaʿfar b. Falāḥ. Following his usual tactics, however, he did not hesitate to desert Mangūtekīn and to cross over to Sulaymān's camp. It was one of his sons, ʿAlī, who pursued and captured Mangūtekīn when he took to flight.

In 387/997 he tried to take Ramla and laid waste the district. The new governor of Damascus, Djaysh b. Ṣamṣāma, having crushed ʿAllāḳa's revolt at Tyre, attacked and gave chase to Mufarridj who took refuge in the mountains of the Banū Ṭayy. When on the point of being captured he took part in a little comedy, sending the old women of his tribe to ask for *amān* and pardon, which were granted. And thus in 396/1005-6 we find Mufarridj sending his three sons ʿAlī, Ḥassān and Maḥmūd with a large number of Bedouins to assist al-Ḥākim's troops against the rebel Abū Rikwa. But in the following year he held up pilgrims from Bag͟hdād north-east of the mountains of ʿAdjā' and Salmā, that is to say in Ṭayyī territory, and compelled them to pay tribute; as the enforced halt had made them lose time, they were obliged to turn back and to call off their pilgrimage.

Some years later, an opportunity occurred for Mufarridj to play a part of genuinely political significance. In about 402/1011-2 the Fāṭimid vizier Abu 'l-Ḳāsim al-Ḥusayn b. ʿAlī al-Mag͟hribī fled and took refuge in Palestine at the encampment of Mufarridj's son Ḥassān who gave him his protection. The caliph having given the governorship of Damascus and the command of troops in Syria to Yārūk͟h, a Turk, Mufarridj's sons were unwilling to submit to his authority, representing to their father the danger to which they would be exposed from this all-powerful governor and advising him to attack Yārūk͟h before he arrived at Ramla. The vizier al-Mag͟hribī also stirred up Ḥassān against Yārūk͟h, with the result that the Djarrāḥids laid an ambush for him on the G͟hazza road, took him prisoner and, at al-Mag͟hribī's instigation, occupied Ramla. Ḥassān, fearing that his father would yield to the pleas of the caliph to have Yārūk͟h set free, had him beheaded. Urged on by this same al-Mag͟hribī, Mufarridj took a further step towards rebellion against al-Ḥākim at the beginning of 403/July 1012 when, at Ramla, he proclaimed an anti-caliph in the person of the ʿAlid S͟harīf of Mecca. But al-Ḥākim knew that it was always possible to suborn the members of this family. He had already arranged for Ḥassān, who had been entrusted with the care of Djawhar's grandsons, to betray them to one of the caliph's officers who had them executed. He also succeeded in persuading Ḥassān and his father to abandon the anti-caliph who returned crestfallen to Mecca, whilst al-Mag͟hribī fled to ʿIrāḳ.

The Djarrāḥids remained masters of Palestine for only two years and five months. During this period Mufarridj tried to win the favour of the Christians in Jerusalem, and perhaps of the Emperor also, by giving orders for, and helping with, the restoration of the Church of the Resurrection which had earlier been destroyed on al-Ḥākim's instructions.

At the beginning of 404/July-August 1013 al-

Ḥākim, changing his tactics, decided to treat the Djarrāḥids with severity and sent an army against them. ʿAlī and Maḥmūd surrendered; at that moment Mufarridj died, possibly poisoned by order of al-Ḥākim; Ḥassān who had taken to flight succeeded in obtaining a pardon from the caliph by sending his mother to beg the caliph's sister, Sitt al-Mulk, to intercede for him. The caliph pardoned him and allowed him to return to Palestine where he recovered his father's lands. Thereafter he refrained from stirring up trouble until the disappearance of al-Ḥākim. He even took part in the expedition against Aleppo organized by ʿAlī b. Aḥmad al-Ḍayf, the former governor of Afāmiya, at the same time as the Kalbids of Sinān b. Sulaymān in 406/1015-6. However he entered into closer relations with the heir presumptive to the throne, ʿAbd al-Raḥīm, brother of al-Ḥākim and governor of Damascus, who sent an envoy to him to seek an undertaking that he would support him in case of need. But Sitt al-Mulk, the regent, had ʿAbd al-Raḥīm assassinated. Ḥassān also intrigued with ʿAlī al-Ḍayf who was anxious to be sent to Palestine, and who was also put to death by Sitt al-Mulk. Ḥassān himself escaped an attempt on his life, also made on her orders.

Ḥassān's ambition was to rule Palestine. Even in al-Ḥākim's time he had concluded a pact with the Kalbid Sinān and the Kilābid Ṣāliḥ b. Mirdās, whereby Damascus was allotted to the Kalbid, Aleppo to the Kilābid and Palestine to himself. This pact was renewed in 415/1024-5. The emperor Basil refused to give them his support. Nevertheless they overcame the general sent by al-Ẓāhir, Anushtekīn al-Duzbarī, at ʿAskalān, and Ḥassān entered Ramla. With the help of Ṣāliḥ b. Mirdās, Ḥassān once again defeated Anushtekīn and continued his depredations in Syria. After Sinān's death, his nephew joined the caliph's cause; but Ṣāliḥ continued to support Ḥassān. In 420/1029, at al-Ukḥuwāna near lake Tiberias, they joined battle with Anushtekīn who gained a complete victory. Ṣāliḥ was killed and Ḥassān fled to the mountains.

Like his father, Ḥassān was in touch with the Byzantine empire. In the next year, 1030, when the emperor Romanus Argyrus was preparing his expedition against the sons of Ṣāliḥ b. Mirdās of Aleppo, he offered him the support of his tribe, and the emperor received his envoys at Antioch with great cordiality, gave them a flag for their master (according to Ibn al-Athīr, it was decorated with a cross) and promised to reinstate the Djarrāḥid in his country once again. The emperor's expedition ended in disaster. Ḥassān, again with the support of the Kalbids of Rāfiʿ b. Abi 'l-Layl, started a campaign against the Fāṭimid troops in the region of Ḥawrān, but was driven back towards the desert. There, in the neighbourhood of Palmyra, he met an envoy from the emperor who persuaded him to come and settle near Byzantine territory. As a result, a group of over 20,000 people, with their herds and tents, moved towards the region of Antioch, almost certainly in the year 422/1031. Ḥassān was loaded with gifts from the emperor and his son ʿAllāf was received at court.

The Ṭayyīs pitched their camps in the neighbourhood of the Rūdj, south-east of Antioch. They were twice attacked by Anushtekīn al-Duzbarī. The names of the places mentioned in this connexion (Kasṭūn, al-Arwādj, Inab; for the identification of the last-named place, see Ibn al-Shiḥna, *al-Durr al-muntakhab*, 117; Dussaud, *Top. historique* ...., 168; *Guide bleu*, 280) show that they were not in Byzantine territory. Ḥassān gave active support to the Byzantines, not only making a successful raid on Afāmiya but also, according to the Byzantine historians, helping Theoctistus, Domesticus of the Scholae, to take the fortress of Menikos (Manīḳa) in the Djabal al-Rawādīf then held by Naṣr b. Musharraf. It was on this occasion, so it is recorded in Scylitzes-Cedrenus, that his son ʿAllāf (Allach to the Byzantines) was received at court and made a patrician. Ḥassān is called Pinzarach (Ibn al-Djarrāḥ) or Apelzarach (by Kekaumenos), but Scylitzes incorrectly gives him the title of amīr of Tripoli. According to these authors he was twice received at Constantinople, but Kekaumenos says that he did not always have cause to be satisfied with his visits.

Moreover we know that, at the time of the negotiations which took place between the caliph and the emperor, after the Byzantines captured the fortress of Bīkisrāʾīl in the summer of 423/1032, Ḥassān was present in person at the discussions at Constantinople. One of the conditions laid down by the emperor for the peace settlement was that the caliph should allow Ḥassān to return to his country and to resume possession of the lands he held at the time of al-Ḥākim, except for those that he had appropriated since the coming of al-Ẓāhir, in return for a promise of fidelity to the caliph. But the caliph refused.

When Anushtekīn al-Duzbarī, taking up a curious attitude, asked the emperor to send an expedition against Aleppo (which he did not enter until 429/1037-8), promising to hold it as a vassal of the empire, we note that with him was Ḥassān's son ʿAllāf (ʿAllān in Kamāl al-Dīn). In 427/1035-6, when the Numayrid Ibn Waththāb and the Marwānid Naṣr al-Dawla attacked Edessa, a Byzantine possession since 422/1031, Ḥassān came to the rescue with 5,000 Greek and Arab horsemen. There is a further mention of him in 433/1041-2 (we are then in the reign of al-Mustanṣir, al-Ẓāhir having died in 427/June 1036). It is said that at that moment he regained possession of Palestine, after al-Duzbarī had been driven from Damascus, but that the new governor of Damascus continued the war against him.

After that date we hear nothing more of Ḥassān. Much later, we come across his nephews, Ḥumayd b. Maḥmūd and Ḥāzim b. ʿAlī, during the disturbances which Badr al-Djamālī had to face in Damascus in about 458/1065-6, in the entourage of an ʿAlid sharīf, Ibn Abi 'l-Djann, who tried to seize Damascus. They must have been arrested and imprisoned in Cairo, for in 459/1066-7 the amīr Nāṣir al-Dawla b. Ḥamdān asked the caliph to free them from the Flag store where they were incarcerated.

Finally, in 501/1107-8 we find a certain Abū ʿImrān Faḍl b. Rabīʿa b. Ḥāzim b. al-Djarrāḥ coming from Baghdād to enter the service of the Saldjūḳid sultan. His equivocal behaviour in Syria —at times he was on the side of the Franks, at others on the side of the Egyptians—led the *atābek* Tughtekīn of Damascus to expel him from Syria. In Baghdād he offered to fight the Mazyadid from Ḥilla, Ṣadaḳa, and to bar the desert route to him. He went to Anbār and nothing more is heard of him.

That, it seems, is all that we know of this turbulent family who were not without significance as pawns on the chess-board of Syria in the 4th-5th/10th-11th centuries, whom the Fāṭimids alternately attacked and wooed, whom the Byzantines succeeded in using, but who seem to have created for themselves,

in their own best interests, a rule of duplicity, treason and pillage.

DJĀRSĪF [see GUERCIF].

AL-**DJĀRŪDIYYA** (or Surḥūbiyya), a group of the early Shīʿa, listed as "Zaydī" [*q.v.*] because they accepted any Fāṭimid ʿAlid as *imām* if he were worthy and claimed the imāmate with the sword. Their chief teacher was the blind Abu 'l-Djārūd Ziyād b. al-Mundhir, who reported *ḥadīth* from Muḥammad al-Bāḳir and was nicknamed by him "Surḥūb" (blind sea-devil); other leaders were Abū Khālid Yazīd al-Wāsiṭī and Fuḍayl b. al-Zubayr al-Rassān. In contrast to other early "Zaydīs", they rejected Abū Bakr and ʿUmar, not admitting the imāmate of the less worthy when the worthier was present. They seem to have regarded supporters of a non-ʿAlid *imām* as *kāfir*. They claimed that authority was potentially equal in all Fāṭimids; some claimed that the needful knowledge came to the *imām* by nature, not by teaching. The name continued to be applied to certain Shīʿīs for a century and a half. Some of them are said to have believed that one or another ʿAlid rebel was to return as *mahdī*: either Muḥammad al-Nafs al-Zakiyya of Madīna (killed under al-Manṣūr), or Muḥammad b. al-Ḳāsim of Ṭāliḳān (killed under al-Muʿtaṣim), or Yaḥyā b. ʿUmar of Kūfa (killed under al-Mustaʿīn).

DJARUNDA (Spanish *Gerona*), capital of the province of the same name, one of the four capitals of the principality of Catalonia. It stands about 25 km. from the sea, and its coastline extends along the well-known Costa Brava. Situated in the outer foothills of the Pyrenees, on a small eminence surrounded by the Ter and Oñar rivers, it has at the present day about 40,000 inhabitants. By reason of its strategic situation on the eastern route between France and Spain it has throughout its history been subjected to sieges and constant attacks, from which it derives its name *Ciudad de los sitios* "the town of sieges". From a village of Iberian origin the Romans raised it to the rank of a town: it figures in the *Itinerary* of Antoninus as a halting-place on the first road to cross Catalonia. Falling in turn into the hands of the Visigoths, Arabs, Franks of the Spanish march and the Catalan-Aragonese, it became a great fortress known in the Middle Ages as *Forsa vella*. At the beginning of their occupation the Muslims, under the command of ʿAbd al-ʿAzīz, son of Mūsā b. Nuṣayr, took possession of the whole sub-Pyrenean region, including Gerona, passing through it on their way to invade the Narbonnaise. In the 2nd/8th century there was no fixed frontier on what was later the Spanish march. For this reason the inhabitants of Gerona in 169/785 entrusted their town to the authority of the Franks, under Louis the Pious, after the Amīr of Cordova ʿAbd al-Raḥmān I had been defeated in this sector. The establishment of this Frankish enclave on Spanish soil foreshadowed the conquest of more extensive territories, that is to say Barcelona, in the near future. But the Muslims were not long in reacting, and in 177/793 ʿAbd al-Malik b. Mughīth, Hishām I's general, laid siege to Gerona and, according to the Arab chroniclers, decimated the Frankish garrison and destroyed a large part of the towers and ramparts, but he was unable to capture the town by assault and went on to raid Narbonne. In 178/798 the Franks occupied the mountain region between Gerona and the upper valley of the Segre, and surrounded Barcelona which they succeeded in capturing after a long siege. Among the feudal overlords taking part in this siege was Rostaing, Count of Gerona, at the head of one of the three corps which comprised the besieging army. In 212/828, a new *ṣāʾifa* against Barcelona and Gerona failed; the Spanish march having been consolidated, the Muslims were unable to reach Gerona, even when the *ḥādjib* al-Manṣūr captured Barcelona. On the other hand, during the final period of the caliphate in Dhu 'l-Ḳaʿda 400/June 1010, a band of Catalans fought on the side of caliph Muḥammad al-Mahdī against the Berbers in the valley of the Guadiaro, not far from Ronda; they were routed and suffered casualties, among them Otón, Bishop of Gerona, at the head of his contingent from Gerona. The county of Gerona, as a dependency of the principality of Catalonia, was the scene of a meeting on 1 November 1143 at which the Order of Templars of Catalonia was admitted. In 1205 Philip Augustus of France seized it. Thereafter, as the result both of civil wars provoked by the prince of Viana and also of struggles against France, the town had to endure numerous sieges and assaults; after being razed to the ground during the war of the Spanish Succession for declaring itself in favour of the Archduke, its tribulations reached their culminating point with the heroic resistance directed by General Alvarez de Castro when, for seven months, the town stood out against Napoleon's Marshals.

DJĀSAK (Djāsek or Djāsik), an island in the Persian Gulf mentioned only by Yāḳūt, ii, 9) and Ḳazwīnī (*Kosmographie*, ed. Wüstenfeld, 115) among Arab geographers. From their statements, it is probably to be identified with the island of Lārak in the straits of Hormuz 35 km. SSE. of Bandar ʿAbbās [*q.v.*], and not with the large island of Ḳishm as was done by Le Strange (261). In the time of these two authors Djāsak belonged to the prince of Kis (Kish, the modern Ḳays), a small island in Lat. 26° 33′ N., Long. 54° 02′ E.

At the present time the name Djāsak (now pronounced Djāsk) is borne by the flat, low-lying promontory on the Persian side of the Gulf of ʿUmān in Lat. 25° 31′ N., 57° 36′ E. and by the adjoining village. Early in the 10th/16th century Djāsk was seized and fortified by the Portuguese and in the following century the English East India Company established a factory there. There is a landing strip for aircraft south-west of the village. The population in 1951 was 3,115.

al-**DJAṢṢĀṢ**, Aḥmad b. ʿAlī Abū Bakr al-Rāzī, famous Ḥanafī jurist and chief representative of the *aṣḥāb al-raʾy* [*q.v.*] in his day. He was born in 917/305, went to Baghdād in 324, and there studied law under ʿAlī b. al-Ḥasan al-Karkhī. He also worked on the Ḳurʾān and *ḥadīth*, handing down the *ḥadīth*s of al-Āṣim, ʿAbd al-Bāḳī Ḳāniʿ (the teacher of the famous al-Dāraḳuṭnī [*q.v.*]), ʿAbd Allāh b. Djaʿfar al-Iṣfahānī, Ṭabarānī, and others. Following the advice of his teacher Karkhī, he went to Nīshāpūr, in order to study *uṣūl al-ḥadīth* under al-Ḥākim al-Nīsābūrī. During this time, Karkhī died, whereupon he returned to Baghdād (in 344). Later, Djaṣṣāṣ became the head of the Ḥanafīs in Baghdād. According to reports, he was twice nominated for the office of judge but he declined. He mediated between the traditionists and the lawyers. Amongst his pupils were Ḳudūrī, Abū Bakr Aḥmad b. Mūsā al-Khwārizmī, and others. He died on 7 Dhu ʾl-Ḥidjdja 370/14 August 981 in Nīshāpūr.

Of his works, the following survive: *Kitāb al-Uṣūl*; his commentary on *al-Djāmiʿ al-kabīr* by Shaybānī; his commentary on *al-Mukhtaṣar fi ʾl-fiḳh* by Ṭaḥāwī (which is the oldest of its commentaries); his excerpts from the *Kitāb ikhtilāf al-fuḳahāʾ* by Ṭaḥāwī, compare Schacht, *Aus den Bibliotheken*, i, no. 24; *Aḥkām al-Ḳurʾān*, ed. Kilisli Rifʿat, Istanbul 1335-38; 3 vols., Cairo 1347.

al-**DJASSĀSA**, "the informer", "the spy", a name which seems to have been given by Tamīm al-Dārī [*q.v.*] to the fabulous female animal which he claimed to have encountered on an island upon which he had been cast by a storm, at the same time as the Dadjdjāl [*q.v.*] who was chained there; the latter being unable to move about, the Djassāsa, which is a monster of gigantic size, brings him whatever news it has gathered. Assimilated by later exegesis with the Beast (*dābba* [*q.v.*]) mentioned in the Ḳurʾān (XXVII, 84/82), it adds considerably to the fantastic element in travellers' and geographers' tales in the classical period which place the incident on an island in the Javaga (Zābadj [*q.v.*]) to which Ibn Khurradādhbih (48) and others give the name Barṭāʾīl. (Ed.)

DJASSAWR (Jessore), principal town of a district of East Pakistan. The town has a garrison and a landing strip. Population of the district in 1951 : 1,703,000. Its name is said to derive from the Sanskrit *yashohara* "disgraced", relating to the story of Rādjā Pratāpāditya, a *zamīndār* whose rebellious attitude was crushed at the time of the Mughal emperor Djahāngīr. Under Muslim rule the region formed part of the *sarkār* of Khalīfatābād, represented now by Bāgerhāt in Khulna district, where Khān Djahān (d. 863/1459), conqueror of this region under the Bengal sultan Nāṣir al-Dīn Maḥmūd II, is buried. A number of monuments of this period remain at or near Bāgerhāt, the most important being the tomb of Khān Djahān and the Sāṭhgunbad, Masdjidkur, Ḳaṣba and Saylkuppa mosques. These mosques mark the appearance of a new style of Muslim architecture in Bengal which, with its dwarf angle buttresses and covered *ṣaḥn*, seems to bring together some aspects of the Dihlī style of Fīrūz Shāh Tughluḳ and those of local origin. Khān Djahān, popularly called Khāndjā ʿAlī, is today venerated as a saint; with Muḥammad Ṭāhir, alias Pīr ʿAlī, he promoted the expansion of Islam in this region. The latter personage brought into being a sect, the Pīr ʿAlī Muslims, which is widespread in the region.

DJASTĀNIDS, DJUSTĀNIDS [see daylam].

DJĀSŪS, a word used to denote the spy, concurrently with *ʿayn*, observer, literally "eye", with the result that it is not always possible to distinguish between the two words and one can hardly discuss the one without speaking of the other. However, it seems that *djāsūs* is used more particularly to refer to a spy sent among the enemy. Dictionaries also give for *djāsūs* the sense of bearer of an unfavourable secret (*ṣāḥib sirr al-sharr*) as opposed to *nāmūs*, the bearer of a favourable secret (*ṣāḥib sirr al-khayr*; see *LA*, vii, 337, Ibn al-Athīr, *Nihāya*, i, 163).

The Ḳurʾān (XLIX, 12) ordains that believers should not spy upon one another. According to al-Māwardī (*Aḥkām*, tr. Fagnan, 538) it is permissible for the *muḥtasib* to make use of *tadjassus* when there is a violation of a prohibition and proof of it might be overlooked, but al-Ghazzālī (*Iḥyāʾ*, ed. 1348, ii, 285, 289) refutes this.

Espionage was practised by the authorities internally for administrative and governmental reasons, and externally for politico-military reasons. Works of the Mirror of Princes type note that sovereigns of all periods have invariably made use of spies in order

to obtain information about their subjects, their ministers and officials, their entourage and even their own family (see the *Kitāb al-tādj* of the Ps. al-Djāḥiẓ, 99, tr. 124; 122, tr. 141-2 (on this passage, cf. al-Ḳalḳashandī, *Ṣubḥ*, i, 116), 167, tr. 184 ff.; *Āthār al-uwal*, of al-Ḥasan al-ʿAbbāsī, in the margin of *Taʾrīkh al-khulafāʾ* of al-Suyūṭī, 97 ff.; the *Siyāsat-nāma* of Niẓām al-Mulk, tr. Schefer, 88, 99, 103 ff.; R. Levy, *A mirror of Princes*, tr. of Ibn Ḳābūs, 135). We know that the Postal Service (*barīd*) was made responsible for this surveillance. Thus the official organization of espionage was reflected in the allegory of the *djunūd al-ḳalb* of al-Ghazzālī, in which the five senses are the spies (*djawāsīs*) who bring their information to the imagination which is, so to speak, the *ṣāḥib al-barīd* (*Iḥyāʾ*, iii, 5 and 8; cf. *Kimiyāʾ al-saʿāda*, ed. 1343, 10 and tr. H. Ritter, *Das Elixir der Glückseligkeit*, 30). There are numerous accounts relating to the use of spies of this sort, for example al-Tanūkhī, *Nishwār*, ii, 157-63, tr. 253-8 (al-Muʿtaḍid having his vizier spied on), Abū Shudjāʿ al-Rūdhrāwarī, 59 (ʿAḍud al-Dawla asking schoolmasters to seek information from the children about their fathers' activities, and to pass it on to the *ṣāḥib al-barīd*). For the spies in the Buwayhid period, sent out to search for fortunes to be confiscated, known as *suʿāt*, calumniators, and *ghammāzūn*, informers, see Miskawayh, ii, 308 (cf. ii, 83), Hilāl al-Ṣābiʾ, in *Eclipse*, iii, 438.

Politico-military espionage was used by the Prophet who had his *djawāsīs* and *ʿuyūn* against the polytheists and Abū Sufyān. There are many instances of the use of spies in war, particularly in civil wars and rebellions: al-Ṭabarī, ii, 585, 904, 947, 949 (Khāridjī affairs), ii, 1248 (Ḳutayba's conquests in central Asia); ii, 1588, 1966 (ʿAbbāsid movement); iii, 284 (affair of the ʿAlid Ibrāhīm b. ʿAbd Allāh); iii, 1174 ff. (war with Bābek: al-Afshīn wins over Bābek's spies). For the Arabo-Byzantine wars, see al-Masʿūdī, *Murūdj*, ii, 434; viii, 75 ff.; al-Ṭabarī, iii, 485 etc. We know that in Constantinople St. Basil the Younger was mistaken for an Arab spy (*BÉt.Or.*, xiii, 55); cf. the legend of al-Baṭṭāl, a spy of Hārūn al-Rashīd. The Mongols used spies disguised as *faḳīrs*, ascetics and holy men (al-Mufaḍḍal, *Hist. des sult. mamelouks*, ed. Blochet, 343, 355).

Just as military leaders are recommended to send spies among the enemy (R. Levy, *op. cit.*, 219; Ibn Djamāʿa, *Taḥrīr al-aḥkām*, in *Islamica*, vi, 402), so they are advised to exclude from their forces all those who might act as spies for the enemy (al-Māwardī, tr. 74), and the *ṣāḥib al-barīd* must watch both land and sea routes by which enemy agents might enter (al-ʿAbbāsī, *Āthār al-uwal*, 100). One of the reasons why it is recommended that non-Muslim secretaries be not employed is that they might act as spies for the Infidels (al-Ḳalḳashandī, *Ṣubḥ*, i, 61). Precautions against espionage were not otiose, for there are instances of correspondence with the enemy (Theophanes, under the year 6248: the Patriarch of Antioch writing to the Byzantines with information about the Arabs; al-Balādhurī, 192, ed. Cairo, 201: an amīr executed for having corresponded with the Greeks).

In al-Ḳalḳashandī (i, 123 ff., *Fī amr al-ʿuyūn wa 'l-djawāsīs*), we find a statement of the conditions which a good spy has to fulfil: absolute sincerity, intelligence and sagacity, cunning, experience of travel and knowledge of the countries to which he is sent, the ability to endure torture if caught in order to avoid betrayal of what he knows. The author also indicates the rules of conduct of the *ṣāḥib dīwān al-inshāʾ* (upon whom they were dependent in the time of the Mamlūks) with regard to spies: to show them sincere affection and not let them feel any suspicion on his part, to pay them liberally both before and, what is more important, after their mission, to provide for their families' needs, not to hold a grudge against them in the event of failure; spies must never know each other, or be known by the army; there must be no intermediary between them and the *ṣāḥib dīwān al-inshāʾ*, etc. This long passage ends with a warning against enemy agents and stresses the importance of winning them over to one's own cause. See also the less detailed statement by al-ʿAbbāsī, *loc. cit.*

There is also some discussion of *djawāsīs* and *ʿuyūn* in works of jurisprudence. First of all, in the rules relating to *dhimmīs*, which include a clause forbidding them to communicate to the enemy any secrets relating to poorly defended points of Muslim territory, or to guide or give shelter to their agents (see, for example, Abū Yūsuf, tr. Fagnan, 305; al-Shīrāzī, *Tanbīh*, 295; Abū Shudjāʿ, *Taḳrīb*, tr. Van den Berg, 624; al-Ṭabarī, *Ikhtilāf*, 239). Incidentally this clause occurs in the first treaties drawn up between Muslims and Christians (Ibn ʿAsākir, i, 149, l. 8, 178, l. 9. See also the typical treaty from the *Kitāb al-umm* of al-Shāfiʿī in Tritton, *The Caliphs and their non-Muslim subjects*, chap. I and A. Fattal, *Le statut légal des non-Musulmans en pays d'Islam*, 77).

In the *Kitāb al-ikhtilāf* of al-Ṭabarī (58-9, cf. 24) or in *al-Mīzān al-kubrā* of al-Shaʿrānī (ed. 1291, ii, 233 ff. and tr. Perron, 1898, 198 ff.), we find a summary of the jurists' views as to how spies working for the enemy should be treated, on which subject there is a considerable divergence of opinion. In the event of a spy being a *dhimmī*, according to al-Awzāʿī he is thus breaking the contract which binds him to the Muslims and he can be put to death; Abū Yūsuf, tr. 294, takes the same line. But al-Shāfiʿī believes that he is only subject to an exemplary punishment since there is no breach of contract. Abū Ḥanīfa also maintains that there is no breach of contract and the *dhimmī* is only liable to corporal punishment and imprisonment. According to the Mālikīs (Ibn al-Ḳāsim), there is a breach of contract and the *dhimmī* can be put to death (al-Khalīl, tr. Guidi, i, 418). The Ḥanbalīs (see, *e.g.*, Ibn Ḳudāma's commentary on *al-Muḳniʿ* in *al-Rawḍ al-murbiʿ* of al-Manṣūr al-Bahūtī, ii, 71) consider that there is a breach of contract: the criterion is the harm caused to the Muslims (for the whole question cf. Fattal, *op. cit.*, 81 ff.).

When the spy is a foreigner who has entered Muslim territory without a safe-conduct he is put to death, and if he came with a safe-conduct without commercial objectives he is simply expelled; if travelling for purposes of commerce, he is sentenced to corporal punishment and is expelled (Abū Ḥanīfa; cf. also al-Shāfiʿī, *Kitāb al-umm*, iv, 167). According to the Mālikīs, (Khalīl, i, 392), it is permitted to kill enemy spies even though they have come armed with a safe-conduct, and Abū Yūsuf (tr. 294) also recommends having them beheaded. If the spy is a Muslim guilty of corresponding with the Greeks and passing them information about the Muslims, according to al-Awzāʿī he is liable to corporal punishment, banishment and prison, unless he shows repentence; the same is true of Abū Ḥanīfa (cf. also Abū Yūsuf, tr. 294). In al-Shāfiʿī's view, since the action is not a characteristic act of *kufr*, punishment is therefore not inevitable and it rests with the *imām* to decide. Mālik also states that the case is left to the free

decision of the *imām* (al-Ṭabarī, *Ikhtilāf*, 172). It is probable that, in practice, and according to circumstances, greater severity was shown.

Bibliography: in the article. See also ʿAbd al-Ḥamīd al-Kātib, *Risāla fī naṣīḥat walī ʿahd Marwān b. Muḥammad*, in *Rasāʾil al-bulaghāʾ*, ed. Kurd ʿAlī, 153. (M. Canard)

DJĀT́, the central Indo-Aryan (Hindī and Urdū) form corresponding to the north-west Indo-Aryan (Pandjābī, Lahndā) Djaṫṫ, a tribe of the Indo-Pakistan sub-continent found particularly in the Pandjāb, Sind, Rādjāsthān and western Uttar Pradēsh. The name is of post-Sanskritic Indian origin (Middle Indo-Aryan **djaṫṫa*), and the form with short vowel is employed by the Persian translator of the *Čač-nāma* (compiled 613/1216), the author of the *Taʾrīkh-i Sind* (*Taʾrīkh-i Maʿṣūmī*) and Shāh Walī Allāh al-Dihlawī [*q.v.*] in his Persian letters. For the Arabicized form *Zuṭṭ* [*q.v.*] see *TA* and Muḥammad Ṭāhir al-Patanī, *Madjmaʿ biḥār al-anwār*, Kānpur 1283, ii, s.v. *Zuṭṭī*.

Little scientific or systematic study has been undertaken so far to determine the ethnological and anthropological strains in the Djāṫs, tall, well-built, sturdy with a dark complexion. It may be presumed that they are racially Aryans, although some writers have alluded to their Scytho-Aryan origin and to the subsequent fusion of various local tribes into the main body (cf. Pradhan, 15). In the undivided Pandjāb the Djāṫs in the districts west of the Ravī were mostly Muslims, those in the centre mostly Sikhs and those in the south-east mostly Hindūs. The non-Muslim Djāṫs of the present Pakistan regions have now all migrated to India. In the northern and western districts of Uttar Pradēsh (India) they constitute an important element of the population, and played a significant rôle in bringing about the downfall of the Mughal empire, which was unable to withstand, in the days of its decadence, their lawlessness and predatory raids on the seat of the government itself. Mostly agricultural by profession, they include Hindūs and Muslims, while many Djāṫs in the Indian Pandjāb profess Sikhism. The Hindū and Sikh Djāṫs may still interdine (and intermarry?); Muslim Djāṫs in many cases retain the old tribal and clan (*khap*) names, and although they may associate with Hindū and Sikh Djāṫs in some social and political activities at the village level in India, their Pakistan cognates have largely lost this connexion.

The Indian Hindū Djāṫs practised polygamy until the passing of the Hindū Marriage Act (1955), and a fraternal polyandry was at one time common. Female infanticide was fairly common until the end of the 19th century. Widow marriage and the levirate are still permitted. The widespread and indiscriminate exogamous marriages and liaisons reported by earlier writers seem no longer to be permitted.

The Djāṫs are proverbially stupid, awkward, and simple in money-matters, caring more for their buffaloes and sugarcane than for their fellow humans, although they are courageous and make good soldiers. On the Djāṫs in the Muslim countries of the Middle East see Zuṭṭ.

In India they fought against the Arab commander, Budayl b. Ṭahfa al-Badjalī, during his attack on the sea-port of Daybul [*q.v.*], some years prior to the invasion of Muḥammad b. al-Ḳāsim, and killed him, and again encountered the forces of Muḥammad b. al-Ḳāsim when he marched upon Daybul in 94/712. A very large number of them was captured by the Muslims, and Muḥammad b. al-Ḳāsim sent ship-loads of them to al-Ḥadjdjādj b. Yūsuf [*q.v.*]. Thereafter they seem to have taken to a settled and peaceful life both in Sind and abroad, as they figure in no further events until the times of Maḥmūd of Ghazna [*q.v.*] who had to fight a naval engagement with them on the Indus, where they troubled the victorious Sultan by attacking his rear and several times looting the baggage (see Gardīzī, *Zayn al-akhbār*, ed. M. Nazim, Berlin 1928, 87-9). The Djāṫs, thereafter, suffered a long eclipse until the reign of the Mughal emperor Shāhdjahān [*q.v.*], when in 1047/1637 they broke out into a revolt and killed the *fawdjdār* [*q.v.*] of Mathurā, Murshid Ḳulī Khān. During the reign of Awrangzīb [*q.v.*], taking advantage of his preoccupation with the Deccan wars, the Djāṫs of northern India, under their leaders Rādjā Rām and Rām Čehrā, terrorized the population and even attempted to despoil the tomb of the emperor Akbar at Sikandra. They were, however, met with stout opposition from the local commandant, Mīr Abu 'l-Faḍl (Jadunath Sarkar, *History of Aurangzib*, v, 696-7). In 1097/1686 Awrangzīb, in a bid to crush them, deputed his general Khān-i Djahān Kokaltāsh, who was, however, defeated by the Djāṫs in several engagements; this compelled the emperor to change the command, and entrust it to his grandson, Bīdār Bakht b. Muḥammad Aʿẓam. After the death of Awrangzīb, when the Mughal empire had begun to disintegrate, the Djāṫs of Bharatpūr [*q.v.*] and the surrounding territory, under their leader Sūradj Mall, terrorized the entire country lying between Agra and Dihlī. The atrocities perpetrated by them on the ill-starred inhabitants of Dihlī have been vividly described by Shāh Walī Allāh al-Dihlawī and his son Shāh ʿAbd al-ʿAzīz al-Dihlawī [*qq.v.*] in their letters. The depredations of the Djāts provoked Aḥmad Shāh Abdālī, when he attacked India, to say "Move into the territories of the accursed Jat, and in every town and district held by him slay and plunder .... Up to Agra leave not a single place standing". (cf. *Indian Antiquary*, ... 58-9 and J. N. Sarkar, *Fall of the Mughal empire*, Calcutta 1950, ii, 61, 85). In 1171/1757, during his fourth invasion of India, Abdālī marched against them but could not subdue them completely, and the Djāṫ chieftain refused to own allegiance to the Durrānī chief. The terrible defeat of the Marāṫhas at his hands in 1175/1761 at the third Battle of Pānīpat practically broke the back of the Djāṫs. Almost at the same time, a petty Djāṫ chieftain of the Pandjāb, Ālā Singh, received a number of villages from the retiring Shāh as a grant, in return for military services rendered. Later these villages formed the nucleus of the former Indian princely state of Paṫiālā. Early in the 13th/18th century Randjit Singh Djāṫ succeeded in establishing a small and shortlived Sikh kingdom in the Pandjāb. Elsewhere the Djāṫs kept quiet till the Mutiny of 1857 when, taking advantage of the general chaos at Dihlī, they indulged in loot and massacre and became a terror to the neighbouring population and the refugees. The subsequent British occupation of India subdued them. During the disturbances of 1947 they were again active in and around Alwār and Bharatpur [*qq.v.*], taking a leading part in the loot and massacre that followed the partition of India. They are still politically active in the Indian Pandjāb and Uttar Pradēsh. For their political organization, see Pradhan (in Bibliography).

In India some Djāṫs appear to have embraced Islam during or soon after the Muslim conquest of Sind; in the Pandjāb most of the Djāṫ tribes were

converted either by Djalāl al-Dīn Ḥusayn Bukhārī or by Farīd al-Dīn Gandj-Shakar [*qq.v.*] of Pak-pattan (see *Gazetteers* of *Multan district* and *Bahawalpore*); many further conversions are reported from the time of Awrangzīb.

Contrary to the popular belief that the Djāṭs are deplorably lacking in common sense and are illiterate and uncultured, they have produced a number of people who have made a name for themselves in the field of learning. A Djāṭ (Zuṭṭ) physician, who was apparently well-versed in witch-craft also, is said to have been called in to treat ʿĀʾisha, when she fell seriously ill. (Cf. al-Bukhārī, *al-Adab al-Mufrad*, Cairo 1349 A.H., 45, Urdū tr. *Kitāb-i Zindagī* by ʿAbd al-Ḳuddūs Hāshimī, Karachi 1960, 84, where the translator, in a note, characterizes this tradition as *munkar*). Abū Ḥanīfa [*q.v.*] was also of Zuṭṭ stock, his grandfather being known as Zūṭī, apparently a corruption of Zuṭṭī. (Cf. *Taʾrīkh Baghdād*, xiii, 324-5). Imām al-Awzāʿī [*q.v.*] was of Sindhī origin and his forefathers might have belonged to those Djāṭs who fell into the hands of Muḥammad b. al-Ḳāsim and were sent as prisoners of war to ʿIrāḳ (cf. Dhahabī, *Ḥuffāẓ*, ii, 61). The Indian Muslim writer and biographer of the Prophet, Shiblī Nuʿmānī [*q.v.*] was also of Djāṭ (Rāwat) origin, a fact reflected in his self-adopted *nisba* Nuʿmānī, pertaining to Abū Ḥanīfa. A Pākistānī Djāṭ (Muḥammad Ẓafar Allāh Khān) till recently (1961) served as a judge of the International Court of Justice at the Hague.

DJĀWA [see DJĀBA, DJĀWI, INDONESIA, JAVA].

AL-DJAWĀD AL-IṢFAHĀNĪ, Abū Djaʿfar Muḥammad b. ʿAlī (he also had the honorific name of Djāmal al-Dīn), vizier of the Zangids; he had been carefully educated by his father, and at a very early age was given an official appointment in the *dīwān al-ʿarḍ* of the Saldjūḳid sultan Maḥmūd. Subsequently he became one of the most intimate friends of Zangī, who made him governor of Naṣībīn and al-Raḳḳa and entrusted him with general supervision of the whole empire. After Zangī's assassination he very nearly shared his master's fate, but succeeded in leading the troops to Mosul. Zangī's son, Sayf al-Dīn Ghāzī, then confirmed his position. Meanwhile, Djāmal al-Dīn was so greatly renowned for his charity that he was given the name al-Djawād "the noble". He particularly deserved the Muslims' gratitude for the many useful improvements he made at his own expense in the two holy cities of Medina and Mecca. However, in 558/1163 he was imprisoned in Mosul by Ḳuṭb al-Dīn Mawdūd who had in the meanwhile succeeded his brother, and he died in prison during the course of the following year. His body was taken, first to Mecca where it was carried round all the holy places, then to Medina where it was buried. Ḥayṣa-Bayṣa and ʿImād al-Dīn were among his panegyrists.

Amedroz, 286, 307, 356, 361, with extracts from Ibn al-Azraḳ published in notes ibid.; ʿImād al-Dīn al-Iṣfahānī, *Seldjoucides*, ed. Houtsma, 209 ff. and in Abū Shāma, i, 134; Ibn al-Djawzī, *al-Muntaẓam*, ed. Ḥaydarābād, x, 209; Usāma b. Munḳidh, in H. Derenbourg, *Vie d'Usāma*, 298; Ibn Djubayr, ed. De Goeje, 124; Ibn al-Athīr, xi, 202 ff. (Ed.)

DJAWĀD PASHA, Aḥmad (T. Ahmed Cevad Paşa), 1851-1900, Ottoman Grand Vizier. Born in Syria, the son of the *mīralāy* Muṣṭafā ʿĀṣīm (whose family originated from Afyonkarahisar), he was educated at the Military College and completed the Staff College course in 1871. He served in the Russo-Turkish war as A.D.C. to the Commander-in-Chief Süleymān Pasha and as chief of staff of Nadjīb Pasha's division. Rapidly promoted, he was appointed successively ambassador to Montenegro, with the rank of *mīrliwā* (1301/1884), chief of staff to the governor and military commander of Crete, Shākir Pasha, with the rank of *ferīḳ* (1306/1889), and soon afterwards vice-governor of Crete and extraordinary commissioner. His services in Crete having commended him to ʿAbd al-Ḥamīd, he was appointed Grand Vizier on 29 Muḥarram 1309/20 February 1891 and held office for over three years.

During this period, when the Ottoman Empire was disturbed particularly by the Armenian question, Djawād Pasha tried to act justly, but he lost the favour of ʿAbd al-Ḥamīd, who was dissatisfied with his conduct of affairs. In memorials addressed to the Palace Djawād Pasha attributed the various revolts in different parts of the Empire to the ineffectiveness of the system of government, and proposed that the influence of the Palace in the government should be reduced and the authority of the Bāb-i ʿĀlī increased: these recommendations led to his dismissal on 9 June 1895. After a period in disgrace, he was again appointed military commander of Crete (14 July 1897) and soon after, when he was already a sick man, commander of the Fifth Army in Syria. His health worsened in Syria and he was recalled to Istanbul, where he died shortly afterwards (14 Rabīʿ II 1318/11 August 1900).

Djawād Pasha, who had from his early years devoted himself to study, was a man of learning, and knew Arabic, Persian, French, Italian and Greek. Among his works are: *Maʿlūmāt-i kāfiye fī memālik-i ʿOthmāniyye*, Istanbul 1289 (a textbook for military *iʿdādī* schools); *Taʾrīkh-i ʿaskerī-i ʿOthmānī*, Istanbul 1297, = *État militaire ottoman* ..., 1882, (on the history of the Janissaries); *Riyāḍiyyeniñ mebāḥith-i daḳīḳasī*; *Kimyānïn ṣanāyiʿa taṭbīḳi*; *Semā*; *Telefon*.

He published a review entitled *Yādigār* and founded a rich library.

Cevad Paşa (M. Tayyib Gökbilgin); Babinger, 382-3. (CAVID BAYSUN)

DJAWĀLĪ, double plural of *djālī* (through the intermediate form *djāliya* which is also found, particularly in old papyri), literally "émigrés", a term which, in administrative usage, very soon served to denote the *djizya* [*q.v.*]. Ancient writers believed that the word had originally been applied to the poll-tax on the *dhimmīs* who were émigrés (driven out) from Arabia; some modern writers have thought that it could have taken on its meaning, by extension, from a term used of the tax on the Jewish community in "Exile" *djālūt*: there is no trace of any such specific use. It would seem that, in order to understand the semantic development of the word, account should be taken of the distinction, going back to the Roman Empire, made between colonists attached to the soil, and consequently to an immutable fiscal community, and those men whom the efforts of the administration did not succeed in preventing from changing their place of residence and occupation, *inquilini*, φυγάδεις. Muslim fiscal practice distinguishes more and more sharply between, on the one hand, the tax due upon the land, which was immovable, from the community collectively responsible, irrespective of the actual whereabouts of each individual on the date of the assessment or payment, and, on the other, the tax due upon the person, which could only be paid by the individual in the place where he was. In the tax registers therefore an entry was made, among the theoretical inhabitants of each district, of the names of those who were "émigrés", together with their place of emigration, for the purpose of informing the authorities concerned. Since this procedure related more particularly to the *djizya*, it might in consequence have led to the name *djawālī* being given to this tax, meaning the individual tax paid also by the émigrés, or, to express it better, by all individuals irrespective of their place of residence. However, no text confirms the truth of this explanatory hypothesis.

Bibliography: see DJIZYA; more particularly Løkkegaard (index), and Fattal, 265. (CL. CAHEN)

AL-**DJAWĀLĪḲĪ** or IBN AL-DJAWĀLĪḲĪ, ABŪ MANṢŪR MAWHŪB B. AḤMAD B. MUḤ. B. AL-KHAḌIR, so named according to Brockelmann, I², 332 and S I, 492. Born in Baghdād in 466/1073, he died there on 15 Muḥarram 539/19 July 1144. According to Brockelmann, he belonged to an ancient family, but the *nisba al-djawālīḳī* "maker, seller of sacks", Persian *gowāl(e)* "sack", arabicized *djuwāliḳ*, pl. *djawāliḳu*, recorded in the *Muʿarrab* (48 end - 49), pl. *djawālīḳu* (Sībawayhi, ii (Paris), 205, allows us to suppose a humble origin.

He was the second successor of his master al-Tibrīzī in the chair of philology at the Niẓāmiyya. A zealous Sunnī (Ḥanbalī, according to *Shadharāt al-dhahab*, iv, 127 and al-Tanūkhī, in *RAAD*, xiv, 164), he was appointed in place of ʿAlī b. Abī Zayd (d. 516/1122), a too notorious Shīʿī who was compelled to resign.

The man was a conscientious teacher, prudent in his answers to questions and with a much admired calligraphy. His works deservedly take their place along with those of al-Tibrīzī in raising the cultural level in the Arabic language from the depths to which it had fallen in the Saldjūḳid period: a) the *K. al-Muʿarrab min al-kalām al-ʿadjamī ʿala ḥurūf al-muʿdjam*, to preserve the *faṣīḥ* language by collecting together words of foreign origin and recording them as such. This explanatory lexicon, which was highly thought of in its time, has proved to be very useful and made Ibn al-Djawālīḳī's reputation. In fact, as was said by one of his pupils (Abu 'l-Barakāt Ibn al-Anbārī, *Nuzha*, 475), "the shaykh was a better lexicographer than grammarian". But it remains principally a creditable application of his predecessors' work: published by Ed. Sachau, from the Leiden MS, Leipzig 1867, x + 70 (notes) + 158 (Arabic text) + 23 (Index) pp. in 8°. W. Spitta filled the gaps from the two Cairo MSS (*ZDMG*, xxxiii, 208-24); an edition in Cairo (Dār al-kutub al-Miṣriyya), 1361 A. H. by Aḥmad Muḥ. Shākir. Glosses originated by Ibn Barrī (d. 582/1186) occur in an Escurial MS (H. Derenbourg, *Les Manuscrits arabes de l'Escurial*, ii, 772, 5). b) *K. al-Takmila fī mā yalḥan fīhi 'l-ʿāmma*, the aim of this work on incorrect expressions is evident: published by H. Derenbourg, *Morgenländ. Forsch.* (Festschrift Fleischer), Leipzig 1875, 107-66 (from a Paris MS, entitled: *K. Khaṭaʾ al-ʿawāmm*), published again in Damascus by ʿIzz al-Dīn al-Tanūkhī (*RAAD*, xiv, 1936, 163-226) from the Ẓāhiriyya MS (with glosses by Ibn Barrī), under the title *Takmilat iṣlāḥ mā taghliṭ fīhi 'l-ʿāmma*, This complements the works of this sort, apart from the *Durrat al-ghawwāṣ* by al-Ḥarīrī (al-Tanūkhī, *ibid.*, 167-168). c) The *Sharḥ* of the *Adab al-kātib* by Ibn Ḳutayba, a guide for the practice of the pure Arabic language, in fact an average work; printed, Cairo, Maktabat al-Ḳudsī, 1350 A.H.

In manuscript (Köpr. 1501, Mesh. xi, 16, 50), the *K. al-Mukhtaṣar fi 'l-naḥw*. Ibn al-Anbārī (*Nuzha*, 474) attributes to him a *K. al-ʿArūḍ* written for the caliph al-Muḳtafī. Brockelmann lists as his work a *Sharḥ Maḳṣūrat Ibn Durayd* (S I, 492) and al-Tanūkhī (*loc. cit.* 166) a *K. Ghalaṭ al-ḍuʿafāʾ min al-fuḳahāʾ*. The *K. Asmāʾ khayl al-ʿarab wa-fursānihā* is to be deleted from his works.

Bibliography: J. Fück, *ʿArabīya*, Paris 1955, 179; Ibn al-Anbārī, *Nuzhat al-alibbāʾ*, 473-8; Yāḳūt, *Udabāʾ*, xix, 205-7; Ibn Khallikān, iv, 424-6 (no. 722); Suyūṭī, *Bughya*, 401; Ibn al-ʿImād, *Shadharāt al-Dhahab*, iv, 127; Ḳifṭī, *Inbāʾ al-ruwāt ʿalā anbāʾ al-nuḥāt*, iii, 335-7, see 335 note for other references. (H. FLEISCH)

DJAWĀN, MIRZĀ KĀẒIM ʿALĪ, one of the pioneers of Urdū prose literature and a *munshī* at Fort William College (Calcutta), originally a resident of Dihlī, migrated to Lucknow after the break-up of the cultural and social life of the Imperial capital following the invasion of Aḥmad Shāh Abdālī in 1174/1760, and was living in Lucknow in 1196/1782 when Ibrāhīm Khān Khalīl was busy compiling his *tadhkira* (see *Gulzār-i Ibrāhīm*, ʿAlīgaṙh 1352/1934, 93). A writer of simple, chaste and unornamented Urdū prose and a scholar of Persian and Arabic (he revised the Urdū translation of the Ḳurʾān, undertaken partially by Amānat Allāh and others), he was also conversant with Bradj-bhāshā. He joined Fort William College on its establishment in 1800 as a teacher and settled permanently in Calcutta. He was alive in 1815 when he revised, in part, the second edition of Ḥafīẓ al-Dīn's *Khirad Afrūz*, an Urdū translation of Abu 'l-Faḍl's *ʿIyār-i Dānish*.

In 1216/1801 he translated from a Bradj-bhāshā version Kālidāsa's Sanskrit drama *Shakuntalā* into Urdū at the instance of Dr. Gilchrist, head of the Hindustānī Department of Fort William College and one of the early patrons of Urdū literature (ed. Calcutta 1804, London 1826, Bombay 1848 and Lucknow 1875). His second literary achievement is the *bārah-māsa Dastūr-i Hind*, a long poem in Urdū, arranged according to the Hindū calendar months, describing in detail the Hindū and Muslim festivals falling in those months, composed 1802 and published at Calcutta 1812. He also attempted a translation of the *Ta'rīkh-i Firishta* comprising the chapters on the Bahmanīs [*q.v.*], and collaborated in the preparation of an anthology of the poems of Walī, Mīr, Sawdā and Sōz [*qq.v.*]. He also helped Munshī Lallūdjī Lāl, his colleague at Fort William College, in the translation of the *Siṃhāsana Dvātriṃśika*, a collection of tales of Vikramāditya, the rādjā of Udjdjayn, from the Bradj-bhāshā version (*Singhāsan Battīsī*) made by Sundar, a *kavi-rāy* of Shāhdjahān's court. He died some time after 1815.

DJAWĀN MARDI [see FUTUWWA].

DJAWĀNRŪD (local Kurdish DJWĀNRŌ), a district of Persian Kurdistān lying to the west of Mt. Shāhō, between Avroman (Hawermān [*q.v.*]) in the north, Shahrizūr in the west, and Zuhāb and Rawānsar in the south and east. The country is generally mountainous and thickly wooded. The valleys are well watered and very fertile, being in effect the granary of the Avroman area.

There is no river now known by this name, but Minorsky derives it from **Djāwān-rūd*, influenced by Persian *djawān* 'young'. A Kurdish tribe Djāwānī, listed by Mas'ūdī (*Murūdj*, iii, 253; *Tanbīh*, 88), appears to be the same as the Djāf [*q.v.*]. Those sections of the Djāf still living in Persia are known collectively as Djāf-i Djawānrūd. The Kurd-ī Djwānrō proper occupy villages as far north as the river Sīrwān, where this becomes the frontier of 'Irāḳ, and thus surround the Hawrāmī villages of Pāwa.

There have been a number of poets of Djawānrūd, the most famous being Mawlawī [*q.v.*].

AL-**DJAWBARĪ** [see SUPPLEMENT].

DJAWDHAR, a eunuch—as is indicated by the epithet *ustādh* generally appended to his name—and slave who played an important part under the first Fāṭimid caliphs. Even in the time of the last Aghlabid he was already working in his service and, while still young, was marked out by al-Mahdī when he came to al-Raḳḳāda. By his devotion he won the favour of the caliph and his son al-Ḳā'im. During the latter's reign he became director of the Treasury and Textile Stores, but in addition was the intermediary (*safīr*) of the caliph, that is to say in charge of relations between him and the various functionaries and officers. In this capacity he was chosen as the depository of important secrets, for example al-Ḳā'im's choice of al-Manṣūr as his heir. In the time of al-Manṣūr, who was much preoccupied with the struggle against Abū Yazīd, very real power had been delegated to Djawdhar. He was given his freedom, directed the *ṭirāz* workshops and had his name marked on officially woven fabrics. Moreover he was responsible for the upkeep of the treasure, in particular the caliph's books, and for watching over the inhabitants of the palace, especially the caliph's uncles and brothers, and he was the sovereign's confidential adviser. Under al-Mu'izz who made him move from al-Mahdiyya to the new capital al-Manṣūriyya he exercised still greater responsibilities, dealing with the receipt and transmission of letters and requests addressed to the caliph, and with the transmission of the sovereign's replies and decisions. But he did more than merely transmit letters; sometimes he not only made for the caliph a résumé of incoming letters and the problems they raised, but the sovereign also made him answer them himself, merely indicating what general lines he should take in his reply.

Djawdhar's boundless devotion inspired such confidence in the caliph that he became a sort of prime minister. Holding the secret of the nomination of the heir to the throne, flattered by members of the great families from whom the governors were selected, and apparently even figuring in the Ismā'īlī hierarchy, he ranked third in the State, coming after the heir apparent. He possessed great wealth, ships with which he imported wood from Sicily (perhaps he owed his skill in maritime commerce to his slave ancestry?), and he was in a position to make gifts of wood and money to the caliph.

Djawdhar left for Egypt at the same time as al-Mu'izz, and died on the road near al-Barḳa, still affectionately regarded by the caliph who held him in his arms shortly before he died.

Certain information about this person whom historians have ignored is to be found in his *Life* (*Sīra*), compiled by his private secretary al-Manṣūr, who was probably a slave like himself, in the time of al-'Azīz. This work contains biographical sections, but it is also primarily a collection of documents relating to the various affairs in which Djawdhar was involved, and includes sermons, letters and drafts made by the caliphs, and from this point of view it is very important historically. It was published in Cairo in 1954.

DJAWF, a topographical term denoting a depressed plain, is similar in meaning to and sometimes replaced by *djaww*, as in Djawf or Djaww al-Yamāma (al-Bakrī, II, 405) and Djawf or Djaww Tu'ām. The name *djawf* is applied to many locations: chiefly Djawf al-Sirḥān and Djawf Ibn Nāṣir (also known as Djawf without the definite article (al-

Bakrī), Djawf al-Yaman, al-Djawf, and the two Djawfs—Djawf Hamdān and Djawf Murād of the lexicographers). Djawf Ibn Nāṣir of north-west al-Yaman is a broad plain, roughly trapeziform, bounded on the north by Djabals al-Lawdh, Baraṭ, and Shaʿaf; on the west by Djabals Madhāb, Khārid Khabash, and al-ʿIshsh; on the south by Djabal Yām; and on the east by the sands of Ramlat Dahm of the south-western Rubʿ al-Khālī. Djawf Ibn Nāṣir, which lies north-west of Maʾrib [*q.v.*], was the centre of the Minaean Dynasty and abounds with archaeological sites (called locally Kharib, the plural of Khariba) which were first described by Hamdānī and later by Halévy, Ḥabshūsh, Glaser, Philby, Fakhry, Tawfīḳ, and von Wissman, and which include Maʿīn, al-Ḥazm, Barāḳish, Kamnā (Kumnā in the local dialect), al-Sawdā, and al-Bayḍā. Among the *wādī*s originating in the mountains to the west and flowing into Wādī al-Djawf and thence to the sands in the east, are Wādī al-ʿUla, Wādī al-Khārid, and Wādī Madhāb. Two canals of ancient construction, Bāhī al-Khārid (which parallels Wādī al-Khārid) and Bāhī al-Sāḳiya, are still in use to irrigate the agricultural lands of al-Ḥazm and al-Ghayl respectively, while al-Maṭimma is irrigated by the seasonal waters of Wādī Madhāb. Al-Ḥazm, the chief village of Djawf Ibn Nāṣir, is the *markaz* of the *nāḥiya* of al-Djawf and seat of the *ʿāmil*, who reports to the governor of the province in Ṣanʿāʾ. Djawf Ibn Nāṣir produces wheat, barley, grain sorghums, sesame seeds and oil, cotton, fruit, camels and sheep for export. It is the *dīra* of Dahm, a tribe tracing its ancestry to Nāṣir (whence Djawf Ibn Nāṣir) through Hamdān [*q.v.*]. Dahm's warlike reputation, which was noted by Niebuhr in 1763, has survived to the present, and raids were carried out by Dahm until the late 1940's (Thesiger). Hamdānī speaks of the bellicosity of the tribes of al-Djawf and mentions two opposing groups, Hamdān and Madhḥidj, whence Djawf Hamdān and Djawf Murād ibn Madhḥidj according to Schleifer) of the lexicographers.

al-DJAWF, district and town in north central Saudi Arabia, near the southern terminus of Wādī al-Sirḥān. The district of al-Djawf (= "belly, hollow"), also known as al-Djuba, is a roughly triangular depression, with one base along the northern fringe of al-Nafud and its northern apex at al-Shuwayḥiṭiyya. It is bounded on the west by Djāl al-Djūba al-Gharbī and on the east by Djāl al-Djūba al-Sharḳī. Al-Djawf, or al-Djūba, with an area of approximately 3,850 square kms., is separated from Nadjd by the sand desert of al-Nafūd. It is administered as a district under the Saudi Arabian Amirate of the Northern Frontiers. The area is relatively well watered, has many palm groves, and is considered to have agricultural potential. The two most important settlements of al-Djawf are the towns of Sakākā, now the administrative centre, and al-Djawf. Ḳāra, al-Ṭuwayr, and Djāwa are smaller villages. The total population of the district was roughly estimated as 25,000 in 1961.

The town of al-Djawf, or Djawf ʿĀmir (29° 48.5′ N., 39° 52.1′ E., elev. c. 650 m.), has historically been the centre of al-Djūba and has been identified with the Dumetha of Ptolemy. It was known to the early Arab geographers as Dūmat al-Djandal, [*q.v.*]. The name Djawf ʿĀmir (also Djawf Al ʿĀmir, Djawf Ibn ʿĀmir) is often used to differentiate the town from the southern Djawf, Djawf Ibn Nāṣir, south-east of Wādī Nadjrān.

Muḥammad b. Muʿayḳil added al-Djawf to the Wahhābī realm of ʿAbd al-ʿAzīz b. Muḥammad b. Saʿūd in 1208/1794, when the people of the area surrendered to his combined forces from Nadjd. In c. 1853 the district was taken by Āl Rashīd of Haʾil who held it, in the face of internal rebellion and threats from the Turks, until 1909. In that year, Nūrī b. Shaʿlān, the Ruwala chief, took al-Djawf. There followed 13 years of struggle between the Ruwala and Shammar for mastery of the area, with the town changing hands several times. The *Ikhwān* levies of Ibn Saʿūd took al-Djawf in 1922 with the aid of local leaders who had adopted Wahhābī tenets. The area has since remained a part of the Saʿūdi state. Al-Djawf, now declining in importance because of the rise of the new administrative centre at Sakākā, has been a trading town of the Shammar, Ruwala, and Sharārāt. It is still known for its date market and crafts, while a planned (1961) road system and development scheme may make it an important agricultural centre.

(J. Mandaville)

DJAWF KUFRA is the chief oasis of the Kufra oasis complex in the Libyan Desert and is located about 575 miles SE of Benghazi. The 2200 (1950 estimate) inhabitants of Djawf raise dates, grapes, barley, and olives. Local industry is limited to handicrafts and olive pressing. In the mid-nineteenth century, the founder of the Sanūsī Order, al-Sayyid Muḥammad b. ʿAlī al-Sanūsī, established Zāwiyat al-Ustādh at Djawf at the request of the local tribe, Zwuyya (Ziadeh 49, cf. *EI*[1], iv, 1108 which gives the tribe's name as Zāwiya) and opened the Sahara and the central Sudan to Sanūsī penetration. Djawf

experienced a short period of prominence in 1895 when al-Sanūsī's son and successor, al-Sayyid Muḥammad al-Mahdī, transferred the capital of the order to Zāwiyat al-Ustā<u>dh</u>. However, the capital was soon moved to the newly constructed Zāwiyat al-Tā<u>dj</u>, also in the Kufra Oasis, and finally in 1899 was moved to the Central Sudan.

DJAWHAR "substance" (the Arabic word is derived from Persian *gawhar*, Pahlawī *gōr*, which has already the meaning of substance, although both in Pahlawī and in Arabic, it can mean also jewel) is the common translation of οὐσία, one of the fundamental terms of Aristotelian philosophy. "Substance" in a general sense may be said to signify the real, that which exists in reality, *al-mawdjūd bi 'l-ḥaḳīḳa*. In opposition to Plato, for whom the particular transitory things of the visible world are but appearances and reality lies in a world beyond, the world of constant, eternal ideas, for Aristotle and his followers in Islam the visible world possesses reality and consists of individuals and in its most pregnant sense "substance" is the first and most important category of Aristotle's table of categories, that which signifies the concrete individual, τόδε τι, *al-mu<u>sh</u>ār ilayhi*, *al-<u>sh</u>a<u>kh</u>ṣ*. In this sense it may be said that all things in the visible world, all bodies, parts of bodies, plants and animals are substances (these individual substances are sometimes called first substances, πρῶται οὐσίαι, *djawāhir uwal* to distinguish them from the second substances, δεύτεραι οὐσίαι, *al-djawāhir al-<u>th</u>awānī*, species and genera). However, according to Aristotle and his school every concrete individual is composed of two factors, matter and form, and although mere matter, unendowed with form, cannot exist by itself, nor form—at least in the sublunar world—can exist without matter, both possess objective reality. Matter in its pregnant sense is prime matter, the underlying entity, substratum of the forms, and is by itself absolutely undetermined. Still, as it bears or carries the forms, the universal essences, it has at least some reality and therefore the name of substance cannot be denied to it. Besides, although it is mere potentiality, it is the principle of all becoming and therefore cannot have become itself, but is eternal. Form is the essence, τὸ τί, τὸ τί ἦν εἶναι, *<u>dh</u>āt*, *māhiyya*, *ḥaḳīḳa*, the universal character of any particular and is the cause which differentiates this particular being from other particular beings of its genus through its species, for instance, every particular man is a man and his being a man, his essence, differentiates him from other living beings and is the cause—the formal cause according to Aristotle and his school—of his being a man. Although these essences, according to Aristotle, never exist by themselves, for only particular beings exist, he regards them as having a reality superior to that of the transitory beings, for they are causes—and a cause, according to him, is superior to its effect— and they are eternal and they merit therefore still more the name of substance than the particular things. But how can one regard these essences, non-existent by themselves, but eternal, as the formal causes of the transitory existents? It is here that the neoplatonizing Muslim philosophers go beyond Aristotle. According to them the fundamental and eternal source of these essences lies in the mind of God or in God's thinking them; it is God's thought which is the ultimate formal and final cause of all things. However, God's absolute Unity is not affected by his thought; in God's self-consciousness these essences are comprehended and in God, the thinker, the thinking and the object of thought are all one.

There is besides another point where the Muslim Aristotelians go beyond their master. It is one of the characteristics of Aristotle's system that reality is regarded as having degrees or, as he expresses it, that being is predicated analogically; first there is the sublunar world of transitory things, then beyond it is the heavenly eternal world of the incorruptible in which there is this mysterious substance, the active intellect, ὁ νοῦς ποιητικός, *al-ʿaḳl al-faʿʿāl*, ungenerated and immortal, the immaterial form which in combination with the passive reason activates the thoughts in human beings. Still higher are the intellects, pure immaterial forms or substances, which are the movers of the celestial sphere, and at the pinnacle is God, the most Real, substance in the truest sense. However, for Aristotle God is but the eternal mover of an eternal universe, he is not its creator, nor are the movers of the celestial spheres dependent on him in their nature or existence. But for the Muslim philosophers under the influence of the neoplatonic theory of emanation God is the eternal, constant creator of the world, co-existent and co-eternal with him. According to them the plurality of the world arises out of God's unity through the eternal and timeless emanation of a descencing chain of intermediaries, intellects and souls, immaterial substances moving the heavenly spheres and, the last of these intellects is the active intellect, the *dator formarum*, *wāhib al-ṣuwar*, which according to Avicenna, when the matters are disposed to receive them, provides them with their forms. All these immaterial substances, essences or forms have a different degree of reality and their reality increases with their nearness to God, who is an existent, a substance, an intellect and a cause, these terms taken, however, in a superior sense to what they have in all other beings, for God's very essence consists in his existence which is necessary by itself and exclusively confined to him and God's substance is the only truly independent substance on which all other substances depend.

The whole theory is highly controversial and <u>Gh</u>azālī in his *Tahāfut al-falāsifa* has seen its fundamental weakness. If the plurality in the world derives from the intermediaries, there will be primary causes besides God, if from God himself, they will be useless; if God is the supreme, eternal and constant cause of the World's existence all changes in the world will derive from him; they cannot derive from a pre-existent mattter, since here is no such pre-existence and besides, matter not endowed with form does not exist. The philosophers, indeed, tried to combine two contradictory theories: the supernaturalistic theory of a divine, eternally acting cause for all existence and the naturalistic theory of an eternal and independent matter in which lie the potentialities of all becoming.

The theory of the A<u>sh</u>ʿarī theologians, on the contrary, is frankly supernaturalistic. For them *djawhar* means simply the underlying substratum of accidents; one may regard it as matter—not of matter in the Aristotelian sense of an entity possessing potentialities, but only as that which

bears or carries accidents—or even as body for the substratum consists of atoms which by their aggregation compose the body. The term, however, is somewhat ambiguous, since often in Ashʿarī terminology *djawhar* means atom, although the full designation for atom is *al-djawhar al-fard* or *al-djawhar al-wāḥid*. The atoms out of which the world consists have no independent existence; they rest only on the power of God who, continually, in every time-atom, creates and recreates his atomic world. And since *djawhar* has in theology a purely material meaning it is forbidden to apply the term to God.

One point, where the Muslim Aristotelians deviate from Aristotle, should be still mentioned. Although Aristotle calls the soul a substance, since it is the formal cause of the living organism, he does not regard it as having an existence separate from the body, that is independent of the body and surviving it. The Muslim philosophers regard the soul as a substance subsistent by itself, *djawhar ḳāʾim binafsihi*, that is independent of the body, and they teach personal immortality. It is however somewhat difficult for them as Aristotelians to uphold this, since, according to Aristotle, matter is the *principium individuationis*—Avicenna gives this as an argument against the possibility of the pre-existence of the soul—perception and representation are localized in the body and all thinking, according to Aristotle, presupposes preliminary perception and representation and is activated by the active intellect which is one for all human beings. Their theories are therefore not always consistent or easily understood.

DJAWHAR (ii) [see SUPPLEMENT].

DJAWHAR ĀFTĀBAČĪ, the author of *Tadhkirat al-wāḳiʿāt*, valuable memoirs of the reign of Humāyūn [*q.v.*] and giving much useful information not available elsewhere, was for some years ewer-bearer (*āftābačī*) to Humāyūn and in this capacity came very close to the emperor. He enjoyed the honorific title of *mihtar* (cf. *Akbarnāma*, Bib. Ind., i, 346; the appellation *mihtar* was, however, common to all the *āftābačīs* in the service of the emperor), and was a trusted confidant of his master. Although he was neither a scholar not a writer of any high standard, history has, however, preserved Djawhar's name for the simple, unostentatious and truthful narration of events of the reign of Humāyūn and his deep loyalty to his master. In recognition of his services he was appointed in 962/1554-5 *muḥaṣṣil* (tax-collector) of the *pargana* of Haybatpur Bīnī and subsequently of the villages included in the *djāgīr* of Tātār Khān Lodī. It, however, appears that he enjoyed this office for a short while only, as the same year (cf. *Akbarnāma*, i, 346; tr. Beveridge, i, 627) he was appointed the *khazīnadār* (treasurer) of the government of the *sarkārs* of the Pandjāb and of Multān. While in Haybatpur, dominated by the Baniyās (Hindū traders and bankers), Djawhar paid off the debts which the local Afghāns owed to the Hindūs and secured the release of pawned Afghān women and children. This humanitarian act earned for him royal approbation resulting in his promotion as a provincial treasurer (*khizānčī*; cf. *Tadhkifat al-wāḳiʿāt*, fol. 132, B.M. MS. Add. 16711). Although a personal servant of Humāyūn, he was entrusted with special State assignments on critical occasions and his counsels were given due weight (cf. *Tadhkirat al-wāḳiʿāt*, faṣl 32 *passim*). As with the meagre details of his life, nothing is known about the dates of his birth and death. He survived his imperial patron but passed into eclipse after Humāyūn's sudden death in 963/1556.

His claim to fame rests chiefly on his only work, the *Tadhkirat al-wāḳiʿāt*, whose value as a very useful source-book for the reign of Humāyūn has been fully recognized. The original Persian text is still in MS. although English and Urdū translations have since appeared; (C. Stewart, *The Tezkereh al-Vakiat* .... London 1832 Calcutta 1904; Muʿīn al-Ḥaḳḳ, *Tadhkirat al-wāḳiʿāt*, Karachi n.d.). At the request of Djawhar a recension in ornate prose was made by Ilāh-dād Fayḍī Sirhindī the author of the Persian lexicon *Madār al-Afāḍil* for presentation to Akbar (cf. Rieu, iii, 927a and Ethé 222).

Bibliography: *Tadhkirat al-wāḳiʿāt* (Urdū tr. Muʿīn al-Ḥaḳḳ), Karachi n.d., index s.v. Djawhar; Storey, i, 536-7; Rieu, i, 246; Elliot and Dowson, *History of India* ...., v, 136-49. (A. S. BAZMEE ANSARI)

DJAWHAR AL-**ṢIḲILLĪ**, general and administrator, one of the founders of the Fāṭimid Empire in North Africa and Egypt.

His name was Djawhar b. ʿAbd Allāh, also Djōhar together with the epithets of al-Ṣaḳlabī (the Slav), al-Ṣiḳillī (the Sicilian) or al-Rūmī (the Greek) and al-Kātib (the State Chancellor) or al-Ḳāʾid (the General). The first two epithets cast some light on his obscure origin, the other two denote the two highest posts he occupied. His birth date is unknown, but judging by the date of his death (20 Dhu 'l-Ḳaʿda 381/28 April 991) we may guess that he was born sometime during the first decade of the 4th/10th century; he was in the prime of his activity between 340/950 and 366/975. From the parallel career of Djawdhar, well known to us, thanks to his recently published biography, we may infer that Djawhar was a freedman of the Fāṭimid house, of Slav origin. (Leo Africanus, tr. Épaulard, 19, 503 = Esclavon; on this question see I. Hrbek, *Die Slaven im Dienste der Fāṭimiden*, in *ArO*, xxi (1953), 560-71). His father ʿAbd Allāh was most probably a slave, but Djawhar appears as a freedman from the very beginning.

The first time we hear of Djawhar he was a *ghulām*, perhaps also the secretary of the third Fāṭimid Caliph al-Manṣūr. In 347/958 al-Muʿizz decided to put all the power he possessed in a military venture to dominate the whole of North Africa, and chose for the leadership of this important campaign his secretary Djawhar, giving him in this way the opportunity to prove that he was the most talented soldier the Fāṭimids ever had.

Djawhar's campaign in the Central and Far Maghrib was perhaps the most resounding achieved by a Muslim army since that of ʿUḳba b. Nāfiʿ some 284 years before, but in spite of the victories Djawhar gained, it was neither decisive nor of any lasting effect. This was due not to any fault of Djawhar, but to the difficulty of the terrain and to the greatly superior strength of the enemy. Near Ṭahart Djawhar had to measure arms with a large army of Zanātīs, supporters of the Umayyads, under Yaʿlā b. Muḥammad al-Yafrānī, governor of Ṭahart and Ifkan; according only to Ibn Abī Zarʿ, also of Ṭandja (Tangier). He won the day and killed Yaʿlā (347/958). Instead of marching on Fez and the other Umayyad strongholds in the region, he chose to use his small forces to realize easier gains. He turned south-east, invaded

the small principality of Sidjilmāsa and put its prince Muḥammad b. al-Fatḥ b. Maymūn b. Midrār to flight. Some days later this last of the Midrāris fell into the hands of Djawhar who killed him mercilessly. He spent more than a year in this region waiting for a suitable opportunity to move northwards. In the last days of Shaʿbān 349/October 960 he headed towards Fez and laid siege to it. On 20 Ramaḍān 349/13 November 960 he stormed the city, thanks to the bravery of Zīrī b. Manād al-Ṣanhādjī who was under his command. Its Umayyad governor Aḥmad b. Abī Bakr al-Djudhāmī was taken prisoner and died in prison. This great victory brought all the Maghrib al-Aḳṣā (except Ṭandja and Sabta) under Fāṭimid authority for a short time. Even the last of the Idrīsids, al-Ḥasān b. Djannūn, who contented himself with a small principality around the city of al-Baṣra under Umayyad vassalage, paid homage. To give al-Muʿizz a tangible proof of his victory he sent to him some live fish, taken from the Atlantic Ocean, in huge jars full of water. Some months later he returned victorious to al-Ḳayrawān with prisoners and rich booty.

These victories of Djawhar's opened the eyes of his master al-Muʿizz to his talents, and convinced him that with his aid he could realize the dearest Fāṭimid dream since the rise of their power: the conquest of Egypt.

Between 350/961 and 358/968-9 we have no information whatsoever about Djawhar. But in 358/968-9 he came to the fore once more as the general chosen by al-Muʿizz to lead the campaign in Egypt. Al-Muʿizz had such confidence in him that he is reported to have said: "By God, if this Djawhar were to go alone, he would conquer Egypt and we would be able to enter this land clad only in our simple clothes (*i.e.*, without armour or shield) without war and we could dwell in the ruined abodes of Ibn Ṭūlūn and build a city which would dominate the world" (*Khiṭaṭ*, i, 378). As a sign of honour al-Muʿizz bestowed on Djawhar before his depature all his royal garments and apparel except his seal and underwear. He ordered all the governors on the route to Egypt to meet him dismounted and to kiss his hand. The governor of Barḳa [*q.v.*] Aflaḥ al-Nāshib offered to pay 100,000 dinars to be spared this humiliation to his dignity, but the Caliph refused. Djōdhar, the highest dignity after the Caliph, was ordered to address Djawhar as an equal brother.

Al-Muʿizz was not disappointed in his hopes. Within four months Djawhar achieved the conquest of Egypt. He left al-Ḳayrawān in Rabīʿ II 358/February 969 and by mid-Shaʿbān of the same year/1 July 969 he was already master of al-Fusṭāṭ after a very little fighting near al-Djīza on 11 Shaʿbān/30 June. He knew how to gain the sympathies of the Egyptians and inspire their confidence in the new régime through a long pompous proclamation read in public and through the nomination of Djaʿfar b. al-Furāt as *wazīr*. As a measure of precaution, however he did not dwell in Fusṭāṭ, but passed the first night after his victory in his camp to its north. The next day he laid the foundations of a new capital Cairo (al-Ḳāhira [*q.v.*]) which was destined to be the greatest of Muslim cities after Baghdād. A year later (24 Djumādā I 359/4 April 970) he founded the famous mosque of al-Azhar [*q.v.*].

Having established Fāṭimid rule in Egypt, Djawhar stayed as sole governor of Egypt for more than four years; al-Muʿizz entered Cairo only on 17 Muḥarram 364/7 October 974. A little later he dismissed Djawhar.

During these four years Djawhar showed noteworthy capacity and foresight as administrator. Besides the sympathies of the people, which he fully gained, he succeeded in putting order in the finances of the country which were in complete chaos during the last years of the Ikhshīdids. It is known that Egypt had yielded since the time of Muʿāwiya an annual revenue of about 4 million dinars when well administered. Djawhar raised 3,400,000 dinars during the first year of his administration, almost the largest revenue of Egypt in the Fāṭimid period. Some 85 years later, the able vizier al-Yāzūrī could raise only 800,000. Djawhar had more confidence in the Maghribīs who came with him than in Egyptians, and gave them almost all the important posts. He may have been following in this respect the instructions of al-Muʿizz.

Besides his work in the administration of the new province, Djawhar had to face the menacing peril of the Ḳarmaṭians [*q.v.*], who in Dhu 'l-Ḥidjdja 358/September 969 defeated and took prisoner at Damascus his lieutenant Djaʿfar b. Fallāh, who had been placed in change of the occupation of Palestine and Syria. During this conflict with the Ḳarmaṭians and their allies, Djawhar was able to annex al-Ḥidjāz to Fāṭimid rule. By 366/976 the *khuṭba* was read in their name in Mecca and Medina.

After 368/976 we hear no more of Djawhar till his death in 20 Dhu 'l-Ḳaʿda 381/30 April 992. He is said have passed those idle years of his life between 368 and 381 in works of piety and welfare. His son al-Ḥusayn, commander-in-chief to the caliph al-Ḥākim, was killed as a result of intrigues in which he took part against the Caliph.

(H. MONÉS)

AL-DJAWHARĪ, ABŪ NAṢR ISMĀʿĪL (B. NAṢR?) B. ḤAMMĀD, a celebrated Arabic lexicographer of Turkish origin, born in the town (or: in the province) of Fārāb [*q.v.*] (whence his *nisba* al-Fārābī), situated east of the Sir-Daryā. In later times, Fārāb was called Otrār or Oṭrār.

The date of his birth is unknown. For the year of his death most sources give either 393/1002-3 or 398/1007-8, while others mention 397/1006-7 or about 400/1009-10. The first date (or even earlier ones; see Rosenthal) is made doubtful by the statement of Yāḳūt that he had seen an autograph copy of al-Djawharī's *Ṣiḥāḥ* dated 396.

Al-Djawharī commenced his studies at home under his maternal uncle Abū Ibrāhīm Isḥāḳ b. Ibrāhīm al-Fārābī (Brockelmann I, 133; S I, 195 f.), the author of the *Dīwān al-adab*, an Arabic lexicon which greatly influenced al-Djawharī's own dictionary *al-Ṣiḥāḥ*. In order to complete his education he went to Baghdād where he attended the lectures of Abū Saʿīd al-Sīrāfī [*q.v.*] and Abū ʿAlī al-Fārisī (Brockelmann I, 116; S I, 175) and later travelled to the abodes of the Bedouin tribes of Muḍar and Rabīʿa (probably in Syria and ʿIrāḳ) and even to the Ḥidjāz and Nadjd (see, *e.g.*, *Ṣiḥāḥ*, s.v. *n kh s*). He thus followed the habit of earlier lexicographers who used to make linguistic investigations among the Arabs of the desert, and he seems to have been the last lexicographer of fame to maintain that tradition. After having spent a large part of his life on travel he returned to the east, stayed some time in Dāmaghān [*q.v.*] with the *Kātib* Abū ʿAlī al-Ḥasan (variant: al-Ḥusayn) b. ʿAlī and then settled in Nīsābūr, where he made a living by teaching and copying books, especially the Ḳurʾān, and also devoted himself to literary activity. His beautiful handwriting was so much admired that it was put on the same level as that of the celebrated Ibn Muḳla. He died in Nīsābūr either as the result of an accidental fall from the top of his house or of the old mosque, or else, in a fit of madness, while trying to fly with two wooden wings (or: with the two wings of a door) fastened to his body.

Besides some verses, part of which are preserved in a Berlin MS. (Ahlwardt 7589_2) or quoted by later authors (*e.g.*, al-Thaʿālibī and Yāḳūt), he wrote an introduction to syntax, *Muḳaddima fi 'l-naḥw*, and a treatise on metre, *ʿArūḍ al-waraḳa*, both of which appear to be lost. His distinction in the field of metrics, where he deviated in some respects from the system laid down by al-Khalīl [*q.v.*], is pointed out by Ibn Rashīḳ.

His fame rests on his dictionary *Tādj al-lugha wa-ṣiḥāḥ al-ʿArabiyya*, commonly known as *al-Ṣiḥāḥ* (*al-Ṣaḥāḥ* is also correct), which represents a milestone in the development of Arabic lexicography. For centuries it was the most widely used Arabic dictionary until, in more recent times, the *Ḳāmūs* of al-Fīrūzābādī [*q.v.*] took its place. In addition to outspoken statements in the sources, the important standing of al-Djawharī's lexicon is attested to by the fact that, in the centuries following its appearance, it gave rise to a huge mass of lexicographical literature, part of which has been described and characterized by Goldziher. The *Ṣiḥāḥ* was abridged, rearranged, supplemented, commented upon, and translated into Turkish and Persian; its contents, together with those of other dictionaries, were merged into new lexicographical works; the verses and *ḥadīth*s quoted in it as *shawāhid* were assembled in special treatises; a versification of it was begun by Zayn al-Dīn al-Maghribī (Yāḳūt, ed. Margoliouth, vii, 292); and a considerable number of writings were devoted to criticism of its shortcomings. On the other hand, several authors made it a point to defend al-Djawharī from the attacks of his critics.

As the title suggests, the *Ṣiḥāḥ* was intended to contain only authentic lexicographical data, their authenticity, according to the notions of indigenous Arabic lexicography, being dependent upon their transmission through a continuous chain of reliable tradition (cf. Suyūṭī, *Muzhir*, i, 58). Hence, the same degree of authority was attributed to the *Ṣiḥāḥ* in lexicography as to the two *Ṣaḥīḥ*s of Bukhārī and Muslim in the science of *ḥadīth*. In both cases, however, the formal principles adopted did not make for absolute correctness, and numerous errors were detected in the *Ṣiḥāḥ* although the work as a whole was held to be highly reliable.

In his short introduction, al-Djawharī claims that he arranged his subject matter according to an entirely new scheme. His innovations, however, are mainly a combination of various principles followed by his predecessors. The arrangement of the roots under the last radical, adopted, after the model of the *Ṣiḥāḥ*, by the best known of later lexicographers, had already been introduced by al-Djawharī's teacher and uncle, al-Fārābī, in the *Dīwān al-adab*. The use of the common order of the Arabic alphabet, in contrast to the phonetical arrangement of al-Khalīl which was followed by several of al-Djawharī's forerunners and successors, had also been in vogue before the *Ṣiḥāḥ*. As to the principle of authenticity, as understood by Arabic lexicographers, al-Djawharī's older contemporary, Ibn Fāris [*q.v.*], had set the example in his *Mudjmal*.

The use of the last radical as the primary basis for the arrangement of the *Ṣiḥāḥ* has been interpreted as being due to the author's intention to help poets find rhyme words. However, Sanskrit lexicography, which seems to have influenced Arabic lexicography in some respects, occasionally used the same principle, although Sanskrit poetry has no rhyme.

At al-Djawharī's time, independent lexicological research had already come to a close. So the *Ṣiḥāḥ* contains mainly an abstract from earlier lexicographical works, in the first place the *Dīwān al-Adab* (see Krenkow), while al-Djawharī's own contributions are minimal. Being replete with grammatical discussions, the *Ṣiḥāḥ* earned its author the reputation of being the outstanding expert on grammar among lexicographers. It is reported that al-Djawharī compiled his dictionary for the *Ustādh* Abū Manṣūr ʿAbd al-Raḥīm (variant: Raḥmān) b. Muḥammad al-Bīshakī, with whom he became closely associated in Nīsābūr (cf. Yāḳūt, *Buldān*, s.v. Bīshak). In the circulation of the work an important part was taken by the author's pupil Ismāʿīl b. Muḥammad b. ʿAbdūs al-Dahhān al-Nīsābūrī, the Egyptian philologist Abū Sahl Muḥammad b. ʿAlī b. Muḥammad al-Harawī and, later on, the well known calligrapher Yāḳūt al-Mawṣilī. Variant readings in different MSS of the *Ṣiḥāḥ* are frequently pointed out by later lexicographers.

According to a tradition which has never been doubted by Western scholars, al-Djawharī did not live to finish a fair copy of his work, reaching only the middle of the letter *Ḍād*, while the rest was completed from his rough draft by his pupil Ibrāhīm b. Sahl (variant: Ṣāliḥ) al-Warrāḳ. This fact, according to tradition, is held responsible for the numerous errors which later scholars detected in the *Ṣiḥāḥ*. The account, however, may have been a mere invention, probably designed to maintain al-Djawharī's reputation as an unfailing authority. Doubts with regard to its correctness were already voiced by Yāḳūt and, more outspokenly, by Ḥadjdjī Khalīfa, since the existence of autograph copies of the complete work had come to their knowledge or

else since, according to some traditions, the entire lexicon had been handed down from al-Djawharī himself. In addition, errors were found not only in the latter part of the *Ṣiḥāḥ* but also in the first which, as agreed by all, had been edited by the author himself. A similar account, probably resulting from the same tendency, exists with regard to the authorship of al-Khalīl's *Kitāb al-ʿAyn*.

The *Ṣiḥāḥ* is available in a Persian lithographed edition (1270) and two Būlāḳ prints (1282 and 1292), while a critical edition is still awaited. Of a European edition, undertaken by E. Scheidius, only the first fascicle appeared (1776; 179 pp.; see Zenker, *Bibl. Or.* i, Leipzig 1846, 5). The Turkish version of Van Kulu [*q.v.*] was the first book issued from the Müteferriḳa press in Istanbul, in 1141/1729.

DJĀWĪ, plur. Djāwa, Muslims from the Bilād al-Djāwa. Bilād al-Djāwa was the collective name for the South-East Asian area used by the inhabitants of Mecca when C. Snouck Hurgronje visited it in 1884-5, and probably much earlier; it has remained in use. Djāwa means not only the Javanese, but also the linguistically related people from the other islands, including the Philippines, and even the linguistically non-related peoples from the South-East Asian mainland. Generally well-to-do and pious, the Djāwa were welcome guests in Mecca, especially since they were less parsimonious than the pilgrims from various other countries and therefore more apt to provide the *shaykhs* concerned with pilgrims with an easy income. Snouck Hurgronje took a particular interest in those Djāwa who came from the Netherlands Indies; to this circumstance we owe the valuable sociological treatise on the Djāwa group in Mecca in *Mekka*, ii, *Aus dem heutigen Leben*, The Hague 1889, ch. iv. The whole pattern of Djāwī life, *e.g.*, their behaviour in their unfamiliar surroundings, how they spent their time in case of a prolonged sojourn, how they reacted upon international and pan-Islamic influences, is discussed here brilliantly and in a very illuminating way. This picture, however, needs to be completed by Snouck Hurgronje's later studies of Islam in Indonesia [*q.v.*], and it is now of historical interest only owing to the considerable change in conditions both in Mecca and in South-East Asia. (C. C. Berg)

DJĀWĪD, Young Turk economist and statesman. Meḥmed Djāwīd was born in 1875 in Salonika, where his father was a merchant, and received his early education both there and in Istanbul. He graduated from the *Mülkiyye* in 1896, where he formed a lasting friendship with his classmate Hüseyin Djāhid [Yalçin], the journalist. After a brief tour of duty with the Agricultural Bank, he entered the service of the Ministry of Education, resigning in 1902 as secretary of the bureau of primary education. Back in Salonika he became director of a private elementary school, *Mekteb-i Tefeyyüz*, and joined the *ʿOthmanlī Ittiḥād we Teraḳḳī Djemʿiyyeti*, the Macedonian nucleus of the Young Turk conspiracy against the despotism of ʿAbd al-Ḥamīd II. In 1908 he became lecturer in economics and statistics at the *Mülkiyye*. During this period in Salonika and Istanbul he published several textbooks on economics (*ʿIlm-i iḳtiṣād*, 4 vols., 1905, ²1912; *Inshāʾiyyāt*, 1909; and *Mekātib-i iʿdādiyyeye makhṣūṣ ʿilm-i iḳtiṣād*, 1909, ²1913) and, together with Aḥmed Shuʿayb and Riḍa Tewfīḳ [Bölükbaşi], edited a learned journal called *ʿUlūm-u Iḳtiṣādiyye ve Idjtimāʿiyye Medjmūʿasī* (1909-11). Following the 1908 revolution he was elected a deputy for Salonika (1908-12) and Bīgha (Çanakkale, 1912-8), and became minister of finance (1910, 1913-4, 1917-8), and a member of the general assembly (*medjlis-i ʿumūmī*) of the Union and Progress (*Ittiḥād we Teraḳḳī*) party (1916-8). In the Chamber of Deputies he soon distinguished himself as an eloquent orator and a competent rapporteur of the Budget Commission. During his years as finance minister he conducted delicate negotiations in Paris and other European capitals for public loans to the Ottoman Empire. Together with a number of other ministers he resigned from the cabinet after Turkey's entry into the war, in opposition to the Germanophile policy of Enwer Pasha; later he re-entered it on the plea of Ṭalʿat Pasha. He was the only wartime Young Turk minister to retain his position in the ʿIzzet Pasha cabinet (14 October to 14 November 1918). Subsequently he went into hiding and exile to escape the wave of prosecution of Union and Progress leaders; in July 1919 an Istanbul tribunal sentenced him *in absentia* to 15 years' hard labour. In 1920 he married ʿAliyye, divorced wife of Burhān al-Dīn, son of the late ʿAbd al-Ḥamīd II.

Djāwīd returned to Istanbul in 1922, where he acted as representative of the Ottoman creditors of the *Dette publique ottomane*. According to Halide Edib, *The Turkish Ordeal*, London 1928, 74, Mustafa Kemal rejected Djāwīd's suggestion that he be allowed to join the Anatolian movement. In 1923 he served as an adviser to the Turkish delegation to the Lausanne peace conference. He was arrested following the 1926 assassination attempt on Mustafa Kemal [Atatürk], and tried before the special Independence tribunal in Izmir (6 July) and Ankara (10 August) on charges of having conspired to resuscitate the Union and Progress movement and thereby to subvert the regime. Much of the questioning turned around a meeting of former Union and Progress leaders held in Djāwīd's house in Instabul on 16 April 1923; yet no specific or overt acts of high

treason were alleged or proved against him. Together with three other ex-Unionist leaders he was sentenced to death and executed by hanging in the Djebedji quarter of Ankara on 26 August 1926.

DJĀWĪDĀN [see SUPPLEMENT].

DJAWKĀN [see ČAWGĀN].

AL-**DJAWLĀN**, a district in southern Syria bounded on the west by the Jordan, on the north by the spurs of Hermon, on the east by the Nahr al-ʿAllān and on the south by the Yarmūk. The northern part lies at a certain altitude and presents the appearance of a wild, hilly region, covered with blocks of lava and oak forests which were once magnificent but are now extremely impoverished. The southern part is fairly low-lying and differs but little from the plain of Ḥawrān, with a soil of volcanic detritus, more even and of greater fertility.

The territory of Djawlān corresponds with the ancient Gaulanitis of the Hellenistic period, which probably took its name from the town of Golan mentioned in the Old Testament. But it appears to have dwindled with time. At one period, continuing into the early days of Islam, this province included the country lying to the east of Nahr al-ʿAllān, which can be inferred from the existence of places called Djābiyat al-Djawlān and Saḥm al-Djawlān beyond that boundary. It was the latter village, which still keeps the same name, that Schumacher thought to be identified with the ancient Ğōlān. A distinction may have been made later, from the 7th/13th century, between Djawlān and Djaydūr where Yāḳūt places al-Djābiya [*q.v.*].

Djawlān, which during the Byzantine period belonged to Palestina Secunda and which had then been one of the centres of power of the Ghassānids (Nābigha, ed. Derenbourg, iv, 4; xxiv, 25, 29; Ḥassān b. Thābit, ed. Hirschfeld, index) was conquered by Shuraḥbīl when he occupied Urdunn, but was later restored to the province of Damascus (al-Ṭabarī, iii, 84) and, according to al-Muḳaddasī, formed one of its six districts. Its capital was originally Bāniyās [*q.v.*] which still held that position in the Mamlūk period but which in modern times was replaced by Ḳunaytra, situated on the important road between Damascus and Tiberias. The population, which previously consisted mostly of Banū Murra, now forms an ethnic and linguistic mosaic in which Druzes and *mutāwila* Shīʿis who have settled at the foot of Hermon live side by side with Čerkes and Turkoman colonies and various nomadic tribes who are turning to a sedentary life. It has always been praised for the richness of its agricultural produce which served to supply Damascus and today still forms the main resource of the region.

(D. SOURDEL)

DJAWNPUR (JAUNPUR), city on the Gumtī in Uttar Pradesh, north India, lat. 25° 48′ N., long. 82° 42′ E., and the surrounding district. The city was founded in 760/1359 by Fīrūz Shāh Tughluḳ [*q.v.*], near the ancient Manāyč reduced by Maḥmūd of Ghazni in 409/1018 and renamed Ẓafarābād by Ẓafar Khān, its governor under Ghiyāth al-Dīn Tughluḳ after 721/1321. Muslim historians derive the name Djawnpur from Djawna Shāh, Muḥammad b. Tughluḳ's title before his accession; but Djamanpur is known as a by-form of the name (? connexion with Djawn = Djamnā, [*q.v.*]; Skt. *Yamunendrapura* has been suggested as the etymon), and this origin cannot be regarded as established.

In the confused conditions at the beginning of the reign of Nāṣir al-Dīn Maḥmūd Tughluḳ [see DIHLĪ SULTANATE] the disaffected Hindūs of the eastern provinces rejected all obedience to Dihlī. The eunuch Malik Sarwar, Khʷādja Djahān, persuaded Maḥmūd to grant him the title of Sulṭān al-Sharḳ and send him to crush the rebellion in 796/1394; having brought under control Koyl, Eṭāwā and Kanawdj he occupied Djawnpur, and there established himself as independent ruler of a kingdom extending over Awadh, west to Koyl and east into Tirhut and Bihār; to these lands were later added the Čunār district of Uṛīsā (857/1453) and Rohilkhand (870/1466). For the history of this kingdom see SHARḲIDS. In 884/1479 Bahlōl, the first Lōdī sultan of Dihlī, defeated the last Sharḳī sultan, Ḥusayn, and established his son Bārbak as ruler over Djawnpur with permission to use the royal title and to issue coin. After Sikandar overcame his brother Bārbak as sultan of Dihlī in 894/1489 Djawnpur was absorbed in the Dihlī empire.

In 933/1526-7 Djawnpur was taken for his father Bābur by Humāyūn, and a governor was appointed; but the growth of the power of Shīr Khān (Shīr Shāh Sūrī, [*q.v.*]) and the disaffection of the Afghān faction on the death of Djunayd Birlās, the governor, compelled Humāyūn to march again on Djawnpur in 943/1536, with success; but Humāyūn's long absence from Dihlī lost him his hold on the eastern provinces, and even before his great victory of Muḥarram 947/May 1540 Shīr Shāh was in command, with his son ʿĀdil Khān installed as viceroy in Djawnpur. The importance of Djawnpur declined with the rise of Čunār, and not until the rebellion (970/1563 onwards) of ʿAlī Ḳulī Khān, governor since 965/1558, does it again come into prominence; ʿAlī's final defeat in Dhu 'l Ḥidjdja 974/June 1567 led to Akbar's temporary residence there and the governorship of Khān-i Khānān Muḥammad Munʿim Khān. After the foundation of Allāhābād [*q.v.*] the importance of Djawnpur waned; it passed into the possession of the Nawwābs of Awadh in the early 12th/18th century, and into British hands in 1775.

Djawnpur was long celebrated for its learning, "the Shīrāz of Hind", from its foundation by Fīrūz certainly until the time of Shīr Shāh; some of its rulers—notably Ibrāhīm and Ḥusayn—were cultured connoisseurs of more than mere scholastic learning; Ḳurʾān schools still exist within the precincts of the mosques.

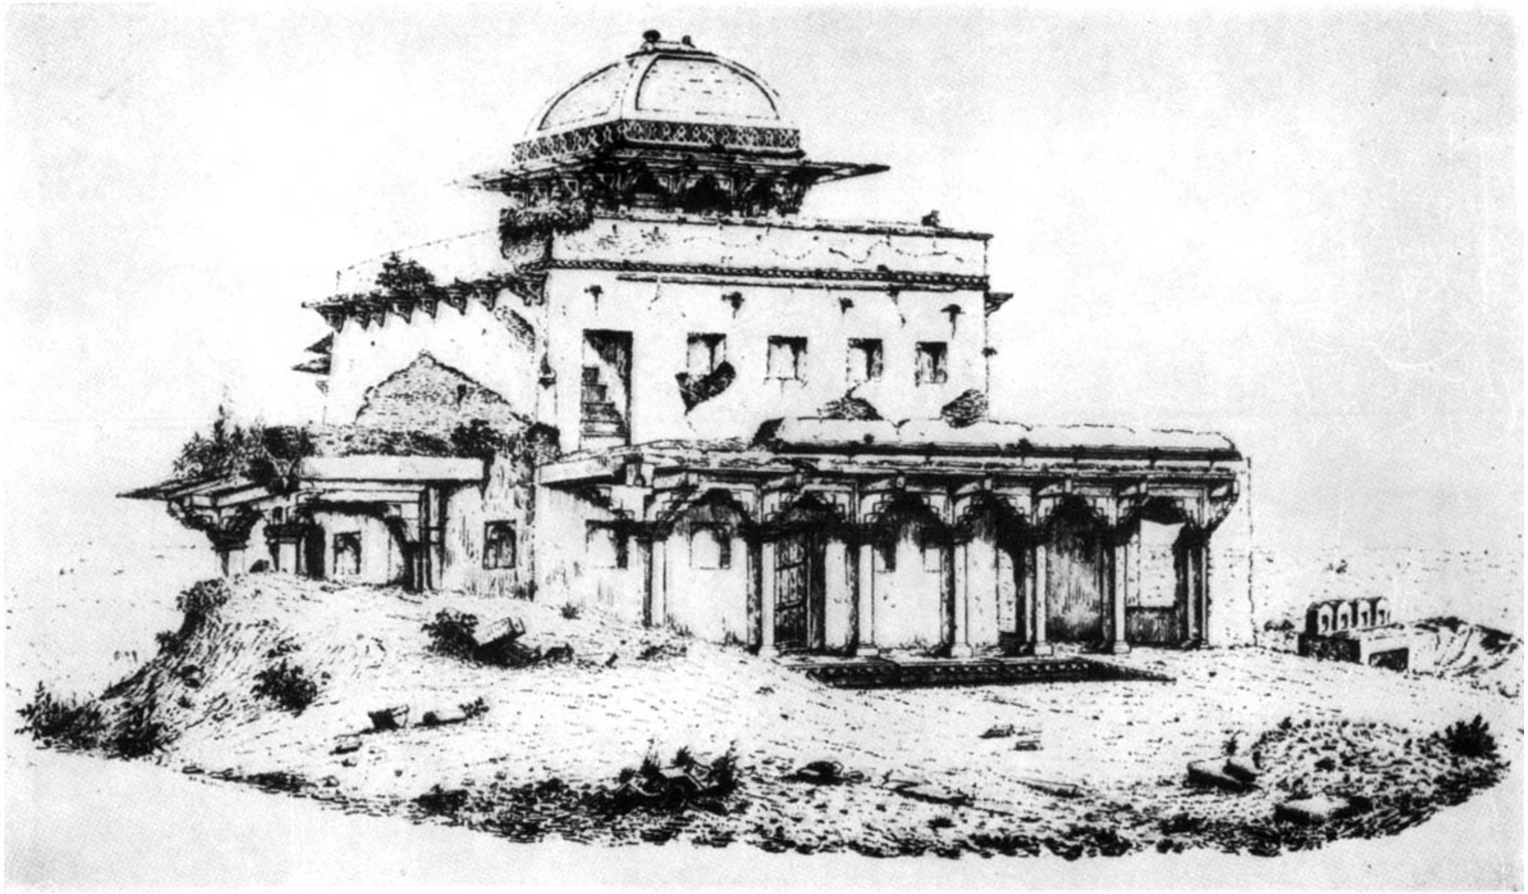
Monuments. The fort of Fīrūz Shāh, an irregular quadrilateral on the north bank of the Gumtī, is of high stone walls built largely from local temple spoil, with a single gateway protected by tapering semicircular bastions; other bastions were destroyed in 1859 by the British, as were some of the

internal buildings, including the palace built by Fīrūz Shāh's governor, the Čihil Sutūn (Plate I). The fort mosque of the same governor, Ibrāhīm Nā'ib Bārbak, still stands: the side *līwāns* are low, trabeate, supported on rows of pillars from Hindū temples set up at random; there are many additions of later periods (illustration in Kittoe, see *Bibl.*); a detached *mīnār* in the court-yard, some 12 m. high, has a fine Arabic inscription giving its date as Dhu 'l-Ḳa'da 778/March-April 1377. A small detached pillar within the fort proclaims an edict of Āṣaf al-Dawla of Awadh on the continuance of the daily stipend to indigent sayyids (*sādāt bī-nawā*) from the revenues of Djawnpur (1180/1766).

The Aṭalā mosque, whose foundations were prepared on the site of the Hindū temple to Aṭalā Devī by Fīrūz Shāh Tughluḳ, was not built until 810/1408 under Ibrāhīm Sharḳī; its main feature, the central bay of the west *līwān* covered by a large dome which is concealed from the court-yard by a tall pyramidal gateway resembling the Egyptian propylon, is the special characteristic of the Djawnpur style under the Sharḳī sultans. The Aṭalā mosque is the largest (78.7 m. square) and most ornate: the *līwāns* on north, east and south are composed of five pillared aisles in two storeys, the two outer aisles at ground level being formed into a range of pillared cells facing the streets; in the middle of each side is an archway, with a smaller propylon on the outside, and with domes over the north and south gates; a dome covers the central bay of each *līwān* on the north and south of the main dome, each with its propylon facing the court-yard. Within each propylon is a large arched recess, with a fringe of stylized spear-heads similar to those of the Khaldjī buildings at Dihlī [*q.v.*], in which are pierced arched openings in front of the dome, and the main entrances beneath. The main propylon is 22.9 m. high, the dome behind being only 19.5 m., and 16.8 m. wide at its base. The dome is supported on a sixteen-sided arched triforium, on corner brackets over an octagon with pierced windows, supported on squinch arches. The *ḳibla* wall is relieved on its exterior by square projections behind each dome, the corners of each supported by a tapering buttress; larger tapering buttresses support the main angles of the wall. There are no *mīnārs*, the top storeys of the propylon serving for the *mu'adhdhin*.

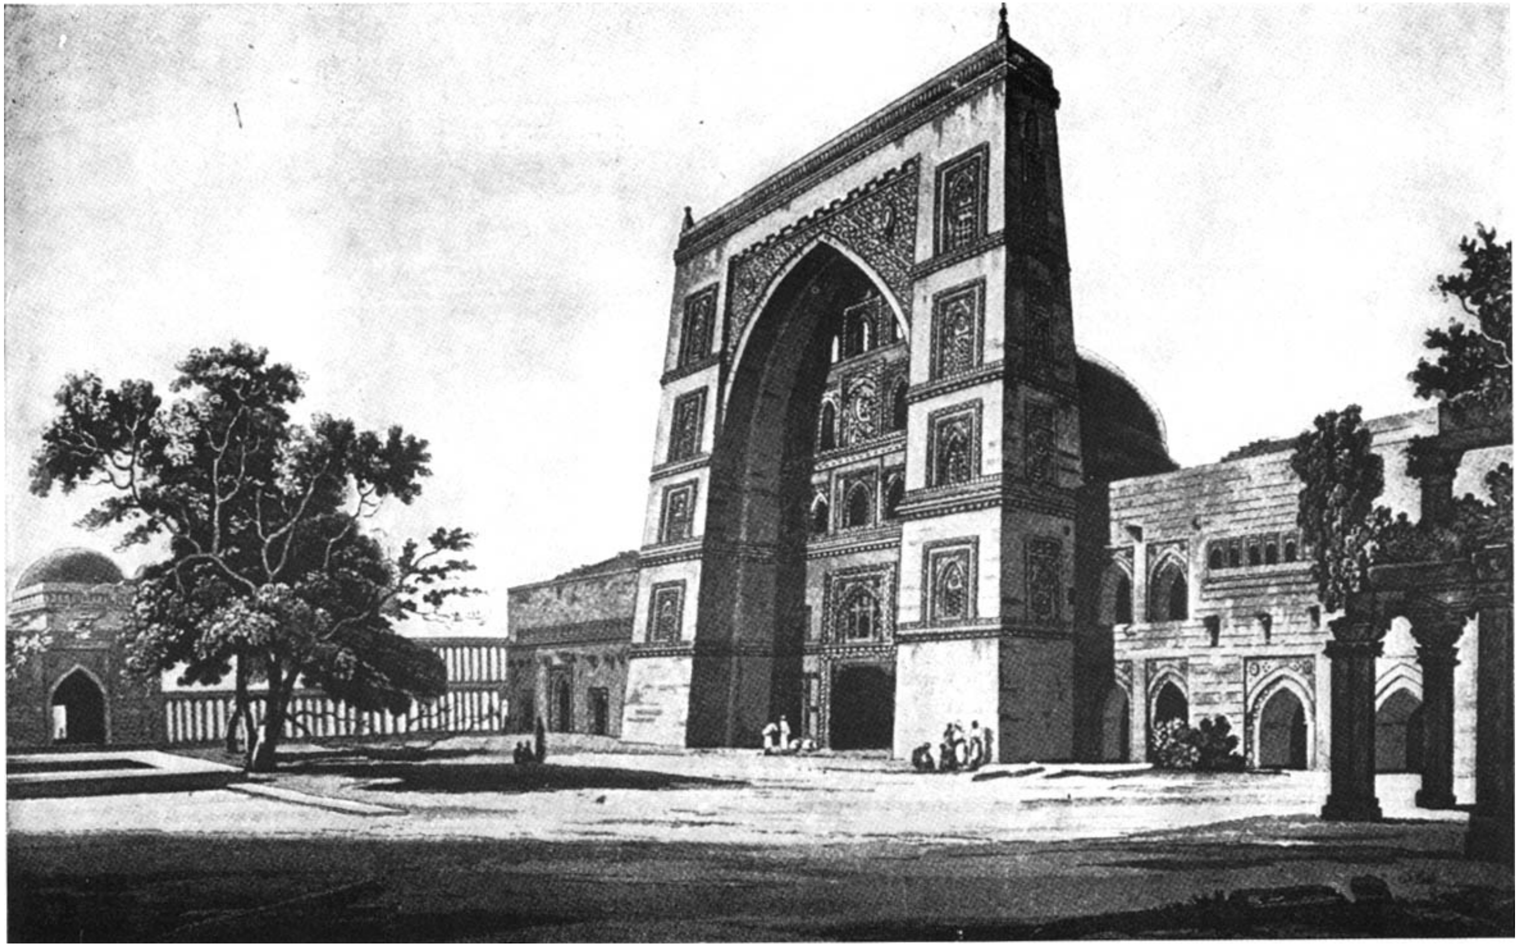
The masdjid Khāliṣ Mukhliṣ, built by two governors of Ibrāhīm, is of the same period, only the central propylon and dome and western *līwāns* remaining, all massive and without ornament. Of the contemporary Djhandjharī (*djhandjhar* "perforated") mosque only the screen of the central propylon remains, filled with the finest stone tracery in Djawnpur. The Lāl darwāza ("red gate"; near the gate of a former palace) mosque in the north-west of the city, the smallest of the Djawnpur mosques, was built c. 851/1447, the sole surviving monument of the reign of Maḥmūd Sharḳī, has a single central dome and propylon with tall trabeate transepts, and *zanāna* galleries on a mezzanine floor flanking the central bay. The foundation of the Djāmi' masdjid (Plate II) was laid in 842/1438, but it was not finished until the reign of Ḥusayn. The mosque stands on a raised terrace 5 to 6 m. above street level, with a single propylon in the west *līwān*, the transepts covered by fine barrel-vaults, and the façade entirely arcuate. These are the only remains of the Sharḳīs standing at Djawnpur, the rest having been demolished by Sikandar Lōdī; all are of stone, largely pillaged from Hindū or Buddhist temples, and cement, the work of Hindū craftsmen. Echoes of the characteristic style of the capital occur in other places within the quondam Djawnpur kingdom, in the Aṛha'ī Kangura masdjid at Banāras (Benares), and in the Djāmi' masdjids at Eṭāwā and Kanawdj [*qq.v.*].

By far the most significant monument of Mughal times is the great bridge of Mun'im Khān, begun 972/1564 and finished 976/1568. Built by Afghān workmen under a Kābul architect, Afḍal 'Alī, it consists of ten spans of arches—the four central ones of wider span than those at each end—the very massive piers of which carry pillared and screened pavilions at road level, partly projecting over the water on brackets; a further five spans carry the road over a smaller branch of the Gumtī.



In the old town of Ẓafarābād, 6.5 km. south-east of Djawnpur, is the mosque of one Shaykh Bārha, converted c. 711/1311 from Buddhist temple remains, entirely trabeate though originally with a large central arch between two piers which was probably the prototype of the propylons of the Djawnpur mosques. There are also many tombs, the most noteworthy being those of Makhdūm Ṣāḥib Čirāgh-i Hind (781/1389) and Sayyid Murtaḍā in the *dargāh-i shahād*, the burial ground of the martyrs who fell in the invasion of Shihāb al-Dīn Shūrī in 590/1194.

Bibliography: Khayr al-Dīn Muḥammad Ilāhābādī, *Djawnpūr-nāma*, ed. Djawnpur n.d., a late 18th century work which makes much use of the *Ta'rīkh-i Firishta* and Baranī's *Ta'rīkh-i Fīrūz Shāhī*, but is not entirely derivative; Eng.tr. R. W. Pogson, Calcutta 1814; for the monuments: A. Cunningham, *ASI* xi, Calcutta 1880, 102-26; A. Führer, *The Sharqi architecture of Jaunpur* (architectural drawings by E. W. Smith), *ASI*, NIS xi, Calcutta 1889: text very turgid; J. Fergusson, *History of Indian and eastern architecture*, London 1876, 522 ff. Illustrations of some buildings not available elsewhere in Markham Kittoe, *Illustrations of Indian architecture from the Muhammadan conquest* . . ., Calcutta 1838. A new monograph on Djawnpur is badly needed.



(J. Burton-Page)

AL-DJAWNPŪRĪ, Sayyid Muḥammad al-Kāẓimī al-Ḥusaynī b. Sayyid Khān alias Baḍḍh Uwaysī (cf. *Ā'īn-i Akbarī*, Bibl. Ind., ii, 241) and Bībī Āḳā Malik, the pseudo-Mahdī [*q.v.*], was born at Djawnpur [*q.v.*] on Monday, 14 Djumādā I 847/10 September 1443. None of the contemporary sources mentions the names of his parents as 'Abd Allāh and Āmina, as claimed by the Mahdawī sources (*e.g.*, *Sirādj al-Abṣār*, see Bibliography), in an obvious attempt to identify them with the names of the Prophet's parents so that the prediction made in the *aḥādīth al-Mahdī* (cf. Ibn Taymiyya, *Minhādj al-Sunna*, Cairo 1321/1903, ii, 133) might fit his case. The *Tuḥfat al-kirām* of 'Alī Shīr Ḳāni' and the *Djawnpūrnāma* of Khayr al-Dīn Ilāhābādī, which mention these names, are much later compilations and therefore not reliable.

A precocious child, gifted with an extraordinary memory, he committed the Ḳur'ān to memory at the early age of seven and received the title, according to Mahdawī sources, of Asad al-'Ulamā' at the age of twelve from his teacher Shaykh Dāniyāl Čishtī. At the age of forty he left Djawnpur for Mecca and, after visiting a number of places *en route* such as Dānāpur, Kālpī, Čanderī, Djāpānīr, Māndū, Burhānpur, Dawlatābād, Aḥmadnagar and Bīdar, reached there in 901/1495. During his stay at Mecca, one day while performing the *ṭawāf*, [*q.v.*], he suddenly announced that he was the promised

Čihil Satūn (destroyed 1858).
(Markham Kittoe, *Illustrations of Indian architecture from the Muhammadan conquest*..., Calcutta 1838)

Djāmiʿ masdjid.
(T. and W. Daniell, *Oriental scenery*, 3rd series, London 1801-3: "A mosque at Juanpore")

Mahdī. He was not taken seriously by the Meccan *ʿulamāʾ*, who simply ignored his claim. He returned to Gudjarāt the following year. While at Aḥmadābād he came into conflict for the first time in 903/1497 with orthodox *ʿulamāʾ*, who challenged his assertion that God could be seen with physical eyes. Finding the atmosphere hostile, he left Aḥmadābād and in 905/1499 reasserted his claim to being the Mahdī at a small place called Baŕhlī near Paťan.

The same year he wrote to some of the independent rulers about his mission inviting them either to accept him as the Mahdī or condemn him to death if he was proved to be an impostor. Of these, according to Mahdawī sources, Ghiyāth al-Dīn Khaldjī of Mālwa, Maḥmūd Bēgŕā of Gudjarāt, Aḥmad Niẓām Shāh of Aḥmadnagar, Shāh Bēg of Ḳandahār and Mīr Dhu' l-Nūn of Farāh accepted his claim. This, however, failed to impress the *ʿulamāʾ*, and the majority of the people continued to regard him as an impostor. The *ʿulamāʾ*, finding his influence growing among the masses and unable to counteract or stem it, demanded his banishment. Hounded from place to place and unable to convince the leading *ʿulamāʾ* of the validity of his claim, he ultimately came to Farāh [*q.v.*] in Khurāsān and died there on Thursday 19 Dhu 'l-Ḳaʿda 910/23 April 1505. Monday, as claimed by the Mahdawī sources to be the day on which he died in order to make it tally with the day of his birth, is definitely to be discarded, as Dhu 'l-Ḳaʿda 910 began on a Sunday. His shrine in Farāh is still visited by his followers who are mainly concentrated in certain places in South India.

After his death he was succeeded in his spiritual heritage, in imitation of the Prophet, by a number of his *Khulafāʾ*, the first being his son Sayyid Maḥmūd. By this time the Mahdawīs had established a number of centres called *dāʾiras*, mostly in Gudjarāt, where they lived a communal life, dealing only among themselves and shunning the rest of the population who were regarded as unbelievers. Their growing popularity was interpreted as a danger to the State and society, leading to the persecution of the Mahdawīs. They were accused of heresy and their leader, Sayyid Maḥmūd, was put into prison where he died in 918/1512, unable to bear the rigours of incarceration. His successor, Khʷānd Mīr, faced still harder times when the *ʿulamāʾ* of Gudjarāt declared it permissible to kill a Mahdawī. Consequently a pitched battle was fought between the Mahdawīs and the Gudjarāt troops at Sadrāsan in Shawwāl 930/August 1524 in which Khʷānd Mīr, along with a large number of his followers, was killed. In spite of these reverses and the mounting opposition of the *ʿulamāʾ* and the masses, the movement did not completely die out. Among historical personalities who suffered in the cause of the movement are Shaykh ʿAbd Allāh Niyāzī, who flourished during the reign of Islām Shāh Sūr, his disciple, Shaykh ʿAlāʾī and Miyāṇ Muṣṭafā Gudjarātī, a very learned man of his times who ably argued his case with the *ʿulamāʾ* of the Court of Akbar but failed to convince them. After his death in 983/1575-6, while on his way from Fatḥpur Sīkrī to Gudjarāt, the movement withered and collapsed.

The piety, learning and sincerity of Sayyid Muḥammad convinced even a severe critic like ʿAbd al-Ḳādir al-Badāʾūnī, who regards him as one of the greatest of the *awliyāʾ*. Like most of the *ṣūfī shaykhs* who lay stress on the renunciation of the world (*tark al-dunyā*), seclusion from the people (*ʿuzla ʿan al-khalḳ*), *tawakkul*, associating with righteous people, Sayyid Muḥammad bade his followers to remain constantly absorbed in *dhikr*, which he raised to the level of an article of faith with them. Great importance was also attached to *hidjra* and here again the founder himself set the example in imitation of the *Hidjra* of the Prophet. Although the Mahdawīs abjured politics, their activities compelled the authorities to act. Consequently, ʿAbd Allāh Niyāzī, his piety notwithstanding, was severely punished, and Shaykh ʿAlāʾī, his disciple, lost his life. *Sawiyat*, which the Mahdawīs interpret as the equal distribution of wealth, material possessions and whatever comes to or is acquired by the community, among its members living within a particular *dāʾira*, is the cardinal point of the teachings of Sayyid Muḥammad, who also denounced capitalism, stockpiling and hoarding as utterly un-Islamic. The failure of the movement, on a deeper analysis, can be attributed to the aloofness of its adherents from the main body of the Muslims, their insistence on the recognition of the founder as the promised Mahdī and the consequent opposition of the *ʿulamāʾ* and the State. Lack of capable leadership in the North and the subsequent involvement of its adherents in politics in the Deccan hastened the decline of the movement which had, in its heyday, fired the Indian Muslim community with a new zeal and religious fervour. At the present day pockets of Mahdawīs exist in the former Ḥaydarābād State (India), Mysore, Djaypur and Gudjarāt. In Pakistan, at Shahdādpūr in Sind, they have established a *dāʾira* after their migration from India.

ʿAlī al-Muttaḳī (d. 975/1567), the author of *Kanz al-ʿummāl* and ʿAlī al-Ḳārī (d. 1016/1607) took serious notice of the movement and wrote *al-Burhān fī ʿalāmāt Mahdī ākhir al-zamān* and *Risālat al-Mahdī* respectively in which they forcefully rebutted the claim of Sayyid Muḥammad to being the promised Mahdī. ʿAlī al-Muttaḳī followed *al-Burhān* by his *Risālat al-radd*, which aroused considerable opposition among the Mahdawīs and has been the subject of criticism in a number of Mahdawī works in vindication of their faith. Asʿad al-Makkī (see Raḥmān ʿAlī, *Tadhkira-i ʿulamāʾ-i Hind*, 178) also wrote his *Shuhub muḥriḳa* on the same subject. An Indian writer, Abū Ridjāʾ Muḥammad Zamān Khān of Shāhdjahānpūr, who strongly criticized the Mahdawīs and the founder of the movement, fell in 1872 to the knife of an assassin for his polemic work *Hadya Mahdawiyya* (ed. Baroda 1287/1870, Kānpur 1293/1876).

(A. S. BAZMEE ANSARI)

AL-**DJAWWĀNĪ**, ABŪ ʿALĪ MUḤAMMAD B. ASʿAD, Arab genealogist and historian, b. 525/1131, d. 588/1192. The Djawwānī family claimed ʿAlid descent through a son of ʿUbayd Allāh b. al-Ḥusayn b. ʿAlī b. al-Ḥusayn b. ʿAlī b. Abī Ṭālib. This pedigree was well established at least as early as the first half of the 4th/10th century when Abu 'l-Faradj al-Iṣfahānī (*Maḳātil al-Ṭālibiyyīn*, Cairo 1368/1949, 193, 435, 438) reported historical information received by him personally from ʿAlī b. Ibrāhīm al-Djawwānī, himself a genealogist and the eighth lineal ancestor of our Djawwānī. The latter was born and educated in Egypt. He taught *ḥadīth* there as well as in Damascus and Aleppo. At one time, he was appointed ʿAlid Chief of Egypt, apparently by Shīrkūh or Ṣalāḥ al-Dīn in the late 1160s. It seems that he did not hold this position very long. His main love and occupation were his genealogical and historical studies. They may have compensated him for the pain he must have felt in witnessing the decay of the power of the Fāṭimids whose fame, it seems, had attracted his family to Egypt. However, he continued to enjoy the favor of the Ayyūbids to whom he dedicated some of his works. Ṣalāḥ al-Dīn is said to have granted al-Djawwāniyya, the estate near Medina after which his family was named, to him as a fief.

A list of his works from al-Maḳrīzī's *Muḳaffā* mentions eighteen titles, some of them large works. They deal with ʿAlid genealogy, including a history of the Djawwānī family, a study of his father's pedigree, and works on Ṭālibid biographies, Ṭālibid genealogists, the Banu 'l-Arḳaṭ, and the Idrīsids. He also wrote genealogical and historical works of a more general nature, among them works on the praiseworthy qualities of the *ʿashara* (*al-mubashshara*, [*q.v.*]), on those who, like al-ʿĀdil, had the *kunya* Abū Bakr, and on Arabic tribes (*al-Djawhar al-maknūn fī dhikr al-ḳabāʾil wa 'l-buṭūn*). The last work, as well as a topographical work on Egypt (*al-Nukaṭ ʿala 'l-khiṭaṭ*) and a monograph on the sanctuary of Sayyida Nafīsa, are also known from quotations in al-Maḳrīzī's *Khiṭaṭ* (the *Djawhar* is also cited in Ibn al-ʿAdīm's *Bughya*). These quotations tend to confirm al-Djawwānī's considerable stature as a scholar, although even in his case orthodox scholars could not entirely suppress their customary suspicion of the veracity of Shīʿī genealogists.

Manuscripts of only two works by al-Djawwānī appear to have been signalized so far. One of them, on the genealogy and history of the Prophet and the people in his life, is dedicated to al-Ḳāḍī al-Fāḍil and entitled *al-Tuḥfa al-sharīfa* (Berlin 9511, Paris 2010, 4798, Topkapusaray Ahmet III, 2759, Cairo[2], v, 129 f., Sohag 315 taʾrīkh). The other, on tribal genealogy, is called *al-Tuḥfa al-ẓarīfa* or *Uṣūl al-aḥsāb wa-fuṣūl al-ansāb* (Paris 4798, Cairo[2], v, 30 f.). Al-Maḳrīzī's list does not include any exactly corresponding titles, but the second work may correspond either to *Tādj al-ansāb wa-minhādj al-ṣawāb* or to *Tadhkirat uli 'l-albāb li-uṣūl al-ansāb*.

Bibliography: Ibn al-Ṣābūnī, *Takmilat Ikmāl al-ikmāl*, Baghdād 1377/1957, 83, 99-104, 189, 299. The editor, Muṣṭafā Djawād, adds detailed information on other sources, to wit: al-ʿImād al-Iṣfahānī, *Kharīda* (on Egyptian poets), Cairo, n.d. (1951), 117 ff.; al-Ḳifṭī, *al-Muḥammadūn min al-shuʿarāʾ*, and *Inbāh*; Yāḳūt, ii, 137; al-Dhahabī, *Taʾrīkh al-Islām*, *anno* 588; al-Ṣafadī, *Wāfī*, ii, 202; Ibn Ḥadjar, *Lisān*, v, 74 ff. (containing references to other sources at present unavailable); Ibn ʿInaba (ʿUtba), *ʿUmdat al-ṭālib*, 212, 285. Cf., further, C. H. Becker, *Beiträge zur Geschichte Ägyptens*, Strasburg, 1902, 26 ff.; Brockelmann, I, 451 f., S I, 626; *Fihrist al-makhṭūṭāt al-muṣawwara*, ii/1, Cairo n.d. (1954), 83.

(F. ROSENTHAL)

AL-**DJAWZĀʾ** [see NUDJŪM].

AL-**DJAWZAHAR** or AL-DJAWZAHR, technical term occurring in Arabic and Persian astrological and astronomical texts.

1. It indicates primarily the two lunar nodes, *al-ʿuḳdatāni*, *i.e.*, the two diametrically opposite points of intersection between the moon's orbit and the ecliptic: the ascending node or "head", *raʾs*, and the descending node or "tail", *dhanab* (*scil.* of the

dragon, *al-tinnīn*). In many cases it refers only to the "head"; in some mss. a special word, *nawbahr*, is used for the "tail" [see below].

The word Djawzahar, though explained differently in the *Mafātīḥ al-ʿulūm*, clearly derives from the Avestan *gao-čithra* (= Pahlawī *gočihr* = mod. Persian *gawzahr*), an (adjectival) epithet of the Moon meaning "forming the origin of the bull" (Bartholomae) or rather "preserving the *sperma bovis*". In the *Bundahishn*, *gočihr*, together with the tailed (*dumbōmand*) *mūsh-parīk*, on one occasion appears as an antagonist of the sun and the moon, while, on another, it is said to have "placed itself in the centre of the heaven, in the shape of a serpent (*mār*, 'draco')".

The complicated semasiological development of the word and its various functions in mythology and early astrology can be understood only when seen in connexion with the myth of the eclipse monster (dragon), of wide distribution all over the Eurasian continent, and in particular the Indian Rāhu myth: There the demon Rāhu, immortalized by the forbidden *amṛta* drink, from which he had sipped, is beheaded by Vishnu; but his two parts, the head (Rāhu) and the tail (thenceforth called Ketu), having become stellified, incessantly try to devour the Sun and the Moon so as to take revenge for their having denounced Rāhu's crime to Vishnu. Thus Rāhu and Ketu are both identified with the eclipse monster, but the latter also appears at irregular intervals in the shape of a comet (*dhūmaketu*, "smoke-*ketu*"; see also art. KAYD, under which name the cometary aspect of the Indian *Ketu* has survived in Islamic astrology).

In the later, "scientific" (*i.e.*, computing) phase of astrology, in India, Rāhu was identified with the ascending, and Ketu, with the descending, node, in view of the fact that eclipses can occur only when the two luminaries stand sufficiently near the nodes. In Arabic it is undoubtedly owing above all to Indian influence that the Gr. terms ὁ ἀναβιβάζων and ὁ καταβιβάζων (scil. σύνδεσμος) as found in the Almagest were replaced by *al-raʾs* and *al-dhanab*; in particular, the synonym of *al-dhanab*: *nawbahr*, "the new part", clearly betrays its relationship with Ketu. As for the eclipse monster, the Djawzahar, it is regarded as a giant serpent or dragon (*tinnīn*); for its representation in Near Eastern art, see Hartner, *opp. cit.* below; for its appearance in Western art, see also Kühnel, *op. cit.* below. As indicated above, the *Bundahishn* identifies the *gočihr* with the constellation of the Dragon, which stands in fact "in the centre of the heaven", near the pole of the ecliptic; but in the same context it is said that it "retrogrades in such a way that after 10 years the head takes the place of the tail, and the tail that of the head". This applies of course not to the immovable constellation but to the Djawzahar joining the two nodes, because these make indeed a complete retrograde revolution in the course of 18.6 years (of which one-half is approximately 10). The circumstance that the nodes have a constant motion, again, gave rise to the astrologers' conceiving of, and treating them as invisible planets ("pseudo-planets"): they attributed to them "exaltations" (*ashrāf*), viz. Gemini to the head, and Sagittarius to the tail, and counted them among the maleficent stars. In European horoscopes, the Djawzahar is always called *Caput et Cauda* (Draconis), and Latin transliterations of the term itself, though sometimes occurring, have not become common. Ephemerides for the Djawzahar are contained in all astronomical tables; they serve of course not only astrological but also astronomical purposes because they are needed for the computation of solar and lunar eclipses.

2. The following two meanings, encountered mostly in texts dating from the 11th century A.D. or later, are obviously secondary: (a) al-Djawzahar = the *circulus parecliplicus* [see article ʿILM AL-HAYʾA, section on "Theory of planetary motion"] of the moon, Ar. *al-mumaththal bi-falak al-burūdj* = ὁ ὁμόκεντρος τῷ κόσμῳ κύκλος (Alm.), or in Ibn al-Haytham's theory of *solid* spheres, the spherical shell concentric with the earth, within which the excentric sphere (*al-falak al-māʾil*, "*sphaera deflectens*") is comprised. (b) al-Djawzahar = the nodes of the orbit of any of the five planets.

DJĀYASĪ [see MALIK MUḤAMMAD DJĀYASĪ].

DJAYB-I HUMĀYŪN, the privy purse of the Ottoman Sultans. Under the authority of the privy secretary (*Sirr kātibi*), it provided for the immediate needs and expenses of the sovereign. Its regular revenues consisted of the tribute from Egypt (see IRSĀLIYYE), the income from the imperial domains (see KHĀṢṢ), and the proceeds from gardens, orchards, forests etc. belonging to or attached to the imperial palaces. Irregular revenues included the fees paid by newly appointed rulers of Moldavia, Wallachia, Transylvania and, for a while, Ragusa, the Sultan's share of war-booty, and the proceeds of confiscations (see MUṢĀDARA).

(ED.)

DJAYḤĀN, (modern Turkish Ceyhan), the name by which the Arabs denote the ancient Pyramus, one of the two rivers which cross Cilicia and flow into the Mediterranean, the other and more westerly river being the Sayḥān, the ancient Saros. The names Djayḥān and Sayḥān appear to have been given by the Arabs to these rivers which separate them from Greek territory, on the analogy of the Djayḥūn and Sayḥūn in central Asia, rivers which separate them from Turkish territory, and which owe their names to a corruption of the names of biblical rivers (Genesis, ii, 11, 13), unless they are an arbitrary translation of the Greek names (cf. Nöldeke, in *ZDMG*, xliv, 700 and the articles ĀMŪ DARYĀ, SAYḤĀN, SIR DARYĀ).

The Djayḥān rises a little to the north-east of Elbistan, in the mountains which divide it from the valley of the Tohma Suyu, a tributary of the Euphrates. Its upper part is the Söğütlü Suyu. Near Elbistan it is swollen by numerous secondary streams, one of the most important being the Hurman Suyu.

Below its confluence with the Göksün Çayı, south of Afs͟hīn (the old Yarpuz-ʿArbasūs-Arabissos), it flows southwards towards Marʿas͟h. On the outskirts of this town it is joined by the Ak Sū (Nahr Ḥūrīt͟h of Suhrāb) which comes from the north-east and flows past al-Ḥadat͟h. It then turns south-west, passing to the west of the Anti-Taurus, and reaches the edge of the Cilician plain after receiving tributaries from the region of Sīs (now Kozan). It makes its way to Missis (al-Maṣṣīṣa) where the main Adana road crosses it by an ancient stone bridge. The mouth of the D̲j̲ayḥān into the Mediterranean has moved several times owing to the delta formed by alluvial deposits. At the present time, after bending sharply to the east, it comes into the sea in a bay lying to the west of Yumurtalık (the old Āyās). Abu 'l-Fidāʾ compares it in importance with the Euphrates.

The region of the lower and middle D̲j̲ayḥān formed part of the *t͟hug͟hūr* (frontier districts). The name of the river consequently occurs more than once in poets of the Ḥamdānid period, al-Mutanabbī, Abū Firās and al-Sarī [for its history, see CILICIA]. In the Mamlūk period this region was conquered by Malik Nāṣir Muḥammad and was known as *al-Futūḥāt al-d̲j̲āhāniyya*, following the Armenian corruption D̲j̲ahān from D̲j̲ayḥān.

The name D̲j̲ayḥān is sometimes used to signify the region rather than the river. This is so in Yaḥyā b. Saʿīd al-Anṭākī (cf. Stephanus of Taron, tr. Gelzer and Burckhardt, 140).

AL-**D̲J̲AYHĀNĪ** [see SUPPLEMENT].

D̲J̲AYḤŪN [see AMU DARYĀ].

D̲J̲AYN, The D̲j̲ayn (Jain) community (followers of Mahāvīra, called the Jina) was much more widely distributed over the Indian sub-continent at the time of the Muslim conquest than in later times, as is shown by the re-utilization of D̲j̲ayn material in early Islamic building. Although they were fairly widespread in the Deccan, their particular stronghold was peninsular Gud̲j̲arāt. Allusions to the D̲j̲ayns in earlier histories have probably been obscured by their being not distinguished from their Hindū neighbours and described with them as "unbelievers" and "idolators"; but their chief social characteristic, an exaggerated reverence for the sanctity of all animal life, was certainly known to and exploited by the Muslims, as the account of the Portuguese traveller Duarte Barbosa, who visited Gud̲j̲arāt early in the 10th/16th century, shows: the Muslims would take fowls and other birds and offer to kill them in the presence of devout D̲j̲ayns, or threaten to kill themselves, or visit them as rat- or snake-catchers, and would be paid large sums of money not to do these things. They were, however, tolerated by the Muslims, since they were of economic importance as the money-lending community (cf. *The book of Duarte Barbosa*, ed. and tr. M. Longworth Dames, Hakluyt Socy., i, 111-2).

Religious contact with the D̲j̲ayns was made by the Mug͟hal emperor Akbar in 990/1582, who invited first Hīravid̲j̲aya and later the great Bhānučandra to the Mug͟hal court, and whose personal beliefs and habits seem to have been much influenced by the D̲j̲ayn leaders (Badāʾunī, *Muntak͟hab al-tawārīk͟h*, tr. Lowe, ii, 331, speaks with disgust of Akbar's orders prohibiting the slaughter of animals on certain days—adding that disobedience was visited with capital punishment!). Many of Akbar's *farmāns* in favour of the D̲j̲ayns were confirmed by his successor D̲j̲ahāngīr, on whom however the personal influence was never profound and who ended by condemning their character and morals (cf. *Tūzuk-i D̲j̲ahāngīrī*, ed. trans. Rogers and Beveridge, i, 437-8).

Bibliography: For Mug͟hal *farmāns* in favour of the D̲j̲ayns see particularly M.S. Commissariat, *Imperial Mughal farmans in Gujarat*, in *Journal Univ. Bombay*, ix/1, 1940; cf. also *Akbar-nāma*, tr. Beveridge, iii, 1061-3. For D̲j̲ayn sources on the relationship between Bhānučandra and Akbar and D̲j̲ahāngīr see *Bhānučandra-čarita*, ed. and Gud̲j̲. trans. Mohanlāl M. Desai, Ahmedabad 1941; some *farmāns* corroborated in D̲j̲ayn inscriptions especially in *Epigraphia indica*, ii, and in A. Guerinot, *Répertoire d'épigraphie jaina*, Paris 1908. (J. BURTON-PAGE)

D̲J̲AYPUR, formerly a princely state in India, now a part of the Indian Union, lying between 25° 41′ and 28° 34′ N. and 74° 13′ E., with an area of 15,579 sq. miles and a population of 1,650,000 in 1951. The ruling dynasty claimed descent from a son of Rāma, the legendary king of Ayōdhyā and the hero of the Sanskrit epic Rāmāyaṇa by Valmīki, in spite of the fact that the ex-ruler was also the head of the Kačhwāha clan of Rād̲j̲pūts. The first ruler of the country, then known as Dhundhār, was a descendant of the Kačhwāha chief of Gwāliyār, who had received the district of Daosa in about 522/1128 as a gift from his father-in-law. Daosa thus became the first capital of the newly acquired territory. The present city of D̲j̲aypur, which gave its name to the entire state was, however, founded by Rād̲j̲ā D̲j̲ay Singh II, better known to history as D̲j̲ay Singh Sawāʾī, in 1141/1728. Abandoning Ambēr, the former capital, he made the new city the seat of

his government. The city was planned on the model of Aḥmadābād [*q.v.*] with broad boulevards and spacious bazars. Even craftsman skilled in various trades were sent for from that place, but the founder of D̲j̲aypur did not succeed in making the new city as prosperous as its model (ʿAbd al-Ḥayy Lakhnawī, *Yād-i Ayyām*, ʿAlīgaṛh 1337, 30-1, in which the city is called D̲j̲aynagar). The title *Sawāʾī*, conferred on him by the Mug̲h̲al emperor, and meaning $1^1/_4$, is not only indicative of the respect that he enjoyed at the Mug̲h̲al Court but is also a tribute to his personal qualities as the scion of an illustrious ruling family. This ruler who ascended the *gaddī* of Ambēr in 1111/1699 and died in 1156/1743 was a remarkable and accomplished person. He made good use of his scientific knowledge and skill in constructing observatories at D̲j̲aypur, Dihlī, Banāras, Mathurā and Ud̲j̲d̲j̲ayn (see G. R. Kaye, *A guide to the old observatories at Delhi, Jaipur, Ujjain and Benares*, Calcutta 1920). The sun-clock, mounted on a triangular tower in the Dihlī observatory, gives accurate time even to this day. He also reconstructed the astronomical tables known after the reigning Mug̲h̲al emperor of Dihlī, Muḥammad S̲h̲āh, as the Zīd̲j̲ Muḥammad S̲h̲āhī. More illustrious and better known to history is, however, D̲j̲ay Singh I who enjoyed a *manṣab* of 6,000 and the imperial title of Mīrzā Rād̲j̲a, conferred on him by Awrangzīb. Soon after D̲j̲ay Singh's death in 1156/1743 the D̲j̲āṭs of Bharatpur [*q.v.*] succeeded in wresting, following a number of sharp encounters, a part of the state; the defection of the chief of Māčerī (now Alwar) about 1205/1790 further reduced the area of the State. By the end of the century D̲j̲aypur was in confusion, torn by internal strife and the extortions of the depredatory Marāṭhās. A treaty concluded in 1218/1803 with the East India Company, was dissolved only two years later. Another treaty was concluded in 1234/1818 putting a stop to the molestation of the Marāṭhās.

On the outbreak of a rebellion in 1820, during the infancy of D̲j̲ay Singh III, a British Officer was posted in the state. In 1835 another rising took place resulting in the murder of a British political officer and injuries to the Agent to the Governor-General. Repression naturally followed resulting in the tightening of the administration and reduction in the state troops.

The D̲j̲aypur Records Office has a rich and rare collection of historical documents, including a large mass of *ak̲h̲bārāt*, the daily news-sheets pertaining mostly to the reign of Awrangzīb. Two unique works of Amīr K̲h̲usraw [*q.v.*], the *K̲h̲azāʾin al-futūḥ* (ed. Waḥīd Mīrzā, Calcutta 1952) and *Ins̲h̲āʾ-yi K̲h̲usraw* are preserved in the State Library.

(A. S. Bazmee Ansari)

D̲J̲AYS̲H̲, one of the common Arabic terms (with *d̲j̲und* and *ʿaskar*) for the army.

i. — Classical.

Except possibly in the Yaman, pre-Islamic Arabia, although living under permanent conditions of minor warfare, knew no armies in the proper meaning of the term apart from those of foreign occupation. Conflicts between tribes brought into action virtually all able-bodied men, but without any military organization, and combats were very often settled by individual feats of arms. The embryo of an army may be said to have appeared with Islam in the expeditions led or prepared by the Prophet, although the *d̲j̲ihād* at this stage was the duty of all able-bodied Muslims. One cannot speak of a real army until the beginning of the Conquests, when there first appeared a division between the combatant and non-combatant sections of the Muslim people. Even though in principle all able-bodied Muslims could be summoned to the *d̲j̲ihād*, in practice the tribes had only to supply a certain percentage of their menfolk, and the numbers were usually more or less made up by volunteers. Their installation in the conquered countries separated these men, if not from their families who usually accompanied them, at any rate from the other members of their tribe and from their traditional way of life. They did not form an army *stricto sensu*, inasmuch as that, in the intervals between campaigns, they followed other activities if they wanted to and, with few exceptions, were not shut up in barracks away from their families; but in any case they were a section of the people permanently obliged to respond to the call of war, and deriving their main livelihood from this. In relation to the conquered, they considered themselves from the start not entirely as a conquering people but rather as an army of occupation. Superior to their adversaries because of their mobility, their being used to a rough mode of life, and a consecrated enthusiasm which was reinforced by the appeal of booty and confirmed by victory, they lacked all knowledge of strategy, their arms remained rudimentary, and their successes were more than half due to the weakness of the enemy empires, the disaffection of the peoples of which these were made up, and to the recruitment of foreign mercenaries as part of the troops which these empires employed. It is perhaps imprudent to try to reckon the manpower which the conquerors were actually able to mobilize: probably round about fifty thousand men under ʿUmar, and double this at the time of the greatest extension of the Umayyad empire.

Except to a certain degree in Syria, the Arab troops were not installed in the settlements of the natives, but rather in camps which ultimately became new cities, the *amṣār* (see miṣr). Thus there came into being Baṣra and Kūfa in ʿIrāḳ, Fusṭāṭ in Egypt, somewhat later Ḳayrawān in Ifrīḳiya, and so on. Their organization was a compromise between new necessities and tribal heritage: the whole army was a mixture of men of various tribes, but in the lower ranks of the army as in the towns, the soldiers remained grouped in communities of tribal origin. Originally they had no other income but the profits of victory which rapidly became considerable, and were regulated by the rules relating to the *g̲h̲ānima* [*q.v.*]. When immense territories were added to the spoils reaped on the battlefield, there were differences of interest between those who would have liked to have seen them entirely divided up, and those around the growing Caliphate who succeeded in imposing the doctrine that they belonged to the Islamic community collectively, both present and future, which meant in fact allowing the original

owners to keep them against payment of taxes, which in turn served to provide the money for regular army pay (see ʿARĪF, ʿAṬĀʾ, and DĪWĀN). In Syria, and later in the Islamic west, the coordinated provincial-military organization of the *djund* [*q.v.*] was brought into being, an organization no precise equivalent of which ever appeared in the vast area of expansion in the east (ʿIrāḳ-Īrān).

Needless to say, this first, primitive army was entirely Arab-Muslim; in the former Byzantine provinces at any rate, this was all the easier to ensure, as the native populations had long since lost the habit of following the profession of arms. Nevertheless, soon enough, the Arab chiefs began to bring their *mawālī* [*q.v.*] with them in a subordinate rank, while on the other hand, certain warlike border peoples (in Central Asia, northern Īrān and Armenia, and in the Syrian Amanus), without embracing Islam, were associated with the military operations of the Muslims as auxiliaries exempt from taxes; only a little later the Berbers, superficially converted to the new religion, were to form the greater part of the army that set out to conquer Spain.

Fairly soon, a special corps under the name of *shurṭa* [*q.v.*] was constituted which, more closely linked to the Caliph or the Governor, was basically concerned less with war than with the maintenance of internal order, and little by little became a kind of police force (see also AḤDĀTH).

From the time of the Umayyads onward, the conditions of military organization were very con-considerably modified. War, because of growing resistance and lengthening lines of communication, ceased to be as profitable as before. The result was that pay, which was not very high, now became the main source of income of the troops, if not of their commanders, and they therefore became all the more demanding. On the other hand, a new cleavage appeared between the reserve troops stationed at Baṣra, Kūfa, etc., living an increasingly civilian life, and the frontier elements who no longer came back but continued to live on the borders of Asia Minor, Central Asia, the Maghrib or Spain. Finally, the nature of military operations changed and demanded war-materials and methods adapted from those of their enemies, an adaptation for which the Arabs were not always very well prepared. Tradition credits tactical reform to the last of the Umayyads, Marwān II, who had had long experience of war in Armenia; but on the whole, the army had not been substantially re-organized when the dynasty was overthrown by the ʿAbbāsids.

These owed their success from the military point of view to the new army organized by Abū Muslim [*q.v.*] from among the people of Khurāsān. For nearly a century, this army was the backbone of the new régime, and at first, the Khurāsānīs alone formed the troops quartered near the Caliph and in the great political centres. There were thus for a certain time two armies side by side. Of prime importance from the social point of view, the intervention of the Khurāsānīs was no less so from the military standpoint. Īrān, and more especially Khurāsān, had, in this respect, their own traditions which the Arab occupation had not succeeded in effacing. In archery, in siege warfare, in the use of "naphtha" (Greek fire), they possessed skills with which the Arabs could not compete, and thus brought to the ʿAbbāsids an element of technical reform which had been missing in the Umayyad army. On the other hand, the Arabs divided their lives between civilian life and that of the camps, still closely linked to the quarrels of the tribes and the clans; the Khurāsānīs, however, formed a more clearly defined corps of professional mercenaries linked to the person of the sovereign. Actually, despite some brilliant exceptions, it was less in external warfare than in the repression of internal revolts that they were mainly employed. The Arabs themselves henceforth belonged to two categories: there were those who lived far away from the zones of military activity, who were above all the cause of disorders, and whom in Egypt the Caliph al-Muʿtaṣim was for this reason to delete entirely from the registers of the *dīwān*; and there were the frontiersmen who could not be demilitarized in the same way, but who organized themselves according to the autonomous new world of the *ghāzīs* and *murābiṭ(ūn)*, cutting themselves off from the regular army proper. The result socially was that the Arabs for the most part no longer formed the breeding-ground of the aristocracy and were lucky indeed if they did not relapse into a miserable Bedouin way of life.

Whoever its members were, the regular army was distinguished from other more ephemeral bodies of combatants, in that they alone appeared on the registers of the *dīwān* as having a right to a permanent wage and a status which made a kind of state corporation out of them. The others, who were various kinds of free corps of "volunteers" (*muṭṭawiʿa*), not only received less pay but, what is more important, only received it for the duration of the campaign for which their presence was required, and were not considered as professionals. As for the *ghāzīs*, they lived on the combined profits of their non-military activities in the intervals between campaigns, on booty during them, and on pious foundations which the Muslims of the interior created in increasing numbers in their favour as a substitute for waging the *djihād*. They also did not appear in the ordinary registers of the *djaysh* and were clearly not professionals.

In its turn, the Khurāsānī army did not survive the first ʿAbbāsid century. When the Caliph al-Maʾmūn bestowed the autonomous government of Khurāsān on the family of the Ṭāhirids, these tended to keep for themselves a large part of the Khurāsānī recruitment. Furthermore, if the ʿAbbāsid dynasty had owed its power to the Khurāsānīs, and more recently, in particular, al-Maʾmūn had owed his victory over his brother, al-Amīn, to them, they themselves were fully aware of this, and in Baghdād itself, where the Ṭāhirids were responsible for keeping order, they came in the end to be resented as somewhat burdensome protectors. Al-Muʿtaṣim, the same who had suppressed the regular Arab army in Egypt, also took the initiative in replacing the Khurāsānīs by Turks. Actually, it was at first mainly the Turks established within the frontiers of Islam who were referred to as such, above all the people of Farghāna whose social conditions resembled those of the Khurāsānīs; but soon young people born outside Islam and brought there as slaves (*mamlūk* in this case rather than *ʿabd*) from Central Asia or what are now the Russian steppes by warriors or merchants, were to be recruited as Turks. The Turks, who were above all excellent horsemen, not only had an apparently justified reputation for military, physical and moral courage, as is witnessed by a well-known short treatise of al-Djāḥiẓ, but it was thought that they, linked to the person of their master by ties of slavery, acquired young enough to be formed in character by him, and being strangers to the aspirations and rivalries of the indigenous peoples,

would form a still more reliable army for the sovereign than had the first Khurāsānīs. In fact, experience was to prove that, having the sovereign in their power, they were to be far less tolerable and far more devoted to their own generals than to the Caliph (who, after al-Muʿtaṣim, never again commanded them directly). Nevertheless, because of their technical qualifications, because of the care bestowed by the Turkish chieftains on maintaining recruitment, and even because the acquisition of new slaves was the easiest remedy against the lack of discipline of the old ones (although in the long run, of course, it merely perpetuated the evil), it seemed no longer possible, right up to modern times, for oriental Muslim states to do without a Turkish army, and all of them, one after another, were to adopt one. At best, in the orient, they were counter-balanced by the calling in of other elements, rough, indigenous mountain people, skilled in fighting on foot in the mountains, such as the Daylamīs, or horsemen like the Kurds, or locally negroes (in Arabia) or Hindūs (army of the Ghaznavids). In Egypt, the Fāṭimids, who conquered it with Berber contingents, reinforced as in Ifrīḳiya with negroes, Slavs and Rūmīs, themselves later tried to neutralize these by introducing Turks, whom in turn they sought to replace by Armenians under chiefs who could hardly be claimed as Muslims, and finally gave back some part in army affairs to the Arabs. The breaking up of the ʿAbbāsid empire also gave the opportunity of a military career to the Arabs of Mesopotamia and Syria, who gave support to the Ḥamdānid [*q.v.*], Mirdāsid [*q.v.*], ʿUkaylid [*q.v.*] and other principalities. The Būyids in western Īrān owed their specific strength to the Daylamīs, but the need for cavalry compelled them nevertheless to reinforce them from the start with Turks. But the racial differences of the contingents, which language and technical differences hindered from mixing easily together, were the cause of disorders, because they were jealous of each other, quarrelled over their share of the state revenues, and espoused the disagreements of their leaders; they made the streets of Baghdād and Cairo run with blood when they were not occupied in promoting their respective generals to power. Even when, later on under the Saldjūḳids, a Turkish people and no longer only an army were to instal themselves in former Islamic territory, the structure of the army was not permanently affected: in the beginning, the Turkoman element, nomadic and natural warriors like the first Arabs, assured them victory; but the new masters of the Muslim east re-organized their army in the traditional manner with Turco-Muslim forces recruited from slaves, and the Turkomans were only able to use their warlike qualities as *ghāzīs* in the outer battlefields of Asia Minor, which they had taken from the Byzantines. The successors of the Saldjūḳids added a new element by introducing, among their Turks, some Kurds, from whom the Āyyūbid dynasty was to rise; but the Ayyūbids, masters of Egypt which they had taken from the Fāṭimids, had themselves an army which became increasingly Turkish in content. The Saldjūḳids of Asia Minor added Armenian mercenaries, Franks, etc., to their ranks in the Byzantine manner, and the Mongol conquerors brought Georgians into theirs. As for the Arabs, the Turkish conquest, combining as it did the old half-Bedouin country of the "fertile crescent" with the Asiatic part of the Byzantine empire which had been the stage of their occasional efforts as *ghāzīs*, eliminated them finally and completely (except in some corners of Arabia) from any part whatsoever in military life.

The evolution which has just been described was not peculiar to the Muslim world. Following the example of the former Roman empire, Byzantium in Islamic times left the running of its wars more and more to mercenaries, of whom a great number were Turkish. Recruitment of slaves proper was unknown to it, but this omission probably made only a limited difference in practice. It was uncommon for the mercenaries to return to their country of origin and they were bound by oath to the emperor. On the Muslim side it must be emphasized that the *mamlūk* in the army of a sovereign, whose agent of power he was, could not be compared with a private, domestic slave. Like the mercenary, he received a salary, he had considerable freedom of action outside his military duties, if he rose in rank he could be set free and the most successful could even rise to govern provinces and rule over free men.

It has already been indicated that the development outlined here was affected by technical as well as social factors. There is no need to give here the full account of armaments and military art (difficult enough in any case because of the lack of earlier studies of these subjects) which will be attempted in the articles ḤARB and SILĀḤ (see in the meantime the names of the various arms); this much, however, must be said—that the dominant characteristic of the development of warfare was the growing rôle of heavy cavalry. This was also the situation in Europe, but, because of the oriental tactical preference for mobility, they never went quite as far as the Europeans in the matter of sheer weight of equipment. From the time of the Arab conquests up to the appearance of fire-arms, armament changed little in nature, but it could change in bulk and above al lin the relative propor tions of the various arms, and technical progress, albeit of a secondary kind, could exercise some influence on the art of combat and the fortunes of war. The struggle against the Crusaders before the time of the Mongols possibly played a locally stimulating part in this respect.

Amongst the ancient Arabs the principal arms were the sword (*sayf*) and the javelin (*rumḥ*), as well as the lance (*ḥarba*) used by the infantry; the bow was not unknown, but little used on horseback; it served more as a weapon in hunting than in warfare, where it did not lend itself well to single combats of the traditional type. Here lay a difference between the Arabs on the one hand, and the Persians and Turks on the other: among the Persians the exercise of drawing a bow, which might be of any shape or size, was a living tradition among the whole population; the Turks excelled in the rapid shooting from horseback of a hail of arrows (*nāvak*) in all directions, thus sowing disorder in the ranks of their enemies. The cross-bow (*djarkh*), often included also with the ordinary bow under the same name (*ḳaws*), followed by a qualifying expression, seems to have been known in the orient since the 3rd/9th century. ʿAbbāsid and later cavalry made much use of the bow, but still also of the javelin, and the lance, too, now became a cavalry weapon; the infantry used the cross-bow while remaining faithful also to the sword which was was much improved by the quality of the so-called "Damascus" steel—in reality an Indian technique; amongst other weapons, the club (*ʿamūd*, Persian *gurz*) was still employed as well as the knife (*sikkīn*). In defence, Arabs used the shield (*daraḳa*), the cuirass (*tirs*), various types of coats of mail (*durʿ*, *zarad*, *djawshan*), and the helmet; they nevertheless

avoided armour that was too heavy, and the large shield does not seem to have been in current usage before the Crusades, the period when this size in shields became fashionable. The cavalryman was almost always mounted on a horse which was also protected by armour; in the armies of eastern Īrān, the Indian elephant was used in some heavy corps; the camel, however, was only used for transport. The fully equipped horseman was given various names, one of which among the Ayyūbids was *ṭawāshī*, a meaning which should be carefully distinguished from its other possible meaning of "eunuch". The soldiers had to maintain their arms as well as their animals but, except in very early times, they were given to them in the first place and renewed in case of need; most of them came from state workshops which, in Egypt, held an almost complete monopoly in their manufacture. *A fortiori*, the state workshops alone dealt in engines worked by teams, that is to say, above all, siege artillery whose use developed increasingly: the heavy-beamed mangonels (*mandjanīḳ*), light ballistas, (*ʿarrāda*, [*q.v.*]), battering-rams (*dabbāba*), etc. The Muslims did not take very long to pierce the secret of *naft* or "Greek fire", which land as well as naval forces used; archaeology has found the pots from which it was hurled. It was to an army possessing all this equipment that the term *ʿaskar* (Persian *lashkar*) was more particularly applied. When on campaign they settled themselves in camps and based themselves on fortresses, *ḥiṣn* [*q.v.*] or *ḳalʿa*, the attacking of which, from the opposing point of view, was one of the most important forms of warfare (see ḤIṢĀR). Finally, mention may be made of the importance, at the beginning of a battle, of the trumpet and other resounding instruments.

We know little of how young soldiers (*ghulām*, pl. *ghilmān*) of the ʿAbbāsid army were trained, and what Niẓām al-Mulk says about the Ghaznavid army must be treated with some reserve; for precise information we must wait until the time of the Mamlūks [*q.v.*]. Occasionally billeted on the people, the troops were far more usually gathered together in barracks or camps, one group of them, the *ḥudjariyya*, near the palace of the sovereign, whether Caliph or otherwise entitled. The brawls which nevertheless frequently broke out between them and the population were one of the causes of the temporary emigration of the Caliphate to Samarra from the time of al-Muʿtaṣim. The *shurṭa*, however, was no longer recruited from amongst themselves, and tended to be replaced by local elements which were sometimes opposed to them. But the Saldjūḳid conquest re-created unity by increasing the numbers of heads of garrisons (*shiḥna*), and giving them the duties of the *shurṭa* which was generally abolished. The army did its military training in open spaces situated on the outskirts of cities.

The army of a large state was divided into regiments which generally corresponded both with a division into ethnic groups and a division according to technical functions, complemented by detachments of sappers. There was also a division according to recruitment under famous generals or during certain reigns. The soldiers who had been part of a general's army continued to form a group solidary until death, and those who had been recruited by one prince kept themselves apart from those younger ones who had been recruited by his successor; hence there were differences and jealousies, with each prince favouring his own. In the lower ranks there were units which might be of ten or a hundred, etc., but these numbers seem fluid. The head of an army, often called *ḳāʾid* in the early days of Islam, and even later than this in the Islamic west, now began to call himself *amīr* [*q.v.*], a title which ultimately included the rule over a province linked to the command of an army. Where there was a commander-in-chief he called himself *amīr al-umarāʾ*; but the title of *amīr* was in the end to become devalued and to finish as a title for all officers, and consequently *amīr al-umarāʾ* fell to being the title of any general. In the Saldjūḳid period, etc., the man who represented the military authority of the sovereign when he himself did not exercise it over the body of the army, was the Grand Chamberlain, *ḥādjib*, who was first and foremost head of the guard. In Īrān, the commander of an army was called *sālār*, the commander-in-chief, *ispāhsālār* or *sar-i lashkar*; among the Turks, the practical equivalent of *amīr* was *beg*, while *amīr al-umarāʾ* was *beglerbeg* or *subashī*.

While there was no uniform in the modern sense, each regiment had its own regulation dress. We can picture for example, that of the Ghaznawid guard since the archaeological discoveries at Lashkar-i Bāzār. The different corps had their flags (*rāya*), and the general or sovereign his own (*liwāʾ*), flying near the tent from which he commanded the battle and forming a rallying point. If there were no true medical services, at least there were transports of arms and food, for which purpose the camel was invaluable. Women often accompanied the army and in case of defeat, formed part of the spoils. A *ḳāḍī*, "readers" of the Ḳurʾān and preachers, sometimes doctors as well, were likewise attached to the army.

The chief preoccupation, whether of the soldiers or of the power they served, was the provision for their pay (*rizḳ*, *khubz*), which went with the supervision of the strength of the establishment and its maintenance. These services were dependent on the section of the *dīwān al-djaysh* called *ʿarḍ*, which was so important that in the Īrānian states the head of military administration was called *ʿāriḍ*. This supervision was based on an extremely exact registration of the men, and of the animals branded with the mark of the prince. It was exercised by means of periodic and very strict parades (*ʿarḍ*) which were taken if possible by the prince or at least in his presence, and at the end of which the men were given their pay [see DAFTAR].

The total amount of pay was very variable, as was its nature and the intervals at which it was paid, which might be monthly or yearly, while the situation of temporary soldiers was a further confusing factor. In general, money payments and payments in kind which could be dealt with in accounts together with the former were combined. As far as we can believe the scattered and inaccurate data which are all we have, it seems that up to about the 4th/10th century, the pay of a foot-soldier in the Caliphate varied between 500 and 1,000 dirhams a year, that is, about two to three times the earnings of a Baghdād journeyman; the cavalry earned double this and the commanders naturally more again. To this must be added payments in kind, gifts from sovereigns on their succession to the throne, gratuities on the occasions of feasts, battles, etc., not to mention those which the troops' growing lack of discipline enabled them to appropriate, or the booty taken after victories or perhaps rather in the permitted period of pillage which followed them. In addition, the state budget had to support the cost of manufacturing

arms, the upkeep of armouries, fortresses, roads of military importance, transports, animals, etc. At 14½ dirhams to the dīnār, the legal rate of exchange in ʿAbbāsid times, the manufacture of arms, etc., may be estimated to have cost some five million dīnārs, quite apart from the expense of an army of 50,000 men, whose overall budget at the zenith of the empire we know to have been in the neighbourhood of fourteen million dīnārs. The two together presumably accounted for half the income of the state; a heavy burden, bringing with it heavy taxation, discontent and, in a vicious circle, revolts provoked by this discontent which lessened the chances of a decrease in taxes since military effort had then to be intensified and an ever-growing proportion of the budget be taken up by the demands of the army. Moreover, even when it had sufficient available funds on account, the Treasury did not always possess the liquid assets needed for the payment of the army at the time promised, and when this happened another vicious circle appeared, and the complaints of those concerned over the delays could only be appeased by means of increases which compromised the future even more. More and more often, the caliphs had to cede the government of provinces to generals on condition that henceforward they and not the state would pay their own army. It is hardly necessary to recall the way in which this development led to the formation of autonomous principalities, but all the same it did not solve the problem of finding by one means or another the resources needed for the upkeep of the whole army.

This was why very soon it was necessary to reorganize the system of payment completely by means of the spread and transformation of the system of *iḳṭāʿ* ([*q.v.*]; see also ḌAYʿA) which, to express it briefly, allowed the army to tax a village or a district and thus take directly from the source the sums which were due to them. It is not possible to dwell here on the alterations in the administrative order which resulted from this development, but it is worth remarking that the value of the *iḳṭāʿ* seems to have been considerably greater than that of their former pay (500-1,000 dīnārs). This indicates clearly the growing social and political importance of the army and fits in with the fact that on his *iḳṭāʿ* the cavalryman had to provide for some few retainers as well as to maintain an increasingly large amount of gear and secure the whole of his supplies in kind. It must be kept in mind, too, that in the district allocated to him, the *muḳṭāʿ* had now to take over the expenses which had formerly been the business of the state, so that the income of the *iḳṭāʿ* was not solely given up to covering the simple pay of earlier times. Such very varied applications of *iḳṭāʿ* were tried out under different states and in different periods, that only a brief enumeration of them is possible here. The system of *iḳṭāʿ* could be used for the whole army or for only a part of it; it could free the *muḳṭāʿ* or not from the obligation of paying the tithe, *zakāt*; it could be temporary and exchangeable or definitive and hereditary; it could be individual, that is to say formulated to assure the upkeep of each cavalryman and his few retainers or general, that is to say very much broader and put into the charge of an officer on condition of his being responsible for the supplies and upkeep of a whole contingent, a situation which, due allowances being made, amounts more or less to the grant of a whole district (for which see above). Finally, the *iḳṭāʿ* could to all intents and purposes free the *muḳṭāʿ* of all narrow governmental control within the extent of the jurisdiction assigned to him or, on the contrary, leave him under detailed supervision and subject to the intervention of the state administration. This was the situation in Egypt, and from it developed the organization of the Mamlūks [*q.v.*]. It is possible that in Syria certain mutual influences occurred between the Muslim *iḳṭāʿ* and the fief of the Latins installed there following the Crusades.

Leaving aside differences of time and place, it can be seen that in almost every country of the Muslim east (rather less so in the west), the army has played an important and special part. Guardian of real power and of growing fortunes based on landed property, it constituted more and more the true aristocracy superimposed upon the ancient native rural and urban aristocracies. By the manner of their recruitment almost foreigners to the native population, which in consequence paid little attention to their internal conflicts and changes of domination, the army imposed on this native population something of the régime of a military occupation which, nevertheless, was only upheld by the mutual support given to one another by the army and the orthodox religious framework of the régime which depended on it. This was a development whose scope, overflowing by far the domain of military matters proper, can in conclusion be no more than indicated here.

Bibliography: Most of the important information is to be found in the chronicles. However, ideas concerning certain aspects or problems of the army are to be found more explicitly discussed, from the first century of the ʿAbbāsids on, in treatises such as the *Risālat al-ṣaḥāba* of Ibn al-Muḳaffaʿ and the *Risāla fī manāḳib al-Turk wa ʿāmmat djund al-Khilāfa* of al-Djāḥiẓ (ed. Van Vloten 1903); and in some works on finance, certain chapters deal specifically with military administration, for example, the *K. al-Kharādj* of Abū Yūsuf and especially, the general treatise on institutions with the same title by Ḳudāma written at the beginning of the 4th/10th century; then in the 6th/12th century, the *Minhādj* of Makhzūmī for Egypt which enables us to complete the retrospective accounts in the *Khiṭaṭ* of Maḳrīzī (i, 94 ff.) and, in Persian, the *Siyāsatnāma* of Niẓām al-Mulk (Saldjūḳids), the *Adab al-mulūk* of Fakhr-i Mudabbir Mubārak-shāh (representing the military tradition of the Ghaznawids and Ghūrids, still unpublished), the *Dastūr al-kātib* of Hindūshāh Nakhdjawānī (representing the military tradition of the Mongols of Persia), etc. On the other hand, according to the evidence of the *Fihrist*, there existed early enough a technical literature in Arabic concerned with the military arts and engines of war, which drew its inspiration from Greek and Īrānian antiquity; however, no example of this has been preserved prior to the Ayyūbid period which produced the *Tadhkira fī 'l-ḥiyal al-ḥarbiyya* of al-Harawī, ed. and French trans. J. Sourdel-Thomine in *BEO*, xvii (1962), the *Treatise on swords* attributed to Kindī, analysed by J. v. Hammer-Purgstall in *JA*, v/3 (1854) and published by ʿAbd al-Raḥmān Zakī in *Rev. Fac. Lettres Univ. Fuad I* xiv/2 (1952), and especially, the *Traité d'armurerie* put together for Ṣalāḥ al-Dīn by Marḍā or Marḍī Ṭarsūsī, ed. Cl. Cahen in *BEO*, xii (1947), a type of literature which was to be developed further in the time of the Mamlūks. On the Persian side should be mentioned the *K. al-ḥarb wa 'l-shadjāʿa* (Ghaz-

nawid), published by I. and M. Shāfiʿ in *IC*, 1946. Earlier information about the Muslims' manner of fighting has been preserved in Byzantine literature, especially in the *Taktikon* of Leon VI and the *Strategikon* of Kekaumenos, as well as in Armenian chronicles.

No general and thorough modern work exists on the Muslim army in the "classical" centuries. The account of A. v. Kremer in his *Kulturgeschichte des Islams*, i, remains useful; it should be complemented on several points by the corresponding chapters of R. Levy in his *Social structure of Islam*, by ʿA. Ibrāhīm Ḥasan and Ḥ. Ibr. Ḥasan in *al-Nuẓum al-Islāmiyya*, and by A. v. Pawlikowski-Cholewa in *Die Heere des Morgenlandes*, 1940; better, but more limited geographically, is the chapter, p. 485-508, of B. Spuler in his *Iran in frühosmanischer Zeit*; see also M. F. Ghāzī, *Remarques sur l'armée chez les Arabes*, in *Ibla*, 1960. The following are monographs dealing with shorter periods: for pre-Islamic Arabia, F. W. Schwarzlose, *Die Waffen der alten Araber*, 1886, which should be complemented by the studies on pre-Islamic Arab society of H. Lammens, B. Farès, etc.; for the period of the conquests, the considerations of Caetani in his *Annali*, iv, and the dissertation of L. Beckmann, *Die musl. Heere der Eroberungszeit*, Hamburg 1952; for the Umayyads, N. Fries, *Das Heereswesen der Araber zur Zeit der Omayyaden nach Tabari*, 1921, and A. E. Kubbel, *Sur certains traits du système militaire omayyade*, in *Palestinskiy Sbornik*, iii, 66 (1958) (in Russian, with an analysis in French by M. Canard, in *Arabica*, 1960, 219-21); for the ʿAbbāsids, W. Hoenerbach, *Zur Heeresverwaltung der Abbasiden, Studie über Qudama*, in *Isl.*, xxix (1950); and for some later states, the two important studies by C. E. Bosworth, *Ghaznavid military organization*, in *Isl.*, xxxvi (1960), and H. A. R. Gibb, *The armies of Saladin*, in *Cahiers d'Histoire Égyptienne*, iii (1951); see also the chapter on military matters in B. Spuler's *Mongolen*², 1955. For the political and social aspects, see Cl. Cahen, *The body politic*, in *Unity and variety in Muslim civilization*, ed. G. E. Von Grünebaum, 1955.

From a more technical point of view, K. A. C. Creswell's *Arms and Armour*, 1956, gives considerable space to examples from the museums, for the most part of a later period than that which has been dealt with here; important is K. Huuri, *Zur Geschichte des mittelalterlischen Geschützwesens aus orientalischen Quellen*, Helsinki 1941, which compares all the "oriental" societies; also A. Zeki Velidi, *Die Schwerter der Germanen* (in fact, this speaks mainly of the Muslim world), in *ZDMG*, xc (1936), not used by A. Mazahéri, *Le sabre contre l'épée*, in *Annales ESC*, xiii (1958); cf. Cl. Cahen's notes to his editon quoted *supra*. For Greek fire, there is now a general review of the use of this in all countries by J. R. Partington, *A history of Greek Fire and gunpowder*, Cambridge 1960 (cf. D. Ayalon, *A reply to Prof. J. R. Partington*, in *Arabica*, 1963). For the *iḳṭāʿ*, see Cl. Cahen, in *Annales ESC*, 1953. For the sake of comparison, it is worth reading R. C. Smail, *Crusading warfare*, Cambridge 1956. (Cl. Cahen)

ii. — Mamlūk [see mamlūks].

iii. — Muslim West

The word *djaysh* in north-west Africa has two further special meanings.

1. *Djīsh*, plur. *Djyūsh* means in the south of Algeria and Morocco an armed band to go out on a *ghazw* (ambush for purposes of plunder or of a holy war) against a caravan or a body of troops. When the *djīsh* consisted of several hundred men, it was called a *ḥarka*. The *Djyush* carried on their operation from the northern Sūdān or the Niger valley throughout the Sahara and the south of Algeria and Morocco. They were composed sometimes of Tuāregs but more often of Berbers from the southern slopes of the High Atlas. The latter assembled on the al-Mayder plateau in the valley of the Wēd Gheris.

When the formation of a *djīsh* was decided upon, the Tuāreg who were to belong to it bound themselves together by an oath before setting out. Among the Awlād Djarīr on the borders of Algeria and Morocco, two mounted marabouts were placed opposite one another. Between these two men of religion ran those intended for the foray, with a branch of the *retem* (Sahara broom) in their hands which they would throw into the air. Each *djīsh* took with him some one to bring him luck, usually a marabout or a warrior who had already taken a successful part in several similar enterprises.

In the sandy plains of the Sahara or in the sand hills the members of the *djīsh* walked in Indian file so that the enemy could not estimate their number from their tracks. They also made all sorts of deviations. When they came to the place chosen for the ambush, they lay in wait. The attack was usually made by night or in the grey of morning, a fierce onslaught, a hail of shot mingled with the shrill wild yells of people shrieking like demons, while the rifles poured forth bullets. All the forces of the attacking party were concentrated on the first onslaught. The terrified animals could no longer be controlled and often stampeded in all directions. Then began the second part of the fight, in which the best horsemen of the *djīsh* played the principal part in driving their dismounted opponents into the desert to die. It was mainly to put down the *djyūsh* that the French military authorities instituted the corps of *Méharistes Sahariens*, who have succeeded in restoring order.

Benhazera, *Six mois chez les Touaregs du Hoggar*, Algiers 1908, 55 ff.; Augustin Bernard, *Les confins algéro-marocains*, Paris 1911, 95, 96; M. Bernard, *Notes sur l'O. Gheris*, in *Bull. Soc. Géog. d'Oran*, xxx, 373; Deschamps, *Le Méhariste saharien*, in *Bull. Soc. Géog. d'Oran*, xxix, *passim* and more particularly 283 ff.; A. Durand, *Notes sur les Touaregs*, in *Bull. Soc. Géog. d'Alger*, 1904, 691 ff.

2. *Djīsh*, or according to the pronunciation in western Morocco *gīsh*, a kind of feudal organization in the Moroccan Army.

Historical. The *djīsh* dates from the beginnings of the reigning dynasty. Previously the various dynasties of North Africa had succeeded to power with the help of groups of the people whose political and religious interests were their own. Revolutions not only overthrew the ruling families but forced them to maintain their power by force of arms and to spill their blood on countless battlefields. The great families, tribes and clans, who had accompanied the first ruler, became extinct. Lest they should become dependent on Berber clans, who could not be relied on to be faithful to a dynasty they had not created, the sultans had to surround themselves with foreign mercenaries, who had no connexion with the

Atlas territory. The older North African dynasties enlisted Christians, Kurds, Persians and negroes. Under the Banū Waṭṭās, however, the Kurd, Christian and negro guards were abolished and replaced by a guard composed solely of Arabs (*al-shurṭa*). This was composed mainly of the elements which had been introduced to west Morocco by the Almohad ruler Yaʿḳūb al-Manṣūr (Dwī Ḥassān, Shabanat, Kholoṭ etc.) or of Maʿāḳil Arabs from the Tlemcen country (Swīd, Banū ʿĀmir, Ṣbāyḥ, Riyyāḥ, etc.). The latter were quartered in the environs of Fās (Fez) and formed the corps of Sherāga (Orientals). The attacks of the Christians in the 9th/15th century forced the ruler of Fās to place garrisons in the strongholds on the coast called *makhzen* (garrison placed in a stronghold), which was very soon to be transferred to the whole feudal organization of Morocco. But this *makhzen* succumbed to the attacks of the Portuguese and Spaniards, the rebellious Berbers and those of a new Maʿāḳil *makhzen*, which had been formed by the Saʿdid Sharīfs of Sūs (1545).

When the Saʿdids had become lords of the kingdom of Fās, they quartered the Arabs of their *djīsh* in the garrisons of Fās, under the name of *Ahl Sūs*; they were soon afterwards transferred to the fortresses of the Gharb as a defence against the Kholoṭ Arabs of the former Marīnid *djīsh*. They later united the remnants of the *djīsh* of the Banū Waṭṭās (Shabana, Zirāra, Awlād Mṭāʿā, Awlād Djerrār) with their own and placed them in the garrisons of Tadla and Marrākūsh. The Sherāga were also enlisted and remained in garrison in the neighbourhood of Fās. The Saʿdid army, the *djīsh*, was thus created. As in the time of the Banū Waṭṭās, it consisted of military cantonments of members of the *makhzen* who were at the call of their sovereign throughout their lives. They lived on estates which formed a kind of fief and were free from taxation. The highest officials rose from their ranks.

But the Saʿdid court became influenced by the Turks in the adjoining lands. In addition to the corps of *djīsh*, the Sharīfs wished to have a corps drilled in the European fashion by Turkish instructors. The nucleus of this corps, consisting of Andalusian Moors, renegades and for the greater part of Sudan negroes, was only of any real value in the reign of Sultan Aḥmad al-Dhahabī (al-Manṣūr). While this dynasty was breaking up in the civil wars caused by rival claimants for the throne, Sultan ʿAbd Allāh b. Shaykh wished to have a body of faithful troops upon whom he could implicitly rely and gave the Sherāga most of the lands which they had previously held only in fief.

When Mawlāy al-Rashīd seized the throne in 1665, and with the help of Arabs and Berbers from the Udjda country founded the dynasty of ʿAlid Sharīfs, he amalgamated his retainers with the Sherāga of Fās. His successor Mawlāy Ismāʿīl gave the *djīsh* its character. His mother belonged to the Arab tribe of Mghāfra, a division of the Udāya. He invited this tribe to come from the other end of Sūs and settled them as a *makhzen* tribe near the lands of the Sherāga of Fās. He reorganized the negro contingent the members of which he had sought out with the help of the Saʿdid Sultan Aḥmad al-Manṣūr's registers. They had to swear an oath of fealty on the Imām al-Bukhārī's book; whence their name *ʿAbīd al-Bukhārī* (slaves of Bukhārī, plur. Bwākher). The *djīsh* further consisted of the Sherāga (Awlād Djamaʿ, Hawwāra, Banū ʿĀmir, Banū Snūs, Sedjʿa, Aḥlāf, Swīd, etc.), the Sherārda (Shabana, Zirāra, Awlād Djerār, Ahl Sūs, Awlād Mṭāʿ, etc.), the Udāya (the Udāya proper, Mgafra etc.) and Bwākher. These were the four *makhzen*-tribes and together formed the *djīsh*. Henceforth the history of the *djīsh* is that of the domestic history of Morocco; indeed it may be said that their history is that of the revolutions of Morocco. In the reigns of Mūlāy Ismāʿīl's successors, it was the *djīsh* that decided the fate of the rulers. The four great tribes acted as suited their individual interests. From 1726 to 1757, in the brief space of 31 years, 14 Sultans were enthroned, and deposed or slain by them, in consideration of the presents (*munā*) they received. In 1757 on the death of the Sultan ʿAbd Allāh b. Ismāʿīl, who had himself been seven times deposed and restored again, his son Muḥammad succeeded him. Under his iron rule, the *djīsh* tribes were kept under control. He broke the power of the Bwākher by dividing them up and sending them to garrison the various seaports. To counteract the influence of the Sherārda of Tadla and the plain of Marrākush, he enlisted sections of the tribes of this plain in the *makhzen*—Mnābeha, Rḥāmna, ʿAbda, Aḥmar and Harbil. Each of these tribes had to send two ḳāʾids and their retainers to the *djīsh*. These detachments were released from their tribes, entered the *makhzen* of Marrākush, to which they belonged, received the pay of other troops and were freed from taxes (*nayba*).

Under Sultan Yazīd, son of Muḥammad, insubordination again broke out, favoured by the weak character of the ruler. He was assassinated and the struggles for the throne of Morocco began again, which became the plaything of the *djīsh* tribes. Finally, about 1791, Mawlāy Slīmān succeeded in winning his way to the throne and overthrowing his rival Mawlāy Hishām, who had been chosen in Marrākush. While he was on a campaign against the Berbers in the south, the Sherārda aroused a great rebellion against him. The Udāya took his side against the rebels and seized the opportunity to plunder Fās. Mawlāy Slīmān was victorious but on his death his successor Mawlāy ʿAbd al-Raḥmān was proclaimed sultan by the Udāya in 1822. The latter was almost overthrown by another rising of the Sherārda and had as a rule to reside in Marrākush, the better to be able to control the tribes. But events in the north of his kingdom, a rising of the Udāya, the conquest of Algeria by the French and the wars of his representative ʿAbd al-Ḳādir against them, forced him to retire to Fās. He wished to take the field in person against the French. But after his defeat at Isly, he recognized how unequal to European armies his *djīsh* was, and resolved to have an army modelled on those of Europe. His successor Muḥammad carried out this plan by his edict of 22 Radjab 1277/18 July 1861. The organization of the new army was after many experiments finally entrusted to a body of French officers.

State of the Djīsh since the French Protectorate. The *djīsh* still consisted of the Sherāga, Sherārda, Udāya and Bwākher with the half *makhzen*-tribes of the plain of Marrākush (ʿAbda etc.). The tribes still had only the use of the lands occupied by them, except the Sherāga, who obtained the cession of most of their lands, and the Bwākher, almost all of whom had land around Meknès (Miknāsa). The *djīsh*-tribes were divided into regiments of 500 men (*rḥa*). At the head of each *rḥa* was a *Ḳāʾid rḥa*, a kind of colonel. Below him were five *ḳāʾid al-mya*, commanders of 100 men, each of whom had 5 *muḳaddam*s below them, who were subordinate

officers commanding 20 men. The private soldier of the *djīsh* was called *mkhāznī*.

The members of the *djīsh* could attain to the highest positions in the *makhzan*. The Bwākher retained a special privilege; from their ranks alone were drawn the *Shwirdet*, pages of a kind, who were employed in the palaces of the sovereign. The Udāya had the right to call themselves "Uncles of the Sultan". The tribes belonging to the *djīsh* were each commanded by a Pasha, except the Sherārda and Udāya, who were divided into garrisons, each of which was commanded by a Ḳāʾid. The Pasha of the Bwākhīr was also Pasha of Meknès, and the Pasha of the Ahl Sūs was also Pasha of Fās Djadīd. All officers were supposed to live in their garrison towns but in time of peace they did not strictly observe this rule. Their military duties were not taken very seriously and most of them lived on their estates. The administration of the affairs of the tribe was in the hands of the *shaykh*, the oldest of the *ḳāʾid rḥa*.

When the Sultan required troops each *makhzen*-tribe sent a detachment corresponding to the number of its *rḥa*. This held for the Sherāga, Sherārda and Udāya, all of which consisted of too many families for them to belong in a body to the *djīsh*. The families who were to be detached were chosen by drawing lots. The others were free, though they paid no taxes and tilled the lands granted them for the time. They formed the reserve of the *djīsh*, from which the Sultan drew the corps of *msakhkhrīn* (muleteers, army service corps) for the *ʿasker* (regular army) and for the artillery. Each member of the *djīsh* called to the colours received in his garrison an allowance of rations (*mūna*) and a monthly pay (*rāteb*).

The Bwākher, who numbered only 4000 men at the time in question, and the Ahl Sūs, were all soldiers. A special register was kept of them. They all received the *mūna* and the *rāṭeb* and their widows also received pensions.

Positions in the *djīsh* often descended from father to son and their holders thus formed a permanent element in the *makhzen* caste.

Although the creation of a standing army on the European model, the *ʿasker*, lessened the influence and political importance of the most prominent members of the *djīsh*, it by no means destroyed its military value. The fact that they were peerless horsemen was largely due to the *laʿb al-bārūd* [*q.v.*] "powder-game", in which the *djīsh* excelled. The field artillery of the standing army was also recruited from them. Trained by the officers of the French military mission, this artillery acquitted itself excellently.

As we have already seen, the *djīsh* was divided into *rḥa* and these were commanded by a *ḳāʾid*, below whom were five *ḳāʾid mya* with their *muḳaddams*. The standing army on the other hand was divided into *ṭābōrs* (battalions or regiments) of varying strengths; these were commanded by a *ḳāʾid rḥa* who had a *khalīfa* and a corresponding number of *ḳāʾid mya* below him.

Distribution, Armament and Dress. The *djīsh*-troops were unequally distributed among the four imperial cities Fās, Meknès, Rabāṭ and Marrākush, the two seaports Tangier and Larash, and a few small garrisons in the Gharb (west), and the east and south of Morocco. In these places the *djīsh* and their people lived by themselves and hardly mixed with the local populations by whom they were feared.

These horsemen were armed with the Winchester rifle, which supplanted the long flintlock; they also carried the *sekkīn*, a sword with an almost straight blade, a horn handle and a wooden sheath covered with red leather. They also carried the *kummiyya* and the *khandjar*, engraved daggers with very curved blades. Their horses as a rule, were good, but the harness as usual among the Arabs was very poor.

They wore a cloth kaftan of some loud colour over which they put a white *faradjiyya*, the whole being held together by a leather girdle with silk embroidery. Their red *sheshiyya* was conical in shape and wound round by a turban of white muslin. Soft slippers of yellow leather with long spikes instead of spurs completed this picturesque outfit.

iv. — Modern period

The history of Islamic armies in modern times is, in its most significant aspect, the history of their reform and westernization. The progress of the sciences in Europe enabled European Powers to wage war with increasing efficiency and their threat to the Islamic domain became progressively more difficult to contain. But it is only towards the end of the eighteenth century that Islamic rulers came to appreciate the threat in its full extent and began to take measures to cope with it. It is true that European techniques of war had been introduced here and there before that time, but the attempts were neither systematic nor long-lived. In the Crete campaign of 1644-69 the Ottoman Government employed English and Dutch instructors to train their sappers. At the end of the seventeenth century, the foundries for the manufacture of cannon were being supervised by a Venetian ex-officer of artillery named Sardi who had turned Muslim. In 1731, the French Count de Bonneval (1675-1747) who had adopted Islam and taken the name of Aḥmad (see AḤMAD PASHA BONNEVAL), was given the task of reforming the Corps of Bombardiers. He recruited and trained some 300 Bombardiers and opened a school of geometry. The innovation did not survive opposition by the Janissaries. In the 1770s, the Baron de Tott, a French Officer of Hungarian extraction who had gone to Turkey with Vergenne's Embassy, and had then been employed by Choiseul on an embassy to the Crimean Tatars, was employed to form a corps of artillery on modern lines. He formed a corps of 600 *sürʿatčis* and built a foundry for cannon. He also introduced the use of the bayonet and set up a mathematical school for the navy. His work was continued, after his return to France in 1775, by a Scotsman called Campbell who had adopted Islam and was known as Ingiliz Muṣṭafā. When the Russians annexed the Crimea in 1783, westernization of the Ottoman army gained impetus, and the French Government, fearing the extension of Russian power further, lent officers headed by General Lafitte for technical instruction and training in military engineering and the art of fortification.

But it was not until the reign of Selīm III (1203-22/1787-1807) that a sustained attempt was made to transform the old-style army into an instrument fit for modern conditions. In 1792 and 1793, as part of his attempt to reform the civil and military institutions of the Empire, and to set up a new system, a *Niẓām-i djadīd*, he issued regulations for

a new model army, which itself came to be known by this very title. The advantages to be derived from a new model army may be gathered from a treatise published in translation in an appendix to W. Wilkinson, *An account of the principalities of Wallachia and Moldavia ...*, London 1820. The treatise, which the author states to be a translation from a Turkish Ms, dating from 1804, when the Sultan was concerned to extend his military reforms, purports to be "An explanation of the Nizam-y-Gedid institution", and to have been written on the Sultan's orders by "Tshelebi-Effendi, one of the Chief dignitaries of the Ottoman Empire, Counsellor, Minister of State etc. [= Čelebi Muṣṭafā Res͟hīd Efendi, known as Köse Kedk͟hudā]". It is a long defence of the Sultan's policy setting out the evils of the old system and the reason for the superiority of European armies which it explains thus: "... their regular troops keep in a compact body, pressing their feet together that their order of battle may not be broken; and their cannon being polished like one of Marcovich's watches [Markwick Markham, a London watchmaker in great esteem with the Turks] they load twelve times in a minute and make the bullets rain like musket balls". The advantages of the *Niẓām-i d͟jadīd*, according to the author, are that the wearing of a distinctive uniform makes desertion more difficult, that the troops, drawn up in lines with the rear ranks parallel with the front, are easy to manœuvre, that discipline is easier to enforce, and that defeats are not turned into routs. A British Admiralty handbook of 1920 summed up and contrasted, after a century or so of reform, the methods and aims of the old and the new model armies: "The chief features of the new methods were the systematic training of the soldiers in drill movements and in the handling of weapons; (2) their organization in symmetrical units (regiments etc.). The undrilled forces of the older armies fought to a large extent as individuals, and the military units, so far as they existed, lacked cohesion and discipline, and therefore full effectiveness in attack and defence. Under the new system the commanders exercised more control in battle and could better calculate the numbers of their troops and thus dispose them more accurately to plan [whilst in the old style armies units were not of uniform size, even approximately]. Under the reformed system an army in battle order was arranged in two or three successive lines, the rear line acting in support and as reserves and each unit being of uniform depth. The ancient crescent movement of the front line was replaced by movement in straight lines". (Geographical Section of the Naval Intelligence Division, Naval Staff, Admiralty, *A handbook of Syria*, 1920, 163). From all this it may be concluded that the objects of military reforms were threefold: the acquisition and manufacture of modern weapons, the inculcation of technical knowledge in the appropriate sections of the army such as sappers and artillerymen, and the creation of a disciplined body of troops easily manœuvrable by their commanders. The second requisite has always been, in the modern period, more difficult to attain than the first, and the third infinitely more so than the second.

Selīm III took up and amplified previous attempts at modernization. He introduced reforms in the artillery, tightened discipline, and increased the pay for privates from 20 to 40 aspers per day. The corps was put under the command of a *topčì bas͟hì* who was made a pas͟ha of two tails, but administration, supplies and finances were separated from operational command and entrusted to a *nāẓir*. In 1796, following earlier negotiations, the Ambassador of the French Republic Aubert-Dubayet brought with him to Istanbul a number of officers who were assigned to train the *Niẓām-i d͟jadīd*. The new corps, composed of voluntary recruits, consisted of *topčì*s, *sipāhī*s and infantry. The recruits were drilled in the European fashion and taught how to manœuvre in a body on the battlefield. Seeking to avoid undue contact with the Janissaries who looked askance at these innovations, the Sultan housed the *Niẓām* in barracks outside Istanbul. When the French, in Bonaparte's Egyptian expedition, marched into Palestine in 1798, the new corps, which amounted by then to three or four thousand gunners and musketeers, was employed to help with the defence of Acre and gave a good account of itself. This raised its reputation particularly with the people of Istanbul and encouraged the Sultan to take a further step. He now desired to recruit troops for the *Niẓām* by conscription both from among the Janissaries and the general population. This new departure had the support of the Mufti, Welizāde Meḥmed Emīn, and other high religious dignitaries who were convinced of the necessity of reform. It is presumably in aid of this policy that the treatise of "Tshelebi-Effendi" mentioned above was written. The Sultan promulgated a *k͟haṭṭ* on these lines in 1805, but strong opposition was soon apparent. The reading of the *k͟haṭṭ* was interrupted by a riot in Edirne, and one *ḳāḍī* reading its text in Rodosto was actually killed. The Janissaries broke out in revolt in Rumelia and the authorities dared not have the *k͟haṭṭ* read in Istanbul. A regiment of *Niẓām* sent from Anatolia against the rebellious Janissaries was decisively defeated. The Sultan had to appoint the Ag͟ha of the Janissaries as Grand Vizier, to return the *Niẓām* to Anatolia, and abandon for the time being the extension of reforms. But he does not seem to have given them up altogether for in 1806 an attempt was made to recruit for the *Niẓām* in Ḳaramān whose Wālī, ʿAbd al-Raḥmān Pas͟ha, had shown energy and loyalty in carrying out the Sultan's policy, and in 1807 auxiliary levies, Yamaks, were ordered to put on the *Niẓām* uniform. This precipitated a revolt, and the Yamaks marched on Istanbul and were soon the masters there. The Sultan attempted to save his throne by decreeing the abolition of the *Niẓām*, but he was deposed by virtue of a *fatwā* which ruled that his actions and enactments were contrary to religion. The Janissaries burnt down the barracks of the *Niẓām*.

Bayraḳdār Muṣṭafā Pas͟ha, who shortly thereafter procured the deposition of Selīm's successor Muṣṭafā IV and the enthronement of Maḥmūd II, attempted in 1808 to carry on with Selīm's schemes, by recruiting troops for the new model army which he sought to disguise by giving its members the traditional title of *Sagbān*s [*q.v.*], but his ruin and death at the hands of the Janissaries ended attempts at reform for the time being. It was not until eighteen years afterwards, in 1826, that Sultan Maḥmūd II (1808-39) was enabled, by a shrewd and lucky stroke, to end the power of the Janissaries and endow the Empire with a modern army. In 1826, having secured the support of the Mufti and the principal Janissary officers at a council held on 24-5 May 1826, the Sultan promulgated a *k͟haṭṭ* which, while speaking of restoring the traditional practices of the Empire, in effect proposed the continuation of Selīm's reforms. A new force was to be formed by each Janissary battalion stationed in Constantinople providing 150

men from its ranks; 5,000 men in all were to be enrolled. The *khaṭṭ* provided for regular payment of salaries, for promotion by seniority, for the orderly provision of leave and pensions and for the abolition of the sale of military offices. The troops were to be armed with rifles and swords and to be trained by Muslim and not European officers. In spite of the ostensible agreement of their chiefs, the Janissaries revolted against the innovation. They proclaimed rebellion on 15 June, but the Sultan was ready for them and the mutiny was crushed. On 17 June the order of the Janissaries was abolished and shortly thereafter the *Sipāhīs*, the *Silīḥdārs*, the *Ghurabā* and the *ʿUlūfedjis* likewise.

No time was lost in proclaiming the formation of a new army which, to emphasize the ostensibly Islamic and traditional character of his reforms, the Sultan called the *ʿAsākir-i Manṣūre-i Muḥammediyye*. The new military code, published towards the end of 1826, divided the army into 8 sections and put at its head the *Serʿasker* [*q.v.*] who combined the functions of commander-in-chief and minister of war, and, under the Sultan, controlled the whole, except that a Grand Master of the Artillery (*Ṭopkhāna Nāẓiri*) was made responsible directly to the Sultan for the artillery, the engineers and munitions (see further BĀB-I SERʿASKERI). This division of functions between the Commander-in-chief and the Grand Master of the Artillery remained until 1909. The new army was to consist of 12,000 troops serving for twelve years; but the term of service was at times extended, as appears from a letter of Helmut v. Moltke of 1838, where he speaks of a term of service of 15 years.

In the following decades the army was considerably enlarged and its administration rationalized. By a law of 1843 army service was fixed at five years. In 1869 service was reduced to four years, in 1886 to three. In the Army Law of 1886, Ottoman subjects were made liable to service in the army for nine years from the age of twenty; they were then to be transferred to the reserve (*redīf*) for a further nine years and to the territorial army (*mustaḥfiẓ*) for a further two. The Law of 1843 provided for five army corps: the Imperial Guard, and the army corps of Istanbul, Rumelia, Anatolia and Arabistan. In 1848 a sixth army corps, with headquarters at Baghdād, was created. The army ranks were graded in the European fashion (a list of Ottoman army ranks with their equivalents in the British Army is conveniently found in Captain M. C. P. Ward, R.A., *Handbook of the Turkish army*, London 1900). The 12,000 of Sultan Maḥmūd's army were quickly increased. By the eighteen-forties the Ottoman armies had some 150,000 members, and this seems to have remained its peace-time strength thereafter. Until the promulgation of the *Khaṭṭ-i humāyūn* of 1856 the army was exclusively drawn from the Muslim population of the Empire. The *Khaṭṭ*, envisaging equality of rights and duties for all the Sultan's subjects, laid it down that henceforth military service would be borne by all, the poll-tax payable by the *dhimmīs* being abolished. This intention remained a dead letter, for until 1909, the non-Muslim subjects of the Sultan were exempt from military service against payment of a *badal* [*q.v.*], and such exemption seems to have tallied with the consensus of both the Muslim and the non-Muslim communities. The law of 1909 which abolished exemption for non-Muslims also abolished the privileged exemption from military service of the inhabitants of Istanbul.

This latter exemption gives an indication of the kind of difficulty which stood in the way of uniform military administration. The heterogeneous character of the Empire, the multiplicity of its religions and sects, the survival of ancient privileges and the creation of new ones during the nineteenth century militated against uniformity. The law of 1886 which mentions the exemption of the inhabitants of Istanbul also lays down that inhabitants of the *sandjaḳ* of the Lebanon and of Samos would also be exempt. Also the law was not to be applied in Scutari (except for Durazzo), in the Yemen, the Ḥidjāz, Nadjd, Tripoli and Benghazi. These anomalies are a fair indication of the resistance which uniform European-style administration aroused.

The training and management of a conscript army and its performance in war depend on the existence of efficient health, supply and financial services, and on the orderly keeping of records. It was of course the case that such services had to be created at the same time as the army was being recruited and expanded, and it is to be expected that in time of emergency, particularly in the beginning, they would fall short of the need. In 1842, for instance, soldiers slept in their clothes and wore a heterogeneous collection of uniforms. Furthermore, the new model army depended heavily for training on a miscellany of foreign officers, French, English, Prussian, Austrian, who, as Christians, were treated with scant respect by the rank and file. Leadership at the top may have been energetic and knowledgeable, but subalterns and non-commissioned officers were scarce and inexperienced. This was the judgment of one observer in 1828 (C. Macfarlane, *Constantinople in 1828* ..., London 1829, 26). The judgement is echoed by the Maréchal de St.-Arnaud in 1854 who wrote that in the Turkish Army there were two things only: a commander-in-chief and soldiers and that there were no intermediary points, no officers, and even less non-commissioned officers (E. Engelhardt, *La Turquie et le Tanzimat*, Paris 1882, i, 116). In Helmut v. Moltke's judgment the advantages of European drill were lost by reason of the impersonality and mass character of the conscript army. The cavalry, he wrote, "learned to ride in masses, but they lost the impetuosity of the wild Turkish charge; and with their endurance of new customs, the old fanatical inspiration vanished. What was good in barbarian warfare was lost without gaining much benefit from the resources of civilization; popular prejudices were shaken, but the national spirit was destroyed at the same time, and the only change for the better was that the troops obeyed the orders of their leaders more than before". (*The Russians in Bulgaria and Rumelia* ..., London 1854, 269.) The deficiency of officers was gradually made good. Maḥmūd II sent military and naval cadets to European colleges in 1827, and in 1834 the military college at Pangaltī (see ḤARBIYE) was opened. The following decades saw a steady increase in and accumulation of modern military knowledge, but it was not until the educational reforms of Sultan ʿAbd al-Ḥamīd II that a notable extension of military education came about. The creation of this modern military *élite*, conscious of its superior knowledge and open, by virtue of its training, to European ideologies, was to have momentous consequences in the political history of the Empire and its successor states.

Contemporary with the Ottoman army reforms were those carried out by Muḥammad ʿAlī, the Wālī of Egypt. Shortly after the consolidation of his

power in the country, Muḥammad ʿAlī determined on forming an efficient army. In 1815, after his return from the Ḥidjāz expedition, Muḥammad ʿAlī introduced European drill in his forces. The enterprise aroused great discontent and a mutiny broke out in Cairo; Muḥammad ʿAlī had to postpone his plans for the time being. In 1819 he obtained the services of Colonel Joseph Sève, a retired Napoleonic officer (who later embraced Islam and became known as Sulaymān Pasha [*q.v.*]) to direct training in a new military school which he established at Aswān, away from Cairo. The trainees were Sudanese slaves and 300 of Muḥammad ʿAlī's mamlūks. Sève encountered the same difficulties which European officers met in the Ottoman Empire: insubordination owing to contempt for the European Christian, and utter unfamiliarity with European techniques and drill. To start with, Muḥammad ʿAlī attempted to recruit Sudanese slaves for the rank-and-file, but their rate of mortality was extremely high: of the 24,000 slaves collected up to 1824 only some 3,000 were still alive by then. This method was abandoned and Muḥammad ʿAlī began recruiting from among the Egyptian peasantry. The *mudīrs* of the provinces were ordered each to provide a fixed quota of recruits. Press-gangs were first used to round up the recruits, an attempt was then made to substitute choice by lot (*ḳarʿa*) for the more forcible method, but neither force not persuasion could overcome the peasant's repugnance for military service: resistance, flight, self-mutilation were his unavailing resort; recruitment by lot proving even more unsatisfactory, the press-gang was once again employed. After the Morea campaign, Muḥammad ʿAlī, seconded by his son Ibrāhīm, increased the facilities for the training of officers; an infantry school, a cavalry school and an artillery school, all directed by Europeans, were established, and the French military code was translated and adapted for use in the army. He entrusted the administration of the army to a *nāẓir al-djihādiyya*, whose labours were to be guided and supervised by a council of officials, *dīwān al-djihādiyya*. By 1831 a disciplined force consisting of 20 regiments of infantry and 10 of cavalry was ready to take the field against the Ottoman Army in the Levant. At the end of the Levant campaigns in 1841 it was estimated that some 100,000 troops, including irregulars, were at the disposal of the Wālī of Egypt.

As part of the settlement between Muḥammad ʿAlī and the Ottoman Empire following his withdrawal from the Levant, the Egyptian Army was reduced to 18,000 troops, by a *fermān* of 13 February 1841. This figure was, however, informally increased by vizieral letters under the khedivate of ʿAbbās I and Saʿīd, the informal arrangement being confirmed by a *fermān* of 27 May 1866 issued to Ismāʿīl. This Khedive later succeeded in removing the limit on the number of Egyptian troops, a *fermān* to this effect being issued to him on 8 June 1873. But following his deposition, and consequent on the disturbed and enfeebled state of Egypt, the Ottoman Government was able to withdraw this concession on the accession of Tawfīḳ, and a *fermān* of 7 August 1879 once again limited the number of Egyptian troops to 18,000.

The second year of Tawfīḳ's khedivate saw the promulgation of a law (of 31 July 1880) which laid down that all Ottoman subjects in Egypt regardless of religion were liable, from the age of 19, to four years' active military service, followed by five years in the *redīf* and a further six in the territorial reserve. The recruits were to be chosen by lot from among those liable to conscription. It seems that this law contributed to the discontent which led to the ʿUrābī movement, since ʿUrābī and his friends argued that four years active service were not enough to gain promotion from the ranks; they therefore considered this law as directed by the Turkish element in the Army against the Egyptian element. An indication of their feelings on this matter is the law of 22 September 1881, which they forced the Khedive to promulgate, and which made promotion regular and mandatory once the prescribed periods of service, and examinations, were passed.

Following the collapse of ʿUrābī's movement and the British occupation of Egypt, the Khedive, by a decree of 17 September 1882, disbanded the Egyptian Army prior to its reorganization. A Khedivial rescript of December 1882 provided for a new army to be formed limited to 10,000 men. This army was intended for internal purposes, its general officers were British and its methods of training and organization followed the British model. Khedivial decrees promulgated in 1886 reiterated the provisions of the Law of 1880 and further allowed exemption on payment of a *badal* (a decree of 22 April 1895 disallowed exemption by payment of *badal* after the holding of the annual recruitment ballot). At the reconquest of the Sudan in 1898, the Army was increased to some 30,000 troops, but numbers thereafter reverted to 10,000-15,000 men until the signature of the Anglo-Egyptian Treaty of 1936.

The attempts to reform military institutions in Persia during the nineteenth century were neither as sustained nor as systematic as in Egypt and the Ottoman Empire. Persia was drawn into European politics during the Napoleonic period, and both France and Britain attempted to acquire exclusive influence in the country. The French sent a mission to train Persian troops in 1807-8, as did the British in 1810. Thereafter a succession of foreign officers, Russian, French and Italian, attempted to introduce European drill and techniques, but their impact was neither profound nor lasting. In 1842 a modified form of conscription was introduced. The cultivated land was surveyed and divided into units, each unit (the amount of land which could be tilled by one plough) being liable to provide a soldier together with a monetary contribution, part of which went to provide for the conscript's family and part to the Government, to defray the expenses of the soldiers. The division of the country into British and Russian zones of influence following the Anglo-Russian Agreement of 1907, and the events of the First World War, prevented the Persian Government from exercising effective control over its armed forces, and it was not until after the *coup d'état* of 1921 that Riḍā (Rizā) Shāh, who then became commander-in-chief, was able to organize the Persian army on the European model. A Conscription Act passed in 1925 provided for universal military service for a period of 2 years. A military college was also set up in Tehrān.

The successor Arab States which were set up after the defeat of the Ottoman Empire in the First World War had, under the mandatory régime, small volunteer forces organized and trained by the mandatory governments whose methods of training and organization tended to influence later practices. On attaining full independence these states speedily introduced universal conscription, the administration of which was not always easy. The Government of ʿIrāḳ, the first to do so (by Law No. 9 of 1934), encountered armed resistance to conscription among

the Euphrates tribes and the Yazīdīs of Djabal Sindjār. A table of equivalent ranks in the armies of Arab states is conveniently set out in ʿAbdallāh al-Tall, *Kārithat Filasṭīn*, Cairo 1959, p. x.

AL-**DJAYṬĀLĪ** (also AL-DJĪṬĀLĪ, var. AL-DJIṬĀLĪ), ABŪ ṬĀHIR ISMĀʿĪL B. MŪSĀ, celebrated Ibāḍite scholar who was a native of Īdjayṭāl (also Īdjīṭāl or Djiṭāl), an ancient village of the Djabal Nafūsa still there today and now called Idjeyṭal or Djeyṭal. The date of his birth is unknown. However, we know that he was a pupil of the *shaykh* ʿĪsā b. Mūsā al-Ṭarmīsī, who lived in the second half of the 7th/13th century. For some time he taught at Mazghūra (today Mezghūra or Timezghūra) in the eastern part of the Djabal Nafūsa not far from Īdjeyṭal. He also lived for nine years at the village of Forsaṭā situated in the western part of the Djabal Nafūsa. It seems that at this period he was occupied with trade. It is said that he once went to Tripoli with some slaves he wished to sell there. Thrown into prison by the *ḳāḍī* and the *amīr* of this town who wished to confiscate his goods, he was freed by the intervention of Ibn Makkī, governor of Gabès, to whom he had addressed a poem full of eulogies. Set at liberty, he retired to Djarba, which at this time was under the authority of the governor of Gabès. He died there, according to al-Shammākhī, in 750/1349-50, or according to Abū Rās in 730/1329-30, and he was buried in the cemetery of the great Ibāḍite-Wahbite mosque on this island.

He was the author of many treatises, especially concerning dogma and the law, which, according to the opinion of later Ibāḍite scholars, revived their sect: 1) *Ḳawāʿid al-Islām* on the fundamental tenets of Islam, of which there is a lithographed Cairo edition with a commentary by Abū ʿAbd Allāh Muḥammad b. Abī Sitta al-Kusbī (10th/16th century); 2) *Al-Ḳanāṭir* (or *Ḳanāṭir al-khayrāt*), a kind of religious and moral encyclopaedia in several volumes, lithographed at Cairo; 3) *Sharḥ al-Nūniyya* (also *Sharḥ al-Ḳaṣīda 'l-Nūniyya* or *Sharḥ al-Uṣūl al-dīniyya mushtamil*[an] *ʿala talkhīṣ maʿānī 'l-ḳaṣīda 'l-nūniyya*, a three-volume commentary on the poem rhyming in *nūn* on the principles of religion composed by Abū Naṣr Fatḥ b. Nūḥ al-Malūshāʾī; 4) *Kitāb fi 'l-ḥisāb wa-ḳism al-farāʾiḍ* or simply *Kitāb al-Farāʾiḍ*, a treatise on the calculation and division of inheritances based on a compilation by Abu 'l-ʿAbbās Aḥmad b. Saʿīd al-Dardjīnī (7th/13th century, printed edition); 5) *Adjwibat al-aʾimma*, a collection of legal opinions originating with imāms of the Ibāḍite sect (in three parts); 6) *Kitāb al-Ḥadjdj wa 'l-manāsik*, a book on the pilgrimage and the ritual practices attaching to it; 7) a collection of epistles (*mā djamaʿa min al-rasāʾil*); 8) poems (*ḳaṣāʾid*), probably religious; 9) *Maḳāyīs al-djurūḥ wa'stikhrādj al-madjhūlāt*, on *fiḳh*, lithographed edition appended to the *K. al-Farāʾiḍ*; 10) *Tardjamat al-ʿaḳīda al-ḳanāṭir*; 11) *Kitāb al-Mirṣād*. Several manuscripts of these works are to be found in the libraries of the Mzab.

DJAYYĀN (Spanish Jaén), capital of the Andalusian province of the same name, situated on the slopes of the rocky hill of Santa Catalina, on the summit of which the Muslims built a fortress which was considered to be impregnable; they also encircled the town with a wall. At the present time the town has a population of about 70,000. It stands in the centre of a fertile plain in which al-Idrīsī noted as many as 3,000 villages devoted to agriculture, and in particular to the breeding of silk-worms which is also the speciality of the *iḳlīm* of the Alpujarras, of which Jaén is the capital. On the other hand, he does not mention the cultivation of olive-trees, now the chief source of wealth. Ibn Ḥawḳal speaks of it as one of the ancient cities of Spain under the name Auringis, conquered by Scipio during the second Punic war, after Hasdrubal's defeat nearby. At the time of the Arab conquest of the Peninsula, the *djund* of Kinisrīn settled there; on his arrival in al-Andalus, ʿAbd al-Raḥmān I came in touch with it. In 210/825 ʿAbd al-Raḥmān II ordered the *fata* Maysara, governor of Jaén, to build the great mosque with five naves supported by marble pillars, which dominated the whole view of the city. At the end of the reign of the *amīr* Muḥammad, the revolt of

ʿUmar b. Ḥafsūn broke out and the district of Jaén was the scene of struggles and frequent uprisings until the rebel was crushed at Poley in Ṣafar 278/May 891. The town took the side of the *amīr* of Cordova but, in the following year, it was recaptured by the rebel and remained under his domination until 290/903. On the fall of the Caliphate the Banū Birzāl and the Banū Ifrān settled there as the result of a grant made by Sulaymān al-Mustaʿīn. Later the town was taken by Habbūs b. Māksan, lord of Granada. The Almoravids occupied it without resistance, and it was from this town that Tamīm b. Yūsuf set out, in 501/1108, for the Uclés campaign. The Almohads entered the town in 543/1149, but the king of Murcia Ibn Mardanīsh annexed it in 554/1159 and handed it over to his father-in-law Ibn Hamus͟hk. The *sayyid*s Yūsuf and ʿUt͟hmān laid siege to it in the summer of 557/1162 but failed to capture it; and Ibn Mardanīs͟h, irritated by the defection of his father-in-law who had given the town to the Almohads in 564/1169, also failed. When starting the campaign for al-ʿIḳāb (Las Navas de Tolosa), al-Nāṣir set up his head-quarters at Jaén. The *sayyid* ʿAbd Allāh al-Bayāsī, governor of Jaén, rebelled against the caliph al-ʿĀdil, and allied himself with Ferdinand III of Castile, who laid siege to the town with great vigour, but was compelled to withdraw with heavy losses, in revenge for which he devastated the whole district. It was only in 644/1246 that he finally succeeded in incorporating the town in the kingdom of Castile. During the 7th/13th and 8th/14th centuries the town was subjected to constant attacks by the Banū Marīn and the Naṣrids of Granada and, thanks to its powerfully-built castle, became the defensive bastion of Castile. Al-Idrīsī, and Ibn ʿAbd al-Munʿim who copied him, noted the variety and wealth of springs, both hot and cold, within the town; some of these springs existed before the Arab period, such as *Ḥammām al-t͟hawr* "the hot springs of the bull", where there was a marble statue of a bull, and the large spring covered with very ancient vaulting, from which the water flowed out into a large pool. Today, the cathedral square is embellished with a monumental fountain. Among the famous natives of Jaén in the Muslim period can be mentioned the poet Yaḥyā al-G͟hazāl "the gazelle", who was sent to Constantinople by ʿAbd al-Raḥmān II as his ambassador to the emperor Theophilus; the philologist Abū D͟harr Muṣʿab, *ḳāḍī* of his native town in 509/1115-6, and referred to in *al-Rawḍ al-miʿṭar* in various poems; Abū Muḥammad b. D͟jiyār al-D͟jayyānī, tax-collector in Fez under the Almoravids, who betrayed the governor prince Yaḥyā Ibn al-Ṣahrawiyā, great-grandson of Yūsuf b. Tas͟hfīn, handed it over in 540/1146 to ʿAbd al-Muʾmin and thereafter enjoyed great influence under his government.

D͟JAYYĀS͟H b. nad͟jāḥ [see nad͟jāḥ, bā].

D͟JAYZĀN, the name of a wadi, a port, and a *muḳāṭaʿa* (district or province) on the Red Sea in south-western Saudi Arabia. The classical form, D͟jāzān, is still often used, especially by writers from the province itself. Variant pronunciations are D͟jē-, D͟jī-, D͟jō-, and rarely Zē- (among the tribe of the Masāriḥa). The form Qīzān, which occurs on many maps, is spurious; it is said to be the plural of *ḳawz* (sand hill), whereas the plural of this word is actually *aḳwāz*.

The name appears to have belonged originally to the wadi, which rises in D͟jabal Rāziḥ and the territory of K͟hawlān in the Yaman, flows south of D͟jabal al-ʿUrr, and then turns south-westwards to empty into the Red Sea at the modern port (lat. 16° 53′ N, long. 42° 33′ E). A detailed list of tributaries is given in al-ʿUḳaylī, i, 33-5, along with the names of 13 small dams (*ʿaḳm*, pl. *ʿuḳūm*). The *sayl*s, with a volume of water reaching 500,000 gal. a second and waves over 10 m. high, make the lower reaches one of the most productive agricultural regions in Arabia, but without proper flood control much of the water is wasted. The principal crops are millets (*d͟hura* and *duk͟hn*) and sesame; other grains, cotton, and indigo are also grown. The soil is so rich that fertilizers are not needed, and four plantings a year can be raised. In 1380/1961 the Saudi Arabian Government, with technical and financial assistance from the United Nations, was implementing a scheme for erecting a large dam across the wadi, modernizing the irrigation system, and building good roads to link the port with its immediate hinterland.

Two channels, one of which is known as the Pearly Gates, lead from the open sea past the Farasān Bank to D͟jayzān port. The approach is beset with shoals, and large vessels must anchor a mile or more offshore. A haven for dhows lies inside the reefs. The town is built beside hills, the highest rising c. 60 m. Probably salt domes in origin, the hills are now capped with forts. There is no other elevated ground in the vicinity, and on the landward side the town is encircled by a salt flat. Round grass huts with conical roofs of African design prevail, but there are also a number of masonry houses, along with a new hotel, hospital, customs house, and school, all of modernistic aspect.

The climate is trying, with very high temperatures and humidity and fierce sand storms in summer, and the water supply is poor, the only sweet wells lying some distance out of town. Many inhabitants are stricken with malaria during the monsoon rains.

Pearling was once the occupation for which D͟jayzān enjoyed special fame. On the outskirts of the town a salt mine is exploited commercially; the open face of the salt is c. 5 m. thick.

D͟jayzān province, sometimes called Tihāmat ʿAsīr [see ʿasīr and the accompanying map], embraces, in addition to the lowlands, the mountains west of the continental divide on the crest of which stands Abhā. Among the mountains belonging to D͟jayzān are those of al-Ḳahr, Harūb, al-Rayt͟h, Banū Mālik, and Fayfā, all of which are 50 km. or more from the coast. The port of al-Ḳaḥma, cut off from the rest of the province by a lava field, its neighbour al-S͟huḳayḳ, and the Farasān Islands [*q.v.*] are the only places in the province where the date palm grows; elsewhere the *dawm* palm flourishes. Some of the numerous livestock are regularly exported to the Ḥid͟jāz. The grazing grounds of the nomads are called *mayr*.

The chief tribe of the region in early Islamic times was Ḥakam b. Saʿd al-ʿAs͟hīra [*q.v.*] of the Southern Arabian stock of Kahlān, with Banū ʿAbd al-D͟jadd as the ruling family. The tribe's capital was the city of al-K͟haṣūf, the site of which appears to be no longer known, and its port was al-S͟hard͟ja, the ruins of which lie near al-Muwassam just north of the present Yemen border. Other tribes in the lowlands

were Kināna, al-Azd, and Khawlān. It has been suggested that Ghassān [q.v.] once lived in this part of Arabia.

A comprehensive list of the modern tribes is provided by al-ʿUḳaylī, i, 83-93, including 12 tribes in the lower wadi with Djayzān port as their headquarters and 17 in the upper wadi centered on Abu ʿArīsh [q.v.]. Among the more important ones are the Masāriḥa near Abū ʿArīsh, the Djaʿāfira along the coast of Ṣabyā [q.v.], and Banū Shuʿba with their capital at al-Darb (or Darb Banī Shuʿba, incorrectly shown on the map in EI^2, i, 708 simply as Darb). The province contains a noteworthy linguistic boundary: in Djayzān port and Abū ʿArīsh and to the south the old form *am* for the definite article is still common, while in Ṣabyā and Baysh and to the north it gives way to *al*.

The information given here on the history of the province supplements the account in the article ʿASĪR.

The name Djayzān (Djāzān) occurs in a *ḥadīth* attributed to the Prophet, in which it is bracketed with Ḍamad, the name of the wadi immediately to the north. Djayzān when mentioned in the early geographers apparently refers to the wadi only, and not to a town.

The dates 373-93/c. 983-1003 are suggested by al-ʿUḳaylī for the rule of Sulaymān b. Ṭarf (or Ṭaraf), the lord of ʿAththar (or ʿAthr) on the coast of Baysh, but these dates are not certain. Possibly al-Ḥusayn b. Salāma (d. 402/1011-2), the Ziyādid vizier who improved the pilgrim road to Mecca, was the one who broke Sulaymān's power and brought al-Mikhlāf al-Sulaymānī back under Ziyādid rule.

Ḥusayn al-Hamdānī, 101-3, presents new evidence to show that ʿAlī b. Muḥammad al-Ṣulayḥī was killed in 459/1067, not in 473/1081 (cf. EI^1, iv, 516). If this is correct, ʿAlī's victory in the battle of al-Zarāʾib could not have taken place in 460/1068; Ḥusayn al-Hamdānī, 83, dates it in 450/1058.

The time of the establishment of the Sulaymānid *sharīf*s in the Mikhlāf is undetermined. One source states that Dāʾūd b. Sulaymān, great-grandson of Mūsā al-Djūn, was the first of the line to migrate from the Ḥidjāz to the Mikhlāf, in the days of the Rassid al-Hādī Yaḥyā (d. 298/910). However, the Sulaymānids do not appear to have transferred the core of their power to the Mikhlāf until after the final defeat in Mecca, c. 462/1070, of their leader Ḥamza b. Wahhās at the hands of the Hāshimid Abū Hāshim Muḥammad. Ḥamza's son Yaḥyā and grandson Ghānim both held authority in the Mikhlāf. The Sulaymānids from Ghānim on are often called Ghānimids (al-Ghawānim), a name which has the advantage of avoiding confusion with Sulaymān b. Ṭarf. Wahhās b. Ghānim was the Ghānimid killed in battle near Ḥaraḍ by the Mahdid ʿAbd al-Nabī b. ʿAlī in 560/1164.

Under the Ziyādids, the Nadjāḥids, and the Mahdids, parts of the Mikhlāf, if not the whole region, were at times brought under the nominal or real suzerainty of Zabīd, the capital of all these dynasties (204-569/819-1174). For example, Surūr, who as vizier was the power behind the Nadjāḥid throne, 529-51/c. 1135-56, secured the Mikhlāf as a fief for himself. From time to time the Zaydī Imāms, often reigning in Ṣaʿda in the highlands almost due east of Djayzān, intervened in the affairs of the Mikhlāf.

Under the Ayyūbids the Ghānimids in the Mikhlāf were called the Shuṭūṭ, the meaning of which sobriquet is not given. Two sons of Ḳāsim b. Ghānim in succession revolted against Ayyūbid rule but were overcome.

The Rasūlid al-Malik al-Ashraf ʿUmar b. Yūsuf (d. 696/1296) in his *Ṭurfat al-aṣḥāb* names Hāshim b. Wahhās, a great-great-grandson of Ghānim b. Yaḥyā, as lord of Djayzān in his time. Other Ghānimids were lords of Baysh and Bāghita, while members of collateral branches ruled in lower and upper Ḍamad, Ṣabyā, and al-Luʾluʾa (al-Shuḳayḳ).

In the early 9th/15th century a new branch of Ghānimids appeared, the Ḳuṭbids, the issue of Ḳuṭb al-Dīn Abū Bakr b. Muḥammad, who chose as their capital Darb al-Nadjā, the ruins of which are still to be seen near Abū ʿArīsh. The Ḳuṭbids were usually subject to the Rasūlids and later the Ṭāhirids. In 882/1477 or 884 the Sharīf of Mecca, Muḥammad b. Barakāt I, raided the Mikhlāf and carried off much loot, including precious books. The connexion of Barakāt II's brother and rival, Aḥmad Djayzān (or al-Djayzānī, d. 909/1503-4), with the Mikhlāf is not clear. He may have lived with his Ghānimid relatives there for a time and secured support from them. One of his descendants was ʿAbd al-Malik al-Djayzānī. Some of the descendants of the Sharīf al-Ḥasan b. Muḥammad Abū Numayy (d. 1010/1601) were also known as Dhawū Djayzān.

Visiting Djayzān in 909/1503, Varthema found 45 vessels from different countries in the port. Writing in the late 9th/15th century, the master pilot Shihāb al-Dīn Aḥmad b. Mādjid [q.v.] gives instructions for entering Djayzān (Djāzān) port. He mentions both the Mikhlāf and the port of al-Shardja. As an authority on this part of the Red Sea he cites the famous captain ʿUthmān al-Djāzānī.

During the first half of the 10th/16th century, Djayzān was attacked on three different occasions by Ḳays b. Muḥammad al-Ḥirāmī, the lord of Ḥaly Ibn Yaʿḳūb [q.v.].

In 946/1539 an Ottoman Mudīr was assigned to the Mikhlāf with headquarters at Abū ʿArīsh. About this time the district was occupied briefly by the Sharīf Muḥammad Abū Numayy. In the 11th/17th century the influence of the Zaydī Imāms grew stronger. In 1102/1690 Aḥmad b. Ghālib, who had made himself master of Mecca for several years despite the fact that he did not belong to any of the three principal clans of Sharīfs (Dhawū Barakāt, Dhawū ʿAbd Allāh, and Dhawū Zayd), was appointed governor of the Mikhlāf by the Zaydī Imām of Ṣanʿāʾ to whom he appealed for favour after his expulsion from Mecca. The first Khayrātid master of the Mikhlāf, Aḥmad b. Muḥammad, also began his career in 1141/1728-9 as governor there for the Zaydīs. Aḥmad's grandfather Khayrāt, on coming from Mecca to Abū ʿArīsh, had been assigned a stipend from the revenues of Djayzān port by the Zaydī Imām al-Mutawakkil Ismāʿīl b. al-Ḳāsim (d. 1087/1676).

In the mid-12th/18th century the warlike tribe of Yām of Nadjrān penetrated into the Mikhlāf under its new leaders, the Makramid [q.v.] *dāʿī*s of the Ismāʿīlī persuasion.

Niebuhr in 1176/1762-3 found the second Khayrātid, Muḥammad b. Aḥmad, an independent ruler over the extensive district of Abū ʿArīsh, which included Djayzān port.

Although the Wahhābīs were never very active in the Red Sea, in 1809 ships of theirs entered Djayzān port and seized coffee and other goods. About a year later the port was taken by Wahhābī *mudjāhidūn* of the tribe of Ridjāl Almaʿ. The Khayrātid Sharīf Ḥamūd Abū Mismār was instru-

mental in bringing about the capture by Muḥammad ʿAlī Pasha's forces of the Wahhābī highland chieftain, Ṭāmī b. Shuʿayb al-Rufaydī, who recited the Ḳur'ān as he was paraded through the streets of Cairo in a scene described by al-Djabartī, iv, 219-20.

Combes and Tamisier, visiting Djayzān in 1835, observed that the commerce of the port had greatly declined as a consequence of Muḥammad ʿAlī's monopolistic practices. Senna and coffee were sent from the mountains to Cairo.

The most powerful of the Khayrātids who came after Ḥamūd was his grandnephew al-Ḥusayn b. ʿAlī (regn. 1840-8), who held Tihāma as far south as Mocha and even occupied for a time Taʿizz and other places in the mountains of al-Yaman al-Asfal. Beaten in battle by the Zaydī al-Mutawakkil Muḥammad b. Yaḥyā, al-Ḥusayn abdicated. Under Ottoman rule two of al-Ḥusayn's sons served short terms as Ḳa'imaḳāms in Abū ʿArīsh.

The last Khayrātid, a nephew of al-Ḥusayn b. ʿAlī, revolted against the Turks and ruled independently and oppressively for a brief span. His name is given by al-ʿUḳaylī as al-Ḥusayn b. Muḥammad, whereas *Nayl al-waṭar*, i, 356, calls him al-Ḥasan.

Having supplanted the Turks in the Mikhlāf in 1909, Muḥammad b. ʿAlī al-Idrīsī defeated them two years later at al-Ḥafā'ir, close to Djayzān port. The capital was moved by al-Idrīsī from Abū ʿArīsh to Ṣabyā.

Under Saudi Arabian administration the capital has been transferred to Djayzān port. The fullest description of the port and province in recent times is given by Philby, who was there in 1936.

Bibliography: To the works given under ʿASĪR should be added Aḥmad b. Mādjid in G. DJAZĀ' (AR.), recompense, both in a good and in a bad sense, especially with reference to the next world; *thawāb* (Ar.) means the same but usually only in a good sense. Opinions differed on its nature, duration, the recipients, and how men knew of it. The Muʿtazila held that God must reward goodness and punish wickedness; reason shows this though some held that the eternal duration of recompense was known only by revelation. The opposing view was that God is not a subject for argument; if He sends all to the fire, it is His justice, and if He takes all into paradise, it is His mercy. The Muʿtazila of Baṣra said that God must reward goodness but may forgive all sinners. Ibn Karrām taught that revelation told that reward may be merited. Some said that reward should be eternal because it is greater than man's merit but not punishment because of God's mercy, though wilful disobedience to Him deserves an eternity of penalty. The common view was that no believer would be kept in the fire for ever; God would at last deliver him. Most Muʿtazila and the Khawāridj said that great sins sent the sinner to the fire for ever but Djāḥiẓ said that this was the fate of obstinate unbelievers only and that the fire drew such to itself by its nature, God did not send them. Kaʿbī said that venial sins would not be punished in the fire but that they might add up to great. Murdār said that even venial sins sent to the fire for ever. Some argued that, if the penalty were limited, so should the reward be, for man's acts are limited. Another view was utilitarian; if God's threats were to be efficacious, they should be as wide as possible but, if encouragement were needed, the limitation of punishment should be stressed. The general view was that all infants would go to paradise though some made their lot depend on the religion of the parents.

Bishr b. Muʿtamir [*q.v.*] said that God can punish infants without being unjust. Some held that believing *djinn* would be in paradise but others thought there would be no resurrection for them, either because there was no resurrection except as a reward or no reward except after responsibility and on either ground *djinn* were excluded. Some said that useful animals would be in paradise but in more beautiful forms to delight the blessed while noxious beasts and insects would be in the fire, helping to torment the wicked but feeling no pain themselves. Paradise is a reward for merit or bounty to those without it, infants and madmen. The nature of recompense was in dispute, whether spiritual, corporeal or both; Naẓẓām argued that bodies were needed if the blessed were to eat and drink. He also said that there were no rewards in this world as blessings were only for encouragement; he also said that God cannot lessen the joys of paradise nor the pains of the fire. Djubbā'ī taught that the torments in hell were not profitable to any but were the result of wisdom and justice. A saint, seen in a dream, said that friends were eating and drinking before the throne but God knew that he cared for none of these things so granted him to look on His face. It was one of the charges against the philosophers that they taught only a resurrection of the spirit. Kaʿbī said that if the hand of a thief were cut off and he died an unbeliever, it was given to one who had lost a hand but died a believer or was given to some other believer. The next world is *dār al-djazā'*.

ii.—OTTOMAN PENAL LAW

In Ottoman usage, *djazā'* means punishment and *ḳānūn-i djazā'ī* (cezâi) a penal code.

The oldest Ottoman penal code so far discovered forms part of the *ḳānūn-nāme* of Meḥemmed II published by Kraelitz (*MOG*, i, 1921, 13-48). It deals chiefly with those criminal offences that are to be punished by strokes and fines. Soon it was enlarged by an additional chapter, a *siyāsetnāme* [*q.v.*] (see *Belleten*, vi, 1942, 37-44), which prescribes capital or severe corporal punishment (*siyāset*) and regulates criminal procedure. This enlarged code constitutes the first part of the so-called *Ḳānūnnāme* of Süleymān I (*TOEM*, 1329, suppl.) which in its major parts,

however, seems to have been compiled already under Bāyezīd II. A third criminal code came into existence in Süleymān I's time. This *ḳānūnnāme*, which will be published soon, covers many additional fields and is differently organized. A fourth, most comprehensive but rather inconcise version, was compiled privately by a clerk of a *sharīʿa* court in the 11th/17th century. In addition, there exist a number of intermediary and secondary types.

Criminal regulations are also found in individual *fermān*s and *yasaḳnāme*s (*e.g.*, Babinger, *Sult. Urkunden*, Munich 1956) and in the *ḳānūnnāme*s concerning the organization of the State, the market police, the artisans, and the various military forces. The numerous provincial *ḳānūnnāme*s contain relatively few penal regulations, since in principle the same criminal law was in force in all parts of the Ottoman Empire. In some Muslim countries conquered in the early 10th/16th century the Ottomans at first confirmed existing secular, including criminal, law, such as the Dhu 'l-Ḳadr codes (Barkan, *Kanunlar*, 119-29). After a short time, however, they introduced their own penal code, proclaiming their wish to abrogate many *bidaʿ* of the previous rulers and alleviate the plight of the population by reducing penalties and abolishing abuses in criminal procedure.

In Ottoman criminal codes wide use is made of *taʿzīr*, *i.e.*, discretionary punishment by the *ḳāḍī* in the form of corporal chastisement, generally the bastinado [see FALAḲA]. For many offences the penalty is a fine (*ḳınlıḳ*, *djerīme*), with or without *taʿzīr* and often in addition to damages. Fines are laid down either as fixed amounts of money (mostly graded in accordance with the financial circumstances of the offender) or set in a certain ratio to the number of strokes inflicted on the criminal. In many instances slaves and non-Muslims pay half the fine of a free Muslim, but in the case of the non-Muslims this privilege is partly cancelled out by their being graded differently. The fines constituted a considerable income for the fief-holders and/or governors (or their subordinates); in later periods *ḳāḍī*s often exacted fines for themselves. Many offenders were also condemned to be ignominiously led through the town and exposed to to public scorn (*teshhīr*). Imprisonment and banishment are rarer penalties; sending to the galleys, though not mentioned in the *ḳānūn*, was quite common. The form of capital punishment referred to specifically in the criminal codes is hanging; historians and travellers also report impaling, beheading, ganching, strangling, etc. Other severe penalties mentioned in *ḳānūnnāme*s are emasculation, the cutting off of a hand or the nose, the branding of the forehead, etc.

The *ḳānūn*, though pretending merely to complete the *sharīʿa*, diverges from its criminal law in a number of important points. On the one hand, it commutes certain *ḥadd* penalties or seems to assume that they are commonly commuted to lighter punishment. On the other hand, it extends the range of many penal regulations of the *sharīʿa* and adds a great many delicts not covered by it. With a view to serving, above all, the interests of the State and ensuring public peace and order, many more crimes are made punishable by death (*siyāseten ḳatl*); many of the penalties are evidently meant to be preventive or intimidating. The monetary fines and some of the corporal penalties laid down in the *ḳānūn* are unknown to religious law. The treatment of attempt, complicity and repeated offences also differs from the *sharīʿa*. Most important, the *ḳānūn* frees criminal procedure from the latter's limitation and strict regulations. Similar to the earlier *maẓālim* (*shurṭa*, *ḥādjib*) and *muḥtasib* jurisdiction in other Muslim countries, the Ottoman *ḳānūn* accepts evidence that is not admissible according to the *sharīʿa* and proof regarded by it as insufficient. Admission of guilt may be obtained by torture; suspicion and the criminal past of the accused are taken into decisive consideration. In several later *ḳānūnnāme* manuscripts, marginal notes, mostly ascribed to the *Nishāndjı*, abolish some regulations of the criminal code because of their inconsistency with the *sharīʿa*.

The Ottomans tried to eliminate the traditional dualism of *ḳāḍī* and *maẓālim* jurisdiction by making the *ḳāḍī* administer both *sharīʿa* and *ḳānūn*. Ordinary citizens were generally to be punished by the governors, *subashı*s, *voyvoda*s, etc. only after a trial by a *ḳāḍī*, but in reality this rule was constantly violated. The clash between the authority of the *ḳāḍī* and the governor in the administration of criminal justice remained a major problem throughout Ottoman history. Certain classes of the population (soldiers and other *ḳapı ḳulları*, *tīmār*-holders, *sherīf*s, *ʿulemāʾ*, foreigners, etc.) were in many cases subject to special penal regulations and tried by separate tribunals. Trade delicts and certain religious and moral misdemeanours were dealt with by the *muḥtasib* [*q.v.*].

The Ottoman penal codes were not conceived merely as laws for the protection of society from the criminals but to a large extent also as a means of protecting the people from oppressive officials and fief-holders. Sulṭān Süleymān I ordered that a bound copy of the penal and feudal *ḳānūnnāme* be sent to every law-court, but to what extent its criminal regulations were actually enforced is not known. From the 11th/17th century, in any case, the *ḳānūn* for various reasons began to lose its practical importance. Criminal justice was henceforth based exclusively on the *sharīʿa* as administered by increasingly corrupt *ḳāḍī*s or the arbitrary will of oppressive governors and their subordinates. Ottoman criminal justice, praised by European observers in earlier periods for its efficiency, degenerated completely.

Modern reform of Ottoman penal law began under Maḥmūd II. After the destruction of the Janissaries (1826), governors were forbidden to inflict the death penalty without the formal sentence of a *ḳāḍī*. A new penal code, published in 1840 in the spirit of the Gülkhāne Charter, still largely aims at curbing tyrannic officials. Penalties are reduced and procedure is to become more regular; every capital punishment has to be confirmed by the Sultan. This primitive and very deficient law was somewhat improved by the code of 1851, only to be replaced in 1858 by a completely different, secular and comprehensive penal code which followed French law and, with many amendments, remained in force until 1926.

(U. HEYD)

AL-**DJAZĀʾIR** is the name given to the islets just off the north-west coast of Algiers Bay,

and which now constitute the Admiralty of the town. The Arabs applied the name of the islets to the town, which was founded in the 4th/10th century on the mainland opposite them. Under the Turks it became the capital of Algeria, and has remained so ever since. It was the French who transformed its Arab name into "Alger" (Algiers). It lies at a latitude of 36° 47′ N., and a longtitude of 3° 4′ E. (Greenwich) In the census of 1954 a municipal population of 355,000 was recorded, of whom 162,000 were Muslims; in 1959, the population of Greater Algiers (city and adjacent communes) stood at 805,000, of whom 456,000 were Muslims.

The discovery in 1940 of an important collection of Punic coins, of lead and bronze, found in the district neighbouring the port (J. Cantineau & L. Leschi, *Monnaies puniques d'Alger*, in *Comptes Rendus Ac. Inscr. et Belles Lettres*, 1941, 263-77), is ample proof of the existence of a Phoenician warehouse, probably on the islets, with the name Ikosim (the isle of owls, or thorns).

The Latin form of the name, Icosium, was given to the Roman settlement on the mainland. It is not known at which date this was founded, but it was not an important settlement, although it was the seat of a bishopric. We find no more reference to it in historical documents after the fifth century. According to al-Bakrī (*Desc. de l'Afr. sept.*, 66, *tr.*, 156), its ruins existed until the 4th/10th century, when the Muslim town was founded by Buluggīn b. Zīrī.

Its name then became Djazā'ir Banī Mazghanna, after a Ṣanhādjian tribe which lived in the region at that time. It remained a town and port of little importance up to the early 10th/16th century, and was tied to the vicissitudes of the central Maghrib. It should nevertheless be mentioned that at the beginning of the 6th/12th century the Almoravids erected a large mosque in Algiers, and that from about 771/1370 onwards, under the protection of the Thaʿāliba Arabs in the Mitidja area, it gradually asserted its claim to be an independent town. In the 9th/15th century its protector was a holy figure, Sīdī ʿAbd al-Raḥmān al-Thaʿālibī, and since that time he has been the patron saint of the city. The mediaeval population of Algiers consisted in part of refugees who had fled from the Christian reconquest of Andalusia, and many of them established themselves as corsairs in Algiers.

In 1510 the Spanish imposed a levy on the city and occupied the islets, in order to suppress the corsairs. When it was realised that this would seriously impair their prosperity, the inhabitants and their leader, Salīm al-Tūmī, sought for an ally to help rid them of the Spanish yoke. When they summoned to their aid the Turkish corsair, ʿArūdj [*q.v.*], who at that time ruled over Djidjelli, he did not succeed in expelling the Spaniards, but seized the town himself and established it as his principal base of operations. The Spaniards attempted to recapture Algiers in 1516 and 1519, but met both times with failure. After the death of ʿArūdj in 924/1518, his brother Khayr al-Dīn assumed power, but was not able to maintain control over Algiers, and fell back to Djidjelli, 926-31/1520-5. Then in 1525 Algiers once more sent out an appeal for assistance, and on 27 May 1529 he succeeded in capturing the fortress (Peñon) which the Spaniards had built on the largest of the islets. The Peñon was pulled down, and the materials served to construct the breakwater which henceforth connected the islets with the mainland. Such was the origin of the port of Algiers.

Meanwhile, Khayr al-Dīn had bequeathed his conquest to the Ottoman Empire, which was thus in possession of an important naval base in the western Mediterranean. It is therefore in no way surprising that Charles V attempted to capture Algiers in 1541. On October 23 his forces landed on the shores of the Bay of Algiers, and after crossing the Wādī Harrāsh, they set up camp on a hill overlooking the town, now known as the Fort l'Empereur but at that time called Kudyat al-Ṣabūn. But during the night of 24-5 October the weather quickly deteriorated, and half the landing fleet was lost in the consequent storm. Defeated as much by the elements as by the Turks, Charles V had to abandon much material and withdraw from Algiers, leaving it with a legend of invincibility which remained intact until 1830.

Charles V's expedition served as a warning signal to the Turks, and they proceeded to extend and perfect the fortifications, especially on the seaward side, until Algiers literally was a stronghold. Moreover, it had become the capital of a considerable Turkish province, enjoying a *de facto* independence of Constantinople, and was the operating base for many corsairs. All these factors contributed to its great economic and social development, beginning in the 16th century.

Very little is known of the town before the Turkish period. It is probable that the original city-wall extended as far as the Turkish wall, but that the density of building within it was much smaller. The Turkish wall, 3,100 m. long, was continuous, even on the coastal side, and was equipped with towers and a moat. Five gates gave access to the city: the Fishery gate and the Fleet gate on the harbour side, Bāb al-Wād to the north, Bab ʿAzzūn to the south, and Bāb Djadīd to the south-west. Various other fortifications reinforced the protection offered by the city-wall: the Ḳaṣba, which in 1816 became the residence of the Dey of Algiers, was built in 1556 to replace a Berber stronghold on the summit of the triangle which the town then formed; the Fort l'Empereur, built on the site of Charles V's camp; several forts and gun emplacements between the Bāb al-Wād and Bāb ʿAzzūn gates along the sea-front, and on the former islets which guarded the port.

The Turks built a palace called the 'Djanīna' (small garden) inside the town, and the former archbishop's palace was at one time part of it. It was used as the Regent's residence until 1816. In the lower part of the town, near the port, several Turkish dignitaries and wealthy privateers built themselves luxurious dwellings. The interior decorating, depending on the owner's taste and his 'catch' on the high seas, was often of European origin (Venetian crystal, Dutch porcelain, etc.). Many mosques were built, the best-known of which is the Djāmiʿ Djadīd (also called the 'Fishery Mosque') in Government Square (1660). There were also a number of barracks and prisons in the town, but virtually nothing remains of them.

We have at hand only rough estimates of the population at various times. Haëdo put it at 60,000 at the end of the 16th century. According to P. Dan, it was 100,000 in 1634, whereas Venture de Paradis counted only 50,000 inhabitants at the end of the 18th century, and 30,000 in 1830. It was always a very mixed population; there were the Turks, mainly members of the army and administration (numbering 4,000 in 1830); the Kulughlis (Turkish Kul-oghlu, cf. the Awlād al-Nās in Egypt), offspring of Turks and the indigenous women of that region, and held in disdain by the Turks; old families with

long roots in the past, often of Andalusian or Moorish origin, forming the bulk of the commercial and artisan classes; the numerous Kabyles, forming the labouring class; Saharans from Biskra and the Mzāb; Jews (4,000 in 1830), the richest of whom had come from Leghorn in the 18th century, and enjoyed the privileges of Europeans; some European business-men and consuls; finally, those taken prisoner from the Christians, numbering as many as 25,000 in 1634 (P. Dan). It is clear that the population was just as much Mediterranean as North African.

As far as is known, the town of Algiers was placed directly under the authority of the head of government. The judicial system was administered by two Ḳāḍīs, one from the Ḥanafī school for the Turks, the other from the Mālikī school for the Arabs. They worked together with a tribunal of rabbis and consuls representing the Jewish and Christian minorities. The police-force was staffed by shāwshs (Turkish čāʾūsh [*q.v.*]) under the command of a *bāsh shāwsh*. There was one force to deal with the Turks, and another to deal with the Moors. To complete the administration, there was a chief of municipal services (*shaykh al-balad*), and a *mizwār*, more or less the equivalent of the *muḥtasib* in Moroccan cities. The Jewish community had its own institutions, and Europeans enjoyed the protection of their respective consuls.

Privateering was the great industry of the Turkish era. After having taken the form of a holy war or of a conflict between the Ottoman Empire and the Austro-Spanish Empire of Charles V and Philip II, it became a profitable business and therefore the chief occupation of the inhabitants. All sections of the population drew benefit from it—the government, which received part of the takings, private individuals, who formed companies to arm the ships, and the general populace, who gained from the generosity of the privateers and wealthy ship-owners. It also led to an influx of adventurers, usually of European or Mediterranean origin, who 'took to the turban' to give vent to their spirit of adventure and taste for plunder, or simply to avoid falling into the hands of slave-traders. It has been estimated that there were 8,000 renegades in Algiers in 1634.

Such piracy often provoked reprisals from the European powers. They generally took the form of naval bombardments of Algiers, some of which caused serious damage. The Spaniards bombarded it in 1567, 1775 (the ensuing landing did not succeed) and 1783, the Danes in 1770. The main attacks came from France (1661, 1665, 1682, 1683, 1688) and England (1622, 1655, 1672). After having been largely suppressed by the end of the 18th century, privateering experienced a revival during the wars of the French Revolution and the First Empire, and the British consequently carried out further shellings in 1816 and 1825.

The French invasion of 1830 had been prepared in 1808 by Major Boutin, an engineering officer sent by Napoleon to make a first-hand report of the conditions necessary to carry out such an operation successfully. The general lines of his plan were used by those who prepared the expedition of 1830; the French forces landed on the shore of the Sīdī Farrūsh peninsula, to the west of the town, on 14 June, and by the 29th they had reached the defences of the Fort l'Empereur. It was captured on 4 July, and on the following day the town itself surrendered, without having suffered much damage.

For many years the French lived within the existing urban boundaries, although they did burst out at one or two points. But as the town's population increased, it overflowed northwards (Bāb al-Wād quarter) and southwards (Bāb ʿAzzūn quarter). Today the metropolis extends to the suburban districts of Saint-Eugène (N), Hussein Dey (S.-E.), Birmandreis (Biʾr Murād Raʾīs) (S), El-Biar (S.-W.) and almost as far as Bouzaréa (W). Its growth remains uninterrupted, and is gradually spoiling the open spaces and gardens which formerly surrounded the town.

The port has undergone a considerable expansion in recent years, and in 1955 it registered the movement of 9387 ships and 500,000 passengers. The airport of Maison-Blanche (25 kms. E. of the town) meets all the requirements of modern international air services.

The organization of local authorities has been modified since April 1959. The city, divided into arrondissements on the French pattern, together with the neighbouring communes, forms the single municipality of Greater Algiers.

After the Anglo-American landings of 8 November 1942, Algiers became the provisional capital of France until Paris was liberated in August 1944. Since the beginning of the Algerian revolution on 1 November 1954, Algiers itself has been the scene of political events of far-reaching importance, particularly those of 6 February 1956, 13 May 1958 and 24 January 1960 and the following days. Since 1 July 1962 it has become the capital of independent Algeria.

(R. LE TOURNEAU)

DJAZĀʾIR-I BAḤR-I SAFĪD, the name given to an *eyālet* of the Ottoman empire, often called simply DJAZĀʾIR and usually known to Europeans as the Vilayet of the Archipelago. It originated as the area under the administration of the Ḳapudan Pasha, the *sandjaḳ beyleri* being known as *deryā beyleri* [see DARYĀ-BEGI] and serving with the fleet instead of with the army. At its greatest extent, in the 11th/17th century, it comprised most of the islands of the Aegean Sea, coast districts of Asia Minor and Greece, and for a time Cyprus, but never Crete. At first the Ḳapudan Pasha, an official of two *ṭughs*, governed

the *sandjaḳ* of Gallipoli (Gelibolu) with the *ḳaḍāʾ*s of Galata and Izmid. Khayr al-Dīn Barbarossa, who submitted to the Sultan in 940/1533, and his successors were *wazīrs* of three *ṭugh*s and members of the *dīwān-i humāyūn*. He already governed Algeria and Mahdiyya. His *eyālet* was extended to incorporate the *sandjaḳ*s of Ḳodja-eli, Ṣughla and Bīgha in Asia, and Negropont (Eghriboz, Euboea), Lepanto (Aynabakhtī), Ḳarlī-eli, Mitylene (Midilli), and Mistra (Mizistre) in Europe. Rhodes (Rodos) was added after his death and about 1027/1618 Chios (Sakīz), Naxos (Naksha) and Andros (Andīra). In 1052/1642 Algiers became virtually independent. Cyprus was added to the *eyālet* about 1080/1670 but was detached again in 1115/1703 when it became a *khāṣṣ* of the Grand Vizier. It reverted to the Ḳapudan Pasha in 1199/1785. Mistra and Ḳarlī-eli were attached to the *eyālet* of the Morea by Merzifonlū Ḳara Muṣṭafā Pasha, and by the time that the Tanẓīmāt abolished the jurisdiction of the Ḳapudan Pasha the eyālet consisted of the six *sandjaḳ*s of Bīgha from which it was governed, Rhodes, Chios, Mitylene, Lemnos (Limni) and Cyprus. In 1876, after the transfer of Bīgha to the eyalet of Khudāvendigar, the centre was moved to Chios and later, in the course of further reorganizations, to Rhodes. Cyprus was occupied by Britain in 1878; Rhodes and the Dodecanese islands passed to Italy after the war of 1911-2, and were incorporated in the Greek kingdom after the second world war; the remaining islands were occupied by Greece during the Balkan war, and the 'eyalet of the islands' ceased to exist. The islands of Imroz (Imbros) and Bozdja-Ada (Tenedos) [*qq.v.*] were returned to Turkey by the treaty of Lausanne, 1923.

AL-DJAZĀʾIR AL-KHĀLIDA, 'the Eternal Islands', the Arabic equivalent of Gk. αἱ τῶν Μακάρων νῆσοι, Lat. Fortunatae Insulae, as applied to certain islands off the W. African coast, apparently the Canaries. The 'Fortunate Islands', Djazāʾir al-Saʿādāt (also Djazāʾir al-Suʿadāʾ), are sometimes distinguished from, more usually identified with, the Eternal Islands. As these names indicate, the early Arab geographers acquired their knowledge of the Atlantic islands from Classical, *i.e.*, Greek, sources, and their accounts share the vagueness of reference of the originals. Thus, as well as the Canaries, the Madeira group and the Azores, even the Cape Verde Islands, may occasionally be intended (cf. Reinaud, *Taḳwīm*, i, ccxxxv). The islands are described as possessing rich natural fertility and a mild climate throughout the year. They are inhabited, six or seven in number, lying in the Circumambient Ocean (al-Baḥr al-Muḥīṭ) at the farthest point to the west. According to al-Bīrūnī (cited Yāḳūt, *Buldān*, ii, 70), they are 200 *farsakh*s out to sea, while in other accounts (Maḳḳarī, *Nafḥ al-ṭīb*, i, 104, see also below) they can be seen from shore on a clear day. Following Ptolemy, Arab geographers made the prime meridian pass through the Eternal Islands. The Spaniard Bakrī (d. 487/1094) has fresh knowledge, or at least a new source, for he names the islands Furṭunātash, certainly from Latin (cf. Pons Boigues, *Historiadores*, 163), and al-Idrīsī (*circa* 1154) gives the names of two of the six islands: Masfahān, for the volcanic peak of which he cites a description, evidently Teneriffe, and Lamghūsh (?). Al-Idrīsī also knows that in the time of the Almoravid ʿAlī b. Yūsuf b. Tāshifīn (500-37/1106-43) an expedition was planned, though it never took place, to an island opposite Āsafī (Safi, Morocco), the smoke of which could be seen on a clear day. Al-Dimishḳī (d. 727/1327) has the story of a successful voyage to certain islands 10° west of al-Andalus (ed. Mehren, 135), which should be taken with accounts of the exploits of Khashkhāsh and the Adventurers (al-Mugharrirūn) (see AL-BAḤR AL-MUḤĪṬ). These stories afford perhaps the only indications of direct contact in early times between the lands of Islam and the Atlantic islands. On the other hand, Ibn Khaldūn (*Muḳaddima*, ed. Būlāḳ-Beirut, 53-4) mentions a Christian expedition to the Eternal Islands, which seems to refer to Portuguese activity in the Canaries in 1341 (cf. R. Hennig, *Terrae Incognitae*, Leiden 1936-9, iii, 138, 206 ff.).

AL-DJAZARĪ, the historian Shams al-Dīn Abū ʿAbd Allāh Muḥammad b. Madjd al-Dīn Abī Isḥāḳ Ibrāhīm b. Abī Bakr b. Ibrāhīm b. ʿAbd al-ʿAzīz al-Djazarī al-Dimashḳī (not to be confused with his compatriot Abu 'l-Khayr Shams al-Dīn Muḥammad b. Muḥammad . . ., better known as Ibn al-Djazarī [*q.v.*], the author of *Ḥiṣn Ḥaṣīn* and a contemporary of Tīmūr), was born at Damascus on 10 Rabīʿ I 658/25 February 1260. He studied with a number of teachers including al-Fakhr ʿAlī al-Bukhārī, Ibrāhīm b. Aḥmad b. Kāmil al-Taḳī al-Wāsiṭī, Ibn al-Mudjāwir and al-Dimyāṭī [*q.v.*]. Hard of hearing, he was a good conversationalist, pure of heart, sincere and upright; he liked the company of virtuous people, towards whom he showed great magnanimity. His fame chiefly rests on his historical work styled *al-Taʾrīkh al-musammā bi-ḥawādith al-zamān wa-anbāʾih wa-wafayāt al-akābir wa 'l-aʿyān min abnāʾih*, better known by the shorter and simpler title of *Taʾrīkh al-Djazarī*. It is a large work of which only the last volume is preserved both in the library of Köprülüzāde at Istanbul and in the Dār al-Kutub al-Miṣriyya. Several other copies are also to be found in European libraries; a detailed analysis of the Paris fragment was published by J. Sauvaget in 1951. The remaining portion, however, still awaits an editor. It is patterned more or less on the lines of al-Dhahabī's *Taʾrīkh al-Islām*, arranged as a diary of events (annals). The latter's work is apparently a continuation of al-Djazarī's. The Istanbul MS. has a detailed biography of the author appended to it in the hand of his friend and admirer the historian al-Ḳāsim b. Muḥammad al-Birzālī [*q.v.*] who also compiled for him a *Mashyakha* (*Mashīkha*) comprising the biographies of ten of his *shaykh*s. The extant portion of his work is in three volumes and comprises the events of thirteen years from 726/1326 onwards until his death in 739/1338.

He was rated very highly as a historian, and his work would have proved a mine of information had

the whole of it survived. Al-Dhahabī and al-Birzālī have both utilized it and extensively quoted from it. Al-Dhahabī, however, is of the opinion that facts have been mixed up with fiction (*al-ʿadjaʾib wa ʾl-gharāʾib*) in this work. Al-Djazarī died at Wāsiṭ on 12 Rabīʿ I 739/29 September 1338.

Rafīʿ al-Sulamī, *Taʾrīkh ʿulamāʾ Baghdād*, Baghdād 1357/1938, 212-3; *Fihris Dār al-Kutub al-Miṣriyya*, 80a-b; al-Ziriklī, *al-Aʿlām*, vi, 189a-b; Cl. Cahen, *La Syrie du Nord . . .*, Paris 1940, 80; idem, *Chroniques des derniers Fatimides*, in *BIFAO*, 1937, 8-9; Brockelmann, S II, 45 (also see S II, 33 where Brockelmann confuses the author's name and the year of his death).

(A. S. Bazmee Ansari)

DJAZĪRA (Ar.), pl. *djazāʾir*, a term which signifies essentially an island and secondarily a peninsula (for example *Djazīrat al-Andalus*, Spain; *Djazīrat al-ʿArab* [see AL-ʿARAB, DJAZĪRAT-]). By extension, this same word is applied also to territories situated between great rivers (see following article) or separated from the rest of a continent by an expanse of desert; it also designates a maritime country (see Asín Palacios, *Abenházam de Cordoba*, Madrid 1927-32, i, 291 n. 347) and, with or without a following *al-nakhl*, an oasis (see Dozy, *Suppl.*, s.v.). Finally, with the Ismāʿīlīs *djazīra* is the name of a propaganda district; see S. de Sacy, *Exposé de la religion des Druzes*, cxiv; W. Ivanow, *The organization of the Fatimid propaganda*, in *JBBRAS*, xv (1939), 10, and *Ismaili tradition concerning the rise of the Fatimids*, 20-1. See also DĀʿĪ. (Ed.)

AL-**DJAZĪRA**, Djazīrat Aḳūr or Iḳlīm Aḳūr (for Aḳūr or Athūr see Yāḳūt, i, 119, 340; ii, 72) is the name used by Arab geographers to denote the northern part of the territory situated between the Tigris and the Euphrates. But the Djazīra also includes the regions and towns which are across the upper Tigris in the north (Mayyāfāriḳīn, Arzan, Siʿirt) and which lie to the east of the middle stretch of the river (Bāʿaynāthā, the Khābūr al-Ḥasaniyya, the two Zāb). In the same way, a strip of land lying to the west, along the right bank of the Euphrates, in the neighbourhood of the Euphrates Route, is also considered to belong to the Djazīra.

The Djazīra is a fairly low-lying plateau which includes certain groups of mountains, the Ḳaradjā Dāgh between Āmid and the Euphrates, the Ṭūr ʿAbdīn between Mārdīn and Djazīrat Ibn ʿUmar, the Djabal ʿAbd al-ʿAzīz between the Balīkh and the Khābūr, the Djabal Sindjār between the Khābūr and the Tigris, and the Djabal Makḥūl south of Mosul. In these mountains rise various streams, and in particular the tributaries of the left bank of the Euphrates, that is to say the Balīkh which comes from the district of Ḥarrān, and the Khābūr which comes from Raʾs ʿAyn with its tributary the Hirmās which rises in the Ṭūr ʿAbdīn. In the Djabal Sindjār are the sources of the Nahr Tharthār which flows into the desert and disappears.

The Djazīra is bounded on the west by Syria, on the north-west by the region of the Mesopotamian *thughūr*, on the north and north-east by Armenia, on the east by Ādharbāydjān and on the south by ʿIrāḳ which begins at a line from Anbār to Takrīt. It consists of three districts (*kūra*), the Diyār Rabīʿa in the east, the Diyār Muḍar in the west, the Diyār Bakr in the north, called after the names of tribes who inhabited them in the pre-Islamic period and at the beginning of the Islamic period. But even in ancient times there were already Arabs in the Djazīra and one of its districts, that of Nisibis (Nāṣibīn) was called Arvastān by the Persians and Bēth Arabāyā by the Aramaeans. Apart from the Arabs, the Djazīra contained considerable Aramaean elements, especially in the Ṭūr ʿAbdīn, and a number of localities bear Aramaean names, and there were Kurds in the Mosul region and Armenians to the north of the upper Tigris.

The Djazīra is of great importance historically, being astride the lines of communication between ʿIrāḳ and Anatolia (it is crossed by the Baghdād railway), ʿIrāḳ and Syria on the vast curve of the so-called Fertile Crescent, and between the Armeno-Iranian regions and Syria on the one side and ʿIrāḳ on the other. It contained many market-towns and cities on the banks of the two rivers and on their tributaries in the Ṭūr ʿAbdīn and along the Mawṣil-Raḳḳa road. In the Romano-Byzantine period it was divided between Persia and Rome-Byzantium. At the time of the Arab conquest, Byzantium held the region extending from Raʾs ʿAyn to the Euphrates and the plain to the south of the Ṭūr ʿAbdīn. The frontier lay between Nisibis and Dārā, at the fort of Sardja (Yāḳūt, ii, 516; iii, 70; Abū Yūsuf Yaʿḳūb, *K. al-kharādj*, ed. 1302, 22, tr. Fagnan, 62). After the conquest of Syria the Byzantine garrisons were isolated, only being able to communicate with the Empire through Armenia. ʿIyāḍ b. Ghanm therefore encountered no resistance; the western part was conquered between 18/639 and 20/641, and the eastern part in 20/641 by troops coming from ʿIrāḳ (al-Balādhurī, 171 ff., ed. Cairo, 179 ff.).

In the Umayyad period the Djazīra was the scene of strife between the Syrians and the ʿIrāḳī Shīʿīs: Sulaymān b. Ṣurad, supported by the Ḳaysī Zufar b. al-Ḥarīth, was killed in 65/685 in a battle near Raʾs ʿAyn against a lieutenant of ʿUbayd Allāh b. Ziyād; after Mukhtār's victory over the Syrians in 67/686 on a tributary of the Zāb, the victors occupied Nisibis, Dārā and Sindjār (see al-Ṭabarī and Ibn al-Athīr under the years indicated). ʿAbd al-Malik, before being able to go on to defeat Muṣʿab b. al-Zubayr at Dayr al-Djāthalīḳ in ʿIrāḳ in 72/691, first had to conquer the Djazīra. It was also in the Djazīra that the fighting between the Ḳaysīs and Taghlabīs took place before and after this date (cf. al-Ṭabarī and Wellhausen, *Das arabische Reich*, 126 ff.; Eng. tr. 202 ff.). In like manner numerous Khāridjī revolts started in the Djazīra at the time of al-Ḥadjdjādj, and later in the reigns of the last Umayyads when the Khāridjīs of Djazīra all but succeeded in seizing power (see Wellhausen, *Oppositionsparteien*, 41 ff.) It was in the Djazīra, at Ḥarrān, that the last Umayyad, Marwān II, had his capital.

At the time when Muʿāwiya was governor of Syria the Djazīra was joined with it under a single administration. It later became a separate province comprising the three districts, responsibility for it being sometimes held by members of the Umayyad family, such as Muḥammad b. Marwān and Maslama b. ʿAbd al-Malik who were at the same time governors of the neighbouring province of Armenia. Mosul was separate, and it was only under Marwān II that it became the capital of the Djazīra.

The Djazīra did not submit to the ʿAbbāsids without resistance, and there were even grave in-

cidents at Mosul where Muḥammad b. Ṣūl, and then Yaḥyā, brother of the first ʿAbbāsid caliph, had been sent (see Ibn al-Athīr, *anno* 132, ed. 1303 A.H., 163 and 166-7). It was the scene of the rebellion of ʿAbd Allāh b. ʿAlī, al-Manṣūr's uncle; later, under al-Maʾmūn, Naṣr b. Shabath's revolt swept through the Djazīra and was with difficulty crushed by ʿAbd Allāh b. Ṭāhir, governor of Syria and the Djazīra, in 209/821. In the reign of al-Muʿtaṣim, a Kurdish revolt to the north of Mosul was put down with difficulty. Khāridjī revolts broke out again in the Djazīra, particularly after al-Mahdī's reign. The province was known as a Khāridjī stronghold, and al-Djāḥiẓ was able to say: *ammā 'l-Djazīra fa-ḥarūriyya shāriyya wa-khāridja mārika* (*Fī manāḳib al-Turk*, ed. 1324, 10; cf. on the Khāridjīs in the Djazīra, *Ḥudūd al-ʿālam*, tr. Minorsky, 140). In Hārūn al-Rashīd's time there took place the rebellion of the Taghlabī Khāridjī al-Walīd b. Ṭarīf (see Ibn al-Athīr, vi, 47). Violent Khāridjī outbreaks occurred in the second half of the 3rd/9th century with Musāwir, and later with Hārūn al-Shārī [see the references given in DIYĀR RABĪʿA]. The caliph al-Muʿtaḍid put an end to these revolts (same references).

In the ʿAbbāsid period Mosul was at times separated from the administration of the Djazīra, at other times the province was included in a larger grouping. Armenia, the neighbouring province, was often linked with it or on occasion united merely with the Diyār Bakr [see DIYĀR BAKR]. Among the governors of the Djazīra worthy of note, we may mention Ṭāhir b. al-Ḥusayn and, later, his son ʿAbd Allāh b. Ṭāhir in al-Muʾmūn's reign. In the second part of the 3rd/9th century the Djazīra for a time escaped from the central authority and became a dependency of the Ṭūlūnid ruler of Egypt, with Isḥāḳ b. Kundādjīḳ, then Muḥammad b. Abi 'l-Sādj, and then Isḥāḳ's son. But it was recovered by the caliph al-Muʿtaḍid after 279/892.

The Djazīra is the home of the Ḥamdānid family who, after various wanderings (their ancestor Ḥamdān was himself a Khāridjī), extended their power over the entire province which was divided between the two Ḥamdānid amīrates of Mosul and Aleppo which, though recognizing the nominal authority of the caliph, were almost independent. It then passed under the domination of the Buwayhids of Baghdād after the conquest by ʿAḍud al-Dawla in 367/977. Then, as a result of the increasing weakness of the Buwayhids, it was divided between the Marwānids in the north (Diyār Bakr) and the ʿUḳaylids (Mosul), one of whose princes, Ḳirwāsh b. Muḳallad, in 401/1010-1 recognized Fāṭimid suzerainty. The Saldjūḳids put an end to these two dynasties.

The Djazīra was a relatively rich and fertile province, plentifully supplied with water by its rivers, and the steppes with their abundant pastures were not short of wells. The triangle enclosed by the Armenian mountains, the Djabal ʿAbd al-ʿAzīz and the Djabal Sindjār, was an immense cultivated area, and there were also large areas of cultivation along the Balīkh and the Khābūr. Horses and sheep, cereals (Mosul supplied Baghdād and Sāmarrā with flour—see al-Ṣūlī, *Akhbār al-Rāḍī*, 76, 109, tr. 133, 177—and the floating mills of Mosul and Balad were famous), rice (Nisibis), olive-oil (al-Raḳḳa, Mārdīn), butter, cheese, sugar-cane (Sindjār), fowls, fresh and dried fruit, raisins, chestnuts (Nisibis), jam (*ḳubbayṭ*), honey, dried meat (*namaksūd*), charcoal, cotton (Ḥarrān and the Khābūr valley) etc.—these, among other things, were the agricultural products of the Djazīra specially mentioned by al-Muḳaddasī and Ibn Ḥawḳal. Among the products of local industrial crafts are mentioned: soap, tar, iron, buckets, knives, arrows, chains, straps, scales (Ḥarrān and Nisibis), linen and woollen fabrics (Āmid), fullers' hammers. Aided by shipping on the Tigris and Euphrates, commerce flourished there. Djazīrat Ibn ʿUmar was the port of shipment for goods from Armenia and the Greek countries, and Bālis for goods from Syria.

It is therefore not surprising that the authority established in Baghdād always tended to keep the Djazīra either directly or indirectly under its domination, which explains the policy of al-Muʿtaḍid, and of the central authority in Baghdād in the Ḥamdānid period. It is difficult to form an exact idea of the revenues of the Djazīra. The amounts vary greatly, and if one compares the figures given by Ḳudāma with those for the 306 budget, given in von Kremer, *Über das Einnahmebudget des Abbasiden-Reiches vom Jahre 306 H*, and with the figures of tribute paid by, or demanded from, the Ḥamdānid amīr of Mosul, we notice a large fall in the contribution. According to Ḳudāma, the Diyār Muḍar had a revenue of 6 million dirhams, the Diyār Rabīʿa 9,635,000, Mosul 6,300,000. However, in 332/944 the Ḥamdānid Nāṣir al-Dawla agreed to pay for the Diyār Rabīʿa and part of the Diyār Muḍar 3,600,000 dirhams, in 337 the Buwayhid demanded 8 million dirhams from him but settled for 3 million, and it seems that he never paid more than 2 million. Even if payments made in kind are added, it is little enough. But for the central authority it was not to be despised.

For the subsequent history of the Djazīra, see DIYĀR BAKR, DIYĀR RABĪʿA, and DIYĀR MUḌAR.

(M. CANARD)

AL-**DJAZĪRA** AL-**KHAḌRĀʾ**, Spanish ALGECIRAS. The town takes its Arabic name from the Isla Verde which lies opposite, in the bay between the Punta del Carnero and the Punta de Europa. It is also called Djazīrat Umm Ḥakīm, from the name of a woman with whom Ṭāriḳ b. Ziyād, when freed by Mūsā b. Nuṣayr, entered the peninsula and to whom he left it as a bequest. It was here that Julia Traducta must have been founded by a number of colonists brought from Arcila and Tangier; and it was here that the Syrian leaders were held the hostages given by Baldj in 124/740 when he crossed from Ceuta to the peninsula to suppress the Berbers' revolt. The town also had the hybrid Latino-Punic name of Julia Ioza which is the equivalent of Julia Traducta.

In the time of the Romans the present Algeciras was called Ad Portum Album, and in Christian sources there are references to two places with the name Algeciras, one on the island which was later deserted, the other on the mainland which kept its name and importance since its harbour and bay have from remotest antiquity provided a safe anchorage, even in winter, and it is the starting point for the crossing to Ceuta, a distance of only 18 miles. The Almohads almost always preferred to cross by the Tarifa-Alcazarseguir route, which is 12 miles across; and the Marīnids followed their example.

The town is situated on a hill dominating the sea, and its walls go right down to the sea-shore; the citadel, built of stone, rises sharply above the ravine that lies alongside the town, to the East.

Through the town runs a river, the Wādī 'l-ʿAsal —river of honey—which has kept this name in Spanish; its banks are covered with orchards and gardens. To the south-east, not far from the gate to the sea, was the Mosque of Banners where the standard-bearers met before the invasion, whilst the Berber contingents sent by Ṭāriḳ came by Gibraltar. It was opposite this same mosque that the Normans (al-Madjūs [*q.v.*]) drew up their forces in 245/859-60, when they seized and burnt it. ʿAbd al-Raḥmān III built an arsenal there for his squadrons and it was from this port that his generals undertook expeditions against the Idrīsids of Morocco. On the fall of the caliphate the Berbers pillaged it in 401/1011 and from 427 to 448/1035-56, the Hammūdids Muḥammad and al-Ḳāsim established themselves there as caliphs before it was annexed to Seville.

In 479/1086, al-Muʿtamid delivered it to Yūsuf b. Tāshfīn who went into al-Andalus to rout Alfonso VI at al-Zallāḳa. Yūsuf lost no time in fortifying the town and repairing the weak points in the walls; he had the town entirely surrounded by a moat, laid in stocks of arms and food, and installed a picked garrison of his best soldiers. On his second crossing he again disembarked at Algeciras, setting out from there to lay siege to Aledo. The Almohads occupied the town in 541/1146, and the Castilians laid waste its territory and that of Ronda in 569/1173 and 578/1182. In 629/1231-2 Algeciras recognized Ibn Hūd. Alfonso the Learned blockaded Algeciras by sea in the summer of 677/1278, and the Christian army camped there in March 1279; on 10 Rabīʿ I/21 July the Castilian squadron was routed by the Marīnids; Algeciras was taken by assault and its defenders put to the sword. In his four Andalusian campaigns Abū Yūsuf made Algeciras the base of his operations and built nearby the royal palace of al-Binya, on the lines of the palace he had built at Fez with Fās al-djadīda; he died there in Muḥarram 685/March 1286. On the same day his son Yaʿḳūb was proclaimed king in this same palace of al-Binya. Abu 'l-Ḥasan ʿAlī returned to the Marīnid tradition of a *djihād* in al-Andalus and, in 741/1340, after defeating admiral Tenorio's squadron in Algeciras bay, he disembarked there and set out to lay siege to Tarifa nearby; after being defeated on the Salado on 7 Djumādā I 741/29 October 1340, he returned to Algeciras where he had left his harem, and from there went back to Morocco. With him the Marīnids' intervention in al-Andalus came to an end; two years later Alfonso XI laid siege to his great naval base and, after twenty months of fierce fighting, succeeded in taking it. In 771/1369 the sultan of Granada recaptured it and completely destroyed it. The territory was annexed to that of Gibraltar and it was not separated administratively from San Roque until 1755. Later, it developed rapidly in the 18th and 19th centuries and, in 1905, an international conference on the question of Morocco was held there.

DJAZĪRAT IBN ʿUMAR [see IBN ʿUMAR, DJAZĪRAT-].

DJAZĪRAT ḲAYS [see KAYS, DJAZĪRAT].

DJAZĪRAT SHARĪK, Name given by the Arabs to the small peninsula thrusting from the eastern coast of Tunisia between the two gulfs of La Goulette (Ḥalḳ al-wādī) and al-Ḥammāmāt. As a physical continuation of the Tunisian Dorsal range, its surface is rather hilly and cut by ravines, but in its east and west and particularly its northern part are wide plains famous since Roman times for their wheat and olives. Its area is about 600 square kilometres. Its farthest point in the north (Cap Bon, or Raʾs Maddār, currently called al-Dakhla) is the nearest point of Africa to Sicily. The peninsula is actually a part of the province (*wilāya*) of Grombalia (Ḳurunbāliya). Its western and northern parts form a subdivision (*délégation, muʿtamadiyya*) of that province called Kiiibia (Iḳlībiya). There are some middle-sized and small towns, such as Grombalia (capital of the province), Korbes (Ḳurbus), Sulaymān, Manzil Bū Zalfā, and Tazeghzān; fishing-ports, such as Iḳlībiya, Manzil Tamīm, Ḳurba, Banī Khiyār, and two fairly important ports: Nabeul (Nābil) and al-Ḥammāmāt. Communications are assured by railways between Nābil, al-Ḥammāmāt, Manzil Tamīm, and Tunis.

Sharīk al-ʿAbsī, after whom the peninsula was named, was one of the officers of the Arab army which conquered Ifrīḳiya under ʿAbd Allāh b. Saʿd b. Abī Sarḥ in 27-8/647-9. After the victory of Subayṭila (Sbeitla, Suffitulum), ʿAbd Allāh b. Saʿd sent Sharīk to occupy the peninsula and nominated him its governor. ʿAbd Allāh b. Saʿd evacuated Ifrīḳiya before the end of 28/649 and the Byzantines were able to reconquer the peninsula from their stronghold of Carthage (Ḳarṭādjanna). Some 32 years later Abu 'l-Muhādjir Dīnār, leader of the Arab troops in Ifrīḳiya between 55/674 and 62/681, was able to conquer Carthage and consequently assure permanent Muslim domination of this important bridge-head to Sicily.

Owing to its strategic importance, Djazīrat Sharīk was always a target for all those contemplating the conquest of Ifrīḳiya from the sea, and hence for long periods of its history it was a battlefield between Ifrīḳiya and its attackers. The Normans dominated it after their conquest of al-Mahdiyya in 543/1148 and held it till 555/1160, when the Almohads under ʿAbd al-Muʾmin b. ʿAlī expelled them and annexed Ifrīḳiya to their Empire). Later, during the 10th/16th century, Djazīrat Sharīk, like the rest of

Tunisia, was one of the battlefields in the war between the Spaniards and the Ottomans in their fierce dispute for the hegemony of the Mediterranean [see TUNISIA].

Two other aspects are characteristic of the history of Djazīrat Sharīk during the middle ages: the first is that its hilly terrain offered refuge for rebels against the governors of Ifrīkiya, especially under the Fāṭimids, when a group of the Nakkāriyya (a branch of the Khawāridj) allies of Abū Yazīd [*q.v.*] caused much trouble to al-Ḳā'im; later, during the second half of the 6th/12th century, the Banū Ghāniya [*q.v.*] invaded Djazīrat Sharīk, and committed atrocities against its inhabitants. The second aspect is that its coasts, as well as those of the adjacent islands of Ḳawṣara (Pantelleria), Ḳirḳinnā and Djarba were from the beginning of the 8th/14th century suitable lairs for pirates (*ghuzāt al-baḥr*), which brought against Ifrīkiya the wrath of the Normans, the Pisans, the Genoese, the Venetians, the Spaniards, and almost all Europe, and were the cause of disastrous attacks on their part.

Djazīrat Sharīk was described by at least four of the leading Muslim geographers and travellers in the middle ages, namely al-Bakrī, al-Tidjānī, al-Idrīsī and Yāḳūt. All, except al-Tidjānī, agree that the peninsula was flourishing and rich. Al-Idrīsī calls it Djazīrat Bashshū, after its then biggest town Manzil Bashshū. Al-Tidjānī, who visited it in 706/1306-7, gives in his *Riḥla* the most detailed description we possess, including a sad picture of the peninsula as a result of the devastations of the Banū Hilāl and the Banū Ghāniya [*q.v.*]. A branch of the Hilāliyya, the Banū Dalādj, were masters of Djazīrat Sharīk in his days. He mentions only three towns: Manzil Bashshū, Ṣilṭān and al-Fallāḥīn.

DJAZĪRAT SHUḲR, Spanish Alcira, called by the Muslims the island of the Júcar, since it is situated between two channels of the river Júcar, in Latin Sucro, one of which is now dry. 37 km. from Valencia, it has a population of about 30,000 and stands at the centre of a natural region known as the Ribera which includes the lower part of the Júcar valley, from Játiva to Catarroja and from the sea to the valley of Cárcer. The fertile alluvial plain is one of the richest in the Peninsula. It is watered by the royal irrigation canal of the Júcar which was constructed by James I the Conqueror in the second half of the 13th century, built up on the site of earlier irrigation works which go back not merely to the Arab period but to the Visigothic and Hispano-Roman periods. Orange-trees, rice and horticulture have brought prosperity. Al-Idrīsī praised it for its fertility and the distinction of its inhabitants; he said that in his time it was possible to reach it only by boat in winter, and by a ford in summer, but in 622/1225, according to al-Muʿdjib, it had a bridge. It must have been inhabited even in prehistoric times, to judge by excavations made on its boundaries, on the mountain of Solá. Its identity with Sucro or Sicania Iberica is open to question, and in the Roman period it must have been fortified, as a stopping place on the Via Augusta, to judge by the commemorative tablets found there.

During the Arab period and until comparatively recent times, timber felled in the great pine-forests of Cuenca was transported on the river Cabriel and, after being taken across the Júcar was brought through Alcira to Cullera, with Denia as its final destination for ship-building and Valencia for building.

Throughout the amīrate and Umayyad caliphate its history was uneventful; it was a dependency of Murcia or of Valencia at the time when the first kingdoms of Taifas were created, until the Cid took possession of it when conquering Valencia and its territories. Ibn ʿĀ'isha, the son of Yūsuf b. Tashfīn, reconquered it and then routed and wiped out a division of the Cid's army. In 519/1125 Alfonso I the Warrior, when undertaking his celebrated expedition into Andalusia, tried to seize it; but after several days he was repulsed, and withdrew with heavy losses. In 523/1129 he once again invaded the region, and between Alcira and Cullera he routed another Almoravid army, thereby opening up the way.

When the Almoravids of al-Andalus disappeared and the second period of the kingdoms of Taifas started, Saʿd b. Mardanīsh succeeded in making himself master of Murcia and Valencia, and appointed as governor of Alcira a noble inhabitant of the town, Aḥmad b. Muḥammad b. Djaʿfar b. Sufyān. The latter, after seeing Ibn Mardanīsh reinforce the Christian garrison of Valencia and, to make way for them, turn out a number of Muslims from their homes, and fearing that he too would be turned out in the same way, rebelled and joined the Almohads, as Ibn Hamushk had done at Jaén and ʿAbd Allāh b. Saʿd at Almería.

Believing that he could recapture the town and so set an example, Ibn Mardanīsh laid siege to Alcira in the middle of Shawwāl 566/June 1171, helped by his brother Abu 'l-Ḥadjdjādj Yūsuf, amīr of Valencia; the siege lasted for two months until the middle of Dhu 'l-Ḥidjdja/August. The caliph, who had been in Cordova since July, and the sayyid Abū Ḥafṣ ʿUmar, who was besieging Murcia, came to the help of the inhabitants of Alcira; but they saw that they were being more and more closely confined, and appealed to Abū Ayyūt Muḥammad b. Hilāl, the friend and colleague of Ibn Baṣīt during the relief of Almería. Ibn Mardanīsh, unable to force the town, had to withdraw.

Under the Almohads the town enjoyed a period of comparative calm, but was soon threatened by the advance of the Christians; and two celebrated poets, Ibn Khafādja and Abu 'l-Muṭarrif Ibn ʿAmīra, sensing that its loss was imminent, wrote with nostalgia of its charms and the beauty of its surroundings. At the end of 1242 James I the Conqueror captured the town.

DJAZM [see NAḤW].

AL-**DJAZR** WA 'L-**MADD** [see MADD].

DJAZŪLA, Arabic name of a small ancient Berber tribe in south-western Morocco, doubtless related to the Ṣanhādja group [*q.v.*]. In association with the Lamṭa [*q.v.*], their kinsmen, they led a nomadic life south of the Anti-Atlas. But, at quite

an early date, some of them began to settle in the western part of this mountain (Djabal Hankīsa); their chief settlement was at Tāghdjīzat, now known as Tāghdjīdjt, 80 km. south-south-east of Tīznīt.

It was among them that ʿAbd Allāh b. Yāsīn was born, the originator of the religious and political movement of the Murābiṭūn [*q.v.*]. The Djazūla took an important part in it and some of them settled in the Moroccan plains.

At the time of the first reverses of the Almoravids in the Sūs, the Djazūla rallied round the Almohads (533/1138) and provided them with contingents. But the loyalty of the latter at Tlemcen, when faced by their kinsmen the Almoravids, was so suspect that the Almohads treacherously massacred them (539/1144). As a result, they gave a welcome to several persons who had revolted against the Almohads and were severely punished.

Later, for almost a century the Djazūla were subjugated by the Banū Yaddar of Sūs. The latter having introduced Arab Bedouin from the group of the Maʿḳil as allies, the Djazūla in the end united with one of their tribes, the Dhawū-Ḥassān. At the beginning of the 16th century, Leo Africanus described them as impoverished and bellicose villagers; it was from among them that the first Saʿdid princes recruited their harquebusiers.

During the decline of the Saʿdid dynasty, the Djazūla's country was governed by the Djaʿfarid (?) Shurafāʾ of the tribe of the Samlāla, with Īlīgh as capital. Their domination lasted for about fifty years until 1080/1670; it extended over the Sūs and, for the time being, over Darʿa and Sidjilmāsa (period of Abū Ḥassūn, surnamed Abū Dumayʿa).

At the beginning of the 19th century a new principality appeared, still with Īlīgh as its centre, founded by a sharīf of the Samlāla; it was to be maintained until towards the end of the 19th century. Under the name of the "kingdom of Sīdī Hāshem, or Hīshem", it enjoyed among European travellers and cartographers a notoriety not attested by the Arab historians of Morocco.

Today the name Djazūla is no longer used except for one of the two ethno-political clans (*laff*) between whom the tribes of the Anti-Atlas district were divided. The former Djazūla are now the confederation of the Waltīta (Berb. Idā Ultīt); the centre of this district is the Tāzarwālt.

In addition to ʿAbd Allāh b. Yāsīn and the two personages who form the subject of the following articles, the Djazūla have produced two other men of distinction: the great saint Aḥmad b. Mūsā al-Samlālī (d. 971/1563), popularly known by the name Sīdī Ḥmād u-Mūsā [*q.v.*], and Muḥammad b. Aḥmad al-Ḥuḍīgī [*q.v.*] (d. 1197/1782), author of a collection of biographies of local saints.

The Arabic orthography *Djazūla* (sometimes *Djuzūla*) corresponds with the Berber plurals *awgūzūlen* (archaic) and *igzūlen*. Some have tried to identify them with the ancient Getuli.

(G. S. COLIN)

AL-DJAZŪLĪ, ABŪ ʿABD ALLĀH MUḤAMMAD B. SULAYMĀN B. ABĪ BAKR AL-DJAZŪLĪ AL-SAMLĀLĪ, although both his father's name and, still more, his grandfather's are in dispute, according to his biographers and associates was descended from the Prophet, like all founders of religious orders. He was born and bred in the Berber tribe of Djazūla in Moroccan Sūs [*q.v.*].

After having studied for a time in his native country he went to Fās and entered the madrasat al-ṣaffārīn where one can still see the room he occupied. Hardly had he returned to his tribe when he was compelled to go back to north Morocco, after charging himself with a crime he did not commit in order to avoid bloodshed. He went to Tangier, then he sailed for the East, spending forty years (?) there partly at Mecca and Medina, partly at Jerusalem. He returned to Fās, and it was during this second stay that, with the help of books from the library of al-Ḳarawiyyīn, he wrote his *Dalāʾil al-khayrāt*. He was then initiated into the order of the Shādhiliyya, then he withdrew into a *khalwa* to worship the Eternal for fourteen years. On leaving his retreat he went to live at Asfī (Safī) where he soon had so great a number of proselytes that the governor of the town felt obliged to expel him. Al-Djazūlī thereupon invoked the help of God against the town which, as a result, was for forty years in the hands of the Christians (Portuguese). It even appears that this governor, thinking him to be the awaited Fāṭimid (the Mahdī), is said to have poisoned him, and the Shaykh died in prayer at Āfūghāl in Dhu 'l-Ḳaʿda 869/25 June-24 July 1465, or 16 Rabīʿ I 870, 872 or even 875.

One of his disciples, ʿUmar b. Sulaymān al-Shayẓamī, known as al-Sayyāf, who as a result claimed to be a prophet himself, conceived the idea of avenging al-Djazūlī. He had the body of his master placed on a bier and raised the standard of revolt. For twenty years he burned and sacked the district of Sūs, accompanied by the body of his master; every evening he laid it out in a place he called *al-ribāṭ*, surrounded by a guard and illuminated all night long by a wick the size of a man's body which stood in a sort of bushel measure full of oil. ʿUmar al-Sayyāf was killed in 890/1485-6. Al-Djazūlī was then buried in the locality of Ḥāḥa, at a place called Āfghāl or Āfūghāl. Seventy-seven years later, on the orders of Sultan Abu 'l-ʿAbbās Aḥmad known as al-Aʿradj, at the time of his entry into Marrākush, and for what were perhaps political motives, his body was exhumed together with that of the Sultan's father who had been buried beside al-Djazūlī. Wrapped in shrouds, they were taken to Marrākush where they were both finally buried side by side, in the place known as Riyāḍ al-ʿArūs where his mausoleum stands. It seems that when the *shaykh* was exhumed from his first tomb, his body had suffered no change and it would have been thought that he had just died. Popularly known by the name of Sīdī Ben Slīmān, he became one of the patron saints (*sabʿatu ridjāl*) of Marrakush.

There grew up in Morocco a sort of religious brotherhood called the Aṣḥāb al-Dalīl, whose essential function was the recital of the celebrated collection of prayers. This book of prayers is often carried as a talisman, hanging over the shoulder in an embroidered leather or silver case (*tahlīl*).

Apart from his immense knowledge of Ṣūfism al-Djazūlī was also a jurisconsult and knew by heart the *Mudawwana* and *al-Mukhtaṣar al-farʿī* of Ibn al-Ḥādjib.

Of his numerous Ṣūfī works only the following are

now known: 1.—*Dalāʾil al-khayrāt wa-shawāriḳ al-anwār fī dhikr al-ṣalāt ʿala ʾl-nabī al-mukhtār*, a collection of prayers for the Prophet, description of his tomb, his names, etc., published several times in Cairo and Constantinople, and in St. Petersburg in 1842; 2.—*Ḥizb al-falāḥ*, a prayer, exists in MS. in Berlin 3886, Gotha 820, Leiden 22003; and 3.—*Ḥizb al-Djazūlī*, now called *Ḥizb subḥān al-dāʾim lā yazūl*, which is found among the Shādhilīs, is in the vernacular.

Al-Djazūlī founded a Shādhilī sect called al-Djazūliyya whose adherents are required without fail to recite the *basmala* 14,000 times and the *Dalāʾil al-khayrāt* twice a day, the *Dalāʾil* once and a quarter of the Ḳurʾān every night.

Épaulard, i, 82; De Castries, *Les sept patrons de Merrakech*, in *Hespéris*, 1924, 272. (M. Ben Cheneb)

AL-**DJAZŪLĪ**, Abū Mūsā ʿĪsā b. ʿAbd al-ʿAzīz b. Yalalbakht b. ʿĪsā b. Yūmarīlī, a member of the Berber tribe of Djazūla, a section of the Yazdakten in southern Morocco, is chiefly known for his short Introduction to the study of Arabic grammar, *Muḳaddima*, entitled *al-Ḳānūn*.

After studying at Marrākush he went to the East to make the pilgrimage to Mecca and Medina. In Cairo he attended classes given by the celebrated lexicologist Abū Muḥammad ʿAbd Allāh b. Barrī; and some have even said that the Introduction merely reproduces his teacher's lectures on *al-Djumal* by al-Zadjdjādjī, adding by way of proof that al-Djazūlī himself admitted that he was not the author. In Cairo he also studied the *Ṣaḥīḥ* by al-Bukhārī with Abū Muḥammad b. ʿUbayd Allāh. While in Cairo he endured the greatest privations and, to raise some money to meet his needs and to be able to complete his studies, he was on several occasions compelled to take on the duties of *imām* in a mosque in the suburbs, refusing to go into a *madrasa*.

On returning from the East, and still in the grip of poverty, he stopped at Bougie for a time, which he spent teaching grammar.

In 543/1148-9 he was in Algiers where he taught his *Ḳānūn* to Abū ʿAbd Allāh b. Muḥammad b. Ḳāsim b. Mandās, a grammarian and native of Āshīr. Crossing into Spain, he stayed for some time in Almeria where he taught grammar. It was in this town that he pawned his copy of the *Uṣūl* by Ibn al-Sarrādj which he had studied with Ibn Barrī and which was in his own handwriting. His creditor to whom this work was given as security disclosed his plight to Abu ʾl-ʿAbbās al-Maghribī, at that time the greatest ascetic in the land, and he in his turn approached the Almohad sultan on his behalf. The latter entrusted al-Djazūlī with the *khuṭba* at the great mosque at Marrākush. He died at Azammūr in 606 or 607 or 610, or else in 616 according to Ibn Ḳunfudh in his *Wafayāt*.

Of his disciples two in particular are noteworthy, Zayn al-Dīn Abu ʾl-Ḥusayn Yaḥyā b. ʿAbd al-Muʿṭī (or more simply Ibn Muʿṭī) b. ʿAbd al-Raḥmān al-Zawāwī, the first grammarian to compose an *Alfiyya*, and Abū ʿAlī ʿUmar b. Muḥammad b. ʿUmar b. ʿAbd Allāh al-Azdī al-Shalūbīnī who edited his master's *Ḳānūn* with commentaries, copies of which survive at the Escurial (Cat. Serenbourg; no. 2, 36, 190).

Al-Djazūlī composed the following works: 1.—Commentary on *Bānat Suʿād* by Kaʿb b. Zuhayr, published by M. R. Basset in Algiers in 1910; 2.—*al-Kānūn*, also called *al-Muḳaddima al-Djazūliyya*; 3.—Commentary on the preceding work; 4.—*Amālī fi ʾl-naḥw* (dictations on grammar); 5.—An abridged version of the commentary by Abu ʾl-Fatḥ ʿUthmān b. Djinnī on the *dīwān* by al-Mutanabbī; 6.—Commentary on the *Uṣūl* by Ibn al-Sarrādj (grammar).

Bibliography: Ibn al-Abbār, *Takmila* (ed. Codera), Madrid 1889, no. 1932; Ibn Khallikān, ed. de Slane, 486, (Cairo 1310, i, 94); Suyūṭī, *Bughyat al-waʿāt*, Cairo 1326, 369; Ghubrīnī, *ʿUnwān al-dirāya*, Algiers 1911, 231; Ibn Ḳunfudh, *Wafayāt*; Aḥmad b. ʿAlī al-Daladjī, *al-Falāka wa ʾl-maflūkūn*, Cairo 1322, 91; Brockelmann, I, 308, S I 541-2. (M. Ben Cheneb)

DJAZZĀR PASHA [see supplement].

DJEBEDJI [see supplement].

DJEBELI, also djebelü, in the Ottoman empire an auxiliary soldier equipped by those to whom the state assigned a source of income such as *tīmār*, *čiftlik*, *waḳf* etc. The word *djebeli* is made by adding the suffix *-li* or *-lü* to the word djebe, arms (cf. *Mogolların gizli tarihi*, tr. A. Temir, Ankara 1948, 75; in the Ottoman army the *djebedji-bashi* was the superintendent of the arms store at the Porte, see I. H. Uzunçarşılı, *Kapîkulu ocaklari*, ii, Ankara 1944, 3-31).

In the 15th century the arms of a *djebeli* consisted mainly of a lance, bow and arrow, a sword, and a shield (cf. *Kānūnnāme Sultan Meḥmeds des Eroberers*, ed. F. Kraelitz-Greifenhorst, *MOG*, i, 28; B. de La Broquière, *Voyage d'outremer*, ed. Ch. Schefer, Paris 1892, 221, 269, 270). Soldiers equipped with such arms and sent to the Sultan's army from various organizations in the provinces such as *yaya müsellem*, *tatar*, *yürük* etc. were designated under the general term of *djebeli* or *eshkündji* [*q.v.*]. Certain *waḳf*s and *mülk*s also were required to send such *djebeli*s for the Sultan's army (see for example, *Vakıflar Dergisi*, ii, 318 doc. 49; ʿAynī ʿAlī, *Ḳawānīn-i Āl-i ʿOsmān* . ., Istanbul 1280 H., 75). In the Ottoman *tīmār* [*q.v.*] the *djebeli* was a cavalryman equipped with the same kind of arms. According to a *tīmār* register of 835/1431 (*Sūret-i defter-i sancāk-i Arvanid*, ed. H. Inalcık, Ankara 1954) the holders of the smallest *tīmār*s between 750-1500 *akčes* were *djebeli*s themselves. Those between 1500-2000 approximately were *djebeli*s themselves but in addition were to bring with them an *oghlan*, or *ghulâm*, page. Those above 2000 were called *bürüme*, "one with a coat of mail". These and the *beg*s who usually held *tīmār*s of more than 20,000 *akčes* were to furnish *djebeli*s for a certain portion of their *tīmār*s (for the number of *djebeli*s in proportion to the *tīmār*s see the table in *Süleymān's Ḳānūnnāme*; M. ʿĀrif's edition in *TOEM* is unreliable in this part).

If the heir to a *tīmār* was too young to join the army in person he had to send a *djebeli* instead (see *Ḳānūnnāme*, Bib. Nationale, Paris, MS. turc 41). To "show one's djebelis" meant a military parade

and inspection (cf. ʿĀshiḳpashazāde, *Taʾrīkh*, ed. ʿĀlī, Istanbul 1332, 135). Most of the *djebelis* in the *tīmār* system were of slave origin.

(HALİL İNALCIK)

DJEDDA [see DJUDDA].

DJEK [see SHAHDĀGH].

DJELALI [see SUPPLEMENT, S.V. DJALĀLĪ].

DJEM, son of Sultan Meḥemmed II, was born on 27 Ṣafar 864/22 December 1459 in Edirne (cf. *Wāḳiʿāt-i Sulṭān Djem*, 1). His mother, Čiček Khātūn, was one of the *djāriyes* in Meḥemmed II's harem. She may have been connected with the Serbian royal house (cf. Thuasne, *Djem-Sultan*, Paris 1892, 2). Her brother, ʿAlī Beg, was with Djem in Rhodes in 887/1482 (*Wāḳiʿāt*, 7).

Djem was sent to the sandjaḳ of Kastamoni as its governor with his two *lalas* in the first ten days (*awāʾil*) of Radjab 873/15-25 January 1469 (*Wāḳiʿāt*, 1; according to Kemāl Pashazāde, *Tevârih-i Âl-i Osman*, ed. Ş. Turan, Ankara 1954, 316, 412, he was sent to Magnisa). There, in these early years, he showed a keen interest in Persian literature (cf. I. H. Ertaylan, *Cem Sultan*, Istanbul 1951, 11-4). He came back to Istanbul for his circumcision in 875/1470-1 (cf. Kemāl Pashazāde, 316) and to Edirne (cf. *Speculum*, xxxv/3, 424) to safeguard Rūmeli during Meḥemmed II's expedition against Uzun Ḥasan in 878/1473. A reliable source (Angiolello, cited in Thuasne, 8) relates that having no news from his father for more than forty days, his two *lalas* made Djem decide to take the *bayʿa* [*q.v.*] of high officials. On his return Meḥemmed II, though he forgave the young prince, executed the two *lalas*, Kara-Süleymān and Nasūḥ (cf. his letter to Djem in Ferīdūn, *Munsheʾāt*, i, 283). In the middle of Shaʿbān 879/20-30 December 1474 (*Wāḳiʿāt*, 1) Djem succeeded his deceased brother Muṣṭafā as governor of Ḳaramān in Konya. Ḳaramānī Meḥemmed Pasha, grand vizier from 881/1476 to 886/1481, favoured Djem (cf. *Al-Shaḳāʾiḳ al-Nuʿmāniyya*, tr. Madjdī. Istanbul 1269, 285; Th. Spandouyn Cantacasin, *Petit traicté de l'origine des Turcqz*, ed. Ch. Schefer, Paris 1896, 43). But Bāyezīd, his elder brother, had become virtually the leader of all the opponents to Ḳaramānī and his financial policy which had been especially ruinous for the holders of *waḳfs* and *mulks* in the empire (cf. art. Meḥmed II, in *İA*). Meḥemmed II himself had serious complaints against Bāyezīd in the last years of his reign (see the documents in Ertaylan, 51, 53).

When Meḥemmed II died on 4 Rabīʿ I 886/3 May 1481 Ḳaramānī's enemies, supported by the Janissaries, eliminated him, invited Bāyezīd to the throne and took all measures to block the way for Djem (cf. documents in I. H. Ertaylan, 82, 84). When Bāyezīd was in Istanbul Djem came to capture Bursa (Rabīʿ I 886/May 1481). Here he had the *khuṭba* read and coins struck in his name (Neshrī, *Djihānnumā*, ed. F. Taeschner, i, Leipzig 1951, 220; the silver coin described by H. Edhem, *Meskūkāt-i ʿOthmāniyye*, i, Istanbul 1334, No. 447). He cooperated with the Ḳaramānids (cf. document in I. H. Ertaylan, 97). His proposal for dividing the empire was declined by Bāyezīd (Neshrī, 22-3). Defeated by the regular forces of the empire under Bāyezīd at Yenishehir on 22 Rabīʿ II 886/20 June 1481 (cf. *Wāḳiʿāt*, 2; Neshrī, 221, Ferīdūn, *Munsheʾāt al-Salāṭīn*, i, Istanbul 1274, 290), Djem fled to Konya (he arrived on 27 Rabīʿ II 886/25 June 1481) and took refuge in Tarsus, a town under the Mamlūks (12 Djumādā I 886/9 July 1481). He arrived in the Mamlūk capital on 1 Shaʿbān 886/25 September 1481 and was received by Sultan Ḳāyitbāy as a prince (*Wāḳiʿāt*, 4; Ibn Iyās, *Badāʾiʿ al-zuhūr* . ., ii, Būlāḳ 1311, 208). When he made the pilgrimage and returned to Cairo (1 Muḥarram 887/20 February 1482) Ḳāsim Beg, the Ḳaramānid pretender (see ḲARAMĀN-OGHLU) and Meḥemmed, sandjaḳ-beg of Ankara, urged him to return to Anatolia. Despite the objection of the Mamlūk amīrs, Sultan Ḳāyitbāy permitted him to leave Egypt for Anatolia (Ibn Iyās, ii, 213; *Wāḳiʿāt*, 5; document in Ertaylan, 121). Djem was in Aleppo on 17 Rabīʿ I 887/6 May 1482; Ḳāsim and Meḥemmed joined him in Mamlūk territory. While Djem and Ḳāsim came to lay siege to Konya, Meḥemmed Beg, who had moved towards Ankara, was defeated and killed in Čubuḳ-Owa. They gave up the siege of Konya and went to capture Ankara, but, at the news of the advance of an army under Bāyezīd II himself, hastily retreated. Djem, changing his original plan of going to Īrān, fled to Tash-eli in Ḳaramān (29 Rabīʿ II 887/17 June 1482). There he entered into negotiations with Bāyezīd II who always rejected his demand for the assignment to him of at least a part of the Ottoman territories. He only promised a yearly allowance of one million *akčes* provided that he would retire to Jerusalem (cf. *Wāḳiʿāt*, 5 and his letters in Ferīdūn, i, 291-2; Djem's original letter in Ertaylan, 127). Ḳāsim, who never gave up the idea of restoring his principality of Ḳaramān, made Djem decide to pass over to Rūm-eli by sea. With this in mind Djem made an agreement with P. d'Aubusson, Grand Master of the Knights of St. John in Rhodes. While governor of Ḳaramān in his father's time Djem had had close relations with P. d'Aubusson (cf. Thuasne, 11-7). The agreement of safe-conduct (text in Thuasne, 60, cf. *Wāḳiʿāt*, 7) dated 24 Djumādā I 887/10 July 1482 provided that Djem could enter, stay and leave Rhodes as he pleased. He arrived at the island on 13 Djumādā II 887/30 July 1482 (*Wāḳiʿāt*, 7). P. d'Aubusson wrote to the Pope that Djem should be used as an instrument to destroy the Ottoman empire (Thuasne, 68) while Djem hoped that he could at least reach an agreement to partition the empire with his brother. In Shaʿbān 887/September 1482 Bāyezīd agreed to a peace treaty with the knights favourable to the Order and at the same time his ambassador to the Grand Master made a separate agreement about Djem who was to be detained by the Knights so as not to cause any concern to Bāyezīd (Thuasne, 85; document in Ertaylan, 152). In return he was to pay 45 thousand Venetian gold ducats annually to meet Djem's expenses (24 Shawwāl 887/6 December 1482) (Thuasne, 86; for the negotiations now see the documents in Ertaylan, 156-61). It was understood that the Grand Master had Djem's mandate on this matter (cf. Thuasne, 80, 86 and Bāyezīd's letter to the French King in Ertaylan, 186). With the promise of sending him to Hungary via France (cf. *Wāḳiʿāt*, 8) d'Aubusson interned him in the Order's places in France for seven years (his departure from Rhodes was on 17 Radjab 887/1 September 1482). Bāyezīd II had asked Venice to intercept him on the sea if he should leave Rhodes (see documents in Ertaylan, 142-3, 188). Actually the Venetians must have attempted to seize him on his way to France (doc. in Ertaylan, 158-9; in *Wāḳiʿāt*, 8, Neapolitan ships). Worried lest Djem should proceed to Hungary, Bāyezīd sent envoys and spies to the West to prevent it (see documents in Ertaylan, 186, 189, 192, 193, 203). His envoy to the French King, Ḥüseyn Beg, was sent to assure Djem's detention there (*Wāḳiʿāt*, 12; Thuasne, 110).

As Djem was a valuable hostage bringing political prestige as well as money the rulers of the time were most anxious to have him and the Kinghts had to be always on guard. In 892/1487 they imprisoned him in the *Grosse Tour* or *Tour de Zizim*, a fort especially built to intern him near Bourgneuf (*Wāḳiʿāt*, 16; Thuasne, 157). Sultan Ḳāyitbāy who had been at war against the Ottomans since 890/1485 and Matthias Corvinus, Hungarian King, maintained active diplomatic relations with the Knights and the Pope to get Djem (for Ḳāyitbāy's ambassadors in Europe see Thuasne, 174, 199, 337). Djem's early attempt to get into contact with Matthias Corvinus had failed (cf. *Wāḳiʿāt*, 11, in Muḥarram 888/ February 1483).

When Djem was interned in France Bāyezīd II put to death Gedük Aḥmed Pasha, the strong man of the empire, and Djem's son, Oghuz-khān, who was then only three years old (Shawwāl 887/December 1482) (documents in Ertaylan, 167-8).

Finally the Knights and the Pope Innocent VIII thought it necessary "for the general good of Christendom" to transfer Djem to Rome, where he arrived on 1 Rabīʿ II 894/4 March 1489. He met the Pope in a royal reception ten days later (description of the reception in *Wāḳiʿāt*, 21-2; Thuasne, 232) and in their private talk Djem complained that the Knights had violated their agreement to lead him to Rūm-eli and treated him as a prisoner. He wanted the Pope to send him back to his family in Egypt asserting that he would never cooperate with the Hungarians against his co-religionists (*Wāḳiʿāt*, 21-3).

Djem's presence in Rome increased the international prestige and activities of the Pope who now planned a Crusade against the Ottomans for which, he said in the letters to the Christian rulers, the conditions were most propitious (Thuasne, 241, 260, 265).

Bāyezīd was most worried by Djem's transference to Rome and he protested against it as a breach of the pact on the part of the Knights. Actually Matthias Corvinus was now pressing the Pope and the Egyptian Sultan was offering 150-200 thousand ducats to have Djem. On 17 Muḥarram 896/30 November 1490 Bāyezīd's ambassador, Ḳapîdjî-bashî Muṣṭafā Beg, came to Rome with a letter assuring the Pope of his friendship and asking him to stand by the agreement made with the Knights. He had brought with him 120 thousand ducats representing three years' pension for Djem which was to be delivered after Muṣṭafā's seeing him alive. Muṣṭafā saw him and delivered him a letter and presents from Bāyezīd. (*Wāḳiʿāt*, 23-4). On 23 Shaʿbān 898/9 June 1493 another ambassador of Bāyezīd came to Rome to renew the agreement about Djem with Alexander VI, successor of Innocent VIII, and delivered 150 thousand ducats as Djem's pension (Thuasne, 314). The Pope gave guarantees about Djem, and, on the other hand he assured the Christian powers that with Djem in his hands he could neutralize the Ottomans in their plans against Christendom. Soon afterwards he could even expect support from Bāyezīd II against Charles VIII of France who was about to invade Italy. The French King came to Rome in 899/1494 and compelled the Pope to hand Djem over to him for his plans of crusade (1 Djumādā I 900/27 January 1495) (*Wāḳiʿāt*, 30). He was taken by the king in his expedition against Naples. On the way he fell ill and died in Naples on the night of 29 Djumādā I 900/25 February 1495. Rumours spread that the Pope had poisoned him (Thuasne, 365-76; Saʿd al-Dīn, *tādj al-tewārīkh*, ii, 37; but in *Wāḳiʿāt*, 30-5, the latter's source, there is no hint at Djem being poisoned; Saʿd al-Dīn must have taken this from Idrīs Bidlīsī's *Hasht Behisht*. Bāyezīd took the place of the Pope in the story in some Ottoman chronicles, see ʿĀlī, *Kunh al-akhbār*, MS.). Djem left a testament (*Wāḳiʿāt*, 32) in which he expressed the wish that his death be made public so that the "infidels" could not use his name in their plans of crusade, that Bāyezīd should have his corpse taken to the Ottoman land, that all his debts be paid, and that his mother, daughter and other kin and servants receive proper care from the Sultan Bāyezīd.

Bāyezīd learned of Djem's death through the Venetians on 24 Radjab 900/20 April 1495. He made it known throughout the empire by public prayers for Djem's soul (Ferīdūn, i, 294), and brought back his corpse, which was embalmed and put in a lead coffin (*Wāḳiʿāt*, 32), from Naples only in Ramaḍān 904/April 1499. Buried at last in the mausoleum of Muṣṭafā, his elder brother, in Bursa (cf. I. Baykal, *Bursa ve Anıtları*, Bursa 1950, 40), Djem's corpse, too, had been subject of high politics (cf. Thuasne, 378-87).

Djem's will was fulfilled by Bāyezīd II (an official record shows that his daughter Gawhar Malik Sulṭān was honored by the Sultan with presents in Ramaḍān 909/February 1504, cf. T. Gökbilgin, *Edirne ve Paşa Livası*, Istanbul 1952, 474). His son Murād, however, who took refuge in Rhodes, was captured during the conquest of the Island and executed with his son on 8 Ṣafar 929/27 December 1522. Murād's wife and two daughters were sent to Istanbul (Ferīdūn, i, 539; Thuasne, 389).

Djem, whose poems were collected in two *dīwāns*, one in Persian (ed. in part by I. H. Ertaylan, *Cem Sultan*) the other in Turkish (ed. by I. H. Ertaylan, *Cem Sultan*) was considered as a distinguished poet (cf. Laṭīfī, *Tedhkire*, Istanbul 1314, 64). He is also the author of a *Fāl-i reyhān-i Sulṭān Djem* (ed. by I. H. Ertaylan, *Fālnāme*, Istanbul 1951).

Bibliography: Documents connected with Djem and his own letters that are preserved in the archives of Tokapî Sarayî Müzesi, Istanbul, have recently been published in fascimile by I. H. Ertaylan (*Sultan Cem*, Istanbul 1951). These original documents as well as the correspondence of Djem in Ferīdūn (*Munsheʾāt al-Salāṭīn*, i, Istanbul 1274, 290-4) have not yet been studied properly. They are mostly undated. The *tahrīr defters* of Konya and Ḳaramān contain a number of documents given in the name of Djem (Başvekâlet Arşivi, Istanbul, tapu def. No. 119, 392, 63, 32, 40, 58, 809). The *Wāḳiʿāt-i Sulṭān Djem* (ed. M. ʿArif, Istanbul 1330 H.) was written or dictated by one of the closest men to Djem, Ḥaydar (cf. M. Ârif's introduction) Ayās or Sinān, who had been with him from his childhood until his death. Saʿd al-Dīn (*Tādj al-tewārīkh*, i, Istanbul 1280, 8-40) reproduced it with a few additions from other sources. *Ghurbetnāme* (Ist. Universite Kütüphanesi, Hāliṣ Efendi Kitapları) is an incomplete copy of the *Wāḳiʿāt*. The collections of poems of ʿAynī-i Tirmīdhī (Konya Müzesi Kütüphanesi 2420/16), of Ḥamīdī (ed. I. H. Ertaylan) and of Ḳabūlī (ed. I. H. Ertaylan) contain contemporary information on Djem's life in Anatolia. Donado Da Lezze, *Historia turchesca*, ed. I. Ursu, Bucarest 1911; L. Thuasne, *Djem-Sultan, étude sur la question d'Orient à la fin du XV^e siècle*, Paris 1892; Ḥasan b. Maḥmūd Bayātī, *Djām-i Djemāyīn*, Istanbul 1331 H.; Aḥmad Sayyid al-Darrādj,

Djem Sulṭān wa 'l-diblūmāsiyya al-duwaliyya, in *al-Madjalla al-ta'rīkhiyya al-miṣriyya*, viii, (1959), 201-42; *İA*, art. Cem (Cavid Baysun).

(HALİL İNALCIK)

DJEMĀL PASHA (Cemal Paşa), Young Turk soldier and statesman. Aḥmed Djemāl was born in Istanbul in 1872. He graduated from the *erkān-i ḥarbiyye mektebi* in 1895, was commissioned as a captain in the general staff, and posted to the Third Army in Salonika. There he joined the Macedonian nucleus of the Young Turk conspiracy, the *ʿOthmānlī Ittiḥād we Teraḳḳī Djemʿiyyeti* (known in Europe as the Committee of Union and Progress), using his assignment as inspector of railways in Macedonia to help spread and consolidate the Committee's organization. Following the 1908 revolution he became a member of the *Ittiḥād we Teraḳḳī*'s executive committee (*merkez-i ʿumūmī*). He participated energetically in the suppression of the 1909 counter-revolution (the *Otuz-bir Mart Waḳʿasī*) and became military governor (*muḥāfiẓ*) of Üsküdar (Asiatic Istanbul). Later that year he was appointed *wālī* of Adana and, in 1911, of Baghdād. In 1912 he took command of the Ḳonya reserve division and, in the First Balkan War, fought at Vize, was defeated at Pīnar Ḥiṣār, and later took over the inspectorate of the Čataldja front.

Following the *Ittiḥād we Teraḳḳī*'s *coup d'état* of 23 January 1913 (known as the Sublime Porte Incident or *Bāb-i ʿĀlī Waḳʿasī*), Djemāl Pasha became military governor and *wālī* of Istanbul. He strongly supported the Unionists' plans for recapturing Edirne in the Second Balkan campaign and, by his forceful measures in rounding up and deporting opposition leaders in the capital, contributed decisively to the consolidation of the new régime; he could not, however, prevent the assassination, in June 1913, of the *ṣadr aʿẓam*, Maḥmūd Shewket Pasha. From this period onward and until the end of the World War, Djemal was widely considered, together with Enwer and Ṭalʿat Pashas, to be part of the informal dictatorial triumvirate ruling the Ottoman Empire. He was promoted to Lieutenant-General, in December 1913 entered the cabinet as minister of works and, in February 1914, was transferred to the navy office, where he worked hard to improve the equipment and training of the fleet. His efforts, during a trip to Paris in July 1914, to bring about a closer understanding between the Ottoman Empire and France bore no fruit and he later supported, somewhat reluctantly, Enwer's policy of alliance with Germany.

In August 1914 Djemāl Pasha was given command of the Second Army (then stationed on the Aegean coast), and from November 1914 until December 1917 he was commander of the Fourth Army, with headquarters in Damascus, as well as military governor of the Syrian Provinces (including Palestine and the Ḥidjāz). Throughout this period, and until October 1918, he retained the navy portfolio, which put him in the anomalous position of being both the colleague and subordinate of Enwer Pasha (as minister of war and deputy commander-in-chief). Djemāl Pasha's initial assignment on the Syrian front was to prepare an attack on the Sinai peninsula and the Suez canal. But several successive forays towards the canal (in February 1915, and in April and July 1916) brought no decisive advance, and Ottoman hopes for an anti-British uprising in Egypt in response to the Ottoman proclamation of *djihād* were disappointed. During the early war years, Djemāl undertook a large programme of public works in the Syrian provinces and took an active interest in the archaeology of the region. But there were indications of political disaffection among the local Arab leaders, and to these Djemāl reacted with characteristic severity. Eleven prominent Arabs were hanged after a summary trial in August 1915, and 21 more, including a member of the Ottoman senate (*medjlis-i aʿyān*), in May 1916—this time without formal trial. A month later, the revolt in the Ḥidjāz under the Sharīf Ḥusayn (with which some of the executed Syrians had been connected) greatly weakened the Fourth Army's position. Early in 1917 the British began their attack on Palestine, and when Djemāl was recalled from the Syrian front at the end of the year, his forces were retreating before Allenby's advance.

Djemāl resigned as minister of navy along with the rest of the Ṭalʿat Pasha cabinet. On 2 November 1918 he fled with Enwer and Ṭalʿat, going first to Berlin and then to Switzerland. (In the meantime his case was tried before an Istanbul court-martial, and he was ordered to be expelled from the army and was later sentenced to death *in absentia*). While in Europe, Djemāl took service with Amīr Amān Allāh of Afghānistān and upon the mediation of Karl Radek, travelled to Russia, where he secured the support of Chicherin, Soviet commissar of foreign affairs, for his mission of modernizing the Afghān army. While in Moscow, he offered his support to the Turkish nationalist movement under Muṣṭafā Kemāl (Atatürk), with whom he carried on an intermittent correspondence by letter and telegram beginning in June 1920; together with Enwer's uncle Khalīl Pasha (Halil Kut), he facilitated the diplomatic contacts between the Bolshevik and Kemalist régimes which culminated in the Treaty of Moscow of 1921. In the summer of 1920 Djemāl stopped in Ṭāshkent, where he recruited a group of interned Ottoman officers for his mission, and proceeded to Afghānistān to assume his post as inspector-general of the army. He returned to Moscow in September 1921 for further negotiations with the Bolsheviks, with Kemāl, and with Enwer Pasha (whom he tried to dissuade from his activities against Kemāl and from his adventurous plans in Uzbekistān). On his way back to Afghānistān, Djemāl was shot to death in Tbilisi (Tiflis) on 21 July 1922 by two Armenians, Kerekin Lalayan and Sergo Vartayan—his death apparently being part of the same assassination campaign to which Ṭalʿat and Saʿīd Ḥalīm Pashas had earlier fallen victim. He was buried in Tbilisi and later reburied in Erzurum.

Bibliography: *Türk Ansiklopedisi*, x, 141 f.; Ibrahim Alâettin Gövsa, *Türk meşhurları ansiklopedisi*, Istanbul [1946], 82; *Millī Newsāl* 132, 314 f.; Djemāl's memoirs (*Khāṭirāt* 1913-1922, Derseʿādet 1922, and modernized and annotated edition, *Hatiralar*, ed. Behcet Cemal (his son), Istanbul 1959; translations: *Erinnerungen eines türkischen Staatsmannes*, Munich 1922, and *Memories of a Turkish Statesman 1913-1919*, London, n.d.) are largely an apologia for his conduct in Syria, as is the "red book" *La vérité sur la question syrienne*, Istanbul 1916, issued by the Fourth Army; for the Arab point of view, see especially George Antonius, *The Arab Awakening*, London 1938, 150-52, 185-90, 202-3. On the war years in Syria much information will he found in the memoirs of his chief of staff Ali Fuad Erden, *Birinci Dünya Harbinde Suriye hâtıraları*, i, Istanbul 1954. The most detailed and reliable

account of Djemāl's last three years is provided by his comrade-in-arms of his Syrian days, Ali Fuat Cebesoy, *Moskova hâtıraları*, Istanbul 1955, 48-50, 57-8, 274-99. Djemāl's archaeological interests are reflected in his book *Alte Denkmäler aus Syrien, Palästina, und West-Arabien*, Berlin 1918. (D. A. Rustow)

DJEMALĪ EFENDI [see djamālī efendi].

DJEMʿIYYET-I ʿILMIYYE-I ʿOTHMĀNIYYE, the Ottoman Scientific Society, was founded in Istanbul in 1861 by Munīf Pasha [*q.v.*]. Modelled on the Royal Society of England, and perhaps inspired by the reopening of the *Institut d'Égypte* [*q.v.*] in Alexandria in 1859, it consisted of a group of Turkish officials, dignitaries and scholars, some of them educated in Europe. It was the third such learned society to appear in 19th century Turkey, having been preceded by the *Endjümen-i Dānish* in 1851 (see andjuman), and by the 'learned society of Beshiktash' in the time of Maḥmūd II (see Djewdet, *Taʾrīkh*[2], xii, 184; Luṭfī, 168-9,; Djewād, 69, n. 1.; Mardin, 229 ff.). The Ottoman Scientific Society arranged public lectures and courses on premises assigned to it by the government, where there was also a reading-room with a small library. Its most important achievement, however, was the publication of the *Medjmūʿa-i Fünūn*, the first scientific periodical in Turkish, published monthly and circulated with official support. Besides the natural sciences, history and geography, politics, economics and philosophy figured largely in the pages of the journal, which introduced its readers to classical and European achievements and writings in these fields, and to the scientific, non-dogmatic study of scientific and philosophical problems. Its rôle in Turkey has been likened by Ahmed Hamdi Tanpınar to that of the *Grande Encyclopédie* in 18th century France. It was of brief duration. During the cholera epidemic of 1865 the journal was compelled to cease publication, and after a brief resumption some years later was finally suppressed in 1882 by Sultan ʿAbd al-Ḥamīd II.

DJEMSHĪD [see djamshīd].

DJENDERELI [see djandarlī].

DJENNÉ [see dienné].

DJERBA [see djarba].

DJERĪD. the wooden dart or javelin used in the game of Djerīd, *i.e.*, Djerīd Oyunu in Turkish and, in the Arabic of Egypt, Laʿb al-Djerīd—a game which was popular and widespread in the Ottoman empire of the 10th/16th-13th/19th centuries. The actual form of the djerīd or wooden javelin varied somewhat in the different parts of the empire; its length, moreover, seems to have ranged in general between 3/4 and 1 1/2 metres (von Oppenheim, 598-9). The djerīd, in Egypt, consisted of a palm branch stripped bare of its leaves, such being indeed the original sense of the Arabic word *djarīd*. At the court of the Ottoman Sultan in Istanbul the game of Djerīd was much in evidence and never more so than in the second half of the 11th/17th century. It afforded to the pages of the Sultan and to the other personnel of the court an admirable opportunity to show their physical prowess and dexterity. The Djerīd Oyunu was in fact a mock battle in the course of which horsemen threw darts at one another, each participant in the game being now the pursuer and now the pursued. Some of the sources declare that the Djerīd horsemen sought, during their mounted evolutions, to gain possession of the darts thrown earlier in the game and carried for this purpose thin canes curved at one end (Hobhouse, 634). At Istanbul large numbers of the court personnel often engaged in the Djerīd Oyunu—indeed rival "factions" existed under the names of Lahanadjī (cabbage men) and Bamyadjī (gumbo men). The game of Djerīd demanded a high degree of skill in horsemanship and in the throwing of the javelin or dart (Guer, *Mœurs et usages des Turcs*, ii, 252 gives an interesting account of the methods followed in order to acquire proficiency in this latter art.). It meant also for the participants a considerable risk of serious wounds and even of death, since the head was a common target of attack. The Djerīd Oyunu was abolished at Istanbul in the reign of Sultan Maḥmūd II (1223-55/1808-39) after the suppression of the Janissaries in 1241/1826, but it survived long thereafter in the provinces as a game popular amongst the mass of the people.

DJEWDET, ʿAbd Allāh (Abdullah Cevdet) Turkish poet, translator, politician, free-thinker and publicist. He was born of the Kurdish family of the ʿUmar Oghullarī, at ʿArabgīr, on 3 Djumādā II 1286/9 September 1869. Having completed his studies at the military school at Maʿmūret el-ʿAzīz (Elâzığ), he came to Istanbul about the age of 15 to attend the Army Medical School. There, in May 1889, he became a founder-member of the Ottoman Society for Union and Progress.

By 1891 he had published four small volumes of poetry, the second of which opened with the well-known *Naʿt-i Sherīf* in praise of the Prophet, which more than once during his stormy career swayed officialdom in his favour. In 1892 he underwent a brief spell of imprisonment for his political activities, and in 1896 was exiled to Tripoli. Becoming involved with the local branch of Union and Progress he was again imprisoned, but after his release succeeded in escaping from Tripoli and making his way to Geneva (September 1897), where he worked for the Young Turk fortnightly *ʿOthmānlī*. In 1899 he was induced to accept the post of medical officer to the embassy in Vienna: by thus taking service under ʿAbd al-Ḥamīd he debarred himself for life from attaining office under the Young Turks.

Yet so far was he from abandoning his revolutionary activities that in September 1903 he was dismissed from his post and forced to leave Austria. Returning to Geneva, he put all he possessed into founding the *Imprimerie Internationale*, which on 1 September 1904 produced the first number of *Idjtihād*, a periodical devoted to the cause of political, intellectual, religious and social liberty, which Djewdet was to edit, albeit with interruptions, for almost 30 years. In the same year he began publication of the series known as *Kütübkhāne-i idjtihād*, in which many of his own works appeared and which he controlled until his death.

Among his works published about this time were *Ḳafḳasyadaki Müslümanlara Beyānnāme*, an appeal to the Muslims of the Caucasus to fight against Russian absolutism, and translations of Byron's *Prisoner of Chillon* and Alfieri's *Del principe e delle lettere*.

Within a few months the Turkish ambassador in Paris brought about Djewdet's expulsion from Switzerland. After a short stay in France, during which the Ottoman government sentenced him, in his absence, to life-imprisonment, loss of civil rights and confiscation of his property, he moved on to Cairo (late 1905), where he remained till mid-1911, working as an oculist while continuing his political and publishing activities. He joined the Young Turk Decentralist party and maintained an incessant output of pamphlets against the Sultan and, for a short while only, against the Ottoman house in general. Regarding ʿAbd al-Ḥamīd as an incorrigible despot, he was not impressed by his acceptance of the Constitution in 1908, but in this matter Djewdet's was a lone voice.

In July 1909, after the Sultan's abdication, *Idjtihād* ceased publication in Cairo, reappearing in June 1911 in Istanbul, where Djewdet had taken up residence. But his troubles did not end with the abdication. In February 1910 the Young Turk cabinet of Ibrāhīm Ḥaḳḳī Pasha banned 'the *History of Islām* by ʿAbd Allāh Djewdet Bey, which is directed against the Muslim faith', though it was Dozy's original and not Djewdet's preface to his translation of it which most offended the authorities. He was imprisoned for a month in the winter of 1912, after the Turkish defeats in the Balkan war. His attacks on the official theologians in the pages of *Idjtihād* led to its temporary suspension in 1913 and to a compulsory change in its title on three occasions in 1914. Djewdet's opposition to Turkish participation in the First World War caused the periodical to be suppressed again, from 13 February 1915 to 1 November 1918. Meanwhile he published several non-political works, among them his edition and translation of the *Rubāʿiyyāt-i Khayyām*.

During the grand-vizierate of Dāmad Ferīd Pasha he twice served as director-general of public health. But he again brought himself into conflict with the authorities by an article which he wrote in favour of Bahāʾism; in April 1922 he was sentenced to 2 years' imprisonment for blasphemy (*enbiyāya ṭaʿn*), but the legal argument dragged on till December 1926. In the result he was discharged and the crime itself was dropped from the new Turkish code. He died on 29 November 1932, working to the end.

His published works, original and translated, number over 60. Among his translations are six of Shakespeare's plays: although all but *Anṭuān we Kleʾopātrā* suffer through being made from French versions, they are by no means without merit. He deserves great credit also for making the modern study of psychology known to his compatriots.

The long article on djewdet by K. Süssheim in *EI*[1] (Suppl.), on which the present article is based, gives a complete list of his works and a bibliography, to which may be added: Enver Behnan Şapolyo, *Ziya Gökalp, İttihat ve Terakki ve Meşrutiyet tarihi*, Istanbul 1943, 30, 49-50, 70; Ahmed Bedevî Kuran, *İnkılâp tarihimiz ve Jön Türkler*, Istanbul 1945; idem, *İnkılâp tarihimiz ve İttihad ve Terakki*, Istanbul 1948; E. E. Ramsaur, Jr., *The young Turks*, Princeton 1957; B. Lewis, *The emergence of modern Turkey*, London 1961. (G. L. Lewis)

DJEWDET PASHA [see aḥmad djewdet pasha].

DJEZĀʾIRLI GHĀZĪ ḤASAN PASHA, one of the most famous *ḳapudan pashas* (Grand Admirals) of the Turkish navy. He was born in Tekfurdaghī (Rodosto) on the Sea of Marmora, where he is said to have been a slave in the service of a Muslim merchant; on being set free, he took part as a janissary in the campaign against Austria in 1737-39. At the end of the war he went to Algiers where he was received by the Deys and in the end was appointed beg of Tlemcen. Some time afterwards, to escape from the persecution of the Dey of Algiers, he took refuge in Spain. In 1760 he returned to Constantinople and was put in command of a warship by Sultan Muṣṭafā III. In 1180/1766-7 he obtained command of the *ḳapudana* (admiral's flag-ship) and in 1770 took part in the naval war against Russia in the Mediterranean. At the nava

battle of Česhme [*q.v.*] the *ḳapudana* of which he was in command caught fire while an attempt was being made to board the Russian flag-ship, and both ships blew up; Ḥasan Beg, although wounded, swam to safety. He then reached the Dardanelles and from there embarked on a daring manœuvre, as a result of which he succeeded in capturing from the Russians the island of Lemnos which they had previously occupied (10 October 1770). For this brilliant feat he was awarded the title of *Ghāzī* and the position of *ḳapudanpasha*. In 1773 and 1774 he took part, as *ser'asker* of Rusčuk, in the continental war against Russia; after the signature of the Treaty of Kaynardja (17 July 1774) he once again held the office of *ḳapudanpasha*. During the following years (1775 and 1776) he brought to an end the domination of Shaykh Ẓāhir al-'Umar [*q.v.*] and his sons over 'Akkā; in 1778, when disputes with Russia over the Crimea gave rise to fears of a new war, he conducted a naval demonstration in the Black Sea; but in fact it entirely failed to achieve its purpose and resulted in the loss of several large ships which ran aground or were involved in various accidents. In 1779 he was sent to the Morea and drove out the hordes of Albanians who had settled there after the withdrawal of the Russian fleet. He was made responsible for governing the Morea while continuing to hold the position of *ḳapudanpasha*; and in 1780 he crushed the revolt of the Maïnots. In the years that followed he took an important part in the government of his country. On three separate occasions (in 1781, 1785 and 1786), though for short periods only, he was entrusted with the Grand Vizierate in the capacity of *ḳā'immaḳām*. His second tenure of the Grand Vizierate followed the fall of his rival Khalīl Ḥāmid Pasha (31 March 1785) whom he had denounced to Sulṭān 'Abd al-Ḥamīd I as the instigator of a plot to depose the sultan and replace him by the crown prince Selīm. At the same time he carried out a reorganization of the navy, built the first barracks for the crews of the fleet (1784) and organized the upkeep of the forts on the Bosphorus, at the entry into Black Sea. In the years 1786 and 1787 he was given the task of restoring the Porte's control over Egypt which, under the Mamlūk *begs* Murād and Ibrāhīm, had become virtually independent. Though with only inadequate forces, he advanced to Cairo, set at liberty Yegen Meḥmed Pasha who was imprisoned there (8 August 1786) and routed the rebel begs; but in the autumn of 1787, while still engaged in restoring order in Egypt, he was recalled on account of the threat of war with Russia. When hostilities broke out, he was ordered to relieve the siege of Oczakov; with this aim, he engaged in several naval battles with the Russians in June 1788, in the vicinity, but in each case without success; he did contrive to send troops and supplies of food into the town, but he was unable to force the Russians to raise the siege. After losing several ships in a storm, he returned to Constantinople at the beginning of December 1788. On 7 April 1789 his patron Sultan 'Abd al-Ḥamīd died. The new sultan, Selīm III, dismissed Djezā'irli Ḥasan Pasha from the office of *ḳapudanpasha* and appointed him *ser'asker* of Ismā'īl. After the Grand Vizier had suffered a severe defeat near Martineshti (22 September), Ḥasan Pasha who had just driven back a Russian army from the fortress of Ismā'īl received the seal of office as Grand Vizier and Commander-in-chief of the forces (end of November). He spent the winter at Shumla and there carried on negotiations with Prince Potemkin. Some days after giving orders to leave winter-quarters he fell ill and on 14 Radjab 1204/30 March 1790 he died, perhaps poisoned by order of the Sultan. He was buried in the Bektashi convent which he had himself built outside the gates of Shumla.

Djezā'irli Ghāzī Ḥasan Pasha was distinguished in a quite remarkable way from other commanders of his time by his personal bravery: his missions to Syria, the Morea and Egypt show not only his military skill but also a political clear-sightedness which was rare at that period. Although his two expeditions in the Black Sea in 1778 and 1788 failed on all counts, he at least had the merit of rebuilding the fleet which had been destroyed at the battle of Česhme and of inaugurating the work of reorganizing the Turkish navy with the help of European technicians, a task which was to be continued by Küčük Ḥuseyn Pasha [*q.v.*]. His complicity in the fall and death of Khalīl Ḥāmid Pasha, though a proof of his own fidelity to his master, was nevertheless a dastardly action which delayed the revival of the Empire.

DJIBĀL, plural of the Arabic *djabal* (mountain or hill), a name given by the Arabs to the region formerly known as *Māh* (*Māda*, Media), which they also called 'Irāḳ 'Adjamī, to distinguish it from Arabian 'Irāḳ, *i.e.*, Lower Mesopotamia. The province came by its name of Djibāl because it is, except in its north-eastern portion, extremely mountainous. It was bounded in the east by the great desert of Khurāsān, on the south-east by Fārs, on the south by Khūzistān, on the west and south-west by Arabian 'Irāḳ, on the north-west by Ādharbāydjān and on the north by the Alburz range. The boundaries were never well defined and therefore underwent frequent changes. According to Iṣṭakhrī (203) and Ibn Ḥawḳal (267) there were antimony mines at Iṣfahān. Owing to the altitude, the climate is in general cold and there is much snow in winter.

Bibliography: Yāḳūt, ii, 15 (= Barbier de Meynard, *Dict. de la Perse*, 151); A. F. Mehren, *Manuel de la cosmographie*, 248; Muḳaddasī, 384; General Sir A. Houtum-Schindler, *Eastern Persian Irak* (Royal Geographical Society publication, London 1896); Le Strange, 185 ff. (L. LOCKHART)

AL-DJIBĀL, name formerly given by Arab authors to that portion of Arabia Petrea situated directly south of the Wādī al-Ḥasā, an affluent of the southern extremity of the Dead Sea, which from its lofty summits (rising to 1400 or 1600 m.) dominates the depression of the Wādī al-'Araba [*q.v.*], the southern prolongation of the Jordan Fault. This important mountain system, continued afterwards by that of al-Sharāt [*q.v.*] with which it is often confused, thus corresponds to the broken

border of the steppe desert, in a region where the Transjordan plateau perceptibly rises. Its tortuous relief, which makes it appear almost like a wall coloured with granites and porphyries on the east of Palestine, opens however by deep gashes on to the basin of the Dead Sea which receives most of the water of its streams, and for long supported by exports of bitumen the traffic of its commercial routes. It was always a region of communication, the strategic importance of which was plain at the time of the defence of the Roman *limes* against the invasions of the nomads, and at the time of the struggles between the Franks of Palestine (fortress of Montreal or al-S̲h̲awbak built by Baldwin I in 1115) and the Muslim principalities of Egypt and Syria. But it was also, until the first centuries of Islam, a cultivated region where the relatively abundant springs permitted the development of small centres of settled population, still attested by numerous ruins although these have been little studied.

In the Hellenic period this ancient land of eastern Edom, separated from the country of Moab by the traditional frontier of the Wādī al-Ḥasā already mentioned, had seen the growth of Nabataean power, the apogee of which must have marked the first period of Arab penetration to the borders of Palestine. We know that some sites of Gebalene like Boṣra, the former Mibṣar identified with the present-day village of Buṣayra to the south of al-Ṭafīla, are reckoned among the localities of the caravan kingdom of Petra. The same territory thereafter became part of the province of Arabia, the frontier marches which Trajan had substituted, in 106, for the Nabataean kingdom and which must then have gradually lost, to Palmyra's advantage, its monopoly of wealth of merchant origin. In 295 new administrative changes rejoined Gebalene to Palestine, an enormous province which was divided first into two and later into three departments in the second half of the 4th century. It was thus to the Third or Salutary Palestine that belonged, according to the Byzantine lists, the towns of Metrocomia (al-Ṭafīla), Mamopsora (Buṣayra), Arindela (al-ʿArandal) and the military post of Rabatha (the former Reḥoboth near the Wādī al-Riḥāb), all townships whose location can today only be established with difficulty, but whose importance seems to have been maintained at the very beginning of Muslim domination.

In fact the names of ʿArandal (Arindela), provided by al-Yaʿḳūbī, and of Ruwāt̲h̲ (Robatha), given by Ibn Ḥawḳal (113), are generally found in the early Arab geographers mentioning the capital of the canton of al-D̲j̲ibāl (according to the authors a canton of the d̲j̲und of Damascus or of the d̲j̲und of Filasṭīn) and distinguishing this district from Maʾāb (capital: Zug̲h̲ār) and from al-S̲h̲arāt (capital: Ad̲h̲ruḥ). Such a distinction, which Ibn K̲h̲urradād̲h̲bih also observes in his enumeration of the Syrian cantons, was not long in becoming blurred, doubtless because of the impoverishment and the progressive abandonment by its population of a region which had however been conquered without a struggle by Yazīd b. Abī Sufyān and would have been able to continue to live on its former prosperity. Even al-Maḳdisī (145) knows only al-S̲h̲arāt, to which he attributes Zug̲h̲ār as its capital and cites Maʿān and Ad̲h̲ruḥ as its principal towns, and Yāḳūt does likewise, locating the village of ʿArandal there. The term al-D̲j̲ibāl had then fallen into desuetude, and in the Mamlūk period writers, such as al-Ḳalḳas̲h̲andī and al-ʿUmarī, only mention, in the *niyāba* of al-Karak, the *wilāyas* of al-S̲h̲awbak, Zug̲h̲ār and Maʿān, extending over all the southern part of the province of Syria.

D̲J̲IBĀYA [see ʿĀMIL, BAYT AL-MĀL, ḌARĪBA, D̲J̲AHBAD̲H̲, K̲H̲ARĀD̲J̲, etc.].

D̲J̲IBRĪL [see D̲J̲ĀBRĀʾĪL].

D̲J̲IBŪTĪ (modern orth. Djibouti), a town and port on the African coast of the Gulf of Aden, at the mouth of the Gulf of Tadjoura. The promontory, composed of four small madrepore reefs upon which the town is built, was called Ras D̲j̲abūtī or Gabūtī, probably an Arabicized form of Gabod (in ʿAfar: "the plateaux in wicker-work"), a name still used for part of the coast nearby. The territory of D̲j̲ibūtī was given to France in March 1885 by local notables of the ʿĪse, a Somali-speaking tribe who had taken the place of the ʿAfar in that region during the 19th century and enjoyed independent status.

The town and port were built up from nothing by France. The former was founded by governor Lagarde on 6 March 1888. In 1896 it officially replaced Obok as chief town of the French establishments in the Gulf of Aden. In 1897 work was started on the Franco-Ethiopian railway (completed in 1917) which connects D̲j̲ibūtī with Addis Ababa, the capital of Ethiopia (784 m.). The port very soon supplanted Zaylāʿ and Tadjoura as the outlet for southern Ethiopia: possessing several deep-water docks, it is one of the leading ports on the east coast of Africa.

The population of D̲j̲ibūtī consists of 32,000 inhabitants, 28,000 of whom are Muslim. About two-thirds of the latter are Somalis (ʿĪse, Gadabbūrsi, Habar-Awwal and other Isāḳ, and some Dārōd), mostly immigrants from the former Somaliland or Ethiopia; a quarter are of foreign extraction. In addition, there are about 5,000 Arabs, 2,000 of whom are of foreign extraction, from the Yemen and Aden Territory, and who hold an important position in commerce; about 3,000 ʿAfar, and a small number of Indian, Ethiopian and Sudanese Muslims. Arabic is the common language of the majority.

For the territory known as French Somali Coast the Ḳāḍī of D̲j̲ibūtī, traditionally of Arab origin, is the leading religious personage. A very great majority of the population belongs to the S̲h̲āfiʿī school; almost the only exception are some Zaydī Arabs. With the ʿAfar and the Somali, custom (*ʿāda* and *ḥēr*, respectively) frequently takes precedence over the *s̲h̲arīʿa*. The religious order most widespread in D̲j̲ibūtī and throughout the region is the Ḳādiriyya; the next, though only in D̲j̲ibūtī, is the Aḥmadiyya which predominates in the Somali tribe of the Habar-D̲j̲aʿlo. In addition to ʿAbd al-Ḳādir al-D̲j̲īlānī, whose *maḳāmāt* are numerous, various saints of either foreign or local origin are venerated almost everywhere; in the ʿAfar country the (false) tomb of a certain s̲h̲ayk̲h̲ Abū Yazīd, who is said to

be Abū Yazīd al-Bisṭāmī [*q.v.*] dominates the Goda mountain. Besides the veneration of local inhabitants, pilgrims from the Arab and Somali regions sometimes visit it. In Djibūtī there are eight large mosques (*djāmiʿ*) of masonry, and several other smaller ones of lighter construction. Several Somali tribes or tribal groups (ʿĪse, Izāḳ, Dārōd) have dedicated small mosques or oratories in the town to their eponymous ancestors.

Since 1957, through the application of the law of 23 June 1956, Djibūtī, an over-seas territory of the French Republic, is administered, under the tutelage of a Governor representing metropolitan France, by a Council of Government, and possesses a Territorial Assembly elected by universal suffrage.

AL-DJIDD WA 'L-HAZL "seriousness and joking", a common combination of antithetical terms which have a certain resonance in Muslim ethics and the Arabic literary genre known as *adab*. Although only the second of these words occurs in the Ḳurʾān, without implication of any kind, while its antonym *djidd* and its synonym *muzāḥ* do not appear there at all, and although the Ḳurʾān does not explicitly prescribe either serious behaviour or the avoidance of jocularity, Islam without necessarily inspiring sadness and tears in spite of its pessimistic view of this world here below, at least invites Believers seriously to consider the divine promises and threats and, during their life on earth, to prepare for the eternal life which awaits them. Thus, in contrast to the levity and carefree attitude of the heathen who, not believing in the immortality of the soul and the resurrection, are inclined to enjoy all worldly pleasures with impunity, in Islam there is found a gravity dictated by the constant anxiety to deserve the divine reward; if, furthermore, *ḥilm* [*q.v.*] is a fundamental basis of Islamic ethics, it implies in particular a dignity of attitude which excludes any possibility of giving way to laughter and joking. The recollection of the ridicule suffered not only by the first Muslims but also by God's earliest messengers inspires a distaste for mockery which moreover is forbidden by the Ḳurʾān (XLIX, II), and even mere laughter, which is itself disapproved of; it is indeed God "who causes to laugh and causes to weep" (LIII, 44), but they will weep much in the other world who in this world have laughed a little (IX, 83/82); laughter is the behaviour of the enemies of God (cf. XXIII, 112/11; XLIII, 46/47; LIII, 60; LXXXIII, 29); however, the Believers will be rewarded in the hereafter, they will laugh and their faces will be bright and joyful (LXXX, 38-9).

Conscious of the nobility and dignity of his religion, of the gravity of his most ordinary actions and the moderation which he must observe in all things the Muslim, when he does not consider himself compelled to shed countless tears [see BAKKĀʾ], accordingly feels that he must be essentially serious and must reject any conduct incompatible with the impassivity which *ḥilm* requires, above all laughter and jocularity. This feeling, based upon a narrow interpretation of Ḳurʾānic ethics, finds an additional justification in a certain number of *ḥadīth*s and memorable sayings which somewhat later authors of ethical works or popular encyclopaedias unfailingly collect together in special paragraphs. Thus al-Ghazālī (*Iḥyāʾ*, book xxiv) declares jocularity to be forbidden and blameworthy, and quotes various *ḥadīth*s in support of his assertion, not, however, without tolerating a moderate joke; al-Ibshīhī (*Mustaṭraf*, ii, 308), immediately after the chapter concerning the prohibition of wine, devotes a paragraph to the forbidding of the joke, but does not fail to quote the favourable traditions at greater length and to repeat a certain number of droll anecdotes.

Indeed, the defenders of the joke are not short of arguments; the basic ideas which would serve to justify complete condemnation are in fact contradicted by certain *ḥadīth*s and reflections of wise Muslims, and it is easy to invoke the help of the Prophet himself who joked in various circumstances, as well as the pious forbears who hardly seem to have observed literally the Ḳurʾānic provisions against laughter and jocularity. The instance of the great *fuḳahāʾ* of Medina is readily taken as a precedent, and one cannot forget the curious but explicable fact, from the 1st/8th century in the Holy Cities, especially Medina, of the rise of an actual school of humourists whose profession it was to bring laughter and who helped to raise the amusing anecdote, the *nādira* [*q.v.*], to the rank of a literary form. ʿIrāḳ was not unaffected by this movement, and it is only necessary to glance through the *Fihrist* (Cairo ed., 201 ff., 435) to get an idea of the wealth of collections of anecdotes, either signed or anonymous, in circulation as early as the time of Ibn al-Nadīm; it is very probable that, insofar as they have a historical existence—and it is known that some of them did indeed exist—these entertainers and their aristocratic clients were scarcely embarrassed by prohibitions which others considered absolute. Collections of this kind, which certainly enjoyed a great vogue, have for the most part disappeared—like the imaginative writings, the richness of which is shown by the *Fihrist*—probably as the result of puritanical reaction, but they have been partly absorbed in more recent collections, and the literature of *adab* has preserved extracts from them which testify to the enduring though unacknowledged taste of Arab readers for the anecdote that is piquant, not to say obscene and indecent.

Apart from its moral aspect properly speaking, the comic element in fact raises a literary problem which al-Djāḥiẓ appears, once again, to have been the first to define clearly. Inheriting a religious and literary tradition of long standing, he was shocked by the needlessly stiff attitude of some of his contemporaries, and from the start he set out to justify laughter, which he associated with life, and jocularity, stressing its advantages so long as it was not exaggerated, and showing that Islam was a liberal religion which in no way enforced reserve and severity; from there he went on to attack the boredom bred by most writings which, in his opinion, were too serious, and he suggested a leavening of a little *hazl* in even the most severe speculations; at times he did not hesitate to interrupt a learned argument to quote some anecdotes, at the risk of discrediting the rest of his work, but he succeeded in harmoniously blending together the serious and the comic in

several of his writings, among which the *Kitāb al-Tarbiʿ wa'l-tadwīr* is unquestionably the most perfect example; in a word, he wished the literary form of *adab* to instruct while it amused. On this point he seems to have been partially successful for he has many imitators in both West and East. Going still further he put into practice, although unknowingly, the motto *castigat ridendo mores*, and wrote the *Kitāb al-Bukhalāʾ* in which he used laughter as an element in a moralizing design; in this case, however, his success is more questionable, and Ibn al-Djawzī appears to be more or less the only other writer who tried to use laughter freely for a similar purpose (*Akhbār al-ḥamḳā wa 'l-mughaffalīn*, Damascus 1345, 2-3). In general, comic writings and even contemporary theatrical comedies (a comedy is called *hazliyya*) are never looked on as more than an agreeable diversion, without any moral significance. (CH. PELLAT)

DJIDDA [see DJUDDA].

DJIDJELLI (Gegel in Leo Africanus; Zizeri, Zigeri-Gigerry, Gigeri in western writers), a coastal town in Algeria, 70 km. west of Bougie and 50 km. east of Collo. Geographical position 36° 49′ 54″ N.-5° 44′ 38″ E. Population 21,200 inhabitants (1955).

The ancient town of Djidjelli stood high up, where the citadel still stands, on a rocky peninsula which juts out between two bays, one to the west, small and very sheltered, the other lying to the east in a deep basin divided from the open sea by a line of reefs. The present town was built after the destruction of the Turkish town by an earthquake in 1856, and lies along the sea near to the large easterly bay. The port gains a certain importance from the export of cork which comes from the forests of the Little Kabylia.

Djidjelli is of very ancient origin. The Phoenicians in fact established a trading post at this spot, named Idgil, which later passed into the hands of the Carthaginians. During the Roman period the colony of Idgilgili was included in Mauretania Caesariensis, eventually being restored to Setifian Mauretania in the time of Diocletian. It was the seat of a bishopric. It passed successively under the domination of the Vandals and Byzantines. When the Arabs became masters of the Maghrib, Djidjelli no doubt retained its independence. Ibn Khaldūn tells us, in effect, that for the early centuries of the Hidjra it was in the hands of the Berber tribe of the Kutāma, who inhabited the nearby mountains (Ibn Khaldūn, *Hist. des Berbères*, tr. de Slane, i, 198). It seems, however, to have been ravaged and in some measure depopulated, since al-Bakrī describes it as a town "now inhabited" (*Description de l'Afrique septentrionale*, tr. de Slane, 193). According to this geographer, some remains of ancient monuments still survived. The inhabitants exported copper ore from the surrounding mountains to Ifrīḳiya and to other even remoter regions (al-Idrīsī, III^e climat, tr. De Goeje, 114). The Ḥammādids who had incorporated it in their kingdom had a castle built there.

Like various other places on the coast of Africa, Djidjelli passed into the hands of the Christians in the 6th/12th century. In 537/1143 George of Antioch, an admiral of Roger II of Sicily, seized the town and the castle. This situation remained unchanged until the overthrow of the Ḥammādid dynasty by ʿAbd al-Muʾmin (547/1152). The Christians were then compelled by this prince to evacuate Djidjelli.

After the break-up of the Almohad empire, Djidjelli fell to the Ḥafṣids and on several occasions was the subjects of disputes between the kings of Bougie and Tunis. Taking advantage of these quarrels, the inhabitants succeeded in making themselves practically independent of both parties (Leo Africanus, ed. Épaulard, 362). They made their living by exporting barley, flax, hemp, nuts and figs which they sent to Tunis, Egypt and even to towns in Italy. The port there was crowded with Christian shipping from Naples, Pisa, Catalonia and Genoa. Genoese merchants were even given favoured treatment there. The commercial importance of Djidjelli declined however in the 9th/15th century owing to the increase in piracy.

At the beginning of the 10th/16th century the Genoese, alarmed by the Spanish occupation of Bougie [see BIDJĀYA], had Djidjelli occupied by a fleet commanded by Andreas Doria. But in the following year ʿArūdj, who had been called in by the inhabitants, seized the Genoese fortress with the help of the Kabyle chief Aḥmad b. al-Ḳādī and settled in Djidjelli. It was from there that he set out in 918/1512 to lay siege to Bougie and, in 922/1516, to take Algiers [see ʿARŪDJ]. It was also there that Khayr al-Dīn came to seek refuge when defeated by the Kabyles, while his enemies ravaged Mitīdja and made themselves masters of Algiers. He lived there from 926/1520 until 934/1527, making it the base for his fleet, and even thought of choosing Djidjelli as his capital. He gave up the idea after the capture of the Peñon at Algiers [see KHAYR AL-DĪN], but granted exemption from all taxes in kind to the people of Djidjelli, for themselves and their descendants, as a reward for their fidelity.

Throughout the 16th century and the first half of the 17th, the Djidjelli seafarers continued their privateering, thus provoking reprisals from the Christian Powers. In 1020/1611 a Spanish fleet commanded by the marquis of Santa Cruz came and burnt the town. In 1074/1663 the French Government, on the advice of Admiral Duquesue and the engineer Clerville, considered setting up in Djidjelli a permanent base for the warships engaged in combating the Barbary corsairs. In the following year, a squadron under the orders of the duke of Beaufort disembarked at Djidjelli an expeditionary corps of 8,000 men commanded by the count of Gadagne. The French troops took possession of the town, almost without striking a blow, on 23 July 1664, and constructed entrenchments and fortifications at some distance from the shore. But, paralysed by the quarrels between their two leaders, they remained inactive in their positions and allowed the Algerians to bring up an army and to establish powerful batteries. Pulverized by the fire of the enemy's artillery, they were compelled to evacuate the town on 31 October 1664 and with great difficulty they re-embarked, with the loss of 2,000 men.

As a guarantee against further attacks, the Turks then established a permanent garrison in the town. It was, however, much too small to overawe the Kabyle tribes, and it remained penned in the citadel in a state of almost perpetual siege. The deys were only able to negotiate with the local inhabitants, from whom they had to obtain the wood required for ship-building, through the intermediary of marabouts belonging to one of the branches of the family of the Moḳrānī. One of them, al-Ḥādjdj ʿAbd al-Ḳādir, was appointed marabout of Djidjelli in 1168/1755, and the office was inherited by his descendants. At this period Djidjelli seems to have regained some of its commercial activity.

This relative prosperity was compromised by the Kabyle insurrection of 1803. The marabout Bū

Dali (al-Ḥādjdj Muḥammad b. al-Ḥarsh) attacked the town, and the Turkish garrison fled. Bū Dali proclaimed himself sultan and entrusted the government of Djidjelli to one of his supporters with the title of *agha*. Sent with a squadron to punish the rebels, the raʾīs Ḥamīdu bombarded the town, without result (1805). But shortly afterwards, having been maltreated by the Kabyles, the inhabitants made their submission to the dey who set up a new garrison in the town.

The fall of the Turkish Government in 1830 gave the people of Djidjelli their independence which they kept until 1839, when the sack of a French trading-post made Marshal Valée, the Governor-General of Algeria, decide to have the town occupied, on 13 May 1839. But the garrison, having no communications with the hinterland, remained besieged by the Kabyles until the moment when an expedition led by general Saint-Armand brought the tribes of the Little Kabylia to submission (1851).

DJIHĀD etymologically signifies an effort directed towards a determined objective. (Cf. *idjtihād*: the work of the scholar-jurists in seeking the solution of legal problems; *mudjāhada* or, again, *djihād*: an effort directed upon oneself for the attainment of moral and religious perfection. Certain writers, particularly among those of Shīʿite persuasion, qualify this *djihād* as "spiritual *djihād*" and as "the greater *djihād*", in opposition to the *djihād* which is our present concern and which is called "physical *djihād*" or "the lesser *djihād*". It is, however, very much more usual for the term *djihād* to denote this latter form of "effort").

In law, according to general doctrine and in historical tradition, the *djihād* consists of military action with the object of the expansion of Islam and, if need be, of its defence.

The notion stems from the fundamental principle of the universality of Islam: this religion, along with the temporal power which it implies, ought to embrace to whole universe, if necessary by force. The principle, however, must be partially combined with another which tolerates the existence, within the Islamic community itself, of the adherents of "the religions with holy books", *i.e.*, Christians, Jews and *Madjūs* [*q.v.*]. As far as these latter are concerned the *djihād* ceases as soon as they agree to submit to the political authority of Islam and to pay the poll tax (*djizya* [*q.v.*]) and the land tax (*kharādj* [*q.v.*]). As long as the question could still, in fact, be posed, a controversy existed—generally resolved by a negative answer—on the question as to whether the Christians and Jews of the Arabian peninsula were entitled to such treatment as of right. To the non-scriptuaries, in particular the idolaters, this half measure has no application according to the opinion of the majority: their conversion to Islam is obligatory under pain of being put to death or reduced into slavery.

In principle, the *djihād* is the one form of war which is permissible in Islam, for, in theory, Islam must constitute a single community organized under a single authority and any armed conflict between Muslims is prohibited.

Following, however, the disintegration of Muslim unity and the appearance, beginning in the middle of the 2nd/8th century, of an ever increasing number of independent States, the question arose as to how the wars which sprang up between them were to be classified. They were never included within the strict notion of *djihād*—even in the case of wars between states of different religious persuasion—at least according to the general Sunnī doctrine; and it is only by an abuse of language that this term is sometimes applied to them, while those authors who seek for a precise terminology label them only as *ḳitāl* or *muḳātala* (conflict, war). There is even hesitation in referring to the struggle against the renegade groups in Islam as *djihād*. The viewpoint of Shīʿite doctrine is not the same, for, according to the Shīʿa, a refusal to subscribe to their teaching is equivalent to unbelief (*kufr*). The same holds good, *a fortiori*, for the Khāridjite doctrine [see further TAKFĪR].

The *djihād* is a duty. This precept is laid down in all the sources. It is true that there are to be found in the Ḳurʾān divergent, and even contradictory, texts. These are classified by the doctrine, apart from certain variations of detail, into four successive categories: those which enjoin pardon for offences and encourage the invitation to Islam by peaceful persuasion; those which enjoin fighting to ward off agression; those which enjoin the initiative in attack, provided it is not within the four sacred months; and those which enjoin the initiative in attack absolutely, at all times and in all places. In sum, these differences correspond to the stages in the development of Muḥammad's thought and to the modifications of policy resulting from particular circumstances; the Meccan period during which Muḥammad, in general, confines himself to moral and religious teaching, and the Medina period when, having become the leader of a politico-religious community, he is able to undertake, spontaneously, the struggle against those who do not wish to join this community or submit to his authority. The doctrine holds that the later texts abrogate the former contradictory texts (the theory of *naskh* [*q.v.*]), to such effect that only those of the last category remain indubitably valid; and, accordingly, the rule on the subject may be formulated in these absolute terms: "the fight (*djihād*) is obligatory even when they (the unbelievers) have not themselves started it".

In two isolated opinions, however, attempts were made to temper the rule in some respects. According to one of these views, attributed to ʿAṭā (d. 114/732-3), the ancient prohibition against fighting during the sacred months remains valid; while according to the other, attributed to Sufyān al-Thawrī (born 97/715), the *djihād* is obligatory only in defence; it is simply recommended (*li 'l-nadb*) in attack. According to a view held by modern orientalist scholarship, Muḥammad's conception of the *djihād* as attack applied only in relation to the peoples of Arabia; its general application was the result of the *idjmāʿ* (general consensus of opinion) of the immediately succeeding generations. At root, of course, this involves the problem as to whether Muḥammad had conceived of Islam as universal or not.

The opinion of al-Thawrī appears to have been adopted by al-Djāḥiẓ. The heterodox movement of the Aḥmadiyya [*q.v.*], beginning towards the end of the 19th century, would go further than al-

Thawrī inasmuch as it refuses to recognize the legitimacy of the *djihād* even as a recommended activity. Cf., in the same sense, the doctrine of Bābism (see BĀB).

According to the general doctine of the Shīʿa, due account taken of their dogma concerning "the absence of the Imām", who alone has the necessary competence to order war, the practice of the *djihād* is necessarily suspended until the re-appearence of the Imām or the *ad hoc* appointment of a vicar designated by him for this task. The Zaydī sect, however, which does not recognize this dogma, follows the same teaching as that of the Sunnī doctrine.

Characteristics of the duty of *djihād*. The *djihād* is not an end in itself but a means which, in itself, is an evil (*fasād*), but which becomes legitimate and necessary by reason of the objective towards which it is directed: to rid the world of a greater evil; it is "good" from the fact that its purpose is "good" (*ḥasan li-ḥusn ghayrih*).

A religious duty. The *djihād* has the effect of extending the sway of the faith; it is prescribed by God and his Prophet; the Muslim dedicates himself to the *djihād* in the same way that, in Christianity, the monk dedicates himself to the service of God; in the same vein it is said in different *ḥadīth*s that "the *djihād* is the monasticism of Islam"; the *djihād* is "an act of pure devotion"; it is "one of the gates to Paradise"; rich heavenly rewards are guaranteed for those who devote themselves to it; those who fall in the *djihād* are the martyrs of the faith, etc. A substantial part of the doctrine reckons the *djihād* among the very "pillars" (*arkan*) of the religion, along with prayer and fasting etc. It is a duty which falls upon every Muslim who is male, free and able-bodied. It is generally considered that non-Muslims may be called upon to assist the Muslims in the *djihād*.

A "collective" obligation (*farḍ kifāya*) in contrast to *farḍ ʿayn*. The *farḍ kifāya* is that duty which is imposed upon the community considered as a whole and which only becomes obligatory for each individual in particular to the extent that his intervention is necessary for the realization of the purpose envisaged by the law. Thus, as soon as there exists a group of Muslims whose number is sufficient to fulfil the needs of a particular conflict, the obligation of the *djihād* no longer rests on the others. The general teaching is that the duty of *djihād* falls, in the first place, individually as a *farḍ ʿayn*, upon those who live in the territory nearest to the enemy, and that the same holds good in the case of the inhabitants of a town which is besieged. In the organized State, however, the appreciation of the precise moment at which the *djihād* is transformed into an *ʿayn* obligation is a matter for the discretion of the sovereign; so that, in the case of general mobilization, the *djihād* loses, for all the members of the community, its character of *farḍ kifāya*, and becomes, instead, *farḍ ʿayn*.

All this implies, however, that for those who hold the reins of authority and, in particular, the sovereign, the *djihād* is always an individual duty, since their own personal action is necessary in every case. Where there are several independent Muslim states, the duty will fall upon the ruler of the state which is nearest to the enemy.

Further, the duty of the *djihād* is relative and contingent in this dual sense that, on the one hand, it only comes into being when the circumstances are favourable and of such a nature as to offer some hope of a victorious outcome, and, on the other hand, the fulfilment of the duty may be renounced in consideration of the payment by the enemy of goods reaching a certain value, if such policy appears to be in conformity with the interests of the moment.

Its subsidiary character. Since the *djihād* is nothing more than a means to effect conversion to Islam or submission to its authority, there is only occasion to undertake it in circumstances where the people against whom it is directed have first been invited to join Islam. Discussion turned on the question as to whether it was necessary, on this ground, to address a formal invitation to the enemy. The general doctrine holds that since Islam is sufficiently widespread in the world, all peoples are presumed to know that they have been invited to join it. It is observed, however, that it would be desirable to repeat the invitation, except in cases where there is ground for apprehension that the enemy, thus forewarned, would profit from such a delay by better organizing his defences and, in this way, compromising the successful outcome of the *djihād*.

Its perpetual character. The duty of the *djihād* exists as long as the universal domination of Islam has not been attained. "Until the day of the resurrection", and "until the end of the world" say the maxims. Peace with non-Muslim nations is, therefore, a provisional state of affairs only; the chance of circumstances alone can justify it temporarily. Furthermore there can be no question of genuine peace treaties with these nations; only truces, whose duration ought not, in principle, to exceed ten years, are authorized. But even such truces are precarious, inasmuch as they can, before they expire, be repudiated unilaterally should it appear more profitable for Islam to resume the conflict. It is, however, recognized that such repudiation should be brought to the notice of the infidel party, and that he should be afforded sufficient opportunity to be able to disseminate the news of it throughout the whole of his territory [see ṢULḤ].

Its defensive as well as offensive character. The *djihād* has principally an offensive character; but it is equally a *djihād* when it is a case of defending Islam against aggression. This indeed, is the essential purpose of the *ribāṭ* [*q.v.*] undertaken by isolated groups or individuals settled on the frontiers of Islam. The *ribāṭ* is a particularly meritorious act.

Finally, there is at the present time a thesis, of a wholly apologetic character, according to which Islam relies for its expansion exclusively upon persuasion and other peaceful means, and the *djihād* is only authorized in cases of "self defence" and of "support owed to a defenceless ally or brother". Disregarding entirely the previous doctrine and historical tradition, as well as the texts of the Ḳurʾān and the *sunna* on the basis of which it was formulated, but claiming, even so, to remain within the bounds of strict orthodoxy, this thesis takes into account only those early texts which state the contrary (v. *supra*).

DJIHĀNGĪR [see DJAHĀNGĪR].

DJILD. The use of leather (*djild, adīm*) as a writing material is well known in the Near East. In Egypt it was used already in the Middle Kingdom; leather manuscripts are known from the empire of Meroe and Nubia to the south of Egypt, from Palestine and Persia. In the latter country the βασιλικαὶ διφθέραι—the Royal archives consisting of leather documents—were known to Ctesias (*apud* Diodorus Siculus, ii, 32, cf. DAFTAR), and when the Persians conquered Egypt for a short time at the beginning of the 7th century A.D., they continued to write on leather here. The leather pieces found in Egypt and preserved in several European collections testify to this fact. When the Persians conquered Southern Arabia soon after 570 A.D., they greatly encouraged the leather industry there; the South-Arabian leather was famous as a writing material of special delicacy and smoothness. But even before the Persian occupation of the Yaman, leather was known there as a writing material. The debenture of a Ḥimyarite to the grandfather of the Prophet Muḥammad, ʿAbd al-Muṭṭalib b. Hāshim, which was preserved in the treasury of the Caliph al-Maʾmūn, was written on a piece of leather. Leather was thus well known to the Arabs even before Islam, and poets like al-Muraḳḳish the Elder and Labīd quote instances to this effect. Arabs even knew how to colour skins yellow with saffron, and later invented, in al-Kūfa, an improvement on the treatment of skins, *viz.*, they replaced quick-lime (which made the skins very dry) by dates, so that the skins became soft. We are told of numerous cases when the Prophet Muḥammad wrote (or had written) on leather—*e.g.*, gifts of lands and wells—and even pieces of the Revelation were written on it. His immediate successors, *e.g.*, ʿAlī, followed this example. As a peculiarity it may be mentioned that the Caliph ʿUthmān is credited with a Ḳurʾān, written on ostrich-skin and preserved in the ʿĀrif Ḥikmet Library in Medina (cf. *ZDMG*, xc, 1956, 102). During the Umayyad period leather was used among the Arabs as writing material; for example the poet Dhu 'l-Rumma (d. 117/735-6) mentions it in one of his *Ḳaṣīda*s (*Aghānī*, xvi, 111). A letter on leather, addressed in Arabic by the Soghdian ruler Diwashtī to the governor Djarrāḥ b. ʿAbd Allāh about 100/719, was discovered in 1932 in Zarafshān in Central Asia (cf. I. Yu. Krachkovsky, *Among Arabic manuscripts*, Leiden 1953, 142). This document was not a unique piece, for the book-collection of Muḥammad b. al-Ḥusayn, mentioned in Ibn al-Nadīm's *Fihrist* (40, 54), contained also leather pieces along with papers and papyri. Various documents on leather are preserved in different papyrus-collections; the oldest piece, a debenture in respect of a nuptial gift, dated 233/847, is in the possession of the Egyptian National Library in Cairo (Cat. Taʾrīkh, n° 1871), the youngest, dated 722 A.H., of the State Museum in Berlin. Special mention must be made of Ḳurʾān-manuscripts written on antelope-skins, to which al-Bīrūnī refers in his *Taʾrīkh al-Hind* (81).

A special kind of leather is parchment (*djild, waraḳ, ḳirṭās, raḳḳ, riḳḳ*), refined from skins of sheep, goats and calves. It was known in Arabia already in the fifth century A.D., since the Himyarite poet Ḳudam b. Ḳādim mentions it in his poem, and Labīd speaks of "talking parchment" (*ṭirs nāṭiḳ*). *Ṭirs* means parchment from which the original text had been washed off and which then was written on again; such a *ṭirs*, bearing a Latin biblical fragment of the fifth century A.D. on one side and an Arabic legal text of the 1st/7th century running across the Latin text on the other, is preserved in Florence. Such palimpsests are still rare. Parchment was used—among other materials—to write parts of the Revelation, and such scraps were found in the legacy of the Prophet. The use of parchment for sacred books was specific for the Hebrews, and the parchment *Thora*-rolls were well known to the Arabs (cf. Bakrī, *Muʿdjam*, ii, 511, who quotes a verse of Djarīr (d. 110/728)). Also the Prophet Muḥammad used parchment on several occasions, and *raḳḳ* as well as *ḳirṭās* is mentioned in the Ḳurʾān (VI, 7, LII, 3). The collection of the Holy Book of Islam, arranged by Zayd b. Thābit, is also said to have been written on parchment (A. Sprenger, *Das Leben und die Lehre des Muḥammad*, iii, p. xl). In the early Umayyad period parchment was preferred as a writing material along with papyri in Syria; in Egypt it was especially used for Ḳurʾān-codices—as also in other Islamic countries—but only exceptionally for secular literary texts. In North Africa a depository of the Sidi ʿUḳba Mosque in al-Ḳayrawān furnished lately some hundreds of literary parchment manuscripts. In ʿIrāḳ parchment was predominantly used in the chanceries until the Barmakid al-Faḍl b. Yaḥyā b. Khālid replaced it by paper. A special precious kind of parchment was made of gazelle-skins. This gazelle-parchment was expensive but nevertheless mentioned several times in papyri, *e.g.*, also in a magical text. The Egyptian National Library possesses several Ḳurʾān manuscripts written on gazelle-parchment (cf. *Fihrist al-kutub al-ʿarabiyya al-maḥfūẓa bi 'l-kutubkhāna al-Khedīwiyya*, i, Cairo 1892-93, 2). In Egypt parchment, made of skins of sheep, goats and calves, plays a very minor rôle in comparison with papyrus. The oldest parchment document hitherto known is dated 168/784; it formed part of the collection of the late German consul Todros Muhareb in Luxor. A specially precious kind of parchment was purple-coloured, well known from early Latin mediaeval manuscripts. The collection of F. Martin contained a beautiful blue-coloured parchment with exquisite Kūfic script in gold, originally belonging to a

Ḳur'ān manuscript from the Mosque at Meshhed (Persia).

AL-**DJILDAĶĪ** [see SUPPLEMENT].

AL-**DJĪLĪ** [see ʿABD AL-ĶĀDIR AL-DJĪLĀNĪ].

DJILLIĶ, the name of a pre-Islamic site famous for its abundant water and shady gardens, and often celebrated by Damascene poets who discovered this name in Ḥassān b. Thābit. It was there that the Ghassānid princes of the Djafnid branch venerated the tomb of one of their ancestors, and that they built what was, with the exception of Djābiya [*q.v.*], the most renowned of their dwellings. It was also no doubt the principal, if not permanent, place of encampment for their troops. About twelve kilometres south of Damascus, the place became a *bādiya* [see ḤĪRA] to which Yazīd b. Muʿāwiya loved to go. When praising the beauties of this resort, the poet ʿArḳala al-Dimashḳī called it "the languorous pupil of the eye of the world".

The identification of this site is somewhat vague in the writings of Arab authors: according to some, it is a village in the Ghūṭa, where there is a statue of a woman from which a spring gushes forth; for others, the name covers the whole group of districts of Damascus together with the Ghūṭa. Finally, some writers, among whom are the mediaeval geographer al-Dimashḳī and the polygraph al-Ḳalḳashandī, who is the only one to use the spelling Djillāḳ, attribute the name to Damascus itself; thus for instance Quatremère in his *Histoire des Sultans Mamelouks* always translates Djilliḳ by Damascus. Yāḳūt placed Djilliḳ in the Ghūṭa, by which term we must understand all the cultivated land in the territory of Damascus, the southern boundary of which for administrative purposes was on the Djabal Kiswa. From the different texts at our disposal we can deduce the following topographical data: Djilliḳ was situated to the south-east of Mount Hermon for, when coming from the south, one could see the "snow mountain" behind the town; it was not far distant from Boṣrā [*q.v.*]; through it passed the road from the Balḳā', as well as the road from Damascus to Cairo, crossing the hills at Djilliḳ by the pass of the *ʿaḳāba* of al-Shaḥūra.

Relying on these facts, R. Dussaud has shown that Djilliḳ must be distinguished from Damascus and identified with Kiswa. These conclusions, although accepted by R. Devreesse, were not shared by H. Lammens who tried to fix the place in the south of Syria and, despite the philological difficulties of the change in the last syllable, identified it with Djillīn in southern Ḥawrān. In support of his theory Lammens quoted as evidence a gloss from De Goeje. The identification of Djilliḳ with Kiswa is supported by the fact that on two occasions, in 12/633 and 15/636, the Byzantines when fighting against the Muslim conquerors pitched camp at Djilliḳ; now the only place south of Damascus where a strategic position for the defence of the town is to be found, and where, on many occasions throughout the centuries, armies have regrouped at the natural barrier (the *thaniyya* of al-Ṭabarī) formed by the Nahr al-Aʿwadj is precisely at Kiswa [*q.v.*].

We do not know at what date the name Djilliḳ disappeared from Syrian toponomy. At the end of the Umayyad period it was still sufficiently alive for the Syrian conquerors of Spain to give the name to a spot renowned for its abundant supplies of water, not far from Sarragossa.

(N. Elisséeff)

DJILLĪĶIYYA, Galicia, the north-west region of the Iberian peninsula, which now includes the four Spanish provinces of La Coruña, Lugo, Pontevedra and Orense. Arab geographers thought of al-Andalus as a triangle, one of the angles being fixed on the sea-coast at the end of the Cantabrian *cordillera*; there they placed an image or monument which can be identified with the Tower of Hercules —situated on the promontory where the town of La Coruña stands—which, from Roman times, has served as a lighthouse. As Arab rule lasted for only a short time in this part, historians were not very familiar with its boundaries or topography. They made no distinction between Galicia and Asturias, and gave no clear definition of the eastern frontier, even putting it as far away as the country of the Vascones. They placed the Rock of Galicia and the mountain of Pelayo—Covadonga—in the sea. For al-Idrīsī, the church of St. James of Compostella stood on a promontory in the Atlantic, and *al-Rawḍ al-miʿṭār* speaks of the lighthouse castle—the Tower of Hercules?—as being near Lugo, on the third angle of the triangle and near the church of St. James. In order to indicate the frontiers of Galicia they relied on the state of the country as they knew it at the time they were writing or as described by their sources, without taking their date into account. In this way they placed the south-west frontier in the Algarve, the old name of what is now Portugal, and gave Braga as the frontier, while at other times they spoke of the town of Viseo as the centre of Portuguese Galicia which extended to the Mondego.

At the time when it was conquered, Lugo was looked upon as the capital and the whole of Galicia was occupied by the Berbers who, after being defeated by the Arabs and made desperate by famine, fled to Morocco, leaving Alfonso I to extend the territories of the Djillīḳiyya as far as the Duero. A state of war existed permanently between Galicia and Cordova, and military expeditions were halted only when the belligerents were compelled by disputes and internal difficulties to refrain from war. Al-Bakrī, an Andalusian, writing in the middle of the 5th/11th century, is the Arab writer who indicates

most precisely the limits and divisions of the Djillīkiyya at his own time, that is to say when the kingdom of the Taifas was at its height. In the Kayrawān manuscript which the editor of *al-Rawḍ al-miʿṭār* cannot have known, he tells us that the ancients had already divided Galicia into four regions: the first lies to the west, curving round towards the north. Its inhabitants are Galicians and its territory is Galicia, properly speaking, reaching as far north as the town of Braga; the second is the region of Asturias which, according to him, takes its name from the river Ashtru, an unknown name which cannot be identified phonetically with the Nalón, the principal river in Asturias; the third zone is south-west Galicia, and its inhabitants, owning only the small enclave between Braga and Oporto, took from the latter town the name "Portuguese"; the fourth zone, situated in the south-east, was called Castile and included two sub-divisions, Upper Castile corresponding with the kingdom of Leon and Lower Castile, at that time with fortresses at Grañon in the province of Logroño, 25 km. from Najera, Alcocero on the Oca 30 km. from the same town, and lastly Burgos *caput Castellae*. Al-Bakrī was familiar with Constantine's division of the Peninsula into six zones; in the second of these zones, the centre of which was Braga and which included the region of the Galicians and Celts, he names Oporto, Tuy, Orense, Lugo, Britania—now Santa Maria de Bretonia, in the *partido judicial* of Mondoñedo—Astorga, in the province of Leon, St. James of Compostella—which can only be the town of the Golden Church (*Kanīsat al-dhahab*), although al-Bakrī makes them two distinct towns—and lastly Iria—now Padrón in the province of La Coruña—Bataca, an unidentified name, and Sarria, 35 km. south of Lugo. Ibn ʿAbd al-Munʿim, following al-Bakrī, describes Galicia as a country with flat, sandy ground while the inhabitants are depicted as unscrupulous warriors, highly primitive in their customs. On the other hand al-Makkarī praises them for their beauty and remarks upon the good qualities of captives; but all are agreed in thinking their reckless courage equal or even superior to that of the Franks, and in striking contrast to the character of the Visigoths and Hispano-Romans before the Muslim invasion.

Under the one name Djillīkiyya Arab historians include the kingdoms of Asturias and Leon; in their view, the kings of both are Galician, and the towns Galician also, Oviedo and Leon like Zamora and Astorga. Military expeditions by the Caliphate did not succeed in reestablishing a firm hold upon the territories south of the Duero which had been lost; and although ʿAbd al-Raḥmān III and *al-ḥādjib* al-Manṣūr were successful in imposing their authority over the kings of Asturias and Leon and making them their vassals, the victorious campaigns of the latter, which reached their apogee with the capture and sack of St. James of Compostella, completed the wide ring of devastating raids into the territories of the Great Djillīkiyya; and very soon afterwards, when the Umayyad caliphate crumbled, it was these kingdoms, springing from the nucleus of Galicia, which carried the war into the Muslim territories and, under Alfonso VI, even captured Toledo.

DJILWA, the ceremony of raising the bride's veil, and the present made by the husband to the wife on this occasion.

According to al-Djurdjānī who bases himself on Muḥyi 'l-Dīn al-ʿArabī (*Definitiones*, ed. Flügel, 80, 294), *djilwa* is the name of the state in which the mystic is on coming out of the *khalwa*: filled with the emanations of divine attributes, his own personality has disappeared and mingles with the being of God (cf. Guys, *Un derviche Algérien*, 203).

One of the two sacred books of the Yazīdīs is called *Kitāb al-Djilwa* [*q.v.*]. (CL. HUART)

DJILWATIYYA (Turkish Djelwetiyye), the name of a *ṭarīka* founded by Sheykh ʿAzīz Maḥmūd Hudāʾī of Üsküdar (Scutari, nr. Istanbul). The name is said to come from *djalwa* (leaving one's native country, emigrating), which, as a *ṣūfī* term, denotes a creature's emergence from solitary withdrawal (*khalwa*) through contemplation of God's attributes and its annihilation in God's Being (Sayyīd Sharīf, *Taʿrīfāt*, 3). An alternative or simultaneous derivation from *djilwa* [*q,v.*], can also be put forward. The Djilwatiyya were a purely Sunnī *ṭarīka*, based on the *dhikr* [*q.v.*] of seven of the names (*asmāʾ*) of God, known as "essential" or "root-names" (*uṣūl-i asmāʾ*) to which five "branch-names" *furūʿ-i asmāʾ*) were added (*i.e.*, *Wahhāb*, *Fattāḥ*, *Wāḥid*, *Aḥad* and *Ṣamad*). The *sheykh* of the *ṭarīka* prescribed to individual dervishes those names which they had to recite, a prescription which might be varied on the basis of dreams reported by the dervishes. Other devotional practices of the *ṭarīka* included various supererogatory prayers and fasts. Djilwatīs wore green turbans (*tādj*) made of 13 strips of material which were meant to symbolize the 12 names of God and their transcendent unity (Ismāʿīl Ḥakkī, *Silsilanāme-i Djilwatiyye*, 1291 AH, 87). The centre (*pīr makāmī*) of the *ṭarīka* was in the *tekke* in Üsküdar where Maḥmūd Hudāʾī was buried. A second famous centre was the *tekke* in Bursa of Ismāʿīl Ḥakkī, the historian of the order and the author of the Turkish commentary *Rūḥ al-bayān* and of other treatises.

According to Ismāʿīl Ḥakkī (*Silsilanāme*, 63) the practice of the *dhikr* of seven names derives from Sheykh Ibrāhīm Zāhid Gīlānī (690/1291) through his pupil *Shaykh* Abū Isḥāk Ṣafī al-Dīn Ardabīlī (735/1334-5). It was also the former who devised the practice (*mashrab*) of *djalwa*, as opposed to that of *khalwa*. Ismāʿīl Ḥakkī adds that a Djilwatī who stops short at the withdrawal of *khalwa* should really be considered a Khalwatī, just as a Khalwatī who has tasted the joy of *djalwa* (or *djilwa*) is really a Djilwatī (*op. cit.*, 64).

In any case the Djilwatiyya were an off-shoot of the Bayrāmiyya, although the spiritual filiation of Maḥmūd Hudāʾī to Ḥādjdjī Bayrām is uncertain in places. In his treatise entitled *Wāķiʿāt*, Hudāʾī names as his *sheykh* Muḥyī al-Dīn Uftāde, who died in Bursa in 988/1580-1. The latter was, according to Ismāʿīl Ḥakkī, the *khalīfa* of Kötürüm (or Paralytic) Khiḍr Dede, also of Bursa, who was in turn a follower of Ḥādjdjī Bayrām (*op. cit.*, 76). Another tradition (Ḥarīrīzāde Kamāl al-Dīn, *Tibyān wasāʾil al-ḥakāʾik fī bayān salāsil al-ṭarāʾik*, Fātiḥ Lib., Ibrāhīm Efendī Collection, Nos. 430-2, i, 227b, 246a), the spiritual genealogy is from Ḥādjdjī Bayrām to Ak Shams al-Dīn to Ḥamd Allāh Čelebi to Uftāde.

According to ʿAṭāʾī (*Shakāʾik-i nuʿmāniyye dheyli*, 64 ff., 358 ff., 760 ff.), Hudāʾī was born at

Seferī-Ḥiṣār. Meḥmed Gülshen Efendi (*Kulliyāt-i Ḥaḍrat-i Hudā'ī*, 1338-40 A.H.) varies this to Sivri-Ḥiṣār and gives the date of birth as 950/1543-4, while both the *Silsilanāme* and *Tibyān* agree on Ḳoč-Ḥiṣār of Ḳonya, the latter bringing the date of birth forward to 948/1541-2. Hudā'ī studied in Istanbul before becoming an instructor (*mu'īd*) at the *madrasa* of Sultan Selīm in Edirne, from where he went to Syria and Egypt as assistant *ḳāḍī* (*nā'ib*). In Egypt he attached himself to one Karīm al-Dīn Khalwatī, becoming himself a Khalwatī. He went next to Bursa where he was appointed *mudarris* at the Farhādiyya *madrasa* and *nā'ib* at the Court of the Old Mosque (Djāmi'-i 'Atīḳ). Tradition has it that it was at this time that he saw in a dream a vision of some people whom he considered righteous tormented in hell, and others in heaven whom he had thought sinners. He thereupon made his submission to Sheykh Uftāde. The *Tibyān* and the *Kulliyāt* give the date of the conversion as 985/1577, the latter giving another version of the story, according to which Hudā'ī first served Uftāde for some three years and was then sent as the latter's *khalīfa* to Sivri Ḥiṣār (*op. cit.*, 4 ff.). Going later to Istanbul, Hudā'ī first settled in two rooms which he had built of stone next to the *masdjid* of Muṣallā in Čamlïdja, moving on first to a room near the mosque of Rūm (the Greek) Meḥmed Pasha and then to the present Djilwatiyya mosque and *tekke* which was built between 997/1589 and 1003/1595. He also preached and taught in other mosques, chief among them the Conqueror's mosque (Fātiḥ Djāmi'i), where, according to Pečewī (*Ta'rīkh*, 1283 AH, ii, 36, 357) he was appointed preacher at the instigation of Ṣun' Allāh, the *ḳaḍ'asker* of Rumeli. This, Pečewī says, was the beginning of his fame. He enjoyed the favour and the respect of the Sultan Aḥmed I, owing these, according to the *Silsilanāme*, to a miraculous interpretation of the Sultan's dream. This royal favour is corroborated by the respectful references to Hudā'ī in both Pečewī and Na'īmā (*Rawḍat al-Ḥusayn fī khulāṣat akhbār al-khāfiḳayn*, 1280 AH, i, 112 ff., 357; ii, 154, 158). Na'īmā reports, for example, that he was asked to wash the dead Sultan's body, but that he excused himself on the grounds of old age, entrusting the duty to his *khalīfa* Sha'bān Dede (ii, 154). Hudā'ī per-formed the pilgrimage three times. He died in 1038/1628.

Na'īmā describes Hudā'ī as an eloquent and soft-spoken man. The *dhayl* (continuation) of the *Shaḳā'iḳ* (i, 64) reports that he let his hair grow long, a habit which was imitated by his followers. Hudā'ī wrote 18 works in Arabic and 12 in Turkish. These are to be found in the Selīm Āghā Library in Üsküdar (for titles of lost works see *Kulliyāt*, 607 note). Most of them are short treatises, including an unfinished Arabic commentary on the *Ḳur'ān* entitled *Madjālis*. His printed *Kulliyāt* includes a *dīwān*, as well as an Arabic treatise entitled *Risāla fī Ṭarīḳāt al-Muḥammadiyya*, a Turkish *Ṭarīḳatnāme* and a Turkish rhymed treatise, entitled *Nadjāt al-gharīḳ* (Salvation of the Drowned). His most important work is undoubtedly the *Wāḳi'āt* or collected sayings (in Arabic rendering) of Sheykh Uftāde (MS in the author's hand, No. 574 in the Selīm Āghā Library). Apart from its mystical interest, this contains many important historical references to contemporary men and events. Meḥmed Gülshen Efendi in his edition of the *Kulliyāt* dates many of the devotional poems, one of which commemorates the death of Murād III (p. 79), adding that many of them were set to music, some by Hudā'ī himself. Some of the poems are syllabic in metre and are strongly influenced by Yūnus Emre. They show Hudā'ī as an orthodox Sunnī *shaykh*, an ascetic (*zāhid*) within the limits of the *sharī'a*, hostile to exalted and more-or-less free-thinking *ṣūfī*s. He even petitioned the Sultan against Badr al-Dīn, the son of the *ḳāḍī* of Simavna, and his followers, among whom he seems to have been numbered for a time (M. Sharaf al-Dīn (Şerefeddin), *Simavnaḳāḍīsī-oghlu Sheykh Badr al-Dīn*, Istanbul 1927, 72 ff.).

The Djilwatiyya had an off-shoot in the Hāshimiyya, founded by Hāshim Baba (d. 1773), a Djilwati *sheykh* who was simultaneously a Malāmī (even laying claim to the title of "Pole" or *ḳuṭub*) and also a Bektashī (among whom he was known as *Baba* or *Dede* and whom also he tried to split by devising an amended ritual).

Bibliography: in the article.

(ABDÜLBÂKÎ GÖLPINARLI)

DJĪM, 5th letter of the Arabic alphabet, transcribed *dj*; numerical value 3, so agreeing, like *dāl*, with the order of the letters of the Syriac (and Canaanite) alphabet [see ABDJAD]. It represents a *g* (occlusive, postpalatal[1], voiced) in the ancient Semitic (and in common Semitic).

In Arabic, this articulation has evolved: the point of articulation has been carried forward, in an unconditioned way[2], to the middle and prepalatal region, as a consequence of which it readily developed elements of palatalization (g^y and d^y) and affrication (*dj*). A simplification of the articulation into a spirant became possible, through the dropping of the first occlusive phase in the affricated (*dj* > *j* where *j* represents a voiced palatal fricative, as French *j*), through the weakening and disappearance of the occlusive element in the palatalized consonant ($d^y > y$). This course of evolution can be written out as follows:

$$g > g^y > d^y \begin{cases} d^y > y \\ d^y > \underline{dj} > j \end{cases}$$

It is probable that the sound *g* of the Semitic *djīm* began at a very early time to evolve in the field which we are now considering. In any event, from the traditional pronunciation of the readers of the Ḳur'ān, from the basic ideas of the Arab grammarians regarding its articulation, and from the modifications in it conditioned by the proximity of other sounds which they have noted (assimilations and dissimilations), one can justifiably conclude that,

1) *g* is defined as: occlusive, postpalatal, voiced; but *g* and *k* (the corresponding unvoiced) are the consonants most influenced, as regards the point of articulation, by the adjacent vowel; they are brought forward to the mediopalatal region with a palatal vowel, and carried back to the velar region with a velar vowel; *postpalatal* signifies a medial position: that of *g*, *k*, articulated with a vowel *a*.

2) It would be better to say: for reasons unknown. A. Martinet has tried precisely to discover the causes of this displacement by structural methods, in his study *La palatisation "spontanée" de* g *en arabe*, in *BSL*, liv/1, 90-102; he has brought out the structural conditioning of the evolutionary processes, by starting from the concept that Arabic emphatics are derived from glottalized consonants. His analysis is original and instructive, but in its turn also is conditioned by the basic hypothesis described above.

from the dawn of the classical period, the occluded *g* in *djīm* was opened through palatalization, affrication or even complete spirantization, at least in certain dialects. Naturally, differences analogous to those existing today in spoken languages, concerning the pronunciation of *djīm*, must have existed between the various ancient languages; some of them had no doubt gone much further than others in evolving towards spirantization. Besides, this process of evolution is still continuing today, as we can see: in Jerusalem, for example, a European observer (Dr. Rosen) has noticed that the affricated *dj* which as a child he used to hear as the pronunciation of *djīm* has now, in the pronunciation of the present time, become a palato-alveolar *j* (see E. Littmann, *Neuarabische Volkspoesie*, 3 n. 1). In certain languages in which the current pronunciation of *djīm* is now *j*, dissimilations in *d* or *g* can only be explained as fixed survivals of a former condition, at a comparatively recent stage in the development of this consonant (cf. Brockelmann, *Grundriss*, i, 235-6).

Arab grammarians looked upon *djīm* as a *shadīda*, and therefore an occlusive, which excludes an affricated (*dj*) or spirant (*j*); and as a *madjhūra*, which means *voiced* (Sībawayhi, ii (Paris), 453 and 454; al-Zamakhsharī, *Muf.*, 2nd ed. Broch. § 734; etc.). As regards the *makhradj*, al-Khalīl's *shadjriyya* (*Muf.*, *ibid.*) is difficult to interpret, but the description given by Sībawayhi (ii, 453 l. 7-8) indicates clearly that the active organ of articulation is the middle of the tongue (that is to say, the front) and the middle of the upper palate. Elsewhere they rejected (Sībawayhi, ii, 452; etc.) the articulation of *djīm* like *kāf* (usual in Baghdād and in the Yemen) and of *djīm* like *shīn*, that is to say like *g* for the first and *j* for the second, which is a quite justifiable interpretation (as in J. Cantineau, *Cours*, 72 and others); d^y (palatalized *d*) being excluded by the designation of the front (and not the tip) of the tongue, there only remains g^y [1]. Arab grammarians appear indeed to consider this to be the only correct pronunciation of *djīm*. This articulation fulfils the required conditions and in addition easily conforms with the passage of *yā*ʾ to *djīm* practised in certain tribes (Rabin, chart 19). In the traditional reading of Arabic the pronunciation *dj* (affricated, prepalatal, voiced) is generally adopted.

As regards the modern dialects, it is possible to draw up a table tracing the pronunciation of *djīm* in general lines as follows:

1. Retention of the original pronunciation *g*: this seems to have been known in Aden in the Middle Ages (according to al-Muḳaddasī, 96 *l.* 14). It is found today in Muscat, in Yemeni dialects and in various Bedouin-dialects in central Arabia. In Dathīna (south-west Arabia) it is found in the conjugation of verbs with *djīm* as first radical, when it forms a syllable with the prefixes (e.g.: *yigzaʿ*). In Ḍofār (south-east Arabia) this pronunciation no longer exists save in the recitation of poetry, that is to say it has an archaic and quasi-artificial character. This pronunciation is also the manner of articulation proper to the dialects of Lower Egypt, and of Cairo in particular. Finally, in most of the dialects of north Morocco and also in Nédroma (Algeria), *g* is by dissimilation the pronunciation of *djīm* when used in conjunction with a sibilant or palato-alveolar.

2. Pronunciation of *djīm* as g^y or d^y: this is the pronunciation found in the majority of Bedouin-dialects in north, central and south Arabia. It is also the pronunciation used by the fellaheen and Bedouins of Upper Egypt. It occasionally occurs in Ḍofār.

3. Pronunciation of *djīm* as *y*: today this occurs widely in the lower Euphrates region. It is the most widely used pronunciation in Ḍofār. It is common but not regularly used in various dialects in south-west Arabia. It is attested in a certain number of north Arabian tribes (notably the Sardīye and the Sirḥān) and in the Djōf; for further particulars see J. Cantineau, *Cours*, 74. In the other Arabic dialects only a few sporadic examples can be given.

4. Pronunciation of *djīm* as *dj*: this pronunciation is already attested in ʿIrāḳ in the golden age of classical literature (according to Brockelmann's interpretation, in *ZA*, xiii (1898), 126 and *Grundriss*, i, 122). It is found in certain places in central Arabia, it is the form most widely used in the Yemen, it is current in Mecca, in ʿIrāḳ, among the Muslims in Jerusalem, in Aleppo, and is most widely used in country districts in Palestine, Jordan and Syria; in the Syrian desert it is regularly used among the tribes of nomad-shepherds. In north Africa it is in almost general use in both rural and urban dialects in north Algeria (for more precise details see J. Cantineau, *Cours*, 75); it has remained in use in Tangier and perhaps in certain places in north Morocco, in cases of gemination (*ḳudjdja* "lock of hair", but pl. *ḳ*ᵘ*jej*).

5. Pronunciation of *djīm* as *j*: in Syria, Palestine and Jordan this is the town-dwellers' pronunciation: Damascus, Nablus, Jaffa, Jerusalem (Christians), etc. It is the pronunciation of the whole of the Lebanon (except to the north of the Beḳāʿ: *dj*), the Anti-Lebanon and the Djabal al-Drūz. In North Africa it is found in Tunisian, Tripolitanian, Moroccan and south Algerian dialects; it is found in certain places in northern Algeria. Probably it was the usual pronunciation of *djīm* in the Arabic dialect of Granada.

6. Pronunciation of *djīm* as *z*: it must, finally, be noted that in the towns of north Africa one can observe a tendency in certain individuals to open the palato-alveolar *j* into a sibilant *z*. This tendency appears to be limited to certain social groups (Jews) or to certain social classes (lower-class people in north Morocco), and is not sufficiently generalized to make it possible to refer to anything more than individual pronunciations.

All the pronunciations of *djīm* given above are voiced. Some unvoiced pronunciations are known, and are extremely local: *č* in Palmyra and in some villages in the Anti-Lebanon, *ts* in Sukhne (between Palmyra and the Euphrates).

In classical Arabic *djīm* is subject to certain conditioned modifications (accommodations, assimilations), see J. Cantineau, *Cours*, 72-3; (for the various modifications in modern dialects, see *ibid.*, 76-9). For the phonological oppositions of the phoneme *djīm*, see idem, *Esquisse*, *BSLP*, cxxvi, 102, 18; for the incompatibilities, see *ibid.* 135.

(W. Marçais-[H. Fleisch])

ii.—languages other than arabic

In Persian the letter *dj̲īm* represents a voiced palatal affricate, which has a voiceless counterpart *č* (*čīm*). The voiced velar occlusive is represented always by *gāf*, although in Arabic loanwords from Iranian *dj̲īm* frequently represents this Iranian *g* (*e.g.*, *dj̲āmūs* "buffalo", P. **gāw-mēs̲h̲*). The letter *čīm* is formed on the model of *dj̲īm*, with three *nuḳṭa*s instead of one.

In Ottoman Turkish, *dj̲īm* and *čīm* are written as in Persian and with the same values, except that in some morphophonemically conditioned situations the voiced/voiceless opposition disappears. In the modern Turkish orthography *dj̲īm and čīm* are replaced in general by *c* and *ç* respectively with, however, account taken of phonetic values; hence *ç* can on occasion represent original *dj̲īm*.

In Urdū *dj̲* (*dj̲īm*) and *č* (*čē, čīm*) are palatal affricates as in Persian, frequently but not invariably uttered with dorsal contact with the tongue-tip behind the lower teeth. Among less educated speakers, especially in areas in India away from the main centres of Muslim culture, *dj̲* is also the pronunciation of the four *z* sounds (*d̲h̲āl* [zāl], *ḍād* [zād, zwād], *ẓāʾ* [zwē, zoē], as well as *zāʾ* [zē]), which results in occasional false back-formations, *e.g.*, *mawzūd* for *mawdj̲ūd*. Both *dj̲* and *č* occur with aspiration, written with *dj̲īm* or *čē* with the "butterfly" (*dūčas̲h̲mī*) form of *hā*.

In Sindhī there occurs beside *dj̲* and *dj̲h* the voiced palatal *implosive* affricate, written with two *nuḳṭa*s arranged vertically, ڄ. Other modifications of *dj̲īm*/*čīm* are the aspirated *čh* (ڇ), and the palatal nasal, *ñ*, with two *nuḳṭa*s placed horizontally, ڃ.

In Pas̲h̲tō beside *dj̲* and *č* occur the dental affricates *dz* and *ts*, both, however, written with the sign ځ.

DJIMAT (Malay), an amulet, more particularly a written amulet. The word is of Arabic origin = *ʿazīma*. [see ḥamāʾil]. (Ed.)

DJIMMĀ, known also as Dj̲immā Kakā, "Dj̲immā of the confederacy", and Dj̲immā Abbā Dj̲ifār, from the name of its most famous king. This state lies in the angle formed by the Omo and Godj̲eb rivers in south-west Ethiopia, and was inhabited by Sidamā (Hamites) of the same stock as the neighbouring kingdom of Kafa; the south-east corner of Dj̲immā, called Garo, was inhabited by the Bos̲h̲a, who are mentioned in an epinikion of Yesḥaḳ of Ethiopia (1412-27) together with the neighbouring state of Enāryā, later known as Limmu and Limmu-Enāryā (I. Guidi, *Le canzoni geez-amariña*, in *Rend. Lin.*, ii, 1889,). The Bos̲h̲a were among the pagans forcibly converted to Christianity by Sarṣa Dengel of Ethiopia about 1586. When the Galla invaded Ethiopia they reached this region about the middle of the 16th century, and began to found small monarchies in the Gibē region, the first of which was Enāryā, where a Galla dynasty was founded about 1550-70. In Dj̲immā six tribes of the Dj̲immā group formed the basis of the Galla state, whence the name Dj̲immā Kakā. Nominally Christian under Ethiopian rule, which ended about 1632, and pagan under the Galla founders of the new dynasty, a Muslim element soon entered, but died out together with Christianity during the 18th century. A monarchy is repugnant to the Galla, and its development was due to the influence of Islam. In Dj̲immā alone of the five Galla monarchies was the kingship allowed to survive after the Ethiopian conquest between 1891 and 1900. The language spoken here is Galla, and there has been a blending of Galla and Islamic institutions. The king has both a Galla war-name, *e.g.*, Abbā Dj̲ifār, "owner of a dappled horse", and a Muslim name, Muḥammad b. Dāʾūd. The kingship was hereditary, passing to a brother if there was no son. Owing to the influence of the monarchy, which was inconsistent with the Galla ideal of a tribal ruler who held office for only eight years, the Galla *gada*-system became much curtailed, and eventually the *gada*-grades were reduced from five to two. Islam was re-introduced early in the 19th century, and by the last quarter of the century Dj̲immā had become a centre of Islamic learning in western Ethiopia, though it caused no real anxiety to the kings of Ethiopia; nevertheless this did prevent Menilek II from annexing Dj̲immā to his kingdom along with the rest of the tributary states that lay round Ethiopia. From the time of the re-introduction of Islam till the end of the century the names of eight kings are preserved, the best known being Sanna Abbā Dj̲ifār I; the last king was also called Abbā Dj̲ifār. The trade route from Kafa to the coast lay through Dj̲immā; since it was a fertile land, the presence of traders from outside encouraged the development of agriculture; wheat, coffee, cotton, and aromatics were its chief products. It was also a centre of the slave-trade. Under Ethiopian rule the kingship was allowed to remain, the king being a vassal of the king of Ethiopia.

DJINĀḤ (Indian-Pākistānī equivalent of Dj̲anāḥ; English spelling: Jinnah), Muḥammad ʿAlī. Muḥammad ʿAlī Dj̲ināḥ, known by his fellow-countrymen as the *Ḳāʾid-i Aʿẓam*, was the founder of the state of Pākistān. He organized and led the Pākistān movement and became the first Governor-General of the new state.

It is generally accepted that he was born on 25 December 1876, though some records give dates in 1875 and 1874. His father was a moderately wealthy merchant, a member of a *Ḵẖōdj̲a* family living in Karachi. His early education took place in Bombay and later at the Sindh Madrasat al-Islām and the Missionary Society High School in Karachi. After matriculation he was sent to England in 1892 where he qualified for the bar (Lincoln's Inn) in 1896.

While in London, during the final days of Gladstonian liberalism, he showed a keen interest in public life, as an admirer and supporter of Dādābhāʾī Nawrōdj̲ī, the first Indian to be elected to the House of Commons. At this stage also he assumed the outward appearance of an Englishman. Until the last year of his life he normally wore immaculate English clothes and he used a monocle. All his important speeches were delivered in English and even his

broadcast on 3 June 1947 on the acceptance of the partition scheme was translated into Urdū by others. In short, he had become "Mr. Jinnah".

He returned to India in 1896 and in the following year began to practise law in Bombay. After several lean years he became quite rapidly a leading member of the Bombay bar. His mind was always that of the lawyer. His speech aimed at precision rather than eloquence. He had little patience with those who used words as symbols to awaken emotions. He addressed himself to the British government or to the educated Indian minority. When he spoke to the masses it was in English and in the same terms he employed in writing a brief. If the masses responded it was to the man's intensity and uprightness, not to the warmth of his words.

D̲j̲ināḥ's first venture into Indian politics was as a member of the Indian National Congress. He attended the 1906 session as private secretary to Nawrōd̲j̲ī who was then Congress President. Three years later, in January 1910, he took his place as a member of the first Imperial legislative Council. He was elected to represent the Muslims of Bombay, and he was the first non-official member to secure adoption of a legislative Act, in this case an Act validating Muslim *waḳfs*.

In 1913, while remaining an influential figure in the Congress, D̲j̲ināḥ joined the Muslim League. He was to serve, said Gokhale, as the "ambassador of Hindū-Muslim unity". He took the leading rôle in negotiating the "Lucknow Pact" whereby the Congress and the Muslim League agreed on a scheme of constitutional reform containing guarantees for the rights of the Muslim community. D̲j̲ināḥ presided over the 1916 session of the League which approved these proposals.

The years after 1918 brought a wave of radicalism and violence into Indian politics. D̲j̲ināḥ, with his repeated emphasis on what he called "constitutional lines" felt himself being supplanted by the extremists. In 1919 he resigned from the Legislative Council in protest against the extension of repressive police authority. The following year he parted from the Congress on the issue of non-cooperation. In addition to his break with the Congress, D̲j̲ināḥ found himself separated from many of his fellow Muslims who were ardent supporters of the K̲h̲ilāfat movement. The Muslim League declined in importance and was internally divided.

D̲j̲ināḥ was married for the first time as a child, before he left for England in 1892, but his wife died whilst he was away. His second marriage, to the daughter of a rich Pārsī, took place in 1918. It was not a success and they had separated before her death ten years later. Throughout most of his life his sister Fāṭima looked after his domestic needs.

Between 1920 and 1930 D̲j̲ināḥ played a part in Indian public life but he cannot be said to have been a leading figure and certainly not the sole or principal spokesman for the Indian Muslims. He was elected to the new Central Assembly and was a delegate to the first two Round Table Conferences (1930-1). At this stage he began to practise at the Privy Council bar and established a home in London, paying only intermittent visits to India.

His final return took place in 1935, after the enactment of the new constitutional provisions of the Government of India Act. Almost at once he began to move toward control of the Muslim League and its development as the main instrument of Muslim nationalism. In 1936 be became President of the Parliamentary Board of the League, the committee that took charge of the election campaign. Their object was a programme of mass contact but they were not markedly successful as was shown by the poor electoral record of the League in 1937. The Congress, which had done well, now assumed power in the majority of the Provinces and seemed to have established a claim to be the sole heir to British authority. D̲j̲ināḥ, now President of the League, moved to dispute this claim, stating that no further constitutional steps could be taken without the consent of the Muslim nation, represented by the League.

D̲j̲ināḥ's first line of argument was that the Muslims could not expect full justice in a political society with a Hindū majority. The League gave much attention to Muslim grievances against Congress provincial ministries. In 1939, after the outbreak of war, the Congress governments resigned. D̲j̲ināḥ, giving cautious support to the war effort, was able to strengthen his organization and to bring about, during the war years, League participation in the government of several provinces.

The second main argument was now launched. It consisted in the assertion that a separate state for the Muslims of India was possible and necessary. Muḥammad Iḳbāl had suggested such a scheme in 1930 but it was not adopted as a political programme until the meeting of the Muslim League at Lahore in March, 1940. This was the Pākistān Resolution.

It was not yet clear whether D̲j̲ināḥ could validly claim to speak for Muslim opinion. In Bengal, the Pand̲j̲āb, Sindh and the North-West Frontier Province, all Muslim-majority areas, the League was unable to exercise effective and continuous control. However, in the elections of 1946 the League won almost all the Muslim seats and D̲j̲ināḥ's position as spokesman for the overwhelming majority could not be denied.

He participated actively in the negotiations leading to the partition scheme, insisting always that the Muslims must be allowed to choose a separate state. In June 1947 his object was accomplished and the state of Pākistān came into existence at midnight on 14-15 August 1947. He took office as Governor-General and President of the Constituent Assembly. His first efforts were directed to ending communal bloodshed and hatred. He was, by this time, seventy years old and his health was showing signs of collapse. Nevertheless he presided over the establishment of the machinery of government and was in effective control of policy. During 1948 he became progressively weaker and on 11 September he died.

He was a man who changed the course of history, for, while there was Muslim national feeling before D̲j̲ināḥ, he gave it self-confidence and organization. He was a man of rigid integrity, perhaps hard to love but made for admiration. He was a nationalist who seemed at times to be more English than Indian; he was a Muslim who made few references to God or the Prophet or the Ḳur'ān. He was not a deeply religious man. To him the Muslim heritage was a civilization, a culture and a national identy. And he founded a state just as surely as had Bābur.

D̲J̲INĀS [see TAD̲J̲NĪS].

D̲J̲IND̲J̲I K̲H̲ʷĀD̲J̲A [see ḤUSAYN D̲J̲IND̲J̲I].

D̲J̲INN, according to the Muslim conception bodies (*ad̲j̲sām*) composed of vapour or flame,

intelligent, imperceptible to our senses, capable of appearing under different forms and of carrying out heavy labours (al-Bayḍāwī, Comm. to Ḳur'ān, LXXII, 1; al-Damīrī, *Ḥayawān*, *s.v.* *djinn*). They were created of smokeless flame (Ḳur'ān, LV, 14) while mankind and the angels, the other two classes of intelligent beings, were created of clay and light. They are capable of salvation; Muḥammad was sent to them as well as to mankind; some will enter Paradise while others will be cast into the fire of hell. Their relation to Iblīs the Shayṭān, and to the Shayṭāns in general, is obscure. In the Ḳur'ān, XVIII, 48, Iblīs is said to be a *djinn*; but according to the Ḳur'ān, II, 32, he is said to be an angel. In consequence there is much confusion, and many legends and hypotheses have grown up on this subject; on the last passage quoted, see al-Bayḍāwī and al-Rāzī, *Mafātīḥ*, Cairo 1307, i, 288 ff. The Arab lexicographers try to make the word *djinn* derive from *idjtinān*, "to be hidden, concealed" (see Lane, *s.v.* *djinn* and al-Bayḍāwī, on II, 7). But this etymology is very difficult, and the possibility of explanation through borrowing from Latin (*genius*) is not entirely excluded. The expression "naturalem deum uniuscuiusque loci" (Serv. Verg. G., i, 302) exactly expresses the formal localization of the *djinn* (cf., *e.g.*, Nöldeke, *Muʿallaḳāt*, i, 74, 78 and ii, 65, 89) as well as their standing as semi-divinities in old Arabia (Robertson Smith, *Rel. of Semites*², 121; Ger. tr. (Stübe), 84 ff.). In the singular one says "*djinnī*"; *djānn* is also used as the equivalent of the form *djinn* (but cf. Lane, *Lexicon*, 492c); *ghūl*, *ʿifrīt*, *siʿlāt* are classes of the *djinn*. For an Ethiopic point of contact with *djānn* see Nöldeke, *Neue Beiträge*, 63.

Consideration of the *djinn* divides naturally under three heads, though these necessarily shade into one another.

I. The *djinn* in pre-Islamic Arabia were the nymphs and satyrs of the desert, and represented the side of the life of nature still unsubdued and hostile to man. For this aspect, see Robertson Smith, *loc. cit.*; Nöldeke in *ERE*, i, 669 ff.; Wellhausen, *Reste*; van Vloten, *Dämonen ... bei d. alt. Arabern*, in *WZKM.*, vii and viii (the author uses materials in al-Djāḥiẓ, *Ḥayawān*). But in the time of Muḥammad *djinn* were already passing over into vague, impersonal gods. The Arabs of Mecca asserted the existence of a kinship (*nasab*) between them and Allāh (Ḳur'ān, XXXVII, 158), made them companions of Allāh (VI, 100), offered sacrifices to them (VI, 128), and sought aid of them (LXXII, 6).

II. In official Islam the existence of the *djinn* was completely accepted, as it is to this day, and the full consequences implied by their existence were worked out. Their legal status in all respects was discussed and fixed, and the possible relations between them and mankind, especially in questions of marriage and property, were examined. Stories of the loves of *djinn* and human beings were evidently of perennial interest. The *Fihrist* gives the titles of sixteen of these (308) and they appear in all the collections of short tales (cf., *e.g.*, Dāwūd al-Anṭākī, *Tazyīn al-aswāḳ*, Cairo 1308, 181 ff.; al-Sarrādj, *Maṣāriʿ al-ʿushshāḳ*, Istanbul 1301, 286 ff.). There are many stories, too, of relations between saints and *djinn*; cf. D. B. Macdonald, *Religious attitude and life in Islam*, 144 ff. A good summary of the question is given in Badr al-Dīn al-Shiblī (d. 769/1368), *Ākām al-mardjān fī aḥkām al-djān* (Cairo 1326); see also Nöldeke's review in *ZDMG*, lxiv, 439 ff. Few even of the Muʿtazila ventured to doubt the existence of *djinn*, and only constructed different theories of their nature and their influence on the material world. The earlier philosophers, even al-Fārābī, tried to avoid the question by ambiguous definitions. But Ibn Sīnā, in defining the word, asserted flatly that there was no reality behind it. The later believing philosophers used subterfuges, partly exegetical and partly metaphysical. Ibn Khaldūn, for example, reckoned all references to the *djinn* among the so-called *mutashābih* passages of the Ḳur'ān, the knowledge of which Allah has reserved to himself (Ḳur'ān, III, 5). These different attitudes are excellently treated in the *Dict. of techn. terms*, i, 261 ff.; cf. also al-Rāzī, *Mafātīḥ*, lxxii.

III. The *djinn* in folk-lore. The transition to this division comes most naturally through the use of the *djinn* in magic. Muslim theology has always admitted the fact of such a use, though judging its legality varyingly. The *Fihrist* traces both the approved and the disapproved kinds back to ancient times, and gives Greek, Ḥarrānian, Chaldean and Hindū sources. At the present day, books treating of the binding of *djinn* to talismanic service are an important part of the literature of the people. All know and read them, and the professional magician has no secrets left. In popular stories too, as opposed to the tales of the professed littérateur, the *djinn* play a large part. It is so throughout the *Thousand and One Nights*, but especially in that class of popular religious novels of which Weil published two in his Translation of the *Nights*, namely the second version of "Djūdhar the Fisherman" and the story entitled "ʿAlī and Ẓāhir of Damascus". In the *Thousand and One Nights*, particularly in the first part, the *djinnī* generally turns against any human being out of spite to get the better of him; roaming the world at night (Night No. 76), the *djinnī* (or fairy, *parī*) transports a man for immense distances, to make him lose his way; he turns him into an animal (a monkey, in No. 48, a dog, in No. 5 and 66); but on the other hand he sometimes restores his human form (No. 5 and 34); he protects the man undeservedly duped by one of his fellows (No. 47); he teaches man how to free someone possessed by another *djinnī*, by means of exorcism (*ibid.*); moreover, *djinn* and fairies sometimes join together to do good (No. 78); on the other hand, man can defend himself and by his cunning has the *djinnī* at his mercy (like the fisherman who imprisons him in a jar, No. 11); and sometimes a man harms *djinn* unintentionally (a man eating dates throws away a stone which kills one of their children, No. 1). Still nearer to the ideas of the masses are the fairy stories collected orally by Artin, Østrup, Spitta, Stumme, etc. In these stories the folk-lore elements of the different races overcome the common Muslim atmosphere. The inspiration of these tales is more characteristic of the peoples of North Africa, as well as of the Egyptians, Syrians, Persians and Turks rather than of Arabia or Islam. Besides this there are the popular beliefs and usages, so far very incompletely gathered. Throughout this field also there are points of contact with the official Islamic view. Thus, in Egyptian popular belief, a man who dies by violence becomes an *ʿifrīt* and haunts the place of his death (Willmore, *Spoken Arabic of Egypt*, 371, 374), while in the Islam of the schools a man who dies in deadly sin may be transformed into a *djinnī* in the world of al-Barzakh (*Dict. of techn. terms*, i, 265). Willmore has other details on the *djinn* in Egypt. For South Arabia see ʿAbdullah Mansur, *The land of Uz*, 22, 26, 203, 316-20. See also R. C. Thomson in *Proc. of Soc. of*

Bibl. Arch., xxviii, 83 ff.; Sayce, in *Folk-lore*, 1900, ii, 338 ff.; Lydia Einszler, in *ZDPV*, x, 170 ff.; H. H. Spoer, in *Folk-lore*, xviii, 54 ff.; D. B. Macdonald, *Aspects of Islam*, 326 ff. But much still remains to be done.

Dj̲inn are most commonly spoken of by allusion (*hāduk al-nās*, "those people there", North Africa) or by antiphrasis, like the Eumenides (*az mā bihtarān*, "those better than ourselves", Īrān).

Bibliography: Damīrī, *Ḥayawān*, for the words *dj̲inn*, *siʿlāt*, *ʿifrīt*, *g̲h̲ūl* (cf. also the translation of Jayakar, London and Bombay 1906-8); Ḳazwīnī, *ʿAdj̲āʾib*, ed. Marçais, *Textes arabes de Takroûna*, index *s.v. Djinns*; P. Bourgeois, *L'univers de l'écolier marocain*, Rabat 1959, 23-43. For Īrān: A. Christensen, *Essai sur la démonologie iranienne*, 71: *dīw* and *dj̲inn*; H. Massé, *Croyances et coutumes persanes* (index III: *dj̲inn*). (D. B. Macdonald-[H. Massé])

In Turkish folklore. Of the words used to denote these, *cin* (dj̲in) is the most common; *ecinni* (edj̲inni) is a variation of it. The word *in*, used only in the form *in-cin*, has in certain instances the same sense as *dj̲inn*; it is a corruption of *ins*, from the group *ins wa dj̲inn* (= "men and dj̲inn"), which occurs frequently in the Ḳurʾān. In everyday speech as well as in stories of fantastic adventures and tales of the supernatural, the word *peri* is often taken as a synonym of *dj̲inn*; the two terms are often confused even in traditions, nevertheless the former really belongs to the realm of supernatural tales where the word *dj̲inn* is less common. In parts of eastern Anatolia (at Tokat and Erzurum, for example: for the latter locality, see Sami Akalın, *Erzurum bilmeceleri*, Istanbul 1954, glossary) the word *mekir* is used to denote a supernatural being with all the characteristics of a *dj̲inn*. At times when one is anxious to avoid any harm being done by them, the word *dj̲inn*, by a linguistic taboo, is replaced by expressions such as *iyi saatte olsunlar* ("may they be at an auspicious moment", meaning: "beings who, I hope, are in good humour and well-disposed towards us"). It is believed that there are Muslim *dj̲inn* and heathen *dj̲inn*; the latter are considered to be the more wicked and difficult to control.

They are thought of as beings of both sexes, and living collectively. They have their chief or, as he is usually called, *pādis̲h̲āh*. All their activities take place at night and come to an end with the first cock-crow or the first call to morning prayer. Traditions, tales and supernatural stories of all kinds name the places where they live or which they frequent and where they choose to meet for their amusement (always at night); — mills, *ḥammāms* (public baths), ruins, derelict houses, cemeteries, certain inns (particularly when deserted and falling into ruin), certain places in the country, especially at the foot of big trees. Certain private houses are reputed to be haunted by *dj̲inn*, and similarly "guest rooms" in villages. In Istanbul, according to local tradition, there are a number of places inside and outside the town which are reputed to be inhabited by these supernatural beings; and the home of the King of the sea-*dj̲inn* is said to be off Leander's Tower, in the Bosphorus. One legend explains why even a mosque, at Dimetoḳa (in Rumelia) is frequented by *dj̲inn* at night. Even in daytime precautions have to be taken with regard to certain places such as water-closets, remote corners where rubbish is piled or where dirty water overflows, at the foot of trees, quiet dirty corners on river-banks, the base of walls above the gutter, enclosed dark places in houses (like lumber-rooms) etc.

Dj̲inn appear to men in many different forms, most often in the guise of animals, such as; — a black cat (without any light markings), a goat (kid, or he-goat), a black dog, a duck, a hen with chickens, a buffalo, a fox; or else in human shape; either as men of ordinary size or dwarfs, and sometimes as men of gigantic stature (many who claim to have seen them describe them as quite white, thin, and as tall as a minaret or a telegraph pole); they also appear with the features of a baby wrapped in its swaddling-clothes. In the magic arts of the negroes in Turkey, the snake is regarded as the animal in which *dj̲inn* are incorporated. Wolves and birds are the only other living creatures to whose attacks *dj̲inn* are vulnerable.

Their behaviour towards human beings is of three sorts: if people understand how to refrain from irritating them, they do no harm: they are indifferent or, at times, are satisfied if they tease people by playing various harmless tricks; to those whose actions deserve some reward they bring great benefits; the imprudent and insolent they punish by inflicting illnesses or infirmities. Some tales, and in particular some legendary stories, give accounts of happenings at certain places, in which persons who have suffered strange treatment by these supernatural beings are mentioned by name (for stories of this type see Eberhard-Boratav, *Typen türkischer Volksmärchen*, Wiesbaden 1953, types no. 67, 67 III, 67 V, 118 and the words: *Geister, Peri, Teufel* in the index; Melahat Sabri, *Cinler* in *Halk Bilgisi Haberleri*, iii, 143-51; the same article is repeated intact in M. Halit Bayrı, *Istanbul folkloru*, Istanbul 1947, 176-181; A. Caferoğlu, *Orta Anadolu ağızlarından derlemeler*, Istanbul 1948, 209-210). Among these supernatural stories there are some which tell how men can make requests, either on their own initiative or with the help of an "initiate", to the King of the Dj̲inn while he is taking counsel. A characteristic feature of the rewards granted by *dj̲inn* to those they favour is that they are given in the form of onion and garlic peel, the former being subsequently changed into gold pieces, the latter into silver.

The illnesses which they inflict are of various kinds: hemiplegia, different forms of paralysis and twisted limbs are the most usual. They sometimes

interfere in family life and wreck marriages; such incidents are due to the young man or woman having irritated a _djinn_ in some way, or else because one or other of them is loved—and indeed "regarded as a spouse"—by one of these supernatural beings, either by a male or female _djinn_ according to the circumstances.

Methods of avoiding _djinn_ and their misdeeds can be put into two categories: precautionary measures which anyone can take of his own initiative, and measures to be taken in cases requiring recourse to a specialist. Some of the precautions to be taken in order not to irritate _djinn_ are as follows: — so far as one can, to avoid the places they frequent, never to "profane" those places (by soiling, spitting, urinating etc.), always to say a *besmele* (*bism-illāh*) or a *destūr* (this word means "with your permission") before each action and before moving anything, never to forget to say these words, *e.g.*, each time any object or article of clothing is put away in a chest or when any provisions are put in store etc., so that the _djinn_ may not consume them.

In serious cases of illnesses or infirmities thought to have been incurred through _djinn_, recourse is made to specialists, who are _khodja_ or _shaykh_s or even simple people without any religious title who however are initiates of the _djinn_; they are called *huddamlı*, "masters—or patrons—of servants", the _djinn_ being considered as servants or slaves entirely subject to them. The procedure for exorcising takes various forms, but the principle is invariable: the sorcerer (who is also given such names as *cindar* [djindār] or *cinci* [djindjī], signifying the captor of a _djinn_), invokes the _djinns_ or _djinn_ thought to be responsible for the trouble, or to be able to reveal it; when he succeeds in calling up the guilty _djinn_, he negotiates with him, either with apologies or with threats, to free and cure the victim. Some of these exorcisms are carried out in the absence of the victims; others require their presence—as is the case in the magic arts of the Turkish negroes (natives of Africa) who, before 1920, and especially in big towns like Istanbul and Izmir, set up corporations of exorcisors under the *godyas*, their spiritual leaders; the efficacity of their magic cures was acknowledged by the white population also. (On this subject see: A. Bombaci, *Pratiche magiche africane*, in *Folklore*, iii, no. 3-4, 1949, Naples, 3-11; P. N. Boratav, *The Negro in the Turkish folklore*, in *Journal of American Folklore*, lxiv (1951), no. 251, 83-8; P. N. Boratav, *Les Noirs dans le folklore turc et le folklore des Noirs de Turquie*, in *Journal de la Société des Africanistes*, xxviii (1958), 7-23).

Bibliography: In addition to the works quoted in the text of the article, the author has made use of materials resulting from his own research, together with the texts of tales, legends and fantastic stories in his collection of manuscripts. The lack of any single comprehensive work on this subject is a gap in Turkish folklore studies.

(P. N. Boratav)

India: In India one encounters three distinct concepts of _djinn_—traditional or orthodox, based on literal interpretations of the Ḳur'ānic verses; superstitious, as revealed in the popular superstitions; and rationalistic, as attempted by Sir Sayyid Aḥmad Khān and others of his school of thought.

(*a*) In traditional or orthodox accounts the _djinn_ is represented as a creature created from fire, unlike man who has been created from clay. The _djinns_ are invisible and aery (*Lughāt al-Ḳur'ān*, ʿAbd al-Rashīd Nuʿmānī, ii, 254-6). Almost all the Indian scholars on exegesis have held this view. ʿInāyat ʿAlī mentions four types of _djinn_: (i) ærial creatures, without any physical form, (ii) snake-like creatures, (iii) those who shall be subjected to the same process of divine dispensation on the Day of Judgment as human beings, and (iv) creatures with beast-like features (*Miṣbāḥ al-furḳān fī lughāt al-Ḳur'ān*, Dihlī 1357 A.H., 85). Some jurists have, despite their belief in the supernatural character of the _djinns_, considered them so real as to deal with hypothetical problems arising out of human marriages with _djinns_.

(*b*) It is popularly held that the _djinns_ are invisible creatures with great supernatural powers and with an organization presided over by a king. Even in the educated circles of Muslim society, this concept was common in the middle ages. During the time of Iletmish, an area in the vicinity of the Ḥawḍ-i Shamsī of Dihlī had the reputation of being the abode of _djinns_ (*Miftāḥ al-ṭālibīn*, Ms personal collection). Djamālī [*q.v.*] refers to a guest house which was constructed by Iletmish (607-33/1210-35) and was known as *Dār al-Djinn* because it was thought to be frequented by the _djinns_. A *Shaykh al-Islām* of Dihlī, Sayyid Nadjm al-Dīn Ṣughra, accommodated Shaykh Djalāl al-Dīn Tabrizī in this house in order to test his spiritual powers. The Shaykh sent his servant to place a copy of the Ḳur'ān in the house before he himself occupied it (*Siyar al-ʿĀrifīn*, Dihlī 1311 A.H., 165, 166). This has given birth to a superstition that before a new house is occupied, a copy of the Ḳur'ān should be placed therein in order to expel the _djinns_. Since it was believed that the _djinns_ could do harm to human beings and also cause serious ailments, many religious writers deal with incantations and litanies to counteract their evil effects. Shāh Walī Allāh (d. 1763) suggests methods to expel _djinn_ from houses (*Ḳawl al-Djamīl*, Kānpur 1291 A.H., 96, 97).

(*c*) An attempt to rationalize the concept of _djinn_ by divesting it of all supernatural and superstitious elements was made by Sayyid Aḥmad Khān. He held the view that by the word _djinn_ the Ḳur'ān meant Bedouins and other uncivilized and uncultured people. To him the expression *djinn wa 'l-ins* which occurs fourteen times in the *Ḳur'ān* meant 'the uncultured and the cultured people'. The different contexts in which the word _djinn_ is used in the Ḳur'ān have been explained by him as references to different qualities and characteristics of these 'people' (*Tafsir al-Ḳur'ān*, iii, ʿAlīgaṛh 1885, 79-89); this point of view was subjected to criticism by the *ʿulamā'*.

Bibliography: In addition to references above and the different *tafsīr*s written by Indo-Muslim scholars: Mawlānā Muḥammad Zaman, *Bustān al-Djinn*, Madrās 1277 A.H.; Ṣādiḳ ʿAlī, *Māhiyyat al-malāk wa 'l-djinn wa 'l-insān ʿalā mā thabata min al-tadabbur fī āyāt al-Ḳur'ān*, Rawalpindi 1899; Aslam Djayrādjpurī, *Taʿlīmāt al-Ḳur'ān*, Dihlī 1934, 37-8; Mawlawī Abū Muḥammad ʿAbd al-Ḥaḳḳ Ḥaḳḳānī, *al-Bayān fī ʿulūm al-Ḳur'ān*, Dihlī 1324, 119-28.

Indonesia. The Arabic _djinn_ is generally known to Indonesian Muslims from Arabic literature and its offshoots. The word _djinn_ passed into various Indonesian languages (Malay, Gayō etc. *djin*, Javanese *djin* or *djim*, Minangkabau *djihin*, Acheh *djén* etc.) and even into the literary language of a non-Muslim people such as the Batak (*odjim*). Malays use it as a polite equivalent or euphemism

for *hantu* (evil spirit); in some languages (*e.g.*, Gayō) it is used as a general name for all kinds of indigenous spirits. (P. VOORHOEVE)

DJINS, γένος, genus, is the first of the five predicables *al-alfāẓ al-khamsa* (genus, species, difference, property, accident) as given by Porphyry in his Introduction (Isagoge) to Aristotle's Logic—introduction which is incorporated by the Muslim philosophers in Aristotle's Organon—and its logical sense (for also its common sense of "race", "stock", "kin", is mentioned by Aristotle, Porphyry and the Arab commentators) is said to be that which is predicated of many things differing in species in answer to what a thing is, *e.g.*, animal. These predicables are also called *al-maʿānī al-thāniya*, "*intentiones secundae*" in scholastic terminology, to distinguish them from *al-maʿānī al-ūlā*, "*intentiones primae*". According to the later Greek and to the Muslim commentators the first intentions refer to the particular things, the second intentions refer to the ten categories which are themselves the highest genera of particular things and to which the Muslim philosophers give the name of the *al-adjnās al-ʿashara*, the ten genera.

As to the problem of the objective reality of the genera, species and, generally speaking, of universals, it is not discussed as much in Muslim philosophy as in Scholasticism, although it is one of the fundamental problems in Aristotilean philosophy and constitutes one of its fundamental difficulties (cf. for this and the following the article DJAWHAR). There are three possible views, the realist view that universals exist objectively, the conceptualist view that they are but abstractions of the mind without a corresponding reality, the nominalist view that they are but names without any reality. Now Aristotle holds at the same time the conflicting realistic and conceptualist views. On the one hand he holds the immanent realistic view that universals form a constitutive part in individuals, Socrates, *e.g.*, is a man because the specific, the universal form of man is realized in him, on the other hand he holds that universals are but entities in the mind and acquired by abstraction. The Muslim philosophers tend to the view that the specific forms are individualized through their realization in the individual, a theory already held by Alexander of Aphrodisias (an individual specific form, however, is a *contradictio in adjecto* and they express Aristotle's conceptualist view by the maxim, often quoted in scholastic philosophy, *intellectus in formis agit universalitatem*, it is the mind that gives the forms their universality. On the other hand they go beyond Aristotle in their neoplatonizing transcendent realism and they hold that the universal forms emanate from eternity out of the mind of God, the supramundane intellects and the *dator formarum*, and we find in a passage in Avicenna's Introduction, *al-Madkhal*, to the Logic of his *Shifāʾ*, Cairo 1952, 65, a threefold distinction *djins ṭabīʿī*, natural genus, *djins ʿaḳlī*, mental genus, *djins manṭiḳī*, logical genus, the first exists before the many, *ḳabl al-kathra* (*ante res*, as the Latins have it) that is in the active intellect, the second in the many, *fi 'l-kathra* (*in rebus*) that is in the particular things, the third *baʿd al-kathra* (*post res*) that is in the human mind. In this passage Avicenna takes the curious view that genera in their own nature are neither universal nor individual; if *e.g.*, "animal" by itself were universal, there could not be several animals; if it were indivudual, there could not be the universal "animal", individuality and universality are therefore accidents added to it, the former in the exterior world, the latter in minds (this passage has been discussed by I. Madkour in his introduction to *al-Madkhal* 63, and his *L'Organon d'Aristote dans le monde arabe*, Paris 1934, 151).

Although Averroës often polemizes against the transcendent realism in Avicenna's theory of the *dator formarum*, he holds fundamentally the same position and he says *e.g.*: "Just as artifical products can only be understood by him who has not made them, because they take their origin in an intellect that is in the form which is in the soul of the artisan, so the products of nature prove the existence of supermundane Forms which are the causes that the sensible substances are potentially intelligible". And he adds: "This is the theory to which the partisans of the Ideas tended, but which they could not attain" (cf. my *Die Epitome der Metaphysik des Averroës*, Leiden 1924, 42).

The Muslim theologians, generally speaking, are nominalists. They argue against the conceptualist side of the philosophers' view by asking: "how can knowledge give any truth, if reality is individual and knowledge universal, since truth is the conformity of thought with reality?" The theologians do not admit the objective reality of forms, all reality is individual, universals exist only in minds, they are *ṣifāt nafsiyya*, spiritual qualities which, however, are not wholly real, but something intermediate between reality and unreality, or unreal, that is to say they are *ḥālāt*, *modi*, or *maʿānī* (the Stoic λεκτά or σημαινόμενα, *maʿnā* in this sense is the literal translation of σημαινόμενον, meaning, something meant, cf. Lane, s.v.). We find also the absolute denial of universals. Since for their sensualism thinking is nothing but the possession of representations and you cannot represent a universal *e.g.*, "a horse", but only a particular, *e.g.*, a definite horse, the universals are totally denied by then, (cf. Ghazzālī, *Tahāfut al-Falāsifa* (ed. Bouyges, Beirut 1927, 330).

Bibliography: The works quoted in the text and my translation (with notes) of Ibn Rushd *Tahāfut al-Tahāfut* (*the Incoherence of the Incoherence*), Oxford 1954. (S. VAN DEN BERGH)

DJINS is the Arabic word in use at the present time to denote "sex", the adjective *djinsī* corresponding to "sexual" and the abstract *djinsiyya* to "sexuality" as well as "nationality". The juridical aspect of sexual relations has already been examined in the article BĀH, and is to be the subject of further articles, NIKĀḤ and ZINĀ; the present review will be limited to general considerations on the sexual life of the Muslims and the place that it occupies in literature.

Pre-Islamic poetry, in so far as it is authentic, indicates that a certain laxity of behaviour was prevalent among the Arabs of the desert (Lammens, *Le berceau de l'Islam*, 276 ff.), and the "réunions galantes" of the contemporary Touaregs, described by Father de Foucauld (in his *Dictionnaire touareg-français*, Paris 1952, ii, 559 ff., s.v. *ahāl*), probably are not far removed from pre-Islamic practices. The *nasīb* of the classical *ḳaṣīda*, markedly erotic in character, is no doubt an indication of the existence of temporary unions in the encampments; in any case, its position at the head of the poem is evidence of the importance which the ancient Arabs attached to love, and especially sensual love, particularly since a number of lines of verse as realistic as those of Imruʾ al-Ḳays have probably been deleted, through puritanical reaction, from the ancient poems collected in the 2nd and 3rd/8th and

9th centuries; a further indication of this interest is shown by the richness of the vocabulary relating to the sexual organs, which is no doubt mainly due to the use of slang terms, as is confirmed at the present time by an unpublished study by Dr. Mathieu on the prostitutes of Casablanca. Incidentally we know that prostitution (*bighā*ʾ), which is to be discussed in the article ZINĀ, was already in existence and that prostitutes were distinguished by a special emblem which floated over their tents (see Caussin de Perceval, *Essai*).

It does not seem that Islam has in practice made many changes from the earlier state of affairs. Certainly the Ḳurʾān, in several verses (IV, 30; XVII, 34; XXIII, 5-7, 35; XXIV, 31, 33; LXX, 29-31), enjoins chastity, but only outside the bonds of marriage or concubinage (see S. H. al-Shamma, *The ethical system underlying the Qurʾān*, Tübingen 1959, 95 ff. and bibliography); it condemns prostitution (XXIV, 33) and, above all, fornication [see ZINĀ], but the conditions laid down by the *fuḳahāʾ* for the legal proof of *zinā* are such that it more often than not escapes punishment. Marriage, as conceived by the Ḳurʾān, has a two-fold object: it is intended to allow the male, who is largely favoured since it is he who benefits from the privileges of polygamy and repudiation (while women are in certain cases even deprived of the right of giving their consent), to satisfy his sexual needs lawfully, and to ensure the perpetuation of the race. That is why celibacy is in no way recommended, and it is even recommended to give the celibate in marriage (XXIV, 32). The Ḳurʾān is realistic where it deals with sexual pleasures which it authorizes and the enjoyment of which it encourages, on the sole condition that Believers should make use of one of the two means at their disposal, marriage and concubinage [see ʿABD]. The celebrated verse (II, 223; see also 183, 222) "Your women are a field for you. Come to your field as you will" may be compared with some of the sūras, such as that of Joseph (XII), or verses such as those which describe the delights of paradise and, above all, the houris (LV, 56, 70, etc.). The Prophet himself is cited as an example of ardent sensuality, and tradition has preserved a certain number of *ḥadīth*s which strongly favour satisfaction of the sexual instinct; G.-H. Bousquet (*Éthique sexuelle*, 41) notes that the 25th of the *Forty ḥadīth*s of al-Nawawī contains this statement by the Prophet: "Each time that you satisfy the flesh, you do a deed of charity"; al-Ghazālī (*Le livre des bons usages en matière de mariage*, trans. L. Bercher and G.-H. Bousquet, Paris-Oxford 1953, 40 ff.) sees only three disadvantages in marriage (the impossibility of lawfully gaining the necessities of life, the difficulty for the husband of meeting all his obligations to his wives, and neglect of religion), while he has no difficulty in celebrating its virtues. It should, however, be noted that sexual relations, though greatly facilitated by Islamic legislation, not only are not absolutely free, but even within their lawful sphere place the partners in a state of major impurity which only the greater ablution (*ghusl*) can remove; in this a certain ambiguity of attitude manifests itself.

Pederasty [see LIWĀṬ] is explicity condemned by the Ḳurʾān (VII, 78, 79) which on the other hand makes no reference to sapphism (*saḥḳ, siḥāḳ, tasāḥuḳ*), to bestiality (*waḥshiyya*) which the jurists rank with *zinā* without, however, considering that it entails the penalty of death, nor finally to onanism (*istimnāʾ*; *nikāḥ al-yad*; *djald ʿUmayra*), regarding which the jurists' opinions do not agree (see al-Ghazālī, *op. cit.*, 119, n. 47) but which is often considered as more reprehensible than sodomy and bestiality (see Bousquet, *Éthique sexuelle*, 57).

The freedom with which the Ḳurʾān and the Prophet discuss these delicate questions ensured that the early Muslims felt no shame in speaking of them in the most direct terms, as is especially shown by juridical literature in its treatment of particular cases. Traditions relating to the early years of Islam are full of details about the importance then attached to sexual life, and in this respect the *Kitāb al-Aghānī* is a mine of information for the historian; it abounds with precise particulars about relations between the sexes in the holy cities, and about the tastes of the women of the aristocracy who often lived lives of the greatest freedom, entirely preoccupied with their pleasures, in surroundings where the flourishing arts of poetry and music invited frivolity (see GHAZAL]. It is impossible in this brief account to mention all the anecdotes which cast a harsh light on the preoccupations of this leisurely society, and of certain caliphs too, but it will be recalled that temporary marriage [see MUTʿA] which the Ḳurʾān had not suppressed (although Sunnī Islam finally rejected it) allowed transitory unions at small cost and, along with female musicians and singers, true professionals of love gained lasting reputations; for example the woman of Medina, by name Ḥubbā, of whom al-Djāḥiẓ (*Djawārī*, 64, 65; *Ḥayawān*, ii, 200; vi, 61, 75) relates that she gave her son advice which seems to us shocking, and that she taught the women of Medina every sort of erotic refinement.

Under the ʿAbbāsids we see the development of a refined society, of luxury and pleasures (on the old Persian practice of incest, see particularly al-Djāḥiẓ, *K. al-Bukhalāʾ*, ed. Ḥādjirī, 3-4). We have little information about the sexual life of the lower orders of Muslims, among whom there was apparently a certain degree of laxity, but it seems clear that if the members of the aristocracy and bourgeoisie married free women who gave them children, they went elsewhere in search of sensual pleasures; this is the reign of the *ḳiyān* [see ḲAYNA], so magnificently described by al-Djāḥiẓ, bringing with them an atmosphere of distinguished sensuality. Although during the pre-Islamic period and in the early days of Islam men's tastes had favoured women of ample proportions, it was now slenderness of figure that they sought, and literature provides many examples of the dubious taste shown with regard to *ghulāmiyyāt* who adopted the appearance of boys. The pronounced liking for ephebes (*ghulām* [*q.v.*]), whose praises were so often sung by poets such as Abū Nuwās, is a recurring characteristic (see A. Mez, *Renaissance*, 337 ff.; English trans., 358 ff.; Spanish trans., 427 ff.). A text such as the one by al-Djāḥiẓ entitled *Mufākharat al-djawārī wa 'l-ghilmān*, despite the obscenity of certain passages, is in this respect extremely instructive. The literary sources abound with anecdotes which refer to sexual abnormalities such as bestiality (al-Djāḥiẓ, *K. al-Bighāl*, (53, § 73, 67, § 100) and sapphism. Prostitution, controlled, existed almost everywhere (Mez, *op. cit.*, 432). In the account of Bashshār given in the *Aghānī*, the most striking detail is the number of successes with women that this poet achieved, but it would be wrong to generalize too hastily and to conclude that debauchery had invaded the whole of society. The heroes of the anecdotes which are related to us almost all belong to the same class of libertines, whilst persons of rectitude, especially the Ḥanbalīs, protested vigorously against public immorality.

On this question, an anecdote attributed to al-Aṣmaʿī [*q.v.*] seems to show to what an extent certain Bedouins had succeeded in keeping their sober habits; the philologist having asked a Bedouin to give him a definition of love (*ʿishḳ*), the latter replied: "a glance after a glance and, if it be possible, a kiss after a kiss; this is the entrance to Paradise". The Bedouin's reply astonished al-Aṣmaʿī who, when asked in his turn to give his own definition, drew this remark from his interlocutor: "But you are not in love! You are merely seeking to have a child!" (al-Washshāʾ, *Muwashshā*, 77).

Throughout the following centuries, interest in sexual matters continued, as can be seen from the copious literature devoted to these subjects. In this connexion we should note that, if writers and poets of restraint do exist in Arabic literature, many others practise complete freedom of language; the restrictions on the circulation of unexpurgated translations of the *Arabian Nights* are well known, and *Das Buch der wunderbaren Erzählungen und seltsamen Geschichten* edited by H. Wehr, Damascus-Wiesbaden 1956, again confirms the general tendency towards indecency, towards *sukhf*, later successfully cultivated by the poet Ibn al-Ḥadjdjādj and many others.

To meet the sort of demand that requires that serious matter should be interspersed with amusing passages, works of *adab* literature frequently contain smutty anecdotes, and even popular encyclopaedias indulge in scabrous sections; there is no reason to be shocked by thus, for the prudishness displayed by some is often no more than hypocrisy, as al-Djāḥiẓ points out, who, in his introduction to the *Mufākharat al-djawārī wa 'l-ghilmān*, after making fun of the Tartuffes who are too easily offended, recalls that the virtuous ancestors were in no whit so prudish and states that the words of the Arabic language were made to be used, even though they may seem shocking. The short work just referred to is particularly scabrous, dealing plainly with one aspect of sexual life and at the same time providing a sort of anthology of love, normal and abnormal; the author verges on obscenity without any sort of restraint.

Earlier works dealing with sexual life seem to have been quite numerous already, if we can judge by the references that Djāḥiẓ makes to the *Kutub al-bāh*, of Indian origin, saying that these works are in no sense pornographic and that the Indians regarded them as manuals of sexual education with which they taught theirc hildren (*K. al-Ḥayawān*, index); no doubt he is here alluding to the *Kāmasūtra*, of which, however, no Arabic translation has survived. Other and later works also appear to have been inspired by the Indian tradition, in particular the *K. al-Alfiyya* which the *Fihrist* quotes, while Ḥādjdjī Khalīfa (see index) says that it was written by a certain al-Ḥakīm al-Azraḳ for the master of Nīsābūr, Tughān Shāh (569-81/1174-85), and embellished with suggestive illustrations. In its development, *adab* literature soon spread to sexual questions also, and two authors of the 3rd/9th century seem to have specialized in this type of writing. The first, Abu 'l-ʿAnbas al-Ṣaymarī (d. 275/888 [see AL-ṢAYMARĪ]), who had, however, been a *ḳāḍī* and to whom are attributed books on astrology still preserved in mss., is the author of some forty works which include one treatise on onanism (*K. al-Khaḍkhaḍa fī djald ʿUmayra*) and one on sapphism (*K. al-Saḥḥāḳāt wa 'l-baghghāʾin*). The second is a certain Muḥammad b. Ḥassān al-Namalī to whom the *Fihrist* (217) devotes a passage, reproduced in full by Yāḳūt (*Udabāʾ*, xviii, 119), and entirely taken up with the enumeration of titles relating to sexual questions, in particular a large work *K. Bardjān wa-ḥubāḥib* in which the author makes a special study of the best ways to fascinate women. The *Fihrist* (436) lists the titles of 12 works "on the Persian, Indian, Byzantine and Arab *bāh*", none of which appear to have survived, but it is probable that some of them were serious in purpose: a study of the harmony between men and women in relation to their physical characters, female physiology, the mystery of generation, sexual medicine and hygiene, etc.

Subsequently, the literature that can be described as erotologic *adab* developed quite considerably; to modern eyes it may appear obscene in character, though it was not so regarded by its readers, since whole chapters characteristically combine verses from the Ḳurʾān and *ḥadīth*s of the Prophet with obscene anecdotes or poems, while others on the contrary are merely inspired by the wish to popularize certain notions about medicine and hygiene. Ṣ. al-Munadjdjid (*Ḥayāt djinsiyya*, 107 ff.) reproduces a list of the contents of several of these works which are mostly unpublished; we will name them briefly, noting the characteristics of the authors to whom several are, rightly or wrongly, attributed: *Djawāmiʿ al-ladhdha* of Abu 'l-Ḥasan ʿAlī b. Naṣr al-Kātib who took his documentation from earlier texts, now lost, particularly the *K. Bardjān wa-ḥubāḥib* referred to above; in character it is at once lexicographical, juridical, medical, psychological and magical, and deals especially with aphrodisiacs.—*Nuzhat al-aṣḥāb fī muʿāsharat al-aḥbāb* of the doctor al-Samawʾal b. Yaḥyā al-Maghribī al-Isrāʾīlī (d. 570/1174, see Brockelmann, I, 892), composed for the Artuḳid ʿImād al-dīn Abū Bakr; it is an *adab* work of somewhat composite nature, medical ideas appearings side by side with advice on buying slaves or behaviour in society. *Nuzhat al-albāb fī-mā lā yūdjad fī kitāb* of Aḥmad b. Yūsuf al-Tīfāshī (d. 651/1253 [see AL-TĪDJĀNĪ]) is mainly devoted to prostitution and sexual anomalies.—*Kitāb al-Bāhiyya wa 'l-tarākīb al-sulṭāniyya* of Naṣīr al-Dīn Ṭūsī (d. 672/1274 [see ṬŪSĪ]), a medical work with some chapters on sexuality.—*Nuzhat al-nufūs wa-daftar al-ʿilm wa-rawḍat al-ʿarūs*, an anonymous *urdjūza* of 10,000 lines of verse on the virtues of marriage, the terminology of the subject, aphrodisiacs, physiognomy and its use in love.—*Tuḥfat al-ʿarūs wa-rawḍat al-nufūs* of Muḥammad b. Aḥmad al Tidjānī (d. after 709/1309 [see AL-TĪDJĀNĪ]), which contains above all the canon of female beauty; this very popular work was printed at Cairo in 1301.—*Rudjūʿ al-shaykh ilā ṣibāh fi 'l-ḳuwwa ʿalā 'l-bāh*, attributed to Ibn Kemāl Pasha (d. 941/1535 [see KEMĀL-PASHAZĀDE]), a compilation of earlier works, medical and hygienic in character but at the same time markedly erotic; this work was printed several times at Cairo and Bombay, and enjoyed great popularity. To this list must be added *al-Rawḍ al-ʿāṭir fī nuzhat al-khāṭir*, composed ca. 813/1910 by Muḥammad al-Nafzāwī on the request of a minister of the Ḥafṣid Abū Fāris, and which offers "the advantage of informing us of the ideas then current, at certain levels, on the subject of women and love" (R. Brunschvig, *Ḥafṣides*, ii, 372-3); this has been the object of numerous editions and a Fr. trans. (Algiers 1876, Paris 1904, 1912).

Systematic search through catalogues of manuscripts would certainly provide a richer harvest, but the particulars given above should prove sufficient.

Bibliography: In the text. Two funda-

mental studies have been devoted to the subject discussed in this article; the first, by G.-H. Bousquet, *La morale de l'Islam et son éthique sexuelle*, Paris 1953, is the work of a jurist and sociologist who does not neglect practical reality; the second, by Ṣalāḥ al-Dīn al-Munadjdjid, *al-Ḥayāt al-djinsiyya ʿind al ʿArab*, Beirut 1958, is an excellent exposé based essentially on literary sources; another work by the same author, *Djamāl al-marʾa ʿind al-ʿArab*, Beirut 1957, is also rewarding. Since then two works have appeared but have remained unavailable to me: M. ʿAbd al-Wāḥīd, *al-Islām wa'l-mushkila al-djinsiyya*, Cairo 1380/1961, and Y. el-Masri, *Le drame sexuel de la femme dans l'Orient arabe*, 1962. (CH. PELLAT)

DJIRDJA [see GIRGA].

DJIRDJENT (in Arabic *Dj.r.dj.n.t* and *K.r.k.nt.*; we know of a *nisba* of Kirkintī, borne by a mystic of Sicilian origin, in the 4th/10th century), Agrigentum. Far removed from its ancient splendour, the town fell into the hands of the Arabs in 214/829 and was destroyed, or more probably dismantled, in the following year for fear that the Byzantines would return. It rose again, however, under Arab rule, and was frequently involved in hostilities with Palermo, which resulted in the bloody struggles of the first half of the 4th/10th century: in the years 325-9/937-41 in particular the people of Agrigentum rose against the Fāṭimid authorities, whose representative in Sicily was the governor Sālim b. Rāshid until he was succeeded by the general Khalīl b. Isḥāḳ, sent by the caliph of of Mahdiyya, al-Ḳāʾim. The general reduced Djirdjent to a state of obedience to the Fāṭimids and carried off several notables as prisoners to Africa; he had them drowned during the crossing by sinking the ship in which they were travelling. Djirdjent then came under the rule of the Kalbid *amīrs* of Sicily, and when in about 431/1040 their power collapsed, it was taken into the territories of the *amīr* of Castrogiovanni Ibn al-Ḥawwās who had a palace at Djirdjent. In the general anarchy which preceded the arrival of the Normans, the town was occupied first by the Zīrid prince Ayyūb b. Tamīm, and then by a Ḥammūdid *sharīf* from Spain. The Normans under Roger captured the town from the *sharīf* on 25 July 1087, and thereafter it formed part of the Norman state of Sicily. Al-Idrīsī speaks of Djirdjent as a flourishing town with very rich markets, beautiful buildings and imposing ancient remains (this certainly refers to the Greek temples). Today nothing survives from the Muslim period apart from the name "Porta Bibirria" (Bāb al-Riyāḥ, Gate of the Winds) which is still current. The Biblioteca Lucchesiana there possesses a few dozen Arabic manuscripts.

Bibliography: M. Amari, *Storia dei Musulmani di Sicilia* and *Biblioteca Arabo-Sicula*, index; Idrīsī, *L'Italia nel libro del re Ruggero*, ed. Amari and Schiaparelli, Rome 1883, 31-2 in the text, 36 in the trans. (F. GABRIELI)

DJIRDJĪ ZAYDĀN [see ZAYDĀN].

DJIRDJĪS, St. George. Islam honours this Christian martyr as a symbol of resurrection and renovation; his festival marks the return of spring.

The legend of St. George had become syncretic long before the days of Islam, for we can recognize in St. George overthrowing the dragon a continuation of Bellerophon slaying the Chimaera. Bellerophon himself was symbolic of the Sun scattering the darkness, or of spring driving away the mists and fogs of winter.

According to Muslim legend, Djirdjīs lived in Palestine in the time of the disciples, and was martyred at Mosul under the ruler Dādān—presumably Diocletian; during his execution the saint died and was resurrected three times. The legend is found in a considerably developed form in the Persian version of Ṭabarī and always with the same motif: it is simply a series of deaths and resurrections. The saint makes the dead rise from the tombs; he makes trees sprout and pillars bear flowers; in one of his martyrdoms, the sky becomes dark and the sun only appears again after he has returned to life.

In the end St. George converts the wife of the monarch persecuting him; she is put to death; the saint then begs God to allow him to die, and his prayer is granted.

In the town of Mosul a *mashhad* of Nabī Djirdjīs is still known, already noticed in the 6th/12th century by al-Harawī (*K. al-Ziyārāt*, ed. Sourdel-Thomine, Damascus 1953, 69; trans. Damascus 1957, 154), and which corresponds to a former Chaldaean church (F. Sarre and E. Herzfeld, *Archaeologische Reise im Euphrat und Tigris Gebiet*, Berlin 1911-22, ii, 236-8; A. Sioufi, *Les antiquités et monuments de Mossoul*, Mosul 1940, 17-23; J. M. Fiey, *Mossoul chrétienne*, Beirut 1959, 118-20).

In Islam St. George is frequently confused with the prophets Khiḍr and Elias [see KHIḌR and KHIḌRELLEZ].

DJIRM [see DJISM].

DJĪRUFT, a fertile, high lying district of Kirmān with a city of the same name south-west of Bam and separated from it by the Bāridjān Mountains. There is no record of the city in pre-Islamic times and the first mention of the city is when Djīruft was captured by Mudjāshiʿ b. Masʿūd in 35/655 (al-Balādhurī, *Futūḥ*, 391). Thereafter the city is mentioned many times, especially in the Arabic geographies.

The Khāridjites were active in Djīruft but nothing is known of the history of the city. The geographer al-Muḳaddasī (461) praises the district highly in describing the fertility of its land and its beauty. The Ṣaffārid Yaʿḳūb and his brother ʿAmr are said to have embellished Djīruft with buildings (Sykes, ii, 16). The city suffered much from the anarchy of the Mongol and post-Ilkhānid periods but it continued to exist in the Tīmūrid period after which Djīruft disappears from the sources, although the district or *shahristān* retains the name to the present day.

The site of the old city of Djīruft is unknown but it must be near the present town of Sabzāwārān, and some nearby ruins (Le Strange, 314) may be those of the old city.

DJISM (A.), body. In philosophical language the body (σῶμα) is distinguished from the incorporeal (ἀσώματον), God, spirit, soul, etc. In so far as speculation among the Muslims was influenced by Neo-Platonism two features were emphasized: 1. the incorporeal is in its nature simple and indivisible, the body on the other hand is composite and divisible; 2. the incorporeal is in spite of its negative character the original, the causing principle, while the body is a product of the incorporeal.

The more or less naive anthropomorphism of early Islam, *i.e.*, the conception of God after the analogy of the human form, is not to be considered here. On it one may consult I. Goldziher, ***Vorlesungen über den Islām***, 1910, 107 f., 120 f., and A. J. Wensinck, ***The Muslim Creed***, 1932, 66 f. But from the usual ***tadjsim*** or ***tashbīh*** we must distinguish the teaching of certain philosophers who called God a body; this is to some extent a question of terminology. According to al-Ashʿarī (***Maḳālāt***, ed. Ritter, i, 31 f., 44 f., 59 f., 207 f., ii, 301 f.), the Shīʿī theologian Hishām b. al-Ḥakam (first half of the 3rd/9th century) was the most important champion of the view that God is a body. He would not however (cf. 208 and 304) compare Him with worldly bodies but only describe Him in an allegorical sense as an existing being, existing through Himself. His description of God (p. 207) is thus to be interpreted: God is in a space which is above space; the dimensions of His body are such that His breadth is not distinguished from His depth and His colour is similar to His taste and smell; He is a streaming light, a pure metal shedding light on all sides like a round pearl. If we add that the qualities of bodies are also called bodies by Hishām and others, then we must conclude with S. Horovitz (***Über den Einfluss der griechischen Philosophie***, 1919, 38 f.) that here Stoic terminology is present but with foreign additions. The doctrine that God is light etc. is not a Stoic theory.

After a long fight among the theological schools the incorporeality of God was recognized by Islam. Only the doctrine of the spirituality of the soul of man, held by many theologians, notably Ghazālī, did not find general recognition [cf. NAFS]. Ibn Ḥazm, for example (*Kitāb al-Faṣl*, 80 ff.), calls the individual *nafs* a *djism*, because it is distinguished from the souls of other individuals, because it has knowledge about much that another does not know, and so on.

A remarkable doctrine about the body had already appeared before Ashʿarī and then developed in his school, namely a theological atomism. Regarded from the philosophical side, the atomists and their opponents have at least one hypothesis in common: the body is composed of the incorporeal. But how? According to the view of the atomist theologians, the body is composed of the smallest particles (atoms) which cannot be further subdivided, incorporeal themselves and not perceptible. They then fall out over the question how many atoms are required to make a body, in a way which reminds one of the old problem of how many grains of corn make a heap. A survey of this speculative atomism, the origins of which have not yet been fully explained, is given by D. B. Macdonald, ***Continuous re-creation and atomic time in Muslim scholastic theology*** (in *Isis*, no. 30, ix/2, 1927, 326 ff.).

The philosophers, on the other hand, say with Aristotle and his school that the body is composed of matter and form (*hayūlā* or *mādda* and *ṣūra*). Both are in themselves incorporeal, indivisible and imperceptible, but their combination, the body, is divisible because the body is a continuous magnitude. This is really a philosophically diluted cosmogonic conception, the birth of the body from a male active principle (form) and a female receptive principle (matter). For Aristotle, who taught the eternity of a world order coming from God, the idea had hardly any importance; still less had it for the Stoics, who taught that matter and form are in reality eternally combined and can only be separated in imagination (Arab. *fi 'l-dhihn, fi 'l-wahm*). But for the Neo-Platonists it became a gigantic problem, to derive the material, corporeal world from the incorporeal; it became still more difficult for the Muslim philosophers to effect a reconciliation with the absolute doctrine of creation.

Aristotle gives the following definition (cf. ***De coelo***, i, 1, 268ª, 7 f., and ***Metaph.***, v, 13, 1020ª, 7): a body is that which has three dimensions (dimension = διάστασις, διάστημα, Arab *buʿd, imtidād*) and is a continuous, therefore always divisible, quantity (ποσὸν συνεχές, *kam muttaṣil*).

A wordy dispute arose over this; the question was which is the most essential, the dimension or the magnitude, and how the magnitude is to be conceived (as incorporeal form). When the Neo-Platonists wish to "explain" something they make an abstract out of the concrete: ποσόν becomes ποσότης, *kam* becomes *kamiyya*, magnitude becomes quantity and *djism djismiyya* (corporeality). The following answer is then given to the question how a body comes into being: through corporeality (= corporeal idea of form) being assumed by matter (also incorporeal by definition). When the absolute body or second matter is thus brought into existence, the dimensions and other qualities of the concrete bodies come into existence; the gap between in corporeal and corporeal is thus bridged.

As regards matter, this doctrine comes from the Enneads (ii, 4); the formulation, that corporeality is the first form of the body (σωματικὸν εἶδος) is found in the Neo-Platonist expositor Simplicius (4th century) in his commentary on Aristotle's Physics (ed. Diels, 227 ff.). Hence in Arabic the expression *ṣūra djismiyya* and in Latin *forma corporeitatis*; because the body according to Aristotle is one of the five continuous magnitudes (like line, surface, space and time) one talks of continuity (*ittiṣāl*) as the form of the body.

The Ikhwān al-Ṣafā, Ibn Sīnā and al-Ghazālī adopted these subtleties, although in different proportions. The Ikhwān al-Ṣafā place corporeality or absolute body (*djism muṭlaḳ*) last in the series of emanations [cf. FAYḌ].

Ibn Sīnā, who also distinguishes two matters, although he knows that *mādda* is the translation of the Greek ὕλη (*hayūlā*) and he regularly uses it synonymously, regards as the first form of existence of the body continuous quantity, in which the power is according to the dimensions, in other words, the dimensions are added like attributes or accidents (cf. *ḥudūd* in *Tisʿ Rasāʾil*, 58, 60 [thereon al-Ghazālī, *Miʿyār al-ʿilm*, 180]; *Ishārāt*, ed. Forget, 90 ff.).

Ibn Rushd disputes (***Metaphysics***, Cairo ed., 37 ff.), as so often, the teachings of his predecessor without quite clearing up the problem.

When the Neo-Platonizing philosophers and theologians talk of the body, it should always be asked what they mean by it: the divine original (= idea of the body) or its purest, unalterable copies in the heavenly spheres and constellations, or lastly the sublunar elementary bodies with their qualities, changes and combinations. This is the first step to comprehension, so far as this is possible.

The distinction between the heavenly bodies and earthly bodies influenced by them was very important for the natural philosophy of the period. The latter were composed of the four relatively simple bodies (elements, in Aristotle ἁπλᾶ σώματα: Arab. *al-basāʾiṭ*). In the higher sense the heavenly bodies were simple; to describe them the term *djirm* (plur. *adjrām*) was often used, which otherwise is synonymous with *djism*. It is to be noted that the *Theology of Aristotle* (ed. Dieterici, 32, 40 f.) understands by

D̲j̲irmiyyūn those philosophers who as followers of Pythagoras teach that the soul of man is the harmony of its body (*iʾtilāf, ittifāḳ, ittiḥād*). This was a theory particularly common among physicians.

Generally popular also was the distinction taken from Aristotle between the physical and the mathematical body (*d̲j̲. ṭabīʿī* and *d̲j̲. taʿlīmī* = *d̲j̲. al-handasa*). The geometricians are said to regard dimensions as ideal figures, abstracted from the many qualities possessed by natural bodies, with which the physicists deal.

D̲j̲irm, *badan* and *d̲j̲asad* are used as synonyms of *d̲j̲ism*; the two last are usually applied to the human body, *badan* often only to the torso. While *badan* is also used for the bodies of animals, *d̲j̲asad* is rather reserved for the bodies of higher beings (angels etc.). *D̲j̲amād* is an inorganic body, but *ad̲j̲sād* is used particularly for minerals. It may also be mentioned that *haykal* (plur. *hayākil*) means with the gnostics and mystics the physical word as whole as well as the planets, because the world-soul and the spirits of the stars dwell in them like the soul of man in its body (cf. AL-ṢĀBIʾA; Nicholson, *Studies in Islamic mysticism*, 110; cf. *Theology of Aristotle*, 167).

D̲J̲ISR, pl. *d̲j̲usūr* (Ar., cf. Fränkel, *Aram. Fremdwörter im Arabischen*, 285), "bridge", is more particularly, though by no means exclusively, a bridge of boats in opposition to *ḳanṭara* [*q.v.*], an arched bridge of stone.

An incident in the history of the conquest of Babylonia has become celebrated among the Arab historians as *yawm al-d̲j̲isr* "the day of [the fight at] the bridge": in 13/634 Abū ʿUbayd al-T̲h̲aḳafī was defeated and slain in battle against the Persians at a bridge across the Euphrates near Ḥīra; cf. Wellhausen, *Skizzen und Vorarbeiten*, vi, 68 ff., 73; Caetani, iii, 145 ff. (ED.)

D̲J̲ISR BANĀT YAʿḲŪB, the "bridge of the daughters of Jacob", name of a bridge over the Upper Jordan, above the sea of Galilee and to the south of the former marshy depression of the lake of al-Ḥūla, now dry. At this point, which was that of an old ford known at the time of the Crusades under the name of the "ford of Yaʿḳūb" (*Vadum Jacob* of William of Tyre) or "ford of lamentations" (*mak̲h̲āḍat al-aḥzān* of Ibn al-At̲h̲īr and Yāḳūt), the *Via maris* from Damascus to Ṣafad and ʿAkkā crossed the river, following a trade route which was especially frequented in Mamlūk times and which coincided also with a *barīd* route. From this time dates the improvement of the crossing by the erection of a bridge of basalt of three arches, traces of which are still visible, and the construction nearby of a caravanserai, before 848/1444, by a Damascene merchant, who marked along with his foundations the route from Syria to Egypt (al-Nuʿaymī, *al-Dāris*, ed. D̲j̲. al-Ḥasanī, ii, Damascus 1951, 290; cf. H. Sauvaire, in *JA*, 1895, ii, 262). Travellers and geographers, oriental and western alike, only rarely omit mention of this stage, sometimes under the designation, also frequent, of D̲j̲isr Yaʿḳūb or *Pons Jacob*.

The strategic importance of this crossing, again emphasized in 1799 when it marked the extreme point of the advance of French troops, was especially marked in the 6th/12th century when Franks and Muslims contested it furiously: Baldwin III was defeated here by Nūr al-Dīn in 552/1157; Baldwin IV built here in 573/1178 a fortress entrusted to the Templars, the Castellet of the ford of Jacob, whose ruins still remain on a knoll on the west bank 500 m. south of the bridge; this stronghold was taken and destroyed by Ṣalāḥ al-Dīn a year later, in 575/1179.

The favour enjoyed by the Biblical reminiscences centred on this locality even in the middle ages, and which seem to have resulted from a transfer to the Jordan of the tradition of Jacob's crossing of the Jabbok (now Nahr al-Zarḳā), according to *Genesis*, xxxii, 22, is attested by the toponymy of the region and by the mentions in Arabic authors of the 6th/12th century of a *mas̲h̲had Yaʿḳūbī*, then a place of pilgrimage, and of a "castle of Jacob" (*ḳaṣr Yaʿḳūb*) or "house of lamentations" (*bayt al-aḥzān*); the latter name refers to the lamentations of Jacob for the death of his son Joseph (recalled not far from there, at the place called D̲j̲ubb Yūsuf or K̲h̲ān D̲j̲ubb Yūsuf, by the pit in which he is said to have been cast by his brothers). At the present day there further exists the "grotto of the daughters of Jacob" (*mag̲h̲ārat banāt Yaʿḳūb*), a sanctuary whose name explains that of the bridge, and whose history is fixed by an inscription of the 9th/15th century (L. A. Mayer, *Satura epigraphica arabica*, in *QDAP*, ii (1932), 127-31).

Bibliography: R. Dussaud, *Topographie historique de la Syrie*, Paris 1927, 314; F. M. Abel, *Géographie de la Palestine*, Paris 1933-8, i, 162, 480, 486; ii, 226; Le Strange, *Palestine*, 53; A. S. Grousset, *Hist. des Croisades*, Paris 1934-6, index s.v. *Jisr Banât Yaqûb* and *Gué de Jacob*). (J. SOURDEL-THOMINE)

D̲J̲ISR AL-ḤADĪD, "iron bridge", name of a bridge over the Orontes in the lower part of its course, at the point where the river, emerging from the valleys of the calcareous plateau and widening towards the depression of al-ʿAmḳ [*q.v.*], turns sharply westwards without being lost in that marshy depression whose waters it partly drains to the sea. The fame of this toponym, frequently mentioned in mediaeval documents but of obscure origin (perhaps local legend), is explained by the strategic and commercial importance of this stage, through which, in antiquity and in the middle ages, has always passed the route joining Antioch to Chalcis (Ḳinnasrīn) and then Aleppo (a route frequently taken, at the time of Antioch's prosperity, by the caravan traffic descending from the col of Baylān [*q.v.*]). The bridge itself, defended by strong towers and fortified on various occasions (notably in 1161 by Baldwin IV), is known to have played a part of prime importance in the wars between Arabs and Byzantines as early as the 4th/10th century, later in the history of the principality of Antioch after its storm by the Franks of the first crusade. The present bridge retains no trace of the building of this period. In the neighbourhood is a raised site

which doubtless marks the position of the ancient Gephyra.

DJISR AL-SHUGHR or Djisr al-Shughūr, the modern name of a place in north Syria, the site of a bridge over the Orontes which has always been an important centre of communications in an area that is mountainous and difficult to traverse. It was in fact at this spot that the most direct route from the Syrian coast to the steppes in the interior and the Euphrates, passing over the Djabal Nuṣayri and the Limestone Massif, crossed the line of communications that ran north-south and followed the Orontes between Apamea/Ḳalʿat al-Muḍīḳ and Antioch/Antāḳiya. Of these two routes the second is today abandoned, its traffic having gradually declined during the Middle Ages, while swamps spread over the once fertile and cultivated plain of al-Ghāb [*q.v.*]. But the valley of the Nahr al-Kabīr and the depression of al-Rūdj are still partly followed by the modern road from al-Lādhikiya to Ḥalab, crossing the Orontes by this bridge which has been so often rebuilt and altered, and across which the old trade route used to run, linking the coastal town of Laodicaea with Chalcis/Ḳinnasrīn and Berea/Ḥalab, in one direction, and with al-Bāra [*q.v.*] and Arra/Maʿarrat al-Nuʿmān in the other.

There have long been attempts to identify this spot with the Seleucia ad Belum of Ptolemy, or Niaccuba (corruption of Seleucobelus) of the *Itinerary of Antoninus*, which in ancient times commanded one of the routes leading from the Limestone Massif. But the identification of this bridge with the one at Kashfahān, so often mentioned in the fighting at the time of the Crusades, has given rise to much discussion which has served to emphasize the utter lack of precision in the descriptions given by Arab authors, and also the modern aspect of the present village. Only a caravanserai and a mosque of the Ottoman period testify to the fact that it was once a halting-place for pilgrims of the ḥadjdj coming from Anatolia and crossing Syria by the ancient road along the Orontes valley, and it is difficult to place at a date earlier than the Mamlūk period (defaced inscription) the bridge with its assortment of materials and the sharp elbow projecting upstream. There seems however to be a convincing case, and on this point we follow R. Dussaud in his refutation of Max van Berchem's suggestion, for distinguishing the site of the cross-roads, the Kashfahān of the Crusades, and Shughr in the *Voyage* of the Mamlūk sultan Ḳāytbāy, from the site of the twin castles of al-Shughr and Baḳās which stood in the same valley, but 6 km. to the north-west, and constituted one of the eastern defences of the Frankish principality of Antioch.

It is this fortress, whose ruins still crown a ridge of rock of which the central part has collapsed (hence the need to build two separate fortications) and dominate the village of Shughr al-Ḳadīm amidst its gardens, which was conquered by Ṣalāḥ al-Dīn in the course of the celebrated campaign of 584/1188, during which he first halted at Tall Kashfahān. Later, this fortress formed part of the domains of the Ayyūbid al-Malik al-Ẓāhir Ghāzī and, after being captured by the Mongols, it became during the Mamlūk period the centre of a military district ranking as one of the *niyābas* of the province of Aleppo. Its decline, from the time when it lost all its strategic importance, finally explains the subsequent rise of the modern Djisr al-Shughūr and the return of a settled population to the neighbourhood of the bridge where, in the time of Abu 'l-Fidā', there had only been a weekly market (crowded, however), and where caravanserais for foreign merchants were then built (the sovereign of Aleppo promised to put up a *fondaco* for the Venetians).

DJIṢṢ (A.), plaster.—Muslim builders have generally shown themselves unanxious to use carefully chosen and worked materials in their constructions. Frequently walls, apparently hurriedly built, are composed of rubble (undressed stones) or even of pisé (compacted earth and lime) or mud-brick. This mediocre skeleton, however, is clad by facings which disguise its poverty and give it the illusion of richness. Just as the Byzantine builders decorated church sanctuaries and rooms in princely dwellings with marble plaques and mocaics with a gold ground, those of Persia, Egypt, or the Maghrib have covered the façades and interiors of their mosques and palaces with incised fayence or with sculptured and coloured plasters, and the windows themselves are adorned with perforated plaster *claustra*, their voids filled with coloured panes.

Plaster and stucco (made of a mixture of lime and marble or powdered eggshell, or else of pure gypsum and dissolved glue) are both of especial interest as the facings of exteriors and interiors. The plaster is carefully smoothed and decorated with paint, or, when it has been applied more or less thickly on the wall, sculptured by an iron tool whence the name of *naḳsh ḥadīda* given in North Africa to work of this genre. In his book *L'Alhambra de Grenade*, 5, Henri Saladin has provided the following technical account [here translated]: 'On a wall coated with plaster the craftsman would trace the intended design with a dry-point; then, with the help of chisels and burins, he would cut in the fresh plaster the ornaments which he had outlined. This prodecure necessitated the use of a slow setting plaster, which could be obtained by the addition of gum or salt to the plaster, as the Tunisian craftsman do today. Later this method was replaced by moulding, but this gives less delicacy. Mouldings of the Arab period may still be seen at the Alhambra. An examination of the ornamentation of the convent at S. Francisco, an old Arab palace . . . reveals the manner in which plaster was retained against wooden surfaces: at one place where the plaster has fallen the wooden backing

can be seen, pierced by nails joined one to another by a network of string'. One should add that besides the sculpture obtained by cutting away the field between the decorative elements one does also find moulded or impressed reliefs—particularly border mountings—level with and adhering to the groundwork, which has been cut back for this purpose.

The important rôle played by decoration of this genre in the Islamic art of the 8th/14th century, which saw the erection of the most notable parts of the Alhambra, is attested by a passage of Ibn Khaldūn, who considers it as a branch of architecture (*Muḳaddima*, ii, 321; Rosenthal, ii, 360-1): he remarks that the work is executed by iron tools (*bi mathāḳib al-ḥadīd*) in the still wet plaster. However, it goes without saying that plaster as an element of decoration is much earlier than the blossoming of Hispano-Moorish art. To what period should one assign its adoption by the Muslims, and to what influence can it be attributed?

Hellenistic art, one of the essential sources of the Muslim arabesque, was not ignorant of stucco relief, which was often delicately modelled. It must not be supposed, however, that Islam has inherited the art of the Roman or Byzantine workers in gypsum plaster, for Islamic moulded-plaster decoration is very different, both as a technique and as a style. It is apparently towards Sasanian art that the search for its origin must be directed. The Syrian castle of Ḳaṣr al-Ḥayr, founded by the Umayyad Hishām in 110/728, in the ornamentation of which Sasanian motifs preponderate, presents some panels which are indicative of this origin. A compact floral decor, wholly filling the geometrical frames which divide the panels, is treated without relief but by cutting out the plaster perpendicularly or obliquely to the surface plane. This sunken two-dimensional scupture, in which there is no projection, is already that of the Muslim works in plaster of the succeeding centuries. It flourishes in the 3rd/9th century at Sāmarrā and, mixed with Hellenistic elements, gives rise to the linear undercut decoration of the ʿAbbāsid palaces. This was transmitted, with many another fashion, from ʿIrāḳ to the Egypt of the Ṭūlūnids. From Egypt it reached North Africa, where it found a favourable soil. An extension towards the Sahara among the Khāridjites, who had taken refuge at Sedrāta near Wargla, must be mentioned. The plaster there, which mixed with sand is very durable, is used, under the name of *timshent*, for incised decorative facings, where the African Christian inheritance appears side by side with Mesopotamian reminiscences. However, it is especially in the Maghrib and in Spain that sculptured plaster attains its greatest beauty. The 6th/12th century saw the birth in Marrakesh, Fez, and Tlemcen, of facings with a floral decoration where the sculptor has given to this plastic decoration a richness of forms, a firmness yet a flexibility of composition, a vigour in relief (*e.g.*, the Almoravid domes of the *mīḍāt* at Marrakesh and of the Ḳarawiyyin of Fez, the Almohad capitals of the Kutubiyya etc.) which greatly transcend the usual frontiers of the arabesque. The rôle played by sculptured plaster in Hispano-Moorish art in the 13th and 14th centuries is well known. It was to be maintained in Spain in the *mudéjar* monuments, and to survive in the later Tunisia and Morocco, attesting less the decorative invention of the artists than their fidelity to tradition and their manual skill. (G. MARÇAIS)

DJĪTAL [see SIKKA, WAZN].

AL-**DJIWĀʾ** (also Līwā, probably derived from the local pronunciation of *dj* as *y*, resulting in al-yiwāʾ > līwā) a district of many tiny oases in the heavy sands of south-central al-Ẓafra, the large, almost completely sand-covered region extending southward from the Persian Gulf between Sabkhat Maṭṭī in the west almost to Long. 55° E. The oases nestle in the hollows and passage ways of the northernmost sand mountains of al-Baṭīn, with the greatest number lying between Lat. 23° N. and Lat. 23° 15′ N. The eastern third of the oases, which are smaller and less frequented than the others, bear to the southeast below Lat. 23° N.

The water of al-Djiwāʾ, which lies only a few feet below the surface, supports numerous small groves of date palms growing on the sheltered side of great dunes. In many places the owners live above their gardens on the dunes themselves, where there is a chance of catching a cooling breeze. The ruins of several forts are scattered throughout the district, but today the inhabitants live only in palm-thatch huts. All but a few of the oases are uninhabited except during the summer when the date groves require attention. During the rest of the year most of the owners are in the desert with their herds or along the coast of the Persian Gulf. Among the settlements usually inhabited the year round are al-Māriya, Ḳaṭūf, Shidḳ al-Kalb, al-Kayya, al-Ḳarmida, Shāh, and Tharwāniyya.

The people of al-Djiwāʾ belong, in roughly descending order of numbers, to the tribes of al-Manāṣīr, al-Mazārīʿ, al-Hawāmil, al-Maḥāriba, al-Ḳubaysāt, Āl Bū Falāḥ, al-Marar, and Āl Bū Muhayr. All but al-Manāṣīr belong to the conglomeration usually referred to as Banī Yās [*q.v.*]. Sand-dwelling tribesmen, such as members of Āl Rāshid and al-ʿAwāmir, some of whom even own a few palms, are frequent visitors. A few residents of al-Djiwāʾ own pearling boats, and every year some of the men journey north to the Persian Gulf to seek their fortunes on the pearling banks. Their number declines, however, as more find employment with the oil companies operating in various parts of Arabia.

Al-Djiwāʾ lies within the more than 70,000 sq. km. of territory in dispute between Saudi Arabia and Abū Ẓaby. During the abortive arbitration of this dispute in 1954-5 (see AL-BURAYMĪ), both sides contended that they had historical rights to sovereignty over al-Djiwāʾ and that they had exercised jurisdiction by collecting *zakāt* (Saudi Arabia on camels and Abū Ẓaby on dates) and by maintaining law and order. Abū Ẓaby claimed the traditional loyalty of all the inhabitants of al-Djiwāʾ, while Saudi Arabia maintained that the preponderance, including all of al-Manāṣīr and al-Mazārīʿ, were loyal Saudis.

Al-Djiwāʾ was unknown to the Western world until 1324/1906 when the acting British Political Resident in the Persian Gulf, P. Z. Cox, learned of its existence from a former inhabitant.

DJĪWAN, the *ʿurf* of Mullā Aḥmad b. Abī Saʿīd b. ʿUbayd Allāh b. ʿAbd al-Razzāḳ b. Makhdūm Khassa-i Khudā al-Ḥanafī al-Ṣāliḥī (he claimed descent from the Prophet Ṣāliḥ) was born at Amēthī, near Lucknow, in 1047/1637, as he was 21 (?) lunar years old in 1069/1658 when he completed his *al-Tafsīr al-Aḥmadī* (cf. *Ḥadāʾiḳ al-Ḥanafiyya*, 436). The same source, however, states that he was 83 years of age at the time of his death in 1130/1717. Gifted with an extraordinary memory, he learnt the Ḳurʾān by heart at the age of seven. Studying in his early years first with Muḥammad Ṣādiḳ al-Sitarkhī, he completed his education in rational and traditional sciences at the age of sixteen with Luṭf Allāh Kōṛā-Djahānābādī. Contrary to the official histories such as the *ʿĀlamgīr-nāma* and the *Maʾāthir-i ʿĀlamgīrī*, all his biographers unanimously agree that he was appointed as one of his 'teachers' by Awrangzīb who greatly respected and honoured him. This must have happened between 1064/1653 and 1068/1657, the year Awrangzīb ascended the throne. Most probably the emperor, on his accession, read certain books with the youthful Mullā. Shāh ʿĀlam I, the son and successor of Awrangzīb, like his father, also held him in great esteem. The Mullā must have attained high proficiency in *fiḳh* as, at the comparatively young age of 21, he compiled his Arabic *Tafsīr* dealing with those *aḥkām sharʿiyya* that are deducible only from the Ḳurʾān. After completing his education, he began to teach at his home-town. He left for Adjmēr and Dihlī in 1087/1676, where he stayed for a considerable time teaching and preaching. In 1102/1690 he left on a visit to Mecca and Medina for the first time and after a stay of five years there returned to India in 1107/1695. He then joined the imperial service and spent some six years with the armies of Awrangzīb who was then engaged in fighting against the Deccan kingdoms. In 1112/1700 he left for the second time for al-Ḥidjāz and after twice performing the *ḥadjdj* and *ziyāra* returned to Amēthī in 1116/1704. After a short stay of two years, during which he received the Ṣūfī *khirḳa* from the Shaykh Yāsīn b. ʿAbd al-Razzāḳ al-Ḳādirī, he repaired to Dihlī with a large number of pupils. He was received in audience at Adjmēr by Shāh ʿĀlam I (1119-24/1707-12) who took him to Lahore. He returned to Dihlī on the death of Shāh ʿĀlam and engaged himself again in his favourite profession of teaching. He had also established a *madrasa* in his home-town Amēthī. A detailed account of this institution appears in the Urdū work *Taʾrīkh ḳaṣaba-i Amēthī* by Khādim Ḥusayn (ed.? date ?). He died in his *zāwiya* in the Djāmiʿ masdjid of Dihlī in 1130/1717 but his dead body was later disinterred and taken to his home-town for final burial.

He is the author of: (i) *al-Tafsīrāt al-Aḥmadiyya fī bayān al-āyāt al-sharʿiyya*, compiled in five years 1064-9/1653-8 while he was still a student (ed. Calcutta, 1263 A.H.); (ii) *Nūr al-anwār*, a commentary on al-Nasafī's *Manār al-anwār* on the principles of jurisprudence, written at the request of certain students of Medina in a short period of two months; also frequently printed; (iii) *al-Sawāniḥ*, on the lines of Djāmī's [*q.v.*] *al-Lawāʾiḥ* written in the Ḥidjāz during his second visit in 1112/1700; (iv) *Manāḳib al-awliyāʾ*, biographies of saints and *mashāyikh* which he compiled in his old age at his home-town. The work contains a supplement by his son ʿAbd al-Ḳādir and a detailed autobiographical note (for an extract see *Nuzhat al-khawāṭir*, vi, 21); (v) *Ādāb-i Aḥmadī*, on *ṣūfism* and mystic stations, compiled in his younger days.

Bibliography: Āzād Bilgrāmī, *Subḥat al-mardjān*, Bombay 1303/1885, 79; idem, *Maʾāthir al-kirām*, Agra 1328/1910, 216-7; Raḥmān ʿAlī, *Tadhkira-i ʿulamāʾ-i Hind*[2], Cawnpore 1914, 45; Faḳīr Muḥammad, *Ḥadāʾiḳ al-Ḥanafiyya*[3], Lucknow 1324/1906, 436; Ṣiddīḳ Ḥasan Khān, *Abdjad al-ʿulūm*, Bhopāl 1295 A.H., 907; ʿAbd al-Ḥayy Lakhnawī, *Nuzhat al-khawāṭir*, Ḥaydarābād 1376/1957, vi, 19-21 (contains the most detailed and authentic notice); ʿAbd al-Awwal Djawnpūrī, *Mufīd al-Muftī*, 113; Shāh Nawāz Khān, *Maʾāthir al-umarāʾ*, Bibl. Muʿtamad Khān, *Taʾrīkh-i Muḥammadī* (Ethé 2834), contains a short but useful notice in Arabic; Khādim Ḥusayn, *Ṣubḥ-i Bahār* (MS. in Urdū). (A. S. BAZMEE ANSARI)

DJIWĀR, "protection" and "neighbourhood", noun of action of the 3rd form to which only the second meaning corresponds, as in the grammatical term *djarr al-djiwār* "attraction of the indirect case" (syn. *djarr al-mudjāwara*, cf. Wright, *Gr. Ar. Lang.*[3], 1955, ii, 234 B). *Djiwār* "protection" corresponds to the 4th form *adjāra*, and particularly to the substantive *djār* "one protected, client" coinciding with the Hebrew *gēr* "one protected by the clan or community". Nöldeke in his study of the *Aḍdād* noted the identity of the institution "in the same juridical sense" (im wesentlich demselben rechtlichen Sinne, *Neue Beiträge zur sem. Sprachw.*, Strasbourg 1910, 38). The religious suggestion of "protection of a holy place", so frequent in Arabic, strangely recurs in the Hebrew *gēr* and especially in the Phoenician equivalent which, in numerous proper names, denotes one protected by a sanctuary or divinity, as well as in a text of Ras Shamra kindly brought to our attention by M. Ch. Virolleau, the eminent pioneer in this field of study: "*gr* already figures in the 14th century B.C. in a poem containing the expression *gr bt il* which I translated in 1936, in my *Légende de Danel*, 165, as 'l'hôte de la maison de Dieu' ... Cyrus H. Gordon, *Ugar. Manual glossary* no. 357, rendered it by 'a person taking asylum in a temple' ". The evident relationship of the term to the religious vocubulary is further emphasized by the later evolution of the Hebrew *gēr* in the well-known sense of "converted to Judaism". Nöldeke's remark (*loc. cit.*) giving precedence to the sense of "one protected" presupposes, in accordance with a well-known law, a term of socio-religious significance, owing its survival to the importance of the institution in nomadic customary law. Despite the Arab lexicographers, and also Gesenius, who wish to derive from a primitive meaning "to deviate", the meaning "to stay in the house of a host", it may be a question of the almost universal semantic link between "foreigner, enemy" (cf. Latin *hostis*) and "guest, client", for the root *gwr* in both languages also has the sense of hostility, injustice. Gesenius compares the Akkadian *geru*, but it is rather *gār*, "enemy", which would agree with the suggested etymology.

Bibliography: Gesenius-Buhl, *Hebr. aram. Hdwörterbuch*, 16 ed. Leipzig 1915, 134-5; also quotes an Egyptian proper noun and Coptic *ğoile*, "foreigner", Aramaic *giyyūra* from which the Septuagint took a Greek γειώρας on which see Nöldeke, *op. cit.*, 37. On the old sense of *gēr*, cf. A. Lods, *Israel des origines au VIII siècle*, 229, and for the later evolution, *JE*, art. Proselyte, and Vigouroux, *Dict. de la Bible*, Paris 1912, v, 758. The Akkadian *gāru* is noted in the index of J. J. Stamm, *Die Akkadische Namengebung*, Leipzig 1959, with reference to p. 179.

(J. Lecerf)

DJĪZA [see al-ḲĀHIRA].

DJĪZĀN [see DJAYZĀN].

al-**DJĪZĪ**, Abū Muḥammad al-Rabīʿ b. Sulaymān b. Dāwūd al-Azdī al-Aʿradj (died in Djīza, Egypt, in Dhu'l-Ḥidjdja 256 or 257/870 or 871), an eminent follower of al-Shāfiʿī and most probably a direct disciple of his. Like a good number of early Shāfiʿīs he was originally a Mālikī and disciple of ʿAbd Allāh b. ʿAbd al-Ḥakam. After his adherence to Shāfiʿism he devoted himself to making an accurate compilation of *Kitāb al-Umm*. Together with that of al-Buwayṭī, his version of this master work of Shāfiʿism is the most trustworthy. It may be considered as representing the second phase of Shāfiʿī jurisprudence known as the Egyptian. His compilation was rewritten at a later date with insertions of another Rabīʿ (Abu Muḥammad b. Sulaymān al-Murādī, d. 270/883). It is difficult to distinguish in *Kitāb al-Umm* things attributed to our Rabīʿ from those of the other. Zakī Mubārak, in his study of *Kitāb al-Umm* has tried to find characteristics of both, but his reasoning is not convincing. Al-Rabīʿ al-Djīzī counts among his disciples Abū Dāwūd and al-Nasāʾī. Ibn Khallikān illustrates him as a most virtuous and modest man.

Bibliography: Al-Subkī, *Ṭabaḳāt*, Cairo, i, 53; Ibn Khallikān, *Wafayāt*, Cairo 1948, i, 53, no. 220; Ibn al-Zayyāt, *Al-Kawākib al-sayyāra fi tartīb al-ziyāra*, Cairo, 151; Zakī Mubārak, *Taḥḳīḳ nasab Kitāb al-Umm*, Cairo 1932, 73; M. K. Ḥusayn, *Adab Miṣr al-Islāmiyya*, Cairo, 58, 95 (note).

(H. Monés)

DJIZYA (i)—the poll-tax which, in traditional Muslim law, is levied on non-Muslims in Muslim states. The history of the origins of the *djizya* is extremely complex, for three different reasons: first, the writers who, in the ʿAbbāsid period, tried to collect the available materials relating to the operation of the *djizya* and the *kharādj* found themselves confronted by texts in which these words were used with different meanings, at times in a wide sense, at others in a technical way and even then varying, so that in order to be able to complete a reasonable picture they tended to interpret them according to the meaning which had become current and best defined in their own time; secondly, it is a fact for which due allowance is not made that the system which sprang from the Arab conquest was not uniform, but resulted from a series of individual, and not identical, agreements or decisions; finally, this system followed after, but did not overthrow, earlier systems which themselves differed one from another and which, moreover, in the period immediately before Islam, are imperfectly understood and a subject of controversy. In these conditions, the account that follows can do no more than serve as a provisional guide.

The word *djizya*, which is perhaps connected with an Aramaic original, occurs in the Ḳurʾān, IX, 29 where, even at that time, it is applied to the dues demanded from Christians and Jews, but probably in the somewhat loose sense, corresponding with the root, of "compensation" (for non-adoption of Islam), and in any case as collective tribute, not differentiated from other forms of taxation, and the nature of its content being left uncertain (the examples given in the works on the biography of the Prophet are very variable; tribute was adapted to the individual conditions of each group concerned). It is possible that, *mutatis mutandis*, precedents can be found in pre-Islamic Arabia outside the religious sphere, in the conditions of submission of inhabited oases to more powerful tribal groups, in return for protection; but as a result of their conquests the Arabs, heirs of the Byzantine and Sāsānid régimes, were to be faced with new practical problems.

Naturally there was no hesitation over the fact that the *dhimmīs* [*q.v.*] had to pay the Muslim community a tax which, from the point of view of the conqueror, was material proof of their subjection, just as for the inhabitants it was a concrete continuation of the taxes paid to earlier regimes. This tax could be of three sorts, according to whether it was levied on individuals as such, or on the land, or was a collective tribute unrelated to any kind of assessment. In the ʿAbbāsid period, the texts show us a clear theoretical distinction between two taxes, on the one hand a tax on land, the *kharādj*, which except only in particular instances could not be suppressed since the land had been conquered once for all for the benefit of the permanent Muslim community, and a tax on persons, the *djizya*, which, for its part, came to an end if the taxpayer became Muslim. But it is far from being the case that such a distinction was always made, either in law or in fact, in the first century of Islam, and the problem is simply to determine what was the primitive practice, and how the ultimate stable system was gradually attained.

Starting from the indisputable fact that in the very early texts the words *djizya* and *kharādj* are constantly taken either in the wide sense of collective tribute or else in apparently narrower but interchangeable senses (*kharādj* on the head, *djizya* on land, as well as *vice versa*), Wellhausen, and then Becker and Caetani etc., built up a system according to which the Arabs, at the time of the conquest, are alleged to have levied collective tribute on the defeated, without taking the trouble to distinguish between the different possible sources of tax, and it was only the multiplicity of conversions which, at the very end of the Umayyad rule, led, particularly in Khurāsān, to a distinction in the total revenues being made between two taxes, the one on the person, ceasing with the status of *dhimmī*, the other on land which remained subject to the obligations placed upon it by the conquest. This theory, apart from the prejudicial question that it contradicts the opinion of all classical jurists, in fact comes up against numerous difficulties and recently has been severely breached, especially by Løkkegaard and even more by Dennett whose conclusions, in their general lines and inspiration, no longer seem to be refutable, although even they do not answer all the problems which they in their turn raise. They have demonstrated completely that the texts often make an effective distinction between the tax on land and the tax on the person, even if the term denoting them is variable, and have stressed the improbability that a reform which covered the whole empire should have started in the remote province of Khurāsān

during the final anarchic years of the Umayyad dynasty, and (especially Dennett in a closely reasoned analysis of the situation region by region) that one could not speak of a uniform system immediately after the conquest, since neither the earlier institutions nor the conditions of occupation had been everywhere the same.

The Sāsānid empire had possessed a fiscal system which distinguished between a general tax on land and a poll-tax, at rates varying according to the degree of wealth, but from which the aristocracy were exempt. The Roman-Byzantine empire had a more complex system about which we still remain uncertain on many points. A personal tax did exist, but was scarcely used, except only for colonists and non-Christians. The general tax made no distinction; in the case of a small property fiscally subject to the direct administration of the State, it was apparently levied on agricultural cultivation, on the basis of a unit of measurement or *jugum*; on the other hand, in large estates enjoying a certain autonomy it appeared to be more practical to base the calculation on the number of persons working; but if the tax was in this way proportional to the size of the population, it was still in no way a specific poll-tax since it was not added to another tax which was apparently based on the land. This precise point must be kept clearly in mind if we wish to understand the subsequent developments.

Now in some instances the conquest was effected purely by force, in which case the system established was at the conqueror's discretion, at other times as the result of a treaty of capitulation, and in this case, when the native population kept its fiscal autonomy, a particular fiscal system might be merely stipulated, or else a certain sum might be fixed in advance as tribute to be paid, with allowances being made for considerations of assessment. In ʿIrāḳ, the province to which most of the ʿAbbāsid jurists refer, the conquest was in general effected by force, or at least with the abandonment of the Sāsānid administrative services; with the help of native subordinates the Arabs controlled the institution and collection of taxes which followed the tradition, that is to say a poll-tax was still distinct from a land tax, though its rate was probably increased (1, 2, 4 dīnārs = 12, 24, 48 dirhams), but the grading of wealth was maintained. To remain exempt from this poll-tax, the members of the aristocracy declared their allegiance to the Muslim faith; one cannot say if at the same time they were freed from the land tax, though subject to it in the modified form of the tithe levied on Muslims' property.—In most of the towns of Syria and Upper Mesopotamia, the Arab occupation was carried out by means of treaties which distinguished them from the large autonomous estates of the previous régime; although temporary agreements at the very beginning had established collective tribute, the system which was set up was one of autonomous control, but with the tax defined by the conqueror and usually calculated (as at Ḥīra in ʿIrāḳ) on the basis of a fixed contribution (generally 1 dīnār) per head, and thus a tax proportional to the population, as was the case before on the large estates; the same method of calculation may have continued on the large estates, but under the direct control of the conqueror, since most of the great Byzantine landowners had disappeared, and with the addition of the poll-tax on the colonists (?); incidentally the conquerors often found it advantageous at that time to accept the peasants' payments in kind. In Egypt most of the Christian communities were taxed under a system which united payments in kind, a land tax of 1 dīnār per *faddān* (unit of cultivated land) and a specific poll-tax of 2 dīnārs per head, this last figure, however, being based on the calculation of the sum which the community had to pay, on the condition that the total amount would eventually be divided among the inhabitants in the most equitable proportions (as papyri show); contrary to previous belief, this poll-tax must in practice have constituted for the mass of the inhabitants a burden almost as heavy as the land tax. Finally, in the greater part of Īrān and central Asia, as well as in some places in Cyrenaica, the system established was of fixed tribute to be paid by the local rulers who were maintained in office, with no interference from the conquerors either in declaring or collecting the tax; in K͟hurāsān in particular, taxpayers continued to be charged on the basis of the Sāsānid dual system of land tax and poll-tax, apart from any questions of conversion or non-conversion to the new religion. Whatever uncertainties remain in particular systems (especially in Syria, it seems), it will be seen that, in general, the duality of land tax and poll-tax existed at the taxpayer's level, under various conditions, for the greater part of the peasant populations, while on the other hand a system of unitary contribution prevailed throughout most of the Syrian towns and in Upper Mesopotamia; the conquerors, particularly in the East, held aloof from these distinctions so long as the tribute was paid.

However, difficulties very soon appeared. In Egypt monks were exempt from poll-tax; the Copts, who since Roman times had been past masters of tax evasion, noted that the taxpayer could escape payment of poll-tax if he left the district where he was enrolled or, better still, if he entered a monastery. It therefore became necessary to make all monks in their turn subject to poll-tax (a much more probable explanation than the alternative upon which one is driven back if one accepts that the poll-tax was absent at the beginning of the Muslim régime: since it was later found applied to monks, the argument runs that it made its original appearance in the form of a tax on the monks). It was necessary to apply for authorization for removal, and to mark taxpayers with an indelible stamp, hence all those passports, seals etc. of which archaeologists have provided us with so many unimpeachable examples. Phenomena of the same sort must have existed in many places, and are for example recorded in Upper Mesopotamia and also in ʿIrāḳ.

There, however, matters are presented to us somewhat differently. In ʿIrāḳ, in fact, evasion of taxes took the form of conversion to Islam, the convert believing that his new status would free him from the whole fiscal complex levied on the non-Muslim, that is to say the land-tax and the poll-tax. In reality what happened at the beginning —and the Muslim administration did not look upon it amiss—was that the convert abandoned his land, with no thought of it ceasing to be subject to the *k͟harād͟j*, to a non-convert who guaranteed its cultivation and fiscal capacity. The thing was possible so long as it happened infrequently and the treasury had little to fear, for the new régime had inherited from its predecessors, both Byzantine and Sāsānid, the idea of the joint liability of each locality in regard to taxation, and those who remained therefore paid for those who had left and whose land they exploited. However, by the time when the terrible governor al-Ḥad͟jd͟jād͟j came to ʿIrāḳ the matter had

already assumed dangerous proportions as regards the development of land, and hence also threatened the treasury. He then took the draconic decision to send back the peasants to the land, to subject them to taxation again, including poll-tax, and, in practice, to forbid them to be converted to Islam.—A similar problem arose in Khurāsān; but there it was the native aristocracy who persecuted the peasantry who were guilty of conversion to Islam: since every conversion risked increasing the burden of taxes on non-Muslims and compelling the aristocracy to make good from their own pockets any shortcomings in payments, they tried wherever they could to impose still heavier taxes upon the Muslims, at least the poorer ones, rather than on the non-Muslims: inequality in reverse ....

It is clear that these repressions also could not last. It was somehow inadmissible, in a Muslim State, virtually to penalize entry into Islam. The pious ʿUmar b. ʿAbd al-ʿAzīz is credited with an attitude of absolute reaction to the policy, and he is said to have gone so far as to encourage conversions by the remission of the whole complex of taxes levied on non-Muslims. The most authoritative texts recently discovered or interpreted do not confirm such a Utopian outlook (H. A. R. Gibb, *The fiscal rescript of Umar II*, in *Arabica*, ii, (1955)). It seems that, under the influence of the jurists who elaborated the doctrine of *fay*ʾ [*q.v.*], there was a move towards the idea of dissociating from the complex of taxes imposed on the non-Muslims the *kharādj*, which from this time on was regarded rather as being levied specifically on land and not on the person, and hence was compatible with the status of Muslim: the poll-tax, as such, was to disappear, but the treasury did not necessarily suffer nor did the taxpayer gain as a result, since the convert had to pay the *zakāt* on his income. It was a system of this sort that, at a later date, Naṣr b. Ṣayyār, the last great Umayyad Governor, tried to introduce in Khurāsān; he is thus at the rear of the movement, and not in the vanguard. In a country like Syria a more delicate adaptation must have been necessary, and appears to have been undertaken from the time of Yazīd and ʿAbd al-Malik (Abū Yūsuf, 24; cf. Løkkegaard, 133), to give a truly personal character to the traditional poll-tax, in addition to a tax on land. In any case, from the moment when the poll-tax had been differentiated from the land-tax in the assessment, the same could also be done in the collection, and the collective responsiblity of places in respect of taxation would cease to operate in this matter. In Egypt particularly, we know that movement of persons became legal, provided that a record of them was kept and that the whereabouts of those concerned was known (see Cl. Cahen, *Impôts du Fayyum*, quoted below, 21). Thus the term which customarily denoted "fugitives"—in Greek φυγάδες —the *djawālī* (plur. of *djāliya*), in administration came to be taken, without further addition, as a synonym of *djizya* in the sense of poll-tax. Naturally, this fiscal arrangement did not solve the economic problem of peasant emigration, and there were further instances of the enforced return of peasants to their fields (see Cl. Cahen, *Fiscalité*, etc. in *Arabica*, i (1954), 146-7); but, in proportion as the rural communities were now able to become Muslim, the problem no longer affected the *djizya*, and it is probable that it was less grave in the solidly-based Christian communities which remained faithful to their creed (Lebanon, Upper Mesopotamia, Egypt itself) and where collective responsibilty was to act against emigration (ibid., 151). Other factors may have counted in favour of attachment to the land, and against emigration to towns, which cannot be discussed here; it seems in any case that, in the centuries that followed, the problem was no longer expressed in the terms in which the sons of the Arab conquerors had known it.

The ʿAbbāsid period thus witnessed the specialization of terminology, as of institutions, at least in technical writings and works of *fiḳh* (the latter treat of it as an appendage to the *djihād*); and whilst the *kharādj* no longer denotes anything more than land-tax, *djizya* is henceforth applied only to the poll-tax on *dhimmīs*. The latter incidentally lost its financial importance everywhere when the non-Muslim communities ceased to be numerically superior. Even when thus diminished, it does not appear to have become uniform. Syria-Palestine and Egypt kept their own system until the 18th century (see Gibb-Bowen, i/2, 254 and Nābulusī in Cl. Cahen, *Impôts du Fayyum*, in *Arabica*, iii (1956), 21-2), despite the assertions of theorists (including Balādhurī but, characteristically, excluding Mālik and Shāfiʿī), while the hierarchized tax system attributed to ʿUmar continued to be practised in the East and from there later passed into the non-Arab provinces of the Ottoman Empire. The numerical importance to it of the *dhimmī*s, as earlier in Saldjūḳid Asia Minor (for this point see in particular Kerimüddin Aksarayī, *Müsâmeret ül-ahbar*, ed. O. Turan, 153, with analysis of F. Işıltan, 1943, 81), once again confers considerable importance on the *djizya*, although the wórd often bestowed on it is *kharādj* (the land-tax at that time bearing other names; see below).

A certain number of rules formulated during the ʿAbbāsid period appear to be generally valid from that time onwards. *Djizya* is only levied on those who are male, adult, free, capable and able-bodied, so that children, old men, women, invalids, slaves, beggars, the sick and the mentally deranged are excluded. Foreigners are exempt from it on condition that they do not settle permanently in the country. Inhabitants of frontier districts who at certain times could be enrolled in military expeditions even if not Muslim (Mardaïtes, Armenians, etc.), were released from *djizya* for the year in question.

A personal fixed contribution, the *djizya* was levied by lunar years (generally just before or just after the beginning of the year; sometimes in Ramaḍān under the Mamlūks), unlike taxes connected with agriculture; it could thus be dissociated from them in tax-farming and *iḳṭā*ʿ concessions. Money was stipulated, and normally payment had to be made in it, but payment in kind was admissible, under an officially determined scale of equivalent values. According to the Ḳurʾānic text, one must give *al-djizyat*[a] *ʿan yad*[in], which has since been interpreted, perhaps wrongly, to mean "by hand" and personally (on this point see F. Rosenthal, *Some minor problems in the Qur'ân*, in *The Joshua Starr Memorial Volume*, New York 1953, 68-72, and Cl. Cahen, *Coran IX-29* ..., in *Arabica*, ix (1962), 76-9); administratively, this meaning suggests the need to count the non-Muslim population, hence for instance the forbidding of all village notables to accept a lump payment of *djizya* from their subordinates. Furthermore it was desired to have confirmation given to every individual concerned of his status as a subject of Islam or, more accurately, as a member of an inferior social class; it is apparently in this way that we must interpret the Ḳurʾānic formula (which

follows the one given above) *wa-hum ṣāghirūn* (sometimes glossed as *akarrū bi 'l-ṣaghār*), in connexion with the well-known instances of notables or Arabs refusing, although Christians, to pay the "*djizya* of the *ʿulūdj*", rather than as implying the necessity for a humiliating procedure, which later rigorists claimed to find in it. Actual censuses were apparently undertaken, especially at the time of the differentiation between *djizya* and *kharādj* (by ʿAbd al-Malik in Syria, Yazīd II in Egypt, etc.), and, reciprocally, the evaluation at 130,000 dīnārs of the total return from *djizya* in Egypt at the time of Saladin, for example, at the average rate of 2 dīnārs, allows us to estimate the Christian population then in the country at about 65,000 heads of families.

In principle, the *djizya*, like the *zakāt*, had to be used for pensions, salaries and charities. But under this pretext it was often paid into the Prince's *khāṣṣ*, "private" treasury. Mālik and al-Shāfiʿī admit that the rate of tax could be increased; with or without doctrinal justification, arbitrary demands appeared at times during the economically difficult and religiously strict period of the Mamlūks; however, we must take count of the fact that the growing scarcity of gold and the devaluation of the dirham had often brought the *djizya* to a level lower than was stipulated by doctrine; moreover the monks, or at least those in poor monasteries, found a way to reduce their returns.

In the territories directly controlled by the Mongols, before their conversion to Islam, the original fiscal system abolished the poll-tax on non-Muslims; when they adopted the Muslim religion, zealous agents sought to make the Christians pay all the arrears (forty years . . .) (al-Djazarī, *Chronique*, ed. Sauvaget, 48, Nr 307).—In Sicily, after the Norman conquest, the poll-tax on Muslims and Jews was called *djizya*.

The *djizya* has naturally disappeared from modern Muslim States as a result of the growing equality of religions, the introduction of military service and the organization of new fiscal systems.

Bibliography: Almost the whole bibliography of sources, al-Balādhurī, Abū Yūsuf, al-Māwardī and other chroniclers, recorders of traditions, jurists, etc., is to be found collected together in Caetani, quoted *infra*; to it should be added Abū ʿUbayd b. Sallām, *K. al-Amwāl*, and, for the *K. al-Kharādj* of Yaḥyā b. Adam, the annotated English translation by A. Ben Shemesh, 1958; for papyri see, besides Becker and Grohmann quoted *infra*, C. Becker, *Papyri Schott-Rheinhardt*, 1906, and H. I. Bell, *Greek papyri in the British Museum*, iv, 1910, as well as R. Rémondon, *Les papyrus d'Apollonos Ano*, 1953, and C. J. Kraemer, *Excavations at Nessana*, iii, *Non-literary papyri*, 1958.

It is not possible here to give the very extensive bibliography of works relating to poll-tax and the associated problems in the Roman-Byzantine Empire; the latest restatements will be found in the bibliography of R. Palanque's edition of the posthumous *Histoire du Bas-Empire* of E. Stein, i, 1959, and in Karayannopoulos, *Das Finanzwesen des frühbyzantinischen Staates*, 1958; the outstanding works are still those of Piganiol, F. Lot and E. Deléage; for Egypt, A. Ch. Johnson and L. C. West, *Byzantine Egypt*, 1949.

For the Muslim world, J. Wellhausen, *Das arabische Reich*, 172 ff., Eng. tr. 276 ff.; C. Becker, *Beiträge zur Geschichte Aegyptens*, 81 ff. (in the 2nd fascicule); idem, *Islamstudien*, i, 1924; Caetani, *Annali*, v, 280-532; A. Grohmann, *Probleme der arabischen Papyrusforschung*, in *ArO*, 1933, 276 ff. and 1934, 125 ff.; Fr. Løkkegaard, *Islamic taxation*, ch. VI; D. C. Dennett, *Conversion and the poll-tax in early Islam*, 1951; A. Fattal, *Le statut légal des non-musulmans en pays d'Islam*, 1958, ch. VII, more detailed than Tritton, *The Caliphs and their non-Muslim subjects*, 1930; M. Ḍiyā al-Dīn al-Raʾīs (Rayes), *al-Kharādj fī al-dawla al-islāmiyya* (a history of Muslim state-finances), Cairo 1957, especially 107 ff.; Mez, *Renaissance*, ch. IV and VIII. Among specialized studies, Ḥabīb Zayyāt, *al-Djizya* in *al-Machriq*, xli (1947), 2; Finocchiaro-Sartorio, *Gizyah e Kharaj nella Sicilia*, in *Archivio giuridico*, lxxxi (1908). (Cl. Cahen)

ii.—Ottoman

The word *kharādj* was used for preference instead of *djizya* by the 10th/16th century, later *djizye* or *djizye-i sherʿī*. (cf. indexes in R. Anhegger-H. Inalcık, *Ḳānūnnāme-i Sulṭānī* ..., Ankara 1956; Tayyib Gökbilgin, *Paşa Livası*, Istanbul 1952; F. Kraelitz, *Os. Urkunden in türkischer Sprache*, Vienna 1922; Ö. L. Barkan, *Kanunlar*, Istanbul 1943). *Bash-kharadjī* for *djizya* was occasionally found in the documents (cf. T. Gökbilgin, 158, and B. Lewis, in *BSOAS*, xiv (1952), 553, 559) to distinguish it from land-*kharādj*. For the collector of *djizya*, *kharādjī* or *kharādjdjī* is used in the first period, *djizyedār* later.

The payment of *djizya* was sometimes dependent on the land possessed: anyone, Muslim or non-Muslim, who possessed a *bashtina*, land recorded under the possession of a *dhimmī* (cf. ČIFTLIK), was to pay *djizya* (cf. the regulation of Ohri dated 1022/1613 in Ö.L. Barkan, 295; that of Avlonya in *Sûret-i Defter-i Sancak-i Arvanid*, ed. H. Inalcık, Ankara 1954, 124). The reason given for this was the treasury's concern to protect the *djizya* revenues.

Following a conservative policy in the conquered lands, the Ottomans identified certain pre-Ottoman poll-taxes with *djizya*. Upon the request of their new subjects in Hungary (Barkan, 304) they accepted for *djizya* the old tax of one *flori*, gold, paid per family to the Hungarian kings before the conquest (cf. Barkan, 303, 320). Previously in the Balkans the Ottomans, however, had introduced a native poll-tax, probably of the same origin as the Hungarian one *flori* tax, in their own taxation only as an *ʿurfī* poll-tax under the name of *ispendje* (cf. H. Inalcık, *Osmanlılarda raiyyet rüsûmu*, in *Belleten*, xcii, 602-8). They ruled that anyone subject to *djizya* was to pay *ispendje* (*Belleten*, xcii, 602). But the latter was ordinarily included in *tīmār*s [*q.v.*]. It can be supposed that the Ottomans, like the first Muslim conquerors of Egypt and Syria, found in the Balkans and Hungary a poll-tax of one gold piece, probably from a common Roman origin (cf. F. Løkkegaard, *Islamic taxation*, Copehagen 1950, 134-5). Sanctioned by *naṣṣ* and *idjtihād* as asserted in the firmans, *djizya* was for the Ottomans a religious tax the collection and spending of which had to receive special care. It was collected as a rule directly for the state treasury by the Sultan's own *kuls* [*q.v.*]. It was exceptional to grant *djizya* revenues as *tīmār* or *mülk*. Also it was farmed out only in special cases (cf. Anhegger-Inalcık, 39). As a *sharʿī* tax belonging to the *bayt māl al-muslimīn* its administration was put under the supervision of the *ḳāḍī*s and not infrequently its actual collection was made by them (cf. Gökbilgin, 158).

The *djizya* revenues were spent usually for military purposes or assigned to the regular pay of a military

unit as *odjaklîk*. Mahmūd II raised the rates of *djizya* and assigned it to the upkeep of his reformed army of *ʿasākir-i manṣūra*, claiming this as a religious use for *ghazā* (cf. Hadžibegić, *Džizja ili harač*, in *Prilozi*, v (1954-5), doc. 19, 78-9). Exemption from *djizya* was usually made in return for military services as was the case with the *voynuks*, *martolos* and *eflaks*.

When a conquered land was to be organized as an Ottoman province a census of people subject to *djizya* was made by the *ḳāḍī* appointed there, and a book called *defter-i djizya-i gabrān* was drawn up (for an example made after the conquest see the *defter* of Buda and Pest in L. Fekete, *Die Siyāqat-schrift in der türkischen Finanzverwaltung*, Budapest 1955, i, doc. 8, 20, pp. 176-98, 350-5; ii, facsimiles, Tables XI, XXXVI). Referred to also as *aṣl defter*, original *defter*, this book was made in two copies, one for the central treasury, the other for the provincial administration. The census was to be renewed. But, as we read in the *nishān* of 22 Djumādā II 1102/23 March 1691 such censuses were not renewed for long periods and as a result of deaths and births, flights and conversions the books did not reflect the actual situation. In the reign of Meḥemmed II half of the *djizya* due from the fugitives of a village was to be made good by its *timār*-holder and the other half by the remaining *djizya*-payers (R. Anhegger-H. Inalcık, 76). But with the collapse of the *tīmār* system in the late 10th/16th century the whole burden fell upon the latter. Finally by the reform of 1102/1691 each *djizya* payer was made responsible only for his own personal *djizya* and a paper, *kāghîd* or *waraḳ*, was delivered to certify its payment. On the other hand the fugitives were pursued, (*ibid.*) or, sometimes, the authorities would try to bring them back by promising a reduction in the rate of *djizya*, as was done to repopulate the deserted villages in the province of Manastir (Monastir) in 1117/1705.

As a rule every third year, called *new-yāfte* (*Naw-Yāfta*) *yîlî* a general inspection was made to cross out the dead, *mürde* (*murda*) and to add *new-yāfte* (*naw-yāfta*), those who were omitted from the *defter* for one reason or another, among them the *bāligh*, adolescents who by the time of the inspection had become legally fit to pay *djizya*. But the inspectors were instructed to carry out this operation so as not to reduce the number of *djizya*-payers. Strangers and passers-by found in a district were subject to the payment of *djizya* on the spot, as ordered in the firmans issued after the reform of 1102/1691 (cf. Hadžibegić, doc. 5, in vol. iii-iv, 111).

It seems that *ruhbān*, clerics, and *keshīsh*, monks, were exempted from *djizya* in the first period (for exemption from *djizya* of a *metropolit* in the time of Meḥemmed II see Anhegger-Inalcık, 66). But in the reform *nishān* of 1102/1691 all clerics except those who had really a disability were subjected to *djizya*. In 1103/1692 the *ruhbān* sent a petition to the Sultan stating a *sharʿī* opinion about the exemption of those *ruhbān* who were in retirement and not earning their own living (cf. *Al-Durar*, 213; Mewḳūfātī, i, 351), but it was rejected on the basis of the different opinion of Imām Yūsuf. By 1255/1839 the monks of the Mount Athos were exempted from all taxes but *djizya*.

However, in accordance with the precise command of the *sharīʿa*, the Ottoman government always exempted from *djizya* children, women, disabled and blind men, and the unemployed poor. Only the widows (*bīve*) possessing the land of their deceased husbands were liable for *djizya*.

The treatises of *fiḳh* (*Al-Durar*, 212; Mewḳūfātī, i, 350) distinguished two kinds of *djizya*, that fixed by *ṣulḥ*, agreement, the amount of which could not be altered, and that levied from individuals, *al-djizya ʿala ʾl-ruʾūs*. The former, called in Ottoman official terminology *djizya ber wedjh-i maḳṭūʿ* or simply *maḳṭūʿ*, was extensively applied and found two different fields of application in the Ottoman empire: (*a*) The submission as a vassal of a Christian prince always implied the payment of an agreed yearly tribute however small the amount might be. Then the Sultan considered the non-Muslims under the prince as the Sultan's own *kharādj*-paying subjects (see BOGHDAN, RAGUSA) and the yearly tribute which was usually paid in gold pieces as a *kharādj-i maḳṭūʿ* (see DĀR AL-ʿAHD); (*b*) In some cases the *dhimmīs* under the Sultan's direct rule were permitted to pay their *djizya* in a fixed sum, *ber wedjh-i maḳṭūʿ*, as a community. The *dhimmī raʿāyā* applied for it mostly to escape the abuses of the *djizya*-collectors and their request was accepted by the government often to insure its payment, for otherwise they often threatened to abandon their villages and run away. On the other hand the Albanian mountain tribes of Klementi living in five villages were permitted to pay a nominal *fixed* sum of one thousand *akče* for their *djizya* in 902/1497, and in return they promised to guard the highway passing through their area. Also in Ḳurvelesh, Albania, seventeen villages in rebellion agreed to submit on condition that they paid their *djizya ber wedjh-i maḳṭūʿ* at a fixed sum of 3301 esedī ghurūsh in 1106/1695. In these examples we see the government being rather forced to come to an agreement with its *dhimmī* subjects. Sometimes the *maḳṭūʿ* was agreed upon between the *djizya*-collectors and the *ḳodja-bashîs*, Christian notables, who thus being able to distribute the *djizya* in their communities themselves expected to have some advantages such as to alleviate their own share, as actually stated in a document. But this practice was denounced by the government.

The *maḳṭūʿ* system gave the Jewish community of Ṣafad the opportunity to save their clerics from paying *djizya* (B. Lewis, *Notes and documents from the Turkish Archives*, Jerusalem 1952, 11; U. Heyd, *Ottoman documents on Palestine*, Oxford 1960, 121; cf. idem on the Djizya-registers for Palestine in *Jerusalem*, iv (1952), 173-84 (in Hebrew, with Turkish documents).

Considering its basic character of a poll-tax, however, the government often insisted on its payment individually. On the other hand the *maḳṭūʿ*, fixed sum of *djizya* for a group, might become too onerous when the number in such a group for one reason or another decreased. In such cases a new census was often asked for, to reduce the amount or to return to the payment by individuals.

The *maḳṭūʿ* system in *djizya*, however, came to be more and more extensively applied in the period of decline during which the central government had increasingly lost the control of tax collection in the provinces. The *ḳodja-bashîs*, *čorbadjîs* and *knez* then took over, as the *aʿyān* among the Muslim population, the collection of taxes within their communities, and this prepared their rise as a local aristocracy in the Balkans in the 12th/18th century. In the belief that the *maḳṭūʿ* system was favourable for the *raʿāyā* the initiators of the *tanẓīmāt* [*q.v.*] generalized the system (the circular of 25 Muḥarram 1257/17 March 1841 in Mühimme no. 13663 Maliye Yeni

Seri, Başvekâlet Archives) and even sanctioned it by a *fatwā* [*q.v.*].

It was the Sultan's responsibility to declare every new year the rates of *djizya* to be collected on the basis of a *fatwā* given by the Shaykh al-Islām who determined it according to the *sharʿī* scale. In Ottoman terminology the grades were *aʿlā*, *awsaṭ* and *adnā* corresponding to *ẓāhir al-ghinā' mukthir*, wealthy, *mutawassiṭ al-ḥāl*, medium status, and *faḳīr muʿtamal*, working poor man, who were to pay, 48, 24 and 12 *dirham-i sharʿī* (see DIRHAM) of pure silver, or four, two and one dīnār gold pieces respectively. In a document of 6 Djumādā II 896/16 April 1491 (Gökbilgin, 159) we find *djizya* applied according to the *sharʿī* scale. But in a firman of 880/1475 the collector was instructed to accept payments over fixed rates (Anhegger-Inalcık, 78).

Payment could be made in silver and gold coins in circulation, and rarely the rates were also shown in current copper coins. In Radjab 1101/April 1690 the rate for the lowest grade was fixed as one Egyptian gold piece, *sharīfī altun*, or $2^1/_4$ esedī (Dutch) ghurūsh, or 90 para or 1170 copper manghır. But payments were mostly made in silver *akče* [*q.v.*] until the late 10th/16th century, and in *ghurūsh* or *para* in later periods. The recurrent debasements and depreciations in coinage (cf. H. İnalcık, in *Belleten*, loc., 676-84; Hadžibegić, in *Prilozi*, v, 51-6) made it necessary for the Ottoman government to declare in the firmans of *djizya*-collection every year (cf. examples in Hadžibegić, doc. nos. 1, 2, 4, 5, 6, 10, 12, 14, 19, 22, 25) a schedule of the official rates of the coins in circulation. But disparities between the official and current rates often gave rise to disputes between the tax-payers and collectors, and the treasury sometimes preferred to accept only gold pieces. At other times, on their own initiative, the collectors forced the tax-payers to pay only in gold with the intention of exchanging this later for their own profit. To prevent this the Sultan often had to send special orders to the collectors to accept silver coins too (the *Aḥkām defterleri* in the Başvekâlet archives, Istanbul, are indeed full of such orders). The rates of *djizya* in the Ottoman silver coinage went up from 1102/1691 to 1249/1834 as shown in the following table (Hadžibegić, in *Prilozi*, v, 102).

(in esedī ghurūsh)

Year	*aʿlā*	*awsaṭ*	*adnā*
1102/1691	9	$4^1/_2$	$2^1/_4$
1108/1696	10	5	$2^1/_4$
1156/1744	11	$5^1/_2$	$2^3/_4$
1218/1804	12	6	3
1231/1816	16	8	4
1239/1824	24	12	6
1242/1827	36	18	9
1244/1829	48	24	12
1249/1834	60	30	15

Maḥmūd II emphasized in his firmans that the increases, *ḍamā'im*, were not newly assessed taxes, *muḥdathāt*, but simply the result of a necessary adjustment of the fixed *sharʿī* quantities of silver to be paid as *djizya* in the currency of the day (cf. Hadžibegić, v, 69, 79). But these increases, even if they were not real in value, gave rise to widespread discontent among the *dhimmīs* in the Ottoman empire.

It must be remembered that until the introduction of radical changes in the Ottoman finances in the 11th/17th century, *djizya* was levied in some large areas of the empire only at one single fixed rate (cf. the Sandjaḳ regulations in Barkan, 83,201, 226, 316): for the *dhimmīs* subject to *djizya* of all classes 25 *aḳče* in the province of Yeni-il in Süleyman's time, 40 *aḳče* in 991/1583, 35 *aḳče* in some areas and 55 in others in the province of Bitlis, 30 in the island of Tashoz, 46 in the province of Mosul in the 10th/16th century. It was 80 *aḳče* in the lands conquered from the Mamlūks, namely in the provinces of Adana, Damascus, Ṣafad; the rates here, except for the latter, were less than the normal lowest rate (one gold piece was 60-70 *aḳče* during this period). The reason given for this special treatment in the provinces of Eastern Anatolia was the poverty due to the physical conditions of the area. As for the islands, similar conditions together with the special defence responsibilities imposed on the population accounted for it. The *dhimmīs* of the island of Imbros were even exempted altogether from *djizya* (Barkan, 237). The single rate of 80 *aḳče* in Syria and Palestine appears to be a survival from the last phase of the Mamlūk period during which *djizya* was for all classes one gold piece plus a fraction to cover collection costs (B. Lewis, *Notes*, 11). Being considered too low as compared to the *sharʿī* rates, these fixed single rates of assessment were raised on the accession of a new Sultan to the throne (on Selīm II's accession an increase of ten *aḳče* was made; cf. Barkan, 318).

The assessment of *djizya* was made per family in Hungary, Palestine in the 10th/16th century (cf. B. Lewis, *Notes*, 10; idem, *Studies in the Ottoman Archives*, in *BSOAS*, xvi/3 (1954), 484-5), in the province of Salonika, and many other places in the Balkans (cf. Gökbilgin, 155-7) before the reform *nishān* of 1102/1691.

Also in the early period there were certain groups exempted from *djizya*. It was true, in principle, that the exemption from *djizya* was considered as a waste of a revenue belonging to the *bayt māl al-muslimīn*; hence it was made only exceptionally and, if done, in return for military services. Thus the *dhimmī* population of a crucial fortress (cf. Barkan, 204; but in 835/1431 the population of Akčaḥiṣār, Albania, was exempted from all taxation but *djizya*, cf. *Sûret-i Defter-i Sancak-i Arvanid*, 104), *dhimmīs* in charge of guarding a mountain pass (cf. H. Inalcık, *Fatih devri*, i, Ankara 1954, doc. 1), relatives of the children levied for the Janissaries, *dhimmīs* supplying sulphur for the powder factories in Salonika (defter, K. Kepeci tasnifi no. 3510, Basvekâlet archives) were exempted from *djizya*. The Christian soldiers who formed part of the Ottoman fighting army in the 9th/15th century, namely Christian tīmār holders, *voynuḳs* [*q.v.*], *martolos* [*q.v.*] and *eflaḳs*, enjoyed total exemption from *djizya* (H. Inalcık, *Fatih devri*, i, 176-9). The sons and brothers of *voynuḳs* were subjected only to a *bedel-i djizya*, substitute of *djizya*, at a fixed rate of 30 *aḳče* which was about half of the lowest rate of *djizya* by 922/1516 (Barkan, 396, 398). When these groups lost their military use in the 10th/16th century they were mostly made *dhimmī raʿāyā* and subjected to *djizya*. Those maintained were subjected to a fixed low rate.

At all times the Ottoman government granted partial exemption from *djizya* to the *dhimmīs* of a particular position. Those living in the provinces in the borderland, *i.e.*, Serbia, Bosnia, Herzegovina, Montenegro, paid *djizya* only at the lowest rate, *adnā*, and in time of war the *dhimmīs* living nearest to the fields of operation and on the military routes paid it as half (cf. Hadžibegić, in *Prilozi*, iii, doc. 2,

101; v, V, 102). The *dhimmīs* having to abandon their homes because of enemy invasion were exempted from *djizya* for a certain period.

The *dhimmī* miners in some regions paid it at a very low rate (only six *akče* in Silistre in the mid-16th century, cf. H. İnalcık, *Osmanlılarda raiyyet rüsûmu*, in *Belleten*, xcii, 608, note 173). As late as 1170/1757 the *dhimmīs* of 21 villages in Chios who were engaged in the production of mastic paid it all equally at the lowest rate.

Under the capitulations the *dhimmī terdjumāns*, dragomans, attached to the foreign embassies, enjoyed exemption from *djizya*. But many *dhimmīs* had managed to obtain *berāts* of *terdjumān* by dubious ways to escape paying *djizya* (see BERĀTLĪ).

If a *musta'min* (see ĀMĀN) prolonged his stay in the Ottoman dominions longer than one year he was treated as a *dhimmī*, subjected to *djizya*, and could not leave the country for the *Dār al-ḥarb* [*q.v.*] (cf. *Al-Durar*, 207). Though we find in the records, *sidjillāt*, of the ḳāḍī of Bursa cases testifying the application of this rule, some ways must have been found to allow foreign merchants to stay as *musta'min* for longer periods in the great commercial centres even as early as the 9th/15th century (cf. documents in *Belleten*, xciii, 67-96). Later on under the capitulations the Ottoman government became more and more tolerant on this matter (cf. the capitulation of 1153/1740 to France, article 63). The Armenians of Persia, *Arāmīne-i ʿAdjem*, visiting the Ottomans lands usually as merchants, were also subject to *djizya* (the *nishān* of 1102/1691, and Hadžibegić, doc. 4, 10, pp. 107, 125).

The *nishān* of 1102/1691 provided that *djizya* was to be levied per head by all the *dhimmīs* subject to *djizya* on the basis of the *Sharʿī* scale, thus abolishing the *maḳṭuʿ* system and exemptions (cf. Fîndîklîlî Meḥmed Agha, *Silāḥdār ta'rīkhi*, i, ed. A. Refīḳ, Istanbul 1928, 559). But many old practices and exemptions survived, and only in 1255/1839 with the proclamation of equality in payment of taxes all such exemptions and privileges were abolished.

Djizya-payers had always to pay two additional dues, *maʿīshat* or *maʿāsh* for the living expenses of the collector and *resm-i kitābet* (also called *resm-i ḥesāb, udjrat-i kitābet, khardj-i muḥāsebe* or *ḳalemiyye*) for the services of the central department of *djizya* (cf. Hadžibegić, iii, 112). Actually these were well established dues found with all the departments of the Ottoman finances. In the firman of 880/1475 on the collection of *djizya* (Anhegger-Inalcık, 77-8) we find a due of two *akče* per family called *resm-i kitābet* and a one *akče* due levied formerly by the *il-ketkhudās*. In the 10th/16th century the collector and the scribe accompanying him each took one *akče* for themselves (Barkan, 180; in Hungary, in addition, one *akče resm-i khāne*, Barkan, 316). In 1102/1691 *maʿīshat* was 12, 6 and 3 para for *aʿlā*, *awsaṭ* and *adnā* respectively and one *para* was paid for *udjrat-i kitābet* by all alike. Four years later a new due, *maʿīshat* for the ḳāḍīs, was added, which was 9, 4 and 1½ para for *aʿlā*, *awsaṭ* and *adnā* respectively. In 1106/1694, to prevent the abuses in collection of these dues, it was made clear that the collectors were to levy these not for their own account but for the treasury, and the remunerations were to be paid to them by the treasury from the *djizya*-revenues at the central department of *djizya* (Hadžibegić, iii-iv, doc. 4, 5, 10, 11, pp. 107, 112, 125, 131). The total sum of these legal dues amounted to $^1/_{26}$ of the *djizya* itself and their rates were raised following the increases in *djizya*. From the same firmans we learn that the collectors were illegally subjecting the *djizya* payers to some exactions under the names *dhakhīra*, *kātibiyya*, *ṣarrāfiyya*, *ḳoldju akčesi*, *khardj-i maḥkeme* (Hadžibegić, iii-iv, 113, 127), *mum-akčesi buyruldu awā'idi* and others. With the proclamation of the *Tanẓīmāt* in 1255/1839 collectors with a salary from the treasury were appointed and were allowed to take from the tax-payers only a minimum of provisions for themselves and their animals (Hadžibegić, *Prilozi*, v, doc. 25, 93). But the heaviest burden on the *djizya*-payers was the obligation to make good the *djizya* of the fugitive *dhimmīs*, *gurikhta* (in Turkish *gürikhte*) and the dead, *murda* (in Turkish *mürde*), which sometimes caused the depopulation and ruin of a whole village. As disclosed in the *nishān* of 1102/1691, in some villages the surviving quarter of the previous population was forced to pay the *djizya* of the missing three quarters too. On the other hand the collectors in cooperation with the local ḳāḍīs sometimes tried, without official permission, to collect *djizya* from the *new-yāfte* (*naw-yāfta*), those not yet recorded as *djizya* payers in the official *defters*. They also collected *bedel-akčesi*, a lump sum for those names in the *defter* under which no one could be identified. The government always struggled to prevent such abuse and ended by assessing a fixed new tax, called *gürikhte*, to be levied equally on each *djizya* payer. This appears in the *djizya* accounts of 1102/1691 and it was then 40 *akče* per head, a sum about one-eight of the *djizya* itself. Also we find a similar tax called *nev-yāfte akčesi* even at an earlier period. These proved to be only new burdens for the *raʿāyā* since the collectors continued their exactions according to the established customs. When in 1102/1691 the method of collecting *djizya* by distributing personal certificates of payment was established, the collectors, in an effort to use all the certificates delivered to them by the treasury, forced people not subject to *djizya* to accept them, or imposed certificates of higher rates to those subject to low rates. Some of the collectors were denounced as having accepted bribery from the wealthy to save them from the certificates of high rate and then forced the poor to accept them. To all this must be added the common complaint about the *raʿāyā* having to provide the needs of the collectors' large suite of *ḳoldjīs*, guardians, and many other exactions which were common in the collection of taxes in the period of decline. The collectors acted apparently even more harshly towards *djizya*-payers, since the firmans commanded, on the basis of the *sharīʿa*, that the *dhimmīs* were to pay *djizya* in complete humiliation, *dhull wa ṣaghār* (cf. Hadžibegić, doc. 5, 10, pp. 112, 126). All this was no doubt mainly responsible for the discontented *raʿāyās* cooperating with foreign invaders from the late 11th/17th century on. The reform measures taken in 1102/1691 and later did not improve the situation, and it can be safely said that the abolition of the exemptions, especially those of clerics under the new system, ended by turning some influential groups among non-Muslims against Ottoman rule.

Bibliography: The Ottoman state followed the Ḥanafī school in the application of *djizya*; *Al-Durar fī sharḥ al-ghurar al-aḥkām* by Molla Khüsrew (Istanbul 1258, 195-216) and later Mewḳūfātī's translation of the *Multaḳā al-abḥur* (Istanbul 1318, 349-51) became the principal authorities for the Ottoman ʿulemā' and administrators on these matters. For a statement of the *sharʿī* principles in an official Ottoman regulation

see Ö. L. Barkan, *Kanunlar*, 351. The earliest firman on the levy of *djizya* that has come down to us is dated 880/1475-6 in R. Anhegger-H. İnalcık, *Ḳānūnnāme-i Sulṭānī ber mūceb-i ʿörf-i Osmānī*, Ankara 1956, 76-8; facsimile in F. Babinger, *Sultanische Urkunden zur Geschichte der osmanischen Wirtschaft und Staatsverwaltung am Ausgang der Herrschaft Mehmeds II, des Erοberers*, i, Munich 1956, 270-80; French summary in N. Beldiceanu, *Les actes des premiers Sultans*, Paris-The Hague 1960, 148-50; H. Hadžibegić in his fundamental article on *djizya* in the Ottoman empire *Džizja ili harač*, in *Prilozi*, iii-iv, 55-135; v, 43-102, published twenty-seven documents from the *sidjillāt* of the ḳāḍīs of Bosnia and Macedonia. Two *berāt*s dated 5 Ramaḍān 1111/24 February 1700 and 1 Shaʿbān 1121/6 October 1709 published by B. C. Nedkof in *Sammlung orientalischer Arbeiten*, xi, Leipzig 1942 and reproduced in *Belleten*, xxxii, 641-9, are transcribed with some errors.

The *cizye muhasebe defterleri, mâliye ahkâm defterleri* and *mukataât defterleri* in the collections of Mâliye, Kâmil Kepeci and Yeni Seri, the Başvekâlet archives, Istanbul, constitute an inexhaustible source on the subject. The oldest *defter*s in these series are a *defter-i muḳāṭaʿāt* of Meḥemmed II's time, Yeni seri, nos. 176, 6222 and 7387, a *defter-i tawzīʿ-i djizya-i gabrān-i wilāyat-i Rumeli wa Anadolu*, dated 958/1551, K. Kepeci, no. 3523 and a *defter-i aḥkām-i māliyye*, dated 973/1565 Mâliye Yeni Seri, no. 2775. The collection of *daftar-i muḥāsebe-i djizya*, the most comprehensive source on *djizya*, start in 1101/1690, K. Kepeci nos. 3508-3799. (Halil İnalcık)

iii.—India

The question of the levy of *djizya* in India has provoked more emotion than scientific study, it being assumed that practice in India was closely modelled on the teachings of *fiḳh*, or the precepts of Indo-Muslim scholars, or the policies of the Ottomans. The view taken here that *djizya* was not normally levied under the Dihlī Sultanate in the sense of a discriminatory religious tax may be contested; the evidence for this view is set out below.

The earliest extant source for the Arab conquest of Sind, Balādhurī, *Futūḥ*, 439, speaks of Muḥammad b. Ḳāsim levying *kharādj* as tribute upon the conquered. The *Čač-nāma*, said to be a Persian translation (c. 613/1216-7) of an early Arabic account of the conquest, speaks (India Office Library MS 435, 268) of the Sindhīs being allowed the status of *dhimmī* and of a graduated poll-tax being laid upon the people of Brāhmanābād, the three classes paying at the canonical rates of 48, 24 and 12 *dirhams* respectively (MS. 261-262). This account, however, would seem more a reflection of later tradition than of events in 94/712 which antedate the differentiation between *kharādj* as land-tax and *djizya* as poll-tax under the late Umayyads which became the basis of *fiḳh* teaching.

Under the Dihlī sultanate [*q.v.*], political conditions —the continued presence of armed Hindū chiefs in rural areas, the particularism of the period 801/1398-9 to 932/1526—do not appear apt for the imposition of a novel discriminatory tax by a minority upon a majority. Ḳāḍī Minhādj al-Sirādj Djūzdjānī does not refer to *djizya* being levied in the period to 658/1260. Amīr Khusraw, *Ḳirān al-saʿdayn*, ʿAlīgaṙh lith, 1918, 35, uses *djizya* to mean tribute from Hindū kings. References in the Khaldjī and early Tughluḳ period couple *djizya* indiscriminately with *kharādj* to mean tribute or land revenue (*e.g.*, Ḍiyāʾ al-Dīn Baranī, *Taʾrīkh-i Fīrūz Shāhī*, *Bib. Ind.*, 291, 574; Baranī states also (*Fatāwa-yi Djahāndārī*, India Office Library MS 1149, fol. 119a) that Hindū *Rāys* and *Rānās* levied *kharādj* and *djizya* from their own Hindū subjects). An anecdote in Amīr Ḥasan Sidjzī's *Fawāʾid al-Fuwād* (707/1307-722/1322) speaks (Dihlī lith. 1865, 76) of a Muslim *darwish* being required to pay *djizya*, in a context showing that tax in general is meant.
